9.1 状态码.....	297
9.2 错误码.....	299
9.3 实例状态说明.....	320
9.4 获取项目 ID.....	321
9.5 获取账号名和账号 ID.....	322
A 修订记录.....	323

1 使用前必读

欢迎使用分布式消息服务RocketMQ版。分布式消息服务RocketMQ版是一个低延迟、弹性高可靠、高吞吐、动态扩展、便捷多样的消息中间件服务。

本文档提供了分布式消息服务RocketMQ版API的描述、语法、参数说明及样例等内容。

须知

分布式消息服务RocketMQ版持续增加新的功能，将不可避免对现有接口有所调整，比如增加响应参数。

为了减少接口变更带来的影响，除了分布式消息服务RocketMQ版自身尽量做到接口向下兼容的同时，用户在使用过程中，应当接受出现返回内容（JSON格式）含有未使用的参数和值的现象，即能够正常忽略未使用的参数和值。

分布式消息服务RocketMQ版提供了REST（Representational State Transfer）风格API，支持您通过HTTPS请求调用，调用方法请参见[如何调用API](#)。

终端节点

终端节点（Endpoint）即调用API的[请求地址](#)，不同服务不同区域的终端节点不同，您可以从[地区和终端节点](#)中查询所有服务的终端节点。

约束与限制

- 您能创建的实例数上限，具体请参见[服务配额](#)。
- 更详细的限制请参见具体API的说明。

基本概念

- 账号
用户注册账号时，账号对其所拥有的资源及云服务具有完全的访问权限，可以重置用户密码、分配用户权限等。由于账号是付费主体，为了确保账号安全，建议您不要直接使用账号进行日常管理工作，而是创建用户并使用他们进行日常管理工作。
- 用户

由账号在IAM中创建的用户，是云服务的使用人员，具有身份凭证（密码和访问密钥）。

在[我的凭证](#)下，您可以查看账号ID和用户ID。通常在调用API的鉴权过程中，您需要用到账号、用户和密码等信息。

- 区域：指云资源所在的物理位置，同一区域内可用区间内网互通，不同区域间内网不互通。通过在不同地区创建云资源，可以将应用程序设计的更接近特定客户的要求，或满足不同地区的法律或其他要求。
- 可用区：一个可用区是一个或多个物理数据中心的集合，有独立的风火水电，AZ内逻辑上再将计算、网络、存储等资源划分成多个集群。一个Region中的多个AZ间通过高速光纤相连，以满足用户跨AZ构建高可用性系统的需求。

- 项目

区域默认对应一个项目，这个项目由系统预置，用来隔离物理区域间的资源（计算资源、存储资源和网络资源），以默认项目为单位进行授权，用户可以访问您账号中该区域的所有资源。如果您希望进行更加精细的权限控制，可以在区域默认的项目中创建子项目，并在子项目中创建资源，然后以子项目为单位进行授权，使得用户仅能访问特定子项目中资源，使得资源的权限控制更加精确。

图 1-1 项目隔离模型

同样在[我的凭证](#)下，您可以查看项目ID。

- 企业项目

企业项目是项目的升级版，针对企业不同项目间资源的分组和管理，是逻辑隔离。企业项目中可以包含多个区域的资源，且项目中的资源可以迁入迁出。

关于企业项目ID的获取及企业项目特性的详细信息，请参见《[企业管理服务用户指南](#)》。

2 API 概览

表 2-1 实例管理类接口

API	说明
生命周期管理	包括创建实例、修改实例信息、查询实例、删除实例、查询代理列表。
消费组管理	包括查询消费组、创建消费组、删除消费组、修改消费组、查询消费列表或详情、重置消费进度。
Topic管理	包括创建主题、删除主题、查询主题、修改主题、查询主题消费组列表、查询主题的消息数。
消息管理	包括查询消息、查询消息轨迹、导出死信消息、重发死信消息、消费验证。
用户管理	包括创建用户、查询用户、修改用户、删除用户、查询主题的授权用户列表、查询消费组的授权用户列表。
元数据迁移	包括新建元数据迁移任务、查询实例下所有迁移任务或查询指定迁移任务信息、删除元数据迁移任务。
参数管理	包括修改RocketMQ配置。
标签管理	包括添加或删除实例标签、查询实例标签和查询项目标签。
其他接口	包括查询可用区信息。
规格变更管理	包括查询实例的扩容规格列表和实例规格变更。
实例管理	包括查询实例节点和重启指定实例。

3 如何调用 API

3.1 构造请求

本节介绍REST API请求的组成，并以调用IAM服务的[管理员创建IAM用户](#)来说明如何调用API。

您还可以通过这个视频教程了解如何构造请求调用API：<https://bbs.huaweicloud.com/videos/102987>。

请求 URI

请求URI由如下部分组成。

{URI-scheme}://{Endpoint}/{resource-path}?{query-string}

尽管请求URI包含在请求消息头中，但大多数语言或框架都要求您从请求消息中单独传递它，所以在此单独强调。

表 3-1 URI 中的参数说明

参数	描述
URI-scheme	表示用于传输请求的协议，当前所有API均采用HTTPS协议。
Endpoint	指定承载REST服务端点的服务器域名或IP，不同服务不同区域的Endpoint不同，您可以从 地区和终端节点 获取。 例如IAM服务在“华北-北京四”区域的Endpoint为“iam.cn-north-4.myhuaweicloud.com”。
resource-path	资源路径，即API访问路径。从具体API的URI模块获取，例如“管理员创建IAM用户”API的resource-path为“/v3.0/OS-USER/users”。
query-string	查询参数，是可选部分，并不是每个API都有查询参数。查询参数前面需要带一个“？”，形式为“参数名=参数取值”，例如“？limit=10”，表示查询不超过10条数据。

例如您需要创建IAM用户，由于IAM为全局服务，则使用任一区域的Endpoint（比如“华北-北京四”区域的Endpoint：“iam.cn-north-4.myhuaweicloud.com”），并在[管理员创建IAM用户](#)的URI部分找到resource-path（/v3.0/OS-USER/users），拼接起来如下所示。

```
https://iam.cn-north-4.myhuaweicloud.com/v3.0/OS-USER/users
```

图 3-1 URI 示意图

说明

为查看方便，在每个具体API的URI部分，只给出resource-path部分，并将请求方法写在一起。这是因为URI-scheme都是HTTPS，而Endpoint在同一个区域也相同，所以简洁起见将这两部分省略。

请求方法

HTTP请求方法（也称为操作或动词），它告诉服务你正在请求什么类型的操作。

- **GET**：请求服务器返回指定资源。
- **PUT**：请求服务器更新指定资源。
- **POST**：请求服务器新增资源或执行特殊操作。
- **DELETE**：请求服务器删除指定资源，如删除对象等。
- **HEAD**：请求服务器资源头部。
- **PATCH**：请求服务器更新资源的部分内容。当资源不存在的时候，PATCH可能会去创建一个新的资源。

在[管理员创建IAM用户](#)的URI部分，您可以看到其请求方法为“POST”，则其请求为：

```
POST https://iam.cn-north-4.myhuaweicloud.com/v3.0/OS-USER/users
```

请求消息头

附加请求头字段，如指定的URI和HTTP方法所要求的字段。例如定义消息体类型的请求头“Content-Type”，请求鉴权信息等。

详细的公共请求消息头字段请参见[表3-2](#)。

表 3-2 公共请求消息头

名称	描述	是否必选	示例
Host	请求的服务器信息，从服务API的URL中获取。值为hostname[:port]。端口缺省时使用默认的端口，https的默认端口为443。	否 使用AK/SK认证时该字段必选。	code.test.com or code.test.com:443
Content-Type	消息体的类型（格式）。推荐用户使用默认值application/json，有其他取值时会在具体接口中说明。	是	application/json
Content-Length	请求body长度，单位为Byte。	否	3495
X-Project-Id	project id，项目编号。请参考 获取项目ID 章节获取项目编号。	否 如果是专属云场景采用AK/SK认证方式的接口请求，或者多project场景采用AK/SK认证的接口请求，则该字段必选。	e9993fc787d94b6c886cb aa340f9c0f4
X-Auth-Token	用户Token。 用户Token也就是调用 获取用户Token 接口的响应值，该接口是唯一不需要认证的接口。 请求响应成功后在响应消息头（Headers）中包含的“X-Subject-Token”的值即为Token值。	否 使用Token认证时该字段必选。	注：以下仅为Token示例片段。 MIIPAgYJKoZlhvcNAQcCo ...ggg1BBIIlNPXsidG9rZ

📖 说明

API同时支持使用AK/SK认证，AK/SK认证是使用SDK对请求进行签名，签名过程会自动往请求中添加Authorization（签名认证信息）和X-Sdk-Date（请求发送的时间）请求头。

AK/SK认证的详细说明请参见[认证鉴权](#)的“AK/SK认证”。

对于**管理员创建IAM用户**接口，使用AK/SK方式认证时，添加消息头后的请求如下所示。

```
POST https://iam.cn-north-4.myhuaweicloud.com/v3.0/OS-USER/users
Content-Type: application/json
X-Sdk-Date: 20240416T095341Z
Authorization: SDK-HMAC-SHA256 Access=*****, SignedHeaders=content-type;host;x-sdk-date,
Signature=*****
```

请求消息体（可选）

该部分可选。请求消息体通常以结构化格式（如JSON或XML）发出，与请求消息头中Content-type对应，传递除请求消息头之外的内容。若请求消息体中参数支持中文，则中文字符必须为UTF-8编码。

每个接口的请求消息体内容不同，也并不是每个接口都需要有请求消息体（或者说消息体为空），GET、DELETE操作类型的接口就不需要消息体，消息体具体内容需要根据具体接口而定。

对于**管理员创建IAM用户**接口，您可以从接口的请求部分看到所需的请求参数及参数说明，将消息体加入后的请求如下所示，其中加粗的字段需要根据实际值填写。

- **accountid**为IAM用户所属的账号ID。
- **username**为要创建的IAM用户名。
- **email**为IAM用户的邮箱。
- *********为IAM用户的登录密码。

```
POST https://iam.cn-north-4.myhuaweicloud.com/v3.0/OS-USER/users
Content-Type: application/json
X-Sdk-Date: 20240416T095341Z
Authorization: SDK-HMAC-SHA256 Access=*****, SignedHeaders=content-type;host;x-sdk-date,
Signature=*****
```

```
{
  "user": {
    "domain_id": "accountid",
    "name": "username",
    "password": "*****",
    "email": "email",
    "description": "IAM User Description"
  }
}
```

到这里为止这个请求需要的内容就具备齐全了，您可以使用curl、Postman或直接编写代码等方式发送请求调用API。

3.2 认证鉴权

调用接口有如下两种认证方式，您可以选择其中一种进行认证鉴权。

- AK/SK认证：通过AK（Access Key ID）/SK（Secret Access Key）加密调用请求。推荐使用AK/SK认证，其安全性比Token认证要高。
- Token认证：通过Token认证调用请求。

AK/SK 认证

📖 说明

AK/SK签名认证方式仅支持消息体大小12M以内，12M以上的请求请使用Token认证。

AK/SK认证就是使用AK/SK对请求进行签名，在请求时将签名信息添加到消息头，从而通过身份认证。

- AK(Access Key ID): 访问密钥ID。与私有访问密钥关联的唯一标识符；访问密钥ID和私有访问密钥一起使用，对请求进行加密签名。
- SK(Secret Access Key): 与访问密钥ID结合使用的密钥，对请求进行加密签名，可标识发送方，并防止请求被修改。

使用AK/SK认证时，您可以基于签名算法使用AK/SK对请求进行签名，也可以使用专门的签名SDK对请求进行签名。详细的签名方法和SDK使用方法请参见[API签名指南](#)。

须知

签名SDK只提供签名功能，与服务提供的SDK不同，使用时请注意。

Token 认证

说明

Token的有效期为24小时，需要使用一个Token鉴权时，可以先缓存起来，避免频繁调用。

Token在计算机系统中代表令牌（临时）的意思，拥有Token就代表拥有某种权限。Token认证就是在调用API的时候将Token加到请求消息头，从而通过身份认证，获得操作API的权限。Token可通过调用[获取用户Token](#)接口获取。

云服务存在两种部署方式：项目级服务和全局级服务。其中：

- 项目级服务需要获取项目级别的Token，此时请求body中auth.scope的取值为 **project**。
- 全局级服务需要获取全局级别的Token，此时请求body中auth.scope的取值为 **domain**。

调用本服务API需要project级别的Token，即调用[获取用户Token](#)接口时，请求body中auth.scope的取值需要选择**project**，如下所示。

```
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username", //IAM用户名
          "password": $ADMIN_PASS, //IAM用户密码，建议在配置文件或者环境变量中密文存放，使用时解密，确保安全
        },
        "domain": {
          "name": "domainname" //IAM用户所属账号名
        }
      }
    },
    "scope": {
      "project": {
        "name": "xxxxxxx" //项目名称
      }
    }
  }
}
```

获取Token后，再调用其他接口时，您需要在请求消息头中添加“X-Auth-Token”，其值即为Token。例如Token值为“ABCDEFJ...”，则调用接口时将“X-Auth-Token: ABCDEFJ...”加到请求消息头即可，如下所示。

```
POST https://iam.cn-north-4.myhuaweicloud.com/v3.0/OS-USER/users
Content-Type: application/json
X-Auth-Token: ABCDEFJ....
```

您可以通过这个视频教程了解如何使用Token认证：<https://bbs.huaweicloud.com/videos/101333>。

3.3 返回结果

状态码

请求发送以后，您会收到响应，包含状态码、响应消息头和消息体。

状态码是一组从1xx到5xx的数字代码，状态码表示了请求响应的状态，完整的状态码列表请参见[状态码](#)。

对于[管理员创建IAM用户](#)接口，如果调用后返回状态码为“201”，则表示请求成功。

响应消息头

对应请求消息头，响应同样也有消息头，如“Content-type”。

对于[管理员创建IAM用户](#)接口，返回如[图3-2](#)所示的消息头。

图 3-2 管理员创建 IAM 用户响应消息头

```
"X-Frame-Options": "SAMEORIGIN",
"X-IAM-ETag-id": "2562365939-d8f6f12921974cb097338ac11fceac8a",
"Transfer-Encoding": "chunked",
"Strict-Transport-Security": "max-age=31536000; includeSubdomains;",
"Server": "api-gateway",
"X-Request-Id": "af2953f2bcc67a42325a69a19e6c32a2",
"X-Content-Type-Options": "nosniff",
"Connection": "keep-alive",
"X-Download-Options": "noopen",
"X-XSS-Protection": "1; mode=block;",
"X-IAM-Trace-Id": "token_ null_af2953f2bcc67a42325a69a19e6c32a2",
"Date": "Tue, 21 May 2024 09:03:40 GMT",
"Content-Type": "application/json; charset=utf8"
```

响应消息体（可选）

该部分可选。响应消息体通常以结构化格式（如JSON或XML）返回，与响应消息头中Content-type对应，传递除响应消息头之外的内容。

对于[管理员创建IAM用户](#)接口，返回如下消息体。为篇幅起见，这里只展示部分内容。

```
{
  "user": {
    "id": "c131886aec...",
    "name": "IAMUser",
    "description": "IAM User Description",
    "areacode": ""
```

```
"phone": "",
"email": "***@***.com",
"status": null,
"enabled": true,
"pwd_status": false,
"access_mode": "default",
"is_domain_owner": false,
"xuser_id": "",
"xuser_type": "",
"password_expires_at": null,
"create_time": "2024-05-21T09:03:41.000000",
"domain_id": "d78cbac1.....",
"xdomain_id": "30086000.....",
"xdomain_type": "",
"default_project_id": null
}
}
```

当接口调用出错时，会返回错误码及错误信息说明，错误响应的Body体格式如下所示。

```
{
  "error_msg": "The format of message is error",
  "error_code": "AS.0001"
}
```

其中，error_code表示错误码，error_msg表示错误描述信息。

4 快速入门

场景描述

您可以根据业务需要创建相应计算能力和存储空间的RocketMQ实例。

API调用方法请参考[如何调用API](#)。

前提条件

已获取IAM和RocketMQ的Endpoint，具体请参见[地区和终端节点](#)。

创建 RocketMQ 实例

如下示例是创建RocketMQ实例的请求消息：

```
{
  "name": "rocketmq-test",
  "engine": "reliability",
  "engine_version": "4.8.0",
  "storage_space": 600,
  "vpc_id": "ead6cxxxxx9ba91820e72c",
  "subnet_id": "3cb6axxxxxa7f671d6a8",
  "security_group_id": "d39c8xxxxxaa8510a498",
  "available_zones": [
    "effdcxxxxx2f56533"
  ],
  "product_id": "c6.4u8g.cluster",
  "storage_spec_code": "dms.physical.storage.high.v2",
  "broker_num": 1
}
```

- name：实例名称，由您自行定义。
- engine：消息引擎，设置为reliability。
- engine_version：消息引擎的版本。
- storage_space：消息存储空间，单位MB。具体取值范围，请参考[创建实例](#)。
- vpc_id：RocketMQ实例所在的VPC（虚拟私有云）的ID。您可以在[虚拟私有云控制台](#)查询，也可以通过[查询VPC列表](#)API查询。
- subnet_id：VPC内子网的网络ID。您可以在[虚拟私有云控制台](#)查询，也可以通过[查询子网列表](#)API查询。
- security_group_id：安全组ID。您可以在[虚拟私有云控制台](#)查询，也可以通过[查询安全组列表](#)API查询。

