| 4.2.2 Querying Time Series Data.....   | 165        |
| 4.2.3 Querying Metrics.....  | 173        |
| 4.2.4 Querying Monitoring Data.....  | 178        |
| 4.2.5 Adding Monitoring Data.....  | 186        |
| 4.2.6 Adding or Modifying One or More Service Discovery Rules.....   | 190        |
| 4.2.7 Deleting a Service Discovery Rule.....   | 199        |
| 4.2.8 Querying Existing Service Discovery Rules.....   | 202        |
| 4.2.9 Adding a Threshold Rule.....   | 208        |
| 4.2.10 Querying the Threshold Rule List.....   | 214        |
| 4.2.11 Modifying a Threshold Rule.....   | 218        |
| 4.2.12 Deleting a Threshold Rule.....  | 223        |
| 4.2.13 Querying a Threshold Rule.....  | 225        |
| 4.2.14 Deleting Threshold Rules in Batches.....  | 229        |
| 4.3 Prometheus Monitoring.....   | 232        |
| 4.3.1 Querying Expression Calculation Results in a Specified Period Using the GET Method.....                    | 232        |
| 4.3.2 (Recommended) Querying Expression Calculation Results in a Specified Period Using the POST Method.....     | 236        |
| 4.3.3 Querying the Expression Calculation Result at a Specified Time Point Using the GET Method.....             | 240        |
| 4.3.4 (Recommended) Querying Expression Calculation Results at a Specified Time Point Using the POST Method..... | 244        |
| 4.3.5 Querying Tag Values.....   | 248        |
| 4.3.6 Obtaining the Tag Name List Using the GET Method.....  | 251        |
| 4.3.7 (Recommended) Obtaining the Tag Name List Using the POST Method.....                                       | 255        |
| 4.3.8 Querying Metadata.....   | 258        |
| 4.4 Log.....   | 261        |
| 4.4.1 Querying Logs.....   | 262        |
| 4.5 Prometheus Instance.....   | 267        |
| 4.5.1 Uninstalling a Hosted Prometheus Instance.....   | 267        |
| 4.5.2 Querying a Prometheus Instance.....  | 269        |
| 4.5.3 Adding a Prometheus Instance.....  | 274        |
| 4.5.4 Creating a Recording Rule for a Prometheus Instance.....   | 278        |
| 4.5.5 Obtaining the Credential for Calling a Prometheus Instance.....  | 280        |
| 4.6 Configuration Management.....  | 282        |
| 4.6.1 Querying the Cloud Services for Which AOM 2.0 Has Been Granted Permissions.....                            | 282        |
| 4.6.2 Querying the ICAgent Installed on a Host.....  | 283        |
| <b>5 Historical APIs.....</b>  | <b>286</b> |
| 5.1 Auto Scaling APIs (Offline Soon).....  | 286        |
| 5.1.1 Creating a Policy.....   | 286        |
| 5.1.2 Deleting a Policy.....   | 294        |
| 5.1.3 Modifying a Policy.....  | 295        |
| 5.1.4 Querying a Policy List.....  | 302        |

|   |            |
|---|------------|
| 5.1.5 Querying a Policy.....  | 305        |
| 5.1.6 Modifying Policy Group Attributes.....  | 308        |
| 5.1.7 Querying Policy Group Attributes.....   | 311        |
| 5.2 Common Monitoring APIs (Offline Soon).....  | 313        |
| 5.2.1 Adding or Modifying One or More Application Discovery Rules (Offline Soon)..... | 313        |
| 5.2.2 Querying Threshold Rules (Offline Soon).....                                    | 328        |
| 5.2.3 Modifying a Threshold Rule (Offline Soon).....                                  | 332        |
| 5.2.4 Adding a Threshold Rule (Offline Soon).....                                     | 337        |
| 5.2.5 Querying Monitoring Data (Offline Soon).....                                    | 342        |
| <b>6 Examples.....</b>  | <b>349</b> |
| 6.1 Querying Time Series Objects.....   | 349        |
| 6.2 Querying Time Series Data.....  | 350        |
| 6.3 Querying Details About a Specified Alarm Action Rule.....                         | 352        |
| <b>7 Permissions Policies and Supported Actions.....</b>                              | <b>354</b> |
| 7.1 Introduction.....   | 354        |
| 7.2 Actions Supported by Policy-based Authorization.....                              | 355        |
| 7.2.1 Alarm APIs.....   | 355        |
| 7.2.2 Monitoring APIs.....  | 357        |
| 7.2.3 Prometheus Monitoring APIs.....   | 358        |
| 7.2.4 Log APIs.....   | 360        |
| 7.2.5 CMDB APIs.....  | 360        |
| <b>8 Appendix.....</b>  | <b>364</b> |
| 8.1 Status Codes.....   | 364        |
| 8.2 Error Codes.....  | 367        |
| 8.3 Obtaining an Account ID and Project ID.....                                       | 392        |
| 8.4 Common Request Headers.....   | 393        |
| 8.5 Common Response Headers.....  | 394        |

# 1

## Before You Start

---

### 1.1 Overview

Welcome to use Application Operations Management (AOM). AOM is a one-stop, multi-dimensional O&M management platform for cloud applications. It provides one-stop observability analysis. By collecting metrics, logs, and performance data from the cloud and local devices, AOM enables you to monitor real-time running status of applications, resources, and services and detect faults in a timely manner, improving O&M automation capability and efficiency.

This document describes how to use APIs to perform operations on AOM, such as creation, deletion, and query. For details about all supported operations, see [2 API Overview](#).

If you plan to call AOM APIs, ensure that you are familiar with AOM concepts..

### 1.2 API Calling

AOM supports Representational State Transfer (REST) APIs, allowing you to call APIs using HTTPS.

For details about API calling, see [3 Calling APIs](#).

### 1.3 Endpoints

An endpoint is the request address for calling an API. Endpoints vary depending on services and regions.

For the endpoints of all services, see [Regions and Endpoints](#).

### 1.4 Concepts

- Account

An account is created upon successful registration with the cloud. The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. The account is a payment entity and should not be used directly to perform routine

management. For security purposes, create Identity and Access Management (IAM) users and grant them permissions for routine management.

- IAM User

An IAM user is created using an account to use cloud services. Each IAM user has its own identity credentials (password and access keys).

An IAM user can view the account ID and user ID on the [My Credentials](#) page of the console. The account name, username, and password will be required for API authentication.

- Region

Regions are divided by geographical location and network latency. Public services, such as Elastic Cloud Server (ECS), Elastic Volume Service (EVS), Object Storage Service (OBS), Virtual Private Cloud (VPC), Elastic IP (EIP), and Image Management Service (IMS), are shared within a region. Regions are classified into universal and dedicated regions. A universal region provides universal cloud services for common tenants. A dedicated region provides specific services for specific tenants.

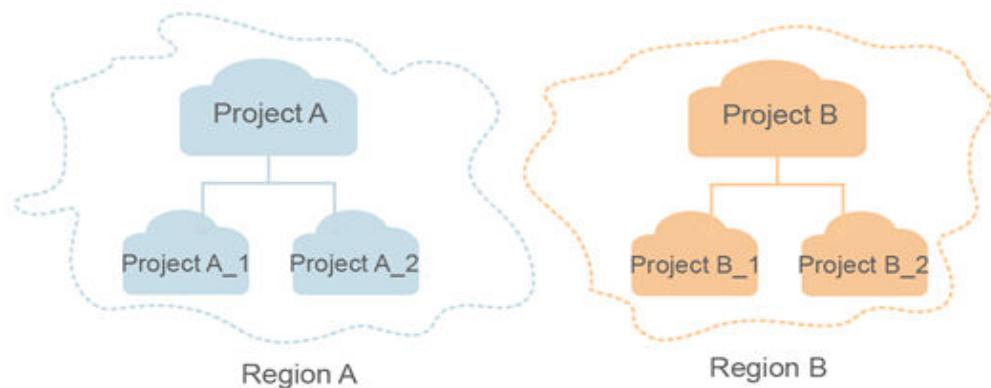

- Availability Zone (AZ)

AZs are physically isolated locations in a region, but are interconnected through an internal network for enhanced application availability.

- Project

Projects group and isolate resources (including compute, storage, and network resources) across physical regions. A default project is provided for each cloud region. Users can be granted permissions to access all resources in a specific project. For more refined access control, create subprojects under a project and purchase resources in the subprojects. Users can then be assigned permissions to access only specific resources in the subprojects.

**Figure 1-1** Project isolating model

To view a project ID, go to the [My Credentials](#) page.

- Enterprise Project

Enterprise projects group and manage resources across regions. Resources in enterprise projects are logically isolated. An enterprise project can contain resources in multiple regions, and resources can be transferred between enterprise projects.

For details about how to obtain enterprise project IDs and features, see the [\*Enterprise Management User Guide\*](#).

# 2 API Overview

AOM provides alarm, monitoring, Prometheus monitoring, log, Prometheus instance, configuration management, and APIs, helping you quickly and cost-effectively maintain applications.

**Table 2-1** API overview

| Type  | API  |
|---|--|
| <a href="#">Alarm APIs</a>                              | Alarm APIs, including the APIs for adding, updating, and deleting event alarm rules.   |
| <a href="#">Monitoring APIs</a>                         | Monitoring APIs, including the APIs for querying metrics, and querying and adding monitoring data.   |
| <a href="#">Prometheus Monitoring APIs</a>              | Prometheus monitoring APIs, including the APIs for querying the expression calculation result in a specified period or at a specified time point.                        |
| <a href="#">Log APIs</a>                                | Log APIs, including the API for querying logs.   |
| <a href="#">Prometheus Instance APIs (AOM 2.0 only)</a> | APIs related to Prometheus instances, including adding and querying Prometheus instances, and uninstalling hosted Prometheus instances.                                  |
| <a href="#">Configuration Management APIs</a>           | Configuration APIs, including the APIs for querying the cloud services for which AOM 2.0 has been granted permissions, and querying ICAgents installed on cluster hosts. |

# 3 Calling APIs

## 3.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM API for [obtaining a user token](#) as an example to demonstrate how to call an API. The obtained token can then be used to authenticate the calling of other APIs.

### Request URI

A request URI is in the following format:

**{URI-scheme}://{{Endpoint}}/{resource-path}?{query-string}**

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

- **URI-scheme:** Protocol used to transmit requests. All APIs use HTTPS.
- **Endpoint:** Domain name or IP address of the server bearing the REST service. The endpoint varies between services in different regions. It can be obtained from [Regions and Endpoints](#).

For example, the endpoint of IAM in the **CN-Hong Kong** region is **iam.ap-southeast-1.myhuaweicloud.com**.

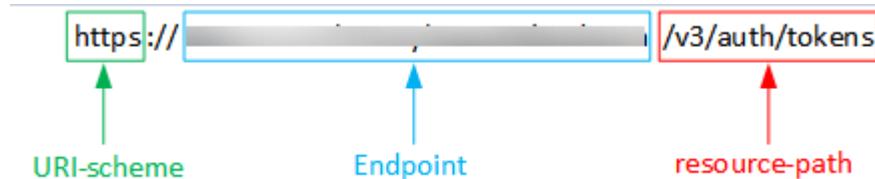

#### NOTICE

For monitoring, log, and auto scaling APIs, use AOM endpoints. For APM APIs, use APM endpoints. For details, see [1.3 Endpoints](#).

- **resource-path:** Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the **resource-path** of the API used to obtain a user token is **/v3/auth/tokens**.
- **query-string:** Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, **? limit=10** indicates that a maximum of 10 data records will be displayed.

For example, to obtain an IAM token in the *xxx* region, obtain the endpoint of IAM for this region and the **resource-path** in the URI of the API used to obtain a user token. Then, construct the URI as follows:

**Figure 3-1** Example URI

**NOTE**

To simplify the URI display in this document, each API is provided only with a **resource-path** and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

## Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET**: requests the server to return specified resources.
- **PUT**: requests the server to update specified resources.
- **POST**: requests the server to add resources or perform special operations.
- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: requests the server to return the response header only.
- **PATCH**: requests the server to update partial content of a specified resource. If the resource does not exist, a new resource will be created.

For example, in the case of the API used to obtain a user token, the request method is POST. The request is as follows:

```
POST https://Endpoint/v3/auth/tokens
```

## Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows:

- **Content-Type**: specifies the request body type or format. This field is mandatory and its default value is **application/json**. Other values of this field will be provided for specific APIs if any.
- **X-Auth-Token**: specifies a user token only for token-based API authentication. The user token is a response to the API used to obtain a user token. This API is the only one that does not require authentication.

#### NOTE

In addition to supporting token-based authentication, public cloud APIs also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

For more information, see [AK/SK-based Authentication](#).

The API used to obtain a user token does not require authentication. Therefore, only the **Content-Type** field needs to be added to requests for calling the API. An example of such requests is as follows:

```
POST https://Endpoint/v3/auth/tokens
Content-Type: application/json
```

## Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to obtain a user token, the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Replace *username*, *domainname*, \*\*\*\*\* (login password), and xxxxxxxxxxxxxxxxx (project ID) with the actual values. To learn how to obtain a project ID, see [8.3 Obtaining an Account ID and Project ID](#).

#### NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account.

```
POST https://Endpoint/v3/auth/tokens
Content-Type: application/json
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "id": "xxxxxxxxxxxxxxxxxxxx"
      }
    }
  }
}
```

If all data required for the API request is available, you can send the request to call the API through curl, Postman, or coding. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

## 3.2 Authentication

Requests for calling an API can be authenticated using either of the following methods:

- Token-based authentication: Requests are authenticated using a token.
- AK/SK-based authentication: Requests are authenticated by encrypting the request body using an AK/SK pair.

### Token-based Authentication

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the Identity and Access Management (IAM) API used to obtain a user token.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API.

In [3.1 Making an API Request](#), the process of calling the API used to **obtain a user token** is described. When calling an API to obtain a user token, you must set **auth.scope** in the request body to **project**.

```
{  
  "auth": {  
    "identity": {  
      "methods": [  
        "password"  
      ],  
      "password": {  
        "user": {  
          "name": "username",  
          "password": "*****",  
          "domain": {  
            "name": "domainname"  
          }  
        }  
      }  
    },  
    "scope": {  
      "project": {  
        "name": "xxxxxxx"  
      }  
    }  
  }  
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, **X-Auth-Token: ABCDEFJ....** can be added to a request as follows:

```
GET https://Endpoint/v3/auth/projects  
Content-Type: application/json  
X-Auth-Token: ABCDEFJ....
```

## AK/SK-based Authentication

### NOTE

AK/SK-based authentication supports API requests with a body not larger than 12 MB. For API requests with a larger body, token-based authentication is recommended.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK-based authentication, you can use an AK/SK to sign requests based on the signature algorithm or use the signing SDK to sign requests. For details about how to sign requests and use the signing SDK, see [AK/SK Signing and Authentication Guide](#).

---

### CAUTION

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

---

## 3.3 Response

### Status Code

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request. For more information, see [8.1 Status Codes](#).

If status code **201** is returned for the calling of the API for [obtaining a user token](#), the request is successful.

### Response Header

Similar to a request, a response also has a header, for example, **Content-Type**.

For the API used to obtain a user token, the **x-subject-token** header field is the desired user token. This token can then be used to authenticate the calling of other APIs.

**Figure 3-2 Header fields of the response to the request for obtaining a user token**

## Response Body

The body of a response is often returned in structured format as specified in the **Content-Type** header field. The response body transfers content except the response header.

The following is part of the response body for the API used to obtain a user token.

```
{
  "token": {
    "expires_at": "2019-02-13T06:52:13.855000Z",
    "methods": [
      "password"
    ],
    "catalog": [
      {
        "endpoints": [
          {
            "region_id": "xx-xxxxxx-1",
.....
```

If an error occurs during API calling, an error code and a message will be displayed. The following shows an error response body.

```
{
  "errorCode": "SVCSTG_AMS_4000001",
  "errorMessage": "Request param invalid"
}
```

In the response body, **errorCode** is an error code, and **errorMessage** provides information about the error.

# 4 APIs

## 4.1 Alarm

### 4.1.1 Querying the Event Alarm Rule List

#### Function

This API is used to query the event alarm rule list.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

GET /v2/{project\_id}/event2alarm-rule

**Table 4-1** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br>Minimum: 32<br>Maximum: 32 |

## Request Parameters

**Table 4-2** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br>Minimum: <b>0</b><br>Maximum: <b>40960</b>   |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>application/json</b></li></ul> |

## Response Parameters

**Status code: 200**

**Table 4-3** Response body parameters

| Parameter | Type   | Description                    |
|-----------|--|--------------------------------|
| [items]   | Array of<br><b>Event2alarm RuleBody</b><br>objects | OK: The request is successful. |

**Table 4-4** Event2alarmRuleBody

| Parameter | Type   | Description  |
|-----------|--------|--|
| user_id   | String | Project ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>  |
| name      | String | Rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, underscores (_), and hyphens (-) are allowed.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |

| Parameter         | Type  | Description  |
|-------------------|---|--|
| description       | String                                      | Rule description. Enter a maximum of 1024 characters and do not start or end with an underscore (_) or hyphen (-). Only letters, digits, and special characters (_->=,. ) are allowed.<br><br>Minimum: <b>0</b><br>Maximum: <b>1024</b>                    |
| create_time       | Long  | Creation time.<br><br>Minimum: <b>0</b><br>Maximum: <b>9999999999999</b>   |
| update_time       | Long  | Update time.<br><br>Minimum: <b>0</b><br>Maximum: <b>9999999999999</b>   |
| resource_provider | String                                      | Event source.<br><br>Minimum: <b>0</b><br>Maximum: <b>64</b>   |
| metadata          | <b>metadata</b> object                      | Source data.   |
| enable            | Boolean                                     | Whether to enable the rule.  |
| trigger_policies  | Array of<br><b>trigger_policies</b> objects | Trigger policy.<br><br>Array Length: <b>0 - 1024</b>   |
| alarm_type        | String                                      | Alarm type. notification: direct alarm reporting. denoising: alarm noise reduction.<br><br>Minimum: <b>0</b><br>Maximum: <b>32</b><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>notification</b></li><li>• <b>denoising</b></li></ul> |
| action_rule       | String                                      | Alarm action rule.<br><br>Minimum: <b>0</b><br>Maximum: <b>128</b>   |
| inhibit_rule      | String                                      | Alarm suppression rule.<br><br>Minimum: <b>0</b><br>Maximum: <b>128</b>  |

| Parameter        | Type                                       | Description  |
|------------------|--|--|
| route_group_rule | String                                     | Alarm grouping rule.<br>Minimum: <b>0</b><br>Maximum: <b>128</b> |
| event_names      | Array of strings                           | Event name.  |
| migrated         | Boolean                                    | Whether to migrate to AOM 2.0.                                   |
| topics           | Array of <a href="#">SmnTopics</a> objects | SMN information.   |

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

## Example Requests

Add an event alarm rule whose user ID is "xxxx", name is "scl\_test\_event", and event source is "AOM".

```
https://{{endpoint}}/v2/{{project_id}}/event2alarm-rule
```

```
{  
    "user_id": "xxxx",  
    "name": "scl_test_event",  
    "description": "",  
    "create_time": 1669276173427,  
    "update_time": 0,  
    "resource_provider": "AOM",  
    "metadata": {  
        "customField": [ "xxx=xxx" ]  
    },  
    "enable": true,  
    "trigger_policies": [ {  
        "id": 0,  
        "name": "",  
        "trigger_type": "accumulative",  
        "period": 300,  
        "operator": ">=",  
        "count": 99,  
        "level": ""  
    } ],  
    "alarm_type": "notification",  
    "action_rule": "111111",  
    "inhibit_rule": "",  
    "route_group_rule": ""  
}
```

## Example Responses

### Status code: 204

OK: The request is successful.

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "error_code": "AOM.02011400",  
    "error_msg": "actionRule is invalid!",  
    "error_type": "BAD_REQUEST",  
    "trace_id": ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code": "SVCSTG.AMS.2000051",  
    "error_msg": "auth failed.",  
    "error_type": "AUTH_FAILED"  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code": "SVCSTG.AMS.2000051",  
    "error_msg": "auth failed.",  
    "error_type": "AUTH_FAILED",  
    "trace_id": "8fb508e9e31b44279016f708e1c60e4c"  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 204         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |

## Error Codes

See [Error Codes](#).

### 4.1.3 Modifying an Event Alarm Rule

#### Function

This API is used to modify an event alarm rule.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

PUT /v2/{project\_id}/event2alarm-rule

**Table 4-21** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

## Request Parameters

**Table 4-22** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | No        | String | User token obtained from IAM.<br>Minimum: <b>0</b><br>Maximum: <b>40960</b>  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-23** Request body parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| user_id   | Yes       | String | Project ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>  |
| name      | Yes       | String | Rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, underscores (_), and hyphens (-) are allowed.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |

| Parameter         | Mandatory | Type                              | Description  |
|-------------------|-----------|-----------------------------------|--|
| description       | No        | String                            | Rule description. Enter a maximum of 1024 characters and do not start or end with an underscore (_) or hyphen (-). Only letters, digits, and special characters (_-<>=,. ) are allowed.<br><br>Minimum: <b>0</b><br>Maximum: <b>1024</b>                   |
| create_time       | Yes       | Long                              | Creation time.<br><br>Minimum: <b>0</b><br>Maximum: <b>9999999999999</b>   |
| update_time       | No        | Long                              | Update time.<br><br>Minimum: <b>0</b><br>Maximum: <b>9999999999999</b>   |
| resource_provider | No        | String                            | Event source.<br><br>Minimum: <b>0</b><br>Maximum: <b>64</b>   |
| metadata          | Yes       | metadata object                   | Source data.   |
| enable            | Yes       | Boolean                           | Whether to enable the rule.  |
| trigger_policies  | Yes       | Array of trigger_policies objects | Trigger policy.<br><br>Array Length: <b>0 - 1024</b>   |
| alarm_type        | Yes       | String                            | Alarm type. notification: direct alarm reporting. denoising: alarm noise reduction.<br><br>Minimum: <b>0</b><br>Maximum: <b>32</b><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>notification</b></li><li>• <b>denoising</b></li></ul> |
| action_rule       | Yes       | String                            | Alarm action rule.<br><br>Minimum: <b>0</b><br>Maximum: <b>128</b>   |
| inhibit_rule      | No        | String                            | Alarm suppression rule.<br><br>Minimum: <b>0</b><br>Maximum: <b>128</b>  |

| Parameter        | Mandatory | Type                                       | Description  |
|------------------|-----------|--|--|
| route_group_rule | No        | String                                     | Alarm grouping rule.<br>Minimum: <b>0</b><br>Maximum: <b>128</b> |
| event_names      | No        | Array of strings                           | Event name.  |
| migrated         | No        | Boolean                                    | Whether to migrate to AOM 2.0.                                   |
| topics           | No        | Array of <a href="#">SmnTopics</a> objects | SMN information.   |

**Table 4-24** metadata

| Parameter   | Mandatory | Type             | Description   |
|-------------|-----------|------------------|---|
| customField | No        | Array of strings | Custom tag.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b><br>Array Length: <b>0 - 1024</b> |

**Table 4-25** trigger\_policies

| Parameter    | Mandatory | Type    | Description  |
|--------------|-----------|---------|--|
| id           | No        | Integer | ID.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>  |
| name         | No        | String  | Event name.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>  |

| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

## Example Requests

Update an event alarm rule whose user ID is "xxxxxx", event source is "AOM", and name is "scl\_test\_event".

[https://{endpoint}/v2/{project\\_id}/event2alarm-rule](https://{endpoint}/v2/{project_id}/event2alarm-rule)

```
{  
    "user_id": "xxxxxx",  
    "name": "scl_test_event",  
    "description": "",  
    "create_time": 1669276304343,  
    "update_time": 1669276304343,  
    "resource_provider": "AOM",  
    "metadata": {  
        "customField": [ "xxx" ]  
    },  
    "enable": true,  
    "trigger_policies": [ {  
        "id": 0,  
        "name": "",  
        "trigger_type": "accumulative",  
        "period": 300,  
        "operator": ">=",  
        "count": 99,  
        "level": ""  
    } ],  
    "alarm_type": "notification",  
    "action_rule": "111111",  
    "inhibit_rule": "",  
    "route_group_rule": ""  
}
```

## Example Responses

**Status code: 204**

OK: The request is successful.

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.02011400",  
    "error_msg" : "actionRule is invalid!",  
    "error_type" : "BAD_REQUEST",  
    "trace_id" : ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code" : "SVCSTG.AMS.2000051",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED"  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code" : "SVCSTG.AMS.2000051",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED"  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 204         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |

| Status Code | Description  |
|-------------|--|
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request. |

| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

## Example Requests

Delete event alarm rule "aomTestLts".

```
https://{endpoint}/v2/{project_id}/event2alarm-rule
[ "aomTestLts" ]
```

## Example Responses

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.02013125",
  "error_msg" : "send kafka message failed",
  "error_type" : "INTERNAL_SERVER_ERROR",
  "trace_id" : "8fb508e9e31b44279016f708e1c60e4c"
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{
  "error_code" : "SVCSTG.AMS.2000051",
  "error_msg" : "auth failed.",
  "error_type" : "AUTH_FAILED"
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code" : "SVCSTG.AMS.2000051",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED"  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 204         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |

## Error Codes

See [Error Codes](#).

### 4.1.5 Obtaining the Alarm Sending Result

#### Function

This API is used to obtain the alarm sending result.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

GET /v2/{project\_id}/alarm-notified-histories

**Table 4-38** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

**Table 4-39** Query Parameters

| Parameter | Mandatory | Type   | Description          |
|-----------|-----------|--------|----------------------|
| event_sn  | No        | String | Alarm serial number. |

## Request Parameters

**Table 4-40** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br>Minimum: <b>1</b><br>Maximum: <b>40960</b>                  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values:<br>• <b>application/json</b> |

## Response Parameters

Status code: 200

**Table 4-41** Response body parameters

| Parameter          | Type  | Description                   |
|--------------------|---|-------------------------------|
| notified_histories | Array of<br><b>NotifiedHistoriesResult</b><br>objects | Historical notification list. |

**Table 4-42** NotifiedHistoriesResult

| Parameter     | Type  | Description  |
|---------------|---|--|
| event_sn      | String                                      | Alarm serial number.<br>Minimum: <b>19</b><br>Maximum: <b>19</b> |
| notifications | Array of<br><b>Notifications</b><br>objects | Notification result.<br>Array Length: <b>0 - 100</b>             |

**Table 4-43** Notifications

| Parameter        | Type                      | Description   |
|------------------|---------------------------|---|
| action_rule      | String                    | Alarm action rule name.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>                         |
| notifier_channel | String                    | Notification type. SMN: Simple Message Notification.<br>Enumeration values:<br>• <b>SMN</b> |
| smn_channel      | <b>SmnResponse</b> object | Notification result details.  |

**Table 4-44** SmnResponse

| Parameter            | Type                                  | Description   |
|----------------------|---------------------------------------|---|
| sent_time            | Long                                  | Sending time.<br>Minimum: <b>0</b><br>Maximum: <b>9999999999</b>                                    |
| smn_notified_history | Array of<br><b>SmnInfo</b><br>objects | Content of a notification.<br>Array Length: <b>1 - 100</b>  |
| smn_request_id       | String                                | ID for requesting SMN.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>                                  |
| smn_response_body    | String                                | Information returned after the SMN service is invoked.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |

| Parameter         | Type   | Description   |
|-------------------|--------|---|
| smn_response_code | String | HTTP status code returned after the SMN service is invoked.<br>Minimum: <b>3</b><br>Maximum: <b>3</b> |
| smn_topic         | String | SMN topic.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>  |

**Table 4-45 SmnInfo**

| Parameter               | Type    | Description  |
|-------------------------|---------|--|
| smn_notified_content    | String  | SMN message content.<br>Minimum: <b>1</b><br>Maximum: <b>9999999</b> |

| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

**Status code: 500**

**Table 4-48** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Response code.<br>Minimum: <b>13</b><br>Maximum: <b>13</b>    |
| error_msg  | String | Response message.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |
| trace_id   | String | Response ID.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>      |

## Example Requests

Obtain the sending result of the alarm whose serial number is 1044686593798963201.

```
https://{{Endpoint}}/v2/{{project_id}}/alarm-notified-histories?event_sn=1044686593798963201
```

## Example Responses

**Status code: 200**

OK: The request is successful.

See [Error Codes](#).

## 4.1.6 Deleting a Silence Rule

### Function

This API is used to delete a silence rule.

### Calling Method

For details, see [Calling APIs](#).

### URI

DELETE /v2/{project\_id}/alert/mute-rules

**Table 4-49** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br><br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

### Request Parameters

**Table 4-50** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br><br>Minimum: <b>1</b><br>Maximum: <b>40960</b>   |
| Content-Type | Yes       | String | Content type, which is application/json.<br><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>application/json</b></li></ul> |

**Table 4-51** Request body parameters

| Parameter | Mandatory | Type  | Description                     |
|-----------|-----------|---|---------------------------------|
| [items]   | Yes       | Array of<br><a href="#">DeleteMuteRuleName</a><br>objects | Name of the rule to be deleted. |

**Table 4-52** DeleteMuteRuleName

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| name      | Yes       | String | Name of the silence rule to be deleted.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |

## Response Parameters

## Example Requests

Add a silence rule whose name is "32255" and user ID is "2xxxxxxxxxxxxxxxxxxxxxxcf".

`https://{{Endpoint}}/v2/{{project_id}}/alert/mute-rules`

```
{
  "create_time": 1668147671966,
  "desc": "",
  "match": [ [ {
```

```
    "key" : "event_severity",
    "operate" : "EQUALS",
    "value" : [ "Info" ]
  } ],
  "mute_config" : {
    "ends_at" : 86399,
    "scope" : [ ],
    "starts_at" : 0,
    "type" : "DAILY"
  },
  "name" : "32255",
  "timezone" : "xxx",
  "update_time" : 1668147671966,
  "user_id" : "2xxxxxxxxxxxxxxxxxxxxxxcf"
}
```

## Example Responses

### Status code: 400

Bad Request: Invalid request. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.08011001",
  "error_msg" : "the muteName is exist",
  "error_type" : "PARAM_INVALID",
  "trace_id" : ""
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{
  "error_code" : "AOM.0403",
  "error_msg" : "auth failed.",
  "error_type" : "AUTH_FAILED",
  "trace_id" : null
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.0403",
  "error_msg" : "auth failed.",
  "error_type" : "AUTH_FAILED",
  "trace_id" : null
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{
  "error_code" : "APM.00000500",
  "error_msg" : "Internal Server Error",
  "trace_id" : ""
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 204         | OK: Operation successful.   |
| 400         | Bad Request: Invalid request. The client should not repeat the request without modifications.   |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |

## Error Codes

See [Error Codes](#).

### 4.1.8 Modifying a Silence Rule

#### Function

This API is used to modify a silence rule.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

PUT /v2/{project\_id}/alert/mute-rules

**Table 4-66** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters.<br>Minimum: 32<br>Maximum: 32 |

## Request Parameters

**Table 4-67** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br>Minimum: <b>1</b><br>Maximum: <b>40960</b>                  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values:<br>• <b>application/json</b> |

**Table 4-68** Request body parameters

| Parameter   | Mandatory | Type                         | Description   |
|-------------|-----------|------------------------------|---|
| create_time | No        | Long                         | Creation time.<br>Minimum: <b>0</b><br>Maximum: <b>9999999999999</b>  |
| desc        | No        | String                       | Rule description.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b>  |
| match       | Yes       | Array<Array< <b>Match</b> >> | Match condition of the rule.<br>Up to 10 serial or parallel conditions can be created.<br>Array Length: <b>1 - 10</b>   |
| mute_config | Yes       | <b>MuteConfig</b> object     | Time when the rule takes effect.  |
| name        | Yes       | String                       | Rule name. Enter a maximum of 100 characters and do not start or end with an underscore (_). Only letters, digits, and underscores are allowed.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |
| timezone    | Yes       | String                       | Time zone.<br>Minimum: <b>1</b><br>Maximum: <b>32</b>   |

| Parameter   | Mandatory | Type   | Description   |
|-------------|-----------|--------|---|
| update_time | No        | Long   | Modification time.<br>Minimum: <b>0</b><br>Maximum: <b>999999999999</b> |
| user_id     | No        | String | User ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>                    |

**Table 4-69** Match

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| key       | Yes       | String           | Key specified in the metadata for matching.<br>Minimum: <b>1</b><br>Maximum: <b>128</b>  |
| operate   | Yes       | String           | Match mode. EXIST: Exist.<br>REGEX: Regular expression.<br>EQUALS: Equal to.<br>Minimum: <b>1</b><br>Maximum: <b>100</b><br>Enumeration values: <ul style="list-style-type: none"><li>• EQUALS</li><li>• REGEX</li><li>• EXIST</li></ul> |
| value     | No        | Array of strings | Value corresponding to the key. If operate is set to EXIST, this parameter is left empty.<br>Minimum: <b>1</b><br>Maximum: <b>256</b><br>Array Length: <b>0 - 5</b>  |

**Table 4-70** MuteConfig

| Parameter | Mandatory | Type | Description   |
|-----------|-----------|------|---|
| ends_at   | No        | Long | End time of the silence rule.<br>Minimum: <b>0</b><br>Maximum: <b>999999999</b> |

| Parameter | Mandatory | Type              | Description   |
|-----------|-----------|-------------------|---|
| scope     | No        | Array of integers | When type is set to WEEKLY or MONTHLY, scope cannot be empty.<br>Minimum: <b>0</b><br>Maximum: <b>31</b><br>Array Length: <b>1 - 100</b>  |
| starts_at | Yes       | Long              | Start time of the silence rule.<br>Minimum: <b>0</b><br>Maximum: <b>999999999</b>   |
| type      | Yes       | String            | Type of the time for the silence rule to take effect.<br>FIXED: Fixed time. DAILY: Certain time every day.<br>WEEKLY: Certain time every week. MONTHLY: Certain time every month.<br>Minimum: <b>1</b><br>Maximum: <b>100</b><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>FIXED</b></li><li>• <b>DAILY</b></li><li>• <b>WEEKLY</b></li><li>• <b>MONTHLY</b></li></ul> |

## Example Requests

Modify a silence rule whose name is "32255", time zone is "xxx", and user ID is "2xxxxxxxxxxxxxxxxxxxxxxcf".

[https://{endpoint}/v2/{project\\_id}/alert/mute-rules](https://{endpoint}/v2/{project_id}/alert/mute-rules)

```
{  
    "create_time" : 1668147671966,  
    "desc" : "",  
    "match" : [ [ {  
        "key" : "event_severity",  
        "operate" : "EQUALS",  
        "value" : [ "Info" ]  
    } ],  
    "mute_config" : {  
        "ends_at" : 86399,  
        "scope" : [ ],  
        "starts_at" : 0,  
        "type" : "DAILY"  
    },  
    "name" : "32255",  
    "timezone" : "xxx",  
    "update_time" : 1668147671966,
```

```
{  
    "user_id" : "2xxxxxxxxxxxxxxxxxxxxxxcf"  
}
```

## Example Responses

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.08012003",  
    "error_msg" : "request insertParma probably has error",  
    "error_type" : "PARAM_INVALID",  
    "trace_id" : ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description  |

## Error Codes

See [Error Codes](#).

### 4.1.10 Querying an Alarm Action Rule Based on Rule Name

#### Function

This API is used to query an alarm action rule based on the rule name.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

GET /v2/{project\_id}/alert/action-rules/{rule\_name}

**Table 4-84** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br><br>Minimum: <b>32</b><br>Maximum: <b>32</b> |
| rule_name  | Yes       | String | Alarm rule name.<br><br>Minimum: <b>1</b><br>Maximum: <b>100</b>   |

## Request Parameters

**Table 4-85** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br><br>Minimum: <b>1</b><br>Maximum: <b>40960</b>                  |
| Content-Type | Yes       | String | Content type, which is application/json.<br><br>Enumeration values:<br>• <b>application/json</b> |

## Response Parameters

Status code: 200

**Table 4-86** Response body parameters

| Parameter | Type   | Description   |
|-----------|--------|---|
| rule_name | String | Rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, and underscores (_) are allowed.<br><br>Minimum: <b>1</b><br>Maximum: <b>100</b> |

| Parameter             | Type                                    | Description  |
|-----------------------|---|--|
| project_id            | String                                  | Project ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>  |
| user_name             | String                                  | Member account name.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>   |
| desc                  | String                                  | Rule description. Enter a maximum of 1024 characters and do not start or end with an underscore (_). Only digits, letters, underscores (_), asterisk (*), and spaces are allowed.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| type                  | String                                  | Action type. Default: Notification.<br>Minimum: <b>1</b><br>Maximum: <b>1</b><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>1</b></li><li>• <b>2</b></li></ul>   |
| notification_template | String                                  | Message template.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>  |
| create_time           | Long                                    | Creation time.<br>Minimum: <b>0</b><br>Maximum: <b>99999999999999</b>  |
| update_time           | Long                                    | Modification time<br>Minimum: <b>0</b><br>Maximum: <b>99999999999999</b>   |
| time_zone             | String                                  | Time zone.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>   |
| smn_topics            | Array of<br><b>SmnTopics</b><br>objects | SMN topic. The total number of topics cannot exceed 5.<br>Array Length: <b>1 - 5</b>   |

**Table 4-87 SmnTopics**

| Parameter    | Type    | Description  |
|--------------|---------|--|
| display_name | String  | Topic display name, which will be the name of an email sender. Max.: 192 bytes. This parameter is left blank by default.<br><br>Minimum: <b>1</b><br>Maximum: <b>64</b>  |
| name         | String  | Name of the topic. Enter 1 to 255 characters starting with a letter or digit. Only letters, digits, hyphens (-), and underscores (_) are allowed.<br><br>Minimum: <b>1</b><br>Maximum: <b>255</b>  |
| push_policy  | Integer | SMN message push policy. Options: 0 and 1.<br><br>Minimum: <b>0</b><br>Maximum: <b>1</b>   |
| status       | Integer | Status of the topic subscriber. 0: The topic has been deleted or the subscription list of this topic is empty. 1: The subscription object is in the subscribed state. 2: The subscription object is in the unsubscribed or canceled state.<br><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>0</b></li><li>• <b>1</b></li><li>• <b>2</b></li></ul> |
| topic_urn    | String  | Unique resource identifier of the topic.<br><br>Minimum: <b>1</b><br>Maximum: <b>100</b>   |

**Status code: 400**

**Table 4-88 Response body parameters**

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Response code.<br><br>Minimum: <b>13</b><br>Maximum: <b>13</b>    |
| error_msg  | String | Response message.<br><br>Minimum: <b>1</b><br>Maximum: <b>100</b> |

| Parameter | Type   | Description  |
|-----------|--------|--|
| trace_id  | String | Response ID.<br>Minimum: <b>12</b><br>Maximum: <b>12</b> |

**Status code: 401**

**Table 4-89** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

**Status code: 403**

**Table 4-90** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |

| Parameter | Type   | Description   |
|-----------|--------|---|
| trace_id  | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

**Status code: 500****Table 4-91** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Response code.<br>Minimum: <b>13</b><br>Maximum: <b>13</b>    |
| error_msg  | String | Response message.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |
| trace_id   | String | Response ID.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>      |

## Example Requests

Query the details of the alarm action rule named 1112222.

