1 Are Resource Snapshots and Resource Change Notifications Dumped into the Same OBS Bucket?

Yes, they are dumped into the same OBS bucket.

When you are enabling or configuring the resource recorder, if you enable the data dump function and configure an OBS bucket, resource snapshots and resource change notifications will be periodically dumped into the configured OBS bucket.

2 How Often Are Resource Snapshots and Resource Change Notifications Dumped, Respectively?

After you enable and configure the resource recorder, it dumps resource snapshots into the OBS bucket every 24 hours.

After you enable and configure the resource recorder, it dumps resource change notifications into the OBS bucket every 6 hours.

3 Do I Need to Configure Both Topic and Data Dump When I Enable and Configure the Resource Recorder?

No. You can specify either **Topic** or **Data Dump**.

4 Why Can't I Receive a Notification After I Configured the Resource Recorder and the Resources Are Changed?

The possible causes are as follows:

- When you were configuring the resource recorder, you have not configured **Topic**. To receive resource change notifications, configure **Topic** when you modify the resource recorder.
- When you were configuring the resource recorder, you have configured **Topic**. However, you only created an SMN topic, and have not added subscriptions and requested confirmations.

  For details, see **Simple Message Notification User Guide**.

5 Why Are Resource Change Notifications Not Dumped Into the Configured OBS Bucket After I Configured the Resource Recorder?

To dump resource change notifications, you need to configure both **Topic** and **Data Dump**.

Check whether you have configured both of them.

6 How Many Assignments Can I Add?

You can use a HUAWEI CLOUD account to add up to 30 assignments.

7 What Are Assignment Parameters When I Am Adding an Assignment?

Assignment parameters correspond to the compliance policy. For example, if you select the **required-tag-check** policy, you need to configure **specifiedTagKey** and **specifiedTagValue** corresponding to this policy.

You can simplify compliance policy management by reducing the number of parameters in a compliance policy. Parameters such as **name** and **description** will not be deleted. These parameter names remain unchanged. However, you can set them to different values as needed.

After you set parameters to different values in the compliance policy, you can use the compliance policies in different scenarios.

8 Why Can't I Delete Resources on the My Resources Page?

On the **My Resources** page, you can only view resources and export resource details. To delete a resource, click **View Details** in the **Operation** column to access the corresponding service page.