- available_zones: 创建节点到指定的AZ ID, 该参数不能为空数组或者数组的值为空, 请参考[查询可用区信息](#)获取。
- product_id: 产品规格。具体取值范围, 请参考[创建实例](#)。
- storage_spec_code: 存储IO规格。具体取值范围, 请参考[创建实例](#)。
- broker_num: 代理个数。

5 API V2 (推荐)

5.1 生命周期管理

5.1.1 查询所有实例列表

功能介绍

查询租户的实例列表，支持按照条件查询。

调用方法

请参见[如何调用API](#)。

URI

GET /v2/{project_id}/instances

表 5-1 路径参数

参数	是否必选	参数类型	描述
project_id	是	String	项目ID，获取方式请参见 获取项目ID 。

表 5-2 Query 参数

参数	是否必选	参数类型	描述
engine	是	String	消息引擎：rocketmq。
name	否	String	实例名称。
instance_id	否	String	实例ID。

参数	是否必选	参数类型	描述
status	否	String	实例状态，详细状态说明请参考 实例状态说明 。
include_failure	否	String	是否返回创建失败的实例数。当参数值为“true”时，返回创建失败的实例数。参数值为“false”或者其他值，不返回创建失败的实例数。
exact_match_name	否	String	是否按照实例名称进行精确匹配查询。 默认为“false”，表示模糊匹配实例名称查询。若参数值为“true”表示按照实例名称进行精确匹配查询。
enterprise_project_id	否	String	企业项目ID。
limit	否	Integer	当次查询返回的最大个数，默认值为10，取值范围为1~50。
offset	否	Integer	偏移量，表示从此偏移量开始查询，offset大于等于0。

请求参数

无

响应参数

状态码： 200

表 5-3 响应 Body 参数

参数	参数类型	描述
instances	Array of ShowInstanceResp objects	实例列表。
instance_num	Integer	实例数量。

表 5-4 ShowInstanceResp

参数	参数类型	描述
name	String	实例名称。

参数	参数类型	描述
engine	String	引擎。
status	String	状态。
description	String	消息描述。
type	String	实例类型：集群，cluster。
specification	String	实例规格。
engine_version	String	版本。
instance_id	String	实例ID。
charging_mode	Integer	付费模式，1表示按需计费，0表示包年/包月计费。
vpc_id	String	私有云ID。
vpc_name	String	私有云名称。
created_at	String	完成创建时间。 格式为时间戳，指从格林威治时间1970年01月01日00时00分00秒起至指定时间的偏差总毫秒数。
product_id	String	产品标识。
security_group_id	String	安全组ID。
security_group_name	String	租户安全组名称。
subnet_id	String	子网ID。
subnet_name	String	子网名称。
subnet_cidr	String	子网路由（仅RocketMQ 5.x版本会显示此字段）。
available_zones	Array of strings	可用区ID列表。
available_zone_names	Array of strings	可用区名称列表。
user_id	String	用户ID。
user_name	String	用户名。
maintain_begin	String	维护时间窗开始时间，格式为HH:mm:ss。
maintain_end	String	维护时间窗结束时间，格式为HH:mm:ss。
enable_log_collection	Boolean	是否开启消息收集功能。

参数	参数类型	描述
storage_space	Integer	存储空间, 单位: GB。
used_storage_space	Integer	已用消息存储空间, 单位: GB。
enable_publicip	Boolean	是否开启公网。
publicip_id	String	实例绑定的弹性IP地址的ID。以英文逗号隔开多个弹性IP地址的ID。如果开启了公网访问功能(即enable_publicip为true), 该字段为必选。
publicip_address	String	公网IP地址。
ssl_enable	Boolean	是否开启SSL。
cross_vpc_info	String	跨VPC访问信息。
storage_resource_id	String	存储资源ID。
storage_spec_code	String	存储规格代码。
service_type	String	服务类型。
storage_type	String	存储类型。
extend_times	Long	扩展时间。
ipv6_enable	Boolean	是否开启IPv6。
support_features	String	实例支持的特性功能。
disk_encrypted	Boolean	是否开启磁盘加密。
ces_version	String	云监控版本。
node_num	Integer	节点数。
new_spec_billing_enable	Boolean	是否启用新规格计费。
enable_acl	Boolean	是否开启访问控制列表。
broker_num	Integer	节点数(仅RocketMQ 4.8.0版本会显示此字段)。
dns_enable	Boolean	实例是否开启域名访问功能。 <ul style="list-style-type: none"> • true: 开启 • false: 未开启
namesrv_address	String	元数据地址。
namesrv_domain_name	String	元数据域名。
broker_address	String	业务数据地址。

参数	参数类型	描述
public_namesrv_address	String	公网元数据地址。
public_namesrv_domain_name	String	公网元数据域名。
public_broker_address	String	公网业务数据地址。
grpc_address	String	grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。
grpc_domain_name	String	grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。
public_grpc_address	String	公网grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。
public_grpc_domain_name	String	公网grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。
enterprise_project_id	String	企业项目ID。
tags	Array of TagEntity objects	标签列表。
total_storage_space	Integer	总存储空间。
resource_spec_code	String	资源规格。

表 5-5 TagEntity

参数	参数类型	描述
key	String	标签键。 <ul style="list-style-type: none"> 不能为空。 对于同一个实例，Key值唯一。 长度为1~128个字符（中文也可以输入128个字符）。 由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @ 首尾字符不能为空格。

参数	参数类型	描述
value	String	标签值。 <ul style="list-style-type: none"> 长度为0~255个字符（中文也可以输入255个字符）。 由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @ 首尾字符不能为空格。

请求示例

查询所有实例的列表。

```
GET https://{endpoint}/v2/{project_id}/instances?engine=reliability
```

响应示例

状态码： 200

查询所有实例列表成功。

```

状态码

状态码	描述
200	查询所有实例列表成功。

错误码

请参见[错误码](#)。

5.1.2 创建实例

功能介绍

创建实例，该接口支持创建按需和包周期两种计费方式的实例。

调用方法

请参见[如何调用API](#)。

URI

POST /v2/{engine}/{project_id}/instances

表 5-6 路径参数

参数	是否必选	参数类型	描述
engine	是	String	消息引擎。
project_id	是	String	项目ID，获取方式请参见 获取项目ID 。

请求参数

表 5-7 请求 Body 参数

参数	是否必选	参数类型	描述
name	是	String	实例名称。 由英文字符开头，只能由英文字母、数字、中划线、下划线组成，长度为4~64的字符。
description	否	String	实例的描述信息。 长度不超过1024的字符串。 说明 \与"在json报文中属于特殊字符，如果参数值中需要显示\或者"字符，请在字符前增加转义字符\，比如\或者"。
engine	是	String	消息引擎。取值填写为：reliability。
engine_version	是	String	消息引擎的版本。取值填写为：4.8.0。
storage_space	是	Integer	存储空间。
vpc_id	是	String	虚拟私有云ID。 获取方法如下：登录虚拟私有云服务的控制台界面，在虚拟私有云的详情页面查找VPC ID。
subnet_id	是	String	子网信息。 获取方法如下：登录虚拟私有云服务的控制台界面，单击VPC下的子网，进入子网详情页面，查找网络ID。
security_group_id	是	String	指定实例所属的安全组。 获取方法如下：登录虚拟私有云服务的控制台界面，在安全组的详情页面查找安全组ID。

参数	是否必选	参数类型	描述
available_zones	是	Array of strings	<p>创建节点到指定且有资源的可用区ID。请参考查询可用区信息获取可用区ID。</p> <p>该参数不能为空数组或者数组的值为空，请注意查看该可用区是否有资源。</p> <p>创建RocketMQ实例，支持节点部署在1个或3个及3个以上的可用区。在为节点指定可用区时，用逗号分隔开。</p>
product_id	是	String	<p>RocketMQ实例规格。</p> <ul style="list-style-type: none"> • c6.4u8g.cluster.small: 单个代理最大Topic数2000，单个代理最大消费组数2000 • c6.4u8g.cluster: 单个代理最大Topic数4000，单个代理最大消费组数4000 • c6.8u16g.cluster: 单个代理最大Topic数8000，单个代理最大消费组数8000 • c6.12u24g.cluster: 单个代理最大Topic数12000，单个代理最大消费组数12000 • c6.16u32g.cluster: 单个代理最大Topic数16000，单个代理最大消费组数16000
ssl_enable	否	Boolean	<p>是否打开SSL加密访问。</p> <ul style="list-style-type: none"> • true: 打开SSL加密访问。 • false: 不打开SSL加密访问。
storage_spec_code	是	String	<p>存储IO规格。</p> <ul style="list-style-type: none"> • dms.physical.storage.high.v2: 高IO类型磁盘 • dms.physical.storage.ultra.v2: 超高IO类型磁盘
enterprise_project_id	否	String	<p>企业项目ID。若为企业项目账号，该参数必填。</p>
enable_acl	否	Boolean	<p>是否开启访问控制列表。</p>
ipv6_enable	否	Boolean	<p>是否支持IPv6。</p> <ul style="list-style-type: none"> • true: 支持 • false: 不支持

参数	是否必选	参数类型	描述
enable_publicip	否	Boolean	是否开启公网访问功能。默认不开启公网。 <ul style="list-style-type: none"> • true: 开启 • false: 不开启
publicip_id	否	String	实例绑定的弹性IP地址的ID。 以英文逗号隔开多个弹性IP地址的ID。 如果开启了公网访问功能（即enable_publicip为true），该字段为必选。
broker_num	是	Integer	代理个数。
bss_param	否	BssParam object	表示包周期计费模式的相关参数。 如果为空，则默认计费模式为按需计费；否则是包周期方式。

表 5-8 BssParam

参数	是否必选	参数类型	描述
is_auto_renew	否	Boolean	是否自动续订。 取值范围： <ul style="list-style-type: none"> • true: 自动续订。 • false: 不自动续订。 默认不自动续订。
charging_mode	否	String	计费模式。 功能说明：付费方式。 取值范围： <ul style="list-style-type: none"> • prePaid: 预付费，即包年包月； • postPaid: 后付费，即按需付费； 默认为postPaid。

参数	是否必选	参数类型	描述
is_auto_pay	否	Boolean	<p>下单订购后, 是否自动从客户的账户中支付, 而不需要客户手动去进行支付。</p> <p>取值范围:</p> <ul style="list-style-type: none"> • true: 是 (自动支付) • false: 否 (需要客户手动支付) <p>默认为手动支付。</p>
period_type	否	String	<p>订购周期类型。</p> <p>取值范围:</p> <ul style="list-style-type: none"> • month: 月 • year: 年 <p>chargingMode为prePaid时生效且为必选值。</p>
period_num	否	Integer	<p>订购周期数。</p> <p>取值范围:</p> <ul style="list-style-type: none"> • periodType=month (周期类型为月) 时, 取值为[1, 9]; • periodType=year (周期类型为年) 时, 取值为[1, 3]; <p>chargingMode为prePaid时生效且为必选值。</p>

响应参数

状态码: 200

表 5-9 响应 Body 参数

参数	参数类型	描述
instance_id	String	实例ID。

请求示例

创建一个RocketMQ实例, 规格为4U8G*1, 600GB的存储空间, 按需付费。

POST https://{endpoint}/v2/reliability/{project_id}/instances

```
{
  "name": "reliability-1751840557",
  "description": "",
  "engine": "reliability",
```

```
"engine_version": "4.8.0",

状态码

状态码	描述
200	创建实例成功。

错误码

请参见[错误码](#)。

5.1.3 查询指定实例

功能介绍

查询指定实例的详细信息。

调用方法

请参见[如何调用API](#)。

URI

GET /v2/{project_id}/instances/{instance_id}

表 5-10 路径参数

参数	是否必选	参数类型	描述
project_id	是	String	项目ID, 获取方式请参见 获取项目ID 。
instance_id	是	String	实例ID。

请求参数

无

响应参数

状态码: 200

表 5-11 响应 Body 参数

参数	参数类型	描述
name	String	实例名称。
engine	String	引擎。
status	String	状态。
description	String	消息描述。
type	String	实例类型: 集群, cluster。
specification	String	实例规格。
engine_version	String	版本。
instance_id	String	实例ID。
charging_mode	Integer	付费模式, 1表示按需计费, 0表示包年/包月计费。

参数	参数类型	描述
vpc_id	String	私有云ID。
vpc_name	String	私有云名称。
created_at	String	完成创建时间。 格式为时间戳，指从格林威治时间1970年01月01日00时00分00秒起至指定时间的偏差总毫秒数。
product_id	String	产品标识。
security_group_id	String	安全组ID。
security_group_name	String	租户安全组名称。
subnet_id	String	子网ID。
subnet_name	String	子网名称。
subnet_cidr	String	子网路由（仅RocketMQ 5.x版本会显示此字段）。
available_zones	Array of strings	可用区ID列表。
available_zone_names	Array of strings	可用区名称列表。
user_id	String	用户ID。
user_name	String	用户名。
maintain_begin	String	维护时间窗开始时间，格式为HH:mm:ss。
maintain_end	String	维护时间窗结束时间，格式为HH:mm:ss。
enable_log_collection	Boolean	是否开启消息收集功能。
storage_space	Integer	存储空间，单位：GB。
used_storage_space	Integer	已用消息存储空间，单位：GB。
enable_publicip	Boolean	是否开启公网。
publicip_id	String	实例绑定的弹性IP地址的ID。以英文逗号隔开多个弹性IP地址的ID。如果开启了公网访问功能（即enable_publicip为true），该字段为必选。
publicip_address	String	公网IP地址。
ssl_enable	Boolean	是否开启SSL。

参数	参数类型	描述
cross_vpc_info	String	跨VPC访问信息。
storage_resource_id	String	存储资源ID。
storage_spec_code	String	存储规格代码。
service_type	String	服务类型。
storage_type	String	存储类型。
extend_times	Long	扩展时间。
ipv6_enable	Boolean	是否开启IPv6。
support_features	String	实例支持的特性功能。
disk_encrypted	Boolean	是否开启磁盘加密。
ces_version	String	云监控版本。
node_num	Integer	节点数。
new_spec_billing_enable	Boolean	是否启用新规格计费。
enable_acl	Boolean	是否开启访问控制列表。
broker_num	Integer	节点数（仅RocketMQ 4.8.0版本会显示此字段）。
dns_enable	Boolean	实例是否开启域名访问功能。 <ul style="list-style-type: none"> • true: 开启 • false: 未开启
namesrv_address	String	元数据地址。
namesrv_domain_name	String	元数据域名。
broker_address	String	业务数据地址。
public_namesrv_address	String	公网元数据地址。
public_namesrv_domain_name	String	公网元数据域名。
public_broker_address	String	公网业务数据地址。
grpc_address	String	grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。
grpc_domain_name	String	grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。

参数	参数类型	描述
public_grpc_address	String	公网grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。
public_grpc_domain_name	String	公网grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。
enterprise_project_id	String	企业项目ID。
tags	Array of TagEntity objects	标签列表。
total_storage_space	Integer	总存储空间。
resource_spec_code	String	资源规格。

表 5-12 TagEntity

参数	参数类型	描述
key	String	标签键。 <ul style="list-style-type: none"> 不能为空。 对于同一个实例，Key值唯一。 长度为1~128个字符（中文也可以输入128个字符）。 由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @ 首尾字符不能为空格。
value	String	标签值。 <ul style="list-style-type: none"> 长度为0~255个字符（中文也可以输入255个字符）。 由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @ 首尾字符不能为空格。

请求示例

查询指定实例的详细信息。

```
GET https://{endpoint}/v2/{project_id}/instances/{instance_id}
```

响应示例

状态码： 200

查询实例成功。

- ```

表 5-14 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

## 请求参数

表 5-15 请求 Body 参数

| 参数                | 是否必选 | 参数类型    | 描述                                                                                                 |
|-------------------|------|---------|----------------------------------------------------------------------------------------------------|
| name              | 否    | String  | 实例名称。<br>由英文字符开头，只能由英文字母、数字、中划线组成，长度为4~64的字符。                                                      |
| description       | 否    | String  | 实例的描述信息。<br>长度不超过1024的字符串。<br><b>说明</b><br>\与"在json报文中属于特殊字符，如果参数值中需要显示\或者"字符，请在字符前增加转义字符\，比如\或者"。 |
| security_group_id | 否    | String  | 安全组ID。<br>获取方法如下：登录虚拟私有云服务的控制台界面，在安全组的详情页面查找安全组ID。                                                 |
| enable_acl        | 否    | Boolean | ACL访问控制。                                                                                           |
| enable_publicip   | 否    | Boolean | 是否开启公网。                                                                                            |
| publicip_id       | 否    | String  | 实例绑定的弹性IP地址的ID。<br>以英文逗号隔开多个弹性IP地址的ID。<br>如果开启了公网访问功能（即enable_publicip为true），该字段为必选。               |

## 响应参数

无

## 请求示例

修改RocketMQ实例的名称和描述信息。

