Before You Start

1.1 Overview

Welcome to *Auto Scaling API Reference*. Auto Scaling (AS) is a service that automatically adjusts resources (Elastic Cloud Server and bandwidth resources) based on your service requirements and configured AS policies. You can specify AS policies based on service requirements. These policies free you from having to repeatedly adjust resources to keep up with service changes and demand spikes, helping you reduce the resources and manpower required. This document describes how to use application programming interfaces (APIs) to perform operations on AS groups, such as creating, deleting, or modifying AS groups. For details about all supported operations, see **API Overview**.

If you plan to access AS through an API, ensure that you are familiar with AS concepts.. For details, see *Auto Scaling User Guide*.

1.2 API Calling

AS supports Representational State Transfer (REST) APIs, allowing you to call APIs using HTTPS. For details about API calling, see **Calling APIs**.

1.3 Constraints

- The numbers of AS groups and AS configurations that you can create are determined by your quota. For details, see **What Is the AS Quota?**
- For more constraints, see API description.

1.4 Concepts

• Account

An account is created upon successful registration. The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. The account is a payment entity, which should not be used directly to perform routine management. For security purposes, create Identity and Access Management (IAM) users and grant them permissions for routine management.

User

An IAM user is created by an account in IAM to use cloud services. Each IAM user has its own identity credentials (password and access keys).

API authentication requires information such as the account name, username, and password.

Region

Regions are divided based on geographical location and network latency. Public services, such as Elastic Cloud Server (ECS), Elastic Volume Service (EVS), Object Storage Service (OBS), Virtual Private Cloud (VPC), Elastic IP (EIP), and Image Management Service (IMS), are shared within the same region. Regions are classified into universal regions and dedicated regions. A universal region provides universal cloud services for common tenants. A dedicated region provides specific services for specific tenants.

For details, see **Region and AZ**.

• AZ

An AZ comprises of one or more physical data centers equipped with independent ventilation, fire, water, and electricity facilities. Computing, network, storage, and other resources in an AZ are logically divided into multiple clusters. AZs within a region are interconnected using high-speed optical fibers to allow you to build cross-AZ high-availability systems.

• Project

A project corresponds to a region. Default projects are defined. Users can be granted permissions in a default project to access all resources under their accounts in the region associated with the project. If you need more refined access control, create subprojects under a default project and create resources in subprojects. Then you can assign users the permissions required to access only the resources in the specific subprojects.

• Enterprise project

Enterprise projects group and manage resources across regions. Resources in different enterprise projects are logically isolated.

For details about enterprise projects and about how to obtain enterprise project IDs, see *Enterprise Management User Guide*.

2 API Overview

By using the APIs provided by AS, you can use all the functions of AS, for example, creating an AS group. Table 2-1 lists the APIs supported by AS.

Table 2-1 AS APIs

Function	Description
AS group	Create, query, modify, and delete AS groups.
AS configuratio n	Create, query, and delete AS configurations.
Instance	Query instances and remove instances from AS groups.
AS policy	Create, query, modify, and delete AS policies.
AS policy execution log	Query execution records of an AS policy.
Scaling action log	Query scaling action logs.
Quota	Query the total quota and used quota of AS groups, AS configurations, AS policies, and instances for a specified tenant.
Notification	Configure AS group notifications, query AS group notifications, and delete AS group notifications.
Lifecycle hook	Create, query, modify, and delete lifecycle hooks.
Tag manageme nt	Query tenant or resource tags, create or delete tags, and query resource instances.
API manageme nt	Query API versions.

3 Calling APIs

3.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM API for **obtaining a user token** as an example to demonstrate how to call an API. The obtained token can then be used to authenticate the calling of other APIs.

Request URI

A request URI is in the following format:

{URI-scheme}://{Endpoint}/{resource-path}?{query-string}

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

Parameter	Description
URI-scheme	Protocol used to transmit requests. All APIs use HTTPS.
Endpoint	Domain name or IP address of the server bearing the REST service. The endpoint varies between services in different regions. It can be obtained from Regions and Endpoints. For example, the endpoint of IAM in region Dublin is iam.myhuaweicloud.eu .
resource-path	Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the resource-path of the API used to obtain a user token is /v3/ auth/tokens .

Table 3-1 URI parameter descriptic

Parameter	Description
query-string	Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of <i>Parameter name=Parameter value</i> . For example, ? limit=10 indicates that a maximum of 10 data records will be displayed.

For example, to obtain an IAM token in the **Dublin** region, obtain the endpoint of IAM (**iam.myhuaweicloud.eu**) for this region and the **resource-path** (**/v3/auth/tokens**) in the URI of the API used to **obtain a user token**. Then, construct the URI as follows:

https://iam.myhuaweicloud.eu/v3/auth/tokens

NOTE

To simplify the URI display in this document, each API is provided only with a **resourcepath** and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server.

Method	Description
GET	Requests the server to return specified resources.
PUT	Requests the server to update specified resources.
POST	Requests the server to add resources or perform special operations.
DELETE	Requests the server to delete specified resources, for example, an object.
HEAD	Same as GET except that the server must return only the response header.
РАТСН	Requests the server to update partial content of a specified resource.
	If the resource does not exist, a new resource will be created.

Table	3-2	HTTP	methods
-------	-----	------	---------

For example, in the case of the API used to **obtain a user token**, the request method is **POST**. The request is as follows:

POST https://iam.myhuaweicloud.eu/v3/auth/tokens

Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows.

Table 3-3 Common request header fields

Parameter	Description	Mandatory	Example Value
Host	Specifies the server domain name and port number of the resources being requested. The value can be obtained from the URL of the service API. The value is in the format of <i>Hostname:Port number</i> . If the port number is not specified, the default port is used. The default port number for https is 443 .	No This field is mandatory for AK/SK authentication.	code.test.com or code.test.com: 443
Content-Type	Specifies the type (or format) of the message body. The default value application/json is recommended. Other values of this field will be provided for specific APIs if any.	Yes	application/json
Content- Length	Specifies the length of the request body. The unit is byte.	No	3495
X-Project-Id	Specifies the project ID. Obtain the project ID by following the instructions in Obtaining a Project ID .	No This field is mandatory for requests that use AK/SK authentication in the Dedicated Cloud (DeC) scenario or multi-project scenario.	e9993fc787d94b 6c886cbaa340f9c 0f4

It is a response to the API for obtaining a userThis field is mandatory forpart of an example tok	arameter	Description	Mandatory	Example Value
API that does not require authentication. NAQcCogg	-Auth-Token	It is a response to the API for obtaining a user token (This is the only API that does not require authentication). After the request is processed, the value of	This field is mandatory for token	The following is part of an example token: MIIPAgYJKoZIhvc NAQcCoggg1B BIINPXsidG9rZ

NOTE

In addition to supporting authentication using tokens, APIs support authentication using AK/SK, which uses SDKs to sign a request. During the signature, the **Authorization** (signature authentication) and **X-Sdk-Date** (time when a request is sent) headers are automatically added in the request.

For more details, see "Authentication Using AK/SK" in Authentication.

The API used to **obtain a user token** does not require authentication. Therefore, only the **Content-Type** field needs to be added to requests for calling the API. An example of such requests is as follows:

POST https://iam.myhuaweicloud.eu/v3/auth/tokens Content-Type: application/json

(Optional) Request Body

This part is optional. The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to **obtain a user token**, the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Replace *username*, *domainname*, ********** (login password), and *xxxxxxxxxxxxxxxxx* (project name) with the actual values. Obtain a project name from Regions and Endpoints.

NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see **Obtaining a User Token**.

POST https://iam.myhuaweicloud.eu/v3/auth/tokens Content-Type: application/json {

```
"auth": {
   "identity": {
      "methods": [
         'password"
     1,
      "password": {
         "user": {
           "name": "username",
           "password": " ********
           "domain": {
              "name": "domainname"
           }
        }
     }
  },
   "scope": {
      "project": {
        "name": "xxxxxxxxxxxxxxxxx
     }
  }
}
```

If all data required for the API request is available, you can send the request to call the API through **curl**, **Postman**, or coding. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

3.2 Authentication

}

Requests for calling an API can be authenticated using either of the following methods:

- Token authentication: Requests are authenticated using tokens.
- AK/SK authentication: Requests are encrypted using AK/SK pairs. AK/SK authentication is recommended because it is more secure than token authentication.

Token Authentication

NOTE

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the IAM API used to obtain a user token.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API. You can obtain a token by calling the **Obtaining User Token** API.

IMS is a project-level service. When you call the API, set **auth.scope** in the request body to **project**.

```
{
    "auth": {
        "identity": {
            "methods": [
            "password"
        ],
        "password": {
            "user": {
            "name": "username", // IAM user name
```

```
"password": " ********", // IAM user password
"domain": {
        "name": "domainname" // Name of the account to which the IAM user belongs
        }
      }
    }
    }
    scope": {
        "project": {
            "name": "xxxxxxx" // Project name
      }
    }
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, **X-Auth-Token: ABCDEFJ....** can be added to a request as follows:

POST https://iam.myhuaweicloud.eu/v3/auth/projects Content-Type: application/json X-Auth-Token: ABCDEFJ....

AK/SK Authentication

}

NOTE

AK/SK authentication supports API requests with a body not larger than 12 MB. For API requests with a larger body, token authentication is recommended.

In AK/SK authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key, which is used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK authentication, you can use an AK/SK to sign requests based on the signature algorithm or using the signing SDK. For details about how to sign requests and use the signing SDK, see **API Request Signing Guide**.

NOTE

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

3.3 Response

Status Codes

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request.

For example, if status code 201 is returned for calling the API used to **obtain a user token**, the request is successful.

Response Header

Similar to a request, a response also has a header, for example, **Content-type**.

Figure 3-1 shows the response header fields for the API used to **obtain a user token**. The **x-subject-token** header field is the desired user token. This token can then be used to authenticate the calling of other APIs.

Figure 3-1 Header fields of the response to the request for obtaining a user token

x-xss-protection \rightarrow 1; mode=block;

(Optional) Response Body

This part is optional. The body of a response is often returned in structured format (for example, JSON or XML) as specified in the **Content-Type** header field. The response body transfers content except the response header.

The following is part of the response body for the API used to **obtain a user token**. For the sake of limited space, only part of the content is displayed.

٤	
	"token": {
	"expires_at": "2019-02-13T06:52:13.855000Z"
	"methods": [
	"password"
],
	"catalog": [
	{
	"endpoints": [
	{
	"region_id": "az-01",

If an error occurs during API calling, an error code and a message will be displayed. The following shows an error response body.

"error_msg": "The format of message is error",

"error_code": "AS.0001"

In the response body, **error_code** is an error code, and **error_msg** provides information about the error.

3.4 Obtaining a Project ID

}

Scenarios

A project ID is required for some URLs when an API is called. Therefore, you need to obtain a project ID in advance. Two methods are available:

- Obtain the Project ID by Calling an API
- Obtain the Project ID from the Console

Obtain the Project ID by Calling an API

You can obtain a project ID by calling the API used to **query projects based on specified criteria**.

The API used to obtain a project ID is GET https://{Endpoint}/v3/projects. {Endpoint} is the IAM endpoint and can be obtained from Regions and Endpoints. For details about API authentication, see **Authentication**.

The following is an example response. The value of **id** is the project ID.

{	
	"projects": [
	"domain_id": "65382450e8f64ac0870cd180d14e684b",
	"is_domain": false,
	"parent_id": "65382450e8f64ac0870cd180d14e684b",
	"name": "project_name",
	"description": "",
	"links": {
	"next": null,
	"previous": null,
	"self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"
	},
	"id": "a4a5d4098fb4474fa22cd05f897d6b99",
	"enabled": true
	}
],
	"links": {
	"next": null,
	"previous": null,
	"self": "https://www.example.com/v3/projects"
	}
}	

Obtain a Project ID from the Console

To obtain a project ID from the console, perform the following operations:

- 1. Log in to the management console.
- 2. Click the username and select **My Credentials** from the drop-down list. On the **API Credentials** page, view the project ID in the project list.

4 Getting Started

4.1 Creating an AS Group

This section describes how to create an AS group by calling a series of AS APIs.

NOTE

The validity period of a token obtained from IAM is 24 hours. If you want to use a token for authentication, cache it to avoid frequently calling the IAM API.

Involved APIs

To use token authentication, you need to obtain a token and add **X-Auth-Token** to the request header of API calls.

- API for obtaining tokens from IAM
- APIs used to create an AS group

Procedure

- 1. Obtain the token by following instructions in Authentication.
- 2. Obtain the project ID (project_id). For details, see Obtaining a Project ID.
- 3. Add the **Content-Type** key to the request header. The value of **Content-Type** is **application/json**.
- 4. Add the **X-Auth-Token** key to the request header. The value is the token obtained in step 1.
- 5. Send **POST https://***AS endpoint*/v1/{*project_id*}/scaling_group. *project_id* is the project ID obtained in step 2.
- 6. Specify the following parameters in the request body:

"scaling_group_name": "GroupNameTest",//AS group name (This is a mandatory string.) "scaling_configuration_id": "47683a91-93ee-462a-a7d7-484c006f4440",//AS configuration ID (This is an optional string, but an AS group to be enabled must have an AS configuration.)

- "desire_instance_number": 0,//Expected instances (This is an optional integer.)
- "min_instance_number": 0,//Minimum instances (This is an optional integer.)
- "max_instance_number": 0,//Maximum instances (This is an optional integer.)

"health_periodic_audit_method": "NOVA_AUDIT",//Instance health check method (This is an

[&]quot;cool_down_time": 200,//Cooldown period (This is an optional integer.)

optional string.)

```
"health_periodic_audit_time": 5,//Instance health check period (This is an optional integer.)
"instance_terminate_policy": "OLD_CONFIG_OLD_INSTANCE",//Instance removal policy (This is an
optional string.)
"vpc_id": "a8327883-6b07-4497-9c61-68d03ee193a",//VPC information (This is a mandatory string.)
"networks": [
        {
            "id": "3cd35bca-5a10-416f-8994-f79169559870"
        }
]//Subnet information (This is a mandatory list data structure.)
}
```

If the request is responded, **scaling_group_id** is returned, indicating that the AS group is successfully created.

If the request fails, an error code and error information are returned. For details, see **Error Codes**.

7. You can query, modify, and delete an AS group based on the obtained **scaling_group_id**.

5 APIS

5.1 AS Groups

5.1.1 Creating an AS Group

Function

An AS group consists of a collection of instances that apply to the same scenario. It is the basis for enabling or disabling AS policies and performing scaling actions. An AS group specifies parameters, such as the maximum number of instances, expected number of instances, minimum number of instances, VPC, subnet, and load balancing.

- Each user can create a maximum of 10 AS groups by default.
- If ELB is configured, AS automatically binds or unbinds a load balancer to or from an instance when the instance is added to or removed from the AS group.
- If an AS group uses ELB health check, the listening ports on the load balancers must be enabled for the instances in the AS group. Enable the listening ports in security groups.

URI

POST /autoscaling-api/v1/{project_id}/scaling_group

Table 5-1 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Request Message

• Request parameters

Table 5-2 Request parameters

Parameter	Mandatory	Туре	Description
scaling_grou p_name	Yes	String	Specifies the AS group name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.
scaling_confi guration_id	Yes	String	Specifies the AS configuration ID, which can be obtained using the API for querying AS configurations. For details, see Querying AS configurations .
desire_instan ce_number	No	Integer	Specifies the expected number of instances. The default value is the minimum number of instances. The value ranges from the minimum number of instances to the maximum number of
			instances.
min_instance _number	No	Integer	Specifies the minimum number of instances. The default value is 0 .
max_instanc e_number	No	Integer	Specifies the maximum number of instances. The default value is 0 .
cool_down_ti me	No	Integer	Specifies the cooldown period (in seconds). The value ranges from 0 to 86400 and is 300 by default.
			After a scaling action is triggered, the system starts the cooldown period. During the cooldown period, scaling actions triggered by alarms will be denied. Scheduled, periodic, and manual scaling actions are not affected.

Parameter	Mandatory	Туре	Description
lbaas_listene rs	No	Array of lbaas_lis teners objects	Specifies information about an enhanced load balancer. You can add up to six load balancers. This parameter is in list data structure. For details, see Table 5-3 .
available_zo nes	No	Array of strings	Specifies the AZ information. The instances added in a scaling action will be created in a specified AZ. If you do not specify an AZ, the system automatically specifies one.
networks	Yes	Array of network s objects	Specifies network information. You can select up to five subnets. The first subnet you select is used by the primary NICs of ECSs by default. For the information about the data structure, see Table 5-4 .
security_grou ps	No	Array of security_ groups objects	Specifies the security group. A maximum of one security group can be selected. For the information about the data structure, see Table 5-5 . If the security group is specified both in the AS configuration and AS group, scaled ECS instances will be added to the security group specified in the AS configuration. If the security group is not specified in either of them, scaled ECS instances will be added to the default security group. For your convenience, you are advised to specify the security group in the AS configuration.
vpc_id	Yes	String	Specifies the VPC ID, which can be obtained using the API for querying VPCs. For details, see "Querying VPCs" in <i>Virtual</i> <i>Private Network API Reference</i> .

Parameter	Mandatory	Туре	Description
health_perio dic_audit_me thod	No	String	 Specifies the health check method for instances in the AS group. The health check methods include ELB_AUDIT and NOVA_AUDIT. When load balancing is configured for an AS group, the default value is ELB_AUDIT. Otherwise, the default value is NOVA_AUDIT. ELB_AUDIT: indicates the ELB health check, which takes effect in an AS group with a listener. NOVA_AUDIT: indicates the ECS instance health check, which is the health check method delivered with AS.
health_perio dic_audit_ti me	No	Integer	Specifies the instance health check period. The value can be 1 , 5 , 15 , 60 , or 180 in the unit of minutes. If this parameter is not specified, the default value is 5 . If the value is set to 0 , health check is performed every 10 seconds.
health_perio dic_audit_gra ce_period	No	Integer	Specifies the grace period for instance health check. The unit is second and the value ranges from 0 to 86400. The default value is 600 . The health check grace period starts after an instance is added to an AS group and is enabled. The AS group will start checking the instance status only after the grace period ends.

This parameter is valid only when the instance health check method of the AS group is

ELB_AUDIT.

Parameter	Mandatory	Туре	Description
instance_ter minate_polic y	No	String	 Specifies the instance removal policy. OLD_CONFIG_OLD_INSTAN CE (default): The earlier-created instances based on the earlier-created AS configurations are removed first. OLD_CONFIG_NEW_INSTAN CE: The later-created instances based on the earlier-created AS configurations are removed first. OLD_INSTANCE: The earlier-created instances are removed first. NEW_INSTANCE: The later-created instances are removed first.
notifications	No	Array of strings	Specifies the notification mode. EMAIL refers to notification by email. This notification mode has been canceled. You are advised to configure the notification function for the AS group. For details, see Notifications .
delete_public ip	No	Boolean	 Specifies whether to delete the EIP bound to the ECS when deleting the ECS. The value can be true or false. The default value is false. true: deletes the EIP bound to the ECS when deleting the ECS. If the EIP is billed on a yearly/monthly basis, it will not be deleted when the ECS is deleted. false: only unbinds the EIP bound to the ECS when deleting the ECS when deleting the ECS.

Parameter	Mandatory	Туре	Description
delete_volu me	No	Boolean	 Specifies whether to delete the data disks attached to the ECS when deleting the ECS. The value can be true or false. The default value is false. true: deletes the data disks attached to the ECS when deleting the ECS. If the data disks are billed a yearly/ monthly basis, they will not be deleted when the ECS is deleted. false: only detaches the data disks attached to the ECS when deleting the ECS.
multi_az_pri ority_policy	No	String	 Specifies the priority policy used to select target AZs when adjusting the number of instances in an AS group. EQUILIBRIUM_DISTRIBUTE (default): When adjusting the number of instances, ensure that instances in each AZ in the available_zones list is evenly distributed. If instances cannot be added in the target AZ, select another AZ based on the PICK_FIRST policy. PICK_FIRST: When adjusting the number of instances, target AZs are determined in the order in the available_zones list.
description	No	String	Specifies the description of the AS group. The value can contain 1 to 256 characters.

Table 5-3 lbaas_listeners field description

Parameter	Mandatory	Туре	Description
pool_id	Yes	String	Specifies the backend ECS group ID.

Parameter	Mandatory	Туре	Description
protocol_port	Yes	Integer	Specifies the backend protocol ID, which is the port on which a backend ECS listens for traffic. The port ID ranges from 1 to 65535.
weight	Yes	Integer	Specifies the weight, which determines the portion of requests a backend ECS processes when being compared to other backend ECSs added to the same listener. The value of this parameter ranges from 0 to 100.

Table 5-4 networks field description

Parameter	Mandatory	Туре	Description
id	Yes	String	Specifies the subnet ID.

Table 5-5 security_groups field description

Parameter	Mandatory	Туре	Description
id	Yes	String	Specifies the security group ID.

Example request

The following example shows how to create an AS group:

- The AS group is named **GroupNameTest**.
- The AS configuration ID is 47683a91-93ee-462a-a7d7-484c006f4440.
- The VPC ID is a8327883-6b07-4497-9c61-68d03ee193a, and the network ID is 3cd35bca-5a10-416f-8994-f79169559870.
- The maximum number of instances is **10**, the expected number of instances is **0**, and the minimum number of instances is **0**.
- The health check method is **ECS health check**.
- When adjusting the number of instances, select target AZ based on the PICK FIRST policy.

The request example is as follows:

```
{
```

```
"scaling_group_name": "GroupNameTest",
"scaling_configuration_id": "47683a91-93ee-462a-a7d7-484c006f4440",
```

[&]quot;desire_instance_number": 0,

5.1.2 Querying AS Groups

Function

This API is used to list AS groups based on search criteria. The results are displayed by page.

- Search criteria can be the AS group name, AS configuration ID, AS group status, start line number, and number of records.
- If no search criteria are specified, a maximum of 20 AS groups can be listed by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_group

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. AS groups can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_gro up_name	No	String	Specifies the AS group name. Fuzzy search is supported.

Table 5-7 Parameter description

Parameter	Mandatory	Туре	Description
scaling_conf iguration_id	No	String	Specifies the AS configuration ID, which can be obtained using the API for listing AS configurations. For details, see Querying AS configurations .
scaling_gro up_status	No	String	 Specifies the AS group status. The options are as follows: INSERVICE: indicates that the AS group is functional.
			 PAUSED: indicates that the AS group is paused.
			 ERROR: indicates that the AS group malfunctions.
			 DELETING: indicates that the AS group is being deleted.
start_numb er	No	Integer	Specifies the start line number. The default value is 0 . The minimum value is 0 , and there is no limit on the maximum value.
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value ranges from 0 to 100.

Request Message

Table 5-8 Response parameters

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start number of query records.

Parameter	Туре	Description
limit	Integer	Specifies the number of query records.
scaling_groups	Array of scaling_g roups objects	Specifies the AS group list.

Table 5-9 scaling_groups field description

Parameter	Туре	Description
scaling_group_name	String	Specifies the name of the AS group.
scaling_group_id	String	Specifies the AS group ID.
scaling_group_status	String	Specifies the AS group status.
scaling_configuration_i d	String	Specifies the AS configuration ID.
scaling_configuration_n ame	String	Specifies the AS configuration name.
current_instance_numb er	Integer	Specifies the number of current instances in the AS group.
desire_instance_numbe r	Integer	Specifies the expected number of instances in the AS group.
min_instance_number	Integer	Specifies the minimum number of instances in the AS group.
max_instance_number	Integer	Specifies the maximum number of instances in the AS group.
cool_down_time	Integer	Specifies the cooldown period (s).
lbaas_listeners	Array of lbaas_list eners objects	Specifies enhanced load balancers. For details, see Table 5-10 .
available_zones	Array of strings	Specifies the AZ information.
networks	Array of networks objects	Specifies the network information. For details, see Table 5-11 .

Parameter

5 APIs
curity group r details, see Table
me when an AS group

security_groups	Array of security_ groups objects	Specifies the security group information. For details, see Table 5-12 .
create_time	String	Specifies the time when an AS group was created. The time format complies with UTC.
vpc_id	String	Specifies the ID of the VPC to which the AS group belongs.
detail	String	Specifies details about the AS group. If a scaling action fails, this parameter is used to record errors.
is_scaling	Boolean	Specifies the scaling flag of the AS group.
health_periodic_audit_ method	String	Specifies the health check method.
health_periodic_audit_t ime	Integer	Specifies the health check interval.
health_periodic_audit_g race_period	Integer	Specifies the grace period for health check.
instance_terminate_pol icy	String	Specifies the instance removal policy.
notifications	Array of strings	Specifies the notification mode. EMAIL refers to notification by email. This notification mode has been canceled. You are advised to configure the notification function for the AS group. For details, see Notifications .
delete_publicip	Boolean	Specifies whether to delete the EIP bound to the ECS when deleting the ECS.
delete_volume	Boolean	Specifies whether to delete the data disks attached to the ECS when deleting the ECS.
cloud_location_id	String	This parameter is reserved.
activity_type	String	Specifies the type of the AS action.
multi_az_priority_policy	String	Specifies the priority policy used to select target AZs when adjusting the number of instances in an AS group.

See Error Codes.

5.1.4 Modifying an AS Group

Function

This API is used to modify a specified AS group.

- When the AS configuration of an AS group is changed, the existing instances created using the original AS configuration are not affected.
- If no scaling action is being performed, you can modify its subnet and AZ configurations.
- Changing the number of expected instances in an AS group will trigger a scaling action to add or remove instances to or from the AS group. The number of expected instances must be greater than or equal to the minimum number of instances and less than or equal to the maximum number of instances.

URI

PUT /autoscaling-api/v1/{project_id}/scaling_group/{scaling_group_id}

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_i d	Yes	String	Specifies the AS group ID.

 Table 5-17
 Parameter
 description

Request Message

• Request parameters

Table 5-18 Request parameters

Parameter	Mandatory	Туре	Description
scaling_grou p_name	No	String	Specifies the AS group name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.
desire_instan ce_number	No	Integer	Specifies the expected number of instances.
			The value ranges from the minimum number of instances to the maximum number of instances.
min_instance _number	No	Integer	Specifies the minimum number of instances.
max_instance _number	No	Integer	Specifies the maximum number of instances, which is greater than or equal to the minimum number of instances.

Parameter	Mandatory	Туре	Description
cool_down_ti me	No	Integer	Specifies the cooldown period (in seconds). The value ranges from 0 to 86400 and is 300 by default.
available_zon es	No	Array of strings	Specifies the AZ information. The instances added in a scaling action will be created in a specified AZ. If you do not specify an AZ, the system automatically specifies one.
			You can change the AZ of an AS group only when no scaling action is being performed in the group.
networks	No	Array of network s objects	Specifies network information. You can select up to five subnets. The first subnet you select is used by the primary NICs of ECSs by default. For the information about the data structure, see Table 5-20 .
			The value of this parameter can be changed only when all the following conditions are met:
			 No scaling actions are triggered in the AS group.
			• The number of instances in the AS group is 0.
			 The AS group is not in service.

Parameter	Mandatory	Туре	Description
security_grou ps	No	Array of security_ groups objects	Specifies the security group. A maximum of one security group can be selected. For information about the data structure, see Table 5-21 .
			If the security group is specified both in the AS configuration and AS group, scaled ECS instances will be added to the security group specified in the AS configuration. If the security group is not specified in either of them, scaled ECS instances will be added to the default security group. For your convenience, you are advised to specify the security group in the AS configuration. The value of this parameter can be changed only when all the following conditions are met:
			• No scaling actions are triggered in the AS group.
			• The number of instances in the AS group is 0.
			• The AS group is not in service.
lbaas_listener s	No	Array of lbaas_lis teners objects	Specifies information about an enhanced load balancer. The system supports the binding of up to six load balancers. This parameter is in list data

structure. For details, see **Table**

5-19.

Parameter	Mandatory	Туре	Description
health_perio dic_audit_me thod	No	String	 Specifies the health check method for instances in the AS group. The health check methods include ELB_AUDIT and NOVA_AUDIT. When load balancing is configured for an AS group, the default value is ELB_AUDIT. Otherwise, the default value is NOVA_AUDIT. ELB_AUDIT: indicates the ELB health check, which takes effect in an AS group with a listener. NOVA_AUDIT: indicates the ECS health check, which is the health check method delivered with AS.
health_perio dic_audit_tim e	No	Integer	Specifies the health check period for the instances in the AS group. The value can be 1 , 5 , 15 , 60 , or 180 in the unit of minutes. If the value is set to 0 , health check is performed every 10 seconds.
instance_ter minate_polic y	No	String	 Specifies the instance removal policy. OLD_CONFIG_OLD_INSTAN CE (default): The earlier-created instances based on the earlier-created AS configurations are removed first. OLD_CONFIG_NEW_INSTAN CE: The later-created instances based on the earlier-created AS configurations are removed first. OLD_INSTANCE: The earlier-created instances are removed first. NEW_INSTANCE: The later-created instances are removed first.

Parameter	Mandatory	Туре	Description
health_perio dic_audit_gra ce_period	No	Integer	Specifies the grace period for instance health check. The unit is second and value range is 0-86400. The default value is 600 . The health check grace period starts after an instance is added to an AS group and is enabled. The AS group will start checking the instance status only after the grace period ends. This parameter is valid only when the instance health check method of the AS group is ELB_AUDIT .
scaling_confi guration_id	No	String	Specifies the AS configuration ID, which can be obtained using the API for querying AS configurations. For details, see Querying AS configurations .
notifications	No	Array of strings	Specifies the notification mode. EMAIL refers to notification by email. This notification mode has been canceled. You are advised to configure the notification function for the AS group. For details, see Notifications .
delete_public ip	No	Boolean	 Specifies whether to delete the EIP bound to the ECS when deleting the ECS. If you do not want to delete the EIP, set this parameter to false. Then, the system only unbinds the EIP from the ECS and reserves the EIP. true: deletes the EIP bound to the ECS when deleting the ECS. If the EIP is billed on a yearly/monthly basis, it will not be deleted when the ECS is deleted. false: only unbinds the EIP bound to the ECS when deleting the ECS is deleted.

Parameter	Mandatory	Туре	Description
delete_volum e	No	Boolean	 Specifies whether to delete the data disks attached to the ECS when deleting the ECS. The value can be true or false. The default value is false. true: deletes the data disks attached to the ECS when deleting the ECS. If the data disks are billed a yearly/ monthly basis, they will not be deleted when the ECS is deleted. false: only detaches the data disks attached to the ECS when deleting the ECS.
multi_az_prio rity_policy	No	String	 Specifies the priority policy used to select target AZs when adjusting the number of instances in an AS group. EQUILIBRIUM_DISTRIBUTE (default): When adjusting the number of instances, ensure that instances in each AZ in the available_zones list is evenly distributed. If instances cannot be added in the target AZ, select another AZ based on the PICK_FIRST policy. PICK_FIRST: When adjusting the number of instances, target AZs are determined in the order in the available_zones list.
description	No	String	Specifies the description of the AS group. The value can contain 1 to 256 characters.

Parameter	Mandatory	Туре	Description
pool_id	Yes	String	Specifies the backend ECS group ID.
			The value of this parameter can be changed only when all the following conditions are met:
			 No scaling actions are triggered in the AS group.
			• The number of instances in the AS group is 0.
			• The AS group is not in service.
protocol_port	Yes	Integer	Specifies the backend protocol ID, which is the port on which a backend ECS listens for traffic. The port ID ranges from 1 to 65535.
weight	Yes	Integer	Specifies the weight, which determines the portion of requests a backend ECS processes when being compared to other backend ECSs added to the same listener. The value of this parameter ranges from 0 to 100.

Returned Value	Description
400 Bad Request	The server failed to process the request.
401 Unauthorized	You must enter the username and password to access the requested page.
403 Forbidden	You are forbidden to access the requested page.
404 Not Found	The server could not find the requested page.
405 Method Not Allowed	You are not allowed to use the method specified in the request.
406 Not Acceptable	The response generated by the server could not be accepted by the client.
407 Proxy Authentication Required	You must use the proxy server for authentication to process the request.
408 Request Timeout	The request timed out.

Returned Value	Description	
409 Conflict	The request could not be processed due to a conflict.	
500 Internal Server Error	Failed to complete the request because of an internal service error.	
501 Not Implemented	Failed to complete the request because the server does not support the requested function.	
502 Bad Gateway	Failed to complete the request because the request is invalid.	
503 Service Unavailable	Failed to complete the request because the system is unavailable.	
504 Gateway Timeout	A gateway timeout error occurred.	

See Error Codes.

5.1.5 Deleting an AS Group

Function

This interface is used to delete a specified AS group.

- **force_delete** specifies whether to forcibly delete an AS group, remove the ECS instances and release them when the AS group is running instances or performing scaling actions. By default, its value is **no**, which means not to forcibly delete the AS group.
- If the value of **force_delete** is set to **no**, the AS group can be deleted only when both the following conditions are met:
 - The AS group is performing no scaling action.
 - The number of running ECS instances (current_instance_number) is **0**.
- If the value of **force_delete** is set to **yes**, the AS group enters the **DELETING** state, rejecting new requests for scaling actions while completing the existing scaling actions. Then, all ECS instances are removed from the AS group and the AS group is deleted. Note that the manually added ECS instances will be removed from the AS group and the ECS instances automatically created by AS will be automatically deleted.

URI

DELETE /autoscaling-api/v1/{project_id}/scaling_group/{scaling_group_id}

Table 5-23 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_i d	Yes	String	Specifies the AS group ID.
force_delete	No	String	Specifies whether to forcibly delete an AS group. Options:
			 no (default): indicates that the AS group is not forcibly deleted.
			 yes: indicates to forcibly delete an AS group.

Request Message

- Request parameters
 - None

504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.1.6 Enabling or Disabling an AS Group

Function

This interface is used to enable or disable a specified AS group.

NOTE

For a disabled AS group, AS does not automatically trigger any scaling actions. When an AS group has an in-progress scaling action, the scaling action does not stop immediately after the AS group is disabled.

URI

POST /autoscaling-api/v1/{project_id}/scaling_group/{scaling_group_id}/action

504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.2 AS Configurations

5.2.1 Creating an AS Configuration

Function

This API is used to create an AS configuration.

• An AS configuration is a template specifying specifications for the instances to be added to an AS group.

- The AS configuration is decoupled from the AS group. An AS configuration can be used by multiple AS groups.
- Up to 100 AS configurations can be created for each user.

URI

POST /autoscaling-api/v1/{project_id}/scaling_configuration

Table 5-26 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Request Message

• Request parameters

Table 5-27 Request parameters

Parameter	Mandatory	Туре	Description
scaling_config uration_name	Yes	String	Specifies the AS configuration name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.
instance_confi g	Yes	Object	Specifies the ECS configuration. For details, see Table 5-28 .

Table 5-28 instance_config field description

Parameter	Mandatory	Туре	Description
instance_id	No	String	Specifies the ECS ID. When you want to create an AS configuration from an ECS, specify this parameter. In this case, the flavorRef , imageRef , disk , tenancy , dedicated_host_id , and security_groups fields do not take effect.
			If the instance_id field is not specified, flavorRef , imageRef , and disk fields are mandatory.

Parameter	Mandatory	Туре	Description
flavorRef	No	String	Specifies the ECS flavor ID. A maximum of 10 flavors can be selected. Use a comma (,) to separate multiple flavor IDs. You can obtain an ECS flavor ID from the API for querying details about flavors and extended flavor information.
imageRef	No	String	Specifies the image ID. Its value is the same as that of image_id for specifying the image selected during ECS creation. You can obtain an image ID by calling the IMS API for querying images.
disk	No	Array of disk objects	Specifies the disk group information. System disks are mandatory and data disks are optional. For details, see Table 5-29 .
key_name	No	String	Specifies the name of the SSH key pair used to log in to the ECS. NOTE If both key_name and user_data are specified, user_data only injects user data.
personality	No	Array of personali ty objects	Specifies information about the injected file. Only text files can be injected. A maximum of five files can be injected at a time and the maximum size of each file is 1 KB. For details, see Table 5-31 .
public_ip	No	public_ip object	 Specifies the EIP of the ECS. The EIP can be configured in two ways. For details, see Table 5-32. Do not use an EIP. In this case, this parameter is unavailable. Automatically assign an EIP. You need to specify the information about the new EIP.

Parameter	Mandatory	Туре	Description
Parameter user_data	Mandatory	Type String	 Description Specifies the user data to be injected during the ECS creation process. Text, text files, and gzip files can be injected. Constraints: The content to be injected must be encoded with base64. The maximum size of the content to be injected (before encoding) is 32 KB. If key_name is not specified, the data injected by user_data is the password of user root for logging in to the ECS by default. This parameter is mandatory when you create a Linux ECS using the password authentication mode. Its value is the initial user root password. Password complexity requirements: Consists of 8 to 26 characters. Contains at least three of the following character types: uppercase letters, lowercase letters, lowercase letters, digits, and special characters (!@\$ %^=+[{}]:,./?). Examples: Use a plaintext password (risky in security), for
			 Examples: Use a plaintext password (risky in security), for example, Cloud.1234. #! /bin/bash
			 #: /bin/bash echo 'root:Cloud.1234' chpasswd ; Use a ciphertext password (recommended) #! /bin/bash echo 'root:\$6\$V6azyeLwcD3CHlpY \$BN3VVq18fmCkj66B4zdHLWevqcxli g' chpasswd -e
			In the preceding command output, \$6\$V6azyeLwcD3CHlpY

Parameter	Mandatory	Туре	Description
			 \$BN3VVq18fmCkj66B4zdHLW evqcxlig is the ciphertext password, which can be generated as follows: 1. Generate an encrypted salt value.
			[root@test linux]# python -c "import crypt, getpass, pwd;print crypt.mksalt()" \$6\$V6azyeLwcD3CHlpY
			2. Generate a ciphertext password based on the salt value. [root@test linux]# python -c "import crypt, getpass, pwd;print crypt.crypt('Cloud.1234','\\$6\ \$V6azyeLwcD3CHlpY')" \$6\$V6azyeLwcD3CHlpY \$BN3VVq18fmCkj66B4zdHLWevqcxlig
			Examples:
			 Linux #! /bin/bash echo user_test >> /home/user.txt
			• Windows rem cmd echo 111 > c:\aaa.txt
			NOTE Data injection is not supported for ECSs that use a Linux image and the password login mode.
metadata	No	metadat a object	Specifies the ECS metadata. For details, see Table 5-35 . NOTE
			 This parameter is mandatory when a Windows ECS with password authentication is created.
			• This parameter does not allow users to write data. It is mandatory when the ECS is to be created using a Windows image.

Parameter	Mandatory	Туре	Description
security_grou ps	No	Array of security_ groups objects	Specifies security groups. For details, see Table 5-36 . If the security group is specified both in the AS configuration and AS group, scaled ECS instances will be added to the security group specified in the AS configuration. If the security group is not specified in either of them, scaled ECS instances will be added to the default security group. For your convenience, you are advised to specify the security group in the AS configuration.
server_group_ id	No	String	Specifies the ECS group ID. For how to obtain an ECS group ID, see .
tenancy	No	String	 Specifies that ECSs are created on DeHs. Options: dedicated: Specifies that ECSs are created on DeHs. This parameter is not specified.
dedicated_ho st_id	No	String	 Specifies the ID of a DeH. NOTE This parameter is valid only when tenancy is set to dedicated. If this parameter is specified, ECSs will be created on a specified DeH. If this parameter is not specified, the system automatically selects the DeH with the maximum available memory size from the DeHs that meet specifications requirements to create the ECSs, thereby balancing load of the DeHs.

Parameter	Mandatory	Туре	Description
multi_flavor_ priority_policy	No	String	Specifies the priority policy used when there are multiple flavors and instances to be created using an AS configuration.
			• PICK_FIRST (default): When an ECS is added for capacity expansion, the target flavor is determined in the order in the flavorRef list.
			• COST_FIRST : When an ECS is added for capacity expansion, the target flavor is determined for minimal expenses.
market_type	No	String	Specifies a billing mode for an ECS. The options are as follows:
			 Pay-per-use, which is not specified
			• Spot pricing

NOTE

For a Linux ECS, its password can be injected only using **userdata**. For a Windows ECS, its password can be injected only using metadata **admin_pass**.

Table 5-29 disk field description

Parameter	Mandatory	Туре	Description
size	Yes	Integer	Specifies the disk size. The unit is GB.
			The system disk size ranges from 1 to 1024 and must be greater than or equal to the minimum size (min_disk value) of the system disk specified in the image.
			The data disk size ranges from 10 to 32768.

Parameter	Mandatory	Туре	Description
volume_type	Yes	String	Specifies the ECS system disk type. The disk type must match the available disk type.
			The value can be SATA , SAS , GPSSD , SSD , or ESSD .
			• SSD : the ultra-high I/O type
			• SAS : the high I/O type
			• SATA : the common I/O type
			• GPSSD : the general purpose SSD type
			• ESSD : the extreme SSD type
			If the specified disk type is not available in the AZ, the disk will fail to create.
			NOTE Different ECS flavors support different disk types. The supported disk types will be displayed on the management console.
			NOTE
			 For details about disk types, see Disk Types and Performance.
disk_type	Yes	String	Specifies a disk type. The options are as follows:
			• DATA : indicates a data disk.
			• SYS : indicates a system disk.
			NOTE System disk encryption is not supported.
dedicated_sto rage_id	No	String	Specifies a DSS device ID for creating an ECS disk. NOTE Specify DSS devices for all disks in an AS configuration or not. If DSS devices are specified, all the data stores must belong to the same AZ, and the disk types supported by a DSS device for a disk must be the same as the volume_type value.

Parameter	Mandatory	Туре	Description
data_disk_ima ge_id	No	String	Specifies the ID of a data disk image used to export data disks of an ECS.
snapshot_id	No	String	Specifies the disk backup snapshot ID for restoring the system disk and data disks using a full-ECS backup when a full-ECS image is used. NOTE Each disk in an AS configuration must correspond to a disk backup in the full-ECS backup by snapshot_id .
metadata	No	<mark>metadat</mark> a object	Specifies the metadata for creating disks. For details, see Table 5-30 .

Table 5-30 metadata Field Description for Creating Disks

Parameter	Mandatory	Туре	Description
systemen crypted	No	String	Specifies encryption in metadata . The value can be 0 (encryption disabled) or 1 (encryption enabled). If this parameter does not exist, the disk will not be encrypted by default. NOTE
			System disk encryption is not supported.
systemcm kid	No	String	Specifies the CMK ID, which indicates encryption in metadata . This parameter is used with system_encrypted.
			 System disk encryption is not supported.
			 For details about how to obtain the CMK ID, see Querying the List of CMKs.

Parameter	Mandatory	Туре	Description
path	Yes	String	Specifies the path of the injected file.
			 For Linux OSs, specify the path, for example, /etc/ foo.txt, for storing the injected file.
			• For Windows, the injected file is automatically stored in the root directory of drive C. You only need to specify the file name, for example, foo . The file name contains only letters and digits.
content	Yes	String	Specifies the content of the injected file.
			The value must be the information after the content of the injected file is encoded using Base64.

 Table 5-31 personality field description

 Table 5-32 public_ip field description

Parameter	Mandatory	Туре	Description
eip	Yes	eip object	Specifies the EIP automatically assigned to the ECS. For details, see Table 5-33 .

Table 5-33 eip field description

Parameter	Mandatory	Туре	Description
ip_type	Yes	String	Specifies the EIP type.
			Enumerated values of the IP address type:
			 5_bgp: indicates the dynamic BGP.
			• 5_sbgp : indicates the static BGP.
bandwidth	Yes	bandwidt h object	Specifies the bandwidth of an IP address. For details, see Table 5-34 .

Parameter	Mandatory	Туре	Description
size	No	Integer	 Specifies the bandwidth (Mbit/s). The value range for bandwidth billed by duration is 1 to 2000 and that for bandwidth billed by traffic is 1 to 300. NOTE If share_type is set to PER, this parameter is mandatory. If share_type is set to WHOLE, this parameter is invalid. The specific range may vary depending on the configuration in each region. You can see the bandwidth range of each region on the management console. The minimum unit for bandwidth varies depending on the bandwidth range. The minimum unit is 1 Mbit/s if the allowed bandwidth size ranges from 0 to 300 Mbit/s (with 300 Mbit/s included). The minimum unit is 50 Mbit/s if the allowed bandwidth size ranges 300 Mbit/s to 1000 Mbit/s (with 1000 Mbit/s included). The minimum unit is 50 Mbit/s if the allowed bandwidth size ranges 300 Mbit/s to 1000 Mbit/s (with 1000 Mbit/s included).
share_type	Yes	String	Specifies the bandwidth sharing type. Enumerated values of the sharing type: • PER: dedicated • WHOLE: shared

Table 5-34 bandwidth field description

Parameter	Mandatory	Туре	Description
charging_mo de	No	String	Specifies the bandwidth billing mode.
			The options are as follows:
			 bandwidth: billed by bandwidth.
			• traffic: billed by traffic.
			If the parameter value is out of the preceding options, creating the ECS will fail.
			NOTE
			 If share_type is set to PER, this parameter is mandatory.
			 If share_type is set to WHOLE, this parameter is invalid.
id	No	String	Specifies the bandwidth ID. When using a shared bandwidth, you can select an existing shared bandwidth to create an EIP. For details, see . NOTE • If share_type is set to PER , this parameter is invalid.
			 If share_type is set to WHOLE, this parameter is mandatory.

Parameter	Manda tory	Туре	Description
admin_pass	No	String Specifies the initial login password the administrator account for logo in to an ECS using password authentication. The Linux administrator is root , and the Windows administrator is Administrator .	
			Password complexity requirements:
			• Consists of 8 to 26 characters.
			 Contains at least three of the following character types: uppercase letters, lowercase letters, digits, and special characters !@\$ %^=+[{}]:,./?
			 The password cannot contain the username or the username in reversed order.
			• The Windows ECS password cannot contain the username, the username in reversed order, or more than two consecutive characters in the username.

Table 5-35 metadata field description

Table 5-36 security_groups field description

Parameter	Mandatory	Туре	Description
id	Yes	String	Specifies the ID of the security group.

• Example request

This example shows how to create an AS configuration with name **as-config-tlzp**, image ID **627a1223-2ca3-46a7-8d5f-7aef22c74ee6**, flavor ID **s3.xlarge**. **4**, 40 GB SATA system disk, and SSH key name **100vm_key**. POST https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_configuration