```
https://{{Endpoint}}/v2/{{project_id}}/alert/action-rules/1112222
```

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
    "create_time": 1665991889597,  
    "notification_template": "aom.built-in.template.zh",  
    "project_id": "2xxxxxxxxxxxxxxxxxxxxxxf",  
    "rule_name": "1112222",  
    "smn_topics": [ {  
        "display_name": "",  
        "name": "gxxxxxt",  
        "push_policy": 0,  
        "status": 0,  
        "topic_urn": "urn:smn:xxx:2xxxxxxxxxxxxxxxxxxxxxf:gxxxxxt"  
    } ],  
    "time_zone": "xxx",  
    "type": "1",  
    "update_time": 1665991889597,  
    "user_name": "kxxxxxxxt"  
}
```

### Status code: 400

Bad Request: Invalid request. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.08001001",  
    "error_msg" : "bad request",  
    "trace_id" : ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: Invalid request. The client should not repeat the request without modifications.   |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |

| Status Code | Description  |
|-------------|--|
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request. |

## Error Codes

See [Error Codes](#).

### 4.1.11 Adding an Alarm Action Rule

#### Function

This API is used to add an alarm action rule.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v2/{project\_id}/alert/action-rules

**Table 4-92** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br><br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

#### Request Parameters

**Table 4-93** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br><br>Minimum: <b>1</b><br>Maximum: <b>40960</b> |

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| Content-Type | Yes       | String | <p>Content type, which is application/json.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• <b>application/json</b></li> </ul> |

**Table 4-94** Request body parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| rule_name  | Yes       | String | <p>Rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, and underscores (_) are allowed.</p> <p>Minimum: <b>1</b><br/>Maximum: <b>100</b></p>                              |

|------------|--------|---|
| error_code | String | Response code.<br>Minimum: <b>13</b><br>Maximum: <b>13</b>    |
| error_msg  | String | Response message.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |
| trace_id   | String | Response ID.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>      |

## Example Requests

Add an alarm action rule whose name is "66666", username is "kxxxxxxxxt", user ID is "21xxxxxxxxxxxxxxxxx47c", and notification template is "aom.built-in.template.en".

```
https://{{Endpoint}}/v2/{{project_id}}/alert/action-rules
```

```
{  
    "desc" : "1111",  
    "notification_template" : "aom.built-in.template.zh",  
    "project_id" : "21xxxxxxxxxxxxxxxxx47c",  
    "rule_name" : "66666",  
    "smn_topics" : [ {  
        "display_name" : "",  
        "name" : "xiaohama",  
        "push_policy" : 0,  
        "status" : 0,  
        "topic_urn" : "urn:smn:xxx:21xxxxxxxxxxxxxx47c:xiaohama"  
    } ],  
    "type" : "1",  
    "user_name" : "kxxxxxxxxt",  
    "time_zone" : "xxx"  
}
```

## Example Responses

### Status code: 400

Bad Request: Invalid request. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.08018012",  
    "error_msg" : "actionRule already exists",  
    "trace_id" : ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code" : "AOM.0403",  
}
```

```
{  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: Operation successful.   |
| 400         | Bad Request: Invalid request. The client should not repeat the request without modifications.   |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |

## Error Codes

See [Error Codes](#).

### 4.1.12 Deleting an Alarm Action Rule

#### Function

This API is used to delete an alarm action rule.

## Calling Method

For details, see [Calling APIs](#).

## URI

DELETE /v2/{project\_id}/alert/action-rules

**Table 4-100** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

## Request Parameters

**Table 4-101** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br>Minimum: <b>1</b><br>Maximum: <b>40960</b>           |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values:<br>• application/json |

**Table 4-102** Request body parameters

| Parameter | Mandatory | Type             | Description                     |
|-----------|-----------|------------------|---------------------------------|
| [items]   | Yes       | Array of strings | Name of the rule to be deleted. |

## Response Parameters

| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

**Status code: 500**

**Table 4-106** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Response code.<br>Minimum: <b>13</b><br>Maximum: <b>13</b>    |
| error_msg  | String | Response message.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |
| trace_id   | String | Response ID.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>      |

## Example Requests

Delete alarm action rule 1112222.

```
https://{{Endpoint}}/v2/{{project_id}}/alert/action-rules  
[ "1112222" ]
```

## Example Responses

**Status code: 400**

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.08020006",  
    "error_msg" : "The action rule does not exist",  
    "trace_id" : ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.0403",  
    "error_msg" : "auth failed.",  
    "error_type" : "AUTH_FAILED",  
    "trace_id" : null  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "AOM.08020500",  
    "error_msg" : "internal server error",  
    "error_type" : "INTERNAL_SERVER_ERROR",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 204         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |

## Error Codes

### 4.1.13 Modifying an Alarm Action Rule

#### Function

This API is used to modify an alarm action rule.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

PUT /v2/{project\_id}/alert/action-rules

**Table 4-107** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID obtained from IAM.<br>Generally, a project ID contains 32 characters.<br>Minimum: <b>32</b><br>Maximum: <b>32</b> |

#### Request Parameters

**Table 4-108** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.<br>Minimum: <b>1</b><br>Maximum: <b>40960</b>   |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>application/json</b></li></ul> |

**Table 4-109** Request body parameters

| Parameter             | Mandatory | Type   | Description  |
|-----------------------|-----------|--------|--|
| rule_name             | Yes       | String | Rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, and underscores (_) are allowed.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>                              |
| project_id            | Yes       | String | Project ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>  |
| user_name             | Yes       | String | Member account name.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>   |
| desc                  | No        | String | Rule description. Enter a maximum of 1024 characters and do not start or end with an underscore (_). Only digits, letters, underscores (_), asterisk (*), and spaces are allowed.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| type                  | Yes       | String | Action type. Default: Notification.<br>Minimum: <b>1</b><br>Maximum: <b>1</b><br>Enumeration values: <ul style="list-style-type: none"><li>• <b>1</b></li><li>• <b>2</b></li></ul>   |
| notification_template | Yes       | String | Message template.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>  |
| create_time           | No        | Long   | Creation time.<br>Minimum: <b>0</b><br>Maximum: <b>99999999999999</b>  |

| Parameter   | Mandatory | Type                                    | Description   |
|-------------|-----------|---|---|
| update_time | No        | Long                                    | Modification time<br>Minimum: <b>0</b><br>Maximum: <b>9999999999999</b>                 |
| time_zone   | No        | String                                  | Time zone.<br>Minimum: <b>1</b><br>Maximum: <b>100</b>                                  |
| smn_topics  | Yes       | Array of<br><b>SmnTopics</b><br>objects | SMN topic. The total number<br>of topics cannot exceed 5.<br>Array Length: <b>1 - 5</b> |

**Table 4-110 SmnTopics**

| Parameter    | Mandatory | Type    | Description   |
|--------------|-----------|---------|---|
| display_name | No        | String  | Topic display name, which will<br>be the name of an email<br>sender. Max.: 192 bytes. This<br>parameter is left blank by<br>default.<br>Minimum: <b>1</b><br>Maximum: <b>64</b>                           |
| name         | Yes       | String  | Name of the topic. Enter 1 to<br>255 characters starting with a<br>letter or digit. Only letters,<br>digits, hyphens (-), and<br>underscores (_) are allowed.<br>Minimum: <b>1</b><br>Maximum: <b>255</b> |
| push_policy  | Yes       | Integer | SMN message push policy.<br>Options: 0 and 1.<br>Minimum: <b>0</b><br>Maximum: <b>1</b>   |

| Parameter | Mandatory | Type    | Description  |
|-----------|-----------|---------|--|
| status    | No        | Integer | <p>Status of the topic subscriber.<br/>0: The topic has been deleted or the subscription list of this topic is empty. 1: The subscription object is in the subscribed state. 2: The subscription object is in the unsubscribed or canceled state.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 1</li> <li>• 2</li> </ul> |
| topic_urn | Yes       | String  | <p>Unique resource identifier of the topic.</p> <p>Minimum: 1</p> <p>Maximum: 100</p>  |

## Response Parameters

**Status code: 400**

**Table 4-111** Response body parameters

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_code | String | <p>Response code.</p> <p>Minimum: 13</p> <p>Maximum: 13</p>    |
| error_msg  | String | <p>Response message.</p> <p>Minimum: 1</p> <p>Maximum: 100</p> |
| trace_id   | String | <p>Response ID.</p> <p>Minimum: 12</p> <p>Maximum: 12</p>      |

**Status code: 401**

**Table 4-112** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

**Status code: 403**

**Table 4-113** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

**Status code: 500**

**Table 4-114** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Response code.<br>Minimum: <b>13</b><br>Maximum: <b>13</b>    |
| error_msg  | String | Response message.<br>Minimum: <b>1</b><br>Maximum: <b>100</b> |
| trace_id   | String | Response ID.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>      |

## Example Requests

Modify the alarm action rule whose name is "lhy\_test01" and user ID is "2xxxxxxxxxxxxxxcf".

```
https://{{endpoint}}/v2/{{project_id}}/alert/action-rules
```

```
{  
    "project_id": "2xxxxxxxxxxxxxxcf",  
    "rule_name": "222",  
    "desc": "222",  
    "type": "1",  
    "smn_topics": [ {  
        "display_name": "",  
        "name": "lhy_test01",  
        "push_policy": 0,  
        "topic_urn": "urn:smn:xxx:2xxxxxxxxxxxxxxcf:lhy_test01"  
    } ],  
    "user_name": "kxxxxxxxxt",  
    "notification_template": "aom.built-in.template.zh",  
    "time_zone": "xxx",  
    "create_time": 1667316727451,  
    "update_time": 1667316727451  
}
```

## Example Responses

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "error_code": "AOM.08019006",  
    "error_msg": "The action rule does not exist",  
    "trace_id": ""  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
    "error_code": "AOM.0403",  
}
```

```
"error_msg" : "auth failed.",
"error_type" : "AUTH_FAILED",
"trace_id" : null
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.0403",
  "error_msg" : "auth failed.",
  "error_type" : "AUTH_FAILED",
  "trace_id" : null
}
```

### Status code: 500

Internal Server Error

The server is able to receive the request but unable to understand the request.

```
{
  "error_code" : "APM.00000500",
  "error_msg" : "Internal Server Error",
  "trace_id" : ""
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 204         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error<br>The server is able to receive the request but unable to understand the request.  |

## Request Parameters

**Table 4-125** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| Enterprise-Project-Id | No        | String | <p>Enterprise project ID.</p> <ul style="list-style-type: none"> <li>• To query instances in an enterprise project, enter the enterprise project ID.</li> <li>• To query instances in all enterprise projects, enter <b>all_granted_eps</b>.</li> </ul> |

## Response Parameters

Status code: 200

**Table 4-126** Response body parameters

| Parameter   | Type   | Description            |
|-------------|--|------------------------|
| alarm_rules | Array of <a href="#">AlarmParamForV4Db</a> objects | Alarm rule list.       |
| metadata    | Object   | Metadata information.  |
| count       | Integer  | Number of alarm rules. |

**Table 4-127** AlarmParamForV4Db

| Parameter              | Type   | Description                           |
|------------------------|--------|---------------------------------------|
| alarm_create_time      | Long   | Time when an alarm rule was created.  |
| alarm_update_time      | Long   | Time when an alarm rule was modified. |
| alarm_rule_name        | String | Alarm rule name.                      |
| alarm_rule_id          | Long   | Alarm rule ID.                        |
| enterprise_project_id  | String | Enterprise project ID.                |
| prom_instance_id       | String | Prometheus instance ID.               |
| alarm_rule_description | String | Alarm rule description.               |

| Parameter           | Type                                     | Description   |
|---------------------|--|---|
| alarm_rule_enable   | Boolean                                  | Enabled or not.   |
| alarm_rule_status   | String                                   | Alarm status. <ul style="list-style-type: none"><li>• OK: normal</li><li>• alarm: threshold-crossing</li><li>• Effective: in use</li><li>• Invalid: not in use</li></ul>  |
| alarm_rule_type     | String                                   | Rule type. <ul style="list-style-type: none"><li>• metric: metric alarm rule</li><li>• event: event alarm rule</li></ul> Enumeration values: <ul style="list-style-type: none"><li>• <b>metric</b></li><li>• <b>event</b></li></ul> |
| metric_alarm_spec   | <a href="#">MetricAlarmSpec</a> object   | Structure of a metric alarm rule.   |
| event_alarm_spec    | <a href="#">EventAlarmSpec</a> object    | Structure of an event alarm rule.   |
| alarm_notifications | <a href="#">AlarmNotification</a> object | Alarm notification module.  |
| user_id             | String                                   | User ID.  |

**Table 4-128 MetricAlarmSpec**

| Parameter          | Type   | Description  |
|--------------------|--|--|
| monitor_type       | String   | Monitoring type. <ul style="list-style-type: none"><li>• all_metric: Select metrics from all metrics.</li><li>• promql: Select metrics using PromQL.</li><li>• resource (unavailable soon): Select metrics by resource type.</li></ul> Enumeration values: <ul style="list-style-type: none"><li>• <b>all_metric</b></li><li>• <b>promql</b></li><li>• <b>resource</b></li></ul> |
| no_data_conditions | Array of <a href="#">NoDataCondition</a> objects | Action taken for insufficient data.  |

| Parameter                       | Type  | Description  |
|---------------------------------|---|--|
| alarm_tags                      | Array of <a href="#">AlarmTags</a> objects        | Alarm tags.  |
| monitor_objects                 | Array of Map<String, String> objects              | List of monitored objects.   |
| recovery_conditions             | <a href="#">RecoveryCondition</a> object          | Alarm clearance condition.   |
| trigger_conditions              | Array of <a href="#">TriggerCondition</a> objects | Trigger conditions.  |
| alarm_rule_template_bind_enable | Boolean   | (Discarded) Whether to bind an alarm rule template.<br>Default: <b>false</b> |
| alarm_rule_template_id          | String  | (Discarded) ID of the alarm rule template.<br>Default: ""                    |

**Table 4-129 NoDataCondition**

| Parameter           | Type    | Description   |
|---------------------|---------|---|
| no_data_timeframe   | Integer | Number of periods without data.   |
| no_data_alert_state | String  | Status of the threshold rule when the data is insufficient. <ul style="list-style-type: none"> <li>• no_data: A notification indicating insufficient data is sent.</li> <li>• alerting: An alarm is triggered.</li> <li>• ok: No exception occurs.</li> <li>• pre_state: Retain the previous state.</li> </ul> Enumeration values: <ul style="list-style-type: none"> <li>• <b>no_data</b></li> <li>• <b>alerting</b></li> <li>• <b>ok</b></li> <li>• <b>pre_state</b></li> </ul> |
| notify_no_data      | Boolean | Whether to send a notification when data is insufficient.   |

**Table 4-130** AlarmTags

| Parameter          | Type             | Description       |
|--------------------|------------------|-------------------|
| auto_tags          | Array of strings | Automatic tag.    |
| custom_tags        | Array of strings | Custom tag.       |
| custom_annotations | Array of strings | Alarm annotation. |

**Table 4-131** RecoveryCondition

| Parameter           | Type    | Description   |
|---------------------|---------|---|
| recovery_time_frame | Integer | Number of consecutive periods for which the trigger condition is not met to clear an alarm. |

**Table 4-132** TriggerCondition

| Parameter         | Type             | Description  |
|-------------------|------------------|--|
| metric_query_mode | String           | Metric query mode. <ul style="list-style-type: none"> <li>• AOM: native AOM</li> <li>• PROM: AOM Prometheus</li> <li>• NATIVE_PROM: native Prometheus</li> </ul> Enumeration values: <ul style="list-style-type: none"> <li>• <b>AOM</b></li> <li>• <b>PROM</b></li> <li>• <b>NATIVE_PROM</b></li> </ul> |
| metric_namespace  | String           | Metric namespace.  |
| metric_name       | String           | Metric name.   |
| metric_unit       | String           | Metric unit.   |
| metric_labels     | Array of strings | Metric dimension.  |
| promql            | String           | Prometheus statement.  |
| promql_expr       | Array of strings | Prometheus statement template.   |
| trigger_times     | String           | Number of consecutive periods.   |

| Parameter        | Type                | Description  |
|------------------|---------------------|--|
| trigger_interval | String              | <p>Check interval.</p> <ul style="list-style-type: none"><li>• If <b>trigger_type</b> is set to <b>HOURLY*</b>, set this parameter to "".</li><li>• If <b>trigger_type</b> is set to <b>DAILY</b>, set 00:00–23:00. Example: 03:00.</li><li>• If <b>trigger_type</b> is set to <b>WEEKLY</b>, select a day in a week and then select 00:00–23:00. Example: **1 03:00" indicates 03:00 on every Monday.</li><li>• If <b>trigger_type</b> is set to <b>CRON</b>, specify a standard cron expression.</li><li>• If <b>trigger_type</b> is set to <b>FIXED_RATE</b>, select 15s, 30s, 1–59 min, or 1–24 h.</li></ul> |
| trigger_type     | String              | <p>Trigger type.</p> <ul style="list-style-type: none"><li>• <b>FIXED_RATE</b>: fixed interval</li><li>• <b>HOURLY</b>: every hour</li><li>• <b>DAILY</b>: every day</li><li>• <b>WEEKLY</b>: every week</li><li>• <b>CRON</b>: Cron expression</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>FIXED_RATE</b></li><li>• <b>HOURLY</b></li><li>• <b>DAILY</b></li><li>• <b>WEEKLY</b></li><li>• <b>CRON</b></li></ul>  |
| promql_for       | String              | Native Prometheus monitoring duration.   |
| aggregation_type | String              | Statistical mode.  |
| operator         | String              | Operator. Options: >, <, =, >=, and <=.  |
| thresholds       | Map<String, String> | Key-value pair. The key indicates the alarm severity while the value indicates the alarm threshold.  |

| Parameter               | Type            | Description  |
|-------------------------|-----------------|--|
| aggregation_window      | String          | Statistical period. <ul style="list-style-type: none"><li>● 15s</li><li>● 30s</li><li>● 1m</li><li>● 5m</li><li>● 15m</li><li>● 1h</li></ul>   |
| cmdb                    | CmdbInfo object | CMDB information.  |
| query_match             | String          | Query filter criteria.   |
| query_param             | String          | Query parameters.  |
| aom_monitor_level       | String          | Monitoring layer.  |
| aggregate_type          | String          | Aggregation mode. <ul style="list-style-type: none"><li>● by: not grouped</li><li>● avg</li><li>● max</li><li>● min</li><li>● sum</li></ul> Enumeration values: <ul style="list-style-type: none"><li>● <b>by</b></li><li>● <b>avg</b></li><li>● <b>max</b></li><li>● <b>min</b></li><li>● <b>sum</b></li></ul>  |
| metric_statistic_method | String          | Metric statistics method to be used when you set <b>Configuration Mode</b> to <b>Select from all metrics</b> during alarm rule setting. <ul style="list-style-type: none"><li>● single: single metric</li><li>● mix: multi-metric combined operations</li></ul> Enumeration values: <ul style="list-style-type: none"><li>● <b>single</b></li><li>● <b>mix</b></li></ul> |
| expression              | String          | Expression of a combined operation.  |
| mix_promql              | String          | PromQL of a combined operation.  |

**Table 4-133 CmdbInfo**

| Parameter | Type  | Description            |
|-----------|---|------------------------|
| app_id    | String  | Application ID.        |
| node_ids  | Array of<br><a href="#">NodeInfo</a><br>objects | Node information list. |

**Table 4-134 NodeInfo**

| Parameter | Type   | Description |
|-----------|--------|-------------|
| node_type | String | Node type.  |
| node_id   | String | Node ID.    |

**Table 4-135 EventAlarmSpec**

| Parameter       | Type                                       | Description   |
|-----------------|--|---|
| alarm_source    | String                                     | <p>Alarm rule source.</p> <ul style="list-style-type: none"> <li>• systemEvent</li> <li>• customEvent</li> </ul> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• <b>systemEvent</b></li> <li>• <b>customEvent</b></li> </ul>  |

|-------------|--|
| 200         | OK: The request is successful.   |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request. |

## Error Codes

See [Error Codes](#).

### 4.1.16 Adding or Modifying Metric or Event Alarm Rules

#### Function

This API is used to add or modify metric or event alarm rules.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v4/{project\_id}/alarm-rules

**Table 4-139** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-140** Query Parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| action_id | Yes       | String | Alarm rule ID. <ul style="list-style-type: none"><li>• To add an alarm rule, enter <b>add-alarm-action</b>.</li><li>• To modify an alarm rule, enter <b>update-alarm-action</b>.</li></ul> |

#### Request Parameters

**Table 4-141** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

| Parameter             | Mandatory | Type   | Description  |
|-----------------------|-----------|--------|--|
| Enterprise-Project-Id | No        | String | <p>Enterprise project ID.</p> <ul style="list-style-type: none"><li>• To query instances in an enterprise project, enter the enterprise project ID.</li><li>• To query instances in all enterprise projects, enter <b>all_granted_eps</b>.</li></ul> |

**Table 4-142** Request body parameters

| Parameter              | Mandatory | Type                                     | Description   |
|------------------------|-----------|--|---|
| alarm_notifications    | No        | <a href="#">AlarmNotification object</a> | Alarm notification module.  |
| alarm_rule_description | No        | String                                   | Alarm rule description.   |
| alarm_rule_enable      | No        | Boolean                                  | Enabled or not.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>   |
| alarm_rule_name        | Yes       | String                                   | Alarm rule name.  |
| alarm_rule_type        | Yes       | String                                   | Alarm rule type. <ul style="list-style-type: none"><li>• metric: metric alarm rule</li><li>• event: event alarm rule</li></ul> Enumeration values: <ul style="list-style-type: none"><li>• <b>metric</b></li><li>• <b>event</b></li></ul> |
| event_alarm_spec       | No        | <a href="#">EventAlarmSpec object</a>    | Structure of an event alarm rule.   |
| metric_alarm_spec      | No        | <a href="#">MetricAlarmSpec object</a>   | Structure of a metric alarm rule.   |
| prom_instance_id       | No        | String                                   | Prometheus instance ID.   |

**Table 4-143** AlarmNotification

| Parameter                 | Mandatory | Type    | Description  |
|---------------------------|-----------|---------|--|
| notification_type         | Yes       | String  | <p>Notification type.</p> <ul style="list-style-type: none"><li>• direct: direct alarm reporting</li><li>• alarm_policy: alarm reporting after noise reduction</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>direct</b></li><li>• <b>alarm_policy</b></li></ul>  |
| route_group_enable        | Yes       | Boolean | <p>Whether to enable the grouping rule.</p> <ul style="list-style-type: none"><li>• If the notification type is <b>alarm_policy</b>, set this parameter to <b>true</b>.</li><li>• If the notification type is <b>direct</b>, set this parameter to <b>false</b>.</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |
| route_group_rule          | Yes       | String  | <p>Grouping rule name.</p> <ul style="list-style-type: none"><li>• If <b>route_group_enable</b> is set to <b>true</b>, enter a grouping rule name.</li><li>• If <b>route_group_enable</b> is set to <b>false</b>, enter "".</li></ul>  |
| notification_enable       | No        | Boolean | <p>Whether to enable an alarm action rule.</p> <ul style="list-style-type: none"><li>• If the notification type is <b>direct</b>, set this parameter to <b>true</b>.</li><li>• If the notification type is <b>alarm_policy</b>, set this parameter to <b>false</b>.</li></ul>  |
| bind_notification_rule_id | No        | String  | <p>Alarm action rule ID.</p> <ul style="list-style-type: none"><li>• If <b>notification_enable</b> is set to <b>true</b>, enter an alarm action rule ID.</li><li>• If <b>notification_enable</b> is set to <b>false</b>, enter "".</li></ul>   |

| Parameter        | Mandatory | Type    | Description  |
|------------------|-----------|---------|--|
| notify_resolved  | No        | Boolean | <p>Whether to send a notification when an alarm is cleared.</p> <ul style="list-style-type: none"><li>• true: Send a notification.</li><li>• false: Do not send any notification.</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>  |
| notify_triggered | No        | Boolean | <p>Whether to send a notification when an alarm is triggered.</p> <ul style="list-style-type: none"><li>• true: Send a notification.</li><li>• false: Do not send any notification.</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>  |
| notify_frequency | No        | Integer | <p>Notification frequency.</p> <ul style="list-style-type: none"><li>• If the notification type is <b>alarm_policy</b>, set this parameter to <b>-1</b>.</li><li>• If the notification type is <b>direct</b>, set this parameter to any of the following:<ul style="list-style-type: none"><li>• 0: alarm sent only once</li><li>• 300: every 5 minutes</li><li>• 600: every 10 minutes</li><li>• 900: every 15 minutes</li><li>• 1800: every 30 minutes</li><li>• 3600: every hour</li><li>• 10800: every 3 hours</li><li>• 21600: every 6 hours</li><li>• 43200: every 12 hours</li><li>• 86400: every day</li></ul></li></ul> |

**Table 4-144** EventAlarmSpec

| Parameter                       | Mandatory | Type  | Description   |
|---------------------------------|-----------|---|---|
| alarm_source                    | No        | String  | Alarm rule source. <ul style="list-style-type: none"><li>● systemEvent</li><li>● customEvent</li></ul> Enumeration values: <ul style="list-style-type: none"><li>● <b>systemEvent</b></li><li>● <b>customEvent</b></li></ul>  |
| event_source                    | No        | String  | Alarm source. <ul style="list-style-type: none"><li>● RDS</li><li>● EVS</li><li>● CCE</li><li>● LTS</li><li>● AOM</li></ul>   |
| monitor_objects                 | No        | Array of Map<String, String> objects                    | List of monitored objects. Key-value pair. <ul style="list-style-type: none"><li>● event_type: notification type</li><li>● event_severity: alarm severity</li><li>● event_name: event name</li><li>● namespace: namespace</li><li>● clusterId: cluster ID</li><li>● customField: user-defined field</li></ul> |
| trigger_conditions              | No        | Array of <a href="#">EventTrigger Condition</a> objects | Trigger conditions.   |
| alarm_rule_template_bind_enable | No        | Boolean   | (Discarded) Whether to bind an alarm rule template.<br>Default: <b>false</b>  |
| alarm_rule_template_id          | No        | String  | (Discarded) ID of the alarm rule template.<br>Default: ""   |

**Table 4-145 EventTriggerCondition**

| Parameter          | Mandatory | Type                 | Description   |
|--------------------|-----------|----------------------|---|
| event_name         | No        | String               | Event name.   |
| trigger_type       | No        | String               | <p>Trigger mode.</p> <ul style="list-style-type: none"> <li>immediately: An alarm is triggered immediately if the alarm condition is met.</li> <li>accumulative: An alarm is triggered if the alarm condition is met for a specified number of times.</li> </ul> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li><b>immediately</b></li> <li><b>accumulative</b></li> </ul> |
| aggregation_window | No        | Long                 | Statistical period, in seconds. For example, <b>3600</b> indicates one hour. Leave this parameter empty if <b>trigger_type</b> is set to <b>immediately</b> .   |
| operator           | No        | String               | Operator. Options: >, <, =, >=, and <=. Leave this parameter empty if <b>trigger_type</b> is set to <b>immediately</b> .  |
| thresholds         | No        | Map<String, Integer> | Key-value pair. The key indicates the alarm severity while the value indicates the number of accumulated trigger times. Leave this parameter empty if <b>trigger_type</b> is set to <b>immediately</b> .  |

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| frequency | No        | String | <p>Event alarm notification frequency. Leave this parameter empty if <b>trigger_type</b> is set to <b>immediately</b>.</p> <ul style="list-style-type: none"><li>• 0: alarm sent only once</li><li>• 300: every 5 minutes</li><li>• 600: every 10 minutes</li><li>• 900: every 15 minutes</li><li>• 1800: every 30 minutes</li><li>• 3600: every hour</li><li>• 10800: every 3 hours</li><li>• 21600: every 6 hours</li><li>• 43200: every 12 hours</li><li>• 86400: every day</li></ul> |

**Table 4-146 MetricAlarmSpec**

| Parameter          | Mandatory | Type   | Description  |
|--------------------|-----------|--|--|
| monitor_type       | Yes       | String   | <p>Monitoring type.</p> <ul style="list-style-type: none"><li>• all_metric: Select metrics from all metrics.</li><li>• promql: Select metrics using PromQL.</li><li>• resource (unavailable soon): Select metrics by resource type.</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>all_metric</b></li><li>• <b>promql</b></li><li>• <b>resource</b></li></ul> |
| no_data_conditions | No        | Array of <a href="#">NoDataCondition</a> objects | Action taken for insufficient data.  |
| alarm_tags         | Yes       | Array of <a href="#">AlarmTags</a> objects       | Alarm tags.  |
| monitor_objects    | No        | Array of Map<String, String> objects             | List of monitored objects.   |

| Parameter                       | Mandatory | Type                              | Description  |
|---------------------------------|-----------|-----------------------------------|--|
| recovery_conditions             | Yes       | RecoveryCondition object          | Alarm clearance condition.   |
| trigger_conditions              | Yes       | Array of TriggerCondition objects | Trigger conditions.  |
| alarm_rule_template_bind_enable | No        | Boolean                           | (Discarded) Whether to bind an alarm rule template.<br>Default: <b>false</b> |
| alarm_rule_template_id          | No        | String                            | (Discarded) ID of the alarm rule template.<br>Default: ""                    |

**Table 4-147** NoDataCondition

| Parameter           | Mandatory | Type    | Description   |
|---------------------|-----------|---------|---|
| no_data_timeframe   | No        | Integer | Number of periods without data.   |
| no_data_alert_state | No        | String  | Status of the threshold rule when the data is insufficient. <ul style="list-style-type: none"><li>• no_data: A notification indicating insufficient data is sent.</li><li>• alerting: An alarm is triggered.</li><li>• ok: No exception occurs.</li><li>• pre_state: Retain the previous state.</li></ul> Enumeration values: <ul style="list-style-type: none"><li>• <b>no_data</b></li><li>• <b>alerting</b></li><li>• <b>ok</b></li><li>• <b>pre_state</b></li></ul> |
| notify_no_data      | No        | Boolean | Whether to send a notification when data is insufficient.   |

**Table 4-148** AlarmTags

| Parameter          | Mandatory | Type             | Description       |
|--------------------|-----------|------------------|-------------------|
| auto_tags          | No        | Array of strings | Automatic tag.    |
| custom_tags        | No        | Array of strings | Custom tag.       |
| custom_annotations | No        | Array of strings | Alarm annotation. |

**Table 4-149** RecoveryCondition

| Parameter           | Mandatory | Type    | Description   |
|---------------------|-----------|---------|---|
| recovery_time_frame | No        | Integer | Number of consecutive periods for which the trigger condition is not met to clear an alarm. |

**Table 4-150** TriggerCondition

| Parameter         | Mandatory | Type             | Description  |
|-------------------|-----------|------------------|--|
| metric_query_mode | Yes       | String           | Metric query mode. <ul style="list-style-type: none"> <li>• AOM: native AOM</li> <li>• PROM: AOM Prometheus</li> <li>• NATIVE_PROM: native Prometheus</li> </ul> Enumeration values: <ul style="list-style-type: none"> <li>• <b>AOM</b></li> <li>• <b>PROM</b></li> <li>• <b>NATIVE_PROM</b></li> </ul> |
| metric_namespace  | Yes       | String           | Metric namespace.  |
| metric_name       | Yes       | String           | Metric name.   |
| metric_unit       | Yes       | String           | Metric unit.   |
| metric_labels     | Yes       | Array of strings | Metric dimension.  |
| promql            | Yes       | String           | Prometheus statement.  |
| promql_expr       | No        | Array of strings | Prometheus statement template.   |

| Parameter        | Mandatory | Type   | Description  |
|------------------|-----------|--------|--|
| trigger_times    | No        | String | Number of consecutive periods.   |
| trigger_interval | No        | String | <p>Check interval.</p> <ul style="list-style-type: none"> <li>If <b>trigger_type</b> is set to <b>HOURLY*</b>, set this parameter to "".</li> <li>If <b>trigger_type</b> is set to <b>DAILY</b>, set 00:00–23:00. Example: 03:00.</li> <li>If <b>trigger_type</b> is set to <b>WEEKLY</b>, select a day in a week and then select 00:00–23:00. Example: **1 03:00" indicates 03:00 on every Monday.</li> <li>If <b>trigger_type</b> is set to <b>CRON</b>, specify a standard cron expression.</li> <li>If <b>trigger_type</b> is set to <b>FIXED_RATE</b>, select 15s, 30s, 1–59 min, or 1–24 h.</li> </ul> |
| trigger_type     | No        | String | <p>Trigger type.</p> <ul style="list-style-type: none"> <li><b>FIXED_RATE</b>: fixed interval</li> <li><b>HOURLY</b>: every hour</li> <li><b>DAILY</b>: every day</li> <li><b>WEEKLY</b>: every week</li> <li><b>CRON</b>: Cron expression</li> </ul> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li><b>FIXED_RATE</b></li> <li><b>HOURLY</b></li> <li><b>DAILY</b></li> <li><b>WEEKLY</b></li> <li><b>CRON</b></li> </ul>  |
| promql_for       | No        | String | Native Prometheus monitoring duration.   |
| aggregation_type | No        | String | <p>Statistical mode.</p> <ul style="list-style-type: none"> <li>average</li> <li>minimum</li> <li>maximum</li> <li>sum</li> <li>sampleCount</li> </ul>   |

| Parameter          | Mandatory | Type                            | Description   |
|--------------------|-----------|---------------------------------|---|
| operator           | No        | String                          | Operator. Options: >, <, =, >=, and <=.   |
| thresholds         | No        | Map<String, String>             | Key-value pair. The key indicates the alarm severity while the value indicates the alarm threshold.   |
| aggregation_window | No        | String                          | Statistical period. <ul style="list-style-type: none"> <li>• 15s</li> <li>• 30s</li> <li>• 1m</li> <li>• 5m</li> <li>• 15m</li> <li>• 1h</li> </ul>   |

## 4.1.17 Deleting Metric or Event Alarm Rules

### Function

This API is used to delete metric or event alarm rules.