```
PUT https://{endpoint}/v2/{project_id}/instances/{instance_id}
{
 "name": "rocketmq001",
 "description": "RocketMQ description"
}
```

## 响应示例

无

## 状态码

| 状态码 | 描述        |
|-----|-----------|
| 204 | 修改实例信息成功。 |

## 错误码

请参见[错误码](#)。

## 5.1.6 批量删除实例

### 功能介绍

批量删除实例。实例删除后，实例中原有的数据将被删除，且没有备份，请谨慎操作。

### 调用方法

请参见[如何调用API](#)。

### URI

POST /v2/{project\_id}/instances/action

表 5-16 路径参数

| 参数         | 是否必选 | 参数类型   | 描述                                    |
|------------|------|--------|---------------------------------------|
| project_id | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |

### 请求参数

表 5-17 请求 Body 参数

| 参数          | 是否必选 | 参数类型             | 描述                                       |
|-------------|------|------------------|------------------------------------------|
| instances   | 否    | Array of strings | 实例的ID列表。                                 |
| action      | 是    | String           | 对实例的操作: delete。                          |
| all_failure | 否    | String           | 参数值为reliability，表示删除租户所有创建失败的RocketMQ实例。 |

## 响应参数

状态码： 200

表 5-18 响应 Body 参数

| 参数      | 参数类型                            | 描述       |
|---------|---------------------------------|----------|
| results | Array of <b>results</b> objects | 修改实例的结果。 |

表 5-19 results

| 参数       | 参数类型   | 描述    |
|----------|--------|-------|
| result   | String | 操作结果。 |
| instance | String | 实例ID。 |

## 请求示例

- 批量删除RocketMQ实例。

```
POST https://{endpoint}/v2/{project_id}/instances/action
```

```
{
 "action": "delete",
 "instances": ["54602a9d-5e22-4239-9123-77e350df4a34", "7166cdea-
dbad-4d79-9610-7163e6f8b640"]
}
```

- 删除所有创建失败的RocketMQ实例。

```
POST https://{endpoint}/v2/{project_id}/instances/action
```

```
{
 "action": "delete",
 "all_failure": "reliability"
}
```

## 响应示例

状态码： 200

批量删除实例成功。

```
{
 "results": [{
 "result": "success",
 "instance": "019cacb7-4ff0-4d3c-9f33-f5f7b7fdc0e6"
 }]
}
```

## SDK 代码示例

SDK代码示例如下。

## Java

- 批量删除RocketMQ实例。

```
package com.huaweicloud.sdk.test;

import com.huaweicloud.sdk.core.auth.ICredential;
import com.huaweicloud.sdk.core.auth.BasicCredentials;

表 5-25 响应 Body 参数

| 参数              | 参数类型                                  | 描述           |
|-----------------|---------------------------------------|--------------|
| total           | Number                                | 消费组总数。       |
| groups          | Array of <b>ConsumerGroup</b> objects | 消费组列表。       |
| max             | Integer                               | 最大可创建消费组数量。  |
| remaining       | Integer                               | 剩余可创建消费组数量。  |
| next_offset     | Integer                               | 下个分页的offset。 |
| previous_offset | Integer                               | 上个分页的offset。 |

表 5-26 ConsumerGroup

| 参数        | 参数类型             | 描述                                           |
|-----------|------------------|----------------------------------------------|
| enabled   | Boolean          | 是否可以消费。                                      |
| broadcast | Boolean          | 是否广播。                                        |
| brokers   | Array of strings | 关联的代理列表。                                     |
| name      | String           | 消费组名称，只能由英文字母、数字、百分号、竖线、中划线、下划线组成，长度3~64个字符。 |

| 参数              | 参数类型             | 描述                 |
|-----------------|------------------|--------------------|
| group_desc      | String           | 消费组描述, 长度0~200个字符。 |
| retry_max_time  | Integer          | 最大重试次数, 取值范围为1~16。 |
| createdAt       | Long             | 创建时间戳。             |
| permissions     | Array of strings | 权限集。               |
| consume_orderly | Boolean          | 是否按顺序消费。           |

## 请求示例

查询RocketMQ实例的消费组列表。

```
GET https://{endpoint}/v2/{project_id}/instances/{instance_id}/groups
```

## 响应示例

状态码: 200

查询消费组成功。

```
{
 "total": 1,
 "groups": [{
 "name": "group-1",
 "enabled": true,
 "broadcast": false,
 "brokers": ["broker-0"],
 "createdAt": 1709087952686,
 "permissions": [],
 "retry_max_time": 16,
 "consume_orderly": false
 }],
 "max": 4000,
 "remaining": 3999,
 "next_offset": -1,
 "previous_offset": -1
}
```

## SDK 代码示例

SDK代码示例如下。

## 5.2.2 创建消费组或批量删除消费组

### 功能介绍

创建消费组或批量删除消费组。

### 调用方法

请参见[如何调用API](#)。

### URI

POST /v2/{project\_id}/instances/{instance\_id}/groups

表 5-27 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

表 5-28 Query 参数

| 参数     | 是否必选 | 参数类型   | 描述                                |
|--------|------|--------|-----------------------------------|
| action | 否    | String | 批量删除消费组时使用，不配置则为创建接口。删除操作：delete。 |

### 请求参数

表 5-29 请求 Body 参数

| 参数     | 是否必选 | 参数类型             | 描述                                           |
|--------|------|------------------|----------------------------------------------|
| groups | 否    | Array of strings | 待删除的消费组列表。                                   |
| name   | 否    | String           | 消费组名称，只能由英文字母、数字、百分号、竖线、中划线、下划线组成，长度3~64个字符。 |

| 参数              | 是否必选 | 参数类型             | 描述                                  |
|-----------------|------|------------------|-------------------------------------|
| brokers         | 否    | Array of strings | 关联的代理列表（仅RocketMQ实例4.8.0版本需要填写此参数）。 |
| broadcast       | 否    | Boolean          | 是否广播。                               |
| retry_max_time  | 否    | Integer          | 最大重试次数，取值范围为1~16。                   |
| enabled         | 否    | Boolean          | 是否可以消费。                             |
| consume_orderly | 否    | Boolean          | 是否按顺序消费（仅RocketMQ实例5.x版本需要填写此参数）。   |
| group_desc      | 否    | String           | 消费组描述，长度0~200个字符。                   |

## 响应参数

状态码： 200

表 5-30 响应 Body 参数

| 参数     | 参数类型   | 描述          |
|--------|--------|-------------|
| job_id | String | 删除消费组的任务ID  |
| name   | String | 创建成功的消费组名称。 |

## 请求示例

- 4.8.0版本RocketMQ实例创建一个消费组，不允许以广播模式消费，关联代理为broker-0，最大重试次数为16。

```
POST https://{endpoint}/v2/{project_id}/instances/{instance_id}/groups
```

```
{
 "name": "consumer-group-test",
 "group_desc": "group_description",
 "brokers": ["broker-0"],
 "broadcast": false,
 "retry_max_time": 16
}
```

- 5.x版本RocketMQ实例创建一个消费组，不允许以广播模式消费，不按顺序消费，最大重试次数为16。

```
POST https://{endpoint}/v2/{project_id}/instances/{instance_id}/groups
```

```
{
 "name": "consumer-group-test",
 "group_desc": "group_description",
 "consume_orderly": false,
 "broadcast": false,
}
```

```
"retry_max_time": 16
}
```

- 删除消费组consumer-group-test。

POST https://{endpoint}/v2/{project\_id}/instances/{instance\_id}/groups?action=delete

```
{
 "groups": ["consumer-group-test"]
}
```

## 响应示例

状态码： 200

创建消费组或批量删除消费组成功。

```
{
 "name": "consumer-group-test"
}
```

## SDK 代码示例

SDK代码示例如下。

### Java

- 4.8.0版本RocketMQ实例创建一个消费组，不允许以广播模式消费，关联代理为broker-0，最大重试次数为16。

```

## 状态码

| 状态码 | 描述               |
|-----|------------------|
| 200 | 创建消费组或批量删除消费组成功。 |

## 错误码

请参见[错误码](#)。

## 5.2.3 批量修改消费组

### 功能介绍

批量修改消费组。

### 调用方法

请参见[如何调用API](#)。

### URI

PUT /v2/{project\_id}/instances/{instance\_id}/groups

表 5-31 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

### 请求参数

表 5-32 请求 Body 参数

| 参数     | 是否必选 | 参数类型                                                         | 描述     |
|--------|------|--------------------------------------------------------------|--------|
| groups | 否    | Array of <a href="#">CreateOrUpdateConsumerGroup</a> objects | 消费组列表。 |

表 5-33 CreateOrUpdateConsumerGroup

| 参数   | 是否必选 | 参数类型   | 描述                                           |
|------|------|--------|----------------------------------------------|
| name | 否    | String | 消费组名称，只能由英文字母、数字、百分号、竖线、中划线、下划线组成，长度3~64个字符。 |

| 参数              | 是否必选 | 参数类型             | 描述                                  |
|-----------------|------|------------------|-------------------------------------|
| brokers         | 否    | Array of strings | 关联的代理列表（仅RocketMQ实例4.8.0版本需要填写此参数）。 |
| broadcast       | 否    | Boolean          | 是否广播。                               |
| retry_max_time  | 否    | Integer          | 最大重试次数，取值范围为1~16。                   |
| enabled         | 否    | Boolean          | 是否可以消费。                             |
| consume_orderly | 否    | Boolean          | 是否按顺序消费（仅RocketMQ实例5.x版本需要填写此参数）。   |
| group_desc      | 否    | String           | 消费组描述，长度0~200个字符。                   |

## 响应参数

状态码： 200

表 5-34 响应 Body 参数

| 参数     | 参数类型   | 描述    |
|--------|--------|-------|
| job_id | String | 任务ID。 |

## 请求示例

批量修改消费组的参数，将consumer-group-test消费组的最大重试次数修改为16。

```
PUT https://{endpoint}/v2/{project_id}/instances/{instance_id}/groups
```

```
{
 "groups": [{
 "name": "consumer-group-test",
 "enabled": true,
 "broadcast": false,
 "consume_orderly": false,
 "retry_max_time": 16
 }]
}
```

## 响应示例

状态码： 200

批量修改消费组成功。

```
{
 "job_id": "8abfa7b27da211df017da340427b0979"
}
```

## SDK 代码示例

SDK代码示例如下。

### Java

批量修改消费组的参数，将consumer-group-test消费组的最大重试次数修改为16。

```

## 5.2.6 修改消费组

### 功能介绍

修改指定消费组参数。

### 调用方法

请参见[如何调用API](#)。

### URI

PUT /v2/{project\_id}/instances/{instance\_id}/groups/{group}

表 5-39 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |
| group       | 是    | String | 消费组名称。                                |

### 请求参数

表 5-40 请求 Body 参数

| 参数        | 是否必选 | 参数类型    | 描述      |
|-----------|------|---------|---------|
| enabled   | 是    | Boolean | 是否可以消费。 |
| broadcast | 是    | Boolean | 是否广播。   |

| 参数             | 是否必选 | 参数类型             | 描述                     |
|----------------|------|------------------|------------------------|
| brokers        | 否    | Array of strings | 关联的代理列表。               |
| name           | 否    | String           | 待修改参数的消费组（消费组名称不支持修改）。 |
| retry_max_time | 是    | Integer          | 最大重试次数，取值范围为 1~16。     |

## 响应参数

状态码： 204

表 5-41 响应 Body 参数

| 参数 | 参数类型    | 描述    |
|----|---------|-------|
| -  | AnyType | 操作成功。 |

## 请求示例

修改consumer-group-test消费组的参数，最大重试次数修改为16。

```
PUT https://{endpoint}/v2/{project_id}/instances/{instance_id}/groups/{group}
```

```
{
 "name" : "consumer-group-test",
 "enabled" : true,
 "retry_max_time" : 16,
 "broadcast" : true
}
```

## 响应示例

无

## SDK 代码示例

SDK代码示例如下。

### Java

修改consumer-group-test消费组的参数，最大重试次数修改为16。

```
package com.huaweicloud.sdk.test;

import com.huaweicloud.sdk.core.auth.ICredential;
import com.huaweicloud.sdk.core.auth.BasicCredentials;
import com.huaweicloud.sdk.core.exception.ConnectionException;
import com.huaweicloud.sdk.core.exception.RequestTimeoutException;
import com.huaweicloud.sdk.core.exception.ServiceResponseException;
import com.huaweicloud.sdk.rocketmq.v2.region.RocketMQRegion;
import com.huaweicloud.sdk.rocketmq.v2.*;
```

```
import com.huaweicloud.sdk.rocketmq.v2.model.*;

public class UpdateConsumerGroupSolution {

 public static void main(String[] args) {
 // The AK and SK used for authentication are hard-coded or stored in plaintext, which has great
 // security risks. It is recommended that the AK and SK be stored in ciphertext in configuration files or

## 5.2.9 查询消费者列表

### 功能介绍

查询消费组内消费者列表

### 调用方法

请参见[如何调用API](#)。

## URI

GET /v2/rocketmq/{project\_id}/instances/{instance\_id}/groups/{group}/clients

表 5-51 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |
| group       | 是    | String | 消费组名称。                                 |

表 5-52 Query 参数

| 参数        | 是否必选 | 参数类型    | 描述                                           |
|-----------|------|---------|----------------------------------------------|
| limit     | 否    | Integer | 查询数量, 取值范围为1~50。                             |
| offset    | 否    | Integer | 偏移量, 表示从此偏移量开始查询, offset大于等于0。               |
| is_detail | 否    | Boolean | 是否查询消费者详细列表, 参数为“true”则表示查询详细列表, 否则表示查询简易列表。 |

## 请求参数

无

## 响应参数

状态码: 200

表 5-53 响应 Body 参数

| 参数                       | 参数类型    | 描述           |
|--------------------------|---------|--------------|
| group_name               | String  | 消费组名称。       |
| online                   | Boolean | 消费组是否在线。     |
| subscription_consistency | Boolean | 订阅关系是否一致。    |
| total                    | Integer | 消费者总数。       |
| next_offset              | Integer | 下个分页的offset。 |
| previous_offset          | Integer | 上个分页的offset。 |

| 参数      | 参数类型                                        | 描述         |
|---------|---------------------------------------------|------------|
| clients | Array of <a href="#">ClientData</a> objects | 消费者订阅详情列表。 |

表 5-54 ClientData

| 参数            | 参数类型                                          | 描述      |
|---------------|-----------------------------------------------|---------|
| language      | String                                        | 客户端语言。  |
| version       | String                                        | 客户端版本。  |
| client_id     | String                                        | 客户端ID。  |
| client_addr   | String                                        | 客户端地址。  |
| subscriptions | Array of <a href="#">Subscription</a> objects | 订阅关系列表。 |

表 5-55 Subscription

| 参数         | 参数类型   | 描述                   |
|------------|--------|----------------------|
| topic      | String | 订阅的Topic名称。          |
| type       | String | 订阅类型，取值如下：TAG和SQL92。 |
| expression | String | 订阅tag字符。             |

## 请求示例

查询指定消费组的消费者列表，查询数量为10，从offset=0开始查询。

```
GET https://{endpoint}/v2/rocketmq/{project_id}/instances/{instance_id}/groups/{group}/clients?offset=0&limit=10&is_detail=true
```

## 响应示例

状态码： 200

查询消费者订阅详情成功。

```
{
 "group_name": "test",
 "online": true,
 "subscription_consistency": true,
 "total": 1,
 "next_offset": -1,
 "previous_offset": -1,
 "clients": [{
 "client_id": "192.168.0.1@consumer1",
```

```

"language" : "JAVA",
"version" : "V4_8_0",
"client_addr" : "192.168.0.1:65233",
"subscriptions" : [{
 "topic" : "topicA",
 "type" : "TAG",
 "expression" : "tagA"
}]
}]
}

```

## 响应参数

状态码： 200

表 5-60 响应 Body 参数

| 参数     | 参数类型   | 描述        |
|--------|--------|-----------|
| id     | String | 主题名称。     |
| job_id | String | 删除主题任务ID。 |

## 请求示例

- 4.8.0版本RocketMQ实例创建一个主题，关联的代理为broker-0，队列数为3。

POST https://{endpoint}/v2/{project\_id}/instances/{instance\_id}/topics

```
{
 "name": "topic-test",
 "brokers": ["broker-0"],
 "permission": "all",
 "queues": [{
 "broker": "broker-0",
 "queue_num": 3
 }]
}
```

- 5.x版本RocketMQ实例创建一个主题，消息类型为普通。

```
POST https://{endpoint}/v2/{project_id}/instances/{instance_id}/topics
{
 "name": "topic-test",
 "message_type": "NORMAL"
}
```

## 响应示例

**状态码： 200**

创建主题或批量删除主题成功。

```
{
 "id": "topic-test"
}
```

## SDK 代码示例

SDK代码示例如下。

### Java

- 4.8.0版本RocketMQ实例创建一个主题，关联的代理为broker-0，队列数为3。

```
package com.huaweicloud.sdk.test;

## 5.3.2 查询主题列表

### 功能介绍

该接口用于查询指定RocketMQ实例的Topic列表。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/{project\_id}/instances/{instance\_id}/topics