```
{
    "scaling_configuration_name": "as-config-tlzq",
    "instance_config": {
        "flavorRef": "s3.xlarge.4",

Returned Value	Description
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.2.2 Querying AS configurations

Function

This API is used to query AS configurations based on search criteria. The results are displayed by page.

- Search criteria can be the AS configuration name, image ID, start line number, and number of records.
- If no search criteria are specified, a maximum of 20 AS configurations can be queried for a tenant by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_configuration

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. AS configurations can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_configur ation_name	No	String	Specifies the AS configuration name. Supports fuzzy search.
image_id	No	String	Specifies the image ID. It is same as imageRef .

Table 5-38 Parameter description

Parameter	Mandatory	Туре	Description
start_number	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value range is 0 to 100.

Request Message

- Request parameters None
- Example request

This example shows how to query the AS configurations with image ID **37ca2b35-6fc7-47ab-93c7-900324809c5c**.

Response Message

• Response parameters

Table 5-39 Response parameters

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start line number.
limit	Integer	Specifies the number of query records.
scaling_config urations	Array of scaling_ configu rations objects	Specifies the AS configuration list.

Table 5-40 scaling_configurations field description

Parameter	Туре	Description
scaling_config uration_id	String	Specifies the AS configuration ID. This parameter is globally unique.
tenant	String	Specifies the tenant ID.

Parameter	Туре	Description
scaling_config uration_name	String	Specifies the AS configuration name. Supports fuzzy search.
instance_conf ig	instanc e_confi g object	Specifies the information about instance configurations.
create_time	String	Specifies the time when AS configurations are created. The time format complies with UTC.
scaling_group _id	String	Specifies the ID of the AS group to which the AS configuration is bound.

 Table 5-41 instance_config field description

Parameter	Туре	Description
flavorRef	String	Specifies the ECS flavor ID.
imageRef	String	Specifies the image ID. It is same as image_id .
disk	Array of <mark>disk</mark> objects	Specifies the disk group information.
key_name	String	Specifies the name of the SSH key pair used to log in to the ECS.
key_fingerprin t	String	Specifies the fingerprint of the SSH key pair used to log in to the ECS.
instance_nam e	String	This parameter is reserved.
instance_id	String	This parameter is reserved.
adminPass	String	This parameter is reserved.
personality	Array of persona lity objects	Specifies information about the injected file.
public_ip	public_i p object	Specifies the EIP of the ECS.
user_data	String	Specifies the Cloud-Init user data, which is encoded using Base64.
metadata	metada ta object	Specifies the ECS metadata. For details, see Table 5-48 .

Parameter	Туре	Description	
security_grou ps	Array of security _groups objects	Specifies the security group information.	
server_group_ id	String	Specifies the ECS group ID.	
tenancy	String	Specifies that ECSs are created on DeHs.	
dedicated_hos t_id	String	Specifies the ID of a DeH.	
market_type	String	Specifies a billing mode for an ECS, which can be spot pricing or pay-per-use.	
multi_flavor_ priority_policy	String	Specifies the priority policy used when there are multiple flavors and instances to be created using an AS configuration.	

 Table 5-42 disk field description

Parameter	Туре	Description
size	Integer	Specifies the disk size. The unit is GB.
volume_type	String	Specifies the disk type.
disk_type	String	Specifies whether the disk is a system disk or a data disk. DATA indicates a data disk. SYS indicates a system disk.
dedicated_sto rage_id	String	Specifies the ID of the DSS device for the disk.
data_disk_im age_id	String	Specifies the ID of the data disk image for creating a data disk.
snapshot_id	String	Specifies the disk backup snapshot ID.
metadata	<mark>metadat</mark> a object	Specifies the metadata for creating disks. For details, see Table 5-43 .

Table 5-45 metadata Field Description for Creating Disks				
Parameter	Туре	Description		
systemen crypted	String	Specifies encryption in metadata . The value can be 0 (encryption disabled) or 1 (encryption enabled).		
		If this parameter does not exist, the disk will not be encrypted by default.		
systemcm kid	String	Specifies the CMK ID, which indicates encryption in metadata . This parameter is used with systemencrypted .		
		NOTE For details about how to obtain the CMK ID, see Querying the List of CMKs.		

Table 5-43 metadata	Field	Descrip	tion for	Creating	Disks

Parameter	Туре	Description
eip	<mark>eip</mark> object	Specifies the automatically assigned EIP.

Table 5-46 eip field description

Parameter	Туре	Description
ip_type	String	Specifies the IP address type.
bandwidth	bandwi dth object	Specifies the bandwidth of an IP address.

Parameter	Туре	Description
size	Integer	Specifies the bandwidth (Mbit/s).
share_type	String	 Specifies the bandwidth sharing type. Enumerated values of the sharing type: PER: dedicated WHOLE: shared
charging_mo de	String	Specifies the bandwidth billing mode. traffic: billed by traffic.
id	String	Specifies the bandwidth ID. You can specify a shared bandwidth when applying for an EIP with the bandwidth whose type is set to WHOLE .

Table 5-47 bandwidth field description

Table 5-48 metadata field description

Parameter	Туре	Description	
admin_pass	String	Specifies the password of the Administrator account for a Windows ECS.	

Table 5-49 security_groups field description

Parameter	Туре	Description
id	String	Specifies the security group ID.

403 Forbidden	You are forbidden to access the requested page.
404 Not Found	The server could not find the requested page.

Returned Value	Description
405 Method Not Allowed	You are not allowed to use the method specified in the request.
406 Not Acceptable	The response generated by the server could not be accepted by the client.
407 Proxy Authentication Required	You must use the proxy server for authentication to process the request.
408 Request Timeout	The request timed out.
409 Conflict	The request could not be processed due to a conflict.
500 Internal Server Error	Failed to complete the request because of an internal service error.
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.2.3 Querying an AS Configuration

Function

This interface is used to query details about an AS configuration by configuration ID.

URI

GET /autoscaling-api/v1/{project_id}/scaling_configuration/ {scaling_configuration_id}

Table 5-50 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Parameter	Mandatory	Туре	Description
scaling_configurat ion_id	Yes	String	Specifies an AS configuration ID, which is unique globally. For details, see Querying an AS Configuration .

Request Message

- Request parameters
 - None
- Example request
 - This example shows how to query details about the AS configuration with ID **6afe46f9-7d3d-4046-8748-3b2a1085ad86**.

GET https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_configuration/ 6afe46f9-7d3d-4046-8748-3b2a1085ad86

Response Message

• Response parameters

Table 5-51 Response parameters

Parameter	Туре	Description
scaling_configuratio n	scaling_configuratio ns object	Provides AS configuration details.

Table 5-52 scaling_configurations field description

Parameter	Туре	Description
scaling_config uration_id	String	Specifies the AS configuration ID. This parameter is globally unique.
tenant	String	Specifies the tenant ID.
scaling_config uration_name	String	Specifies the AS configuration name. Supports fuzzy search.
instance_conf ig	instanc e_confi g object	Specifies the information about instance configurations.
create_time	String	Specifies the time when AS configurations are created. The time format complies with UTC.
scaling_group _id	String	Specifies the ID of the AS group to which the AS configuration is bound.

Parameter	Туре	Description
flavorRef	String	Specifies the ECS flavor ID.
imageRef	String	Specifies the image ID. It is same as image_id .
disk	Array of <mark>disk</mark> objects	Specifies the disk group information.
key_name	String	Specifies the name of the SSH key pair used to log in to the ECS.
key_fingerprin t	String	Specifies the fingerprint of the SSH key pair used to log in to the ECS.
instance_nam e	String	This parameter is reserved.
instance_id	String	This parameter is reserved.
adminPass	String	This parameter is reserved.
personality	Array of persona lity objects	Specifies information about the injected file.
public_ip	public_i p object	Specifies the EIP of the ECS.
user_data	String	Specifies the Cloud-Init user data, which is encoded using Base64.
metadata	metada ta object	Specifies the ECS metadata. For details, see Table 5-48 .
security_grou ps	Array of security _groups objects	Specifies the security group information.
server_group_ id	String	Specifies the ECS group ID.
tenancy	String	Specifies that ECSs are created on DeHs.
dedicated_hos t_id	String	Specifies the ID of a DeH.
market_type	String	Specifies a billing mode for an ECS, which can be spot pricing or pay-per-use.

Table 5-53 instance_config field description
--

Parameter	Туре	Description
multi_flavor_ priority_policy	String	Specifies the priority policy used when there are multiple flavors and instances to be created using an AS configuration.

Table 5-54 disk field description

Parameter	Туре	Description
size	Integer	Specifies the disk size. The unit is GB.
volume_type	String	Specifies the disk type.
disk_type	String	Specifies whether the disk is a system disk or a data disk. DATA indicates a data disk. SYS indicates a system disk.
dedicated_sto rage_id	String	Specifies the ID of the DSS device for the disk.
data_disk_im age_id	String	Specifies the ID of the data disk image for creating a data disk.
snapshot_id	String	Specifies the disk backup snapshot ID.
metadata	<mark>metadat</mark> a object	Specifies the metadata for creating disks. For details, see Table 5-43 .

 Table 5-55 personality field description

Parameter	Туре	Description
path	String	Specifies the path of the injected file.
content	String	Specifies the content of the file to be injected. The file content is encoded using Base64.

Table 5-56 public_ip field description

Parameter	Туре	Description
eip	<mark>eip</mark> object	Specifies the automatically assigned EIP.

Table 5-57 eip field description

Parameter	Туре	Description
ip_type	String	Specifies the IP address type.
bandwidth	bandwidth object	Specifies the bandwidth of an IP address.

Table 5-58 bandwidth field description

Parameter	Туре	Description
size	Integer	Specifies the bandwidth (Mbit/s).
share_type	String	 Specifies the bandwidth sharing type. Enumerated values of the sharing type: PER: dedicated WHOLE: shared
charging_mo de	String	Specifies the bandwidth billing mode. traffic: billed by traffic.
id	String	Specifies the bandwidth ID. You can specify a shared bandwidth when applying for an EIP with the bandwidth whose type is set to WHOLE .