### Calling Method

For details, see [Calling APIs](#).

### URI

DELETE /v4/{project\_id}/alarm-rules

**Table 4-157** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

### Request Parameters

**Table 4-158** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

**Table 4-159** Request body parameters

| Parameter   | Mandatory | Type             | Description           |
|-------------|-----------|------------------|-----------------------|
| alarm_rules | Yes       | Array of strings | Alarm rule name list. |

### Response Parameters

**Status code: 200**

**Table 4-160** Response body parameters

| Parameter     | Type  | Description    |
|---------------|---|----------------|
| error_code    | String  | Error code.    |
| error_message | String  | Error message. |
| resources     | Array of<br><a href="#">ItemResult</a><br>objects | Resource list. |

**Table 4-161** ItemResult

| Parameter       | Type   | Description      |
|-----------------|--------|------------------|
| alarm_rule_name | String | Alarm rule name. |

**Status code: 400**

**Table 4-162** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

**Status code: 500**

**Table 4-163** Response body parameters

| Parameter  | Type   | Description   |
|------------|--------|---|
| error_code | String | Error code.<br>Minimum: <b>12</b><br>Maximum: <b>12</b>     |
| error_msg  | String | Error message.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |
| error_type | String | Error type.<br>Minimum: <b>0</b><br>Maximum: <b>128</b>     |
| trace_id   | String | Request ID.<br>Minimum: <b>32</b><br>Maximum: <b>32</b>     |

## Example Requests

- Delete a metric or event alarm rule.

```
https://{{Endpoint}}/v4/{{project_id}}/alarm-rules
{
  "alarm_rules" : [ "aom_alarm_rule" ]
}
```

- Delete multiple metric or event alarm rules.

```
https://{{Endpoint}}/v4/{{project_id}}/alarm-rules
{
  "alarm_rules" : [ "aom_alarm_rule", "aom_alarm_rule2" ]
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{
  "error_code" : "200",
  "error_message" : "success",
  "resources" : [ {
    "alarm_rule_name" : "aom_alarm_rule"
  } ]
}
```

### Status code: 400

Bad Request: Invalid request. The client should not repeat this request without modification.

```
{
  "error_code" : "AOM.02024016",
  "error_msg" : "delete alarm rule name is empty",
```

```
    "trace_id" : ""  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "APM.00000500",  
    "error_msg" : "Internal Server Error",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description  |
|-------------|--|
| 200         | OK: The request is successful.   |
| 400         | Bad Request: Invalid request. The client should not repeat this request without modification.          |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request. |

See [Error Codes](#).

### 4.1.18 Querying Events and Alarms

#### Function

This API is used to query events and alarms of a user.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v2/{project\_id}/events

**Table 4-164** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-165** Query Parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| type      | No        | String | Type of information to be queried. active_alert: Active alarms are to be queried. history_alert: Historical alarms are to be queried. If this parameter is not transferred or other values are transferred, information that meets the specified search criteria will be returned.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>history_alert</b></li><li>• <b>active_alert</b></li></ul> |

## Request Parameters

**Table 4-166** Request header parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| X-Auth-Token          | Yes       | String | User token obtained from IAM.   |
| Content-Type          | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>application/json</b></li></ul>   |
| Enterprise-Project-Id | No        | String | Enterprise project ID. <ul style="list-style-type: none"><li>• To query instances in an enterprise project, enter the enterprise project ID.</li><li>• To query instances in all enterprise projects, enter <b>all_granted_eps</b>.</li></ul> |

**Table 4-167** Request body parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| time_range | Yes       | String | <p>Time range specified to query data of the last N minutes when the client time is inconsistent with the server time. It can also be used to accurately query the data of a specified period.</p> <p>Example:</p> <ul style="list-style-type: none"><li>• -1.-1.60: indicates that the data of the latest 60 minutes is queried. This query is based on the server time regardless of the current client time.</li><li>• 1650852000000.165085230000.5: indicates the five minutes from 10:00:00 to 10:05:00 on April 25, 2022 GMT+08:00.</li></ul> <p>Format:</p> <p>startTimeInMillis.endTimeInMillis.durationInMinutes</p> <p>Parameter description:</p> <ul style="list-style-type: none"><li>• startTimeInMillis: Start time of the query, in milliseconds. If this parameter is set to -1, the server calculates the start time as follows: endTimeInMillis - durationInMinutes x 60 x 1000. For example, -1.1650852300000.5 is equivalent to 1650852000000.165085230000.5.</li><li>• endTimeInMillis: End time of the query, in milliseconds. If this parameter is set to -1, the server calculates the end time as follows: startTimeInMillis + durationInMinutes x 60 x 1000. If the calculated end time is later than the</li></ul> |

| Parameter         | Mandatory | Type                                  | Description  |
|-------------------|-----------|---------------------------------------|--|
|                   |           |                                       | <p>current system time, the current system time is used. For example, 1650852000000.-1.5 is equivalent to 1650852000000.165085230000.5.</p> <ul style="list-style-type: none"><li>durationInMinutes: Time span, in minutes. The value must be greater than 0 and greater than or equal to the result of "(endTimeInMillis - startTimeInMillis)/(60 x 1000) - 1". If both the start time and end time are set to -1, the system sets the end time to the current UTC time (in milliseconds) and calculates the start time as follows: endTimeInMillis - durationInMinutes x 60 x 1000. For example, -1.-1.60 indicates the latest 60 minutes.</li></ul> <p>Constraint:<br/>In a single request, the following condition must be met: durationInMinutes x 60/period ≤ 1440</p> |
| step              | No        | Long                                  | Statistical step (unit: ms). For example, if the statistical step is one minute, set this parameter to 60,000.   |
| search            | No        | String                                | Field specified for fuzzy query, which can be left blank. If this field is not left blank, fuzzy query can be performed accordingly. In that case, the metadata field is mandatory.  |
| sort              | No        | sort object                           | Sorting order, which can be left blank.  |
| metadata_relation | No        | Array of <b>RelationModel</b> objects | Combination of search criteria, which can be left blank.   |

**Table 4-168 sort**

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| order_by  | No        | Array of strings | List of sorted fields. Fields in this list are sorted based on the specified order.  |
| order     | No        | String           | Sorting order. asc: ascending order. desc: descending order.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>asc</b></li><li>• <b>desc</b></li></ul> |

**Table 4-169 RelationModel**

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| key       | No        | String           | Key specified for query, which corresponds to the key in the metadata.   |
| value     | No        | Array of strings | Value of the specified key in the search criterion.  |
| relation  | No        | String           | Relationship between search criteria. Values: AND: All criteria must be met. OR: One of the criteria needs to be met. NOT: None of the criteria can be met.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>AND</b></li><li>• <b>OR</b></li><li>• <b>NOT</b></li></ul> |

## Response Parameters

Status code: 200

**Table 4-170** Response body parameters

| Parameter | Type  | Description             |
|-----------|---|-------------------------|
| events    | Array of<br><a href="#">EventModel</a><br>objects | Event or alarm details. |

**Table 4-171** EventModel

| Parameter   | Type                   | Description   |
|-------------|------------------------|---|
| starts_at   | Long                   | Time when an event or alarm is generated (CST timestamp precise down to the millisecond).   |
| ends_at     | Long                   | Time when an event or alarm is cleared (CST timestamp precise down to the millisecond). 0: The event or alarm is not deleted.   |
| timeout     | Long                   | Duration (in milliseconds) at which an alarm is automatically cleared. For example, if an alarm needs to be automatically cleared in one minute, set this parameter to 60000. The default value is 3 days (that is, 3 days x 24 hours x 60 minutes x 1000 ms = 4,320,000 ms).   |
| metadata    | Map<String,St<br>ring> | Details of an event or alarm. The value is a key-value pair. The following fields are mandatory: <ul style="list-style-type: none"><li>• <b>event_name</b>: event or alarm name, which is a string.</li><li>• <b>event_severity</b>: event severity, which is an enumerated value with string elements. Options: <b>Critical</b>, <b>Major</b>, <b>Minor</b>, and <b>Info</b>.</li><li>• <b>event_type</b>: event type, which is an enumerated value with string elements. Options: <b>event</b> and <b>alarm</b>.</li><li>• <b>resource_provider</b>: name of a cloud service corresponding to an event, which is a string.</li><li>• <b>resource_type</b>: type of the resource corresponding to an event, which is a string.</li><li>• <b>resource_id</b>: resource ID corresponding to an event, which is a string.</li></ul> |
| annotations | Map<String,O<br>bject> | Additional field for an event or alarm, which can be left blank.  |
| attach_rule | Map<String,O<br>bject> | Reserved field for an event or alarm, which can be left blank.  |

| Parameter | Type   | Description  |
|-----------|--------|--|
| id        | String | Event or alarm ID, which is automatically generated by the system. |

**Status code: 400**

**Table 4-172** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

**Status code: 401**

**Table 4-173** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

**Status code: 403**

**Table 4-174** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

**Status code: 500**

**Table 4-175** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

### Status code: 503

**Table 4-176** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

## Example Requests

Query the events and alarms of a specified user.

```
https://{endpoint}/v2/{project_id}/events

{
  "time_range": "-1.-1.30",
  "metadata_relation": [ {
    "key": "event_type",
    "relation": "AND",
    "value": [ "alarm" ]
  }, {
    "key": "event_severity",
    "relation": "AND",
    "value": [ "Critical", "Major", "Minor", "Info" ]
  }],
  "search": "",
  "sort": {
    "order_by": [ "starts_at" ],
    "order": "desc"
  }
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{
  "events": [ {
```

```
  "annotations" : {  
    "alarm_probableCause_zh_cn" : "Possible Causes",  
    "message" : "Alarm Details",  
    "alarm_fix_suggestion_zh_cn" : "Suggestions"  
  },  
  "attach_rule" : { },  
  "ends_at" : 0,  
  "id" : "6775161208461480000",  
  "metadata" : {  
    "event_type" : "alarm",  
    "event_severity" : "Major",  
    "resource_type" : "vm",  
    "event_name" : "test",  
    "resource_id" : "ecs123",  
    "resource_provider" : "ecs"  
  },  
  "starts_at" : 16377362908000,  
  "timeout" : 60000  
} ]  
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
  "error_code" : "AOM.08032002",  
  "error_message" : "The request body is illegal",  
  "error_type" : "SC_BAD_REQUEST"  
}
```

### Status code: 401

Unauthorized: The authentication information is incorrect or invalid.

```
{  
  "error_code" : "AOM.0403",  
  "error_message" : "auth failed.",  
  "error_type" : "AUTH_FAILED",

}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.1.19 Counting Events and Alarms

#### Function

This API is used to count events and alarms that meet specified conditions.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v2/{project\_id}/events/statistic

**Table 4-177** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-178** Query Parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| type      | No        | String | <p>Type of information to be queried. active_alert: Active alarms are to be queried. history_alert: Historical alarms are to be queried. If this parameter is not transferred or other values are transferred, information that meets the specified search criteria will be returned.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• <b>history_alert</b></li> <li>• <b>active_alert</b></li> </ul> |

## Request Parameters

**Table 4-179** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | <p>Content type, which is application/json.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• <b>application/json</b></li> </ul> |

**Table 4-180** Request body parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| time_range | Yes       | String | <p>Time range specified to query data of the last N minutes when the client time is inconsistent with the server time. It can also be used to accurately query the data of a specified period.</p> <p>Example:</p> <ul style="list-style-type: none"><li>• -1.-1.60: indicates that the data of the latest 60 minutes is queried. This query is based on the server time regardless of the current client time.</li><li>• 1650852000000.165085230000.5: indicates the five minutes from 10:00:00 to 10:05:00 on April 25, 2022 GMT+08:00.</li></ul> <p>Format:</p> <p>startTimeInMillis.endTimeInMillis.durationInMinutes</p> <p>Parameter description:</p> <ul style="list-style-type: none"><li>• startTimeInMillis: Start time of the query, in milliseconds. If this parameter is set to -1, the server calculates the start time as follows: endTimeInMillis - durationInMinutes x 60 x 1000. For example, -1.1650852300000.5 is equivalent to 1650852000000.165085230000.5.</li><li>• endTimeInMillis: End time of the query, in milliseconds. If this parameter is set to -1, the server calculates the end time as follows: startTimeInMillis + durationInMinutes x 60 x 1000. If the calculated end time is later than the</li></ul> |

| Parameter         | Mandatory | Type                                  | Description  |
|-------------------|-----------|---------------------------------------|--|
|                   |           |                                       | <p>current system time, the current system time is used. For example, 1650852000000.-1.5 is equivalent to 1650852000000.165085230000.5.</p> <ul style="list-style-type: none"> <li>durationInMinutes: Time span, in minutes. The value must be greater than 0 and greater than or equal to the result of "(endTimeInMillis – startTimeInMillis)/(60 x 1000) – 1". If both the start time and end time are set to -1, the system sets the end time to the current UTC time (in milliseconds) and calculates the start time as follows: endTimeInMillis – durationInMinutes x 60 x 1000. For example, -1.-1.60 indicates the latest 60 minutes.</li> </ul> <p>Constraint:<br/>In a single request, the following condition must be met: durationInMinutes x 60/period ≤ 1440</p> |
| step              | Yes       | Long                                  | Statistical step (unit: ms). For example, if the statistical step is one minute, set this parameter to 60,000.   |
| search            | No        | String                                | Field specified for fuzzy query, which can be left blank. If this field is not left blank, the system will return metadata's mandatory fields that are fuzzily matched.  |
| sort              | No        | sort object                           | Sorting order, which can be left blank.  |
| metadata_relation | No        | Array of <b>RelationModel</b> objects | Combination of search criteria, which can be left blank.   |

**Table 4-181 sort**

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| order_by  | No        | Array of strings | List of sorted fields. Fields in this list are sorted based on the specified order.  |
| order     | No        | String           | Sorting order. asc: ascending order. desc: descending order.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>asc</b></li><li>• <b>desc</b></li></ul> |

**Table 4-182 RelationModel**

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| key       | No        | String           | Key specified for query, which corresponds to the key in the metadata.   |
| value     | No        | Array of strings | Value of the specified key in the search criterion.  |
| relation  | No        | String           | Relationship between search criteria. Values: AND: All criteria must be met. OR: One of the criteria needs to be met. NOT: None of the criteria can be met.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>AND</b></li><li>• <b>OR</b></li><li>• <b>NOT</b></li></ul> |

## Response Parameters

Status code: 200

**Table 4-183** Response body parameters

| Parameter  | Type                                | Description  |
|------------|-------------------------------------|--|
| step       | Long                                | Statistical step (unit: ms). For example, if the statistical step is one minute, set this parameter to 60,000. |
| timestamps | Array of longs                      | Time series object corresponding to the statistical result.  |
| series     | Array of <b>EventSeries</b> objects | Statistical results of a time series object's different severities of events or alarms.                        |
| summary    | Map<String, Integer>                | Alarm statistics summary.  |

**Table 4-184** EventSeries

| Parameter      | Type              | Description  |
|----------------|-------------------|--|
| event_severity | String            | Enumerated values of event or alarm severities.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>Critical</b></li><li>• <b>Major</b></li><li>• <b>Minor</b></li><li>• <b>Info</b></li></ul> |
| values         | Array of integers | Event or alarm statistical result.   |

**Status code: 400**

**Table 4-185** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

**Status code: 401**

**Table 4-186** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

**Status code: 503**

**Table 4-189** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |

| Parameter | Type   | Description |
|-----------|--------|-------------|
| trace_id  | String | Request ID. |

## Example Requests

Query the events and alarms on the step basis in a specified time range.

```
https://{endpoint}/v2/{project_id}/events/statistic
{
  "time_range": "-1.-1.5",
  "step": 60000
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{
  "series": [ {
    "event_severity": "Critical",
    "values": [ 2, 3, 3, 1, 0 ]
  }, {
    "event_severity": "Major",
    "values": [ 4, 3, 5, 4, 0 ]
  }, {
    "event_severity": "Minor",
    "values": [ 3, 1, 1, 1, 0 ]
  }, {
    "event_severity": "Info",
    "values": [ 0, 0, 0, 0, 0 ]
  }],
  "step": 60000,
  "summary": {
    "critical_count": 9,
    "info_count": 0,
    "major_count": 16,
    "minor_count": 6
  },
  "timestamps": [ 1711788600000, 1711788660000, 1711788720000, 1711788780000, 1711788840000 ]
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "error_code": "AOM.08033002",
  "error_message": "The request body is illegal",

## 4.1.20 Reporting Events and Alarms

### Function

This API is used to report events and alarms of a user.

### Calling Method

For details, see [Calling APIs](#).

### URI

PUT /v2/{project\_id}/push/events

**Table 4-190** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-191** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| action    | No        | String | Requested action. clear: The alarm is to be cleared. If this parameter is not transferred or other values are transferred, the alarm is reported by default.<br>Enumeration values: <ul style="list-style-type: none"><li>• clear</li></ul> |

### Request Parameters

**Table 4-192** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

| Parameter               | Mandatory | Type   | Description   |
|-------------------------|-----------|--------|---|
| Content-Type            | Yes       | String | Content type, which is application/json.<br>Enumeration values:<br>• application/json |
| x-enterprise-project-id | No        | String | ID of the enterprise project to which the alarm belongs.                              |

**Table 4-193** Request body parameters

| Parameter | Mandatory | Type                               | Description             |
|-----------|-----------|------------------------------------|-------------------------|
| events    | Yes       | Array of <b>EventModel</b> objects | Event or alarm details. |

**Table 4-194** EventModel

| Parameter | Mandatory | Type | Description   |
|-----------|-----------|------|---|
| starts_at | No        | Long | Time when an event or alarm is generated (CST timestamp precise down to the millisecond).   |
| ends_at   | No        | Long | Time when an event or alarm is cleared (CST timestamp precise down to the millisecond). 0: The event or alarm is not deleted.   |
| timeout   | No        | Long | Duration (in milliseconds) at which an alarm is automatically cleared. For example, if an alarm needs to be automatically cleared in one minute, set this parameter to 60000. The default value is 3 days (that is, 3 days x 24 hours x 60 minutes x 1000 ms = 4,320,000 ms). |

| Parameter   | Mandatory | Type                | Description  |
|-------------|-----------|---------------------|--|
| metadata    | No        | Map<String, String> | <p>Details of an event or alarm. The value is a key-value pair. The following fields are mandatory:</p> <ul style="list-style-type: none"><li>• <b>event_name</b>: event or alarm name, which is a string.</li><li>• <b>event_severity</b>: event severity, which is an enumerated value with string elements. Options: <b>Critical</b>, <b>Major</b>, <b>Minor</b>, and <b>Info</b>.</li><li>• <b>event_type</b>: event type, which is an enumerated value with string elements. Options: <b>event</b> and <b>alarm</b>.</li><li>• <b>resource_provider</b>: name of a cloud service corresponding to an event, which is a string.</li><li>• <b>resource_type</b>: type of the resource corresponding to an event, which is a string.</li><li>• <b>resource_id</b>: resource ID corresponding to an event, which is a string.</li></ul> |
| annotations | No        | Map<String, Object> | Additional field for an event or alarm, which can be left blank.   |
| attach_rule | No        | Map<String, Object> | Reserved field for an event or alarm, which can be left blank.   |
| id          | No        | String              | Event or alarm ID, which is automatically generated by the system.   |

## Response Parameters

Status code: 400

**Table 4-195** Response body parameters

| Parameter  | Type   | Description            |
|------------|--------|------------------------|
| error_code | String | Response code.         |
| error_msg  | String | Error description.     |
| error_type | String | API call failure type. |
| trace_id   | String | Request ID.            |

## Example Requests

Report an alarm named "test".

```
https://{{EndPoint}}/v2/{{project_id}}/push/events

{
  "events" : [ {
    "starts_at" : 1605232501000,
    "timeout" : 60000,
    "metadata" : {
      "event_name" : "test",
      "event_severity" : "Major",
      "event_type" : "alarm",
      "resource_provider" : "ecs",
      "resource_type" : "vm",
      "resource_id" : "ecs123"
    },
    "annotations" : {
      "alarm_probableCause_zh_cn" : "Possible Causes",
      "alarm_fix_suggestion_zh_cn" : "Suggestions",
      "message" : "Alarm Details"
    },
    "attach_rule" : { }
  } ]
}
```

## Example Responses

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.0400",
  "error_msg" : "parse eventParam failed",
  "error_type" : "SC_BAD_REQUEST"
}
```

## Status Codes

| Status Code | Description                    |
|-------------|--------------------------------|
| 204         | OK: The request is successful. |

| Status Code | Description   |
|-------------|---|
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

## 4.2 Monitoring

### 4.2.1 Querying Time Series Objects

#### Function

This API is used to query the time series objects that can be monitored in the system. You can specify a namespace, name, dimension, and resource ID (format: resType\_resId). You can also specify the start position and the maximum number of returned records for a pagination query.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v2/{project\_id}/series

**Table 4-196** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-197** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| limit     | No        | String | Maximum number of returned records. Value range: 1–1000. Default value: 1000. |
| offset    | No        | String | Start position of a pagination query. The value is a non-negative integer.    |

## Request Parameters

**Table 4-198** Request body parameters

| Parameter | Mandatory | Type   | Description                             |
|-----------|-----------|--|---|
| series    | Yes       | Array of <a href="#">QuerySeries</a> <a href="#">OptionParam</a> objects | Array for querying time series objects. |

**Table 4-199** QuerySeriesOptionParam

| Parameter   | Mandatory | Type   | Description  |
|-------------|-----------|--------|--|
| namespace   | Yes       | String | Namespace of time series objects. Value range: PAAS.CONTAINER, PAAS.NODE, PAAS.SLA, PAAS.AGGR, or CUSTOMMETRICS.<br>PAAS.CONTAINER: namespace of application time series objects. PAAS.NODE: namespace of node time series objects. PAAS.SLA: namespace of SLA time series objects. PAAS.AGGR: namespace of cluster time series objects. CUSTOMMETRICS: namespace of custom time series objects. |
| metric_name | No        | String | Time series name. Length: 1 to 255 characters. Values: cpuUsage: CPU usage. cpuCoreUsed: used CPU cores. Custom time series names.   |

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--|--|
| dimensions | No        | Array of <a href="#">DimensionSeries</a> objects | List of time series dimensions. You can call the /v2/{project_id}/series API to query the time series dimension list by namespace and metric_name. |

**Table 4-200 DimensionSeries**

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| name      | No        | String | Dimension name.  |
| value     | No        | String | Dimension value. |

## Response Parameters

Status code: 200

**Table 4-201 Response body parameters**

| Parameter | Type   | Description                                 |
|-----------|--|---|
| series    | Array of <a href="#">SeriesQueryItemResult</a> objects | List of time series objects.                |
| meta_data | <a href="#">MetaDataSet</a> object                     | Metadata, including pagination information. |

**Table 4-202 SeriesQueryItemResult**

| Parameter            | Type   | Description             |
|----------------------|--|-------------------------|
| namespace            | String   | Namespace.              |
| dimensions           | Array of <a href="#">DimensionSeries</a> objects | Dimension list.         |
| metric_name          | String   | Time series name.       |
| unit                 | String   | Time series unit.       |
| dimension_value_hash | String   | Time series hash value. |

**Table 4-203** DimensionSeries

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| name      | String | Dimension name.  |
| value     | String | Dimension value. |

**Table 4-204** MetaDataSeries

| Parameter | Type    | Description   |
|-----------|---------|---|
| count     | Integer | Number of returned records.   |
| offset    | Integer | Start of the next page, which is used for pagination. null: No more data. |
| total     | Integer | Total number of records.  |
| nextToken | Integer | Offset.   |

### Status code: 400

**Table 4-205** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |
| error_type | String | Error type.    |
| trace_id   | String | Request ID.    |

## Example Requests

Query time series objects by namespace and metric\_name.

`https://{Endpoint}/v2/{project_id}/series`

```
{  
    "series": [ {  
        "namespace": "PAAS.CONTAINER",  
        "metric_name": "aom_process_cpu_usage"  
    } ]  
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{  
  "meta_data": {  
    "count": 1,  
    "offset": null,  
    "total": 1,  
    "nextToken": 0  
  },  
  "series": [ {  
    "namespace": "PAAS.CONTAINER",  
    "metric_name": "cpuUsage",  
    "unit": "Percent",  
    "dimensions": [ {  
      "name": "appName",  
      "value": "appValue"  
    } ],  
    "dimension_value_hash": null  
  } ]  
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
  "error_code": "AOM.04007101",  
  "error_msg": "Invalid namespace",  
  "error_type": "BAD_REQUEST",  
  "trace_id": ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

## 4.2.2 Querying Time Series Data

### Function

This API is used to query time series data within a specified period. You can specify a dimension or period to query.

### Calling Method

For details, see [Calling APIs](#).

### URI

POST /v2/{project\_id}/samples

**Table 4-206** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-207** Query Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| fill_value | No        | String | Value filled for breakpoints in time series data. Default value: -1. -1: Breakpoints are filled with -1. 0: Breakpoints are filled with 0. null: Breakpoints are filled with null. average: Breakpoints are filled with the average value of the adjacent valid data. If there is no valid data, breakpoints are filled with null. |

## Request Parameters

**Table 4-208** Request body parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--|---|
| samples    | Yes       | Array of<br><a href="#">QuerySample</a><br>objects | List of time series objects. A JSON array can contain up to 20 objects.   |
| statistics | Yes       | Array of<br>strings                                | Statistic. Values: maximum, minimum, sum, average, and sampleCount.   |
| period     | Yes       | Integer  | Granularity for monitoring data, which is an enumerated value. Values: 60: The data monitoring granularity is 1 minute. 300: The data monitoring granularity is 5 minutes. 900: The data monitoring granularity is 15 minutes. 3600: The data monitoring granularity is 1 hour. |

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| time_range | Yes       | String | <p>Time range specified to query data of the last N minutes when the client time is inconsistent with the server time. It can also be used to accurately query the data of a specified period.</p> <p>Example:</p> <ul style="list-style-type: none"><li>• -1.-1.60: indicates that the data of the latest 60 minutes is queried. This query is based on the server time regardless of the current client time.</li><li>• 1650852000000.165085230000.5: indicates the five minutes from 10:00:00 to 10:05:00 on April 25, 2022 GMT+08:00.</li></ul> <p>Format:</p> <p>startTimelnMillis.endTimelnMillis.durationInMinutes</p> <p>Parameter description:</p> <ul style="list-style-type: none"><li>• startTimelnMillis: Start time of the query, in milliseconds. If this parameter is set to -1, the server calculates the start time as follows: endTimelnMillis - durationInMinutes x 60 x 1000. For example, -1.1650852300000.5 is equivalent to 1650852000000.165085230000.5.</li><li>• endTimelnMillis: End time of the query, in milliseconds. If this parameter is set to -1, the server calculates the end time as follows: startTimelnMillis + durationInMinutes x 60 x 1000. If the calculated end time is later than the current system time, the current system time is used.</li></ul> |

| Parameter | Mandatory | Type | Description   |
|-----------|-----------|------|---|
|           |           |      | <p>For example,<br/>1650852000000.-1.5 is<br/>equivalent to<br/>1650852000000.165085230<br/>0000.5.</p> <ul style="list-style-type: none"><li>durationInMinutes: Time span, in minutes. The value must be greater than 0 and greater than or equal to the result of "(endTimeInMillis – startTimeInMillis)/(60 x 1000) – 1". If both the start time and end time are set to -1, the system sets the end time to the current UTC time (in milliseconds) and calculates the start time as follows: endTimeInMillis – durationInMinutes x 60 x 1000. For example, -1.-1.60 indicates the latest 60 minutes.</li></ul> <p>Constraint:</p> <p>In a single request, the following condition must be met: durationInMinutes x 60 / period ≤ 1440</p> |

**Table 4-209** QuerySample

| Parameter   | Mandatory | Type   | Description  |
|-------------|-----------|--|--|
| namespace   | Yes       | String   | Namespace of time series objects. Value range: PAAS.CONTAINER, PAAS.NODE, PAAS.SLA, PAAS.AGGR, or CUSTOMMETRICS.<br>PAAS.CONTAINER: namespace of application time series objects. PAAS.NODE: namespace of node time series objects. PAAS.SLA: namespace of SLA time series objects. PAAS.AGGR: namespace of cluster time series objects. CUSTOMMETRICS: namespace of custom time series objects. |
| dimensions  | Yes       | Array of <a href="#">DimensionSeries</a> objects | List of time series dimensions. You can call the /v2/{project_id}/series API to query the time series dimension list by namespace and metric_name.   |
| metric_name | Yes       | String   | Time series name. Length: 1 to 255 characters. Values: cpuUsage: CPU usage. cpuCoreUsed: used CPU cores. Custom time series names.   |

**Table 4-210** DimensionSeries

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| name      | No        | String | Dimension name.  |
| value     | No        | String | Dimension value. |

## Response Parameters

**Status code: 200**

**Table 4-211** Response body parameters

| Parameter | Type  | Description                  |
|-----------|---|------------------------------|
| samples   | Array of<br><a href="#">SampleDataValue</a> objects | List of time series objects. |

**Table 4-212** SampleDataValue

| Parameter   | Type   | Description                  |
|-------------|--|------------------------------|
| sample      | <a href="#">QuerySample</a> object                   | List of time series objects. |
| data_points | Array of<br><a href="#">MetricDataPoints</a> objects | Time series data.            |

**Table 4-213** QuerySample

| Parameter   | Type  | Description   |
|-------------|---|---|
| namespace   | String  | Namespace of time series objects. Value range: PAAS.CONTAINER, PAAS.NODE, PAAS.SLA, PAAS.AGGR, or CUSTOMMETRICS.<br>PAAS.CONTAINER: namespace of application time series objects. PAAS.NODE: namespace of node time series objects. PAAS.SLA: namespace of SLA time series objects. PAAS.AGGR: namespace of cluster time series objects.<br>CUSTOMMETRICS: namespace of custom time series objects. |
| dimensions  | Array of<br><a href="#">DimensionSeries</a> objects | List of time series dimensions. You can call the /v2/{project_id}/series API to query the time series dimension list by namespace and metric_name.  |

| trace_id   | String | Request ID.    |

## Example Requests

Query time series data in the last five minutes by namespace, metric\_name, and dimensions.

```
https://{{Endpoint}}/v2/{{project_id}}/samples
{
  "samples": [
    {
      "namespace": "PAAS.CONTAINER",
      "metric_name": "aom_process_cpu_usage",
      "dimensions": [
        {
          "name": "appName",
          "value": "aomApp"
        }
      ]
    }
  ]
}
```

```
        ]
    },
    "period": 60,
    "time_range": "-1.-1.5",// Last 5 minutes
    "statistics": [
        "sum"
    ]
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{
  "samples" : [ {
    "sample" : {
      "namespace" : "PAAS.CONTAINER",
      "metric_name" : "aom_process_cpu_usage",
      "dimensions" : [ {
        "name" : "appName",
        "value" : "aomApp"
      }]
    },
    "data_points" : [ {
      "timestamp" : 1694673300000,
      "unit" : "Percent",
      "statistics" : [ {
        "statistic" : "sum",
        "value" : "23"
      }]
    }]
  }
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.04008105",
  "error_msg" : "Query metric data samples is invalid",
  "error_type" : "BAD_REQUEST",
  "trace_id" : ""
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |

| Status Code | Description  |
|-------------|--|
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.                 |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications. |

## Error Codes

See [Error Codes](#).