表 5-61 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |

表 5-62 Query 参数

| 参数     | 是否必选 | 参数类型    | 描述                             |
|--------|------|---------|--------------------------------|
| limit  | 否    | Integer | 查询数量, 取值范围为1~50。               |
| offset | 否    | Integer | 偏移量, 表示从此偏移量开始查询, offset大于等于0。 |

## 请求参数

无

## 响应参数

状态码: 200

表 5-63 响应 Body 参数

| 参数              | 参数类型                                   | 描述            |
|-----------------|----------------------------------------|---------------|
| total           | Integer                                | Topic总数。      |
| max             | Integer                                | 最大可创建Topic数量。 |
| remaining       | Integer                                | 剩余可创建Topic数量。 |
| next_offset     | Integer                                | 下个分页的offset。  |
| previous_offset | Integer                                | 上个分页的offset。  |
| topics          | Array of <a href="#">Topic</a> objects | Topic列表。      |

表 5-64 Topic

| 参数                   | 参数类型   | 描述       |
|----------------------|--------|----------|
| name                 | String | Topic名称。 |
| total_read_queue_num | Number | 总读队列个数。  |

| 参数                    | 参数类型                            | 描述                            |
|-----------------------|---------------------------------|-------------------------------|
| total_write_queue_num | Number                          | 总写队列个数。                       |
| permission            | String                          | 权限。                           |
| brokers               | Array of <b>brokers</b> objects | 关联的代理。                        |
| message_type          | String                          | 消息类型 (RocketMQ实例5.x版本才包含此参数)。 |

表 5-65 brokers

| 参数              | 参数类型   | 描述     |
|-----------------|--------|--------|
| broker_name     | String | 代理名称。  |
| read_queue_num  | Number | 读队列个数。 |
| write_queue_num | Number | 写队列个数。 |

## 请求示例

查询指定RocketMQ实例的主题列表，查询数量为10，从offset=0开始查询。

```
GET https://{endpoint}/v2/{project_id}/instances/{instance_id}/topics?offset=0&limit=10
```

## 响应示例

状态码：200

查询成功。

```
{
 "total": "3,",
 "max": "2000,",
 "remaining": "1997,",
 "next_offset": "-1,",
 "previous_offset": "-1,",
 "topics": [{
 "name": "topic-1",
 "total_read_queue_num": 3,
 "total_write_queue_num": 3,
 "permission": "all",
 "brokers": [{
 "broker_name": "broker-0",
 "read_queue_num": 3,
 "write_queue_num": 3
 }],
 "message_type": "NORMAL"
 }, {
 "name": "topic-2",
 "total_read_queue_num": 3,
 "total_write_queue_num": 3,
 "permission": "all",
 "brokers": [{
```

```

"broker_name" : "broker-0",
"read_queue_num" : 3,
"write_queue_num" : 3
}],
"message_type" : "NORMAL"
}, {
"name" : "topic-3",
"total_read_queue_num" : 3,
"total_write_queue_num" : 3,

### 功能介绍

查询单个主题。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/{project\_id}/instances/{instance\_id}/topics/{topic}

表 5-68 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |
| topic       | 是    | String | 主题名称。                                  |

### 请求参数

无

### 响应参数

状态码: 200

表 5-69 响应 Body 参数

| 参数                    | 参数类型   | 描述       |
|-----------------------|--------|----------|
| name                  | String | Topic名称。 |
| total_read_queue_num  | Number | 总读队列个数。  |
| total_write_queue_num | Number | 总写队列个数。  |
| permission            | String | 权限。      |

| 参数           | 参数类型                            | 描述                            |
|--------------|---------------------------------|-------------------------------|
| brokers      | Array of <b>brokers</b> objects | 关联的代理。                        |
| message_type | String                          | 消息类型 (RocketMQ实例5.x版本才包含此参数)。 |

表 5-70 brokers

| 参数              | 参数类型   | 描述     |
|-----------------|--------|--------|
| broker_name     | String | 代理名称。  |
| read_queue_num  | Number | 读队列个数。 |
| write_queue_num | Number | 写队列个数。 |

## 请求示例

查询指定的单个主题的详细信息。

GET https://{endpoint}/v2/{project\_id}/instances/{instance\_id}/topics/{topic}

## 响应示例

**状态码： 200**

查询单个主题成功。

```
{
 "total_read_queue_num": 3,
 "total_write_queue_num": 3,
 "permission": "all",
 "brokers": [{
 "broker_name": "broker-0",
 "read_queue_num": 3,
 "write_queue_num": 3
 }],
 "message_type": "NORMAL"
}
```

## 5.3.6 查询主题消费组列表

### 功能介绍

查询主题消费组列表。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/{project\_id}/instances/{instance\_id}/topics/{topic}/groups

表 5-74 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |
| topic       | 是    | String | 主题名称。                                  |

表 5-75 Query 参数

| 参数     | 是否必选 | 参数类型    | 描述                              |
|--------|------|---------|---------------------------------|
| limit  | 否    | Integer | 当次查询返回的最大个数, 默认值为10, 取值范围为1~50。 |
| offset | 否    | Integer | 偏移量, 表示从此偏移量开始查询, offset大于等于0。  |

## 请求参数

无

## 响应参数

状态码: 200

表 5-76 响应 Body 参数

| 参数     | 参数类型             | 描述     |
|--------|------------------|--------|
| groups | Array of strings | 消费组列表。 |

## 请求示例

查询指定主题的消费组列表。

```
GET https://{endpoint}/v2/{project_id}/instances/{instance_id}/topics/{topic}/groups
```

## 响应示例

状态码: 200

查询主题消费组列表成功。

```
{
 "groups": ["CID_JODIE_1", "test_consumer"]
}
```

## SDK 代码示例

SDK代码示例如下。

# 5.4 消息管理

## 5.4.1 查询消息

### 功能介绍

查询消息。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/{engine}/{project\_id}/instances/{instance\_id}/messages

表 5-81 路径参数

| 参数     | 是否必选 | 参数类型   | 描述    |
|--------|------|--------|-------|
| engine | 是    | String | 消息引擎。 |

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |

表 5-82 Query 参数

| 参数         | 是否必选 | 参数类型   | 描述                              |
|------------|------|--------|---------------------------------|
| topic      | 是    | String | 主题名称。                           |
| limit      | 否    | String | 查询数量。                           |
| offset     | 否    | String | 偏移量, 表示从此偏移量开始查询, offset大于等于0。  |
| key        | 否    | String | 消息的key。                         |
| start_time | 否    | String | 开始时间 (不通过msg_id精确查询消息时, 此参数必填)。 |
| end_time   | 否    | String | 结束时间 (不通过msg_id精确查询消息时, 此参数必填)。 |
| msg_id     | 否    | String | 消息ID。                           |

## 请求参数

无

## 响应参数

状态码: 200

表 5-83 响应 Body 参数

| 参数       | 参数类型                                     | 描述    |
|----------|------------------------------------------|-------|
| messages | Array of <a href="#">Message</a> objects | 消息列表。 |
| total    | Number                                   | 消息总数。 |

表 5-84 Message

| 参数     | 参数类型   | 描述    |
|--------|--------|-------|
| msg_id | String | 消息ID。 |

| 参数              | 参数类型                                           | 描述         |
|-----------------|------------------------------------------------|------------|
| instance_id     | String                                         | 实例ID。      |
| topic           | String                                         | 主题名称。      |
| store_timestamp | Number                                         | 存储消息的时间。   |
| born_timestamp  | Number                                         | 产生消息的时间。   |
| reconsume_times | Integer                                        | 重试次数。      |
| body            | String                                         | 消息体。       |
| body_crc        | Number                                         | 消息体校验和。    |
| store_size      | Number                                         | 存储大小。      |
| property_list   | Array of <a href="#">property_list</a> objects | 消息属性列表。    |
| born_host       | String                                         | 产生消息的主机IP。 |
| store_host      | String                                         | 存储消息的主机IP。 |
| queue_id        | Integer                                        | 队列ID。      |
| queue_offset    | Integer                                        | 在队列中的偏移量。  |

表 5-85 property\_list

| 参数    | 参数类型   | 描述    |
|-------|--------|-------|
| name  | String | 属性名称。 |
| value | String | 属性值。  |

## 请求示例

查询消息。

```
GET https://{endpoint}/v2/{engine}/{project_id}/instances/{instance_id}/messages?topic={topic}
```

## 响应示例

### 功能介绍

导出死信消息。

### 调用方法

请参见[如何调用API](#)。

### URI

POST /v2/{project\_id}/instances/{instance\_id}/messages/export

表 5-90 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |

## 请求参数

表 5-91 请求 Body 参数

| 参数            | 是否必选 | 参数类型             | 描述       |
|---------------|------|------------------|----------|
| topic         | 否    | String           | 主题名称。    |
| msg_id_list   | 否    | Array of strings | 消息ID列表。  |
| uniq_key_list | 否    | Array of strings | 唯一Key列表。 |

## 响应参数

状态码： 200

表 5-92 响应 Body 参数

| 参数     | 参数类型                            | 描述  |
|--------|---------------------------------|-----|
| [数组元素] | Array of <b>Message</b> objects | 消息。 |

表 5-93 Message

| 参数              | 参数类型    | 描述       |
|-----------------|---------|----------|
| msg_id          | String  | 消息ID。    |
| instance_id     | String  | 实例ID。    |
| topic           | String  | 主题名称。    |
| store_timestamp | Number  | 存储消息的时间。 |
| born_timestamp  | Number  | 产生消息的时间。 |
| reconsume_times | Integer | 重试次数。    |

| 参数            | 参数类型                                           | 描述         |
|---------------|------------------------------------------------|------------|
| body          | String                                         | 消息体。       |
| body_crc      | Number                                         | 消息体校验和。    |
| store_size    | Number                                         | 存储大小。      |
| property_list | Array of <a href="#">property_list</a> objects | 消息属性列表。    |
| born_host     | String                                         | 产生消息的主机IP。 |
| store_host    | String                                         | 存储消息的主机IP。 |
| queue_id      | Integer                                        | 队列ID。      |
| queue_offset  | Integer                                        | 在队列中的偏移量。  |

表 5-94 property\_list

| 参数    | 参数类型   | 描述    |
|-------|--------|-------|
| name  | String | 属性名称。 |
| value | String | 属性值。  |

## 请求示例

导出主题中指定消息ID和Key的死信消息。

```
POST https://{endpoint}/v2/{project_id}/instances/{instance_id}/messages/export
{
 "topic": "%DLQ%group1",
 "msg_id_list": ["COA8011700002774000000000013B19D", "COA8011700002774000000000013B30F"],
 "uniq_key_list": ["7F000001001C18B4AAC26B8AED170010", "7F000001001C18B4AAC26B8AEE030015"]
}
```

## 响应示例

**状态码： 200**

导出死信消息成功。

```
{
 "topic": "topic_01",
 "body": "Hello world",
 "property_list": {
 "name": "ORIGIN_MESSAGE_ID",
 "value": "COA8005B000027750000000000000EBAE"
 },
 "msg_id": "COA8005B00002775000000000000133A2",
 "instance_id": "56055acb-3c3b-4481-aeab-10464086c2b4",
 "store_timestamp": 1662690563020,
 "born_timestamp": 1662690324415,
 "reconsume_times": 5,
}
```

```
"body_crc" : 198614610,
"store_size" : 317,
"born_host" : "10.58.233.224:63529",
"store_host" : "192.168.0.91:10101",
"queue_id" : 0,
"queue_offset" : 0
}
```

## SDK 代码示例

SDK代码示例如下。

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| engine      | 是    | String | 消息引擎。                                  |
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |

## 请求参数

表 5-100 请求 Body 参数

| 参数          | 是否必选 | 参数类型             | 描述         |
|-------------|------|------------------|------------|
| group       | 是    | String           | Group ID。  |
| topic       | 否    | String           | 消息所属Topic。 |
| client_id   | 是    | String           | 客户端ID。     |
| msg_id_list | 否    | Array of strings | 消息列表。      |

## 响应参数

状态码: 200

表 5-101 响应 Body 参数

| 参数             | 参数类型                                            | 描述      |
|----------------|-------------------------------------------------|---------|
| resend_results | Array of <a href="#">resend_results</a> objects | 消费验证结果。 |

表 5-102 resend\_results

| 参数            | 参数类型   | 描述    |
|---------------|--------|-------|
| msg_id        | String | 消息ID。 |
| error_code    | String | 错误码。  |
| error_message | String | 错误信息。 |

## 请求示例

消费验证。

```
POST https://{endpoint}/v2/{engine}/{project_id}/instances/{instance_id}/messages/resend
{
 "group": "GID_test",
 "client_id": "192.168.0.1",
 "msg_id_list": ["id1"]
}
```

## 响应示例

**状态码： 200**

消费验证成功。

```
{
 "resend_results": [{
 "msg_id": "COA8149E00002776000000000000B6835",
 "error_code": "DMS.00000000",
 "error_message": "Success."
 }]
}
```

## SDK 代码示例

SDK代码示例如下。

### Java

表 5-108 topic\_perms

| 参数   | 参数类型   | 描述    |
|------|--------|-------|
| name | String | 主题名称。 |
| perm | String | 权限。   |

表 5-109 group\_perms

| 参数   | 参数类型   | 描述     |
|------|--------|--------|
| name | String | 消费组名称。 |
| perm | String | 权限。    |

## 请求示例

创建一个非管理员的用户，授予发布、订阅topic1和group1的权限。

POST https://{endpoint}/v2/{project\_id}/instances/{instance\_id}/users

```
{
 "access_key" : "user_name",
 "secret_key" : "*****",
 "white_remote_address" : "",
 "admin" : false,
 "default_topic_perm" : "DENY",
 "default_group_perm" : "DENY",
 "topic_perms" : [{
 "name" : "topic1",
 "perm" : "PUB|SUB"
 }],
 "group_perms" : [{
 "name" : "group1",
 "perm" : "PUB|SUB"
 }]
}
```

## 响应示例

状态码： 200

创建成功。

```
{
 "access_key" : "test_01",
 "admin" : false,
 "default_group_perm" : "DENY",
 "default_topic_perm" : "SUB",
 "group_perms" : [],
 "secret_key" : "*****",
 "topic_perms" : [],
 "white_remote_address" : ""
}
```

## SDK 代码示例

SDK代码示例如下。

## Java

创建一个非管理员的用户，授予发布、订阅topic1和group1的权限。

```
package com.huaweicloud.sdk.test;

import com.huaweicloud.sdk.core.auth.ICredential;

## 5.5.2 查询用户列表

### 功能介绍

查询用户列表。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/{project\_id}/instances/{instance\_id}/users

表 5-110 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

表 5-111 Query 参数

| 参数     | 是否必选 | 参数类型   | 描述                           |
|--------|------|--------|------------------------------|
| offset | 否    | String | 偏移量，表示从此偏移量开始查询，offset大于等于0。 |
| limit  | 否    | String | 查询数量。                        |

## 请求参数

无

## 响应参数

状态码： 200

表 5-112 响应 Body 参数

| 参数    | 参数类型                         | 描述     |
|-------|------------------------------|--------|
| users | Array of <b>User</b> objects | 用户列表。  |
| total | Number                       | 总用户个数。 |

表 5-113 User

| 参数                   | 参数类型    | 描述                                                                                                                                                                                                       |
|----------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| access_key           | String  | 用户名，只能英文字母开头，且由英文字母、数字、中划线、下划线组成，长度为7~64个字符。                                                                                                                                                             |
| secret_key           | String  | 密钥。<br>8-32个字符。<br>至少包含以下字符中的3种： <ul style="list-style-type: none"> <li>• 大写字母</li> <li>• 小写字母</li> <li>• 数字</li> <li>• 特殊字符`~!@#\$\$%^&amp;*()-_+=\  [{}];:","&lt;.&gt;/?`密钥。</li> </ul> 不能与名称或倒序的名称相同。 |
| white_remote_address | String  | IP白名单。                                                                                                                                                                                                   |
| admin                | Boolean | 是否为管理员。                                                                                                                                                                                                  |

| 参数                 | 参数类型                                         | 描述        |
|--------------------|----------------------------------------------|-----------|
| default_topic_perm | String                                       | 默认的主题权限。  |
| default_group_perm | String                                       | 默认的消费组权限。 |
| topic_perms        | Array of <a href="#">topic_perms</a> objects | 特殊的主题权限。  |
| group_perms        | Array of <a href="#">group_perms</a> objects | 特殊的消费组权限。 |

表 5-114 topic\_perms

| 参数   | 参数类型   | 描述    |
|------|--------|-------|
| name | String | 主题名称。 |
| perm | String | 权限。   |

表 5-115 group\_perms

| 参数   | 参数类型   | 描述     |
|------|--------|--------|
| name | String | 消费组名称。 |
| perm | String | 权限。    |

## 请求示例

查询用户列表。

```
GET https://{endpoint}/v2/{project_id}/instances/{instance_id}/users?offset=0&limit=10
```

## 响应示例

状态码： 200

查询结果。

```
{
 "users": [{
 "access_key": "test_01",
 "admin": false,
 "default_group_perm": "DENY",
 "default_topic_perm": "SUB",
 "group_perms": [],
 "secret_key": "*****",
 "topic_perms": [],
```

```
"white_remote_address" : ""
}],
"total" : 1
}
```