Table 5-59 metadata field description

Parameter	Туре	Description
admin_pass	String	Specifies the password of the Administrator account for a Windows ECS.

Table 5-60 security_groups field description

Parameter	Туре	Description
id	String	Specifies the security group ID.

Returned Value	Description	
504 Gateway Timeout	A gateway timeout error occurred.	

See Error Codes.

5.3 Instances

5.3.1 Querying Instances in an AS Group

Function

This API is used to query instances in an AS group based on search criteria. The results are displayed by page.

- Search criteria can be the instance lifecycle status, instance health status, instance protection status, start line number, and number of records in the AS group.
- If no search criteria are specified, a maximum of 20 instances in an AS group can be queried by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_group_instance/{scaling_group_id}/list

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. Instances in an AS group can be searched by all optional parameters in the following table. For details, see the example request.

 Table 5-64
 Parameter description

Parameter	Mandator y	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_id	Yes	String	Specifies the AS group ID.

Parameter	Mandator y	Туре	Description
life_cycle_state	No	String	Specifies the instance lifecycle status in the AS group.
			• INSERVICE : The instance is enabled.
			 PENDING: The instance is being added to the AS group.
			 PENDING_WAIT: The instance is waiting to be added to the AS group.
			 REMOVING: The instance is being removed from the AS group.
			 REMOVING_WAIT: The instance is waiting to be removed from the AS group.
			• STANDBY : The instance is in standby state.
			• ENTERING_STANDBY: The instance is entering the standby state.
health_status	No	String	Specifies the instance health status.
			• INITIALIZING : The instance is initializing.
			• NORMAL : The instance is normal.
			• ERROR : The instance is abnormal.
protect_from_scaling_do wn	No	String	Specifies the instance protection status.
			• true : Instance protection is enabled.
			• false : Instance protection is disabled.
start_number	No	Intege r	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .

Parameter	Mandator y	Туре	Description
limit	No	lntege r	Specifies the number of query records. The default value is 20 . The value ranges from 0 to 100.

Request Message

- **Request parameters**
 - None
- Example request

This example shows how to query enabled, healthy instances in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**. GET https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_group_instance/e5d27f5c-dd76-4a61-

b4bc-a67c5686719a/list?life_cycle_state=INSERVICE&health_status=NORMAL

Response Message

Response parameters

Table 5-6	Response	parameters
-----------	----------	------------

Parameter	Тур е	Description
total_number	lnte ger	Specifies the total number of query records.
start_number	lnte ger	Specifies the start line number.
limit	lnte ger	Specifies the maximum number of resources to be queried.
scaling_group_insta nces	Arr ay of scal ing _gr oup _ins tan ces obj ects	Specifies details about the instances in the AS group.

Parameter	Тур е	Description		
instance_id	Strin g	Specifies the instance ID.		
instance_name	Strin g	Specifies the instance name.		
scaling_group_id	Strin g	Specifies the ID of the AS group to which the instance belongs.		
scaling_group_nam e	Strin g	Specifies the name of the AS group to which the instance belongs.		
		Supports fuzzy search.		
life_cycle_state	Strin g	Specifies the instance lifecycle status in the AS group.		
		• INSERVICE : The instance is enabled.		
		 PENDING: The instance is being added to the AS group. 		
		 PENDING_WAIT: The instance is waiting to be added to the AS group. 		
		• REMOVING : The instance is being removed from the AS group.		
		 REMOVING_WAIT: The instance is waiting to be removed from the AS group. 		
		• STANDBY : The instance is in standby state.		
		• ENTERING_STANDBY: The instance is entering the standby state.		
health_status	Strin	Specifies the instance health status.		
	g	• INITIALIZING : The instance is being initialized.		
		• NORMAL: The instance is functional.		
		• ERROR : The instance is faulty.		
scaling_configurati on_name	Strin g	Specifies the AS configuration name.		
scaling_configurati	Strin	Specifies the AS configuration ID.		
on_id	g	If the returned value is not empty, the instance is an ECS automatically created in a scaling action.		
		If the returned value is empty, the instance is an ECS manually added to the AS group.		

Parameter	Тур е	Description
create_time	Strin g	Specifies the time when the instance is added to the AS group. The time format complies with UTC.
protect_from_scalin g_down	Bool ean	Specifies the instance protection status.

5.3.2 Removing an Instance from an AS Group

Function

This interface is used to remove a specified instance from an AS group.

- You can remove instances only in **INSERVICE** state and only when the number of instances after the removal is greater than or equal to the minimum number of instances allowed.
- You can remove instances from an AS group only when no scaling action is in progress.

NOTE

Manually added instances are only be removed from an AS group but are not deleted.

URI

DELETE /autoscaling-api/v1/{project_id}/scaling_group_instance/{instance_id}

Table 5-67 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Parameter	Mandatory	Туре	Description
instance_id	Yes	String	Specifies the instance ID. For details, see Querying Instances in an AS Group .
instance_delet e	No	String	Specifies whether an instance is deleted when it is removed from the AS group. Options:
			 no (default): The instance will not be deleted.
			• yes : The instance will be deleted.

Request Message

• Request parameters

None

503 Service Unavailable	Failed to complete the request because the system is unavailable.		
504 Gateway Timeout	A gateway timeout error occurred.		

See Error Codes.

5.3.3 Batch Managing Instances

Function

• Add or remove instances to or from an AS group in batches.

NOTE

If instances are manually added to an AS group, they are removed from the AS group but are not deleted.

- Configure instance protection or cancel the configuration for the instances in an AS group in batches.
- Set the standby mode or cancel the setting for the instances in an AS group in batches.

NOTE

- A batch operation can be performed on a maximum of 50 instances at a time. After instances are added to an AS group, the number of instances in the AS group cannot be greater than the maximum number of instances. After instances are removed from an AS group, the number of instances in the AS group cannot be less than the minimum number of instances.
- Instances can be added to an AS group only when the AS group is in the **INSERVICE** state and has no scaling action in progress.
- You can remove instances from an AS group only when no scaling action is in progress.
- To add instances to an AS group, ensure that the AZ of the instances falls within that of the AS group.
- Only instances in **INSERVICE** state can be removed from an AS group. Instance protection can be enabled or disabled only for **INSERVICE** instances.
- When the capacity of an AS group is automatically decreased, the instances with instance protection enabled will not be removed from the AS group.
- If the listener bound to the instance to be removed is the same as the listener in the AS group, the listener will be unbound from the instance. If the listener bound to the instance to be removed is different from the listener in the AS group, the binding relationship between the listener and instance will be reserved.

URI

POST /autoscaling-api/v1/{project_id}/scaling_group_instance/{scaling_group_id}/ action

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_i d	Yes	String	Specifies the AS group ID.

Request Message

• Request parameters

Table 5-69 Request parameters

Parameter	Mandatory	Туре	Description
instances_id	Yes	Array of strings	Specifies the ECS ID.

Parameter	Mandatory	Туре	Description
instance_delete	No	String	Specifies whether to delete an instance when it is removed from an AS group. Options:
			 no (default): The instance will not be deleted.
			• yes : The instance will be deleted. Manually added instances are removed from an AS group but are not deleted.
			This parameter takes effect only when the action is set to REMOVE .
instance_appen d	No	String	Specifies whether to add new instances when certain existing instances enter standby mode.
			Options:
			• no (default): No new instances will be added.
			• yes : New instances will be added.
			This parameter takes effect only when action is set to ENTER_STANDBY .

Parameter	Mandatory	Туре	Description
action	Yes	String	Specifies an action to be performed on instances in batches. The options are as follows:
			• ADD : adds instances to the AS group.
			 REMOVE: removes instances from the AS group.
			• PROTECT : enables instance protection.
			• UNPROTECT: disables instance protection.
			• ENTER_STANDBY: sets instances to standby mode.
			• EXIT_STANDBY: cancels standby mode for instances.

• Example request

This example shows how to remove and delete instances with IDs instance_id_1 and instance_id_2 from the AS group with ID e5d27f5cdd76-4a61-b4bc-a67c5686719a in a batch.

POST https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_group_instance/e5d27f5c-dd76-4a61b4bc-a67c5686719a/action

```
{
    "action": "REMOVE",
    "instances_id": [
        "instance_id_1",
        "instance_id_2"
    ],
    "instance_delete": "yes"
}
```

See Error Codes.

5.4 AS Policies

5.4.1 Creating an AS Policy

Function

This API is used to create an AS policy.

- An AS policy defines whether to increase or decrease the number of instances in an AS group. If the number and the expected number of instances in an AS group are different due to the execution of the AS policy, AS automatically adjusts the number of instances to the expected.
- AS supports the following policies: alarm-triggered policy, periodic policy, and scheduled policy.
- In the execution of the AS policy, you can set the number of instances to be scaled or perform a scaling action according to a percentage specified in the AS policy.

URI

POST /autoscaling-api/v1/{project_id}/scaling_policy

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Request Message

• Request parameters

 Table 5-71
 Request parameters

Parameter	Mandatory	Туре	Description
scaling_policy_ name	Yes	String	Specifies the AS policy name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.
scaling_group_ id	Yes	String	Specifies the AS group ID, which can be obtained using the API for querying AS groups. For details, see Querying AS Groups .

Parameter	Mandatory	Туре	Description
scaling_policy_ type	Yes	String	 Specifies the AS policy type. ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by an alarm. SCHEDULED (corresponding to scheduled_policy): indicates that the scaling action is triggered as scheduled. RECURRENCE (corresponding to scheduled_policy): indicates that the scaling action is triggered as scheduled.
alarm_id	No	String	Specifies the alarm rule ID. This parameter is mandatory when scaling_policy_type is set to ALARM. After this parameter is specified, the value of scheduled_policy does not take effect. After you create an alarm policy, the system automatically adds an alarm triggering activity of the autoscaling type to the alarm_actions field in the alarm rule specified by the parameter value.
scheduled_poli cy	No	schedul ed_polic y object	Specifies the periodic or scheduled AS policy. This parameter is mandatory when scaling_policy_type is set to SCHEDULED or RECURRENCE. After this parameter is specified, the value of alarm_id does not take effect. For details, see Table 5-72.
scaling_policy_ action	No	scaling_ policy_a ction object	Specifies the scaling action of the AS policy. For details, see Table 5-73 .
cool_down_tim e	No	Integer	Specifies the cooldown period (in seconds). The value ranges from 0 to 86400 and is 300 by default.

Deverseter	Parameter Mandatory Type Description			
Parameter	Mandatory	Туре	Description	
launch_time	Yes	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.	
			 If scaling_policy_type is set to SCHEDULED, the time format is YYYY-MM- DDThh:mmZ. 	
			 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm. 	
recurrence_ty pe	No	String	Specifies the periodic triggering type. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.	
			 Daily: indicates that the scaling action is triggered once a day. 	
			 Weekly: indicates that the scaling action is triggered once a week. 	
			• Monthly : indicates that the scaling action is triggered once a month.	

Table 5-72 scheduled_policy field description

Parameter	Mandatory	Туре	Description
recurrence_va lue	No	String	Specifies the day when a periodic scaling action is triggered. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			 If recurrence_type is set to Daily, the value is null, indicating that the scaling action is triggered once a day.
			 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.
			• If recurrence_type is set to Monthly, the value ranges from 1 to 31. The digits refer to the dates in each month and separated by a comma, such as 1,10,13,28.
start_time	No	String	Specifies the start time of the scaling action triggered periodically. The time format complies with UTC. The default value is the local time. The time format is YYYY-MM- DDThh:mmZ .
end_time	No	String	Specifies the end time of the scaling action triggered periodically. The time format complies with UTC. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			When the scaling action is triggered periodically, the end time cannot be earlier than the current and start time. The time format is YYYY-MM- DDThh:mmZ .

Parameter	Mandatory	Туре	Description
operation	No	String	Specifies the operation to be performed. The default operation is ADD .
			• ADD : adds specified number of instances to the AS group.
			• REMOVE/REDUCE : removes or reduces specified number of instances from the AS group.
			• SET : sets the number of instances in the AS group.
instance_num ber	No	Integer	Specifies the number of instances to be operated. The default number is 1 . The value range is as follows for a default quota:
			• If operation is set to SET , the value ranges from 0 to 300.
			 If operation is set to ADD, REMOVE, or REDUCE, the value ranges from 1 to 300.
			NOTE Either instance_number or instance_percentage is required.
instance_perc entage	No	Integer	Specifies the percentage of instances to be operated. You can increase, decrease, or set the number of instances in an AS group to the specified percentage of the current number of instances. If operation is set to ADD , REMOVE or REDUCE , the value is an integer from 1 to 20000. If operation is set to SET , the value is an integer from 0 to 20000.
			If neither instance_number nor instance_percentage is specified, the number of instances to be operated is 1.
			Either instance_number or instance_percentage is required.

5.4.2 Creating an AS Policy (V2)

Function

This API is used to create an AS policy for an AS group or bandwidth.

The difference between the V2 and V1 APIs for creating an AS policy is that V2 supports creating an AS policy for adjusting bandwidth and differentiating scaling resources by their types.

URI

POST /autoscaling-api/v2/{project_id}/scaling_policy

Table 5-75 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Request Message

• Request parameters

Table 5-76 Request parameters

Parameter	Mandatory	Туре	Description
scaling_polic y_name	Yes	String	Specifies the AS policy name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.
scaling_resou rce_id	Yes	String	 Specifies the scaling resource ID, which is the unique ID of an AS group or bandwidth. If scaling_resource_type is set to SCALING_GROUP, this parameter indicates the unique AS group ID. If scaling_resource_type is set to BANDWIDTH, this parameter indicates the unique bandwidth ID. NOTE AS cannot scale yearly/monthly bandwidths.
scaling_resou rce_type	Yes	String	 Specifies the scaling resource type. AS group: SCALING_GROUP Bandwidth: BANDWIDTH
scaling_polic y_type	Yes	String	 Specifies the AS policy type. ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by an alarm. SCHEDULED (corresponding to scheduled_policy): indicates that the scaling action is triggered as scheduled. RECURRENCE (corresponding to scheduled_policy): indicates that the scaling action is triggered periodically. INTERVAL_ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by a refined scaling policy.

Parameter	Mandatory	Туре	Description
alarm_id	No	String	Specifies the alarm rule ID. This parameter is mandatory when scaling_policy_type is set to ALARM. After this parameter is specified, the value of scheduled_policy does not take effect. After you create an alarm policy, the system automatically adds an alarm triggering activity of the autoscaling type to the alarm_actions field in the alarm rule specified by the parameter value. You can obtain the parameter value by querying Cloud Eye alarm rules.
scheduled_p olicy	No	schedule d_policy object	Specifies the periodic or scheduled AS policy. This parameter is mandatory when scaling_policy_type is set to SCHEDULED or RECURRENCE. After this parameter is specified, the value of alarm_id does not take effect. For details, see Table 5-77.
scaling_polic y_action	No	scaling_ policy_a ction object	Specifies the scaling action of the AS policy. For details, see Table 5-78 .
cool_down_ti me	No	Integer	Specifies the cooldown period (in seconds). The value ranges from 0 to 86400 and is 300 by default.
description	No	String	Specifies the description of the AS policy. The value can contain 1 to 256 characters.

Parameter	Mandatory	Туре	Description
launch_time	Yes	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.
			 If scaling_policy_type is set to SCHEDULED, the time format is YYYY-MM- DDThh:mmZ.
			 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm.
recurrence_ty pe	No	String	Specifies the periodic triggering type. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			 Daily: indicates that the scaling action is triggered once a day.
			 Weekly: indicates that the scaling action is triggered once a week.
			• Monthly : indicates that the scaling action is triggered once a month.

Table 5-77 scheduled_policy	y field description
-----------------------------	----------------------------

Parameter	Mandatory	Туре	Description
recurrence_va lue	No	String	Specifies the day when a periodic scaling action is triggered. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			• If recurrence_type is set to Daily , the value is null , indicating that the scaling action is triggered once a day.
			 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.
			 If recurrence_type is set to Monthly, the value ranges from 1 to 31. The digits refer to the dates in each month and separated by a comma, such as 1,10,13,28. NOTE When recurrence_type is set to Daily, this parameter does not take effect.
start_time	No	String	Specifies the start time of the scaling action triggered periodically. The time format complies with UTC. The default value is the local time. The time format is YYYY-MM-
			DDThh:mmZ.
end_time	No	String	Specifies the end time of the scaling action triggered periodically. The time format complies with UTC. This parameter is mandatory when scaling_policy_type is set to RECURRENCE . When the scaling action is triggered periodically, the end time cannot be earlier than the current and start time.
			The time format is YYYY-MM- DDThh:mmZ .

Parameter	Mandatory	Туре	Description
operation	No	String	Specifies the operation to be performed. The default operation is ADD .
			• If scaling_resource_type is set to SCALING_GROUP, the following operations are supported:
			 ADD: indicates adding instances.
			 REMOVE/REDUCE: indicates removing or reducing instances.
			 SET: indicates setting the number of instances to a specified value.
			• If scaling_resource_type is set to BANDWIDTH, the following operations are supported:
			 ADD: indicates adding instances.
			 REDUCE: indicates reducing instances.
			 SET: indicates setting the number of instances to a specified value.

Table 5-78 scaling_policy_action field description

Parameter	Mandatory	Туре	Description
size	No	Integer	Specifies the operation size. The value is an integer from 0 to 300. The default value is 1 . This parameter can be set to 0 only when operation is set to SET .
			 If scaling_resource_type is set to SCALING_GROUP, this parameter indicates the number of instances. The value is an integer from 0 to 300 and the default value is 1.
			• If scaling_resource_type is set to BANDWIDTH, this parameter indicates the bandwidth (Mbit/s). The value is an integer from 1 to 300 and the default value is 1.
			• If scaling_resource_type is set to SCALING_GROUP, either size or percentage can be set.
percentage	No	Integer	Specifies the percentage of instances to be operated. If operation is set to ADD , REMOVE , or REDUCE , the value of this parameter is an integer from 1 to 20000. If operation is set to SET , the value is an integer from 0 to 20000.
			• If scaling_resource_type is set to SCALING_GROUP, either size or percentage can be set. If neither size nor percentage is set, the default value of size is 1.
			 If scaling_resource_type is set to BANDWIDTH, percentage is unavailable.

Parameter	Mandatory	Туре	Description
limits	No	Integer	Specifies the operation restrictions.
			If scaling_resource_type is set to BANDWIDTH and operation is not SET, this parameter takes effect and the unit is Mbit/s.
			• If operation is set to ADD , this parameter indicates the maximum bandwidth allowed.
			 If operation is set to REDUCE, this parameter indicates the minimum bandwidth allowed.

• Example request

This example shows how to create an alarm policy named **hth_aspolicy_1** with the following configurations: The alarm rule ID is **al1513822380493GvUKZwA8**; when the alarm threshold is reached according to the alarm rule, the bandwidth with ID **8ade64b5**-**d685-40b8-8582-4ce306ea37a6** will be increased by 1 Mbit/s until the bandwidth reaches 10 Mbit/s. POST https://{Endpoint}/autoscaling-api/v2/{project_id}/scaling_policy {

5.4.3 Modifying an AS Policy

Function

This API is used to modify a specified AS policy.