### 4.2.3 Querying Metrics

#### Function

This API is used to query the metrics that can be monitored in the system. You can query specific metrics by specifying a namespace, metric name, dimension, and resource ID (format: resType\_resId). You can also specify the start position and the maximum number of returned records for a pagination query.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v1/{project\_id}/ams/metrics

**Table 4-218** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-219** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| type      | No        | String | Metric query mode.  |
| limit     | No        | String | Maximum number of returned records. Value range: 1-1000. Default value: 1000.<br>Minimum: 0<br>Maximum: 4 |

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| start     | No        | String | Start position of a pagination query. The value is a non-negative integer. |

## Request Parameters

**Table 4-220** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-221** Request body parameters

| Parameter   | Mandatory | Type  | Description  |
|-------------|-----------|---|--|
| inventoryId | No        | String  | Resource ID, which must be in the format of resType_resId. Enumerated values of resType: host, application, instance, container, process, network, storage, and volume. When type (a URI parameter) is inventory, this parameter instead of metricItems is used for associated metric queries. |
| metricItems | No        | Array of <a href="#">QueryMetricItemOptionParam</a> objects | If the value of type in the URI is not inventory, metrics are queried based on the information carried by metricItems.   |

**Table 4-222** QueryMetricItemOptionParam

| Parameter  | Mandatory | Type                              | Description   |
|------------|-----------|-----------------------------------|---|
| dimensions | No        | Array of <b>Dimension</b> objects | List of metric dimensions.  |
| metricName | No        | String                            | Metric name. Length: 1 to 255 characters. Value range: cpuUsage, cpuCoreUsed, and other basic metrics provided by AOM. cpuUsage: CPU usage. cpuCoreUsed: used CPU cores. Custom metrics.  |
| namespace  | Yes       | String                            | Metric namespace. Values: PAAS.CONTAINER: namespace of component, instance, process, and container metrics. PAAS.NODE: namespace of host, network, disk, and file system metrics. PAAS.SLA: namespace of SLA metrics. PAAS.AGGR: namespace of cluster metrics. CUSTOMMETRICS: default namespace of custom metrics. Enumeration values: <ul style="list-style-type: none"> <li>• <b>PAAS.CONTAINER</b></li> <li>• <b>PAAS.NODE</b></li> <li>• <b>PAAS.SLA</b></li> <li>• <b>PAAS.AGGR</b></li> <li>• <b>CUSTOMMETRICS</b></li> </ul> |

**Table 4-223** Dimension

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| name      | Yes       | String | Dimension name.  |
| value     | Yes       | String | Dimension value. |

## Response Parameters

Status code: 200

**Table 4-224** Response body parameters

| Parameter | Type   | Description                                 |
|-----------|--|---|
| metaData  | <a href="#">MetaDataSet</a> object                   | Metadata, including pagination information. |
| metrics   | Array of <a href="#">MetricItemResultAPI</a> objects | Metric list.                                |

**Table 4-225** MetaDataSet

| Parameter | Type    | Description   |
|-----------|---------|---|
| count     | Integer | Number of returned records.   |
| offset    | Integer | Start of the next page, which is used for pagination. null: No more data. |
| total     | Integer | Total number of records.  |
| nextToken | Integer | Offset.   |

**Table 4-226** MetricItemResultAPI

| Parameter          | Type                                       | Description                |
|--------------------|--|----------------------------|
| dimensions         | Array of <a href="#">Dimension</a> objects | List of metric dimensions. |
| dimensionValueHash | String                                     | Metric hash value.         |
| metricName         | String                                     | Metric name.               |
| namespace          | String                                     | Namespace.                 |
| unit               | String                                     | Metric unit.               |

**Table 4-227** Dimension

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| name      | String | Dimension name.  |
| value     | String | Dimension value. |

## Example Requests

- Query metrics by inventory ID.

```
https://{{Endpoint}}/v1/{{project_id}}/ams/metrics
```

```
{  
    "metricItems" : [ {  
        "namespace" : "PAAS.CONTAINER",  
        "dimensions" : [ {  
            "name" : "appName",  
            "value" : "aomApp"  
        }, {  
            "name" : "clusterName",  
            "value" : "aomCluster"  
        } ]  
    } ]  
}
```

- Query metrics by namespace, appName, and clusterName.

```
https://{{Endpoint}}/v1/{{project_id}}/ams/metrics?type=inventory
```

```
{  
    "inventoryId" : "application_xxxxxxx-xxxx-xxxx-xxxx-xxxxx3fee10"  
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{  
    "errorCode" : "SVCSTG_AMS_2000000",  
    "errorMessage" : "success",  
    "metaData" : {  
        "count" : 1,  
        "offset" : 1,  
        "nextToken" : null,  
        "total" : 1  
    },  
    "metrics" : [ {  
        "namespace" : "PAAS.CONTAINER",  
        "metricName" : "aom_process_cpu_usage",  
        "unit" : "Percent",  
        "dimensions" : [ {  
            "name" : "appName",  
            "value" : "aomApp"  
        } ]  
    } ]  
}
```

## Status Codes

| Status Code | Description  |
|-------------|--|
| 200         | OK: The request is successful.   |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications. |
| 401         | Unauthorized: The authentication information is incorrect or invalid.                                |

| Status Code | Description   |
|-------------|---|
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable<br>The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.2.4 Querying Monitoring Data

#### Function

This API is used to query monitoring data of metrics within a specified period. You can specify a dimension or period to query.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v1/{project\_id}/ams/metricdata

**Table 4-228** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-229** Query Parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| fillValue | No        | String | <p>Value filled for breakpoints in monitoring data. Default value: -1. -1: Breakpoints are filled with -1. 0: Breakpoints are filled with 0. null: Breakpoints are filled with null. average: Breakpoints are filled with the average value of the adjacent valid data. If there is no valid data, breakpoints are filled with null.</p> <p>Default: <b>-1</b></p> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• <b>-1</b></li> <li>• <b>0</b></li> <li>• <b>null</b></li> <li>• <b>average</b></li> </ul> |

## Request Parameters

**Table 4-230** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | <p>Content type, which is application/json.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"> <li>• <b>application/json</b></li> </ul> |

**Table 4-231** Request body parameters

| Parameter | Mandatory | Type  | Description   |
|-----------|-----------|---|---|
| metrics   | Yes       | Array of <a href="#">MetricQuery</a> <a href="#">MeritParam</a> objects | Metric list. A JSON array can contain up to 20 objects. |

| Parameter  | Mandatory | Type             | Description   |
|------------|-----------|------------------|---|
| period     | Yes       | Integer          | Granularity for monitoring data, which is an enumerated value. Values: 60: The data monitoring granularity is 1 minute. 300: The data monitoring granularity is 5 minutes. 900: The data monitoring granularity is 15 minutes. 3600: The data monitoring granularity is 1 hour. |
| statistics | Yes       | Array of strings | Statistic. Values: maximum, minimum, sum, average, and sampleCount.   |

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| timerange | Yes       | String | <p>Time range specified to query data of the last N minutes when the client time is inconsistent with the server time. It can also be used to accurately query the data of a specified period.</p> <p>Example:</p> <ul style="list-style-type: none"><li>• -1.-1.60: indicates that the data of the latest 60 minutes is queried. This query is based on the server time regardless of the current client time.</li><li>• 1650852000000.165085230000.5: indicates the five minutes from 10:00:00 to 10:05:00 on April 25, 2022 GMT+08:00.</li></ul> <p>Format:</p> <p>startTimelnMillis.endTimelnMillis.durationInMinutes</p> <p>Parameter description:</p> <ul style="list-style-type: none"><li>• startTimelnMillis: Start time of the query, in milliseconds. If this parameter is set to -1, the server calculates the start time as follows: endTimelnMillis - durationInMinutes x 60 x 1000. For example, -1.1650852300000.5 is equivalent to 1650852000000.165085230000.5.</li><li>• endTimelnMillis: End time of the query, in milliseconds. If this parameter is set to -1, the server calculates the end time as follows: startTimelnMillis + durationInMinutes x 60 x 1000. If the calculated end time is later than the current system time, the current system time is used.</li></ul> |

| Parameter | Mandatory | Type | Description   |
|-----------|-----------|------|---|
|           |           |      | <p>For example, 1650852000000.-1.5 is equivalent to 1650852000000.165085230000.5.</p> <ul style="list-style-type: none"><li>durationInMinutes: Time span, in minutes. The value must be greater than 0 and greater than or equal to the result of "(endTimeInMillis - startTimeInMillis)/(60 x 1000) - 1". If both the start time and end time are set to -1, the system sets the end time to the current UTC time (in milliseconds) and calculates the start time as follows: endTimeInMillis - durationInMinutes x 60 x 1000. For example, -1.-1.60 indicates the latest 60 minutes.</li></ul> <p>Constraint:</p> <p>In a single request, the following condition must be met: durationInMinutes x 60 / period ≤ 1440</p> |

**Table 4-232 MetricQueryMeritParam**

| Parameter  | Mandatory | Type                              | Description  |
|------------|-----------|-----------------------------------|--|
| dimensions | Yes       | Array of <b>Dimension</b> objects | List of metric dimensions. Neither the array nor the name or value of any dimension in the array can be left blank.  |
| metricName | Yes       | String                            | Metric name. Length: 1 to 255 characters. Value range: cpuUsage, cpuCoreUsed, and other basic metrics provided by AOM. cpuUsage: CPU usage. cpuCoreUsed: used CPU cores. Custom metrics. |

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| namespace | Yes       | String | Metric namespace. Values:<br>PAAS.CONTAINER: namespace of component, instance, process, and container metrics.<br>PAAS.NODE: namespace of host, network, disk, and file system metrics.<br>PAAS.SLA: namespace of SLA metrics.<br>PAAS.AGGR: namespace of cluster metrics.<br>CUSTOMMETRICS: default namespace of custom metrics. |

**Table 4-233 Dimension**

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| name      | Yes       | String | Dimension name.  |
| value     | Yes       | String | Dimension value. |

## Response Parameters

Status code: 200

**Table 4-234 Response body parameters**

| Parameter    | Type  | Description       |
|--------------|---|-------------------|
| errorCode    | String  | Response code.    |
| errorMessage | String  | Response message. |
| metrics      | Array of<br><a href="#">MetricDataValue</a> objects | Metric list.      |

**Table 4-235 MetricDataValue**

| Parameter  | Type   | Description |
|------------|--|-------------|
| dataPoints | Array of<br><a href="#">MetricDataPoints</a> objects | Key metric. |

| Parameter | Type  | Description       |
|-----------|---|-------------------|
| metric    | <a href="#">MetricQuery</a><br><a href="#">MeritcParam</a> object | Query parameters. |

**Table 4-236 MetricDataPoints**

| Parameter  | Type  | Description       |
|------------|---|-------------------|
| statistics | Array of <a href="#">StatisticValue</a> objects | Statistic.        |
| timestamp  | Long  | Timestamp.        |
| unit       | String  | Time series unit. |

**Table 4-237 StatisticValue**

| Parameter | Type   | Description         |
|-----------|--------|---------------------|
| statistic | String | Statistic.          |
| value     | Double | Statistical result. |

**Table 4-238 MetricQueryMeritcParam**

| Parameter  | Type                                       | Description  |
|------------|--|--|
| dimensions | Array of <a href="#">Dimension</a> objects | List of metric dimensions. Neither the array nor the name or value of any dimension in the array can be left blank.  |
| metricName | String                                     | Metric name. Length: 1 to 255 characters. Value range: cpuUsage, cpuCoreUsed, and other basic metrics provided by AOM. cpuUsage: CPU usage. cpuCoreUsed: used CPU cores. Custom metrics.   |
| namespace  | String                                     | Metric namespace. Values: PAAS.CONTAINER: namespace of component, instance, process, and container metrics. PAAS.NODE: namespace of host, network, disk, and file system metrics. PAAS.SLA: namespace of SLA metrics. PAAS.AGGR: namespace of cluster metrics. CUSTOMMETRICS: default namespace of custom metrics. |

**Table 4-239 Dimension**

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| name      | String | Dimension name.  |
| value     | String | Dimension value. |

## Example Requests

Query the monitoring data of **cpuUsage** in the **PAAS.CONTAINER** namespace in the last five minutes.

```
https://{{Endpoint}}/v1/{{project_id}}/ams/metricdata
```

```
{
  "metrics": [
    {
      "dimensions": [
        {
          "name": "appName",
          "value": "aomApp"
        }
      ],
      "metricName": "cpuUsage",
      "namespace": "PAAS.CONTAINER"
    }
  ],
  "period": 60,
  "statistics": [
    "maximum",
    "minimum",
    "sum"
  ],
  "timerange": "-1.-1.5"
}
```

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{
  "errorCode": "SVCSTG_AMS_2000000",
  "errorMessage": "success",
  "metrics": [
    {
      "metric": {
        "namespace": "PAAS.CONTAINER",
        "metricName": "cpuUsage",
        "dimensions": [
          {
            "name": "appName",
            "value": "aomApp"
          }
        ]
      },
      "dataPoints": [
        {
          "timestamp": "1467892800000",
          "unit": "Percent",
          "statistics": [
            {
              "statistic": "maximum",
              "value": "23"
            }
          ]
        }
      ]
    }
  ]
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.2.5 Adding Monitoring Data

#### Function

This API is used to add one or more monitoring data records to a server.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v1/{project\_id}/ams/report/metricdata

**Table 4-240** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-241** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-242** Request body parameters

| Parameter | Mandatory | Type  | Description        |
|-----------|-----------|---|--------------------|
| [items]   | Yes       | Array of <a href="#">MetricDataItem</a> objects | Metric parameters. |

**Table 4-243** MetricDataItem

| Parameter    | Mandatory | Type                                       | Description  |
|--------------|-----------|--|--|
| collect_time | Yes       | Long                                       | Data collection time (UNIX timestamp, in ms), which ranges from the last 24 hours to the next 0.5 hour. The following requirement needs to be met: Current UTC time – Data collection time ≤ 24 hours, or Data collection time – Current UTC time ≤ 30 minutes If the data reporting time is earlier than 08:00 of the current day, only the data generated after 08:00 of the current day is displayed on the metric monitoring page. |
| metric       | Yes       | <a href="#">MetricItemInfo</a> object      | Metric details.  |
| values       | Yes       | Array of <a href="#">ValueData</a> objects | Metric value.  |

**Table 4-244 MetricItemInfo**

| Parameter  | Mandatory | Type                               | Description  |
|------------|-----------|------------------------------------|--|
| dimensions | Yes       | Array of <b>Dimension2</b> objects | List of metric dimensions. A maximum of 50 dimensions are supported. Each dimension is in JSON format. The structure is as follows:<br>dimension.name: 1–32 characters. dimension.value: 1–64 characters.  |
| namespace  | Yes       | String                             | Metric namespace. It cannot contain colons (:). It must be in the format of "service.item". The value must contain 3 to 32 characters starting with a letter. Only letters, digits, and underscores (_) are allowed. In addition, "service" cannot be "PAAS".<br>Minimum: 3<br>Maximum: 32 |

**Table 4-245 Dimension2**

| Parameter | Mandatory | Type   | Description                                   |
|-----------|-----------|--------|---|
| name      | Yes       | String | Dimension name.<br>Minimum: 1<br>Maximum: 32  |
| value     | Yes       | String | Dimension value.<br>Minimum: 1<br>Maximum: 64 |

**Table 4-246 ValueData**

| Parameter   | Mandatory | Type   | Description                               |
|-------------|-----------|--------|---|
| metric_name | Yes       | String | Metric name. Length: 1 to 255 characters. |

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| type      | No        | String | Data type. Values: int and float.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>int</b></li><li>• <b>float</b></li></ul> |
| unit      | No        | String | Data unit. Length: up to 32 characters.  |
| value     | Yes       | Double | Metric value, which must be of a valid numeric type.<br>Minimum: <b>0</b>  |

## Response Parameters

Status code: 200

**Table 4-247** Response body parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

## Example Requests

Add a piece of monitoring data to the server. (In the following example, set "collect\_time" to the latest timestamp.)

[https://{{Endpoint}}/v1/{{project\\_id}}/ams/report/metricdata](https://{{Endpoint}}/v1/{{project_id}}/ams/report/metricdata)

```
[ {
  "metric" : {
    "namespace" : "NOVAAS.ESC",
    "dimensions" : [ {
      "name" : "instance_id",
      "value" : "instance-101"
    } ]
  },
  "values" : [ {
    "unit" : "percent",
    "metric_name" : "cpu_util",
    "type" : "int",
    "value" : 35
  }],
  "collect_time" : 1467787152000
}]
```

## Example Responses

Status code: 200

OK: The request is successful.

```
{  
    "errorCode" : "SVCSTG_AMS_2000000",  
    "errorMessage" : "success"  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.2.6 Adding or Modifying One or More Service Discovery Rules

#### Function

This API is used to add or modify one or more service discovery rules. A maximum of 100 rules can be added to a project.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

PUT /v1/{project\_id}/inv/servicediscoveryrules

**Table 4-248** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-249** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.   |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values:<br>• application/json |

**Table 4-250** Request body parameters

| Parameter | Mandatory | Type                                      | Description         |
|-----------|-----------|---|---------------------|
| appRules  | No        | Array of <a href="#">AppRules</a> objects | Service parameters. |

**Table 4-251** AppRules

| Parameter  | Mandatory | Type    | Description  |
|------------|-----------|---------|--|
| createTime | No        | String  | Creation time. When creating a service discovery rule, leave this parameter blank. When modifying a service discovery rule, enter the returned createTime.<br>Default: 1599098476654 |
| enable     | Yes       | Boolean | Whether a rule is enabled. Values: true and false.   |

| Parameter | Mandatory | Type                                | Description  |
|-----------|-----------|-------------------------------------|--|
| eventName | Yes       | String                              | aom_inventory_rules_event<br>Rule event name. For service discovery, the fixed value is aom_inventory_rules_event.   |
| hostid    | No        | Array of strings                    | Host ID. Currently, this parameter is not used and can be left blank.  |
| id        | Yes       | String                              | Rule ID. When creating a service discovery rule, leave this parameter blank. When modifying a service discovery rule, enter a rule ID.   |
| name      | Yes       | String                              | Rule name, which contains a maximum of 64 characters. It must start with a lowercase letter but cannot end with a hyphen (-). Only digits, lowercase letters, and hyphens are allowed. |
| projectid | Yes       | String                              | Project ID obtained from IAM. Generally, a project ID contains 32 characters.  |
| spec      | Yes       | <a href="#">AppRulesSpec object</a> | Rule details.  |
| desc      | No        | String                              | Custom description   |

**Table 4-252 AppRulesSpec**

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| appType   | Yes       | String           | Service type, which is used only for rule classification and UI display. You can enter any field. For example, enter Java or Python by technology stack, or enter collector or database by function. |
| attrList  | No        | Array of strings | Attribute list. Currently, this parameter is not used and can be left blank. Values: cmdLine and env.  |

| Parameter     | Mandatory | Type   | Description   |
|---------------|-----------|--|---|
| detectLog     | Yes       | String   | Whether to enable log collection. Values: true and false.   |
| discoveryRule | Yes       | Array of <a href="#">DiscoveryRule</a> objects | Discovery rule. If the array contains multiple conditions, only the processes that meet all the conditions will be matched. If the value of checkType is cmdLine, set the value of checkMode to contain. checkContent is in the format of ["xxx"], indicating that the process must contain the xxx parameter. If the value of checkType is env, set the value of checkMode to contain. checkContent is in the format of ["k1","v1"], indicating that the process must contain the environment variable whose name is k1 and value is v1. If the value of checkType is scope, set the value of checkMode to equals. checkContent is in the format of ["hostId1","hostId2"], indicating that the rule takes effect only on specified nodes. If no nodes are specified, the rule applies to all nodes of the project. |
| isDefaultRule | Yes       | String   | Whether the rule is the default one. Values: true and false.  |
| isDetect      | Yes       | String   | Whether the scenario is a pre-check scenario. No rules will be saved in the pre-check scenario. This scenario is designed only to check whether a rule can detect node processes before it is delivered. Values: true and false.  |
| logFileFix    | Yes       | Array of strings                               | Log file suffix. Values: log, trace, and out.   |

| Parameter                  | Mandatory | Type                                | Description   |
|----------------------------|-----------|-------------------------------------|---|
| logPathRule                | No        | Array of <b>LogPathRule</b> objects | Log path configuration rule. If cmdLineHash is a fixed string, logs in the specified log path or log file are collected. Otherwise, only the files whose names end with .log or .trace are collected. If the value of nameType is cmdLineHash, args is in the format of ["00001"] and value is in the format of ["/xxx/xx.log"], indicating that the log path is /xxx/xx.log when the startup command is 00001. |
| nameRule                   | Yes       | <b>NameRule</b> object              | Naming rules for discovered services and applications.  |
| priority                   | Yes       | Integer                             | Rule priority. Value range: 1 to 9999. Default value: 9999.   |
| dataSource                 | No        | String                              | Data source.  |
| editable                   | No        | String                              | Whether to support editing. Options: true and false.  |
| aom_metric_relabel_configs | No        | Object                              | Metric configuration.   |

**Table 4-253 DiscoveryRule**

| Parameter    | Mandatory | Type             | Description                                  |
|--------------|-----------|------------------|--|
| checkContent | Yes       | Array of strings | Matched value.                               |
| checkMode    | Yes       | String           | Match condition. Values: contain and equals. |
| checkType    | Yes       | String           | Match type. Values: cmdLine, env, and scope. |

**Table 4-254 LogPathRule**

| Parameter | Mandatory | Type             | Description |
|-----------|-----------|------------------|-------------|
| args      | Yes       | Array of strings | Command.    |

| Parameter | Mandatory | Type             | Description                           |
|-----------|-----------|------------------|---------------------------------------|
| nameType  | Yes       | String           | Value type, which can be cmdLineHash. |
| value     | Yes       | Array of strings | Log path.                             |

**Table 4-255 NameRule**

| Parameter   | Mandatory | Type   | Description   |
|-------------|-----------|--|---|
| appNameRule | Yes       | Array of <a href="#">AppNameRule</a> objects | Service name rule. If there are multiple objects in the array, the character strings extracted from these objects constitute the service name. If the value of nameType is cmdLine, args is in the format of ["start", "end"], indicating that the characters between start and end in the command are extracted. If the value of nameType is cmdLine, args is in the format of ["aa"], indicating that the environment variable named aa is extracted. If the value of nameType is str, args is in the format of ["fix"], indicating that the service name is suffixed with fix. If the value of nameType is cmdLineHash, args is in the format of ["0001"] and value is in the format of ["ser"], indicating that the service name is ser when the startup command is 0001. |

| Parameter           | Mandatory | Type   | Description   |
|---------------------|-----------|--|---|
| applicationNameRule | Yes       | Array of <a href="#">ApplicationNameRule</a> objects | Application name rule.If the value of nameType is cmdLine, args is in the format of ["start", "end"], indicating that the characters between start and end in the command are extracted.If the value of nameType is cmdLine, args is in the format of ["aa"], indicating that the environment variable named aa is extracted.If the value of nameType is str, args is in the format of ["fix"], indicating that the service name is suffixed with fix.If the value of nameType is cmdLineHash, args is in the format of ["0001"] and value is in the format of ["ser"], indicating that the application name is ser when the startup command is 0001. |

**Table 4-256 AppNameRule**

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| nameType  | Yes       | String           | Value type. Values: cmdLineHash, cmdLine, env, and str.                          |
| args      | Yes       | Array of strings | Input value.   |
| value     | No        | Array of strings | Service name, which is mandatory only when the value of nameType is cmdLineHash. |

**Table 4-257 ApplicationNameRule**

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| nameType  | Yes       | String | Value type. Values: cmdLineHash, cmdLine, env, and str. |

| Parameter | Mandatory | Type             | Description  |
|-----------|-----------|------------------|--|
| args      | Yes       | Array of strings | Input value.   |
| value     | No        | Array of strings | Service name, which is mandatory only when the value of nameType is cmdLineHash. |

## Response Parameters

**Status code: 200**

**Table 4-258** Response body parameters

| Parameter      | Type                                 | Description   |
|----------------|--------------------------------------|---|
| errorCode      | String                               | Response code.  |
| errorMessage   | String                               | Response message.   |
| responseStatus | Integer                              | Response status code (no longer used).  |
| id             | Array of strings                     | Service discovery rule ID list. This parameter is used during cross-AZ configuration synchronization. |
| results        | Array of Map<String, String> objects | Details about service discovery rules.  |

## Example Requests

Add an application discovery rule whose name is **aom\_inventory\_rules\_event** and project ID is **684fc87a79d7xxxx22e62a7da95b**.

`https://{endpoint}/v1/{project_id}/inv/servicediscoveryrules`

```

    } ]
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
    "errorCode" : "SVCSTG.INV.4000115",
    "errorMessage" : "apprule name has existed",
    "id" : [ ],
    "results" : [ ]
}
```

## Status Codes

| Status Code | Description  |
|-------------|--|
| 200         | OK: The request is successful.   |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications. |

| Status Code | Description   |
|-------------|---|
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.2.7 Deleting a Service Discovery Rule

#### Function

This API is used to delete a service discovery rule.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

DELETE /v1/{project\_id}/inv/servicediscoveryrules

**Table 4-259** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-260** Query Parameters

| Parameter  | Mandatory | Type  | Description  |
|------------|-----------|-------|--|
| appRuleIds | Yes       | Array | Discovery rule ID. Multiple IDs need to be separated by commas (,). The parameter cannot be empty. |

## Request Parameters

**Table 4-261** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

## Response Parameters

**Status code: 200**

**Table 4-262** Response body parameters

| Parameter      | Type             | Description   |
|----------------|------------------|---|
| errorCode      | String           | Response code.  |
| errorMessage   | String           | Response message.   |
| responseStatus | Integer          | Response status code (no longer used).  |
| id             | Array of strings | Service discovery rule ID list. This parameter is used during cross-AZ configuration synchronization. |

## Example Requests

Delete a service discovery rule with a specified ID.

```
https://{{Endpoint}}/v1/{{project_id}}/inv/servicediscoveryrules?appRuleIds=b788349e-62b2-xxxx-xxxx-02c611d59801
```

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
    "errorCode": "SVCSTG.INV.2000000",  
    "errorMessage": null,  
    "id": []  
}
```

**Status code: 400**

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{

## Error Codes

See [Error Codes](#).

## 4.2.8 Querying Existing Service Discovery Rules

### Function

This API is used to query existing service discovery rules in the system.

### Calling Method

For details, see [Calling APIs](#).

### URI

GET /v1/{project\_id}/inv/servicediscoveryrules

**Table 4-263** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-264** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| id        | No        | String | Service discovery rule ID, which corresponds to a service discovery rule. If this parameter is left blank, all service discovery rules in the project are returned. |

### Request Parameters

**Table 4-265** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

## Response Parameters

Status code: 200

**Table 4-266** Response body parameters

| Parameter    | Type                                      | Description   |
|--------------|---|---|
| appRules     | Array of <a href="#">AppRules</a> objects | Rule information.   |
| errorCode    | String                                    | Response code. AOM_INVENTORY_2000000: Success response.   |
| errorMessage | String                                    | Response message.   |
| id           | Array of strings                          | Service discovery rule ID list. This parameter is used during cross-AZ configuration synchronization. |

**Table 4-267** AppRules

| Parameter  | Type             | Description   |
|------------|------------------|---|
| createTime | String           | Creation time. When creating a service discovery rule, leave this parameter blank. When modifying a service discovery rule, enter the returned createTime.<br>Default: <b>1599098476654</b> |
| enable     | Boolean          | Whether a rule is enabled. Values: true and false.  |
| eventName  | String           | aom_inventory_rules_event Rule event name. For service discovery, the fixed value is aom_inventory_rules_event.   |
| hostid     | Array of strings | Host ID. Currently, this parameter is not used and can be left blank.   |
| id         | String           | Rule ID. When creating a service discovery rule, leave this parameter blank. When modifying a service discovery rule, enter a rule ID.  |
| name       | String           | Rule name, which contains a maximum of 64 characters. It must start with a lowercase letter but cannot end with a hyphen (-). Only digits, lowercase letters, and hyphens are allowed.      |
| projectid  | String           | Project ID obtained from IAM. Generally, a project ID contains 32 characters.   |

| Parameter | Type                                | Description        |
|-----------|-------------------------------------|--------------------|
| spec      | <a href="#">AppRulesSpec object</a> | Rule details.      |
| desc      | String                              | Custom description |

**Table 4-268 AppRulesSpec**

| Parameter     | Type   | Description   |
|---------------|--|---|
| appType       | String   | Service type, which is used only for rule classification and UI display. You can enter any field. For example, enter Java or Python by technology stack, or enter collector or database by function.  |
| attrList      | Array of strings                               | Attribute list. Currently, this parameter is not used and can be left blank. Values: cmdLine and env.   |
| detectLog     | String   | Whether to enable log collection. Values: true and false.   |
| discoveryRule | Array of <a href="#">DiscoveryRule objects</a> | Discovery rule. If the array contains multiple conditions, only the processes that meet all the conditions will be matched. If the value of checkType is cmdLine, set the value of checkMode to contain. checkContent is in the format of ["xxx"], indicating that the process must contain the xxx parameter. If the value of checkType is env, set the value of checkMode to contain. checkContent is in the format of ["k1","v1"], indicating that the process must contain the environment variable whose name is k1 and value is v1. If the value of checkType is scope, set the value of checkMode to equals. checkContent is in the format of ["hostId1","hostId2"], indicating that the rule takes effect only on specified nodes. If no nodes are specified, the rule applies to all nodes of the project. |
| isDefaultRule | String   | Whether the rule is the default one. Values: true and false.  |
| isDetect      | String   | Whether the scenario is a pre-check scenario. No rules will be saved in the pre-check scenario. This scenario is designed only to check whether a rule can detect node processes before it is delivered. Values: true and false.  |

| Parameter                   | Type   | Description   |
|-----------------------------|--|---|
| logFileFix                  | Array of strings                             | Log file suffix. Values: log, trace, and out.   |
| logPathRule                 | Array of <a href="#">LogPathRule</a> objects | Log path configuration rule. If cmdLineHash is a fixed string, logs in the specified log path or log file are collected. Otherwise, only the files whose names end with .log or .trace are collected. If the value of nameType is cmdLineHash, args is in the format of ["00001"] and value is in the format of ["/xxx/xx.log"], indicating that the log path is /xxx/xx.log when the startup command is 00001. |
| nameRule                    | <a href="#">NameRule</a> object              | Naming rules for discovered services and applications.  |
| priority                    | Integer                                      | Rule priority. Value range: 1 to 9999. Default value: 9999.   |
| dataSource                  | String                                       | Data source.  |
| editable                    | String                                       | Whether to support editing. Options: true and false.  |
| aom_metric_r elabel_configs | Object                                       | Metric configuration.   |

**Table 4-269** DiscoveryRule

| Parameter    | Type             | Description                                  |
|--------------|------------------|--|
| checkContent | Array of strings | Matched value.                               |
| checkMode    | String           | Match condition. Values: contain and equals. |
| checkType    | String           | Match type. Values: cmdLine, env, and scope. |

**Table 4-270** LogPathRule

| Parameter | Type             | Description                           |
|-----------|------------------|---------------------------------------|
| args      | Array of strings | Command.                              |
| nameType  | String           | Value type, which can be cmdLineHash. |
| value     | Array of strings | Log path.                             |

**Table 4-271** NameRule

| Parameter           | Type   | Description   |
|---------------------|--|---|
| appNameRule         | Array of <a href="#">AppNameRule</a> objects         | Service name rule. If there are multiple objects in the array, the character strings extracted from these objects constitute the service name. If the value of nameType is cmdLine, args is in the format of ["start", "end"], indicating that the characters between start and end in the command are extracted. If the value of nameType is cmdLine, args is in the format of ["aa"], indicating that the environment variable named aa is extracted. If the value of nameType is str, args is in the format of ["fix"], indicating that the service name is suffixed with fix. If the value of nameType is cmdLineHash, args is in the format of ["0001"] and value is in the format of ["ser"], indicating that the service name is ser when the startup command is 0001. |
| applicationNameRule | Array of <a href="#">ApplicationNameRule</a> objects | Application name rule. If the value of nameType is cmdLine, args is in the format of ["start", "end"], indicating that the characters between start and end in the command are extracted. If the value of nameType is cmdLine, args is in the format of ["aa"], indicating that the environment variable named aa is extracted. If the value of nameType is str, args is in the format of ["fix"], indicating that the service name is suffixed with fix. If the value of nameType is cmdLineHash, args is in the format of ["0001"] and value is in the format of ["ser"], indicating that the application name is ser when the startup command is 0001.   |

**Table 4-272** AppNameRule

| Parameter | Type             | Description  |
|-----------|------------------|--|
| nameType  | String           | Value type. Values: cmdLineHash, cmdLine, env, and str.                          |
| args      | Array of strings | Input value.   |
| value     | Array of strings | Service name, which is mandatory only when the value of nameType is cmdLineHash. |

**Table 4-273 ApplicationNameRule**

| Parameter | Type             | Description  |
|-----------|------------------|--|
| nameType  | String           | Value type. Values: cmdLineHash, cmdLine, env, and str.                          |
| args      | Array of strings | Input value.   |
| value     | Array of strings | Service name, which is mandatory only when the value of nameType is cmdLineHash. |

## Example Requests

Query the application discovery rule whose ID is **-6066-\*\*\*\*-8cc7-**.

```
https://{endpoint}/v1/{project_id}/inv/servicediscoveryrules?id=*****-6066-***-8cc7-*****
```

## Example Responses

**Status code: 200**

OK: The request is successful.

```

See [Error Codes](#).

## 4.2.9 Adding a Threshold Rule

### Function

This API is used to add a threshold rule.

## Calling Method

For details, see [Calling APIs](#).

## URI

POST /v2/{project\_id}/alarm-rules

**Table 4-274** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-275** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-276** Request body parameters

| Parameter         | Mandatory | Type             | Description  |
|-------------------|-----------|------------------|--|
| action_enabled    | No        | Boolean          | Whether to enable notification.  |
| alarm_actions     | No        | Array of strings | List of alarm notifications.   |
| alarm_advice      | No        | String           | Alarm clearance suggestion.<br>Minimum: <b>0</b><br>Maximum: <b>255</b>  |
| alarm_description | No        | String           | Threshold rule description.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |

| Parameter                 | Mandatory | Type                              | Description  |
|---------------------------|-----------|-----------------------------------|--|
| alarm_level               | Yes       | Integer                           | Alarm severity. Values: 1 (critical), 2 (major), 3 (minor), and 4 (warning).<br>Enumeration values: <ul style="list-style-type: none"><li>• 1</li><li>• 2</li><li>• 3</li><li>• 4</li></ul>  |
| alarm_rule_name           | Yes       | String                            | Threshold rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, underscores (_), and hyphens (-) are allowed.   |
| comparison_operator       | Yes       | String                            | Comparison operator. Options: <: less than the threshold; >: greater than the threshold; <=: less than or equal to the threshold; >=: greater than or equal to the threshold.<br>Enumeration values: <ul style="list-style-type: none"><li>• &lt;</li><li>• &gt;</li><li>• &lt;=</li><li>• &gt;=</li></ul> |
| dimensions                | Yes       | Array of <b>Dimension</b> objects | List of time series dimensions.  |
| evaluation_periods        | Yes       | Integer                           | Interval.<br>Minimum: 1<br>Maximum: 5  |
| is_turn_on                | No        | Boolean                           | Whether to enable the threshold rule.  |
| insufficient_data_actions | No        | Array of strings                  | List of insufficient data notifications.   |
| metric_name               | Yes       | String                            | Time series name. Length: 1 to 255 characters.   |
| namespace                 | Yes       | String                            | Time series objects' namespace.  |

| Parameter  | Mandatory | Type             | Description  |
|------------|-----------|------------------|--|
| ok_actions | No        | Array of strings | List of normal status notifications.   |
| period     | Yes       | Integer          | Statistical period. Options:<br>60000: one minute; 300000:<br>five minutes; 900000: 15<br>minutes; 3600000: one hour.<br>Enumeration values:<br><ul style="list-style-type: none"> <li>• 60000</li> <li>• 300000</li> <li>• 900000</li> <li>• 3600000</li> </ul> |
| statistic  | Yes       | String           | Statistic.<br>Enumeration values:<br><ul style="list-style-type: none"> <li>• maximum</li> <li>• minimum</li> <li>• average</li> <li>• sum</li> <li>• sampleCount</li> </ul>   |
| threshold  | Yes       | String           | Threshold value.   |
| unit       | Yes       | String           | Time series unit.  |

**Table 4-277 Dimension**

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| name      | Yes       | String | Dimension name.  |
| value     | Yes       | String | Dimension value. |

## Response Parameters

**Status code: 200**

**Table 4-278 Response body parameters**

| Parameter     | Type | Description        |
|---------------|------|--------------------|
| alarm_rule_id | Long | Threshold rule ID. |

**Status code: 400**

**Table 4-279** Response body parameters

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_code | String | Error code.  |
| error_msg  | String | Error message.   |
| error_type | String | Error type.  |
| trace_id   | String | Trace ID, which is used to search for logs and locate faults. If <b>2xx</b> is returned, <b>trace_id</b> is empty. If <b>4xx</b> , <b>trace_id</b> is not empty. |

**Status code: 500****Table 4-280** Response body parameters

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_code | String | Error code.  |
| error_msg  | String | Error message.   |
| error_type | String | Error type.  |
| trace_id   | String | Trace ID, which is used to search for logs and locate faults. If <b>2xx</b> is returned, <b>trace_id</b> is empty. If <b>4xx</b> , <b>trace_id</b> is not empty. |

## Example Requests

Add a threshold rule whose name is **testaom**, alarm severity is **3**, namespace is **PAAS.CONTAINER**, and statistical mode is **average**.