## 请求示例

修改用户参数，授予user\_name用户发布、订阅topic1和group1的权限。

```
PUT https://{endpoint}/v2/{project_id}/instances/{instance_id}/users/{user_name}
```

```
{
 "access_key" : "user_name",
 "secret_key" : "*****",
 "white_remote_address" : "",
 "admin" : false,
 "default_topic_perm" : "DENY",
 "default_group_perm" : "DENY",
 "topic_perms" : [{
 "name" : "topic1",
 "perm" : "PUB|SUB"
 }],
 "group_perms" : [{
 "name" : "group1",
 "perm" : "PUB|SUB"
 }]
}
```

## 响应示例

**状态码： 200**

修改成功。

```
{
 "access_key" : "test_01",
 "admin" : false,
 "default_group_perm" : "DENY",
 "default_topic_perm" : "SUB",
 "group_perms" : [],
 "secret_key" : "*****",
 "topic_perms" : [],
 "white_remote_address" : ""
}
```

## SDK 代码示例

SDK代码示例如下。

## Java

修改用户参数，授予user\_name用户发布、订阅topic1和group1的权限。

```
package com.huaweicloud.sdk.test;

import com.huaweicloud.sdk.core.auth.ICredential;
import com.huaweicloud.sdk.core.auth.BasicCredentials;
import com.huaweicloud.sdk.core.exception.ConnectionException;
import com.huaweicloud.sdk.core.exception.RequestTimeoutException;
import com.huaweicloud.sdk.core.exception.ServiceResponseException;
import com.huaweicloud.sdk.rocketmq.v2.region.RocketMQRegion;
import com.huaweicloud.sdk.rocketmq.v2.*;
import com.huaweicloud.sdk.rocketmq.v2.model.*;

import java.util.List;
import java.util.ArrayList;

public class UpdateUserSolution {

 public static void main(String[] args) {
 // The AK and SK used for authentication are hard-coded or stored in plaintext, which has great
 // security risks. It is recommended that the AK and SK be stored in ciphertext in configuration files or
 // environment variables and decrypted during use to ensure security.
 // In this example, AK and SK are stored in environment variables for authentication. Before running
 // this example, set environment variables CLOUD_SDK_AK and CLOUD_SDK_SK in the local environment
 String ak = System.getenv("CLOUD_SDK_AK");
 String sk = System.getenv("CLOUD_SDK_SK");
 String projectId = "{project_id}";

| group_perms              | Array of <a href="#">group_perms</a> objects | 特殊的消费组权限。                                                                                                                                                                                     |

表 5-125 topic\_perms

| 参数   | 参数类型   | 描述    |
|------|--------|-------|
| name | String | 主题名称。 |
| perm | String | 权限。   |

表 5-126 group\_perms

| 参数   | 参数类型   | 描述     |
|------|--------|--------|
| name | String | 消费组名称。 |
| perm | String | 权限。    |

## 请求示例

查询用户详情。

```
GET https://{endpoint}/v2/{project_id}/instances/{instance_id}/users/{user_name}?offset=0&limit=10
```

## 响应示例

状态码： 200

查询用户详情成功。

```
{
 "access_key": "test_01",
 "admin": false,
 "default_group_perm": "DENY",
 "default_topic_perm": "SUB",
 "group_perms": [],
 "secret_key": "*****",
 "topic_perms": [],
 "white_remote_address": ""
}
```

## SDK 代码示例

## 状态码

| 状态码 | 描述            |
|-----|---------------|
| 200 | 消费组的授权用户列表成功。 |

## 错误码

请参见[错误码](#)。

## 5.6 元数据迁移

### 5.6.1 新建元数据迁移任务

#### 功能介绍

新建元数据迁移任务。

## 调用方法

请参见[如何调用API](#)。

## URI

POST /v2/{project\_id}/instances/{instance\_id}/metadata

表 5-137 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                     |
|-------------|------|--------|----------------------------------------|
| project_id  | 是    | String | 项目ID, 获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                  |

表 5-138 Query 参数

| 参数        | 是否必选 | 参数类型   | 描述                                                            |
|-----------|------|--------|---------------------------------------------------------------|
| overwrite | 是    | String | true开启同名覆盖, 会对已有的同名元数据的配置进行修改, false时当Topic或group已存在则会报错。     |
| name      | 是    | String | 迁移任务名称, 名称规则参考创建实例。                                           |
| type      | 是    | String | 迁移任务类型, 分为自建RocketMQ上云(rocketmq)、自建RabbitMQ上云(rabbitToRocket) |

## 请求参数

表 5-139 请求 Body 参数

| 参数                     | 是否必选 | 参数类型                                            | 描述                                                                         |
|------------------------|------|-------------------------------------------------|----------------------------------------------------------------------------|
| topicConfigTable       | 否    | Map<String, MigrationRocketMqTopicConfig>       | RocketMQ Topic 元数据, 键为Topic名, 值为topic配置, 迁移任务类型为自建RocketMQ上云(rocketmq)时必填。 |
| subscriptionGroupTable | 否    | Map<String, MigrationRocketMqSubscriptionGroup> | RocketMQ消费组元数据, 键为消费组名, 值为消费组配置, 迁移任务类型为自建RocketMQ上云(rocketmq)时必填。         |

| 参数        | 是否必选 | 参数类型                                                             | 描述                                                            |
|-----------|------|------------------------------------------------------------------|---------------------------------------------------------------|
| vhosts    | 否    | Array of <a href="#">MigrationRabbitVhostMetadata</a> objects    | RabbitMQ vhost元数据列表，迁移任务类型为自建RabbitMQ上云(rabbitToRocket)时必填。   |
| queues    | 否    | Array of <a href="#">MigrationRabbitQueueMetadata</a> objects    | RabbitMQ队列元数据列表，迁移任务类型为自建RabbitMQ上云(rabbitToRocket)时必填。       |
| exchanges | 否    | Array of <a href="#">MigrationRabbitExchangeMetadata</a> objects | RabbitMQ交换机元数据列表，迁移任务类型为自建RabbitMQ上云(rabbitToRocket)时必填。      |
| bindings  | 否    | Array of <a href="#">MigrationRabbitBindingMetadata</a> objects  | RabbitMQ binding元数据列表，迁移任务类型为自建RabbitMQ上云(rabbitToRocket)时必填。 |

表 5-140 MigrationRocketMqTopicConfig

| 参数              | 是否必选 | 参数类型    | 描述                                                                                                          |
|-----------------|------|---------|-------------------------------------------------------------------------------------------------------------|
| topicName       | 否    | String  | Topic名称。                                                                                                    |
| order           | 否    | Boolean | 是否有序消息。                                                                                                     |
| perm            | 否    | Integer | Topic权限。                                                                                                    |
| readQueueNums   | 否    | Integer | 读队列个数。                                                                                                      |
| writeQueueNums  | 否    | Integer | 写队列个数。                                                                                                      |
| topicFilterType | 否    | String  | Topic过滤类型。<br><ul style="list-style-type: none"> <li>• SINGLE_TAG: 单标签</li> <li>• MULTI_TAG: 多标签</li> </ul> |
| topicSysFlag    | 否    | Integer | Topic系统标志位。                                                                                                 |

表 5-141 MigrationRocketMqSubscriptionGroup

| 参数                             | 是否必选 | 参数类型    | 描述                 |
|--------------------------------|------|---------|--------------------|
| groupName                      | 否    | String  | 消费组名。              |
| consumeBroadcastEnable         | 否    | Boolean | 是否允许以广播模式消费。       |
| consumeEnable                  | 否    | Boolean | 是否允许消费。            |
| consumeFromMinEnable           | 否    | Boolean | 是否从最小偏移量开始消费。      |
| notifyConsumerIdsChangedEnable | 否    | Boolean | 消费者ID变化时是否通知。      |
| retryMaxTimes                  | 否    | Integer | 消费最大重试次数。          |
| retryQueueNums                 | 否    | Integer | 重试队列个数。            |
| whichBrokerWhenConsumeSlow     | 否    | Long    | 慢消费时选择的broker节点ID。 |

表 5-142 MigrationRabbitVhostMetadata

| 参数   | 是否必选 | 参数类型   | 描述       |
|------|------|--------|----------|
| name | 否    | String | vhost名称。 |

表 5-143 MigrationRabbitQueueMetadata

| 参数      | 是否必选 | 参数类型    | 描述       |
|---------|------|---------|----------|
| vhost   | 否    | String  | vhost名称。 |
| name    | 否    | String  | 队列名称。    |
| durable | 否    | Boolean | 是否持久化。   |

表 5-144 MigrationRabbitExchangeMetadata

| 参数    | 是否必选 | 参数类型   | 描述       |
|-------|------|--------|----------|
| vhost | 否    | String | vhost名称。 |

| 参数      | 是否必选 | 参数类型    | 描述     |
|---------|------|---------|--------|
| name    | 否    | String  | 交换机名称。 |
| type    | 否    | String  | 交换机类型。 |
| durable | 否    | Boolean | 是否持久化。 |

表 5-145 MigrationRabbitBindingMetadata

| 参数               | 是否必选 | 参数类型   | 描述       |
|------------------|------|--------|----------|
| vhost            | 否    | String | vhost名称。 |
| source           | 否    | String | 消息的来源。   |
| destination      | 否    | String | 消息的目标。   |
| destination_type | 否    | String | 目标的类型。   |
| routing_key      | 否    | String | 路由键。     |

## 响应参数

状态码： 200

表 5-146 响应 Body 参数

| 参数      | 参数类型   | 描述    |
|---------|--------|-------|
| task_id | String | 任务ID。 |

## 请求示例

- 创建元数据迁移任务，迁移其他厂商或自建RocketMQ实例的元数据到云上RocketMQ实例。

```
POST https://{endpoint}/v2/{project_id}/instances/{instance_id}/metadata?
overwrite=true&name=task-123&type=rocketmq
```

```
{
 "topicConfigTable" : {
 "topic-test1" : {
 "order" : false,
 "perm" : 6,
 "readQueueNums" : 3,
 "topicFilterType" : "SINGLE_TAG",
 "topicName" : "topic-test1",
 "topicSysFlag" : 0,
 "writeQueueNums" : 3
 }
 },
 "subscriptionGroupTable" : {
 "group-test1" : {
```

```
"consumeBroadcastEnable" : true,
"consumeEnable" : true,
"consumeFromMinEnable" : true,
"groupName" : "group-test1",
"notifyConsumerIdsChangedEnable" : true,
"retryMaxTimes" : 2,
"retryQueueNums" : 1,
"whichBrokerWhenConsumeSlow" : 1
}
}
```

- 创建元数据迁移任务，迁移RabbitMQ的元数据到云上RocketMQ实例。

POST https://{endpoint}/v2/{project\_id}/instances/{instance\_id}/metadata?  
overwrite=true&name=task-123&type=rabbitToRocket

```
{
 "vhosts" : [{
 "name" : "DeleteVhost123"
 }],
 "queues" : [{
 "name" : "test-001",
 "vhost" : "/",
 "durable" : false
 }],
 "exchanges" : [{
 "name" : "direct",
 "vhost" : "/",
 "type" : "topic",
 "durable" : false
 }],
 "bindings" : [{
 "source" : "direct",
 "vhost" : "/",
 "destination" : "test-001",
 "destination_type" : "queue",
 "routing_key" : "test-001"
 }]
}
```

## 响应示例

状态码： 200

创建成功。

```
{
 "task_id" : "6cf4dcd3-8471-4139-8b5b-8a3a71f704c7"
}
```

## SDK 代码示例

SDK代码示例如下。

### Java

- 创建元数据迁移任务，迁移其他厂商或自建RocketMQ实例的元数据到云上RocketMQ实例。

```
package com.huaweicloud.sdk.test;

import com.huaweicloud.sdk.core.auth.ICredential;
import com.huaweicloud.sdk.core.auth.BasicCredentials;
import com.huaweicloud.sdk.core.exception.ConnectionException;
import com.huaweicloud.sdk.core.exception.RequestTimeoutException;
import com.huaweicloud.sdk.core.exception.ServiceResponseException;
```

```

import com.huaweicloud.sdk.rocketmq.v2.region.RocketMQRegion;
import com.huaweicloud.sdk.rocketmq.v2.*;
import com.huaweicloud.sdk.rocketmq.v2.model.*;

import java.util.Map;

## 5.7 参数管理

### 5.7.1 查询 RocketMQ 配置

#### 功能介绍

该接口用于查询RocketMQ配置，若成功则返回配置的相关信息。

#### 调用方法

请参见[如何调用API](#)。

#### URI

GET /v2/{project\_id}/rocketmq/instances/{instance\_id}/configs

表 5-153 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

#### 请求参数

无

#### 响应参数

状态码： 200

表 5-154 响应 Body 参数

| 参数               | 参数类型                                                | 描述          |
|------------------|-----------------------------------------------------|-------------|
| rocketmq_configs | Array of <a href="#">RocketMQConfigResp</a> objects | RocketMQ配置。 |

表 5-155 RocketMQConfigResp

| 参数            | 参数类型   | 描述               |
|---------------|--------|------------------|
| name          | String | RocketMQ配置名称。    |
| value         | String | RocketMQ配置当前值。   |
| config_type   | String | RocketMQ配置的类型。   |
| default_value | String | RocketMQ配置的默认值。  |
| valid_values  | String | RocketMQ配置取值的范围。 |
| value_type    | String | RocketMQ配置值的类型。  |

## 请求示例

```
GET https://{endpoint}/v2/{project_id}/rocketmq/instances/{instance_id}/configs
```

## 响应示例

状态码： 200

查询RocketMQ配置成功。

```
{
 "rocketmq_configs": [{
 "name": "fileReservedTime",
 "value": 48,
 "config_type": "dynamic",
 "default_value": 48,
 "valid_values": "1~720",
 "value_type": "integer"
 }]
}
```

| unavailable_zones     | Array of strings | 不可用分区。                |
| qingtian_incompatible | Boolean          | 是否为擎天实例。              |

## 请求示例

```
GET https://{endpoint}/v2/{engine}/products
```

## 响应示例

状态码： 200

查询产品规格列表成功。

```
{
 "engine": "rocketmq",
 "versions": [],
 "products": []
}
```

## 状态码

| 状态码 | 描述          |
|-----|-------------|
| 200 | 查询产品规格列表成功。 |

## 错误码

请参见[错误码](#)。

## 5.9.3 查询 RocketMQ 产品规格核数

### 功能介绍

查询RocketMQ产品规格核数。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/rocketmq/products/cores

### 请求参数

无

### 响应参数

状态码： 200

表 5-174 响应 Body 参数

| 参数       | 参数类型    | 描述 |
|----------|---------|----|
| core_num | Integer | 核数 |

### 请求示例

```
GET https://{endpoint}/v2/rocketmq/products/cores
```

### 响应示例

状态码： 200

查询成功。

```
{
 "core_num": 100
}
```

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 查询成功。 |

## 错误码

请参见[错误码](#)。

# 5.10 规格变更管理

## 5.10.1 查询实例的扩容规格列表

### 功能介绍

查询实例的扩容规格列表。

### 调用方法

请参见[如何调用API](#)。

## URI

GET /v2/{engine}/{project\_id}/instances/{instance\_id}/extend

表 5-175 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| engine      | 是    | String | 消息引擎的类型。支持的类型为 rocketmq。              |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

表 5-176 Query 参数

| 参数   | 是否必选 | 参数类型   | 描述                  |
|------|------|--------|---------------------|
| type | 否    | String | 产品的类型。advanced：专享版。 |

## 请求参数

无

## 响应参数

状态码： 200

表 5-177 响应 Body 参数

| 参数       | 参数类型                                                             | 描述         |
|----------|------------------------------------------------------------------|------------|
| engine   | String                                                           | 消息引擎类型。    |
| versions | Array of strings                                                 | 消息引擎支持的版本。 |
| products | Array of <a href="#">RocketMQExtendProductInfoEntity</a> objects | 规格变更的产品信息。 |

表 5-178 RocketMQExtendProductInfoEntity

| 参数                | 参数类型                                                                  | 描述           |
|-------------------|-----------------------------------------------------------------------|--------------|
| type              | String                                                                | 实例类型。        |
| product_id        | String                                                                | 产品ID。        |
| ecs_flavor_id     | String                                                                | 该产品使用的ECS规格。 |
| billing_code      | String                                                                | 账单计费类型。      |
| arch_types        | Array of strings                                                      | 支持的CPU架构类型。  |
| charging_mode     | Array of strings                                                      | 支持的计费模式类型。   |
| ios               | Array of <a href="#">RocketMQExtendProductIosEntity</a> objects       | 磁盘IO信息。      |
| properties        | <a href="#">RocketMQExtendProductPropertiesEntity</a> object          | 功能特性的键值对。    |
| available_zones   | Array of strings                                                      | 有可用资源的可用区列表。 |
| unavailable_zones | Array of strings                                                      | 资源售罄的可用区列表。  |
| support_features  | Array of <a href="#">RocketMQProductSupportFeaturesEntity</a> objects | 支持的特性功能。     |

| 参数                    | 参数类型    | 描述       |
|-----------------------|---------|----------|
| qingtian_incompatible | Boolean | 是否为擎天实例。 |