URI

PUT /autoscaling-api/v1/{project_id}/scaling_policy/{scaling_policy_id}

 Table 5-80
 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_policy_i d	Yes	String	Specifies an AS policy ID. For details, see Querying AS Policies Bound to an AS Group .

Request Message

• Request parameters

Table 5-81 Request parameters

Parameter	Mandatory	Туре	Description
scaling_policy _name	No	String	Specifies the AS policy name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.
scaling_policy _type	No	String	 Specifies the AS policy type. ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by an alarm. SCHEDULED (corresponding to scheduled_policy): indicates that the scaling action is triggered as scheduled. RECURRENCE (corresponding to scheduled_policy): indicates that the scaling action is triggered periodically.

Parameter	Mandatory	Туре	Description
alarm_id	No	String	Specifies the alarm rule ID. This parameter is mandatory when scaling_policy_type is set to ALARM. After this parameter is specified, the value of scheduled_policy does not take effect. After you modify an alarm policy, the system automatically adds an alarm triggering activity of the autoscaling type to the alarm_actions field in the alarm rule specified by the parameter value.
			You can obtain the parameter value by querying Cloud Eye alarm rules.
scheduled_pol icy	No	schedul ed_polic y object	Specifies the periodic or scheduled AS policy. This parameter is mandatory when scaling_policy_type is set to SCHEDULED or RECURRENCE. After this parameter is specified, the value of alarm_id does not take effect. For details, see Table 5-82.
scaling_policy _action	No	scaling_ policy_a ction object	Specifies the scaling action of the AS policy. For details, see Table 5-83 .
cool_down_ti me	No	Integer	Specifies the cooldown period (in seconds). The value ranges from 0 to 86400.

Parameter	Mandatory	Туре	Description
launch_time	Yes	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.
			 If scaling_policy_type is set to SCHEDULED, the time format is YYYY-MM-DDThh:mmZ.
			 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm.
recurrence_ty pe	No	String	Specifies the periodic triggering type. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			 Daily: indicates that the scaling action is triggered once a day.
			 Weekly: indicates that the scaling action is triggered once a week.
			• Monthly : indicates that the scaling action is triggered once a month.
recurrence_va lue	No	String	Specifies the day when a periodic scaling action is triggered. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			 If recurrence_type is set to Daily, the value is null, indicating that the scaling action is triggered once a day.
			 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.
			 If recurrence_type is set to Monthly, the value ranges from 1 to 31. The digits refer to the dates in each month and separated by a comma, such as 1,10,13,28.

Parameter	Mandatory	Туре	Description
start_time	No	String	Specifies the start time of the scaling action triggered periodically. The time format complies with UTC. The time format is YYYY-MM- DDThh:mmZ .
end_time	No	String	Specifies the end time of the scaling action triggered periodically. The time format complies with UTC. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			When the scaling action is triggered periodically, the end time cannot be earlier than the current and start time.
			The time format is YYYY-MM- DDThh:mmZ.

Table 5-83 scaling_policy_action field description

Parameter	Mandatory	Туре	Description
operation	No	String	Specifies the operation to be performed. The default operation is ADD .
			• ADD : adds specified number of instances to the AS group.
			• REMOVE/REDUCE : removes or reduces specified number of instances from the AS group.
			• SET : sets the number of instances in the AS group.

Parameter	Mandatory	Туре	Description
instance_num ber	No	Integer	 Specifies the number of instances to be operated. The default number is 1. The value range is as follows for a default quota: If operation is set to SET, the value ranges from 0 to 300.
			 If operation is set to ADD, REMOVE, or REDUCE, the value ranges from 1 to 300.
			NOTE Either instance_number or instance_percentage is required.
instance_perc entage	No	Integer	Specifies the percentage of instances to be operated. You can increase, decrease, or set the number of instances in an AS group to the specified percentage of the current number of instances. If operation is set to ADD , REMOVE or REDUCE , the value is an integer from 1 to 20000. If operation is set to SET , the value is an integer from 0 to 20000.
			If neither instance_number nor instance_percentage is specified, the number of instances to be operated is 1.
			Either instance_number or instance_percentage is required.

• Example request

This example shows how to modify the periodic AS policy with ID **0h327883-324n-4dzd-9c61-68d03ee191dd** for an AS group with two instances. The modification is as follows: The AS policy name is changed to **policy_01**, and the modification is executed at 16:00 every day from 2016-01-08T17:31Z through 2016-02-08T17:31Z.

5.4.4 Modifying an AS Policy (V2)

Function

This API is used to modify a specified AS policy.

The difference between the V2 and V1 APIs for modifying an AS policy is that V2 supports modifying a scaling resource type.

URI

PUT /autoscaling-api/v2/{project_id}/scaling_policy/{scaling_policy_id}

Table 5-84 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_policy_ id	Yes	String	Specifies an AS policy ID. For details, see Querying AS Policies Bound to a Scaling Resource (V2).

Request Message

• Request parameters

Table 5-85 Request parameters

Parameter	Mandatory	Туре	Description
scaling_policy _name	No	String	Specifies the AS policy name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 64 characters.

Parameter	Mandatory	Туре	Description
scaling_policy _type	No	String	 Specifies the AS policy type. ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by an alarm. SCHEDULED (corresponding to scheduled_policy): indicates that the scaling action is triggered as scheduled. RECURRENCE (corresponding to scheduled_policy): indicates that the scaling action is triggered periodically. INTERVAL_ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by a refined scaling policy.
scaling_resour ce_id	No	String	Specifies the scaling resource ID, which is the ID of a unique AS group or bandwidth.
scaling_resour ce_type	No	String	Specifies the scaling resource type. • AS group: SCALING_GROUP • Bandwidth: BANDWIDTH
alarm_id	No	String	Specifies the alarm rule ID. This parameter is mandatory when scaling_policy_type is set to ALARM. After this parameter is specified, the value of scheduled_policy does not take effect. After you modify an alarm policy, the system automatically adds an alarm triggering activity of the autoscaling type to the alarm_actions field in the alarm rule specified by the parameter value. You can obtain the parameter value by querying Cloud Eye alarm rules.

Parameter	Mandatory	Туре	Description
scheduled_pol icy	No	schedul ed_poli cy object	Specifies the periodic or scheduled AS policy. This parameter is mandatory when scaling_policy_type is set to SCHEDULED or RECURRENCE. After this parameter is specified, the value of alarm_id does not take effect. For details, see Table 5-86.
scaling_policy _action	No	scaling _policy _action object	Specifies the scaling action of the AS policy. For details, see Table 5-87 .
cool_down_ti me	No	Integer	Specifies the cooldown period (in seconds). The value ranges from 0 to 86400.
description	No	String	Specifies the description of the AS policy. The value can contain 1 to 256 characters.

Table 5-86 scheduled_policy field description

Parameter	Mandatory	Туре	Description
launch_time	Yes	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.
			 If scaling_policy_type is set to SCHEDULED, the time format is YYYY-MM- DDThh:mmZ.
			 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm.

Parameter	Mandatory	Туре	Description
recurrence_ty pe	No	String	Specifies the periodic triggering type. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			• Daily : indicates that the scaling action is triggered once a day.
			• Weekly: indicates that the scaling action is triggered once a week.
			• Monthly : indicates that the scaling action is triggered once a month.
recurrence_va lue	No	String	Specifies the day when a periodic scaling action is triggered. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			• If recurrence_type is set to Daily, the value is null, indicating that the scaling action is triggered once a day.
			 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.
			• If recurrence_type is set to Monthly, the value ranges from 1 to 31. The digits refer to the dates in each month and separated by a comma, such as 1,10,13,28.
start_time	No	String	Specifies the start time of the scaling action triggered periodically. The time format complies with UTC.
			The time format is YYYY-MM- DDThh:mmZ .

Parameter	Mandatory	Туре	Description
end_time	No	String	Specifies the end time of the scaling action triggered periodically. The time format complies with UTC. This parameter is mandatory when scaling_policy_type is set to RECURRENCE.
			When the scaling action is triggered periodically, the end time cannot be earlier than the current and start time. The time format is YYYY-MM- DDThh:mmZ .

Table 5-87	' scaling	_policy_	action	field	description
------------	-----------	----------	--------	-------	-------------

Parameter	Mandatory	Туре	Description
operation	No	String	Specifies the operation to be performed. The default operation is ADD .
			• If scaling_resource_type is set to SCALING_GROUP, the following operations are supported:
			 ADD: indicates adding instances.
			 REMOVE/REDUCE: indicates removing or reducing instances.
			 SET: indicates setting the number of instances to a specified value.
			 If scaling_resource_type is set to BANDWIDTH, the following operations are supported:
			 ADD: indicates adding instances.
			 REDUCE: indicates reducing instances.
			 SET: indicates setting the number of instances to a specified value.

Parameter	Mandatory	Туре	Description
size	No	Integer	 Specifies the operation size. The value is an integer from 0 to 300. The default value is 1. This parameter can be set to 0 only when operation is set to SET. If scaling_resource_type is set to SCALING_GROUP, this
			parameter indicates the number of instances. The value is an integer from 0 to 300 and the default value is 1 .
			• If scaling_resource_type is set to BANDWIDTH, this parameter indicates the bandwidth (Mbit/s). The value is an integer from 1 to 300 and the default value is 1.
			 If scaling_resource_type is set to SCALING_GROUP, either size or percentage can be set.
percentage	No	Integer	Specifies the percentage of instances to be operated. If operation is set to ADD , REMOVE , or REDUCE , the value of this parameter is an integer from 1 to 20000. If operation is set to SET , the value is an integer from 0 to 20000.
			 If scaling_resource_type is set to SCALING_GROUP, either size or percentage can be set. If neither size nor percentage is set, the default value of size is 1.
			 If scaling_resource_type is set to BANDWIDTH, percentage is unavailable.

Parameter	Mandatory	Туре	Description
limits	No	Integer	Specifies the operation restrictions.
			If scaling_resource_type is set to BANDWIDTH and operation is not SET, this parameter takes effect and the unit is Mbit/s.
			• If operation is set to ADD , this parameter indicates the maximum bandwidth allowed.
			• If operation is set to REDUCE , this parameter indicates the minimum bandwidth allowed.