```
https://{{Endpoint}}/v2/{{project_id}}/alarm-rules
```

```
{
  "is_turn_on" : true,
  "action_enabled" : false,
  "alarm_actions" : [ ],
  "alarm_advice" : "",
  "alarm_description" : "",
  "alarm_level" : 3,
  "alarm_rule_name" : "aom_rule",
  "comparison_operator" : ">=",
  "dimensions" : [ {
    "name" : "appName",
    "value" : "rhm-broker"
  }],
  "evaluation_periods" : 1,
  "insufficient_data_actions" : [ ],
  "metric_name" : "cpuCoreLimit",
  "namespace" : "PAAS.CONTAINER",
  "ok_actions" : [ ],
  "period" : 60000,
  "statistic" : "average",
  "threshold" : 0,
```

```
    "unit" : "Core"  
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{  
    "alarm_rule_id" : 1134050083814244400  
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "error_code" : "AOM.02001102",  
    "error_msg" : "this Threshold rule name has been existed",  
    "error_type" : "BAD_REQUEST",  
    "trace_id" : ""  
}
```

### Status code: 500

Internal Server Error: The server is able to receive the request but unable to understand the request.

```
{  
    "error_code" : "AOM.02001500",  
    "error_msg" : "internal server error",  
    "error_type" : "INTERNAL_SERVER_ERROR",  
    "trace_id" : ""  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.2.10 Querying the Threshold Rule List

#### Function

This API is used to query the threshold rule list.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

GET /v2/{project\_id}/alarm-rules

**Table 4-281** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-282** Query Parameters

| Parameter | Mandatory | Type    | Description   |
|-----------|-----------|---------|---|
| offset    | No        | String  | Pagination information.   |
| limit     | No        | Integer | Maximum number of returned records. Value range: 1–1000. Default value: 1000. |

#### Request Parameters

**Table 4-283** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

## Response Parameters

Status code: 200

**Table 4-284** Response body parameters

| Parameter  | Type                              | Description   |
|------------|-----------------------------------|---|
| meta_data  | MetaData object                   | Metadata, including pagination information.         |
| thresholds | Array of QueryAlarmResult objects | Parameters specified for querying a threshold rule. |

**Table 4-285** MetaData

| Parameter | Type    | Description   |
|-----------|---------|---|
| count     | Integer | Number of returned records.   |
| start     | String  | Start of the next page, which is used for pagination. null: No more data. |
| total     | Integer | Total number of records.  |

**Table 4-286** QueryAlarmResult

| Parameter           | Type             | Description                     |
|---------------------|------------------|---------------------------------|
| action_enabled      | Boolean          | Whether to enable notification. |
| alarm_actions       | Array of strings | List of alarm notifications.    |
| alarm_advice        | String           | Alarm clearance suggestion.     |
| alarm_description   | String           | Threshold rule description.     |
| alarm_level         | String           | Alarm severity.                 |
| alarm_rule_id       | String           | Threshold rule ID.              |
| alarm_rule_name     | String           | Threshold rule name.            |
| comparison_operator | String           | Comparison operator.            |

| Parameter                 | Type                                       | Description                              |
|---------------------------|--|--|
| dimensions                | Array of <a href="#">Dimension</a> objects | List of time series dimensions.          |
| evaluation_periods        | Integer                                    | Interval.                                |

| unit                      | String                                     | Threshold unit.                          |

**Table 4-287 Dimension**

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| name      | String | Dimension name.  |
| value     | String | Dimension value. |

**Status code: 400**

**Table 4-288** Response body parameters

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_code | String | Error code.  |
| error_msg  | String | Error message.   |
| error_type | String | Error type.  |
| trace_id   | String | Trace ID, which is used to search for logs and locate faults. If <b>2xx</b> is returned, <b>trace_id</b> is empty. If <b>4xx</b> , <b>trace_id</b> is not empty. |

## Example Requests

Obtain the alarm rule list of a user whose ID is **Project\_Id**.

[https://{{EndPoint\\_Id}}/v2/{{Project\\_Id}}/alarm-rules](https://{{EndPoint_Id}}/v2/{{Project_Id}}/alarm-rules)

## Example Responses

**Status code: 200**

OK: The request is successful.

```

### 4.2.11 Modifying a Threshold Rule

#### Function

This API is used to modify a threshold rule.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

PUT /v2/{project\_id}/alarm-rules

**Table 4-289** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-290** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-291** Request body parameters

| Parameter         | Mandatory | Type             | Description   |
|-------------------|-----------|------------------|---|
| action_enabled    | No        | Boolean          | Whether to enable notification.   |
| alarm_actions     | No        | Array of strings | List of alarm notifications.  |
| alarm_advice      | No        | String           | Alarm clearance suggestion, which contains a maximum of 255 characters.<br>Minimum: <b>0</b><br>Maximum: <b>255</b>   |
| alarm_description | No        | String           | Threshold rule description, which contains a maximum of 1024 characters.<br>Minimum: <b>0</b><br>Maximum: <b>1024</b> |

| Parameter                 | Mandatory | Type                              | Description  |
|---------------------------|-----------|-----------------------------------|--|
| alarm_level               | Yes       | Integer                           | Alarm severity. Values: 1 (critical), 2 (major), 3 (minor), and 4 (warning).<br>Enumeration values: <ul style="list-style-type: none"><li>• 1</li><li>• 2</li><li>• 3</li><li>• 4</li></ul>  |
| alarm_rule_name           | Yes       | String                            | Threshold rule name. Enter a maximum of 100 characters and do not start or end with a special character. Only letters, digits, underscores (_), and hyphens (-) are allowed.   |
| comparison_operator       | Yes       | String                            | Comparison operator. Options: <: less than the threshold; >: greater than the threshold; <=: less than or equal to the threshold; >=: greater than or equal to the threshold.<br>Enumeration values: <ul style="list-style-type: none"><li>• &lt;</li><li>• &gt;</li><li>• &lt;=</li><li>• &gt;=</li></ul> |

| threshold | Yes       | String  | Threshold.   |
| unit      | Yes       | String  | Time series unit.  |

**Table 4-292 Dimension**

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| name      | Yes       | String | Dimension name.  |
| value     | Yes       | String | Dimension value. |

## Response Parameters

**Status code: 200**

**Table 4-293 Response body parameters**

| Parameter     | Type | Description        |
|---------------|------|--------------------|
| alarm_rule_id | Long | Threshold rule ID. |

**Status code: 400**

**Table 4-294** Response body parameters

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_code | String | Error code.  |
| error_msg  | String | Error message.   |
| error_type | String | Error type.  |
| trace_id   | String | Trace ID, which is used to search for logs and locate faults. If <b>2xx</b> is returned, <b>trace_id</b> is empty. If <b>4xx</b> , <b>trace_id</b> is not empty. |

## Example Requests

Modify a threshold rule whose name is **testaom**, alarm severity is **3**, metric name is **cpuCoreLimit**, and namespace is **PAAS.CONTAINER**.

```
https://{{Endpoint}}/v2/{{project_id}}/alarm-rules
{
    "action_enabled": false,
    "alarm_actions": [],
    "alarm_advice": "",
    "alarm_description": "",
    "alarm_level": 3,
    "alarm_rule_name": "aom_rule",
    "comparison_operator": ">=",
    "dimensions": [
        {
            "name": "appName",
            "value": "rhm-broker"
        }
    ],
    "evaluation_periods": 1,
    "insufficient_data_actions": [],
    "metric_name": "cpuCoreLimit",
    "namespace": "PAAS.CONTAINER",
    "ok_actions": [],
    "period": 60000,
    "statistic": "average",
    "threshold": 0,
    "unit": "Core"
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{
    "alarm_rule_id": 91307490000416600
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
    "error_code": "AOM.02002SVCSTG_AMS_4000101",
    "error_msg": "Invalid alarm name",
```

```
"error_type" : "BAD_REQUEST",
"trace_id" : ""
}
```

## Status Codes

| namespace                 | String                                     | Time series objects' namespace.          |
| ok_actions                | Array of strings                           | List of normal status notifications.     |
| period                    | Integer                                    | Statistical period.                      |
| policy_name               | String                                     | Threshold rule name.                     |
| resources                 | Array of strings                           | Resource information (discarded).        |
| state_reason              | String                                     | Cause description.                       |
| state_updated_timestamp   | String                                     | Time when the status was updated.        |
| state_value               | String                                     | Service status.                          |
| statistic                 | String                                     | Statistic.                               |
| threshold                 | String                                     | Threshold value.                         |
| type                      | String                                     | Threshold rule type.                     |
| unit                      | String                                     | Threshold unit.                          |

**Table 4-303** Dimension

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| name      | String | Dimension name.  |
| value     | String | Dimension value. |

**Status code: 400**

**Table 4-304** Response body parameters

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_code | String | Error code.  |
| error_msg  | String | Error message.   |
| error_type | String | Error type.  |
| trace_id   | String | Trace ID, which is used to search for logs and locate faults. If <b>2xx</b> is returned, <b>trace_id</b> is empty. If <b>4xx</b> , <b>trace_id</b> is not empty. |

## Example Requests

Obtain the details about the alarm rule whose ID is **alarm\_rule\_id**.

[https://{{Endpoint}}/v2/{{project\\_id}}/alarm-rules/{{alarm\\_rule\\_id}}](https://{{Endpoint}}/v2/{{project_id}}/alarm-rules/{{alarm_rule_id}})

## Example Responses

**Status code: 200**

OK: The request is successful.

See [Error Codes](#).

## 4.2.14 Deleting Threshold Rules in Batches

### Function

This API is used to delete threshold rules in batches.

## Calling Method

For details, see [Calling APIs](#).

## URI

POST /v2/{project\_id}/alarm-rules/delete

**Table 4-305** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-306** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-307** Request body parameters

| Parameter   | Mandatory | Type             | Description                     |
|-------------|-----------|------------------|---------------------------------|
| alarm_rules | Yes       | Array of strings | Name of the rule to be deleted. |

## Response Parameters

**Status code: 400**

**Table 4-308** Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| error_code | String | Error code. |

| Parameter  | Type   | Description  |
|------------|--------|--|
| error_msg  | String | Error message.   |
| error_type | String | Error type.  |
| trace_id   | String | Trace ID, which is used to search for logs and locate faults. If <b>2xx</b> is returned, <b>trace_id</b> is empty. If <b>4xx</b> , <b>trace_id</b> is not empty. |

## Example Requests

Delete threshold rules in batches by rule name.

```
https://{{Endpoint}}/v2/{{project_id}}/alarm-rules/delete
{
  "alarm_rules" : []
}
```

## Example Responses

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "error_code" : "AOM.02005115",
  "error_msg" : "Invalid request parameter",
  "error_type" : "BAD_REQUEST",
  "trace_id" : ""
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

See [Error Codes](#).

# 4.3 Prometheus Monitoring

## 4.3.1 Querying Expression Calculation Results in a Specified Period Using the GET Method

### Function

This API is used to query the calculation results of a PromQL expression in a specified period using the GET method.

### Calling Method

For details, see [Calling APIs](#).

### URI

GET /v1/{project\_id}/aom/api/v1/query\_range

**Table 4-309** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-310** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| query     | Yes       | String | PromQL expression. For details, see <a href="https://prometheus.io/docs/prometheus/latest/querying/basics/">https://prometheus.io/docs/prometheus/latest/querying/basics/</a> . |
| start     | Yes       | String | Start timestamp (Unix timestamp, in seconds).   |
| end       | Yes       | String | End timestamp (Unix timestamp, in seconds).   |

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| step      | Yes       | String | Query step (in seconds). The task is executed on the step basis within the specified period. |

## Request Parameters

**Table 4-311** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

## Response Parameters

**Status code: 200**

**Table 4-312** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| data      | Object | Response data.   |

**Status code: 400**

**Table 4-313** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 403**

**Table 4-314** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 422**

**Table 4-315** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 503**

**Table 4-316** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Query the calculation result of PromQL expression "up" every 15s in a specified period.

```
https://{{EndPoint}}/v1/{{project_id}}/aom/api/v1/query_range?  
query=up&start=1630124012&end=1630127612&step=15s
```

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
  "status" : "success",  
  "data" : {  
    "resultType" : "matrix",  
    "result" : [ {
```

```
    "metric" : {
      "__name__" : "up",
      "job" : "prometheus",
      "instance" : "localhost:9090"
    },
    "values" : [ [ 1.435781430781E9, "1" ], [ 1.435781445781E9, "1" ], [ 1.435781460781E9, "1" ] ]
  }, {
    "metric" : {
      "__name__" : "up",
      "job" : "node",
      "instance" : "localhost:9091"
    },
    "values" : [ [ 1.435781430781E9, "0" ], [ 1.435781445781E9, "0" ], [ 1.435781460781E9, "1" ] ]
  } ]
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "bad_param",
  "error" : "param is invalid."
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "auth",
  "error" : "auth project_id not pass."
}
```

### Status code: 422

Unprocessable: The expression cannot be executed.

```

  "error" : "expression can't be executed."
}
```

### Status code: 503

Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "timeout",
  "error" : "query timed out in query execution."
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 422         | Unprocessable: The expression cannot be executed.   |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.3.2 (Recommended) Querying Expression Calculation Results in a Specified Period Using the POST Method

#### Function

This API is used to query the calculation results of a PromQL expression in a specified period using the POST method.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v1/{project\_id}/aom/api/v1/query\_range

**Table 4-317** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-318** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| query     | Yes       | String | PromQL expression. For details, see <a href="https://prometheus.io/docs/prometheus/latest/querying/basics/">https://prometheus.io/docs/prometheus/latest/querying/basics/</a> . |
| start     | Yes       | String | Start timestamp (Unix timestamp, in seconds).   |
| end       | Yes       | String | End timestamp (Unix timestamp, in seconds).   |
| step      | Yes       | String | Query step (in seconds). The task is executed on the step basis within the specified period.  |

## Request Parameters

**Table 4-319** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

## Response Parameters

**Status code: 200**

**Table 4-320** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| data      | Object | Response data.   |

**Status code: 400**

**Table 4-321** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |

| Parameter | Type   | Description    |
|-----------|--------|----------------|
| errorType | String | Error type.    |
| error     | String | Error message. |

### Status code: 403

**Table 4-322** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

### Status code: 422

**Table 4-323** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

### Status code: 503

**Table 4-324** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Query the top N aom\_node\_status metrics on the step basis in a specified period.

```
https://{{EndPoint}}/v1/{{project_id}}/aom/api/v1/query_range?  
query=topk(2,aom_node_status)&start=1630386780&end=1630390380&step=15
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{  
    "status" : "success",  
    "data" : {  
        "resultType" : "matrix",  
        "result" : [ {  
            "metric" : {  
                "__name__" : "amm_node_status",  
                "clusterId" : "000000-0000-0000-0000-00000000",  
                "hostID" : "c9xxcb-2x6c-4h54-8fcf-f68xx85",  
                "nameSpace" : "default",  
                "nodeIP" : "1xx.1xx.0.1xx",  
                "nodeName" : "sis-xxn-amm"  
            },  
            "values" : [ [ 1630386780, "0" ], [ 1630388610, "0" ], [ 1630388625, "0" ] ]  
        }, {  
            "metric" : {  
                "__name__" : "amm_node_status",  
                "clusterId" : "00000000-0000-0000-0000-00000000",  
                "hostID" : "ec5xxxb-0xx8-4xxx-bxx-9ecxxf",

### 4.3.3 Querying the Expression Calculation Result at a Specified Time Point Using the GET Method

#### Function

This API is used to query the calculation result of a PromQL expression at a specified time point using the GET method.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

GET /v1/{project\_id}/aom/api/v1/query

**Table 4-325** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-326** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| query     | Yes       | String | PromQL expression. For details, see <a href="https://prometheus.io/docs/prometheus/latest/querying/basics/">https://prometheus.io/docs/prometheus/latest/querying/basics/</a> . |
| time      | No        | String | Timestamp specified for PromQL calculation (Unix timestamp, in seconds).  |

## Request Parameters

**Table 4-327** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

## Response Parameters

**Status code: 200**

**Table 4-328** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| data      | Object | Response data.   |

**Status code: 400**

**Table 4-329** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 403**

**Table 4-330** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 422**

**Table 4-331** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 503**

**Table 4-332** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Query the calculation result of expression "up" at time point "1630124012".

[https://{{EndPoint}}/v1/{{project\\_id}}/aom/api/v1/query?query=up&time=1630124012](https://{{EndPoint}}/v1/{{project_id}}/aom/api/v1/query?query=up&time=1630124012)

## Example Responses

### Status code: 200

OK: The request is successful.

```
{  
  "status" : "success",  
  "data" : {  
    "resultType" : "vector",  
    "result" : []  
  }  
}
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
  "status" : "error",  
  "errorType" : "bad_param",  
  "error" : "param is invalid."  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
  "status" : "error",  
  "errorType" : "auth",  
  "error" : "auth project_id not pass."  
}
```

### Status code: 422

Unprocessable: The expression cannot be executed.

```
{  
  "status" : "error",  
  "errorType" : "excution",  
  "error" : "expression can't be executed."  
}
```

### Status code: 503

Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.

```
{  
  "status" : "error",  
  "errorType" : "timeout",  
  "error" : "query timed out in query execution."  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 422         | Unprocessable: The expression cannot be executed.   |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.3.4 (Recommended) Querying Expression Calculation Results at a Specified Time Point Using the POST Method

#### Function

This API is used to query the calculation result of a PromQL expression at a specified time point using the POST method.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v1/{project\_id}/aom/api/v1/query

**Table 4-333** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-334** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| query     | Yes       | String | PromQL expression. For details, see <a href="https://prometheus.io/docs/prometheus/latest/querying/basics/">https://prometheus.io/docs/prometheus/latest/querying/basics/</a> . |
| time      | No        | String | Timestamp specified for PromQL calculation (Unix timestamp, in seconds).  |

## Request Parameters

**Table 4-335** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

## Response Parameters

**Status code: 200**

**Table 4-336** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| data      | Object | Response data.   |

**Status code: 400**

**Table 4-337** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 403**

**Table 4-338** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 422**

**Table 4-339** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 503**

**Table 4-340** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Query the top N aom\_node\_status metrics at time point "1630381536".

[https://EndPoint/v1/{project\\_id}/aom/api/v1/query?query=topk\(2,aom\\_node\\_status\)&time=1630381536](https://EndPoint/v1/{project_id}/aom/api/v1/query?query=topk(2,aom_node_status)&time=1630381536)

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
    "status" : "success",  
    "data" : {  
        "resultType" : "vector",  
        "result" : [ {  
            "metric" : {  
                "__name__" : "amm_node_status",  
                "value" : 100  
            }  
        }  
    }  
}
```

```
"clusterId" : "00000000-0000-0000-0000-00000000",
"hostID" : "g947xcxh-2xcxc-xxx-xxcd-f6xxx85",
"nameSpace" : "default",
"nodeIP" : "1x6.1xx.0.xxx",
"nodeName" : "sdxx-jxxgksi-axx"
},
"value" : [ 16303810036, "0" ]
}, {
"metric" : {
"__name__" : "amm_node_status",
"clusterId" : "00000000-0000-0000-0000-00000000",
"hostID" : "dc1xxxf7e-b095-4e77-bxx-914dhlxxbf7",
"nameSpace" : "default",
"nodeIP" : "1xx.1xx.0.xxx",
"nodeName" : "sds-jixxxsi-texxt"
},
"value" : [ 1630381536, "0" ]
} ]
```

### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "bad_param",
  "error" : "param is invalid."
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "auth",
  "error" : "auth project_id not pass."
}
```

### Status code: 422

Unprocessable: The expression cannot be executed.

```
{

  "errorType" : "excution",
  "error" : "expression can't be executed."
}
```

### Status code: 503

Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "timeout",
  "error" : "query timed out in query execution."
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 422         | Unprocessable: The expression cannot be executed.   |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.3.5 Querying Tag Values

#### Function

This API is used to query the values of a specified tag.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

GET /v1/{project\_id}/aom/api/v1/label/{label\_name}/values

**Table 4-341** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| label_name | Yes       | String | Tag to be queried.  |
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-342** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

## Response Parameters

**Status code: 200**

**Table 4-343** Response body parameters

| Parameter | Type             | Description      |
|-----------|------------------|------------------|
| status    | String           | Response status. |
| data      | Array of strings | Tag value.       |

**Status code: 400**

**Table 4-344** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 403**

**Table 4-345** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 422**

**Table 4-346** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

#### Status code: 503

**Table 4-347** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Query all values of the "job" tag.

[https://{{EndPoint}}/v1/{{project\\_id}}/aom/api/v1/label/job/values](https://{{EndPoint}}/v1/{{project_id}}/aom/api/v1/label/job/values)

## Example Responses

#### Status code: 200

OK: The request is successful.

```
{  
    "status" : "success",  
    "data" : [ "node", "prometheus" ]  
}
```

#### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "status" : "error",  
    "errorType" : "bad_param",  
    "error" : "param is invalid."  
}
```

#### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
    "status" : "error",  
}
```

```
    "errorType" : "auth",
    "error" : "auth project_id not pass."
}
```

### Status code: 422

Unprocessable: The expression cannot be executed.

```
{
  "status" : "error",
  "errorType" : "excution",
  "error" : "expression can't be executed."
}
```

### Status code: 503

Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.

```
{
  "status" : "error",
  "errorType" : "timeout",
  "error" : "query timed out in query execution."
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 422         | Unprocessable: The expression cannot be executed.   |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

### 4.3.6 Obtaining the Tag Name List Using the GET Method

#### Function

This API is used to obtain the tag name list using the GET method.

#### Calling Method

For details, see [Calling APIs](#).

## URI

GET /v1/{project\_id}/aom/api/v1/labels

**Table 4-348** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

## Request Parameters

**Table 4-349** Request header parameters

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| X-Auth-Token | Yes       | String | User token obtained from IAM. |

## Response Parameters

**Status code: 200**

**Table 4-350** Response body parameters

| Parameter | Type             | Description      |
|-----------|------------------|------------------|
| status    | String           | Response status. |
| data      | Array of strings | Tag value.       |

**Status code: 400**

**Table 4-351** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 403**

**Table 4-352** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 422**

**Table 4-353** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

**Status code: 503**

**Table 4-354** Response body parameters

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Return the tag name list.

[https://EndPoint/v1/{project\\_id}/aom/api/v1/labels](https://EndPoint/v1/{project_id}/aom/api/v1/labels)

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
    "status": "success",  
    "data": [ "__name__", "call", "code", "config", "dialer_name", "endpoint", "event", "goversion", "handler",  
    "instance", "slice", "version" ]  
}
```

**Status code: 400**

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
  "status" : "error",  
  "errorType" : "bad_param",  
  "error" : "param is invalid."  
}
```

### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{

| Parameter | Type   | Description      |
|-----------|--------|------------------|
| status    | String | Response status. |
| errorType | String | Error type.      |
| error     | String | Error message.   |

## Example Requests

Obtain the metadata.

[https://{}{EndPoint}/v1/{project\\_id}/aom/api/v1/metadata](https://{}{EndPoint}/v1/{project_id}/aom/api/v1/metadata)

## Example Responses

#### Status code: 200

OK: The request is successful.

```
{  
    "status" : "success",  
    "data" : {  
        "aggregator.openapi_v2_regeneration_count" : [ {  
            "type" : "counter",  
            "help" : "[ALPHA] Counter of OpenAPI v2 spec regeneration count broken down by causing APIService  
name and reason.",  
            "unit" : ""  
        } ]  
    }  
}
```

#### Status code: 400

Bad Request: The request is invalid. The client should not repeat the request without modifications.

```
{  
    "status" : "error",  
    "errorType" : "bad_param",  
    "error" : "param is invalid."  
}
```

#### Status code: 403

Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications.

```
{  
  "status" : "error",  
  "errorType" : "auth",  
  "error" : "auth project_id not pass."  
}
```

### Status code: 422

Unprocessable: The expression cannot be executed.

```
{  
  "status" : "error",  
  "errorType" : "excution",  
  "error" : "expression can't be executed."  
}

  "status" : "error",  
  "errorType" : "timeout",  
  "error" : "query timed out in query execution."  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 422         | Unprocessable: The expression cannot be executed.   |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## Error Codes

See [Error Codes](#).

## 4.4 Log

## 4.4.1 Querying Logs

### Function

This API is used to query logs by different dimensions, such as by cluster, IP address, or application. Pagination queries are supported.

### Calling Method

For details, see [Calling APIs](#).

### URI

POST /v1/{project\_id}/als/action

**Table 4-369** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-370** Query Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| type      | Yes       | String | Log API call mode. When the value is querylogs, this API is used to query logs. |

### Request Parameters

**Table 4-371** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.  |
| Content-Type | Yes       | String | Content type, which is application/json.<br>Enumeration values: <ul style="list-style-type: none"><li>• application/json</li></ul> |

**Table 4-372** Request body parameters

| Parameter     | Mandatory | Type             | Description   |
|---------------|-----------|------------------|---|
| category      | Yes       | String           | Log type. Values: app_log: application log. node_log: node log. custom_log: log in a custom path.   |
| endTime       | Yes       | Long             | End time of the query (UTC, in ms).   |
| hideSyslog    | No        | Integer          | Whether to hide system logs during log queries. 0: Hide system logs. 1: Show system logs.   |
| keyWord       | No        | String           | Keyword for search.<br>1. Exact search by keyword is supported. A keyword is between two adjacent delimiters.<br>2. Fuzzy search by keyword is supported. Example: RROR, ERRO?, ROR, ERR*, or ER*OR.<br>3. Exact search by phrase is supported. Example: Start to refresh alm Statistic.<br>4. Search using AND (&&) or OR (  ) is supported.<br>Example: query&&logs or query  logs. Note: Default delimiters: , ";"=()[] {}@&<>/:\n\t\r |
| lineNum       | No        | String           | Sequence number of the final log in the last query result. This parameter is not required for the first query, but is required for subsequent pagination queries.   |
| pageSize/size | No        | String           | Number of logs queried each time. Default value: 5000. Recommended value: 100. For the first query, pageSize is used. For subsequent pagination queries, size is used.  |
| searchKey     | Yes       | SearchKey object | Log filter criteria, which vary according to log sources.   |

| Parameter | Mandatory | Type    | Description  |
|-----------|-----------|---------|--|
| startTime | Yes       | Long    | Start time of the query (UTC, in ms).  |
| type      | No        | String  | Pagination query. This parameter is not required for the first query, but is required for subsequent pagination queries.   |
| isDesc    | No        | Boolean | Whether to query logs based on lineNum in ascending or descending order. true: lineNum in descending order (from the latest time to the earliest time) false: lineNum in ascending order (from the earliest time to the latest time) |

**Table 4-373** SearchKey

| Parameter | Mandatory | Type   | Description                                  |
|-----------|-----------|--------|--|
| appName   | No        | String | Application name.                            |
| clusterId | Yes       | String | CCE cluster ID.                              |
| hostIP    | No        | String | IP address of the VM where logs are located. |
| nameSpace | No        | String | CCE cluster namespace.                       |
| pathFile  | No        | String | Log file name.                               |
| podName   | No        | String | Container instance name.                     |

## Response Parameters

Status code: 200

**Table 4-374** Response body parameters

| Parameter    | Type   | Description  |
|--------------|--------|--|
| errorCode    | String | Response code. SVCSTG_AMS_2000000: Success response. |
| errorMessage | String | Response message.                                    |

| Parameter | Type   | Description   |
|-----------|--------|---|
| result    | String | Metadata, including results and the total number of returned records. |

**Status code: 400**

**Table 4-375** Response body parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

**Status code: 401**

**Table 4-376** Response body parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

**Status code: 403**

**Table 4-377** Response body parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

**Status code: 500**

**Table 4-378** Response body parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

### Status code: 503

**Table 4-379** Response body parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

## Example Requests

- Example 1: Query application logs under a cluster.

```
"POST https://{endpoint}/v1/{project_id}/als/action?type=querylogs"

{
    "category" : "app_log",
    "endTime" : 15389000003,
    "hideSyslog" : 0,
    "keyWord" : "",
    "searchKey" : {
        "clusterId" : "c69xxxc-5xxx-1xxx-8xxx5-02xxxxx40"
    },
    "startTime" : 15389000003
}
```

- Example 2: Perform pagination queries. Notes:

- For pagination queries, the `lineNum` (sequence number of the final log in the last query result), `type` (value: `next`), and `size` parameters need to be added.
- The values of `category`, `searchKey`, `keyWord`, `startTime`, and `endTime` must be the same as those in the first query.
- To implement another pagination query, change the value of `lineNum` to the sequence number of the final log in the last query result. The rest may be deduced by analogy.

```
/v1/{project_id}/als/action?type=querylogs
```

```
{
    "category" : "app_log",
    "searchKey" : {
        "clusterId" : "874xxx9a2-xxx-xxx-8xxe-02xxxxx3"
    },
    "keyWord" : "",
    "startTime" : 156946300095,
    "endTime" : 15694600008895,
    "lineNum" : "1569463900000047",
    "type" : "next",
    "size" : 100,
    "hideSyslog" : 0
}
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{
    "errorCode" : "SVCSTG.ALS.200.200",
```

```
"errorMessage" : "Query data success",
"result" : [ {
  "data" : [ {
    "appName" : "axxs0712",
    "category" : "apx",
    "clusterId" : "c6xxxx7c-54cd-11e8-8055-025xxx1e40",
    "collectTime" : 153900000983,
    "containerName" : "contsssnr-0",
    "hostIP" : "1xx.xxx.0.1xxx",
    "hostId" : "c11xxxxx11-0000b-4925-bef4-d0xxxx9b0",
    "hostName" : "1x2.168.0.xxx",
    "lineNum" : "1xxx23xxxxx2VW5xxxxx0ZWdlcg==",
    "logContent" : "warn:2018/10/09 06:57:01 helloworld.go:108: the main processis running now.",
    "logContentSize" : null,
    "loghash" : "4xxxxx0d40a83c17f262540xxxxxxxxfeaa30eb",
    "nameSpace" : "default",
    "pathFile" : "/xxx/xxx/xxx/xxx/xxx/xxx.trxe",
    "podName" : "axxx12-7xxf884-qxxwp",
    "serviceID" : ""
  }],
  "total" : 5000
} ]
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | OK: The request is successful.  |
| 400         | Bad Request: The request is invalid. The client should not repeat the request without modifications.  |
| 401         | Unauthorized: The authentication information is incorrect or invalid.   |
| 403         | Forbidden: The request is rejected. The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error: The server is able to receive the request but unable to understand the request.  |
| 503         | Service Unavailable: The requested service is invalid. The client should not repeat the request without modifications.  |

## 4.5 Prometheus Instance

### 4.5.1 Uninstalling a Hosted Prometheus Instance

#### Function

This API is used to uninstall a hosted Prometheus instance.

## Calling Method

For details, see [Calling APIs](#).

## URI

DELETE /v1/{project\_id}/aom/prometheus

**Table 4-380** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

**Table 4-381** Query Parameters

| Parameter | Mandatory | Type   | Description             |
|-----------|-----------|--------|-------------------------|
| prom_id   | Yes       | String | Prometheus instance ID. |

## Request Parameters

**Table 4-382** Request header parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| X-Auth-Token          | Yes       | String | User token obtained from IAM.   |
| Content-Type          | Yes       | String | Content type, which is application/json.  |
| Enterprise-Project-Id | No        | String | Enterprise project ID. <ul style="list-style-type: none"><li>• To query instances in an enterprise project, enter the enterprise project ID.</li><li>• To query instances in all enterprise projects, enter <b>all_granted_eps</b>.</li></ul> |

## Response Parameters

**Status code: 400**

**Table 4-383** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |
| error_type | String | Error type.    |
| trace_id   | String | Trace ID.      |

## Example Requests

Delete the Prometheus instance whose **prom\_id** is **08\*\*\*\*2a-8b-45-b1-d1\*\*\*\*\*79**.

```
https://{{Endpoint}}/v1/{{project_id}}/aom/prometheus?prom_id=08****2a-8**b-4**5-b**1-d1*****79
```

## Example Responses

### Status code: 200

OK: The request is successful.

```
{  
    "08****2a-8**b-4**5-b**1-d1*****79" : true  
}
```

### Status code: 400

No Prometheus instance is found.

```
{  
    "error_code" : "AOM.11017014",  
    "error_msg" : "prom instance not found",  
    "trace_id" : ""  
}
```

## Status Codes

## Response Parameters

**Status code: 200**

**Table 4-387** Response body parameters

| Parameter  | Type   | Description               |
|------------|--|---------------------------|
| prometheus | Array of <b>PromInstanceEpsModel</b> objects | Prometheus instance list. |

**Table 4-388** PromInstanceEpsModel

| Parameter | Type   | Description  |
|-----------|--------|--|
| prom_name | String | Prometheus instance name. Enter 1–100 characters and do not start or end with an underscore (_) or hyphen (-). Only letters, digits, underscores, and hyphens are allowed. |
| prom_id   | String | Prometheus instance ID.  |

| Parameter             | Type                                    | Description  |
|-----------------------|---|--|
| prom_type             | String                                  | Prometheus instance type ( <b>VPC</b> and <b>KUBERNETES</b> are not supported).<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>default</b></li><li>• <b>ECS</b></li><li>• <b>VPC</b></li><li>• <b>CCE</b></li><li>• <b>REMOTE_WRITE</b></li><li>• <b>KUBERNETES</b></li></ul> |
| prom_version          | String                                  | Prometheus instance version.   |
| prom_create_timestamp | Long                                    | Timestamp when the Prometheus instance is created.   |
| prom_update_timestamp | Long                                    | Timestamp when the Prometheus instance is updated.   |
| prom_status           | String                                  | Prometheus instance status.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>DELETED</b></li><li>• <b>NORMAL</b></li><li>• <b>ALL</b></li></ul>   |
| enterprise_project_id | String                                  | Enterprise project that the Prometheus instance belongs to.  |
| project_id            | String                                  | ID of the project that the Prometheus instance belongs to.   |
| is_deleted_tag        | Long                                    | Whether an instance has been deleted.  |
| deleted_time          | Long                                    | Deletion time.   |
| prom_spec_config      | <a href="#">PromConfig Model</a> object | Special configuration of the Prometheus instance.  |
| cce_spec_config       | String                                  | Special configuration of the Prometheus instance in the CCE scenario.  |

**Table 4-389** PromConfigModel

| Parameter        | Type   | Description                                      |
|------------------|--------|--|
| remote_write_url | String | Remote write address of the Prometheus instance. |
| remote_read_url  | String | Remote read address of the Prometheus instance.  |

| Parameter              | Type   | Description   |
|------------------------|--------|---|
| prom_http_api_endpoint | String | URL for calling the Prometheus instance.  |
| dashboard_id           | String | ID of the dashboard associated with the Prometheus instance (not used currently). |
| region_id              | String | Region that the Prometheus instance belongs to.                                   |

## Example Requests

- Query a Prometheus instance.  
[https://{{Endpoint}}/v1/{{project\\_id}}/aom/prometheus](https://{{Endpoint}}/v1/{{project_id}}/aom/prometheus)
- Query the Prometheus instance whose **prom\_id** is **08\*\*\*\*2a-8b-45-b1-d1\*\*\*\*\*79**.  
[https://{{Endpoint}}/v1/{{project\\_id}}/aom/prometheus?prom\\_id=08\\*\\*\\*\\*2a-8\\*\\*b-4\\*\\*5-b\\*\\*1-d1\\*\\*\\*\\*\\*79](https://{{Endpoint}}/v1/{{project_id}}/aom/prometheus?prom_id=08****2a-8**b-4**5-b**1-d1*****79)

## Example Responses

### Status code: 200

OK: The request is successful.