## 响应参数

状态码: 200

表 5-184 响应 Body 参数

| 参数     | 参数类型   | 描述        |
|--------|--------|-----------|
| job_id | String | 规格变更任务ID。 |

## 请求示例

```
POST https://{endpoint}/v2/rocketmq/{project_id}/instances/{instance_id}/extend
{
 "oper_type": "horizontal",
 "new_product_id": "c6.4u8g.cluster"
}
```

## 响应示例

状态码: 200

实例规格变更成功。

```
{
 "job_id" : "93b94287-728d-4bb1-a158-cb66cb0854e7"
}
```

## SDK 代码示例

SDK代码示例如下。

# 6 应用示例

## 6.1 批量创建 Topic

RocketMQ未提供批量创建Topic接口，用户想批量创建Topic时只能手动多次调用接口一个个创建，效率低下。现通过代码实现接口循环调用，可实现批量创建Topic的效果。

### 前提条件

- 已获取IAM和RocketMQ服务所在区域的Endpoint地址。
- 已获取RocketMQ实例的实例ID，以及实例所在区域的项目ID。

### 使用华为云 SDK 5.x 版本批量创建不同类型的 Topic

1. 新建“topics.txt”文件，用于存放待创建的Topic信息。  
文件内容格式为“Topic名称 消息类型”，消息类型包含普通（NORMAL）、顺序（FIFO）、定时（DELAY）、事务（TRANSACTION）四种。文件内容填写示例如下：  
topic-test01 NORMAL  
topic-test02 FIFO  
topic-test02 DELAY  
topic-test02 TRANSACTION  
一个Topic一行数据，您可以根据实际情况设置多个Topic名称和消息类型。
2. 通过代码实现接口循环调用，批量创建Topic。

#### 代码示例

其中加粗部分内容请根据实际情况修改。

```
package com.huaweicloud.sdk.test;
import com.huaweicloud.sdk.core.auth.ICredential;
import com.huaweicloud.sdk.core.auth.BasicCredentials;
import com.huaweicloud.sdk.core.exception.ConnectionException;
import com.huaweicloud.sdk.core.exception.RequestTimeoutException;
import com.huaweicloud.sdk.core.exception.ServiceResponseException;
import com.huaweicloud.sdk.rocketmq.v2.region.RocketMQRegion;
import com.huaweicloud.sdk.rocketmq.v2.*;
import com.huaweicloud.sdk.rocketmq.v2.model.*;
```

```

import java.io.*;
import java.util.List;
import java.util.ArrayList;

public class CreateBatchTopicSolution {
 public static void main(String[] args) throws IOException {
 // The AK and SK used for authentication are hard-coded or stored in plaintext, which has great
 // security risks. It is recommended that the AK and SK be stored in ciphertext in configuration files or
 // environment variables and decrypted during use to ensure security.
 // In this example, AK and SK are stored in environment variables for authentication. Before
 // running this example, set environment variables CLOUD_SDK_AK and CLOUD_SDK_SK in the local
 // environment
 String ak = "{CLOUD_SDK_AK}"; //访问密钥ID。查看AK的方法请参见获取AK/SK。
 String sk = "{CLOUD_SDK_SK}"; //与访问密钥ID结合使用的密钥。查看SK的方法请参见获取AK/SK。
 String projectId = "{project_id}"; //项目ID。查看项目ID的方法请参见获取项目ID。

 ICredential auth = new BasicCredentials()
 .withProjectId(projectId)
 .withAk(ak)
 .withSk(sk);

 RocketMQClient client = RocketMQClient.newBuilder()
 .withCredential(auth)
 .withRegion(RocketMQRegion.valueOf("<YOUR REGION>")) //项目所在的区域。在获取项目ID中可以查看到项目ID对应的区域信息。
 .build();

 File file = new File("d:/topics.txt"); //1中topic文件所在路径。文件名称和文件路径可自定义。
 FileReader fileReader = new FileReader(file);

public void setMessageType(String messageType) {
 this.messageType = messageType;
}

public TopicEntity(String name, String messageType) {
 this.name = name;
 this.messageType = messageType;
}
}
```

# 7 权限和授权项

如果您需要对您所拥有的DMS for RocketMQ实例进行精细的权限管理，您可以使用统一身份认证服务（Identity and Access Management，简称IAM），如果华为账号已经能满足您的要求，不需要创建独立的IAM用户，您可以跳过本章节，不影响您使用DMS for RocketMQ实例的其它功能。

默认情况下，新建的IAM用户没有任何权限，您需要将其加入用户组，并给用户组授予策略或角色，才能使用户组中的用户获得相应的权限，这一过程称为授权。授权后，用户就可以基于已有权限对云服务进行操作。

权限根据授权的精细程度，分为**角色**和**策略**。角色以服务为粒度，是IAM最初提供了一种根据用户的工作职能定义权限的粗粒度授权机制。策略以API接口为粒度进行权限拆分，授权更加精细，可以精确到某个操作、资源和条件，能够满足企业对权限最小化的安全管控要求。

## 📖 说明

如果您要允许或是禁止某个接口的操作权限，请使用策略。

账号具备所有接口的调用权限，如果使用账号下的IAM用户发起API请求时，该IAM用户必须具备调用该接口所需的权限，否则，API请求将调用失败。每个接口所需要的权限，与各个接口所对应的授权项相对应，只有发起请求的用户被授予授权项所对应的策略，该用户才能成功调用该接口。例如，用户要调用接口来创建RocketMQ实例，那么这个IAM用户被授予的策略中必须包含允许“dms:instance:create”的授权项，该接口才能调用成功。

## 支持的授权项

策略包含系统策略和自定义策略，如果系统策略不满足授权要求，管理员可以创建自定义策略，并通过给用户组授予自定义策略来进行精细的访问控制。策略支持的操作与API相对应，授权项列表说明如下：

- 权限：允许或拒绝某项操作。
- 对应API接口：自定义策略实际调用的API接口。
- 授权项：自定义策略中支持的Action，在自定义策略中的Action中写入授权项，可以实现授权项对应的权限功能。
- IAM项目（Project）/企业项目（Enterprise Project）：自定义策略的授权范围，包括IAM项目与企业项目。授权范围如果同时支持IAM项目和企业项目，表示此授权项对应的自定义策略，可以在IAM和企业管理两个服务中给用户组授权并生效。

效。如果仅支持IAM项目，不支持企业项目，表示仅能在IAM中给用户组授权并生效，如果在企业管理中授权，则该自定义策略不生效。关于IAM项目与企业项目的区别，详情请参见：[IAM与企业管理的区别](#)。

DMS for RocketMQ的支持自定义策略授权项如下表所示。用户调用如下API时，需要获取对应的权限。权限获取请参考[统一身份认证服务（IAM）](#)的帮助指导。

表 7-1 DMS for RocketMQ 授权项明细

| 权限           | 对应API接口                                                                        | 授权项                     | IAM项目<br>(Project) | 企业项目<br>(Enterprise Project) |
|--------------|--------------------------------------------------------------------------------|-------------------------|--------------------|------------------------------|

表 8-2 响应 Body 参数

| 参数                | 参数类型             | 描述                                                                                                                                                       |
|-------------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| name              | String           | 实例名称。<br>由英文字符开头，只能由英文字母、数字、中划线、下划线组成，长度为4~64的字符。                                                                                                        |
| description       | String           | 实例的描述信息。<br>长度不超过1024的字符串。<br><b>说明</b><br>\与"在json报文中属于特殊字符，如果参数值中需要显示\或者"字符，请在字符前增加转义字符\，比如\或者"。                                                       |
| engine            | String           | 消息引擎。取值填写为：reliability。                                                                                                                                  |
| engine_version    | String           | 消息引擎的版本。取值填写为：4.8.0。                                                                                                                                     |
| storage_space     | Integer          | 存储空间。                                                                                                                                                    |
| vpc_id            | String           | 虚拟私有云ID。<br>获取方法如下：登录虚拟私有云服务的控制台界面，在虚拟私有云的详情页面查找VPC ID。                                                                                                  |
| subnet_id         | String           | 子网信息。<br>获取方法如下：登录虚拟私有云服务的控制台界面，单击VPC下的子网，进入子网详情页面，查找网络ID。                                                                                               |
| security_group_id | String           | 指定实例所属的安全组。<br>获取方法如下：登录虚拟私有云服务的控制台界面，在安全组的详情页面查找安全组ID。                                                                                                  |
| available_zones   | Array of strings | 创建节点到指定且有资源的可用区ID。<br>请参考 <a href="#">查询可用区信息</a> 获取可用区ID。<br>该参数不能为空数组或者数组的值为空，请注意查看该可用区是否有资源。<br>创建RocketMQ实例，支持节点部署在1个或3个及3个以上的可用区。在为节点指定可用区时，用逗号分隔开。 |

| 参数                    | 参数类型    | 描述                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| product_id            | String  | <p><b>RocketMQ实例规格。</b></p> <ul style="list-style-type: none"> <li>• c6.4u8g.cluster.small: 单个代理最大Topic数2000, 单个代理最大消费组数2000</li> <li>• c6.4u8g.cluster: 单个代理最大Topic数4000, 单个代理最大消费组数4000</li> <li>• c6.8u16g.cluster: 单个代理最大Topic数8000, 单个代理最大消费组数8000</li> <li>• c6.12u24g.cluster: 单个代理最大Topic数12000, 单个代理最大消费组数12000</li> <li>• c6.16u32g.cluster: 单个代理最大Topic数16000, 单个代理最大消费组数16000</li> </ul> |
| ssl_enable            | Boolean | <p>是否打开SSL加密访问。</p> <ul style="list-style-type: none"> <li>• true: 打开SSL加密访问。</li> <li>• false: 不打开SSL加密访问。</li> </ul>                                                                                                                                                                                                                                                                               |
| storage_spec_code     | String  | <p>存储IO规格。</p> <ul style="list-style-type: none"> <li>• dms.physical.storage.high.v2: 高IO类型磁盘</li> <li>• dms.physical.storage.ultra.v2: 超高IO类型磁盘</li> </ul>                                                                                                                                                                                                                                          |
| enterprise_project_id | String  | <p>企业项目ID。若为企业项目账号, 该参数必填。</p>                                                                                                                                                                                                                                                                                                                                                                       |
| enable_acl            | Boolean | <p>是否开启访问控制列表。</p>                                                                                                                                                                                                                                                                                                                                                                                   |
| ipv6_enable           | Boolean | <p>是否支持IPv6。</p> <ul style="list-style-type: none"> <li>• true: 支持</li> <li>• false: 不支持</li> </ul>                                                                                                                                                                                                                                                                                                  |
| enable_publicip       | Boolean | <p>是否开启公网访问功能。默认不开启公网。</p> <ul style="list-style-type: none"> <li>• true: 开启</li> <li>• false: 不开启</li> </ul>                                                                                                                                                                                                                                                                                        |
| publicip_id           | String  | <p>实例绑定的弹性IP地址的ID。<br/>以英文逗号隔开多个弹性IP地址的ID。<br/>如果开启了公网访问功能(即enable_publicip为true), 该字段为必选。</p>                                                                                                                                                                                                                                                                                                       |
| broker_num            | Integer | <p>代理个数。</p>                                                                                                                                                                                                                                                                                                                                                                                         |

| 参数        | 参数类型                   | 描述                                             |
|-----------|------------------------|------------------------------------------------|
| bss_param | <b>BssParam</b> object | 表示包周期计费模式的相关参数。<br>如果为空，则默认计费模式为按需计费；否则是包周期方式。 |

表 8-3 BssParam

| 参数            | 参数类型    | 描述                                                                                                                                                      |
|---------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_auto_renew | Boolean | 是否自动续订。<br>取值范围：<br><ul style="list-style-type: none"> <li>• true: 自动续订。</li> <li>• false: 不自动续订。</li> </ul> 默认不自动续订。                                   |
| charging_mode | String  | 计费模式。<br>功能说明：付费方式。<br>取值范围：<br><ul style="list-style-type: none"> <li>• prePaid: 预付费，即包年包月；</li> <li>• postPaid: 后付费，即按需付费；</li> </ul> 默认为postPaid。    |
| is_auto_pay   | Boolean | 下单订购后，是否自动从客户的账户中支付，而不需要客户手动去进行支付。<br>取值范围：<br><ul style="list-style-type: none"> <li>• true: 是（自动支付）</li> <li>• false: 否（需要客户手动支付）</li> </ul> 默认为手动支付。 |
| period_type   | String  | 订购周期类型。<br>取值范围：<br><ul style="list-style-type: none"> <li>• month: 月</li> <li>• year: 年</li> </ul> <b>chargingMode为prePaid时生效且为必选值。</b>                |

| 参数         | 参数类型    | 描述                                                                                                                                                                                    |
|------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| period_num | Integer | 订购周期数。<br>取值范围： <ul style="list-style-type: none"><li>periodType=month（周期类型为月）时，取值为[1, 9]；</li><li>periodType=year（周期类型为年）时，取值为[1, 3]；</li></ul> <b>chargingMode为prePaid时生效且为必选值。</b> |

## 请求示例

POST https://{endpoint}/v1.0/dms/{project\_id}/instances

## 响应示例

状态码： 200

创建成功。

```
{
 "instance_id" : "8959ab1c-7n1a-yyb1-a05t-93dfc361b32d"
}
```

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 创建成功。 |

## 错误码

请参见[错误码](#)。

### 8.1.1.2 查询实例

## 功能介绍

查询实例。

## 调用方法

请参见[如何调用API](#)。

## URI

GET /v1.0/{project\_id}/instances/{instance\_id}

表 8-4 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| instance_id | 是    | String | 实例ID。                                 |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |

## 请求参数

无

## 响应参数

状态码： 200

表 8-5 响应 Body 参数

| 参数                  | 参数类型    | 描述                                                           |
|---------------------|---------|--------------------------------------------------------------|
| name                | String  | 实例名称。                                                        |
| engine              | String  | 引擎。                                                          |
| status              | String  | 状态。                                                          |
| description         | String  | 消息描述。                                                        |
| type                | String  | 实例类型：集群，cluster。                                             |
| specification       | String  | 实例规格。                                                        |
| engine_version      | String  | 版本。                                                          |
| instance_id         | String  | 实例ID。                                                        |
| charging_mode       | Integer | 付费模式，1表示按需计费，0表示包年/包月计费。                                     |
| vpc_id              | String  | 私有云ID。                                                       |
| vpc_name            | String  | 私有云名称。                                                       |
| created_at          | String  | 完成创建时间。<br>格式为时间戳，指从格林威治时间1970年01月01日00时00分00秒起至指定时间的偏差总毫秒数。 |
| product_id          | String  | 产品标识。                                                        |
| security_group_id   | String  | 安全组ID。                                                       |
| security_group_name | String  | 租户安全组名称。                                                     |

| 参数                    | 参数类型             | 描述                                                                           |
|-----------------------|------------------|------------------------------------------------------------------------------|
| subnet_id             | String           | 子网ID。                                                                        |
| subnet_name           | String           | 子网名称。                                                                        |
| subnet_cidr           | String           | 子网路由（仅RocketMQ 5.x版本会显示此字段）。                                                 |
| available_zones       | Array of strings | 可用区ID列表。                                                                     |
| available_zone_names  | Array of strings | 可用区名称列表。                                                                     |
| user_id               | String           | 用户ID。                                                                        |
| user_name             | String           | 用户名。                                                                         |
| maintain_begin        | String           | 维护时间窗开始时间，格式为HH:mm:ss。                                                       |
| maintain_end          | String           | 维护时间窗结束时间，格式为HH:mm:ss。                                                       |
| enable_log_collection | Boolean          | 是否开启消息收集功能。                                                                  |
| storage_space         | Integer          | 存储空间，单位：GB。                                                                  |
| used_storage_space    | Integer          | 已用消息存储空间，单位：GB。                                                              |
| enable_publicip       | Boolean          | 是否开启公网。                                                                      |
| publicip_id           | String           | 实例绑定的弹性IP地址的ID。以英文逗号隔开多个弹性IP地址的ID。如果开启了公网访问功能（即enable_publicip为true），该字段为必选。 |
| publicip_address      | String           | 公网IP地址。                                                                      |
| ssl_enable            | Boolean          | 是否开启SSL。                                                                     |
| cross_vpc_info        | String           | 跨VPC访问信息。                                                                    |
| storage_resource_id   | String           | 存储资源ID。                                                                      |
| storage_spec_code     | String           | 存储规格代码。                                                                      |
| service_type          | String           | 服务类型。                                                                        |
| storage_type          | String           | 存储类型。                                                                        |
| extend_times          | Long             | 扩展时间。                                                                        |
| ipv6_enable           | Boolean          | 是否开启IPv6。                                                                    |
| support_features      | String           | 实例支持的特性功能。                                                                   |

| 参数                         | 参数类型                                       | 描述                                                                                                  |
|----------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------------------|
| disk_encrypted             | Boolean                                    | 是否开启磁盘加密。                                                                                           |
| ces_version                | String                                     | 云监控版本。                                                                                              |
| node_num                   | Integer                                    | 节点数。                                                                                                |
| new_spec_billing_enable    | Boolean                                    | 是否启用新规格计费。                                                                                          |
| enable_acl                 | Boolean                                    | 是否开启访问控制列表。                                                                                         |
| broker_num                 | Integer                                    | 节点数（仅RocketMQ 4.8.0版本会显示此字段）。                                                                       |
| dns_enable                 | Boolean                                    | 实例是否开启域名访问功能。<br><ul style="list-style-type: none"> <li>• true: 开启</li> <li>• false: 未开启</li> </ul> |
| namesrv_address            | String                                     | 元数据地址。                                                                                              |
| namesrv_domain_name        | String                                     | 元数据域名。                                                                                              |