• Example request

This example shows how to modify an AS policy with ID **0h327883-324n-4dzd-9c61-68d03ee191dd**. The modification is as follows: The AS policy name is changed to **hth_aspolicy_1**; the alarm ID is changed to **al1513822380493GvUKZwA8**; the cooldown period is changed to 900 seconds; the policy execution action is to add a bandwidth of 1 Mbit/s until the bandwidth reaches 10 Mbit/s.

```

5.4.5 Querying AS Policies Bound to an AS Group

Function

This API is used to query AS policies based on search criteria. The results are displayed by page.

- Search criteria can be the AS policy name, policy type, policy ID, start line number, and number of records.
- If no search criteria are specified, a maximum of 20 AS policies for a specified AS group can be queried for a tenant by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_policy/{scaling_group_id}/list

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. AS policies can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_id	Yes	String	Specifies the AS group ID.
scaling_policy_name	No	String	Specifies the AS policy name. Supports fuzzy search.
scaling_policy_type	No	String	 Specifies the AS policy type. ALARM: alarm policy SCHEDULED: scheduled policy RECURRENCE: periodic policy
scaling_policy_id	No	String	Specifies the AS policy ID.
start_number	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value ranges from 0 to 100.

Table 5-89 Parameter description

Request Message

- Request parameters None
- Example request

This example shows how to query scheduled AS policies named **as-policy-test** in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**.

GET https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_policy/e5d27f5c-dd76-4a61-b4bca67c5686719a/list?scaling_policy_name=as-policy-test&scaling_policy_type=SCHEDULED

Response Message

• Response parameters

Table 5-90 Response parameters

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start line number.
limit	Integer	Specifies the maximum number of resources to be queried.
scaling_policies	Array of scaling_policies objects	Specifies scaling policies. For details, see Table 5-91 .

Table 5-91 scaling_policies field description

Parameter	Туре	Description	
scaling_group_id	String	Specifies the AS group ID.	
scaling_policy_na me	String	String Specifies the AS policy name.	
scaling_policy_id	String	Specifies the AS policy ID.	
policy_status	String	 Specifies the AS policy status. INSERVICE: The AS policy is enabled. PAUSED: The AS policy is disabled. EXECUTING: The AS policy is being executed. 	

Parameter	Туре	Description
scaling_policy_typ e	String	 Specifies the AS policy type. ALARM: indicates that the scaling action is triggered by an alarm. A value is returned for alarm_id, and no value is returned for scheduled_policy. SCHEDULED: indicates that the scaling action is triggered as scheduled. A value is returned for scheduled_policy, and no value is returned for alarm_id, recurrence_type, recurrence_value, start_time, or end_time. RECURRENCE: indicates that the scaling action is triggered periodically. Values are returned for scheduled_policy, recurrence_type, recurrence_type, recurrence_type, recurrence_type, recurrence_type, recurrence_type, recurrence_type, recurrence_type, recurrence_type, recurrence_value, start_time, and end_time, and no value is returned for alarm_id.
alarm_id	String	Specifies the alarm ID.
scheduled_policy	scheduled_ policy object	Specifies the periodic or scheduled AS policy. For details, see Table 5-92 .
scaling_policy_acti on	scaling_pol icy_action object	Specifies the scaling action of the AS policy. For details, see Table 5-93 .
cool_down_time	Integer	Specifies the cooldown period (s).
create_time	String	Specifies the time when an AS policy was created. The time format complies

with UTC.

Table 5-92 scheduled_policy field description

Parameter	Туре	Description
launch_time	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.
		 If scaling_policy_type is set to SCHEDULED, the time format is YYYY-MM-DDThh:mmZ.
		 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm.
recurrence_type	String	Specifies the type of a periodically triggered scaling action.
		• Daily : indicates that the scaling action is triggered once a day.
		• Weekly: indicates that the scaling action is triggered once a week.
		• Monthly : indicates that the scaling action is triggered once a month.
recurrence_value	String	Specifies the frequency at which scaling actions are triggered.
		 If recurrence_type is set to Daily, the value is null, indicating that the scaling action is triggered once a day.
		 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.
		• If recurrence_type is set to Monthly, the value ranges from 1 to 31. The digits refer to the dates in each month and separated by a comma, such as 1,10,13,28.
start_time	String	Specifies the start time of the scaling action triggered periodically. The time format complies with UTC.
		The time format is YYYY-MM- DDThh:mmZ.
end_time	String	Specifies the end time of the scaling action triggered periodically. The time format complies with UTC.
		The time format is YYYY-MM- DDThh:mmZ.

Table 5-93 scaling_policy_action field description

Parameter	Туре	Description	
operation	String	Specifies the scaling action.	
		 ADD: adds specified number of instances to the AS group.

5.4.6 Querying AS Policies Bound to a Scaling Resource (V2)

Function

This API is used to query AS policies based on search criteria. The results are displayed by page.

- The difference between the V2 and V1 APIs for querying AS policies is that V2 contains scaling resource types in response messages.
- Search criteria can be the AS policy name, policy type, policy ID, start line number, and number of records.
- If no search criteria are specified, a maximum of 20 AS policies for specified resources can be queried for a tenant by default.

URI

GET /autoscaling-api/v2/{project_id}/scaling_policy/{scaling_resource_id}/list

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. AS policies can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_resou rce_id	Yes	String	Specifies the scaling resource ID.
scaling_polic y_name	No	String	Specifies the AS policy name. Supports fuzzy search.
scaling_polic y_type	No	String	 Specifies the AS policy type. ALARM: alarm policy SCHEDULED: scheduled policy RECURRENCE: periodic policy INTERVAL_ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by a refined scaling policy.
scaling_polic y_id	No	String	Specifies the AS policy ID.
start_numbe r	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value range is 0 to 100.

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start line number.
limit	Integer	Specifies the maximum number of resources to be queried.
scaling_policies	Array of scaling_pol icies objects	Specifies AS policies. For details, see Table 5-96.

Table 5-96 scaling_policies field description

Parameter	Туре	Description
scaling_policy_na me	String	Specifies the AS policy name. Supports fuzzy search.
scaling_policy_id	String	Specifies the AS policy ID.
scaling_resource_i d	String	Specifies the scaling resource ID.
scaling_resource_t ype	String	Specifies the scaling resource type.AS group: SCALING_GROUPBandwidth: BANDWIDTH
policy_status	String	 Specifies the AS policy status. INSERVICE: The AS policy is enabled. PAUSED: The AS policy is disabled. EXECUTING: The AS policy is being executed.

Parameter	Туре	Description	
scaling_policy_typ e	String	 Specifies the AS policy type. ALARM: indicates that the scaling action is triggered by an alarm. A value is returned for alarm_id, and no value is returned for scheduled_policy. SCHEDULED: indicates that the scaling action is triggered as 	
		scheduled. A value is returned for scheduled_policy, and no value is returned for alarm_id, recurrence_type, recurrence_value, start_time, or end_time.	
		 RECURRENCE: indicates that the scaling action is triggered periodically. Values are returned for scheduled_policy, recurrence_type, recurrence_value, start_time, and end_time, and no value is returned for alarm_id. 	
		• INTERVAL_ALARM: indicates that the scaling action is triggered by a refined scaling policy. A value is returned for alarm_id, and no value is returned for scheduled_policy.	
alarm_id	String	Specifies the alarm ID.	
scheduled_policy	scheduled_ policy object	Specifies the periodic or scheduled AS policy. For details, see Table 5-97 .	
scaling_policy_acti on	scaling_pol icy_action object	Specifies the scaling action of the AS policy. For details, see Table 5-98 .	
cool_down_time	Integer	Specifies the cooldown period (s).	
create_time	String	Specifies the time when an AS policy was created. The time format complies with UTC.	
meta_data	meta_data object	Provides additional information. For details, see Table 5-99 .	
description	String	Specifies the AS policy description.	

Table 5-97 scheduled_policy field description	ı
---	---

Parameter	Туре	Description
launch_time	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.
		 If scaling_policy_type is set to SCHEDULED, the time format is YYYY-MM-DDThh:mmZ.
		 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm.
recurrence_type	String	Specifies the type of a periodically triggered scaling action.
		• Daily : indicates that the scaling action is triggered once a day.
		 Weekly: indicates that the scaling action is triggered once a week.
		• Monthly : indicates that the scaling action is triggered once a month.
recurrence_value	String	Specifies the frequency at which scaling actions are triggered.
		 If recurrence_type is set to Daily, the value is null, indicating that the scaling action is triggered once a day.
		 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.

401 Unauthorized	You must enter the username and password to access the requested page.
403 Forbidden	You are forbidden to access the requested page.
404 Not Found	The server could not find the requested page.

Returned Values	Description
405 Method Not Allowed	You are not allowed to use the method specified in the request.
406 Not Acceptable	The response generated by the server could not be accepted by the client.
407 Proxy Authentication Required	You must use the proxy server for authentication to process the request.
408 Request Timeout	The request timed out.
409 Conflict	The request could not be processed due to a conflict.
500 Internal Server Error	Failed to complete the request because of an internal service error.
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

Error Codes

See Error Codes.

5.4.7 Querying AS Policies (V2)

Function

This API is used to query all AS policies for a tenant based on search criteria. The results are displayed by page.

- Search criteria can be the AS resource ID, AS resource type, AS policy name, AS policy ID, alarm ID, start line number, number of records, and sorting method.
- If no search criteria are specified, a maximum of 20 AS policies can be queried for a tenant by default.

URI

GET /autoscaling-api/v2/{project_id}/scaling_policy

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. AS policies can be searched by all optional parameters in the following table. For details, see the example request.

Table 5-100	Parameter	description
-------------	-----------	-------------

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_resour ce_id	No	String	Specifies the scaling resource ID.
scaling_resour ce_type	No	String	 Specifies the scaling resource type. AS group: SCALING_GROUP Bandwidth: BANDWIDTH
scaling_policy _name	No	String	Specifies the AS policy name. Supports fuzzy search.
scaling_policy _id	No	String	Specifies the AS policy ID.
scaling_policy	No	String	Specifies the AS policy type.
_type			ALARM: alarm policy
			SCHEDULED: scheduled policy
			RECURRENCE: periodic policy
			• INTERVAL_ALARM (corresponding to alarm_id): indicates that the scaling action is triggered by a refined scaling policy.
start_number	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value ranges from 0 to 100.

Parameter	Mandatory	Туре	Description
sort_by	Νο	String	 Specifies the sorting method. POLICY_NAME: AS policies are sorted by name. TRIGGER_CONDITION: AS policies are sorted by trigger condition. For example, in ascending order, alarm policies are first, and others are sorted in ascending order based on the latest triggering time. CREATE_TIME: AS policies are sorted based on the creation time.
order	No	String	Specifies the sorting order.ASC: ascending orderDESC: descending order
alarm_id	No	String	Specifies the alarm rule ID.

Request Message

- Request parameters
 None
- Example request

This example shows how to query all periodic AS policies for resources with ID **8ade64b5-d685-40b8-8582-4ce306ea37a6**.

GET https://{Endpoint}/autoscaling-api/v2/{project_id}/scaling_policy?scaling_resource_id=8ade64b5d685-40b8-8582-4ce306ea37a6&scaling_policy_type=RECURRENCE

Response Message

• Response parameters

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start line number.
limit	Integer	Specifies the maximum number of resources to be queried.
scaling_policies	Array of scaling_p olicies objects	Specifies AS policies. For details, see Table 5-102 .

	J _P · · · · ·	
Parameter	Туре	Description
scaling_policy_ name	String	Specifies the AS policy name.
scaling_policy_ id	String	Specifies the AS policy ID.
scaling_resourc e_id	String	Specifies the scaling resource ID.
scaling_resourc e_type	String	Specifies the scaling resource type.AS group: SCALING_GROUPBandwidth: BANDWIDTH
policy_status	String	 Specifies the AS policy status. INSERVICE: The AS policy is enabled. PAUSED: The AS policy is disabled. EXECUTING: The AS policy is being executed.
scaling_policy_ type	String	 Specifies the AS policy type. ALARM: indicates that the scaling action is triggered by an alarm. A value is returned for alarm_id, and no value is returned for scheduled_policy. SCHEDULED: indicates that the scaling action is triggered as scheduled. A value is returned for scheduled_policy, and no value is returned for scheduled_policy, and no value is returned for alarm_id, recurrence_type, recurrence_value, start_time, or end_time.
		 RECURRENCE: indicates that the scaling action is triggered periodically. Values are returned for scheduled_policy, recurrence_type, recurrence_value, start_time, and end_time, and no value is returned for alarm_id. INTERVAL_ALARM: indicates that the scaling action is triggered by a refined scaling policy. A value is returned for
alarm id	String	alarm_id, and no value is returned for scheduled_policy.
alarm_id	String	Specifies the alarm ID.

Table 5-102 scaling_policies field description

Parameter	Туре	Description
scheduled_poli cy	scheduled _ policy object	Specifies the periodic or scheduled AS policy. For details, see Table 5-103 .
scaling_policy_ action	scaling_p olicy_acti on object	Specifies the scaling action of the AS policy. For details, see Table 5-104 .
cool_down_tim e	Integer	Specifies the cooldown period (s).
create_time	String	Specifies the time when an AS policy was created. The time format complies with UTC.
meta_data	meta_dat a object	Provides additional information. For details, see Table 5-105 .
description	String	Specifies the AS policy description.

Table 5-103 scheduled_policy field description

Parameter	Туре	Description
launch_time	String	Specifies the time when the scaling action is triggered. The time format complies with UTC.
		 If scaling_policy_type is set to SCHEDULED, the time format is YYYY- MM-DDThh:mmZ.
		 If scaling_policy_type is set to RECURRENCE, the time format is hh:mm.
recurrence_typ e	String	Specifies the type of a periodically triggered scaling action.
		• Daily : indicates that the scaling action is triggered once a day.
		• Weekly: indicates that the scaling action is triggered once a week.
		 Monthly: indicates that the scaling action is triggered once a month.

Parameter	Туре	Description
recurrence_val ue	String	Specifies the frequency at which scaling actions are triggered.
		 If recurrence_type is set to Daily, the value is null, indicating that the scaling action is triggered once a day.
		 If recurrence_type is set to Weekly, the value ranges from 1 (Sunday) to 7 (Saturday). The digits refer to dates in each week and separated by a comma, such as 1,3,5.
		• If recurrence_type is set to Monthly , the value ranges from 1 to 31 . The digits refer to the dates in each month and separated by a comma, such as 1,10,13,28 .
start_time	String	Specifies the start time of the scaling action triggered periodically. The time format complies with UTC.
		The time format is YYYY-MM-DDThh:mmZ .
end_time	String	Specifies the end time of the scaling action triggered periodically. The time format complies with UTC.
		The time format is YYYY-MM-DDThh:mmZ .

Table 5-104 scaling_policy_action field description

Parameter	Туре	Description
operation	String	Specifies the scaling action.
		ADD: indicates adding instances.
		• REDUCE : indicates reducing instances.
		• SET : indicates setting the number of instances to a specified value.
size	Integer	Specifies the number of instances to be operated.
percentage	Integer	Specifies the percentage of instances to be operated.
limits	Integer	Specifies the operation restrictions.

Parameter	Туре	Description
metadata_ban dwidth_share_t ype	String	Specifies the bandwidth sharing type in the bandwidth scaling policy.
metadata_eip_i d	String	Specifies the EIP ID for the bandwidth in the bandwidth scaling policy.
metadata_eip_ address	String	Specifies the EIP for the bandwidth in the bandwidth scaling policy.

Table 5-105 meta_data field description

500 Internal Server Error	Failed to complete the request because of an internal service error.
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.4.10 Executing, Enabling, or Disabling an AS Policy

Function

This interface is used to immediately execute, enable, or disable a specified AS policy.

An AS policy can be executed only when the AS group and AS policy are in the **INSERVICE** state. Otherwise, the execution fails.

URI

POST /autoscaling-api/v1/{project_id}/scaling_policy/{scaling_policy_id}/action

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_policy_i d	Yes	String	Specifies the AS policy ID.

 Table 5-117
 Parameter description

Request Message

• Request parameters

Table 5-118 Request parameters

Parameter	Mandatory	Туре	Description
action	Yes	String	Specifies the operation for an AS policy.
			• execute : immediately executes the AS policy.
			 resume: enables the AS group.
			• pause : disables the AS group.

• Example request

This example shows how to immediately execute the AS policy with ID **906f73ff-56e8-41b2-a005-8157d0c60361**.

POST https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_policy/906f73ff-56e8-41b2-a005-8157d0c60361/action

{
 "action": "execute"
}

Response Message

504 Gateway Timeout	A gateway timeout error occurred.	

See Error Codes.

5.4.12 Batch Managing AS Policies

Function

This interface is used to enable, disable, or delete AS policies in batches.

• A batch operation can be performed on a maximum of 20 AS policies at a time.

URI

POST /autoscaling-api/v1/{project_id}/scaling_policies/action

 Table 5-120
 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.

Request Message

• Request parameters

Parameter	Mandatory	Туре	Description
scaling_policy _id	Yes	Array of strings	Specifies the AS policy ID.
action	Yes	String	Specifies an action to be performed on AS policies in batches. The options are as follows:
			• delete : deletes AS policies.
			• resume : enables AS policies.
			• pause : disables AS policies.
force_delete	No	String	Specifies whether to forcibly delete an AS policy. If the value is set to no , in-progress AS policies cannot be deleted. Options:
			• no (default): indicates that the AS policy is not forcibly deleted.
			• yes : indicates that the AS policy is forcibly deleted.
			This parameter is available only when action is set to delete .
delete_alarm	No	String	Specifies whether to delete the alarm rule used by the alarm policy. The value can be yes or no (default).
			This parameter is available only when action is set to delete .

Table 5-121 Request parameters

• Example request

This example shows how to enable the AS policies with IDs **policy_id1** and **policy_id2** in a batch.

POST https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_policies/action

```
{
    "action": "resume",
    "scaling_policy_id": [
        "policy_id1",
        "policy_id2"
]
}

403 Forbidden	You are forbidden to access the requested page.
404 Not Found	The server could not find the requested page.
405 Method Not Allowed	You are not allowed to use the method specified in the request.
406 Not Acceptable	The response generated by the server could not be accepted by the client.
407 Proxy Authentication Required	You must use the proxy server for authentication to process the request.
408 Request Timeout	The request timed out.
409 Conflict	The request could not be processed due to a conflict.
500 Internal Server Error	Failed to complete the request because of an internal service error.
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.5 AS Policy Execution Logs

5.5.1 Querying AS Policy Execution Logs

Function

This API is used to query the historical records of AS policy execution based on search criteria. The results are displayed by page.

- Search criteria can be the log ID, AS resource type, AS resource ID, policy execution type, start time, end time, start line number, and number of records.
- If no search criteria are specified, a maximum of 20 AS policy execution logs can be queried by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_policy_execute_log/{scaling_policy_id}

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. AS policy execution logs can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_policy_id	Yes	String	Specifies the AS policy ID.
log_id	No	String	Specifies the ID of an AS policy execution log.
scaling_resource_ type	No	String	 Specifies the scaling resource type. AS group: SCALING_GROUP Bandwidth: BANDWIDTH
scaling_resource_i d	No	String	Specifies the scaling resource ID.

Table 5-122	Parameter	description
-------------	-----------	-------------

Parameter	Mandatory	Туре	Description
execute_type	No	String	Specifies the AS policy execution type.
			• SCHEDULED: automatically triggered at a specified time point
			• RECURRENCE : automatically triggered at a specified time period
			ALARM: alarm-triggered
			MANUAL: manually triggered
			• INTERVAL_ALARM: automatically triggered by a refined scaling policy
start_time	No	String	Specifies the start time that complies with UTC for querying AS policy execution logs. The format of the start time is yyyy-MM-ddThh:mm:ssZ .
end_time	No	String	Specifies the end time that complies with UTC for querying AS policy execution logs. The format of the end time is yyyy- MM-ddThh:mm:ssZ .
start_number	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value range is 0 to 100.

Request Message

- Request parameters
 - None
- Example request

This example shows how to query the AS policy execution log with ID **05545d3d-ccf9-4bca-ae4f-1e5e73ca0bf6**. GET https://{Endpoint}/autoscaling-api/v1/edcb94a885a84ed3a3fdf8ea4d2741da/ scaling_policy_execute_log/05545d3d-ccf9-4bca-ae4f-1e5e73ca0bf6

Response Message

• Response parameters

Table 5-123	Response	parameters
-------------	----------	------------

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start line number.
limit	Integer	Specifies the maximum number of resources to be queried.
scaling_policy _execute_log	Array of scaling_p olicy_exe cute_log objects	Specifies the AS policy execution logs. For details, see Table 5-124 .

Table 5-124 scaling_policy_execute_log field description

Parameter	Туре	Description
status	String	 Specifies the AS policy execution status. SUCCESS: The AS policy has been executed. FAIL: Executing the AS policy failed. EXECUTING: The AS policy is being executed.
failed_reason	String	Specifies the AS policy execution failure.
execute_type	String	 Specifies the AS policy execution type. SCHEDULED: automatically triggered at a specified time point RECURRENCE: automatically triggered at a specified time period ALARM: alarm-triggered MANUAL: manually triggered INTERVAL_ALARM: automatically triggered by a refined scaling policy
execute_time	String	Specifies the time when an AS policy was executed. The time format complies with UTC.
id	String	Specifies the ID of an AS policy execution log.
tenant_id	String	Specifies the project ID.
scaling_polic y_id	String	Specifies the AS policy ID.

Parameter	Туре	Description
scaling_resou rce_type	String	Specifies the scaling resource type.AS group: SCALING_GROUPBandwidth: BANDWIDTH
scaling_resou rce_id	String	Specifies the scaling resource ID.
old_value	String	Specifies the source value.
desire_value	String	Specifies the target value.
limit_value	String	 Specifies the operation restrictions. If scaling_resource_type is set to BANDWIDTH and operation is not SET, this parameter takes effect and the unit is Mbit/s. In this case: If operation is set to ADD, this parameter indicates the maximum bandwidth allowed. If operation is set to REDUCE, this parameter indicates the minimum bandwidth allowed.
type	String	 Specifies the AS policy execution type. ADD: indicates adding instances. REMOVE: indicates reducing instances. SET: indicates setting the number of instances to a specified value.
job_records	Array of job_recor ds objects	Specifies the tasks contained in a scaling action based on an AS policy. For details, see Table 5-125.
meta_data	meta_dat a object	Provides additional information. For details, see Table 5-126 .

Table 5-125 job_records field description

Parameter	Туре	Description
job_name	String	Specifies the task name.
record_type	String	 Specifies the record type. API: API calling type MEG: message type
record_time	String	Specifies the record time.

Parameter	Туре	Description
request	String	Specifies the request body. This parameter is valid only if record_type is set to API .
response	String	Specifies the response body. This parameter is valid only if record_type is set to API .
code	String	Specifies the returned code. This parameter is valid only if record_type is set to API .
message	String	Specifies the message. This parameter is valid only if record_type is set to MEG .
job_status	String	Specifies the execution status of the task.
		 SUCCESS: The task is successfully executed. FAIL: The task failed to be executed.

Table 5-126 meta_data field description

Parameter	Туре	Description
metadata_ba ndwidth_shar e_type	String	Specifies the bandwidth sharing type in the bandwidth scaling policy.
metadata_ei p_id	String	Specifies the EIP ID for the bandwidth in the bandwidth scaling policy.
metadataeip _address	String	Specifies the EIP for the bandwidth in the bandwidth scaling policy.

5.6 Scaling Action Logs

5.6.1 Querying Scaling Action Logs

Function

This API is used to query scaling action logs based on search criteria. The results are displayed by page.

- Search criteria can be the start time, end time, start line number, and number of records.
- If no search criteria are specified, a maximum of 20 scaling action logs can be queried by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_activity_log/{scaling_group_id}

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. Scaling action logs can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandat ory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_id	Yes	String	Specifies the AS group ID.
start_time	No	String	Specifies the start time that complies with UTC for querying scaling action logs. The format of the start time is yyyy-MM-ddThh:mm:ssZ .
end_time	No	String	Specifies the end time that complies with UTC for querying scaling action logs. The format of the end time is yyyy-MM-ddThh:mm:ssZ .
start_number	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value ranges from 0 to 100.

Error Codes

See Error Codes.

5.6.2 Querying Scaling Action Logs (V2)

Function

This API is used to query scaling action logs based on search criteria. The scaling actions include increasing instances, setting instances to the standby mode, and migrating instances to balance load. The results are displayed by page.

- The difference between the V2 and V1 APIs for querying scaling action logs is that V2 displays more detailed action logs, such as ELB migration logs and instance standby logs.
- Search criteria can be the start time, end time, start line number, number of records, and scaling action type.
- If no search criteria are specified, a maximum of 20 scaling action logs can be queried by default.

URI

GET /autoscaling-api/v2/{project_id}/scaling_activity_log/{scaling_group_id}

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. Scaling action logs can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandator y	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_ id	Yes	String	Specifies the AS group ID.
log_id	No	String	Specifies the scaling action log ID.
start_time	No	String	Specifies the start time that complies with UTC for querying scaling action logs. The format of the start time is yyyy-MM- ddThh:mm:ssZ .
end_time	No	String	Specifies the end time that complies with UTC for querying scaling action logs. The format of the end time is yyyy-MM-ddThh:mm:ssZ .
start_number	No	Integer	Specifies the start line number. The default value is 0 . The minimum parameter value is 0 .

Parameter	Mandator y	Туре	Description
limit	No	Integer	Specifies the number of query records. The default value is 20 . The value ranges from 0 to 100.
type	No	String	Specifies the types of the scaling actions to be queried. Different types are separated by commas (,).
			• NORMAL: indicates a common scaling action.
			• MANUAL_REMOVE: indicates manually removing instances from an AS group.
			• MANUAL_DELETE: indicates manually removing and deleting instances from an AS group.
			• MANUAL_ADD: indicates manually adding instances to an AS group.
			• ELB_CHECK_DELETE: indicates that instances are removed from an AS group and deleted based on the ELB health check result.
			• AUDIT_CHECK_DELETE: indicates that instances are removed from an AS group and deleted based on the OpenStack audit.
			• DIFF : indicates that the number of expected instances is different from the actual number of instances.
			• MODIFY_ELB : indicates the load balancer migration.
			• ENTER_STANDBY: indicates setting instances to standby mode.
			• EXIT_STANDBY : indicates canceling standby mode for

instances.

Parameter	Mandator y	Туре	Description
status	No	String	Specifies the status of the scaling action.
			• SUCCESS : The scaling action has been performed.
			• FAIL: Performing the scaling action failed.
			 DOING: The scaling action is being performed.

Request Message

- Request parameters None
- Example request

This example shows how to query the scaling action logs of the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**. The start time is 2018-11-22T00:00:00Z, and the end time is 2018-11-22T14:00:00Z.

GET https://{Endpoint}/autoscaling-api/v2/{project_id}/scaling_activity_log/e5d27f5c-dd76-4a61-b4bca67c5686719a?start_time=2018-11-22T00:00:00Z&end_time=2018-11-22T14:00:00Z

Response Message

• Response parameters

Parameter	Туре	Description
total_number	Integer	Specifies the total number of query records.
start_number	Integer	Specifies the start line number.
limit	Integer	Specifies the maximum number of resources to be queried.
scaling_activity_lo g	Array of scaling_ac tivity_log objects	Specifies scaling action logs. For details, see Table 5-132 .