```

### 4.5.3 Adding a Prometheus Instance

#### Function

This API is used to add a Prometheus instance.

#### Calling Method

For details, see [Calling APIs](#).

#### URI

POST /v1/{project\_id}/aom/prometheus

**Table 4-390** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

#### Request Parameters

**Table 4-391** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token obtained from IAM.   |
| Content-Type | Yes       | String | Content type, which is application/json.  |
| region       | Yes       | String | Region to which the Prometheus instance belongs. Generally, it is the domain name or IP address of the server bearing the REST service endpoint. This parameter varies depending on the service and region. |

**Table 4-392** Request body parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| prom_name             | Yes       | String | Prometheus instance name.<br>Enter 1–100 characters and do not start or end with an underscore (_) or hyphen (-). Only letters, digits, underscores, and hyphens are allowed.   |
| prom_type             | Yes       | String | Prometheus instance type ( <b>VPC</b> and <b>KUBERNETES</b> are not supported).<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>ECS</b></li><li>• <b>VPC</b></li><li>• <b>CCE</b></li><li>• <b>REMOTE_WRITE</b></li><li>• <b>KUBERNETES</b></li></ul> |
| prom_version          | No        | String | Prometheus instance version.  |
| enterprise_project_id | No        | String | Enterprise project that the Prometheus instance belongs to.   |
| project_id            | No        | String | ID of the project that the Prometheus instance belongs to.  |

## Response Parameters

Status code: 200

**Table 4-393** Response body parameters

| Parameter  | Type   | Description               |
|------------|--|---------------------------|
| prometheus | Array of <b>PromInstanceEpsCreateModel</b> objects | Prometheus instance list. |

**Table 4-394** PromInstanceEpsCreateModel

| Parameter             | Type                                    | Description   |
|-----------------------|---|---|
| prom_name             | String                                  | Prometheus instance name. Enter 1–100 characters and do not start or end with an underscore (_) or hyphen (-). Only letters, digits, underscores, and hyphens are allowed.  |
| prom_id               | String                                  | Prometheus instance ID.   |
| prom_type             | String                                  | Prometheus instance type ( <b>VPC</b> and <b>KUBERNETES</b> are not supported).<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>ECS</b></li><li>• <b>VPC</b></li><li>• <b>CCE</b></li><li>• <b>REMOTE_WRITE</b></li><li>• <b>KUBERNETES</b></li></ul> |
| prom_version          | String                                  | Prometheus instance version.  |
| prom_create_timestamp | Long                                    | Timestamp when the Prometheus instance was created.   |
| prom_update_timestamp | Long                                    | Timestamp when the Prometheus instance was updated.   |
| prom_status           | String                                  | Prometheus instance status.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>DELETED</b></li><li>• <b>NORMAL</b></li><li>• <b>ALL</b></li></ul>  |
| enterprise_project_id | String                                  | Enterprise project that the Prometheus instance belongs to.   |
| project_id            | String                                  | ID of the project that the Prometheus instance belongs to.  |
| deleted_time          | Long                                    | Deletion time.  |
| prom_spec_config      | <a href="#">PromConfig Model</a> object | Special configuration of the Prometheus instance.   |
| cce_spec_config       | String                                  | Special configuration of the Prometheus instance in the CCE scenario.   |

**Table 4-395** PromConfigModel

| Parameter              | Type   | Description   |
|------------------------|--------|---|
| remote_write_url       | String | Remote write address of the Prometheus instance.                                  |
| remote_read_url        | String | Remote read address of the Prometheus instance.                                   |
| prom_http_api_endpoint | String | URL for calling the Prometheus instance.  |
| dashboard_id           | String | ID of the dashboard associated with the Prometheus instance (not used currently). |
| region_id              | String | Region that the Prometheus instance belongs to.                                   |

## Example Requests

Add a Prometheus instance for CCE.

```
https://{{Endpoint}}/v1/{{project_id}}/aom/prometheus
{
    "prom_type" : "CCE",
    "prom_name" : "aom_prometheus"
}
```

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{
    "prometheus" : [ {
        "deleted_time" : 0,
        "enterprise_project_id" : "0",
        "project_id" : "2a4***56cc***7f837***891***c1cf",
        "prom_create_timestamp" : 1691718171483,
        "prom_id" : "08****2a-8**b-4**5-b**1-d1*****79",
        "prom_name" : "aom_prometheus",
        "prom_spec_config" : {
            "prom_http_api_endpoint" : "aom-internal.cn-***-*.myhuaweicloud.com:***/v1/2a4***56cc***7f837***891***c1cf/08****2a-8**b-4**5-b**1-d1*****79",
            "remote_read_url" : "aom-internal.cn-***-*.myhuaweicloud.com:***/v1/2a4***56cc***7f837***891***c1cf/08****2a-8**b-4**5-b**1-d1*****79/api/v1/read",
            "remote_write_url" : "aom-internal.cn-***-*.myhuaweicloud.com:***/v1/2a4***56cc***7f837***891***c1cf/08****2a-8**b-4**5-b**1-d1*****79/push",
            "region_id" : "cn-***-*"
        },
        "prom_type" : "CCE",
        "prom_update_timestamp" : 1691718171483
    } ]
}
```

## Status Codes

| Status Code | Description                    |
|-------------|--------------------------------|
| 200         | OK: The request is successful. |

## Error Codes

See [Error Codes](#).

## 4.5.4 Creating a Recording Rule for a Prometheus Instance

### Function

This API is used to create a recording rule for a Prometheus instance.

### Calling Method

For details, see [Calling APIs](#).

### URI

POST /v1/{project\_id}/{prometheus\_instance}/aom/api/v1/rules

**Table 4-396** Path Parameters

| Parameter           | Mandatory | Type   | Description   |
|---------------------|-----------|--------|---|
| project_id          | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |
| prometheus_instance | Yes       | String | Prometheus instance ID.   |

### Request Parameters

**Table 4-397** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

**Table 4-398** Request body parameters

| Parameter      | Mandatory | Type   | Description     |
|----------------|-----------|--------|-----------------|
| recording_rule | Yes       | String | Recording rule. |

## Response Parameters

**Status code: 500**

**Table 4-399** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |
| error_type | String | Error type.    |
| trace_id   | String | Trace ID.      |

## Example Requests

Create a recording rule for a Prometheus instance.

```
https://{{Endpoint}}/v1/{{project_id}}/{{prometheus_instance}}/aom/api/v1/rules
{
  "recording_rule": "groups:\n    - name: apiserver_request_total\n      interval: 60s\n      rules:\n        -\n          record: job_instance_mode:apiserver_request_total:avg_rate5m\n            expr: avg by (job, instance, mode)\n            (rate(apiserver_request_total[5m]))\n            labels:\n              team: operations\n            -\n              record:\n                job:apiserver_request_total:sum_rate10m\n                  expr: sum by (job)(rate(apiserver_request_total[10m]))\n                  labels:\n                    team: operations"
}
```

## Example Responses

**Status code: 204**

OK: The request is successful.

""

**Status code: 500**

The recording rule already exists.

```
{
  "error_code": "AOM.5001019",
  "error_msg": "recording rule exist for the prometheus instance"
}
```

## Status Codes

| Status Code | Description                        |
|-------------|------------------------------------|
| 204         | OK: The request is successful.     |
| 500         | The recording rule already exists. |

## Error Codes

See [Error Codes](#).

## 4.5.5 Obtaining the Credential for Calling a Prometheus Instance

### Function

This API is used to obtain the credential for calling a Prometheus instance.

### Calling Method

For details, see [Calling APIs](#).

### URI

GET /v1/{project\_id}/access-code

**Table 4-400** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

### Request Parameters

**Table 4-401** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

## Response Parameters

**Status code: 200**

**Table 4-402** Response body parameters

| Parameter    | Type  | Description   |
|--------------|---|---------------|
| access_codes | Array of<br><a href="#">AccessCodeModel</a> objects | Access codes. |

**Table 4-403** AccessCodeModel

| Parameter      | Type   | Description     |
|----------------|--------|-----------------|
| access_code    | String | Access code.    |
| access_code_id | String | Access code ID. |
| create_at      | Long   | Creation time.  |
| status         | String | Status.         |

## Example Requests

Obtain the credential for calling a Prometheus instance.

[https://{{Endpoint}}/v1/{{project\\_id}}/access-code](https://{{Endpoint}}/v1/{{project_id}}/access-code)

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
    "access_codes": [  
        {  
            "access_code": "b***OOJpV***B4ciU*****NfR2f9xZ****tgpba****yQS66lh***a",  
            "access_code_id": "c6*04***ee6e****092****45**3",  
            "create_at": 1700796457506243016,  
            "status": "enable"  
        }  
    ]  
}
```

## Status Codes

| Status Code | Description                    |
|-------------|--------------------------------|
| 200         | OK: The request is successful. |

## Error Codes

See [Error Codes](#).

# 4.6 Configuration Management

## 4.6.1 Querying the Cloud Services for Which AOM 2.0 Has Been Granted Permissions

### Function

This API is used to query the cloud services for which AOM 2.0 has been granted permissions.

### Calling Method

For details, see [Calling APIs](#).

### URI

GET /v1/{project\_id}/aom/auth/grant

**Table 4-404** Path Parameters

| Parameter  | Mandatory | Type   | Description   |
|------------|-----------|--------|---|
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

### Request Parameters

**Table 4-405** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

### Response Parameters

None

## Example Requests

Query the cloud services for which AOM 2.0 has been granted permissions.

`https://{{Endpoint}}/v1/{{project_id}}/aom/auth/grant`

## Example Responses

**Status code: 200**

OK: The request is successful.

```
{  
    "CES": {  
        "role_name": [ "CES ReadOnlyAccess" ],  
        "status": true  
    },  
    "ECS": {  
        "role_name": [ "ECS CommonOperations", "ECS ReadOnlyAccess" ],  
        "status": true  
    },  
    "CCE": {  
        "role_name": [ "CCE FullAccess" ],  
        "status": true  
    },  
    "CCI": {  
        "role_name": [ "CCI FullAccess" ],  
        "status": true  
    },  
    "RMS": {  
        "role_name": [ "RMS ReadOnlyAccess" ],  
        "status": true  
    },  
    "LTS": {  
        "role_name": [ "LTS FullAccess" ],  
        "status": true  
    },  
    "DMS": {  
        "role_name": [ "DMS UserAccess" ],  
        "status": true  
    }  
}
```

## Status Codes

| Status Code | Description                    |
|-------------|--------------------------------|
| 200         | OK: The request is successful. |

## Error Codes

See [Error Codes](#).

## 4.6.2 Querying the ICAgent Installed on a Host

### Function

This API is used to query the ICAgent installed on a cluster host or a custom host.

## Calling Method

For details, see [Calling APIs](#).

## URI

GET /v1/{project\_id}/{cluster\_id}/{namespace}/agents

**Table 4-406** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| cluster_id | Yes       | String | <ul style="list-style-type: none"><li>Enter a cluster ID when a cluster host is queried.</li><li>Enter <b>APM</b> when a custom host is queried.</li></ul> |
| namespace  | Yes       | String | <ul style="list-style-type: none"><li>Enter a namespace when a cluster host is queried.</li><li>Enter <b>APM</b> when a custom host is queried.</li></ul>  |
| project_id | Yes       | String | Project ID obtained from IAM. Generally, a project ID contains 32 characters.  |

## Request Parameters

**Table 4-407** Request header parameters

| Parameter    | Mandatory | Type   | Description                              |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token obtained from IAM.            |
| Content-Type | Yes       | String | Content type, which is application/json. |

## Response Parameters

None

## Example Requests

Query the ICAgent installed on a host.

`https://{{Endpoint}}/v1/{{project_id}}/{{cluster_id}}/{{namespace}}/agents`

## Example Responses

**Status code: 200**

OK: The request is successful.

```
[ {

# 5 Historical APIs

## 5.1 Auto Scaling APIs (Offline Soon)

### 5.1.1 Creating a Policy

#### Function

This API is used to create a policy.

#### NOTICE

- The value must be 1 to 64 characters starting with a letter. Only digits, letters, underscores (\_), and hyphens (-) are allowed.
- In an AS group, for the same metric (**metric\_name**), the value of **metric\_threshold** with **metric\_operation** set to > must be greater than that with **metric\_operation** set to <.
- In an AS group, the **metric\_operation** for a metric must be unique.
- In a policy, the logic of **conditions** of metrics with the same **metric\_name** cannot conflict.
- The year in the trigger time (**launch\_time**) of a scheduled policy cannot be later than 2099.
- The year in the start time (**start\_time**) and end time (**end\_time**) of a periodic policy cannot be later than 2099.
- An AS group supports a maximum of 10 scheduled and periodic policies, and 10 alarm policies.
- In an AS group, alarm policies cannot affect each other.

#### URI

POST /v1/{project\_id}/pe/policy

## Request

### Request headers

[Table 5-1](#) describes the request headers.

**Table 5-1** Request headers

| Parameter       | Description   | Mandatory | Example                         |
|-----------------|---|-----------|---------------------------------|
| Deployment-Name | Application name.   | Yes       | -                               |
| Content-Type    | Content type,<br>which is<br><b>application/json; charset=utf-8</b> . | Yes       | application/json; charset=utf-8 |
| Cluster-Id      | Cluster ID.   | Yes       | -                               |
| Namespace       | Namespace.  | Yes       | -                               |
| X-Auth-Token    | User token obtained<br>from IAM.                                      | Yes       | -                               |
| Reserved-Info   | Custom parameter<br>of the product.                                   | No        | -                               |

### Request parameters

[Table 5-2](#) describes the request parameters.

**Table 5-2** Request parameters

| Parameter   | Mandatory | Type                            | Value Range   | Description          |
|-------------|-----------|---------------------------------|---|----------------------|
| name        | Yes       | String                          | The value must be<br>1 to 64 characters<br>starting with a<br>letter. Only digits,<br>letters,<br>underscores (_),<br>and hyphens (-)<br>are allowed. | Policy name.         |
| policy_type | Yes       | String                          | <ul style="list-style-type: none"><li>• SCHEDULED</li><li>• RECURRENCE</li><li>• ALARM</li></ul>  | Policy type.         |
| rule        | Yes       | See <a href="#">Table 5-3</a> . | -   | Policy trigger rule. |

**Table 5-3** rule parameters

| Parameter  | Mandatory | Type                            | Value Range                    | Description  |
|------------|-----------|---------------------------------|--------------------------------|--|
| conditions | Yes       | See <a href="#">Table 5-4</a> . | Only one condition is allowed. | Condition contents.<br>When multiple alarm policies are used, their conditions cannot overlap. Example: You cannot set a metric greater than 10% in one condition and smaller than 20% in another condition. |
| actions    | Yes       | See <a href="#">Table 5-5</a> . | Only one action is allowed.    | Action executed after a specified policy is successfully matched.  |

**Table 5-4** conditions parameters

| Parameter       | Mandatory | Type   | Value Range   | Description  |
|-----------------|-----------|--------|---|--|
| launch_time     | Yes       | String | -   | Trigger time, which must comply with ISO 8601 or UTC specifications. <ul style="list-style-type: none"> <li>• If the value of <b>policy_type</b> is <b>SCHEDULED</b>, the time format is <b>YYYY-MM-DDThh:mmZ</b>.</li> <li>• If the value of <b>policy_type</b> is <b>RECURRENCE</b>, the time format is <b>hh:mm</b>.</li> </ul> |
| recurrence_type | Yes       | String | Value: Daily, Weekly, or Monthly. <ul style="list-style-type: none"> <li>• Daily: Execution by day</li> <li>• Weekly: Execution by week</li> <li>• Monthly: Execution by month</li> </ul> | Trigger period.  |

| Parameter        | Mandatory | Type   | Value Range   | Description  |
|------------------|-----------|--------|---|--|
| recurrence_value | Yes       | String | <ul style="list-style-type: none"> <li>When the value of <b>recurrence_type</b> is <b>Daily</b>, the value of this parameter is <b>null</b>.</li> <li>When the value of <b>recurrence_type</b> is <b>Weekly</b>, this parameter indicates the <i>N</i>th day within a week. Its value ranges from 0 to 6. <b>0</b> indicates Sunday, <b>1</b> indicates Monday, and the same rule applies to other values. To select multiple values, separate them using commas (,). Example: 0,2,4, which indicates Sunday, Tuesday, and Thursday, respectively.</li> <li>When the value of <b>recurrence_type</b> is <b>Monthly</b>, this parameter indicates a day in a month. To select multiple values, separate them using commas (,). Example: 1,10,13,28.</li> </ul> | Number of tasks executed when a periodic policy is triggered.  |
| start_time       | Yes       | String | -   | Time when periodic policy execution starts, which must comply with ISO 8601 or UTC specifications.<br>Format: YYYY-MM-DDThh:mmZ. |

| Parameter          | Mandatory | Type    | Value Range  | Description  |
|--------------------|-----------|---------|--|--|
| end_time           | Yes       | String  | -  | Time when periodic policy execution stops, which must comply with ISO 8601 or UTC specifications. Format: YYYY-MM-DDThh:mmZ. |
| metric_namespace   | Yes       | String  | <ul style="list-style-type: none"> <li>PAAS.CONTAINER: application metric namespace.</li> <li>PAAS.CUSTOMMETRICS: custom metric namespace.</li> </ul>  | Namespace.   |
| metric_name        | Yes       | String  | The value must be 1 to 255 characters long and meet the [a-zA-Z_][a-zA-Z0-9_]* expression. That is, the value must start with a letter, underscore (_), or colon (:). Only letters, digits, underscores, and colons are allowed. | Metric name.   |
| metric_unit        | Yes       | String  | -  | Unit.  |
| period             | Yes       | Integer | 20, 60, 300, 900, 1800, or 3600  | Statistical period (unit: s).  |
| evaluation_periods | Yes       | Integer | 1, 2, 3, 4, or 5   | Number of consecutive periods.   |
| statistic          | Yes       | String  | Currently, only <b>average</b> is supported.   | Statistic.   |
| metric_operation   | Yes       | String  | > and <. For example, you can use > in a threshold criterion (when the value of a metric is greater than <b>metric_thresholdUpdate</b> ) to trigger actions.   | Metric operator.   |
| metric_threshold   | Yes       | Float   | [0, 2147483647]  | Threshold criterion.   |

The following describes the meaning of each field in the **conditions** parameter.

```
"conditions": [{"  
    "metric_namespace" : "PAAS.CONTAINER",  
    "metric_name" : "cpuUsage",  
    "metric_unit" : "Percent",  
    "period" : 300,  
    "evaluation_periods" : 2,  
    "statistic" : "average",  
    "metric_operation" : ">",  
    "metric_threshold" : 70  
}]
```

For **cpuUsage** (**metric\_name**) in **PAAS.CONTAINER** (**metric\_namespace**), when its **average** value (**statistic**) exceeds 70% (**metric\_threshold**) for two (**evaluation\_periods**) consecutive periods (with a duration of 300s), the policy is triggered.

**Table 5-5 actions parameters**

| Parameter  | Mandatory | Type                            | Value Range   | Description   |
|------------|-----------|---------------------------------|---|---|
| type       | Yes       | String                          | <ul style="list-style-type: none"> <li>• scale_out_k8s</li> <li>• scale_out_vm</li> <li>• scale_in_k8s</li> <li>• scale_in_vm</li> <li>• scale_set_k8s</li> <li>• scale_set_vm</li> </ul> | <ul style="list-style-type: none"> <li>• <b>scale_out_k8s</b> and <b>scale_out_vm</b> indicate a scale-out.</li> <li>• <b>scale_in_k8s</b> and <b>scale_in_vm</b> indicate a scale-in.</li> <li>• <b>scale_set_k8s</b> and <b>scale_set_vm</b> indicate the number of application instances.</li> </ul> <p><b>NOTE</b><br/>The value containing <b>k8s</b> indicates a container application and that containing <b>vm</b> indicates a process application.</p> |
| parameters | Yes       | See <a href="#">Table 5-6</a> . | -   | Number of scale-in or -out instances.   |

**Table 5-6** parameters

| Parameter  | Mandatory | Type    | Value Range   | Description                           |
|------------|-----------|---------|---|---------------------------------------|
| scale_unit | Yes       | Integer | Minimum number of instances to the maximum number of instances in a policy group. | Number of scale-in or -out instances. |

### Example request

- Example of a scheduled policy

```
{
  "name": "policy1",
  "policy_type": "SCHEDULED",
  "rule": {
    "conditions": [
      {
        "launch_time": "2017-03-04T03:37Z",
        "recurrence_type": null,
        "recurrence_value": null,
        "start_time": null,
        "end_time": null
      }
    ],
    "actions": [
      {
        "type": "scale_set_k8s",
        "parameters": {
          "scale_unit": 1
        }
      }
    ]
  }
}
```

- Example of a periodic policy

```
{
  "name": "policy_2",
  "policy_type": "RECURRANCE",
  "rule": {
    "conditions": [
      {
        "launch_time": "13:45",
        "recurrence_type": "Weekly",
        "recurrence_value": "0,1,4",
        "start_time": "2017-01-26T03:33Z",
        "end_time": "2099-01-31T03:33Z"
      }
    ],
    "actions": [
      {
        "type": "scale_set_k8s",
        "parameters": {
          "scale_unit": 1
        }
      }
    ]
  }
}
```

- Example of an alarm policy

```
{
  "name": "policy_1",
  "policy_type": "ALARM",
  "rule": {
```

```
"conditions" : [ {  
    "metric_namespace" : "PAAS.CONTAINER",  
    "metric_name" : "cpuUsage",  
    "metric_unit" : "Percent",  
    "period" : 60,  
    "evaluation_periods" : 1,  
    "statistic" : "average",  
    "metric_operation" : ">",  
    "metric_threshold" : 70  
},  
],  
"actions" : [ {  
    "type" : "scale_out_k8s",  
    "parameters" : {  
        "scale_unit" : 1  
    }  
}  
]  
}
```

## Response

### Response parameters

**Table 5-7** describes the response parameters.

**Table 5-7** Response parameters

| Parameter    | Type   | Description    |
|--------------|--------|----------------|
| errorCode    | String | Error code.    |
| errorMessage | String | Error details. |
| policy_id    | String | Policy ID.     |

### Example response

```
{  
    "errorCode": 0,  
    "errorMessage": "",  
    "policy_id": "1b9994f0-847a-45e4-aeee-e8b604dddb34"  
}
```

## Error Code

**Table 5-8** Error codes

| Error Code        | Message                          | Solution  |
|-------------------|----------------------------------|---|
| SVCSTG.PE.4001101 | Invalid parameter.               | Check whether the parameter meets requirements. |
| SVCSTG.PE.4031012 | Failed to verify the project ID. | Check whether the parameter meets requirements. |

| Error Code        | Message  | Solution                   |
|-------------------|--|----------------------------|
| SVCSTG.PE.5001201 | Failed to insert or update data in the background. | Contact technical support. |

## 5.1.2 Deleting a Policy

### Function

This API is used to delete a specified policy.

### URI

DELETE /v1/{project\_id}/pe/policy

### Request

#### Request headers

[Table 5-9](#) describes the request headers.

**Table 5-9** Request headers

| Parameter       | Description       | Mandatory | Example |
|-----------------|-------------------|-----------|---------|
| Deployment-Name | Application name. | Yes       | -       |
| Policy-Id       | Policy ID.        | Yes       | -       |

#### Request parameters

None

#### Example request

None

### Response

#### Response parameters

If a policy is successfully deleted, only **204** is returned. If a policy fails to be deleted, the response body containing error information is returned.

[Table 5-10](#) describes the response parameters.

**Table 5-10** Response parameters

| Parameter    | Type   | Description    |
|--------------|--------|----------------|
| errorCode    | String | Error code.    |
| errorMessage | String | Error details. |

**Example response**

None

## Error Code

**Table 5-11** Error codes

| Error Code        | Message                          | Solution  |
|-------------------|----------------------------------|---|
| SVCSTG.PE.4031012 | Failed to verify the project ID. | Check whether the parameter meets requirements. |
| SVCSTG.PE.5001205 | Failed to delete records.        | Contact technical support.                      |

## 5.1.3 Modifying a Policy

### Function

This API is used to modify a policy.

**NOTICE**

Alarm policies can be modified, but scheduled and periodic policies cannot.

### URI

PUT /v1/{project\_id}/pe/policy/{policy\_id}

[Table 5-12](#) describes the parameters.

**Table 5-12** Parameters

| Parameter  | Mandatory | Description |
|------------|-----------|-------------|
| project_id | Yes       | Project ID. |
| policy_id  | Yes       | Policy ID.  |

## Request

### Request headers

[Table 5-13](#) describes the request headers.

**Table 5-13** Request headers

| Parameter       | Description   | Mandatory | Example                         |
|-----------------|---|-----------|---------------------------------|
| Content-Type    | Content type, which is <b>application/json; charset=utf-8</b> . | Yes       | application/json; charset=utf-8 |
| Cluster-Id      | Cluster ID.   | Yes       | -                               |
| Namespace       | Namespace.  | Yes       | -                               |
| Deployment-Name | Application name.   | Yes       | -                               |

### Request parameters

[Table 5-14](#) describes the request parameters.

**Table 5-14** Request parameters

| Parameter   | Mandatory | Type                             | Value Range  | Description  |
|-------------|-----------|----------------------------------|--|--|
| id          | Yes       | String                           | -  | Policy ID.   |
| name        | Yes       | String                           | The value must be 1 to 64 characters starting with a letter. Only digits, letters, underscores (_), and hyphens (-) are allowed. | Policy name, which cannot be modified.                     |
| policy_type | Yes       | String                           | ALARM  | Policy type. Currently, only ALARM policies are supported. |
| rule        | Yes       | See <a href="#">Table 5-15</a> . | -  | Policy trigger rule.                                       |

**Table 5-15** rule parameters

| Parameter  | Mandatory | Type                             | Value Range | Description   |
|------------|-----------|----------------------------------|-------------|---|
| conditions | Yes       | See <a href="#">Table 5-16</a> . | 1–5         | Condition contents. A rule can contain multiple conditions in AND relationships. One condition describes the matching method of one metric. |
| actions    | Yes       | See <a href="#">Table 5-17</a> . | 1–5         | Action executed after a specified policy is successfully matched.   |

**Table 5-16** conditions parameters

| Parameter        | Mandatory | Type   | Value Range   | Description       |
|------------------|-----------|--------|---|-------------------|
| metric_namespace | Yes       | String | <ul style="list-style-type: none"> <li>• PAAS.CONTAINER: application metric namespace</li> <li>• PAAS.CUSTOMMETRICS: custom metric namespace</li> </ul> | Metric namespace. |

| Parameter          | Mandatory | Type    | Value Range  | Description   |
|--------------------|-----------|---------|--|---|
| metric_name        | Yes       | String  | The value must be 1 to 255 characters long and meet the [a-zA-Z_-][a-zA-Z0-9_-]* expression. That is, the value must start with a letter, underscore (_), or colon (:). Only letters, digits, underscores, and colons are allowed. | Metric name.  |
| metric_unit        | Yes       | String  | -  | Unit.<br><b>NOTE</b><br>The value is retrieved from an AMS API and varies with the metric name. |
| period             | Yes       | Integer | 20, 60, 300, 900, 1800, or 3600  | Statistical period (unit: s).   |
| evaluation_periods | Yes       | Integer | 1, 2, 3, 4, or 5   | Number of consecutive periods.  |
| statistic          | Yes       | String  | Currently, only <b>average</b> is supported.   | Statistic.  |

| Parameter        | Mandatory | Type   | Value Range  | Description          |
|------------------|-----------|--------|--|----------------------|
| metric_operation | Yes       | String | > and <. For example, you can use > in a threshold criterion (when the value of a metric is greater than <b>metric_thresholdUpdate</b> ) to trigger actions. | Metric operator.     |
| metric_threshold | Yes       | Float  | [0, 2147483647]  | Threshold criterion. |

**Table 5-17** actions parameters

| Parameter  | Mandatory | Type                             | Value Range  | Description   |
|------------|-----------|----------------------------------|--|---|
| type       | Yes       | String                           | <ul style="list-style-type: none"> <li>• scale_out_k8s</li> <li>• scale_out_vm</li> <li>• scale_in_k8s</li> <li>• scale_in_vm</li> </ul> | <ul style="list-style-type: none"> <li>• <b>scale_out_k8s</b> and <b>scale_out_vm</b> indicate a scale-out.</li> <li>• <b>scale_in_k8s</b> and <b>scale_in_vm</b> indicate a scale-in.</li> </ul> <p><b>NOTE</b><br/>The value containing <b>k8s</b> indicates a container application and that containing <b>vm</b> indicates a process application.</p> |
| parameters | Yes       | See <a href="#">Table 5-18</a> . | -  | Number of scale-in or -out instances.   |

**Table 5-18** parameters

| Parameter  | Mandatory | Type    | Value Range   | Description                           |
|------------|-----------|---------|---|---------------------------------------|
| scale_unit | Yes       | Integer | Minimum number of instances to the maximum number of instances in a policy group. | Number of scale-in or -out instances. |

### Example request

Example of an alarm policy

```
{
  "id" : "5c2eecea-32ac-42c0-be30-f73b15d68429",
  "name" : "policy_1",
  "policy_type" : "ALARM",
  "rule" : {
    "conditions" : [
      {
        "metric_namespace" : "PAAS.CONTAINER",
        "metric_name" : "cpuUsage",
        "metric_unit" : "Percent",
        "period" : 60,
        "evaluation_periods" : 1,
        "statistic" : "average",
        "metric_operation" : ">",
        "metric_threshold" : 70
      }
    ],
    "actions" : [
      {
        "type" : "scale_out_k8s",

| SVCSTG.PE.5001203 | Query error.                                       | Contact technical support.                      |
| SVCSTG.PE.5003007 | Failed to update the threshold rule.               | Contact technical support.                      |

## 5.1.4 Querying a Policy List

### Function

This API is used to query details about all policies of a specified project.

### URI

GET /v1/{project\_id}/pe/policy

[Table 5-21](#) describes the parameters.

**Table 5-21** Parameters

| Parameter  | Mandatory | Description |
|------------|-----------|-------------|
| project_id | Yes       | Project ID. |

### Request

#### Request headers

None

#### Request parameters

None

#### Example request

None

### Response

#### Response parameters

[Table 5-22](#) describes the response parameters.

**Table 5-22** Response parameters

| Parameter    | Type                             | Description                      |
|--------------|----------------------------------|----------------------------------|
| errorCode    | String                           | Error code.                      |
| errorMessage | String                           | Error details.                   |
| policy       | See <a href="#">Table 5-23</a> . | Details about a modified policy. |

**Table 5-23** policy parameters

| Parameter   | Type                             | Description          |
|-------------|----------------------------------|----------------------|
| id          | String                           | Policy ID.           |
| name        | String                           | Policy name.         |
| policy_type | String                           | Policy type.         |
| rule        | See <a href="#">Table 5-24</a> . | Policy trigger rule. |
| create_time | String                           | Creation time.       |
| update_time | String                           | Update time.         |
| status      | String                           | Status               |

**Table 5-24** rule parameters

| Parameter  | Type                             | Description   |
|------------|----------------------------------|---|
| name       | String                           | Policy name.  |
| conditions | See <a href="#">Table 5-25</a> . | Condition contents.   |
| actions    | See <a href="#">Table 5-26</a> . | Action executed after a specified policy is successfully matched. |

**Table 5-25** conditions parameters

| Parameter          | Type    | Description                    |
|--------------------|---------|--------------------------------|
| metric_namespace   | String  | Namespace.                     |
| metric_name        | String  | Metric name.                   |
| metric_unit        | String  | Unit.                          |
| period             | Integer | Statistical period (unit: s).  |
| evaluation_periods | Integer | Number of consecutive periods. |
| statistic          | String  | Statistic.                     |
| metric_operation   | String  | Metric operator.               |
| metric_threshold   | Float   | Threshold criterion.           |

**Table 5-26** actions parameters

| Parameter  | Type                             | Description  |
|------------|----------------------------------|--|
| type       | String                           | Scale-in or -out. The value containing <b>k8s</b> indicates a container application and that containing <b>vm</b> indicates a process application. |
| parameters | See <a href="#">Table 5-27</a> . | Number of scale-in or -out instances.  |

**Table 5-27** parameters

| Parameter  | Type    | Description                           |
|------------|---------|---------------------------------------|
| scale_unit | Integer | Number of scale-in or -out instances. |

## Error Code

**Table 5-28** Error codes

| Error Code        | Message                          | Solution  |
|-------------------|----------------------------------|---|
| SVCSTG.PE.4031012 | Failed to verify the project ID. | Check whether the parameter meets requirements. |
| SVCSTG.PE.5001203 | Query error.                     | Contact technical support.                      |

## 5.1.5 Querying a Policy

### Function

This API is used to query details about a policy of a specified project.

### URI

GET /v1/{project\_id}/pe/policy/{policy\_id}

**Table 5-29** describes the parameters.

**Table 5-29** Parameters

| Parameter  | Mandatory | Description |
|------------|-----------|-------------|
| project_id | Yes       | Project ID. |
| policy_id  | Yes       | Policy ID.  |

## Request

### Request headers

None

### Request parameters

None

### Example request

None

## Response

### Response parameters

[Table 5-30](#) describes the response parameters.