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 查询成功。 |

## 错误码

请参见[错误码](#)。

### 8.1.1.3 查询实例列表

## 功能介绍

查询实例列表。

## 调用方法

请参见[如何调用API](#)。

## URI

GET /v1.0/{project\_id}/instances

表 8-7 路径参数

| 参数         | 是否必选 | 参数类型   | 描述                                    |
|------------|------|--------|---------------------------------------|
| project_id | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |

## 请求参数

无

## 响应参数

状态码： 200

表 8-8 响应 Body 参数

| 参数           | 参数类型                                              | 描述    |
|--------------|---------------------------------------------------|-------|
| instances    | Array of <a href="#">ShowInstanceResp</a> objects | 实例列表。 |
| instance_num | Integer                                           | 实例数量。 |

表 8-9 ShowInstanceResp

| 参数             | 参数类型   | 描述               |
|----------------|--------|------------------|
| name           | String | 实例名称。            |
| engine         | String | 引擎。              |

| type           | String | 实例类型：集群，cluster。 |
| specification  | String | 实例规格。            |
| engine_version | String | 版本。              |
| instance_id    | String | 实例ID。            |

| 参数                    | 参数类型             | 描述                                                                           |
|-----------------------|------------------|------------------------------------------------------------------------------|
| charging_mode         | Integer          | 付费模式，1表示按需计费，0表示包年/包月计费。                                                     |
| vpc_id                | String           | 私有云ID。                                                                       |
| vpc_name              | String           | 私有云名称。                                                                       |
| created_at            | String           | 完成创建时间。<br>格式为时间戳，指从格林威治时间1970年01月01日00时00分00秒起至指定时间的偏差总毫秒数。                 |
| product_id            | String           | 产品标识。                                                                        |
| security_group_id     | String           | 安全组ID。                                                                       |
| security_group_name   | String           | 租户安全组名称。                                                                     |
| subnet_id             | String           | 子网ID。                                                                        |
| subnet_name           | String           | 子网名称。                                                                        |
| subnet_cidr           | String           | 子网路由（仅RocketMQ 5.x版本会显示此字段）。                                                 |
| available_zones       | Array of strings | 可用区ID列表。                                                                     |
| available_zone_names  | Array of strings | 可用区名称列表。                                                                     |
| user_id               | String           | 用户ID。                                                                        |
| user_name             | String           | 用户名。                                                                         |
| maintain_begin        | String           | 维护时间窗开始时间，格式为HH:mm:ss。                                                       |
| maintain_end          | String           | 维护时间窗结束时间，格式为HH:mm:ss。                                                       |
| enable_log_collection | Boolean          | 是否开启消息收集功能。                                                                  |
| storage_space         | Integer          | 存储空间，单位：GB。                                                                  |
| used_storage_space    | Integer          | 已用消息存储空间，单位：GB。                                                              |
| enable_publicip       | Boolean          | 是否开启公网。                                                                      |
| publicip_id           | String           | 实例绑定的弹性IP地址的ID。以英文逗号隔开多个弹性IP地址的ID。如果开启了公网访问功能（即enable_publicip为true），该字段为必选。 |
| publicip_address      | String           | 公网IP地址。                                                                      |

| 参数                         | 参数类型    | 描述                                                                                                  |
|----------------------------|---------|-----------------------------------------------------------------------------------------------------|
| ssl_enable                 | Boolean | 是否开启SSL。                                                                                            |
| cross_vpc_info             | String  | 跨VPC访问信息。                                                                                           |
| storage_resource_id        | String  | 存储资源ID。                                                                                             |
| storage_spec_code          | String  | 存储规格代码。                                                                                             |
| service_type               | String  | 服务类型。                                                                                               |
| storage_type               | String  | 存储类型。                                                                                               |
| extend_times               | Long    | 扩展时间。                                                                                               |
| ipv6_enable                | Boolean | 是否开启IPv6。                                                                                           |
| support_features           | String  | 实例支持的特性功能。                                                                                          |
| disk_encrypted             | Boolean | 是否开启磁盘加密。                                                                                           |
| ces_version                | String  | 云监控版本。                                                                                              |
| node_num                   | Integer | 节点数。                                                                                                |
| new_spec_billing_enable    | Boolean | 是否启用新规格计费。                                                                                          |
| enable_acl                 | Boolean | 是否开启访问控制列表。                                                                                         |
| broker_num                 | Integer | 节点数（仅RocketMQ 4.8.0版本会显示此字段）。                                                                       |
| dns_enable                 | Boolean | 实例是否开启域名访问功能。<br><ul style="list-style-type: none"> <li>• true: 开启</li> <li>• false: 未开启</li> </ul> |
| namesrv_address            | String  | 元数据地址。                                                                                              |
| namesrv_domain_name        | String  | 元数据域名。                                                                                              |
| broker_address             | String  | 业务数据地址。                                                                                             |
| public_namesrv_address     | String  | 公网元数据地址。                                                                                            |
| public_namesrv_domain_name | String  | 公网元数据域名。                                                                                            |
| public_broker_address      | String  | 公网业务数据地址。                                                                                           |
| grpc_address               | String  | grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。                                                                    |

| 参数                      | 参数类型                              | 描述                                 |
|-------------------------|-----------------------------------|------------------------------------|
| grpc_domain_name        | String                            | grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。   |
| public_grpc_address     | String                            | 公网grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。 |
| public_grpc_domain_name | String                            | 公网grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。 |
| enterprise_project_id   | String                            | 企业项目ID。                            |
| tags                    | Array of <b>TagEntity</b> objects | 标签列表。                              |
| total_storage_space     | Integer                           | 总存储空间。                             |
| resource_spec_code      | String                            | 资源规格。                              |

表 8-10 TagEntity

| 参数    | 参数类型   | 描述                                                                                                                                                                                            |
|-------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| key   | String | 标签键。 <ul style="list-style-type: none"> <li>不能为空。</li> <li>对于同一个实例，Key值唯一。</li> <li>长度为1~128个字符（中文也可以输入128个字符）。</li> <li>由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @</li> <li>首尾字符不能为空格。</li> </ul> |
| value | String | 标签值。 <ul style="list-style-type: none"> <li>长度为0~255个字符（中文也可以输入255个字符）。</li> <li>由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @</li> <li>首尾字符不能为空格。</li> </ul>                                         |

## 请求示例

```
GET https://{endpoint}/v1.0/dms/{project_id}/instances
```

## 响应示例

状态码： 200

查询成功。

## 8.1.2 其他接口

### 8.1.2.1 查询可用区

#### 功能介绍

查询可用区。

#### 调用方法

请参见[如何调用API](#)。

#### URI

GET /v1.0/availableZones

#### 请求参数

无

#### 响应参数

状态码： 200

表 8-13 响应 Body 参数

| 参数              | 参数类型                                             | 描述     |
|-----------------|--------------------------------------------------|--------|
| region_id       | String                                           | 区域ID。  |
| available_zones | Array of <a href="#">available_zones</a> objects | 可用区数组。 |

表 8-14 available\_zones

| 参数                    | 参数类型    | 描述           |
|-----------------------|---------|--------------|
| soldOut               | Boolean | 是否售罄。        |
| id                    | String  | 可用区ID。       |
| code                  | String  | 可用区编码。       |
| name                  | String  | 可用区名称。       |
| port                  | String  | 可用区端口号。      |
| resource_availability | String  | 分区上是否还有可用资源。 |
| default_az            | Boolean | 是否为默认可用区。    |
| remain_time           | Long    | 剩余时间。        |
| ipv6_enable           | Boolean | 是否支持IPv6。    |

## 请求示例

GET https://{endpoint}/v1.0/availableZones

## 响应示例

### 8.1.2.2 查询配额

## 功能介绍

查询配额信息。

## 调用方法

请参见[如何调用API](#)。

## URI

GET /v1.0/{project\_id}/quotas/dms

表 8-15 路径参数

| 参数         | 是否必选 | 参数类型   | 描述                                    |
|------------|------|--------|---------------------------------------|
| project_id | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |

## 请求参数

无

## 响应参数

状态码： 200

表 8-16 响应 Body 参数

| 参数     | 参数类型                          | 描述    |
|--------|-------------------------------|-------|
| quotas | <a href="#">quotas</a> object | 配额信息。 |

表 8-17 quotas

| 参数        | 参数类型                                                 | 描述    |
|-----------|------------------------------------------------------|-------|
| resources | Array of <a href="#">QuotaResourceEntity</a> objects | 配额列表。 |

表 8-18 QuotaResourceEntity

| 参数    | 参数类型    | 描述                                                                                                                                                                                                                                                    |
|-------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type  | String  | 支持rabbitmqInstance、kafkaInstance、rocketmqInstance、tags四种。 <ul style="list-style-type: none"> <li>• rabbitmqInstance表示RabbitMQ实例配额。</li> <li>• kafkaInstance表示Kafka实例配额。</li> <li>• rocketmqInstance表示RocketMQ实例配额。</li> <li>• tags表示标签的配额。</li> </ul> |
| quota | Integer | 租户最大可以创建的实例个数，或者每个实例最大可以创建的标签个数。                                                                                                                                                                                                                      |
| used  | Integer | 已创建的实例个数。                                                                                                                                                                                                                                             |

## 请求示例

GET https://{endpoint}/v1.0/{project\_id}/quotas/dms

## 响应示例

状态码： 200

查询成功。

```
{
 "quotas": [
 {
 "resources": [
 {
 "type": "rabbitmqInstance",
 "quota": 100,
 "used": 3
 },
 {
 "type": "kafkaInstance",

## 8.2 API V2

### 8.2.1 查询指定实例

#### 功能介绍

查询指定实例的详细信息。

#### 调用方法

请参见[如何调用API](#)。

#### URI

GET /v2/{engine}/{project\_id}/instances/{instance\_id}

表 8-31 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| engine      | 是    | String | 引擎。                                   |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

#### 请求参数

无

#### 响应参数

状态码： 200

表 8-32 响应 Body 参数

| 参数                   | 参数类型             | 描述                                                           |
|----------------------|------------------|--------------------------------------------------------------|
| name                 | String           | 实例名称。                                                        |
| engine               | String           | 引擎。                                                          |
| status               | String           | 状态。                                                          |
| description          | String           | 消息描述。                                                        |
| type                 | String           | 实例类型：集群，cluster。                                             |
| specification        | String           | 实例规格。                                                        |
| engine_version       | String           | 版本。                                                          |
| instance_id          | String           | 实例ID。                                                        |
| charging_mode        | Integer          | 付费模式，1表示按需计费，0表示包年/包月计费。                                     |
| vpc_id               | String           | 私有云ID。                                                       |
| vpc_name             | String           | 私有云名称。                                                       |
| created_at           | String           | 完成创建时间。<br>格式为时间戳，指从格林威治时间1970年01月01日00时00分00秒起至指定时间的偏差总毫秒数。 |
| product_id           | String           | 产品标识。                                                        |
| security_group_id    | String           | 安全组ID。                                                       |
| security_group_name  | String           | 租户安全组名称。                                                     |
| subnet_id            | String           | 子网ID。                                                        |
| subnet_name          | String           | 子网名称。                                                        |
| subnet_cidr          | String           | 子网路由（仅RocketMQ 5.x版本会显示此字段）。                                 |
| available_zones      | Array of strings | 可用区ID列表。                                                     |
| available_zone_names | Array of strings | 可用区名称列表。                                                     |
| user_id              | String           | 用户ID。                                                        |
| user_name            | String           | 用户名。                                                         |
| maintain_begin       | String           | 维护时间窗开始时间，格式为HH:mm:ss。                                       |
| maintain_end         | String           | 维护时间窗结束时间，格式为HH:mm:ss。                                       |

| 参数                       | 参数类型    | 描述                                                                                                |
|--------------------------|---------|---------------------------------------------------------------------------------------------------|
| enable_log_collect ion   | Boolean | 是否开启消息收集功能。                                                                                       |
| storage_space            | Integer | 存储空间，单位：GB。                                                                                       |
| used_storage_spac e      | Integer | 已用消息存储空间，单位：GB。                                                                                   |
| enable_publicip          | Boolean | 是否开启公网。                                                                                           |
| publicip_id              | String  | 实例绑定的弹性IP地址的ID。以英文逗号<br>隔开多个弹性IP地址的ID。如果开启了公<br>网访问功能（即enable_publicip为<br>true），该字段为必选。          |
| publicip_address         | String  | 公网IP地址。                                                                                           |
| ssl_enable               | Boolean | 是否开启SSL。                                                                                          |
| cross_vpc_info           | String  | 跨VPC访问信息。                                                                                         |
| storage_resource_i d     | String  | 存储资源ID。                                                                                           |
| storage_spec_code        | String  | 存储规格代码。                                                                                           |
| service_type             | String  | 服务类型。                                                                                             |
| storage_type             | String  | 存储类型。                                                                                             |
| extend_times             | Long    | 扩展时间。                                                                                             |
| ipv6_enable              | Boolean | 是否开启IPv6。                                                                                         |
| support_features         | String  | 实例支持的特性功能。                                                                                        |
| disk_encrypted           | Boolean | 是否开启磁盘加密。                                                                                         |
| ces_version              | String  | 云监控版本。                                                                                            |
| node_num                 | Integer | 节点数。                                                                                              |
| new_spec_billing_ enable | Boolean | 是否启用新规格计费。                                                                                        |
| enable_acl               | Boolean | 是否开启访问控制列表。                                                                                       |
| broker_num               | Integer | 节点数（仅RocketMQ 4.8.0版本会显示<br>此字段）。                                                                 |
| dns_enable               | Boolean | 实例是否开启域名访问功能。<br><ul style="list-style-type: none"> <li>• true：开启</li> <li>• false：未开启</li> </ul> |
| namesrv_address          | String  | 元数据地址。                                                                                            |

| 参数                         | 参数类型                              | 描述                                 |
|----------------------------|-----------------------------------|------------------------------------|
| namesrv_domain_name        | String                            | 元数据域名。                             |
| broker_address             | String                            | 业务数据地址。                            |
| public_namesrv_address     | String                            | 公网元数据地址。                           |
| public_namesrv_domain_name | String                            | 公网元数据域名。                           |
| public_broker_address      | String                            | 公网业务数据地址。                          |
| grpc_address               | String                            | grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。   |
| grpc_domain_name           | String                            | grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。   |
| public_grpc_address        | String                            | 公网grpc连接地址（仅RocketMQ 5.x版本会显示此字段）。 |
| public_grpc_domain_name    | String                            | 公网grpc连接域名（仅RocketMQ 5.x版本会显示此字段）。 |
| enterprise_project_id      | String                            | 企业项目ID。                            |
| tags                       | Array of <b>TagEntity</b> objects | 标签列表。                              |
| total_storage_space        | Integer                           | 总存储空间。                             |
| resource_spec_code         | String                            | 资源规格。                              |

表 8-33 TagEntity

| 参数  | 参数类型   | 描述                                                                                                                                                                                            |
|-----|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| key | String | 标签键。 <ul style="list-style-type: none"> <li>不能为空。</li> <li>对于同一个实例，Key值唯一。</li> <li>长度为1~128个字符（中文也可以输入128个字符）。</li> <li>由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @</li> <li>首尾字符不能为空格。</li> </ul> |

| 参数    | 参数类型   | 描述                                                                                                                                                    |
|-------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| value | String | 标签值。 <ul style="list-style-type: none"> <li>长度为0~255个字符（中文也可以输入255个字符）。</li> <li>由任意语种字母、数字、空格和字符组成，字符仅支持_ . : = + - @</li> <li>首尾字符不能为空格。</li> </ul> |

## 请求示例

GET https://{endpoint}/v2/{engine}/{project\_id}/instances/{instance\_id}

## 响应示例

状态码： 200

查询成功。

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 查询成功。 |

## 错误码

请参见[错误码](#)。

## 8.2.2 查询所有消费组

### 功能介绍

查询所有消费组。

### 调用方法

请参见[如何调用API](#)。

### URI

GET /v2/{engine}/{project\_id}/instances/{instance\_id}/groups

表 8-34 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| engine      | 是    | String | 引擎。                                   |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

表 8-35 Query 参数

| 参数     | 是否必选 | 参数类型    | 描述                                 |
|--------|------|---------|------------------------------------|
| offset | 否    | Integer | 偏移量，表示从此偏移量开始查询，offset大于等于0。       |
| limit  | 否    | Integer | 当次查询返回的最大消费组ID个数，默认值为10，取值范围为1~50。 |
| group  | 否    | String  | 消费组名过滤查询，过滤方式为字段包含过滤。              |
| topic  | 否    | String  | 若指定topic，则只查询该topic的消费组。           |

## 请求参数

无

## 响应参数

状态码： 200

表 8-36 响应 Body 参数

| 参数              | 参数类型                                           | 描述           |
|-----------------|------------------------------------------------|--------------|
| total           | Number                                         | 消费组总数。       |
| groups          | Array of <a href="#">ConsumerGroup</a> objects | 消费组列表。       |
| max             | Integer                                        | 最大可创建消费组数量。  |
| remaining       | Integer                                        | 剩余可创建消费组数量。  |
| next_offset     | Integer                                        | 下个分页的offset。 |
| previous_offset | Integer                                        | 上个分页的offset。 |

表 8-37 ConsumerGroup

| 参数        | 参数类型             | 描述       |
|-----------|------------------|----------|
| enabled   | Boolean          | 是否可以消费。  |
| broadcast | Boolean          | 是否广播。    |
| brokers   | Array of strings | 关联的代理列表。 |

| 参数              | 参数类型             | 描述                                           |
|-----------------|------------------|----------------------------------------------|
| name            | String           | 消费组名称，只能由英文字母、数字、百分号、竖线、中划线、下划线组成，长度3~64个字符。 |
| group_desc      | String           | 消费组描述，长度0~200个字符。                            |
| retry_max_time  | Integer          | 最大重试次数，取值范围为1~16。                            |
| createdAt       | Long             | 创建时间戳。                                       |
| permissions     | Array of strings | 权限集。                                         |
| consume_orderly | Boolean          | 是否按顺序消费。                                     |

## 请求示例