Table 5-131 Response parameters

Parameter	Туре	Description
status	String	 Specifies the status of the scaling action. SUCCESS: The scaling action has been performed. FAIL: Performing the scaling action failed. DOING: The scaling action is being performed.
start_time	String	Specifies the start time of the scaling action. The time format must comply with UTC.
end_time	String	Specifies the end time of the scaling action. The time format must comply with UTC.
id	String	Specifies the scaling action log ID.
instance_removed_ list	Array of scaling_in stance objects	Specifies names of the ECSs that are removed from the AS group in a scaling action. For details, see Table 5-133 .
instance_deleted_li st	Array of scaling_in stance objects	Specifies names of the ECSs that are removed from the AS group and deleted in a scaling action. For details, see Table 5-133 .
instance_added_lis t	Array of scaling_in stance objects	Specifies names of the ECSs that are added to the AS group in a scaling action. For details, see Table 5-133 .
instance_failed_list	Array of scaling_in stance objects	Specifies the ECSs for which a scaling action fails. For details, see Table 5-133 .
instance_standby_l ist	Array of scaling_in stance objects	Specifies the ECSs that are set to standby mode or for which standby mode is canceled in a scaling action. For details, see Table 5-133.
scaling_value	String	Specifies the number of added or deleted instances during the scaling.
description	String	Specifies the description of the scaling action.
instance_value	Integer	Specifies the number of instances in the AS group.

Parameter	Туре	Description
desire_value	Integer	Specifies the expected number of instances for the scaling action.
lb_bind_success_lis t	Array of modify_lb objects	Specifies the load balancers that are bound to the AS group. For details, see Table 5-134 .
lb_bind_failed_list	Array of modify_lb objects	Specifies the load balancers that failed to be bound to the AS group. For details, see Table 5-134 .
lb_unbind_success _list	Array of modify_lb objects	Specifies the load balancers that are unbound from the AS group. For details, see Table 5-134 .
lb_unbind_failed_li st	Array of modify_lb objects	Specifies the load balancers that failed to be unbound from the AS group. For details, see Table 5-134 .
type	String	Specifies the type of the scaling action.

 Table 5-133 scaling_instance field description

Parameter	Туре	Description
instance_name	String	Specifies the ECS name.
instance_id	String	Specifies the ECS ID.
failed_reason	String	Specifies the cause of the instance scaling failure.
failed_details	String	Specifies details of the instance scaling failure.
instance_config	String	Specifies the information about instance configurations.

Table 5-134 modify_lb field description

i		
Parameter	Туре	Description
lbaas_listener	lbaas _ liste ner object	Specifies information about an enhanced load balancer. For details, see Table 5-135 .
listener	String	Specifies information about a classic load balancer.
failed_reason	String	Specifies the cause of a load balancer migration failure.

Parameter	Туре	Description
failed_details	String	Specifies the details of a load balancer migration failure.

Table 5-135 lbaas_listener field description

Parameter	Туре	Description
listener_id	String	Specifies the listener ID.
pool_id	String	Specifies the backend ECS group ID.
protocol_port	Intege r	Specifies the backend protocol port, which is the port on which a backend ECS listens for traffic.
weight	Intege r	Specifies the weight, which determines the portion of requests a backend ECS processes when being compared to other backend ECSs added to the same listener.

5.8 Notifications

5.8.1 Enabling Notification for an AS Group

Function

This API is used to enable notification for an AS group. Each time this API is called, the AS group adds a notification topic and scenario. Each AS group supports up to five topics. The notification topic is pre-configured and subscribed by you in SMN. When the live network complies with the notification scenario that matches the notification topic, the AS group sends a notification to your subscription endpoints.

URI

PUT /autoscaling-api/v1/{project_id}/scaling_notification/{scaling_group_id}

Table	5-144	Parameter	description
-------	-------	-----------	-------------

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_i d	Yes	String	Specifies the AS group ID.

Request Message

• Request parameters

Table 5-145 Request parameters

Parameter	Mandatory	Туре	Description
topic_urn	Yes	String	Specifies a unique topic in SMN.

Parameter	Mandatory	Туре	Description	
topic_scene	Yes	Array of strings	Specifies a notification scenario, which can be one of the following:	
			• SCALING_UP : indicates that the capacity is expanded.	
			• SCALING_UP_FAIL: indicates that the capacity expansion failed.	
			• SCALING_DOWN: indicates that the capacity is reduced.	
			• SCALING_DOWN_FAIL: indicates that the capacity reduction failed.	
				• SCALING_GROUP_ABN ORMAL: indicates that an exception has occurred in the AS group.

• Example request

This example shows how to enable notification with topic_urn urn:smn:*regionld*:b53e5554fad0494d96206fb84296510b:gsh for the AS group with ID e5d27f5c-dd76-4a61-b4bc-a67c5686719a. After the configuration, a notification will be sent when capacity expansion succeeds or fails, capacity reduction succeeds or fails, or an error occurs in the AS group.

504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.9 Lifecycle Hooks

5.9.1 Creating a Lifecycle Hook

Function

This interface is used to create a lifecycle hook for an AS group. Up to five lifecycle hooks can be created for one AS group.

- After the creation, when the AS group performs a scaling action, the lifecycle hook suspends the target instance and sets it to be in Wait (Adding to AS group) or Wait (Removing from AS group) status. This status retains until the timeout duration expires or you manually call back this status.
- During the instance waiting duration, you can perform customized operations. For example, you can install or configure software on a newly started instance, or download the log file from the instance before the instance terminates.

URI

POST /autoscaling-api/v1/{project_id}/scaling_lifecycle_hook/{scaling_group_id}

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_i d	Yes	String	Specifies the AS group ID.

Table 5-151 Parameter description

Request Message

• Request parameters

Table 5-152 Request parameters

Parameter	Mandatory	Туре	Description
lifecycle_ho ok_name	Yes	String	Specifies the lifecycle hook name. The name contains only letters, digits, underscores (_), and hyphens (-), and cannot exceed 32 characters.
lifecycle_ho ok_type	Yes	String	Specifies the lifecycle hook type. Options:
			• INSTANCE_TERMINATING : The hook suspends the instance when the instance is terminated.
			• INSTANCE_LAUNCHING : The hook suspends the instance when the instance is started.

Parameter	Mandatory	Туре	Description
default_resu lt	No	String	 Specifies the default lifecycle hook callback operation. By default, this operation is performed when the timeout duration expires. ABANDON CONTINUE NOTE If an instance is starting, CONTINUE indicates that your customized operations are successful and the instance can be used. ABANDON indicates that your customized operations failed, and the instance will be terminated. In such a case, the scaling action fails, and you must create a new instance. If an instance is stopping, both ABANDON and CONTINUE allow instance termination. The difference between the two states is as follows: ABANDON stops other lifecycle hooks, but CONTINUE allows the completion of other lifecycle hooks. The default value of this parameter is ABANDON.
default_time out	No	Integer	Specifies the lifecycle hook timeout duration, which ranges from 300 to 86400 in the unit of second. The default value is 3600. By default, this parameter specifies the instance waiting duration. You can prolong the timeout duration or perform the CONTINUE or ABANDON operation before the timeout duration expires.

Parameter	Mandatory	Туре	Description
notification_ topic_urn	Yes	String	Specifies a unique topic in SMN.
			This parameter specifies a notification object for a lifecycle hook. When an instance is suspended by the lifecycle hook, the SMN service sends a notification to the object. This notification contains the basic instance information, your customized notification content, and the token for controlling lifecycle operations.
notification_ metadata	No	String	Specifies a customized notification, which contains no more than 256 characters in length. The message cannot contain the following characters: <>&'()
			After a notification object is configured, the SMN service sends your customized notification to the object.

• Example request

{

}

This example shows how to create a lifecycle hook named **test-hook1** in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**. The configuration is as follows: The callback operation is **ABANDON**; the timeout duration is 3600 seconds; the notification topic_urn is **urn:smn:***regionId*:**b53e5554fad0494d96206fb84296510b:gsh**; the hook suspends the instance when the instance is started.

POST https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_lifecycle_hook/e5d27f5c-dd76-4a61-b4bc-a67c5686719a

```
"lifecycle_hook_name": "test-hook1",
"default_result": "ABANDON",
"default_timeout": 3600,
"notification_topic_urn": "urn:smn:regionId:b53e5554fad0494d96206fb84296510b:gsh",
"lifecycle_hook_type": "INSTANCE_LAUNCHING"
```

Response Message

• Response parameters

Table 5-153 Response parameters

Parameter	Туре	Description
lifecycle_hook_nam e	String	Specifies the lifecycle hook name.
lifecycle_hook_type	String	Specifies the lifecycle hook type.INSTANCE_TERMINATINGINSTANCE_LAUNCHING
default_result	String	Specifies the default lifecycle hook callback operation.ABANDONCONTINUE
default_timeout	Integer	Specifies the lifecycle hook timeout duration in the unit of second.
notification_topic_u rn	String	Specifies a unique topic in SMN.
notification_topic_n ame	String	Specifies the topic name in SMN.
notification_metad ata	String	Specifies the notification message.
create_time	String	Specifies the UTC-compliant time when the lifecycle hook is created.

Example response

```

502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.9.4 Modifying a Lifecycle Hook

Function

This interface is used to modify the information about a specified lifecycle hook.

URI

PUT /autoscaling-api/v1/{project_id}/scaling_lifecycle_hook/{scaling_group_id}/ {lifecycle_hook_name}

Table 5-159 Para	ameter description
------------------	--------------------

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_i d	Yes	String	Specifies the AS group ID.
lifecycle_hook_ name	Yes	String	Specifies the lifecycle hook name.

Request Message

• Request parameters

Table 5-160 Request parameters

Parameter	Mandatory	Туре	Description
lifecycle_ho ok_type	No	String	 Specifies the lifecycle hook type. Options: INSTANCE_TERMINATING: The hook suspends the instance when the instance is terminated. INSTANCE_LAUNCHING: The hook suspends the instance
default_resu lt	No	String	when the instance is started. Specifies the default lifecycle hook callback operation. By default, this operation is performed when the
			 timeout duration expires. ABANDON CONTINUE NOTE If an instance is starting,
			CONTINUE indicates that your customized operations are successful and the instance can be used. ABANDON indicates that your customized operations failed, and the instance will be terminated. In such a case, the scaling action fails, and you must create a new instance.
			 If an instance is stopping, both ABANDON and CONTINUE allow instance termination. The difference between the two states is as follows: ABANDON stops other lifecycle hooks, but CONTINUE allows the completion of other lifecycle hooks. The default value of this
			parameter is ABANDON .
default_time out	No	Integer	Specifies the lifecycle hook timeout duration, which ranges from 300 to 86400 in the unit of second. The default value is 3600. By default, this parameter specifies the instance waiting duration. You can prolong the timeout duration or perform the CONTINUE or ABANDON operation before the timeout duration expires.

Parameter	Mandatory	Туре	Description
notification_ topic_urn	No	String	Specifies a unique topic in SMN. This parameter specifies a notification object for a lifecycle hook. When an instance is suspended by the lifecycle hook, the SMN service sends a notification to the object. This notification contains the basic instance information, your customized notification content, and the token for controlling lifecycle operations.
notification_ metadata	No	String	Specifies a customized notification, which contains no more than 256 characters in length. The message cannot contain the following characters: <>&'() After a notification object is configured, the SMN service sends your customized notification to the object.

• Example request

This example shows how to change the callback operation of the lifecycle hook named **test-hook1** in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a** to **CONTINUE**.

PUT https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_lifecycle_hook/e5d27f5c-dd76-4a61b4bc-a67c5686719a/test-hook1

```
{
    "default_result": "CONTINUE"
}
```

Response Message

• Response parameters

Table 5-161 Response parameters

Parameter	Туре	Description
lifecycle_hook_nam e	String	Specifies the lifecycle hook name.
lifecycle_hook_type	String	Specifies the lifecycle hook type. • INSTANCE_TERMINATING • INSTANCE_LAUNCHING

Parameter	Туре	Description
default_result	String	Specifies the default lifecycle hook callback operation.ABANDONCONTINUE
default_timeout	Integer	Specifies the lifecycle hook timeout duration in the unit of second.
notification_topic_u rn	String	Specifies a unique topic in SMN.
notification_topic_n ame	String	Specifies the topic name in SMN.
notification_metad ata	String	Specifies the customized notification.
create_time	String	Specifies the time when the lifecycle hook is created. The time is UTC-compliant.

• Example response

ł

```
"lifecycle_hook_name": "test-hook1",

"default_result": "CONTINUE",

"default_timeout": 3600,

405 Method Not Allowed	You are not allowed to use the method specified in the request.

Returned Value	Description
406 Not Acceptable	The response generated by the server could not be accepted by the client.
407 Proxy Authentication Required	You must use the proxy server for authentication to process the request.
408 Request Timeout	The request timed out.
409 Conflict	The request could not be processed due to a conflict.
500 Internal Server Error	Failed to complete the request because of an internal service error.
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the request is invalid.
503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.9.5 Calling Back a Lifecycle Hook

Function

This interface is used to call back the lifecycle hook specified by a scaling instance based on the lifecycle action key or based on the instance ID and lifecycle hook name.

- If your custom operations were successful before the timeout duration elapses, select **Abandon** or **Continue** to complete the lifecycle action.
- If you require more time to complete your custom operations, select Extend Timeout to enable the instance to remain in a wait state for an additional hour.
- The callback operation can be performed only when the lifecycle hook of the target instance is in **HANGING** state.

URI

PUT /autoscaling-api/v1/{project_id}/scaling_instance_hook/{scaling_group_id}/ callback

 Table 5-162
 Parameter description

Parameter	Mandatory	Туре	Description
project_id	Yes	String	Specifies the project ID.
scaling_group_ id	Yes	String	Specifies the AS group ID.

Request Message

• Request parameters

Table 5-163 Request parameters

Parameter	Mandatory	Туре	Description
lifecycle_acti on_key	No	String	Specifies the lifecycle operation token, which is obtained by calling the API for querying instance suspension.
			When specifying a lifecycle callback object, this field is mandatory if the instance_id parameter is not used. If both this parameter and the instance_id parameter are used, preferentially use this parameter for callback.
instance_id	No	String	Specifies the instance ID. When a lifecycle callback object is specified, this parameter is mandatory if the lifecycle_action_key parameter is not used.
lifecycle_hoo k_name	No	String	Specifies the lifecycle hook name. When a lifecycle callback object is specified, this parameter is mandatory if the lifecycle_action_key parameter is not used.
lifecycle_acti on_result	Yes	String	 Specifies the lifecycle callback action. ABANDON: terminates the instance. CONTINUE: continues the instance. EXTEND: extends the timeout duration, one hour each time.

• Example request

This example shows how to use lifecycle token **23880867-6288-4470-98a8-f8bda096b6c4** in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a** to perform the **ABANDON** callback operation. 503 Service Unavailable	Failed to complete the request because the system is unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

See Error Codes.

5.9.6 Querying Instance Suspension

Function

After a lifecycle hook is added, when an AS group performs a scaling action, the lifecycle hook suspends the target instance and sets it to be in waiting state. You can query the instance suspension based on search criteria.

- Search instance suspension by instance ID.
- If no search criteria are specified, the suspension about all instances in the specified AS group is queried by default.

URI

GET /autoscaling-api/v1/{project_id}/scaling_instance_hook/{scaling_group_id}/list

NOTE

You can type the question mark (?) and ampersand (&) at the end of the URI to define multiple search criteria. Instance suspension can be searched by all optional parameters in the following table. For details, see the example request.

Parameter	Mandatory	Туре	Description	
project_id	Yes	String	Specifies the project ID.	
scaling_group_id	Yes	String	Specifies the AS group ID.	
instance_id	No	String	Specifies the AS instance ID.	

Table 5-164	Parameter	description
-------------	-----------	-------------

Request Message

• Request parameters

None

Example request

This example shows how to query the suspension of the instance with ID **b25c1589-c96c-465b-9fef-d06540d1945c** in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**.

GET https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_instance_hook/e5d27f5c-dd76-4a61-b4bc-a67c5686719a/list?instance_id=b25c1589-c96c-465b-9fef-d06540d1945c

Response Message

• Response parameters

Table 5-165 Response parameters

Parameter	Туре	Description
instance_han ging_info	Array of instance_ha nging_info objects	Specifies lifecycle hook information about an AS instance.

Table 5-166 instance_hanging_info field description

Parameter	Туре	Description	
lifecycle_hook _name	String	Specifies the lifecycle hook name.	
lifecycle_actio n_key	String	Specifies the lifecycle action key, which determines the lifecycle callback object.	
instance_id	String	Specifies the AS instance ID.	
scaling_group_ id	String	Specifies the AS group ID.	
lifecycle_hook _status	String	 Specifies the lifecycle hook status. HANGING: suspends the instance. CONTINUE: continues the instance. ABANDON: terminates the instance. 	
timeout	String	Specifies the timeout duration in the format of "YYYY-MM-DDThh:mm:ssZ". The time is UTC-compliant.	
default_result	String	Specifies the default lifecycle hook callback operation.	