**Table 5-30** Response parameters

| Parameter    | Type                             | Description                      |
|--------------|----------------------------------|----------------------------------|
| errorCode    | String                           | Error code.                      |
| errorMessage | String                           | Error details.                   |
| policy       | See <a href="#">Table 5-31</a> . | Details about a modified policy. |

**Table 5-31** policy parameters

| Parameter   | Type                             | Description          |
|-------------|----------------------------------|----------------------|
| id          | String                           | Policy ID.           |
| name        | String                           | Policy name.         |
| policy_type | String                           | Policy type.         |
| rule        | See <a href="#">Table 5-32</a> . | Policy trigger rule. |
| create_time | String                           | Creation time.       |
| update_time | String                           | Update time.         |
| status      | String                           | Status.              |

**Table 5-32** rule parameters

| Parameter  | Type                             | Description   |
|------------|----------------------------------|---|
| name       | String                           | Policy name.  |
| conditions | See <a href="#">Table 5-33</a> . | Condition contents.   |
| actions    | See <a href="#">Table 5-34</a> . | Action executed after a specified policy is successfully matched. |

**Table 5-33** conditions parameters

| Parameter          | Type    | Description                    |
|--------------------|---------|--------------------------------|
| metric_namespace   | String  | Namespace.                     |
| metric_name        | String  | Metric name.                   |
| metric_unit        | String  | Unit.                          |
| period             | Integer | Statistical period (unit: s).  |
| evaluation_periods | Integer | Number of consecutive periods. |
| statistic          | String  | Statistic.                     |
| metric_operation   | String  | Metric operator.               |
| metric_threshold   | Float   | Threshold criterion.           |

**Table 5-34** actions parameters

| Parameter  | Type                             | Description  |
|------------|----------------------------------|--|
| type       | String                           | Scale-in or -out. The value containing <b>k8s</b> indicates a container application and that containing <b>vm</b> indicates a process application. |
| parameters | See <a href="#">Table 5-35</a> . | Number of scale-in or -out instances.  |

**Table 5-35** parameters

| Parameter  | Type    | Description                           |
|------------|---------|---------------------------------------|
| scale_unit | Integer | Number of scale-in or -out instances. |

### Example response

Table 5-36 Error codes

| Error Code        | Message                          | Solution  |
|-------------------|----------------------------------|---|
| SVCSTG.PE.4031012 | Failed to verify the project ID. | Check whether the parameter meets requirements. |
| SVCSTG.PE.5001203 | Query error.                     | Contact technical support.                      |

## 5.1.6 Modifying Policy Group Attributes

### Function

This API is used to modify policy group attributes.

### URI

PUT /v1/{project\_id}/pe/policy/config

[Table 5-37](#) describes the parameters.

**Table 5-37** Parameters

| Parameter  | Mandatory | Description |
|------------|-----------|-------------|
| project_id | Yes       | Project ID. |

## Request

### Request headers

[Table 5-38](#) describes the request headers.

**Table 5-38** Request headers

| Parameter       | Description       | Mandatory | Example  |
|-----------------|-------------------|-----------|--|
| ResourceType    | Resource type.    | Yes       | Default value: app, indicates modifying the policy group attributes of an application. |
| Cluster-Id      | Cluster ID.       | Yes       | -  |
| Namespace       | Namespace.        | Yes       | -  |
| Deployment-Name | Application name. | Yes       | -  |

### Request parameters

[Table 5-39](#) describes the request parameters.

**Table 5-39** Request parameters

| Parameter       | Type    | Description                  |
|-----------------|---------|------------------------------|
| max_instances   | Integer | Maximum number of instances. |
| min_instances   | Integer | Minimum number of instances. |
| cooldown_time   | Integer | Cooldown period (unit: s).   |
| deployment_name | String  | Microservice name.           |
| cluster_id      | String  | Cluster ID.                  |

| Parameter | Type   | Description |
|-----------|--------|-------------|
| namespace | String | Namespace.  |

### Example request

```
{  
    "max_instances": 100,//Maximum number of instances  
    "min_instances": 1,//Minimum number of instances  
    "cooldown_time": 60//Cooldown period, which is the execution interval between two policies.  
}
```

## Response

### Response parameters

**Table 5-40** describes the response parameters.

**Table 5-40** Response parameters

| Parameter    | Type   | Description    |
|--------------|--------|----------------|
| errorCode    | String | Error code.    |
| errorMessage | String | Error details. |

### Example response

```
{  
    "errorCode": "SVCSTG.PE.0",  
    "errorMessage": ""  
}
```

## Error Code

**Table 5-41** Error codes

| Error Code        | Message  | Solution  |
|-------------------|--|---|
| SVCSTG.PE.4001101 | Invalid parameter.                                 | Check whether the parameter meets requirements. |
| SVCSTG.PE.4031012 | Failed to verify the project ID.                   | Check whether the parameter meets requirements. |
| SVCSTG.PE.5001201 | Failed to insert or update data in the background. | Contact technical support.                      |
| SVCSTG.PE.5001203 | Query error.                                       | Contact technical support.                      |

## 5.1.7 Querying Policy Group Attributes

### Function

This API is used to query policy group attributes.

### URI

GET /v1/{project\_id}/pe/policy/config

[Table 5-42](#) describes the parameters.

**Table 5-42** Parameters

| Parameter  | Mandatory | Description |
|------------|-----------|-------------|
| project_id | Yes       | Project ID. |

### Request

#### Request headers

[Table 5-43](#) describes the request headers.

**Table 5-43** Request headers

| Parameter       | Description   | Mandatory | Example   |
|-----------------|---|-----------|---|
| ResourceType    | Resource type.  | Yes       | Default value: app, indicates querying the policy group attributes of an application. |
| Content-Type    | Content type, which is <b>application/json; charset=utf-8</b> . | Yes       | application/json; charset=utf-8   |
| Cluster-Id      | Cluster ID.   | Yes       | -   |
| Namespace       | Namespace.  | Yes       | -   |
| Deployment-Name | Application name.   | Yes       | -   |

### Response

#### Response parameters

**Table 5-44** describes the response parameters.

**Table 5-44** Response parameters

| Parameter    | Type                             | Description                     |
|--------------|----------------------------------|---------------------------------|
| errorCode    | String                           | Error code.                     |
| errorMessage | String                           | Error details.                  |
| config       | See <a href="#">Table 5-45</a> . | Set of policy group attributes. |

**Table 5-45** config parameters

| Parameter     | Type    | Description                     |
|---------------|---------|---------------------------------|
| id            | String  | ID of a policy group attribute. |
| max_instances | Integer | Maximum number of instances.    |
| min_instances | Integer | Minimum number of instances.    |
| cooldown_time | Integer | Cooldown period (unit: s).      |

### Example response

```
{  
    "errorCode": "SVCSTG.PE.0",  
    "errorMessage": "",  
    "config": {  
        "id": "f9c7f57e-b1dc-4ef0-a009-ff2848776803",  
        "max_instances": 100, //Maximum number of instances  
        "min_instances": 1, //Minimum number of instances  
        "cooldown_time": 60 //Cooldown period, which is the execution interval between two policies.  
    }  
}
```

## Error Code

**Table 5-46** Error codes

| Error Code        | Message                          | Solution  |
|-------------------|----------------------------------|---|
| SVCSTG.PE.4031012 | Failed to verify the project ID. | Check whether the parameter meets requirements. |
| SVCSTG.PE.5001203 | Query error.                     | Contact technical support.                      |

## 5.2 Common Monitoring APIs (Offline Soon)

### 5.2.1 Adding or Modifying One or More Application Discovery Rules (Offline Soon)

#### Function

This API is used to add or modify one or more application discovery rules. A maximum of 100 rules can be added to a project.

#### URI

PUT /v1/{project\_id}/inv/servicediscoveryrules

#### Request

##### Request parameters

[Table 5-47](#) describes the request parameter.

**Table 5-47** Request parameter

| Parameter | Mandatory | Type  | Value Range | Description                      |
|-----------|-----------|-------|-------------|----------------------------------|
| appRules  | No        | Array | -           | See <a href="#">Table 5-48</a> . |

**Table 5-48** appRules parameters

| Parameter | Mandatory | Type   | Value Range | Description   |
|-----------|-----------|--------|-------------|---|
| projectid | Yes       | String | -           | Project ID obtained from IAM. Generally, a project ID contains 32 characters. |

| Parameter  | Mandatory | Type    | Value Range  | Description  |
|------------|-----------|---------|--|--|
| id         | Yes       | String  | -  | Rule ID. When creating a discovery rule, leave this parameter blank. When modifying a discovery rule, enter a rule ID.                             |
| name       | Yes       | String  | The value can contain a maximum of 64 characters. It must start with a lowercase letter but cannot end with a hyphen (-). Only digits, lowercase letters, and hyphens are allowed. | Rule name.   |
| createTime | No        | String  | -  | Creation time. When creating a discovery rule, leave this parameter blank. When modifying a discovery rule, enter the returned <b>createTime</b> . |
| enable     | Yes       | Boolean | true or false  | Whether to enable a rule.  |
| hostid     | No        | Array   | -  | Host ID. Currently, this parameter is not used and can be left blank.  |

| Parameter | Mandatory | Type   | Value Range                | Description   |
|-----------|-----------|--------|----------------------------|---|
| eventName | Yes       | String | aom_inventor_y_rules_event | Rule event name. For application discovery, the value is fixed to <b>aom_inventor_y_rules_event</b> . |
| spec      | Yes       | Object | -                          | Rule details. See <a href="#">Table 5-49</a> .  |

**Table 5-49** spec parameters

| Parameter  | Mandatory | Type   | Value Range               | Description                       |
|------------|-----------|--------|---------------------------|-----------------------------------|
| detectLog  | Yes       | String | true or false             | Whether to enable log collection. |
| logFileFix | Yes       | Array  | <b>log, trace, or out</b> | Log file suffix.                  |

| Parameter     | Mandatory | Type  | Value Range  | Description   |
|---------------|-----------|-------|--|---|
| discoveryRule | Yes       | Array | <ul style="list-style-type: none"> <li>If the value of <b>checkType</b> is <b>cmdLine</b>, set the value of <b>checkMode</b> to <b>contain</b>. <b>checkContent</b> is in the format of <code>["xxx"]</code>, indicating that the process must contain the <b>xxx</b> parameter.</li> <li>If the value of <b>checkType</b> is <b>env</b>, set the value of <b>checkMode</b> to <b>contain</b>. <b>checkContent</b> is in the format of <code>["k1","v1"]</code>, indicating that the process must contain the environment variable whose name is <b>k1</b> and value is <b>v1</b>.</li> <li>If the value of</li> </ul> | Discovery rule. When it is an array consisting of multiple conditions, only the processes that meet all the conditions are filtered. See <a href="#">Table 5-50</a> . |

| Parameter | Mandatory | Type   | Value Range   | Description  |
|-----------|-----------|--------|---|--|
|           |           |        | <b>checkType</b> is <b>scope</b> , set the value of <b>checkMode</b> to <b>equals</b> . <b>checkContent</b> is in the format of <code>["hostId1", "hostId2"]</code> , indicating that the rule takes effect only on specified nodes. If no nodes are specified, the rule applies to all nodes of the project. |  |
| attrList  | No        | Array  | <b>cmdLine</b> or <b>env</b>  | Attribute list. Currently, this parameter is not used and can be left blank.   |
| isDetect  | Yes       | String | true or false   | Whether the scenario is a pre-check scenario. No rules will be saved in the pre-check scenario. This scenario is designed only to check rules before they are delivered. |

| Parameter     | Mandatory | Type    | Value Range                                     | Description   |
|---------------|-----------|---------|---|---|
| isDefaultRule | Yes       | String  | true or false                                   | Whether this rule will become the default rule.   |
| priority      | Yes       | Integer | An integer from 1 to 9999. Default value: 9999. | Rule priority.  |
| nameRule      | Yes       | Object  | -   | Naming requirements of the application discovery rule. See <a href="#">Table 5-51</a> .   |
| appType       | Yes       | String  | -   | Application type, which is used to categorize applications and is used only for rule classification and UI display. Enter any field. For example, enter <b>Java</b> or <b>Python</b> by technology stack, or enter <b>collector</b> or <b>database</b> by function. |

| Parameter   | Mandatory | Type  | Value Range   | Description   |
|-------------|-----------|-------|---|---|
| logPathRule | No        | Array | <ul style="list-style-type: none"><li>• If <b>cmdLineHash</b> is a fixed string, a log path or log file is specified. Otherwise, only the files whose names end with <b>.log</b> and <b>.trace</b> are collected.</li><li>• If the value of <b>nameType</b> is <b>cmdLineHash</b>, <b>args</b> is in the format of <b>["00001"]</b> and <b>value</b> is in the format of <b>["/xxx/xx.log"]</b>, indicating that the log path is <b>/xxx/xx.log</b> when the startup command is <b>00001</b>.</li></ul> | Log path configuration rule. See <a href="#">Table 5-54</a> . |

**Table 5-50** discoveryRule parameters

| Parameter | Mandatory | Type   | Value Range                                   | Description      |
|-----------|-----------|--------|---|------------------|
| checkType | Yes       | String | <b>cmdLine</b> , <b>env</b> , or <b>scope</b> | Match type.      |
| checkMode | Yes       | String | <b>contain</b> or <b>equals</b>               | Match condition. |

| Parameter    | Mandatory | Type  | Value Range | Description    |
|--------------|-----------|-------|-------------|----------------|
| checkContent | Yes       | Array | -           | Matched value. |

**Table 5-51** nameRule parameters

| Parameter   | Mandatory | Type  | Value Range  | Description  |
|-------------|-----------|-------|--|--|
| appNameRule | Yes       | Array | <ul style="list-style-type: none"><li>• If the value of <b>nameType</b> is <b>cmdLine</b>, <b>args</b> is in the format of <code>["start", "end"]</code>, indicating that the characters between <b>start</b> and <b>end</b> in the command are extracted.</li><li>• If the value of <b>nameType</b> is <b>cmdLine</b>, <b>args</b> is in the format of <code>["aa"]</code>, indicating that the environment variable named <b>aa</b> is extracted.</li><li>• If the value of <b>nameType</b> is <b>str</b>, <b>args</b> is in the format of <code>["fix"]</code>, indicating that the application name is suffixed with <b>fix</b>.</li></ul> | Application name rule. If there are multiple objects in an array, the character strings extracted from these objects constitute the application name. See <a href="#">Table 5-52</a> . |

| Parameter | Mandatory | Type | Value Range  | Description |
|-----------|-----------|------|--|-------------|
|           |           |      | <ul style="list-style-type: none"><li>If the value of <b>nameType</b> is <b>cmdLineHash, args</b> is in the format of <b>["0001"]</b> and <b>value</b> is in the format of <b>["ser"]</b>, indicating that the application name is <b>ser</b> when the startup command is <b>0001</b>.</li></ul> |             |

| Parameter           | Mandatory | Type  | Value Range   | Description   |
|---------------------|-----------|-------|---|---|
| applicationNameRule | Yes       | Array | <ul style="list-style-type: none"> <li>If the value of <b>nameType</b> is <b>cmdLine</b>, <b>args</b> is in the format of <code>["start", "end"]</code>, indicating that the characters between <b>start</b> and <b>end</b> in the command are extracted.</li> <li>If the value of <b>nameType</b> is <b>cmdLine</b>, <b>args</b> is in the format of <code>["aa"]</code>, indicating that the environment variable named <b>aa</b> is extracted.</li> <li>If the value of <b>nameType</b> is <b>str</b>, <b>args</b> is in the format of <code>["fix"]</code>, indicating that the application name is suffixed with <b>fix</b>.</li> <li>If the value of</li> </ul> | Application name rule. See <a href="#">Table 5-53</a> . |

| Parameter | Mandatory | Type | Value Range  | Description |
|-----------|-----------|------|--|-------------|
|           |           |      | <b>nameType</b><br>is<br><b>cmdLineHash</b> , <b>args</b><br>is in the<br>format of<br>["0001"]<br>and <b>value</b><br>is in the<br>format of<br>["ser"],<br>indicating<br>that the<br>application<br>name is<br><b>ser</b> when<br>the startup<br>command<br>is <b>0001</b> . |             |

**Table 5-52** appNameRule parameters

| Parameter | Mandatory | Type   | Value Range  | Description   |
|-----------|-----------|--------|--|---|
| nameType  | Yes       | String | <b>cmdLineHash</b> , <b>cmdLine</b> , <b>env</b> , or <b>str</b> | Value type.   |
| args      | Yes       | Array  | -  | Input value.  |
| value     | No        | Array  | -  | Application name, which is mandatory only when the value of <b>nameType</b> is <b>cmdLineHash</b> . |

**Table 5-53** applicationNameRule parameters

| Parameter | Mandatory | Type   | Value Range  | Description  |
|-----------|-----------|--------|--|--------------|
| nameType  | Yes       | String | <b>cmdLineHash</b> , <b>cmdLine</b> , <b>env</b> , or <b>str</b> | Value type.  |
| args      | Yes       | Array  | -  | Input value. |

| Parameter | Mandatory | Type  | Value Range | Description   |
|-----------|-----------|-------|-------------|---|
| value     | No        | Array | -           | Application name, which is mandatory only when the value of <b>nameType</b> is <b>cmdLineHash</b> . |

**Table 5-54** logPathRule parameters

| Parameter | Mandatory | Type   | Value Range | Description |
|-----------|-----------|--------|-------------|-------------|
| nameType  | Yes       | String | cmdLineHash | Value type. |
| args      | Yes       | Array  | -           | Command.    |
| value     | Yes       | Array  | -           | Log path.   |

### Request headers

[Table 5-55](#) describes the request headers.

**Table 5-55** Request headers

| Parameter    | Mandatory | Description                                      |
|--------------|-----------|--|
| X-Auth-Token | Yes       | User token obtained from IAM.                    |
| Content-Type | Yes       | Content type, which is <b>application/json</b> . |

### Example request

```
{
  "appRules": [
    {
      "id": "",
      "name": "bytest",
      "createTime": "",
      "projectId": "5a6036f48e954fc8d4d198cb28db311a",

        }
    ]
}
}
```

## Response

### Response parameters

**Table 5-56** describes the response parameters.

**Table 5-56** Response

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |

**Example response**

```
{  
    "errorCode": "SVCSTG.INV.2000000",  
    "errorMessage": ""  
}
```

**Status Code**

- Success response

[Table 5-57](#) describes the status code.

**Table 5-57** Status code

| Status Code | Message | Description                |
|-------------|---------|----------------------------|
| 200         | OK      | The request is successful. |

- Error response

[Table 5-58](#) describes the status codes. For more information, see [8.1 Status Codes](#).

**Table 5-58** Status codes

| Status Code | Message               | Description   |
|-------------|-----------------------|---|
| 400         | Bad Request           | Invalid request.<br>The client should not repeat the request without modifications.   |
| 401         | Unauthorized          | The authentication information is incorrect or invalid.   |
| 403         | Forbidden             | The request is rejected.<br>The server has received the request and understood it, but the server refuses to respond to it. The client should not repeat the request without modifications. |
| 500         | Internal Server Error | The server is able to receive the request but unable to understand the request.   |

| Status Code | Message             | Description  |
|-------------|---------------------|--|
| 503         | Service Unavailable | The requested service is invalid.<br>The client should not repeat the request without modifications. |

## Error Code

**Table 5-59** Error codes

| Error Code         | Error Message                                 | Solution                                    |
|--------------------|---|---|
| SVCSTG.INV.4030000 | Forbidden                                     | Use an authorized account.                  |
| SVCSTG.INV.4000115 | Invalid request parameter.                    | Check the parameter.                        |
| SVCSTG.INV.5000002 | The Elasticsearch execution is abnormal.      | Contact technical support.                  |
| SVCSTG.INV.5000003 | The call ICMGR is abnormal.                   | Contact technical support.                  |
| SVCSTG.INV.5000001 | The Elasticsearch session is null.            | Contact technical support.                  |
| SVCSTG.INV.5000006 | The apprule name already exists.              | Use another name.                           |
| SVCSTG.INV.5000007 | The maximum number of rules has been reached. | Delete unnecessary rules and add new rules. |

## 5.2.2 Querying Threshold Rules (Offline Soon)

### Function

This API is used to query a threshold rule list.

### URI

GET /v1/{project\_id}/ams/alarms

For details about the substitute of this API, see [Querying the Threshold Rule List](#).

### Request

#### Request parameters

**Table 5-60** describes the request parameters.

**Table 5-60** Request parameters

| Parameter  | Mandatory | Type    | Value Range | Description   |
|------------|-----------|---------|-------------|---|
| project_id | Yes       | String  | -           | Project ID applied from Identity and Access Management (IAM). Generally, it is a string containing 32 characters. |
| limit      | No        | Integer | (0,1000]    | Maximum number of returned records.<br>Value range: 1-1000. Default value: 1000.                                  |
| start      | No        | String  | -           | Pagination information.   |

### Request headers

**Table 5-61** describes the request headers.

**Table 5-61** Request headers

| Name         | Mandatory | Description                                      |
|--------------|-----------|--|
| X-Auth-Token | Yes       | User token obtained from IAM.                    |
| Content-Type | Yes       | Content type, which is <b>application/json</b> . |

## Response

### Response parameters

**Table 5-62** describes the response parameters.

**Table 5-62** Response parameters

| Parameter      | Type    | Description   |
|----------------|---------|---|
| errorCode      | String  | Response code.  |
| errorMessage   | String  | Response message.                                     |
| metaData       | Object  | Metadata, including pagination information.           |
| metaData.count | Integer | Number of returned records.                           |
| metaData.total | Integer | Total number of records.                              |
| metaData.start | String  | Start of the next page, which is used for pagination. |
| thresholds     | Array   | Threshold rule list.                                  |

### Example response

```
{  
    "errorCode": "SVCSTG.AMS.2000",  
    "errorMessage": "success",  
    "metaData": {  
        "count": 10,  
        "start": null,  
        "total": 100  
    },  
    "thresholds":  
    [  
        {  
            "id": "2137",  
            "alarmName": "aaaaaaaa",  
            "alarmDescription": "",  
            "actionEnabled": false,  
            "okActions": [],  
            "alarmActions": [],  
            "insufficientDataActions": [],  
            "stateValue": "alarm",  
            "stateReason": "",  
            "stateUpdatedTimestamp": null,  
            "metricName": "cpuCoreLimit",  
            "namespace": "PAAS.CONTAINER",  
            "statistic": "average",  
            "dimensions": [  
                {  
                    "name": "appName",  
                    "value": "rhm-broker"  
                }  
            ],  
            "period": 60000,  
            "evaluationPeriods": 1,  
            "unit": "Core",  
            "threshold": "0",  
            "comparisonOperator": ">=",  
            "alarmAdvice": "",  
            "alarmLevel": 3  
        }  
    ]  
}
```

## Status Code

- Success response

[Table 5-63](#) describes the status code.

**Table 5-63** Status code

| Status Code | Message | Description                |
|-------------|---------|----------------------------|
| 200         | OK      | The request has succeeded. |

- Error response

[Table 5-64](#) describes the status codes. For more information, see [8.1 Status Codes](#).

**Table 5-64** Status codes

| Status Code | Message             | Description   |
|-------------|---------------------|---|
| 400         | Bad Request         | The request is invalid.<br>The client should not repeat the request without modifications.  |
| 401         | Unauthorized        | The authorization information provided by the client is incorrect or invalid.   |
| 403         | Forbidden           | The request is rejected.<br>The server has received the request and understood it, but the server is refusing to respond to it. The client should not repeat the request without modifications. |
| 500         | InternalServerError | The server is able to receive the request but unable to understand the request.   |
| 503         | ServiceUnavailable  | The requested service is invalid.<br>The client should not repeat the request without modifications.  |

## Error Code

**Table 5-65** Error codes

| Error Code         | Message             | Solution  |
|--------------------|---------------------|---|
| SVCSTG_AMS_4000109 | Invalid project ID. | Check whether the parameter meets requirements. |

| Error Code         | Message                              | Solution  |
|--------------------|--------------------------------------|---|
| SVCSTG_AMS_4000110 | Invalid limit.                       | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000111 | Invalid start.                       | Check whether the parameter meets requirements. |
| SVCSTG_AMS_5030001 | The Cassandra session is null.       | Contact technical support.                      |
| SVCSTG_AMS_5030002 | The Cassandra execution is abnormal. | Contact technical support.                      |

## 5.2.3 Modifying a Threshold Rule (Offline Soon)

### Function

This API is used to modify a threshold rule.

### URI

PUT /v1/{project\_id}/ams/alarms

For details about the substitute of this API, see [Modifying a Threshold Rule](#).

### Request

#### Request parameters

[Table 5-66](#) describes the request parameters.

**Table 5-66** Request parameters

| Parameter  | Mandatory | Type   | Value Range                                     | Description   |
|------------|-----------|--------|---|---|
| project_id | Yes       | String | -   | Project ID applied from Identity and Access Management (IAM). Generally, it is a string containing 32 characters. |
| statistic  | Yes       | String | maximum, minimum, average, sum, or sampleCount. | Statistic.  |

| Parameter          | Mandatory | Type    | Value Range  | Description   |
|--------------------|-----------|---------|--|---|
| namespace          | Yes       | String  | -  | Namespace. The value of this parameter is saved in the backend when a threshold rule is added. It cannot be changed.        |
| metricName         | Yes       | String  | The value must be 1 to 255 characters long and meet the [a-zA-Z_][a-zA-Z0-9_]* expression. That is, the value must start with a letter, underscore (_), or colon (:). Only letters, digits, underscores, and colons are allowed. | Metric name. The value of this parameter is saved in the backend when a threshold rule is added. It cannot be changed.      |
| period             | Yes       | Integer | -  | Statistical period.   |
| alarmLevel         | Yes       | Integer | -  | Alarm severity.   |
| evaluationPeriods  | Yes       | Integer | -  | Number of consecutive periods.  |
| comparisonOperator | Yes       | String  | -  | Threshold criterion expression.   |
| threshold          | Yes       | String  | -  | Threshold.  |
| alarmName          | Yes       | String  | -  | Threshold name.   |
| dimensions         | Yes       | String  | -  | Metric dimension. The value of this parameter is saved in the backend when a threshold rule is added. It cannot be changed. |

| Parameter               | Mandatory | Type    | Value Range | Description  |
|-------------------------|-----------|---------|-------------|--|
| unit                    | Yes       | String  | -           | Metric unit. The value of this parameter is saved in the backend when a threshold rule is added. It cannot be changed. |
| actionEnabled           | No        | Boolean | -           | Whether to enable the alarm function.  |
| alarmActions            | No        | Array   | -           | Alarm action.  |
| alarmAdvice             | No        | String  | -           | Alarm suggestion, which is an empty string.  |
| alarmDescription        | No        | String  | -           | Threshold rule description.  |
| insufficientDataActions | No        | Array   | -           | Action to be taken when data is insufficient.  |
| okActions               | No        | Array   | -           | Recovery action.   |

### Request headers

**Table 5-67** describes the request headers.

**Table 5-67** Request headers

| Name         | Mandatory | Description                                      |
|--------------|-----------|--|
| X-Auth-Token | Yes       | User token obtained from IAM.                    |
| Content-Type | Yes       | Content type, which is <b>application/json</b> . |

### Example request

```
{
    "actionEnabled": false,
    "alarmActions": [],
    "alarmAdvice": "",
    "alarmDescription": "",
    "alarmLevel": 3,
    "alarmName": "aaaaaaaa",
    "comparisonOperator": ">=",
```

```
"dimensions": [
  {
    "name": "appName",
    "value": "rhm-broker"
  }
],
"evaluationPeriods": 1,
"insufficientDataActions": [],
"metricName": "cpuCoreLimit",
"namespace": "PAAS.CONTAINER",
"okActions": [],
"period": 60000,
"statistic": "average",
"threshold": 0,
"unit": "Core"
}
```

## Response

### Response parameters

[Table 5-68](#) describes the response parameters.

**Table 5-68** Response parameters

| Parameter    | Type    | Description          |
|--------------|---------|----------------------|
| errorCode    | String  | Response code.       |
| errorMessage | String  | Response message.    |
| alarmId      | Integer | Threshold rule code. |

### Example response

```
{
  "errorCode": "SVCSTG.AMS.2000",
  "errorMessage": "success",
  "alarmId": 12345678
}
```

## Status Code

- Success response

[Table 5-69](#) describes the status code.

**Table 5-69** Status code

| Status Code | Message | Description                |
|-------------|---------|----------------------------|
| 200         | OK      | The request has succeeded. |

- Error response

[Table 5-70](#) describes the status codes. For more information, see [8.1 Status Codes](#).

**Table 5-70** Status codes

| Status Code | Message             | Description   |
|-------------|---------------------|---|
| 400         | Bad Request         | The request is invalid.<br>The client should not repeat the request without modifications.  |
| 401         | Unauthorized        | The authorization information provided by the client is incorrect or invalid.   |
| 403         | Forbidden           | The request is rejected.<br>The server has received the request and understood it, but the server is refusing to respond to it. The client should not repeat the request without modifications. |
| 500         | InternalServerError | The server is able to receive the request but unable to understand the request.   |
| 503         | ServiceUnavailable  | The requested service is invalid.<br>The client should not repeat the request without modifications.  |

## Error Code

**Table 5-71** Error codes

| Error Code         | Message                                 | Solution  |
|--------------------|---|---|
| SVCSTG_AMS_4000101 | Invalid alarm name.                     | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000102 | The threshold rule name already exists. | Use another name.                               |
| SVCSTG_AMS_4000103 | Invalid alarm description.              | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000104 | Invalid alarm threshold.                | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000105 | Invalid alarm period.                   | Check whether the parameter meets requirements. |

| Error Code         | Message   | Solution  |
|--------------------|---|---|
| SVCSTG_AMS_4000106 | Invalid email list.                                     | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000107 | The maximum number of threshold rules has been reached. | Contact technical support to expand the capacity. |
| SVCSTG_AMS_4000108 | Invalid time range for alarm queries.                   | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000109 | Invalid project ID.                                     | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000115 | Invalid request parameter.                              | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000118 | Invalid number of consecutive periods.                  | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000119 | Invalid alarm statistic.                                | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000120 | Invalid alarm comparison operator.                      | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000121 | The alarm does not exist.                               | Check whether the threshold rule exists.          |
| SVCSTG_AMS_5000000 | Internal server error.                                  | Contact technical support.                        |

## 5.2.4 Adding a Threshold Rule (Offline Soon)

### Function

This API is used to add a threshold rule.

### URI

POST /v1/{project\_id}/ams/alarms

For details about the substitute of this API, see [Adding a Threshold Rule](#).

## Request

### Request parameters

**Table 5-72** describes the request parameters.

**Table 5-72** Request parameters

| Parameter          | Mandatory | Type    | Value Range  | Description   |
|--------------------|-----------|---------|--|---|
| project_id         | Yes       | String  | -  | Project ID applied from Identity and Access Management (IAM). Generally, it is a string containing 32 characters. |
| statistic          | Yes       | String  | maximum, minimum, average, sum, or sampleCount.  | Statistic.  |
| namespace          | Yes       | String  | -  | Namespace.  |
| metricName         | Yes       | String  | The value must be 1 to 255 characters long and meet the [a-zA-Z_][a-zA-Z0-9_]* expression. That is, the value must start with a letter, underscore (_), or colon (:). Only letters, digits, underscores, and colons are allowed. | Metric name.  |
| period             | Yes       | Integer | -  | Statistical period.   |
| alarmLevel         | Yes       | Integer | -  | Alarm severity.   |
| evaluationPeriods  | Yes       | Integer | -  | Number of consecutive periods.  |
| comparisonOperator | Yes       | String  | -  | Threshold criterion expression.   |

| Parameter               | Mandatory | Type    | Value Range | Description                                   |
|-------------------------|-----------|---------|-------------|---|
| threshold               | Yes       | String  | -           | Threshold.                                    |
| alarmName               | Yes       | String  | -           | Threshold name.                               |
| dimensions              | Yes       | String  | -           | Metric dimension.                             |
| unit                    | Yes       | String  | -           | Metric unit.                                  |
| actionEnabled           | No        | Boolean | -           | Whether to enable the alarm function.         |
| alarmActions            | No        | Array   | -           | Alarm action.                                 |
| alarmAdvice             | No        | String  | -           | Suggestion.                                   |
| alarmDescription        | No        | String  | -           | Threshold rule description.                   |
| insufficientDataActions | No        | Array   | -           | Action to be taken when data is insufficient. |
| okActions               | No        | Array   | -           | Recovery action.                              |

### Request headers

**Table 5-73** describes the request headers.

**Table 5-73** Request headers

| Name         | Mandatory | Description                                      |
|--------------|-----------|--|
| X-Auth-Token | Yes       | User token obtained from IAM.                    |
| Content-Type | Yes       | Content type, which is <b>application/json</b> . |

### Example request

```
{
  "actionEnabled": false,
  "alarmActions": [],
  "alarmAdvice": "",
  "alarmDescription": "",
  "alarmLevel": 3,
  "alarmName": "aaaaaaaa",
  "comparisonOperator": ">=",
  "dimensions": [
    {
      "name": "appName",
      "value": "rhm-broker"
    }
  ]
}
```

```
        },
        "evaluationPeriods": 1,
        "insufficientDataActions": [],
        "metricName": "cpuCoreLimit",
        "namespace": "PAAS.CONTAINER",
        "okActions": [],
        "period": 60000,
        "statistic": "average",
        "threshold": 0,
        "unit": "Core"
    }
```

## Response

### Response parameters

**Table 5-74** describes the response parameters.

**Table 5-74** Response parameters

| Parameter    | Type    | Description          |
|--------------|---------|----------------------|
| errorCode    | String  | Response code.       |
| errorMessage | String  | Response message.    |
| alarmId      | Integer | Threshold rule code. |

### Example response

```
{
    "errorCode": "SVCSTG.AMS.2000",
    "errorMessage": "success",
    "alarmId": 12345678
}
```

## Status Code

- Success response

**Table 5-75** describes the status code.

**Table 5-75** Status code

| Status Code | Message | Description                |
|-------------|---------|----------------------------|
| 200         | OK      | The request has succeeded. |

- Error response

**Table 5-76** describes the status codes. For more information, see [8.1 Status Codes](#).

**Table 5-76** Status codes

| Status Code | Message             | Description   |
|-------------|---------------------|---|
| 400         | Bad Request         | The request is invalid.<br>The client should not repeat the request without modifications.  |
| 401         | Unauthorized        | The authorization information provided by the client is incorrect or invalid.   |
| 403         | Forbidden           | The request is rejected.<br>The server has received the request and understood it, but the server is refusing to respond to it. The client should not repeat the request without modifications. |
| 500         | InternalServerError | The server is able to receive the request but unable to understand the request.   |
| 503         | ServiceUnavailable  | The requested service is invalid.<br>The client should not repeat the request without modifications.  |

## Error Code

**Table 5-77** Error codes

| Error Code         | Message                                 | Solution  |
|--------------------|---|---|
| SVCSTG_AMS_4000101 | Invalid alarm name.                     | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000102 | The threshold rule name already exists. | Use another name.                               |
| SVCSTG_AMS_4000103 | Invalid alarm description.              | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000104 | Invalid alarm threshold.                | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000105 | Invalid alarm period.                   | Check whether the parameter meets requirements. |

| Error Code         | Message   | Solution  |
|--------------------|---|---|
| SVCSTG_AMS_4000106 | Invalid email list.                                     | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000107 | The maximum number of threshold rules has been reached. | Contact technical support to expand the capacity. |
| SVCSTG_AMS_4000108 | Invalid time range for alarm queries.                   | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000109 | Invalid project ID.                                     | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000115 | Invalid request parameter.                              | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000118 | Invalid number of consecutive periods.                  | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000119 | Invalid alarm statistic.                                | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000120 | Invalid alarm comparison operator.                      | Check whether the parameter meets requirements.   |
| SVCSTG_AMS_4000121 | The alarm does not exist.                               | Check whether the threshold rule exists.          |
| SVCSTG_AMS_5000000 | Internal server error.                                  | Contact technical support.                        |

## 5.2.5 Querying Monitoring Data (Offline Soon)

### Function

This API is used to query monitoring data of metrics within a specified time period. You can specify a dimension or period to query data.