```
GET https://{endpoint}/v2/{engine}/{project_id}/instances/{instance_id}/groups
```

## 响应示例

状态码： 200

查询成功。

```
{
 "total": 1,
 "groups": [{
 "name": "group-1",
 "enabled": true,
 "broadcast": false,
 "brokers": ["broker-0"],
 "createdAt": 1709087952686,
 "permissions": [],
 "retry_max_time": 16,
 "consume_orderly": false
 }],
 "max": 4000,
 "remaining": 3999,
 "next_offset": -1,
 "previous_offset": -1
}
```

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 查询成功。 |

## 错误码

请参见[错误码](#)。

## 8.2.3 更新消费组

### 功能介绍

更新消费组。

### 调用方法

请参见[如何调用API](#)。

### URI

PUT /v2/{engine}/{project\_id}/instances/{instance\_id}/groups

表 8-38 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| engine      | 是    | String | 引擎。                                   |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |

### 请求参数

无

### 响应参数

状态码： 200

表 8-39 响应 Body 参数

| 参数     | 参数类型   | 描述     |
|--------|--------|--------|
| job_id | String | 后台任务ID |

### 请求示例

```
PUT https://{endpoint}/v2/{engine}/{project_id}/instances/{instance_id}/groups
```

### 响应示例

状态码： 200

操作成功。

```
{
 "job_id" : "8a2c259182ab0e9d0182ab1882560010"
}
```

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 操作成功。 |

## 错误码

请参见[错误码](#)。

## 8.2.4 修改指定消费组

### 功能介绍

修改指定消费组。

### 调用方法

请参见[如何调用API](#)。

### URI

PUT /v2/{engine}/{project\_id}/instances/{instance\_id}/groups/{group}

表 8-40 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| engine      | 是    | String | 引擎。                                   |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |
| group       | 是    | String | 消费组ID。                                |

### 请求参数

无

### 响应参数

无

### 请求示例

PUT https://{endpoint}/v2/{engine}/{project\_id}/instances/{instance\_id}/groups/{group}

## 响应示例

无

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 操作成功。 |

## 错误码

请参见[错误码](#)。

## 8.2.5 删除指定消费组

### 功能介绍

删除指定消费组。

### 调用方法

请参见[如何调用API](#)。

### URI

DELETE /v2/{engine}/{project\_id}/instances/{instance\_id}/groups/{group}

表 8-41 路径参数

| 参数          | 是否必选 | 参数类型   | 描述                                    |
|-------------|------|--------|---------------------------------------|
| engine      | 是    | String | 引擎。                                   |
| project_id  | 是    | String | 项目ID，获取方式请参见 <a href="#">获取项目ID</a> 。 |
| instance_id | 是    | String | 实例ID。                                 |
| group       | 是    | String | 消费组ID。                                |

### 请求参数

无

### 响应参数

无

## 请求示例

```
DELETE https://{endpoint}/v2/{engine}/{project_id}/instances/{instance_id}/groups/{group}
```

## 响应示例

无

## 状态码

| 状态码 | 描述    |
|-----|-------|
| 200 | 删除成功。 |

## 错误码

请参见[错误码](#)。

# 9 附录

## 9.1 状态码

状态码如表9-1所示

表 9-1 状态码

| 状态码 | 编码                            | 错误码说明                                                 |
|-----|-------------------------------|-------------------------------------------------------|
| 100 | Continue                      | 继续请求。<br>这个临时响应用来通知客户端，它的部分请求已经被服务器接收，且仍未被拒绝。         |
| 101 | Switching Protocols           | 切换协议。只能切换到更高级的协议。<br>例如，切换到HTTP的新版本协议。                |
| 200 | OK                            | 请求成功。                                                 |
| 201 | Created                       | 创建类的请求完全成功。                                           |
| 202 | Accepted                      | 已经接受请求，但未处理完成。                                        |
| 203 | Non-Authoritative Information | 非授权信息，请求成功。                                           |
| 204 | NoContent                     | 请求完全成功，同时HTTP响应不包含响应体。<br>在响应OPTIONS方法的HTTP请求时返回此状态码。 |
| 205 | Reset Content                 | 重置内容，服务器处理成功。                                         |
| 206 | Partial Content               | 服务器成功处理了部分GET请求。                                      |
| 300 | Multiple Choices              | 多种选择。请求的资源可包括多个位置，相应可返回一个资源特征与地址的列表用于用户终端（例如：浏览器）选择。  |

| 状态码 | 编码                            | 错误码说明                                                                                  |
|-----|-------------------------------|----------------------------------------------------------------------------------------|
| 301 | Moved Permanently             | 永久移动，请求的资源已被永久的移动到新的 URI，返回信息会包括新的 URI。                                                |
| 302 | Found                         | 资源被临时移动。                                                                               |
| 303 | See Other                     | 查看其它地址。<br>使用 GET 和 POST 请求查看。                                                         |
| 304 | Not Modified                  | 所请求的资源未修改，服务器返回此状态码时，不会返回任何资源。                                                         |
| 305 | Use Proxy                     | 所请求的资源必须通过代理访问。                                                                        |
| 306 | Unused                        | 已经被废弃的 HTTP 状态码。                                                                       |
| 400 | BadRequest                    | 非法请求。<br>建议直接修改该请求，不要重试该请求。                                                            |
| 401 | Unauthorized                  | 在客户端提供认证信息后，返回该状态码，表明服务端指出客户端所提供的认证信息不正确或非法。                                           |
| 402 | Payment Required              | 保留请求。                                                                                  |
| 403 | Forbidden                     | 请求被拒绝访问。<br>返回该状态码，表明请求能够到达服务端，且服务端能够理解用户请求，但是拒绝做更多事情，因为该请求被设置为拒绝访问，建议直接修改该请求，不要重试该请求。 |
| 404 | NotFound                      | 所请求的资源不存在。<br>建议直接修改该请求，不要重试该请求。                                                       |
| 405 | MethodNotAllowed              | 请求中带有该资源不支持的方法。<br>建议直接修改该请求，不要重试该请求。                                                  |
| 406 | Not Acceptable                | 服务器无法根据客户端请求的内容特性完成请求。                                                                 |
| 407 | Proxy Authentication Required | 请求要求代理的身份认证，与 401 类似，但请求者应当使用代理进行授权。                                                   |
| 408 | Request Time-out              | 服务器等候请求时发生超时。<br>客户端可以随时再次提交该请求而无需进行任何更改。                                              |
| 409 | Conflict                      | 服务器在完成请求时发生冲突。<br>返回该状态码，表明客户端尝试创建的资源已经存在，或者由于冲突请求的更新操作不能被完成。                          |
| 410 | Gone                          | 客户端请求的资源已经不存在。<br>返回该状态码，表明请求的资源已被永久删除。                                                |

| 状态码 | 编码                              | 错误码说明                                                                                 |
|-----|---------------------------------|---------------------------------------------------------------------------------------|
| 411 | Length Required                 | 服务器无法处理客户端发送的不带Content-Length的请求信息。                                                   |
| 412 | Precondition Failed             | 未满足前提条件，服务器未满足请求者在请求中设置的其中一个前提条件。                                                     |
| 413 | Request Entity Too Large        | 由于请求的实体过大，服务器无法处理，因此拒绝请求。为防止客户端的连续请求，服务器可能会关闭连接。如果只是服务器暂时无法处理，则会包含一个Retry-After的响应信息。 |
| 414 | Request-URI Too Large           | 请求的URI过长（URI通常为网址），服务器无法处理。                                                           |
| 415 | Unsupported Media Type          | 服务器无法处理请求附带的媒体格式。                                                                     |
| 416 | Requested range not satisfiable | 客户端请求的范围无效。                                                                           |
| 417 | Expectation Failed              | 服务器无法满足Expect的请求头信息。                                                                  |
| 422 | Unprocessable Entity            | 请求格式正确，但是由于含有语义错误，无法响应。                                                               |
| 429 | TooManyRequests                 | 表明请求超出了客户端访问频率的限制或者服务端接收到多于它能处理的请求。建议客户端读取相应的Retry-After首部，然后等待该首部指出的时间后再重试。          |
| 500 | InternalServerError             | 表明服务端能被请求访问到，但是不能理解用户的请求。                                                             |
| 501 | Not Implemented                 | 服务器不支持请求的功能，无法完成请求。                                                                   |
| 502 | Bad Gateway                     | 充当网关或代理的服务器，从远端服务器接收到了一个无效的请求。                                                        |
| 503 | ServiceUnavailable              | 被请求的服务无效。<br>建议直接修改该请求，不要重试该请求。                                                       |
| 504 | ServerTimeout                   | 请求在给定的时间内无法完成。客户端仅在为请求指定超时（Timeout）参数时会得到该响应。                                         |
| 505 | HTTP Version not supported      | 服务器不支持请求的HTTP协议的版本，无法完成处理。                                                            |

## 9.2 错误码

当您调用API时，如果遇到“APIGW”开头的错误码，请参见[API网关错误码](#)进行处理。

更多服务错误码请参见[API错误中心](#)。

| 状态码 | 错误码          | 错误信息                                                                                                                                 | 描述                                  | 处理措施             |
|-----|--------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|------------------|
| 400 | DMS.00400002 | The project ID format is invalid.                                                                                                    | Project-ID的格式无效。                    | 请检查Project-ID的格式 |
| 400 | DMS.00400004 | The request body is empty.                                                                                                           | 请求消息体为空。                            | 请查看请求信息体         |
| 400 | DMS.00400005 | The message body is not in JSON format or contains invalid characters.                                                               | 请求消息体不是JSON格式或字段非法。                 | 请检查消息体格式         |
| 400 | DMS.00400007 | Unsupported type.                                                                                                                    | 不支持的类型。                             | 请检查类型            |
| 400 | DMS.00400008 | Unsupported version.                                                                                                                 | 不支持的版本。                             | 请检查版本            |
| 400 | DMS.00400009 | Invalid product_id.                                                                                                                  | 请求参数 product_id非法。                  | 请检查参数 product_id |
| 400 | DMS.00400010 | Invalid instance name. The name must be 4 to 64 characters long. Only letters, digits, underscores (_), and hyphens (-) are allowed. | 实例名称不合法，只能包含字母，数字，下划线或者中划线，长度为4-64。 | 请检查实例名称          |
| 400 | DMS.00400011 | The instance description can contain a maximum of 1024 characters.                                                                   | 实例描述长度必须为0-1024。                    | 请查看实例描述          |

| 500 | DMS.10550035  | tag_type must be either or or and.  | tag_type不正确，tag_type必须为or或者and。 | 请检查tag_type                     |
| 501 | DMS.111501026 | Query reach maximum byte            | 查询消息的总字节数超过限定值                  | 缩短时间范围，确保查询字节数不超过限定值，或者使用其他方式查询 |
| 503 | DMS.111501025 | Query Busy. Please try again later. | 查询繁忙，请稍后查询                      | 请稍后查询                           |

## 9.3 实例状态说明

表 9-2 实例状态说明

| 状态             | 说明                               |
|----------------|----------------------------------|
| CREATING       | 申请实例后，在实例状态进入运行中之前的状态。           |
| RUNNING        | 实例正常运行状态。在这个状态的实例可以运行您的业务。       |
| ERROR          | 实例处于故障的状态。                       |
| RESTARTING     | 实例正在进行重启操作。                      |
| STARTING       | 实例从已冻结到运行中的中间状态。                 |
| EXTENDING      | 实例正在进行规格变更操作。                    |
| EXTENDEDFAILED | 实例处于规格变更操作失败的状态。                 |
| FROZEN         | 实例处于已冻结状态，用户可以在“我的订单”中续费开启冻结的实例。 |
| FREEZING       | 实例从运行中到已冻结的中间状态。                 |
| UPGRADING      | 实例正在进行升级操作。                      |
| ROLLINGBACK    | 实例正在进行回滚操作。                      |

## 9.4 获取项目 ID

### 操作场景

在调用接口的时候，部分URL中需要填入项目ID，所以需要获取到项目ID。有如下两种获取方式：

- [调用API获取项目ID](#)
- [从控制台获取项目ID](#)

### 调用 API 获取项目 ID

项目ID可以通过调用[查询指定条件下的项目信息](#)API获取。

获取项目ID的接口为“GET https://{Endpoint}/v3/projects”，其中{Endpoint}为IAM的终端节点，可以从[地区和终端节点](#)获取。接口的认证鉴权请参见[认证鉴权](#)。

响应示例如下，其中projects下的“id”即为项目ID。

```
{
 "projects": [
 {
 "domain_id": "65382450e8f64ac0870cd180d14e684b",
 "is_domain": false,
 "parent_id": "65382450e8f64ac0870cd180d14e684b",
 "name": "xxx-xxx-xxx",
 "description": "",
 "links": {
 "next": null,
 "previous": null,
 "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"
 },
 "id": "a4a5d4098fb4474fa22cd05f897d6b99",
 "enabled": true
 }
],
 "links": {
 "next": null,
 "previous": null,
 "self": "https://www.example.com/v3/projects"
 }
}
```

### 从控制台获取项目 ID

在调用接口的时候，部分URL中需要填入项目ID（project\_id），所以需要先在管理控制台上获取到项目ID。

项目ID获取步骤如下：

**步骤1** 登录管理控制台。

**步骤2** 鼠标悬停在右上角的用户名，选择下拉列表中的“我的凭证”。

在“API凭证”页面的项目列表中查看项目ID。

图 9-1 查看项目 ID

----结束

## 9.5 获取账号名和账号 ID

在调用接口的时候，部分URL中需要填入账号名和账号ID，所以需要先在管理控制台上获取到账号名和账号ID。账号名和账号ID获取步骤如下：

1. 登录管理控制台。
  2. 鼠标悬停在右上角的用户名，选择下拉列表中的“我的凭证”。
- 查看账号名和账号ID。

图 9-2 查看账号名和账号 ID

# A 修订记录

| 发布日期       | 修订记录                                                                                                                                                                       |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2024-12-20 | 本次变更如下：<br>新增 <a href="#">查询产品规格列表</a> 、 <a href="#">查询RocketMQ产品规格核数</a> 、 <a href="#">查询实例节点</a> 和 <a href="#">重启指定实例</a> 接口。                                            |
| 2024-09-04 | 本次变更如下：<br>更新 <a href="#">查询RocketMQ配置</a> 的响应示例。                                                                                                                          |
| 2024-07-05 | 本次变更如下：<br>新增应用示例 <a href="#">批量创建Topic</a> 。                                                                                                                              |
| 2023-12-15 | 本次变更如下：<br>新增 <a href="#">查询实例的扩容规格列表</a> 和 <a href="#">实例规格变更</a> 接口。                                                                                                     |
| 2023-06-06 | 本次变更如下：<br>新增 <a href="#">新建元数据迁移任务</a> 、 <a href="#">查询实例下所有迁移任务或查询指定迁移任务信息</a> 和 <a href="#">删除元数据迁移任务</a> 接口。                                                           |
| 2023-04-21 | 本次变更如下：<br>新增 <a href="#">查询消费者列表</a> 接口。                                                                                                                                  |
| 2023-02-17 | 本次变更如下： <ul style="list-style-type: none"><li>更新<a href="#">创建实例</a>的URI。</li><li>新增<a href="#">批量添加或删除实例标签</a>、<a href="#">查询实例标签</a>和<a href="#">查询项目标签</a>接口。</li></ul> |
| 2023-01-13 | 本次变更如下：<br>新增 <a href="#">查询主题列表</a> 接口。                                                                                                                                   |
| 2022-07-07 | 本次变更如下：<br>新增 <a href="#">权限和授权项</a> 章节。                                                                                                                                   |
| 2022-05-16 | 第一次正式发布。                                                                                                                                                                   |