### URI

POST /v1/{project\_id}/ams/metricdata?fillValue=xx

For details about the substitute API, see [Querying Monitoring Data](#).

**Table 5-78** describes the parameters.

**Table 5-78** Parameters

| Parameter  | Mandatory | Type   | Value Range              | Description  |
|------------|-----------|--------|--------------------------|--|
| project_id | Yes       | String | -                        | Project ID applied from Identity and Access Management (IAM). Generally, it is a string containing 32 characters.  |
| fillValue  | No        | String | -1, 0, null, and average | Filled value for breakpoints in monitoring data. Default value: -1. <ul style="list-style-type: none"> <li>• -1: Breakpoints are filled with -1.</li> <li>• 0: Breakpoints are filled with 0.</li> <li>• null: Breakpoints are filled with null.</li> <li>• average: Breakpoints are filled with the average value of adjacent valid data. If there is no valid data, breakpoints are filled with null.</li> </ul> |

## Request

### Request parameters

**Table 5-79** describes the request parameters.

**Table 5-79** Request parameters

| Parameter | Mandatory | Type   | Value Range  | Description       |
|-----------|-----------|--------|--|-------------------|
| metrics   | Yes       | Array  | The JSON array can contain a maximum of 20 metrics.                | List of metrics.  |
| namespace | Yes       | String | PAAS.CONTAINER, PAAS.NODE, PAAS.SLA, PAAS.AGGR, and CUSTOMMETRICS. | Metric namespace. |

| Parameter  | Mandatory | Type    | Value Range   | Description  |
|------------|-----------|---------|---|--|
| metricName | Yes       | String  | 1–255 characters.   | Metric name.   |
| dimensions | Yes       | Array   | Neither the array, nor the name/value of any dimension in the array can be left blank.  | Metric dimension.<br>dimensions.name: dimension name. Example: appName.<br>dimensions.value: dimension value, such as a specific application name. |
| period     | Yes       | Integer | Enumerated value. Options:<br><ul style="list-style-type: none"> <li>• 60: The data monitoring granularity is 1 minute.</li> <li>• 300: The data monitoring granularity is 5 minutes.</li> <li>• 900: The data monitoring granularity is 15 minutes.</li> <li>• 3600: The data monitoring granularity is 1 hour.</li> </ul> | Data monitoring granularity.   |

| Parameter  | Mandatory | Type   | Value Range   | Description  |
|------------|-----------|--------|---|--|
| timerange  | Yes       | String | Format: start time (UTC, in ms).end time (UTC, in ms).number of minutes in the time period<br>When the start time and end time are -1, it indicates the latest $N$ minutes. $N$ indicates the time period by the granularity of minute. | Query time period. For example, <b>-1.-1.5</b> indicates the latest 5 minutes. <b>1501545600000</b> . <b>150163200000</b> . <b>0.1440</b> indicates the fixed time period from 08:00:00 on August 1, 2017 to 08:00:00 August 2, 2017.<br><b>NOTE</b><br>Time range/ period $\leq 1440$<br>During calculation, <b>timerange</b> and <b>period</b> must be in the same unit. |
| statistics | Yes       | Array  | maximum, minimum, sum, average, or sampleCount.   | Statistic.   |

## Request headers

[Table 5-80](#) describes the request headers.

**Table 5-80** Request headers

| Name         | Mandatory | Description                                      |
|--------------|-----------|--|
| X-Auth-Token | Yes       | User token obtained from IAM.                    |
| Content-Type | Yes       | Content type, which is <b>application/json</b> . |

## Example request

```
{
  "metrics": [
    {
      "namespace": "abc",
      "metricName": "def",
      "dimensions": [
        {
          "name": "instance_id",

```

```
        "value": "demo1"
    }
}
],
"period": 60,
"timerange": "-1.-1.5",//Last 5 minutes
"statistics": [
    "maximum",
    "minimum",
    "min",
    "sum"
]
}
```

## Response

### Response parameters

**Table 5-81** describes the response parameters.

**Table 5-81** Response parameters

| Parameter    | Type   | Description       |
|--------------|--------|-------------------|
| errorCode    | String | Response code.    |
| errorMessage | String | Response message. |
| metrics      | Object | -                 |

### Example response

```
{
    "errorCode": "SVCSTG.AMS.2000",
    "errorMessage": "success",
    "metrics": [
        {
            "metric": {
                "namespace": "abc",
                "metricName": "def",
                "dimensions": [
                    {
                        "name": "ghi",
                        "value": "lmn"
                    }
                ],
                "dataPoints": [
                    {
                        "timestamp": 1467892800000,
                        "unit": "Percent",
                        "statistics": [
                            {
                                "statistic": "maximum",
                                "value": 23
                            }
                        ]
                    }
                ]
            }
        }
    ]
}
```

## Status Code

- Success response

**Table 5-82** describes the status code.

**Table 5-82** Status code

| Status Code | Message | Description                |
|-------------|---------|----------------------------|
| 200         | OK      | The request has succeeded. |

- Error response

**Table 5-83** describes the status codes. For more information, see [8.1 Status Codes](#).

**Table 5-83** Status codes

| Status Code | Message             | Description   |
|-------------|---------------------|---|
| 400         | Bad Request         | The request is invalid.<br>The client should not repeat the request without modifications.  |
| 401         | Unauthorized        | The authorization information provided by the client is incorrect or invalid.   |
| 403         | Forbidden           | The request is rejected.<br>The server has received the request and understood it, but the server is refusing to respond to it. The client should not repeat the request without modifications. |
| 500         | InternalServerError | The server is able to receive the request but unable to understand the request.   |
| 503         | ServiceUnavailable  | The requested service is invalid.<br>The client should not repeat the request without modifications.  |

## Error Code

**Table 5-84** Error codes

| Error Code         | Message                            | Solution  |
|--------------------|------------------------------------|---|
| SVCSTG_AMS_4000101 | Projectid is left blank.           | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000102 | The metric data parameter is null. | Check whether the parameter meets requirements. |

| Error Code         | Message   | Solution  |
|--------------------|---|---|
| SVCSTG_AMS_4000103 | Invalid period.   | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000104 | Invalid statistics.                                     | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000105 | Invalid metrics.  | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000106 | Invalid time range.                                     | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000107 | The number of data points in a time range exceeds 1440. | Check whether the parameter meets requirements. |
| SVCSTG_AMS_4000110 | Invalid fillValue.                                      | Check whether the parameter meets requirements. |
| SVCSTG_AMS_5000000 | Internal server error.                                  | Contact technical support.                      |

# 6 Examples

## 6.1 Querying Time Series Objects

### Scenario

[Host Metrics - Dimension](#) This section describes how to query time series objects about a node's CPU usage.

### Obtaining Basic Information

Before querying time series objects, obtain the value of the node ID from **dimensions** on the ECS console, and the value of the cluster ID from **dimensions** on the cluster management page of the CCE console.

For **metric\_name** of CPU usage, see [Host Metrics](#). For the **name** corresponding to the cluster ID or node ID, see [Host Metrics - Dimension](#). For the namespace, see [Table 4 QuerySeriesOptionParam](#).

### Querying Time Series Objects

- URI format

[POST /v2/{project\\_id}/series](#)

- Example request

POST https://[aom\_endpoint]/v2/{project\_id}/series

To obtain the value of *{aom\_endpoint}*, see [Regions and Endpoints](#).

Body:

```
{
  "series": [
    {
      "namespace": "PAAS.NODE",
      "metric_name": "aom_node_cpu_usage",
      "dimensions": [
        {
          "name": "clusterId",
          "value": "4fae3587-0202-11eb-9ba9-0255ac100b02"
        },
        {
          "name": "hostID",
          "value": "4100f512-c4e9-4b65-b0dd-2b94ea5e1a84"
        }
      ]
    }
  ]
}
```

- Example response
- ```
{  
    "meta_data": {  
        "count": 0,  
        "offset": 0,  
        "total": 1,  
        "nextToken": 9007148492074133276  
    },  
    "series": [  
        {  
            "namespace": "PAAS.NODE",  
            "metric_name": "cpuUsage",  
            "unit": "Percent",  
            "dimensions": [  
                {  
                    "name": "clusterId",  
                    "value": "4fae3587-0202-11eb-9ba9-0255ac100b02"  
                },  
                {  
                    "name": "clusterName",  
                    "value": "testdiskrate"  
                },  
                {  
                    "name": "hostID",  
                    "value": "4100f512-c4e9-4b65-b0dd-2b94ea5e1a84"  
                },  
                {  
                    "name": "nameSpace",  
                    "value": "default"  
                },  
                {  
                    "name": "nodeIP",  
                    "value": "192.168.0.123"  
                },  
                {  
                    "name": "nodeName",  
                    "value": "192.168.0.123"  
                }]  
            ]  
        }  
    ]  
}
```

## 6.2 Querying Time Series Data

### Scenario

This section describes how to query the time series data about a node's CPU usage.

### Obtaining Basic Information

Before querying time series data, obtain the value of the node ID from **dimensions** on the ECS console, and the value of the cluster ID from **dimensions** on the cluster management page of the CCE console.

Some metrics may be renamed due to format standardization. For the input parameter **metric\_name** for CPU usage used in this scenario, see the **metric\_name** (not renamed) returned when you call the API for [querying time series objects](#) (to call this API, set the input parameter **metric\_name** to the name queried in [Host Metrics](#)). In this example, the name is **aom\_node\_cpu\_usage**

(renamed)). For the **name** corresponding to the cluster ID or node ID, see [Host Metrics - Dimension](#). For the namespace, see [Table 4 QuerySeriesOptionParam](#).

## Querying Time Series Data

- URI format

**POST /v2/{project\_id}/samples**

- Example request

**POST https://{aom\_endpoint}/v2/{project\_id}/samples**

To obtain the value of *{aom\_endpoint}*, see [Regions and Endpoints..](#)

Body:

```
{
  "samples": [
    {
      "namespace": "PAAS.NODE",
      "metric_name": "cpuUsage",
      "dimensions": [
        {
          "name": "clusterId",
          "value": "4fae3587-0202-11eb-9ba9-0255ac100b02"
        },
        {
          "name": "hostID",
          "value": "4100f512-c4e9-4b65-b0dd-2b94ea5e1a84"
        }
      ]
    },
    "period": 60,
    "time_range": "-1.-1.2",
    "statistics": [
      "maximum",
      "minimum",
      "sum"
    ]
  ]
}
```

- Example response

```
{
  "samples": [
    {
      "sample": {
        "namespace": "PAAS.NODE",
        "metric_name": "cpuUsage",
        "dimensions": [
          {
            "name": "clusterId",
            "value": "4fae3587-0202-11eb-9ba9-0255ac100b02"
          },
          {
            "name": "hostID",
            "value": "4100f512-c4e9-4b65-b0dd-2b94ea5e1a84"
          }
        ],

            "statistics": [
              {
                "statistic": "maximum",
                "value": 14.5
              },
              {
                "statistic": "minimum",
                "value": 14.5
              },
              {
                "statistic": "sum",
                "value": 14.5
              }
            ]
          }
        ]
      }
    }
  ]
}
```

```
        }]
    },
    {
        "timestamp": 1608191940000,
        "unit": "Percent",
        "statistics": [
            {
                "statistic": "maximum",
                "value": 12.0
            },
            {
                "statistic": "minimum",
                "value": 12.0
            },
            {
                "statistic": "sum",
                "value": 12.0
            }
        ]
    }
}
```

## 6.3 Querying Details About a Specified Alarm Action Rule

### Scenario

This section describes how to query an alarm action rule by name.

### Obtaining Basic Information

Before querying the details about an alarm action rule, obtain its rule name first. You can call the API for obtaining the alarm action rule list or go to the AOM 2.0 console to obtain the rule name.

### Querying Details About a Specified Alarm Action Rule

- URI format  
URI format: GET /v2/{project\_id}/alert/action-rules/{rule\_name}
- Example request  
GET https://{Endpoint}/v2/{project\_id}/alert/action-rules/{rule\_name}  
You can obtain the value of {aom\_endpoint} from [Regions and Endpoints](#).
- Example response

```
{
    "create_time": 1665991889597,
    "notification_template": "aom.built-in.template.zh",
    "project_id": "xxxxxxxxxxxxxxxxxxxxxx",
    "rule_name": "1112222",
    "smn_topics": [
        {
            "display_name": "",
            "name": "gxxxxxt",
            "push_policy": 0,
            "status": 0,
            "topic_urn": "urn:smn:xxxx:xxxxxxxxxxxxxxxxxxxxf:gxxxxxt"
        }
    ],
    "time_zone": "xx/XXX",
    "type": "1",
    "update_time": 1665991889597,
```

```
        "user_name": "kxxxxxxxxt"  
    }
```

# 7

# Permissions Policies and Supported Actions

## 7.1 Introduction

You can use Identity and Access Management (IAM) for fine-grained permissions management of your AOM. If your account does not need individual IAM users, you can skip this topic.

By default, new IAM users do not have any permissions assigned. You need to add a user to one or more groups, and assign permissions policies or roles to these groups. The user then inherits permissions from the groups it is a member of. This process is called authorization. After authorization, the user can perform specified operations on AOM.

You can grant users permissions by using roles and policies. Roles are provided by IAM to define service-based permissions that match users' job responsibilities. Policies define API-based permissions for operations on specific resources under certain conditions, allowing for more fine-grained, secure access control of cloud resources.

### NOTE

If you want to allow or deny the access to an API, use policy-based authorization.

Your account has all the permissions required to call all APIs, but IAM users under your account must be assigned the required permissions. The required permissions are determined by the actions supported by the API. Only users with the policies allowing for those actions can call the API successfully. For example, if an IAM user wants to query metrics using an API, the user must have been granted permissions that allow the **aom:metric:get** action.

## Supported Actions

AOM provides system-defined policies that can be directly used in IAM. You can also create custom policies to supplement system-defined policies for more refined access control. Operations supported by policies are specific to APIs. The following are common concepts related to policies:

- Permissions: actions defined in custom policies.

- APIs: REST APIs that can be called by a user who has been granted specific permissions.
- Actions: specific operations that are allowed or denied in a custom policy.
- IAM projects/Enterprise projects: the authorization scope of a custom policy. A custom policy can be applied to IAM projects or enterprise projects or both. Policies that contain actions for both IAM and enterprise projects can be used and applied for both IAM and Enterprise Management. Policies that contain actions only for IAM projects can be used and applied to IAM only. Administrators can check whether an action supports IAM projects or enterprise projects in the action list. For details about the differences between IAM and enterprise management, see [What Are the Differences Between IAM and Enterprise Management?](#)

AOM supports the following actions that can be defined in custom policies:

- [7.2.1 Alarm APIs](#): includes the actions supported by alarm APIs, such as the API for querying alarms.
- [7.2.2 Monitoring APIs](#): includes the actions supported by monitoring APIs, such as the API for querying metrics.
- [7.2.3 Prometheus Monitoring APIs](#): includes the actions supported by Prometheus monitoring APIs, such as the API for querying the expression calculation result in a specified period.
- [7.2.4 Log APIs](#): includes the actions supported by log APIs, such as the API for querying logs.

## 7.2 Actions Supported by Policy-based Authorization

### 7.2.1 Alarm APIs

✓: supported; x: not supported

**Table 7-1** Alarm APIs

| Permission                         | API                                    | Action                     | IAM Project | Enterprise Project |
|------------------------------------|----------------------------------------|----------------------------|-------------|--------------------|
| Adding an event alarm rule         | POST /v2/{project_id}/event2alarm-rule | aom:event2AlarmRule:create | ✓           | x                  |
| Querying the event alarm rule list | GET /v2/{project_id}/event2alarm-rule  | aom:event2AlarmRule:list   | ✓           | x                  |

| Permission                            | API                                                 | Action                     | IAM Project | Enterprise Project |
|---------------------------------------|-----------------------------------------------------|----------------------------|-------------|--------------------|
| Modifying an event alarm rule         | PUT /v2/{project_id}/event2alarm-rule               | aom:event2AlarmRule:set    | ✓           | ✗                  |
| Deleting an event alarm rule          | DELETE /v2/{project_id}/event2alarm-rule            | aom:event2AlarmRule:delete | ✓           | ✗                  |
| Obtaining the sent alarm content      | GET /v2/{project_id}/alarm-notified-histories       | aom:alarm:list             | ✓           | ✗                  |
| Querying an alarm action rule by name | GET /v2/{project_id}/alert/action-rules/{rule_name} | aom:actionRule:get         | ✓           | ✓                  |
| Adding an alarm action rule           | POST /v2/{project_id}/alert/action-rules            | aom:actionRule:create      | ✓           | ✓                  |
| Deleting an alarm action rule         | DELETE /v2/{project_id}/alert/action-rules          | aom:actionRule:delete      | ✓           | ✓                  |
| Modifying an alarm action rule        | PUT /v2/{project_id}/alert/action-rules             | aom:actionRule:update      | ✓           | ✓                  |
| Querying the alarm rule list          | GET /v2/{project_id}/alert/action-rules             | aom:actionRule:list        | ✓           | ✓                  |
| Querying events and alarms            | POST /v2/{project_id}/events                        | aom:alarm:list             | ✓           | ✗                  |
| Counting events and alarms            | POST /v2/{project_id}/events/statistic              | aom:alarm:list             | ✓           | ✗                  |

| Permission                  | API                              | Action        | IAM Project | Enterprise Project |
|-----------------------------|----------------------------------|---------------|-------------|--------------------|
| Reporting events and alarms | PUT /v2/{project_id}/push/events | aom:alarm:put | ✓           | ✗                  |

## 7.2.2 Monitoring APIs

✓: supported; ✗: not supported

**Table 7-2** Monitoring APIs

| Permission                                   | API                                               | Action                   | IAM Project | Enterprise Project |
|----------------------------------------------|---------------------------------------------------|--------------------------|-------------|--------------------|
| Querying time series objects                 | POST /v2/{project_id}/series                      | aom:metric:list          | ✓           | ✗                  |
| Querying time series data                    | POST /v2/{project_id}/samples                     | aom:metric:list          | ✓           | ✗                  |
| Querying metrics                             | POST /v1/{project_id}/ams/metrics                 | aom:metric:get           | ✓           | ✗                  |
| Querying monitoring data                     | POST /v1/{project_id}/ams/metricdata              | aom:metric:get           | ✓           | ✗                  |
| Adding or modifying a service discovery rule | PUT /v1/{project_id}/inv/servicediscoveryrules    | aom:discoveryRule:set    | ✓           | ✗                  |
| Deleting a service discovery rule            | DELETE /v1/{project_id}/inv/servicediscoveryrules | aom:discoveryRule:delete | ✓           | ✗                  |

| Permission                                | API                                                 | Action                 | IAM Project | Enterprise Project |

### 7.2.3 Prometheus Monitoring APIs

✓: supported; ✗: not supported

**Table 7-3 Prometheus monitoring APIs**

| Permission                                                           | API                                                       | Action          | IAM Project | Enterprise Project |
|----------------------------------------------------------------------|-----------------------------------------------------------|-----------------|-------------|--------------------|
| Querying the expression calculation result in a specified period     | GET /v1/{project_id}/aom/api/v1/query_range               | aom:metric:list | √           | √                  |
| Querying the expression calculation result in a specified period     | POST /v1/{project_id}/aom/api/v1/query_range              | aom:metric:list | √           | √                  |
| Querying the expression calculation result at a specified time point | GET /v1/{project_id}/aom/api/v1/query                     | aom:metric:list | √           | √                  |
| Querying the expression calculation result at a specified time point | POST /v1/{project_id}/aom/api/v1/query                    | aom:metric:list | √           | √                  |
| Querying tag values                                                  | GET /v1/{project_id}/aom/api/v1/label/{label_name}/values | aom:metric:list | √           | √                  |
| Obtaining the tag name list                                          | GET /v1/{project_id}/aom/api/v1/labels                    | aom:metric:list | √           | √                  |

| Permission                  | API                                      | Action          | IAM Project | Enterprise Project |
|-----------------------------|------------------------------------------|-----------------|-------------|--------------------|
| Obtaining the tag name list | POST /v1/{project_id}/aom/api/v1/labels  | aom:metric:list | ✓           | ✓                  |
| Querying metadata           | GET /v1/{project_id}/aom/api/v1/metadata | aom:metric:list | ✓           | ✓                  |

## 7.2.4 Log APIs

✓: supported; x: not supported

**Table 7-4** Log APIs

| Permission    | API                              | Action       | IAM Project | Enterprise Project |
|---------------|----------------------------------|--------------|-------------|--------------------|
| Querying logs | POST /v1/{project_id}/als/action | aom:log:list | ✓           | x                  |

## 7.2.5 CMDB APIs

✓: supported; x: not supported

**Table 7-5** CMDB APIs

| Permission              | API                                      | Action                     | IAM Project | Enterprise Project |
|-------------------------|------------------------------------------|----------------------------|-------------|--------------------|
| Adding an application   | POST /v1/applications                    | aom:cmdbApplication:create | ✓           | x                  |
| Deleting an application | DELETE /v1/applications/{application_id} | aom:cmdbApplication:delete | ✓           | x                  |

| Permission                                | API                                   | Action                     | IAM Project | Enterprise Project |
|-------------------------------------------|---------------------------------------|----------------------------|-------------|--------------------|
| Querying the details about an application | GET /v1/applications/{application_id} | aom:cmdbApplication:get    | √           | ✗                  |
| Modifying an application                  | PUT /v1/applications/{application_id} | aom:cmdbApplication:update | √           | ✗                  |
| Adding a component                        | POST /v1/components                   | aom:cmdbComponent:create   | √           | ✗                  |
| Deleting a component                      | DELETE /v1/components/{component_id}  | aom:cmdbComponent:delete   | √           | ✗                  |
| Querying the details about a component    | GET /v1/components/{component_id}     | aom:cmdbComponent:get      | √           | ✗                  |
| Modifying a component                     | PUT /v1/components/{component_id}     | aom:cmdbComponent:update   | √           | ✗                  |
| Creating an environment                   | POST /v1/environments                 | aom:cmdbEnvironment:create | √           | ✗                  |

| Permission                                     | API                                                               | Action                     | IAM Project | Enterprise Project |
|------------------------------------------------|-------------------------------------------------------------------|----------------------------|-------------|--------------------|
| Deleting an environment                        | DELETE /v1/environments/{environment_id}                          | aom:cmdbEnvironment:delete | ✓           | ✗                  |
| Querying the details about an environment      | GET /v1/environments/{environment_id}                             | aom:cmdbEnvironment:get    | ✓           | ✗                  |
| Modifying an environment                       | PUT /v1/environments/{environment_id}                             | aom:cmdbEnvironment:update | ✓           | ✗                  |
| Querying the list of resources bound to a node | POST /v1/resource/{rf_resource_type}/type/{type}/ci-relationships | aom:cmdbResources:list     | ✓           | ✗                  |
| Querying the details about an application      | GET /v1/applications                                              | aom:cmdbApplication:get    | ✓           | ✗                  |

| Permission                                | API                                                                   | Action                  | IAM Project | Enterprise Project |

| Querying the details about a component    | GET /v1/components/application/{application_id}/name/{component_name} | aom:cmdbComponent:get   | ✓           | ✗                  |

# 8 Appendix

## 8.1 Status Codes

[Table 8-1](#) describes status codes.

**Table 8-1** Status codes

| Status Code | Message                       | Description                                                                                                                                                                                |
|-------------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 100         | Continue                      | The client should continue with its request.<br>This interim response is used to inform the client that the initial part of the requests has been received and not rejected by the server. |
| 101         | Switching Protocols           | The protocol should be switched. The protocol can only be switched to a more advanced protocol.<br>For example, a new HTTP protocol.                                                       |
| 200         | OK                            | The request has succeeded.                                                                                                                                                                 |
| 201         | Created                       | The request has been fulfilled, resulting in the creation of a new resource.                                                                                                               |
| 202         | Accepted                      | The request has been accepted, but the processing has not been completed.                                                                                                                  |
| 203         | Non-Authoritative Information | The server successfully processed the request, but is returning information that may be from another source.                                                                               |
| 204         | No Content                    | The server has successfully processed the request, but does not return any content.<br>The status code is returned in response to an HTTP OPTIONS request.                                 |
| 205         | Reset Content                 | The server has fulfilled the request, but the requester is required to reset the content.                                                                                                  |

| Status Code | Message           | Description                                                                                                                                                                                                                       |
|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 206         | Partial Content   | The server has successfully processed a part of the GET request.                                                                                                                                                                  |
| 300         | Multiple Choices  | There are multiple options for the location of the requested resource. The response contains a list of resource characteristics and addresses from which a user terminal (such as a browser) can choose the most appropriate one. |
| 301         | Moved Permanently | The requested resource has been assigned with a new permanent URI. This new URI is contained in the response.                                                                                                                     |
| 302         | Found             | The requested resource resides temporarily under a different URI.                                                                                                                                                                 |
| 303         | See Other         | The response to the request can be found under a different URI.<br>It should be retrieved using a GET or POST method.                                                                                                             |
| 304         | Not Modified      | The requested resource has not been modified. When the server returns this status code, it does not return any resources.                                                                                                         |
| 305         | Use Proxy         | The requested resource must be accessed through a proxy.                                                                                                                                                                          |
| 306         | Unused            | This HTTP status code is no longer used.                                                                                                                                                                                          |
| 400         | Bad Request       | The request is invalid.<br>The client should not repeat the request without modifications.                                                                                                                                        |
| 401         | Unauthorized      | The authorization information provided by the client is incorrect or invalid.                                                                                                                                                     |
| 402         | Payment Required  | This status code is reserved for future use.                                                                                                                                                                                      |
| 403         | Forbidden         | The request is rejected.<br>The server has received the request and understood it, but the server is refusing to respond to it. The client should not repeat the request without modifications.                                   |
| 404         | Not Found         | The requested resource cannot be found.<br>The client should not repeat the request without modifications.                                                                                                                        |

| Status Code | Message                         | Description                                                                                                                                                                                                                                                                            |
|-------------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 405         | Method Not Allowed              | The method specified in the request is not supported by the requested resource.<br>The client should not repeat the request without modifications.                                                                                                                                     |
| 406         | Not Acceptable                  | The server cannot fulfill the request based on the content characteristics of the request.                                                                                                                                                                                             |
| 407         | Proxy Authentication Required   | This status code is similar to 401, but indicates that the client must authenticate itself with the proxy first.                                                                                                                                                                       |
| 408         | Request Timeout                 | The client does not produce a request within the time that the server was prepared to wait.<br>The client may repeat the request without modifications later.                                                                                                                          |
| 409         | Conflict                        | The request cannot be processed due to a conflict.<br>The resource that the client attempts to create already exists, or the request fails to be processed because of the update of the conflict request.                                                                              |
| 410         | Gone                            | The requested resource cannot be found.<br>The requested resource has been deleted permanently.                                                                                                                                                                                        |
| 411         | Length Required                 | The server refuses to process the request without a defined Content-Length.                                                                                                                                                                                                            |
| 412         | Precondition Failed             | The server does not meet one of the preconditions that the requester puts on the request.                                                                                                                                                                                              |
| 413         | Request Entity Too Large        | The server refuses to process a request because the request entity is too large. The server may disable the connection to prevent the client from sending requests consecutively. If the server cannot process the request temporarily, the response will contain a Retry-After field. |
| 414         | Request-URI Too Long            | The request URI is too long for the server to process.                                                                                                                                                                                                                                 |
| 415         | Unsupported Media Type          | The server cannot process the media format in the request.                                                                                                                                                                                                                             |
| 416         | Requested Range Not Satisfiable | The requested range is invalid.                                                                                                                                                                                                                                                        |
| 417         | Expectation Failed              | The server fails to meet the requirements of the Expect request-header field.                                                                                                                                                                                                          |

| Status Code | Message                    | Description                                                                                                                                                                                                                                                                                                                                                      |
|-------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 422         | Unprocessable Entity       | The request is well-formed but is unable to be processed due to semantic errors.                                                                                                                                                                                                                                                                                 |
| 429         | Too Many Requests          | The client sends excessive requests to the server within a given time (exceeding the limit on the access frequency of the client), or the server receives excessive requests within a given time (beyond its processing capability). In this case, the client should repeat requests after the time specified in the Retry-After header of the response expires. |
| 500         | Internal Server Error      | The server is able to receive the request but unable to understand the request.                                                                                                                                                                                                                                                                                  |
| 501         | Not Implemented            | The server does not support the function required to fulfill the request.                                                                                                                                                                                                                                                                                        |
| 502         | Bad Gateway                | The server acting as a gateway or proxy receives an invalid response from a remote server.                                                                                                                                                                                                                                                                       |
| 503         | Service Unavailable        | The requested service is invalid.<br>The client should not repeat the request without modifications.                                                                                                                                                                                                                                                             |
| 504         | Server Timeout             | The request cannot be fulfilled within a given time. This status code is returned to the client only when the timeout parameter is specified in the request.                                                                                                                                                                                                     |
| 505         | HTTP Version Not Supported | The server does not support the HTTP protocol version used in the request.                                                                                                                                                                                                                                                                                       |

## 8.2 Error Codes

If an error code starting with **APIGW** is returned after you call an API, rectify the fault according to [APIG Error Codes](#).

| Status Code | Error Code         | Message | Description                       | Solution                                             |
|-------------|--------------------|---------|-----------------------------------|------------------------------------------------------|
| 200         | SVCSTG.INV.2000000 | null    | The request is properly executed. | No action is required after the request is executed. |

| Status Code | Error Code         | Message                                       | Description                                   | Solution                                             |
|-------------|--------------------|-----------------------------------------------|-----------------------------------------------|------------------------------------------------------|
| 200         | SVCSTG_AMS_2000000 | null                                          | The request is properly executed.             | No action is required after the request is executed. |
| 300         | AOM.08001300       | The maximum number of rules has been reached. | The maximum number of rules has been reached. | Delete unneeded rules and try again.                 |
| 400         | AOM.0400           | Bad request.                                  | Incorrect request parameter.                  | Check whether the parameter meets requirements.      |
| 400         | AOM.02001101       | Invalid rule name.                            | Invalid rule name.                            | Check whether the parameter meets requirements.      |
| 400         | AOM.02001102       | The rule name already exists.                 | The rule name already exists.                 | Check whether the parameter meets requirements.      |
| 400         | AOM.02001103       | Invalid description.                          | Invalid description.                          | Check whether the parameter meets requirements.      |
| 400         | AOM.02001104       | Invalid threshold.                            | Invalid threshold.                            | Check whether the parameter meets requirements.      |
| 400         | AOM.02001105       | Invalid period.                               | Invalid period.                               | Check whether the parameter meets requirements.      |
| 400         | AOM.02001106       | Invalid email.                                | Invalid email.                                | Check whether the parameter meets requirements.      |
| 400         | AOM.02001107       | The maximum number of rules has been reached. | The maximum number of rules has been reached. | Check whether the parameter meets requirements.      |

| Status Code | Error Code   | Message                                | Description                            | Solution                                        |
|-------------|--------------|----------------------------------------|----------------------------------------|-------------------------------------------------|
| 400         | AOM.02001108 | Invalid time range.                    | Invalid time range.                    | Check whether the parameter meets requirements. |
| 400         | AOM.02001109 | Threshold rule xxx does not exist.     | Threshold rule xxx does not exist.     | Check whether the parameter meets requirements. |
| 400         | AOM.02001110 | Invalid limit.                         | Invalid limit.                         | Check whether the parameter meets requirements. |
| 400         | AOM.02001111 | Invalid offset.                        | Invalid offset.                        | Check whether the parameter meets requirements. |
| 400         | AOM.02001112 | Invalid request parameter.             | Invalid request parameter.             | Check whether the parameter meets requirements. |
| 400         | AOM.02001115 | Invalid request parameter.             | Invalid request parameter.             | Check whether the parameter meets requirements. |
| 400         | AOM.02001118 | Invalid number of consecutive periods. | Invalid number of consecutive periods. | Check whether the parameter meets requirements. |

## 8.3 Obtaining an Account ID and Project ID

When making API calls, you may need to enter the username, user ID, project name, and project ID in some URLs. You can obtain them on the **My Credentials** page.

**Step 1** Log in to the management console.

**Step 2** Hover over the username in the upper right corner, and choose **My Credentials**.

**Step 3** On the **API Credentials** page, view the username, account ID, project name, and project ID.

----End

## Obtaining a Project ID by Calling an API

You can also call the API for [querying project information based on the specified criteria](#) to obtain a project ID.

The API is **GET https://*{Endpoint}*/v3/projects/**, where *{Endpoint}* indicates the Identity and Access Management (IAM) endpoint. For details, see [Regions and Endpoints](#). For details about API authentication, see [3.2 Authentication](#).

In the following example, **id** indicates the project ID.

```
{
  "projects": [
    {
      "domain_id": "65382450e8f64ac0870cd180d14e684b",
      "is_domain": false,
      "parent_id": "65382450e8f64ac0870cd180d14e684b",
      "name": "cn-north-4",
      "description": "",
      "links": {
        "next": null,
        "previous": null,
        "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"
      },
      "id": "a4a5d4098fb4474fa22cd05f897d6b99",
      "enabled": true
    }
  ],
  "links": {
    "next": null,
    "previous": null,
    "self": "https://www.example.com/v3/projects"
  }
}
```

## 8.4 Common Request Headers

**Table 8-2** Common request headers

| Name         | Description                                                     | Mandatory                          | Example                        |
|--------------|-----------------------------------------------------------------|------------------------------------|--------------------------------|
| X-Auth-Token | User token.                                                     | Yes for token-based authentication | -                              |
| Content-Type | Content type.<br>Enter <b>application/json; charset=utf-8</b> . | Yes                                | application/json; charset=utf8 |

| Name          | Description                                                                                                                                                                                                        | Mandatory                          | Example          |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|------------------|
| x-sdk-date    | Time to send a request.<br>The format is <i>YYYYMMDD'T'HHMMSS'Z'</i> . GMT time is used.                                                                                                                           | Yes for AK/SK-based authentication | 20160629T101459Z |
| Authorization | Signature authentication information.<br>It can be obtained from the result of request signing.                                                                                                                    | Yes for AK/SK-based authentication | -                |
| Host          | Request server information, which is obtained from the URL of a service API. The value is <b>hostname[:port]</b> . If no port is specified, the default port will be used. For HTTPS, port 443 is used by default. | Yes for AK/SK-based authentication | -                |

## 8.5 Common Response Headers

A response usually contains the following headers:

**Table 8-3** Response headers

| Name   | Description                                                                                         | Example                       |
|--------|-----------------------------------------------------------------------------------------------------|-------------------------------|
| Date   | (Standard HTTP header)<br>Time when a message is sent. This field complies with RFC822 definitions. | Mon, 12 Nov 2007 15:55:01 GMT |
| Server | (Standard HTTP header)<br>Software that a server uses to process the request.                       | Apache                        |

| Name           | Description                                                                                                          | Example          |
|----------------|----------------------------------------------------------------------------------------------------------------------|------------------|
| Content-Length | (Standard HTTP header)<br>Length of the response body, which is represented by a decimal number and stored in bytes. | xxx              |
| Content-Type   | (Standard HTTP header)<br>Media type of the response body sent to the recipient.                                     | application/json |