• Example response

```

 200
- Abnormal

Returned Value	Description
400 Bad Request	The server failed to process the request.
401 Unauthorized	You must enter the username and password to access the requested page.
403 Forbidden	You are forbidden to access the requested page.
404 Not Found	The server could not find the requested page.
405 Method Not Allowed	You are not allowed to use the method specified in the request.
406 Not Acceptable	The response generated by the server could not be accepted by the client.
407 Proxy Authentication Required	You must use the proxy server for authentication to process the request.
408 Request Timeout	The request timed out.
409 Conflict	The request could not be processed due to a conflict.
500 Internal Server Error	Failed to complete the request because an internal service error occurred.
501 Not Implemented	Failed to complete the request because the server does not support the requested function.
502 Bad Gateway	Failed to complete the request because the server has received an invalid response.
503 Service Unavailable	Failed to complete the request because the system is currently unavailable.
504 Gateway Timeout	A gateway timeout error occurred.

Error Codes

See Error Codes.

5.10.3 Creating or Deleting a Tag

Function

This API is used to create or delete a tag.

Each AS group can have a maximum of 10 tags added to it.

URI

POST /autoscaling-api/v1/{project_id}/{resource_type}/{resource_id}/tags/action

 Table 5-174
 Parameter description

Parameter	Mandator y	Туре	Description
project_id	Yes	String	Specifies the project ID.
resource_type	Yes	String	Specifies the resource type. The option is as follows:
			scaling_group_tag : indicates that the resource type is AS groups.
resource_id	Yes	String	Resource ID

Request Message

• Request parameters

Table 5-175 Request parameters

Parameter	Mandatory	Туре	Description
tags	Yes	Array of ResourceTa g objects	Specifies the tag list. For details, see Table 5-176 . If action is set to delete , the tag structure cannot be missing, and the key cannot be left blank or an empty string.

Parameter	Mandatory	Туре	Description
action	Yes	String	 Specifies the operation ID. The value is case-sensitive and can be any of the following: delete: indicates deleting a tag. create: indicates creating a tag. If the same key value already exists, it will be overwritten.

Table 5-176 ResourceTag field description

Parameter	Mandatory	Туре	Description
key	Yes	String	Specifies the tag key. Tag keys of a resource must be unique.
			 A tag key contains a maximum of 36 characters. The character set is as follows: A-Z, a-z, 0-9, hyphens (-), underscores (_), and Unicode characters (\u4E00-\u9FFF).
			 When action is set to delete, the tag character set is not verified, and a key contains a maximum of 127 Unicode characters.

Parameter	Mandatory	Туре	Description
value	No	String	 Specifies the tag value. A tag value contains a maximum of 43 characters and can be left blank. The character set is as follows: A-Z, a-z, 0-9, periods (.), hyphens (-), underscores (_), and Unicode characters (\u4E00-\u9FFF).
			• When action is set to delete, the tag character set is not verified, and a value contains a maximum of 255 Unicode characters. If value is specified, tags are deleted by key and value. If value is not specified, tags are deleted by key.

• Example request

This example shows how to add two tags (key = **ENV15** and value = **ENV15**) and (key = **ENV151** and value = **ENV151**) to the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**.

POST https://{Endpoint}/autoscaling-api/v1/{project_id}/scaling_group_tag/e5d27f5c-dd76-4a61-b4bca67c5686719a/tags/action

```
{
    "tags": [
    {
        "key": "ENV15",
        "value": "ENV15"
    },
    {
        "key": "ENV151",
        "value": "ENV151"
    }
  ],
    "action": "create"
}
```

Response Message

5.10.4 Querying Resources by Tag

Function

This API is used to query resources in a project by tag.

By default, resources and resource tags are in descending order of their creation time.

URI

POST /autoscaling-api/v1/{project_id}/{resource_type}/resource_instances/action

Table	5-177	Parameter	description
-------	-------	-----------	-------------

Parameter	Mandat ory	Туре	Description
project_id	Yes	String	Specifies the project ID.
resource_type	Yes	String	Specifies the resource type. An example value is scaling_group_tag .

Request Message

• Request parameters

Table 5-178 Request parameters

Parameter	Mandator y	Туре	Description
tags	No	Array of Tag objects	Specifies filter criteria with tags included. A maximum of 10 keys can be contained. The structure body must be complete. For details, see Table 5-179 .
tags_any	No	Array of Tag objects	Specifies filter criteria with any tag included. A maximum of 10 keys can be contained. For details, see Table 5-179 .
not_tags	No	Array of Tag objects	Specifies filter criteria without tags included. A maximum of 10 keys can be contained. For details, see Table 5-179 .
not_tags_any	No	Array of Tag objects	Specifies filter criteria without any tag included. A maximum of 10 keys can be contained. For details, see Table 5-179 .

Parameter	Mandator y	Туре	Description
limit	No	String	 Specifies the maximum number of query records. The maximum value is 1,000, and the minimum value is 1. If action is set to count, this parameter is invalid. If action is set to filter, the default value is 1000.
marker	No	String	Marks the paging location (index position). You are advised to use the offset parameter to set the index position. Marks the paging location (resource ID or index location).
action	Yes	String	 Specifies the operation, which can be filter or count. filter: indicates that resources are filtered by tag and the resources meeting the search criteria are returned on pages. count: indicates that resources are searched by tag and the number of resources meeting the search criteria is returned.
offset	No	String	 Specifies the index position. The query starts from the next image indexed by this parameter. The value must be a non-negative number. You do not need to specify this parameter when querying resources on the first page. When you query resources on subsequent pages, set offset to the location returned in the response body for the previous query. If the action value is count, this parameter is invalid. If the action value is filter, the default value is 0.

Parameter	Mandator y	Туре	Description
matches	No	Array of <mark>match</mark> objects	Specifies fuzzy search. For details, see Table 5-180 .

Table 5-179 Tag field description

Parameter	Mandatory	Туре	Description
key	Yes	String	Specifies the tag key. It contains a maximum of 127 Unicode characters. It cannot be left blank (This parameter is not verified in the search process.) A maximum of 10 keys are allowed and the key cannot be left blank or an empty string. Each key must be unique.
values	Yes	Array of strings	 Specifies tag values. A value contains a maximum of 255 Unicode characters. A key contains a maximum of 10 values. Each value of the same key must be unique. The asterisk (*) is reserved for the system. If the value starts with *, it indicates that fuzzy match is performed for the digits following *. The value cannot contain only asterisks (*). If the values are null (not default), it indicates any_value (querying any value). The resources contain one or multiple values listed in values will be found and displayed.

Table 5-180 match field description

Parameter	Mandatory	Туре	Description
key	Yes	String	Specifies the key based on which to query resources. The parameter value can only be resource_name .
value	Yes	String	Specifies the value. The value is a fixed dictionary value. A value contains a maximum of 255 Unicode characters. If the value is an empty string or resource_id , exact match is used.

- Example request
 - Example request when action is set to filter

This example shows how to query AS groups of a tenant using the following search criteria: including tag (key = **key1** and value = **value**), excluding tag (key = **key2** and value = **value2**), index position 100, and maximum number of records 100.

POST https: //{Endpoint}/autoscaling-api/v1/{project_id}/scaling_group_tag/resource_instances/ action

```
"offset": "100".
   "limit": "100",
   "action": "filter",
   "matches": [{
      "key": "resource_name",
      "value": "resource1"
  }],
   "not tags": [{
      "key": "key2",
      "values": ["value2"]
   }],
   "tags": [{
      "key": "key1",
      "values": ["value1"]
  }]
}
```

Example request when action is set to count

This example shows how to query the number of AS groups for a tenant using the following search criteria: including the tag (key = **key1** and value = **value**) and excluding the tag (key = **key2** and value = **value2**). POST https: //{Endpoint}/autoscaling-api/v1/{project_id}/scaling_group_tag/resource_instances/ action

```
{

"action": "count",

"not_tags": [{

"key": "key2",

"values": ["value2"]

}],

"tags": [{

"key": "key1",

"values": ["value1"]
```

```
},
{
    "key": "key2",
    "values": ["value1",
    "value2"]
}],
"matches": [{
    "key": "resource_name",
    "value": "resource1"
}]
```

Response Message

• Response parameters

Table 5-181 Response parameters

Parameter	Туре	Description
resources	Array of Resource objects	Specifies tag resources. For details, see Table 5-182.
total_count	Integer	Specifies the total number of records. When action is set to count , only this parameter is returned. The values of resources and marker are not returned.
marker	String	Specifies the paging location identifier.

Table 5-182 Resource field description

Parameter	Туре	Description
resource_id	String	Specifies the resource ID.
resource_deta il	String	Specifies the resource details.
tags	Array of ResourceTag objects	Specifies tags. If there is no tag, the field tags is taken as an empty array by default. For details, see Table 5-183 .
resource_nam e	String	Specifies the resource name. If there is no resource, this parameter is an empty string by default.

Table 5-183 ResourceTag field description

Parameter	Туре	Description
key	String	Specifies the tag key. It contains a maximum of 36 Unicode characters.

Parameter	Туре	Description
value	String	Specifies the tag value. It contains a maximum of 36 Unicode characters.

• Example response

- Example response when **action** is set to **filter**

```
ł
  "resources": [{
     "resource_id": "64af4b6f-ec51-4436-8004-7a8f30080c87",

504 Gateway Timeout	A gateway timeout error occurred.

Error Codes

See Error Codes.

6 Application Examples

6.1 Example 1: Creating an AS Configuration

Scenarios

This section describes how to create an AS configuration by calling APIs. For details, see **Calling APIs**.

An AS configuration defines the specifications of the ECSs to be added to an AS group. The specifications include the ECS flavor, image, and disk size. You can use specifications of an existing ECS or create an AS configuration.

Constraints

- The AS configuration is decoupled from the AS group. An AS configuration can be used by multiple AS groups.
- Up to 100 AS configurations per account can be created by default.

Involved APIs

To create an AS configuration, you need to perform several operations, such as querying a user token, ECS flavors, and images. The following APIs are required:

- **Obtaining a User Token**: Determine the user token that can be used to authenticate the calling of other APIs.
- **Querying Details About ECS Flavors**: Determine the ECS flavor to be used to create the AS configuration.
- **Querying Images**: Determine the image for the AS configuration.
- Querying SSH Key Pairs: Set the login mode to key pair.
- **Creating an AS Configuration**: Create an AS configuration using the flavor and image you specify.
- **Querying an AS Configuration**: Verify the AS configuration creation.

Procedure

- **Step 1** Determine the user token that can be used to authenticate the calling of other APIs.
 - 1. View the user token. For details, see **Obtaining a User Token**.
 - Obtain the value of **X-Subject-Token** in the response header. 2.
- **Step 2** Determine the ECS flavor.
 - 1. View ECS flavors. For details, see Querying Details About ECS Flavors.
 - 2. Select a flavor based on site requirements and record the flavor ID.
- **Step 3** Determine the image.
 - View images. For details, see **Querying Images**. 1.
 - 2. Select an image based on site requirements and record the image ID.
- **Step 4** Set the login mode to **Key pair**.
 - 1. View SSH key pairs. For details, see **Querying SSH Key Pairs**.
 - 2. Select a key pair as required and record the key pair name.
- **Step 5** Create an AS configuration using the flavor and image you specify.
 - API • URI format: POST /autoscaling-api/v1/{project_id}/scaling_configuration For details about API request parameters, see Creating an AS Configuration.
 - Example request

POST: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling configuration

Obtain *{endpoint}* from Regions and Endpoint.

Body:

```
"scaling_configuration_name": "as-config-tlzq",
  "instance_config": {
     "flavorRef": "s3.xlarge.4",
     "imageRef": "627a1223-2ca3-46a7-8d5f-7aef22c74ee6",
     "disk": [
        {
           "size": 40,
           "volume_type": "SATA",
           "disk_type": "SYS"
        }
     ],
"key_name": "100vm_key",
     "multi_flavor_priority_policy": "PICK_FIRST"
  }
}
```

Example response •

{ "scaling_configuration_id": "f8327883-6a07-4497-9a61-68c03e8e72a2" }

Step 6 Verify the AS configuration creation.

API

URI format: GET /autoscaling-api/v1/{project id}/scaling configuration/ {scaling_configuration_id}

For details, see **Querying an AS Configuration**.

• Example request

GET: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_configuration/ f8327883-6a07-4497-9a61-68c03e8e72a2

where

f8327883-6a07-4497-9a61-68c03e8e72a2 is the UUID of the created AS configuration.

Obtain *{endpoint}* from Regions and Endpoint.

```

      "multi_flavor_priority_policy": "PICK_FIRST"
   }
    'create time": "2015-07-23T01:04:07Z"
}
```

----End

6.2 Example 2: Creating an AS Group

Scenarios

This section describes how to create an AS group by calling APIs. For details, see **Calling APIs**.

An AS group consists of a collection of instances that apply to the same scenario. It is the basis for enabling or disabling AS policies and performing scaling actions. An AS group specifies parameters, such as the maximum number of instances, expected number of instances, minimum number of instances, VPC, subnet, and load balancing.

Constraints

- Up to 10 AS groups per account can be created by default.
- If ELB is configured, AS automatically binds or unbinds a load balancer to or from an instance when the instance is added or removed from the AS group.
- If an AS group uses ELB health check, the listening ports on the load balancers must be enabled for the instances in the AS group. Enable the listening ports in security groups. For details, see Adding a Security Group Rule.

Involved APIs

To create an AS group, you need to perform several operations, such as querying a user token, security groups, and AS configurations. The following APIs are required:

- **Obtaining a User Token**: Determine the user token that can be used to authenticate the calling of other APIs.
- **Querying VPCs**: Determine the VPC for the ECSs in the AS group to be created.
- **Querying Security Groups**: Determine the security group to which the ECSs in the AS group will be added.
- **Querying Subnets**: Determine the subnet for the ECSs in the AS group.
- **Querying AS configurations**: Determine the AS configuration of the AS group.
- **Querying AZs**: Determine the AZ where the AS group to be created is located.
- **Creating an AS Group**: Create an AS group using the VPC and AS configuration you specify.
- Querying an AS Group: Verify the AS group creation.

Procedure

- **Step 1** Determine the user token that can be used to authenticate the calling of other APIs.
 - 1. View the user token. For details, see **Obtaining a User Token**.
 - 2. Obtain the value of **X-Subject-Token** in the response header.
- **Step 2** Determine the VPC.
 - 1. View VPCs. For details, see **Querying VPCs**.
 - 2. Select a VPC based on site requirements and record the VPC ID.
- **Step 3** Determine the security group.
 - 1. View security groups. For details, see **Querying Security Groups**.
 - 2. Select a security group based on site requirements and record the security group ID.
- **Step 4** Determine the subnet.
 - 1. View subnets in the specified VPC based on VPC ID. For details, see **Querying Subnets**.

2. Select a subnet based on site requirements and record the subnet ID.

Step 5 Determine the AS configuration.

1. View AS configurations.

– API

URI format: GET /autoscaling-api/v1/{project_id}/scaling_configuration

For details about the API request parameters, see **Querying AS Configurations**.

- Example request

```
GET: https://{Endpoint}/autoscaling-api/
v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_configuration?
start_number=0&limit=10
```

Obtain {endpoint} from Regions and Endpoint.

```
– Example response
```

```

```

2. Select an AS configuration based on site requirements and record the AS configuration ID.

Step 6 Determine the AZ.

1. View AZs. For details, see **Querying AZs**.

- 2. Select an AZ as required and record the AZ name.
- Step 7 Create an AS group using the VPC and AS configuration you specify.
 - API
 - URI format: POST /autoscaling-api/v1/{project_id}/scaling_group For details about the API request parameters, see **Creating an AS Group**.
 - Example request

POST: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group

Obtain *{endpoint}* from Regions and Endpoint.

Body:

```
"scaling_group_name": "GroupNameTest",
"scaling_configuration_id": "47683a91-93ee-462a-a7d7-484c006f4440",

6.3 Example 3: Enabling an AS Group

Scenarios

This section describes how to enable an AS group by calling APIs. For details, see **Calling APIs**.

An AS group consists of a collection of instances that apply to the same scenario. It is the basis for enabling or disabling AS policies and performing scaling actions.

Only enabled AS groups support scaling actions.

Involved APIs

- **Obtaining a User Token**: Determine the user token that can be used to authenticate the calling of other APIs.
- **Querying AS Groups**: Determine the AS group to be enabled.
- Enabling or Disabling an AS Group: Enable the AS group you specify.

Procedure

- **Step 1** Determine the user token that can be used to authenticate the calling of other APIs.
 - 1. View the user token. For details, see **Obtaining a User Token**.
 - 2. Obtain the value of **X-Subject-Token** in the response header.

Step 2 Determine the AS group.

- 1. View AS groups.
 - API

URI format: GET /autoscaling-api/v1/{project_id}/scaling_group For details, see **Querying AS Groups**.

- Example request

This example shows how to query AS groups with AS configuration ID **1d281494-6085-4579-b817-c1f813be835f**.

GET https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group? scaling_configuration_id=1d281494-6085-4579-b817-c1f813be835f

Obtain *{endpoint}* from Regions and Endpoint.

- Example response

```
{
 "limit": 20,
 "scaling_groups": [
    {
      "networks": [
         {
           "id": "a8327883-6b07-4497-9c61-68d03ee193a",
            "ipv6_enable": true,
            "ipv6_bandwidth":
           {
              "id": "076ee2ff-f23e-4338-b8ac-1bc7278532d5"
           }
         }
      ],
       "available_zones": [
         "XXXa",
         "XXXb"
      ],
"detail": null,
      "scaling_group_name": "as-group-test",
      "scaling_group_id": "77a7a397-7d2f-4e79-9da9-6a35e2709150",
      "scaling_group_status": "INSERVICE",
      "scaling_configuration_id": "1d281494-6085-4579-b817-c1f813be835f",
      "scaling_configuration_name": "healthCheck",
      "current_instance_number": 0,
      "desire_instance_number": 1,
      "min_instance_number": 0,
      "max_instance_number": 500,
      "cool_down_time": 300,
      "lb_listener_id": "f06c0112570743b51c0e8fbe1f235bab",
      "security_groups": [
         {
            "id": "8a4b1d5b-0054-419f-84b1-5c8a59ebc829"
         }
      ],
      "create_time": "2015-07-23T02:46:29Z",

"delete_publicip": false,
"enterprise_project_id": "c92b1a5d-6f20-43f2-b1b7-7ce35e58e413",
"multi_az_priority_policy": "PICK_FIRST"
}
],
"total_number": 1,
"start_number": 0
}
```

2. Select an AS group and record the AS group ID.

Step 3 Enable the specified AS group.

API

URI format: POST /autoscaling-api/v1/{project_id}/scaling_group/ {scaling_group_id}/action For details, see **Enabling or Disabling an AS Group**.

• Example request

POST: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group/ 77a7a397-7d2f-4e79-9da9-6a35e2709150/action

Obtain *{endpoint}* from Regions and Endpoint.

Body:

{
 "action": "resume"

• Example response

The HTTP status code **204** is returned.

----End

6.4 Example 4: Creating an AS Policy

Scenarios

This section describes how to create an AS policy by calling APIs. For details, see **Calling APIs**.

An AS policy specifies a condition for triggering a scaling action. When the trigger condition is met, a scaling action occurs.

Involved APIs

Creating an AS policy involves the following APIs:

- **Obtaining a User Token**: Determine the user token that can be used to authenticate the calling of other APIs.
- Querying AS Groups: Determine the AS group for which the AS policy is created.
- Creating an AS Policy: Create a policy for the specified AS group.

• Querying AS Policy Details: Verify the AS policy creation.

Procedure

- **Step 1** Determine the user token that can be used to authenticate the calling of other APIs.
 - 1. View the user token. For details, see **Obtaining a User Token**.
 - 2. Obtain the value of **X-Subject-Token** in the response header.

Step 2 Determine the AS group.

- 1. View AS groups.
 - API

URI format: GET /autoscaling-api/v1/{project_id}/scaling_group For details, see **Querying AS Groups**.

Example request

GET: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group Obtain *{endpoint}* from Regions and Endpoint.

```
- Example response
```

```
"limit": 20,
"scaling_groups": [
  {
     "networks": [
       {
          "id": "a8327883-6b07-4497-9c61-68d03ee193a",
          "ipv6 enable": true,
          "ipv6_bandwidth":
          {
             "id": "076ee2ff-f23e-4338-b8ac-1bc7278532d5"
          }
       }
     ],
     "available zones": [
        "XXXa",
"XXXb"
     ],
"detail": null,
     "scaling_group_name": "as-group-test",
     "scaling_group_id": "77a7a397-7d2f-4e79-9da9-6a35e2709150",
     "scaling group status": "INSERVICE",
     "scaling_configuration_id": "1d281494-6085-4579-b817-c1f813be835f",
     "scaling_configuration_name": "healthCheck",
     "current instance number": 0,
     "desire_instance_number": 1,
     "min_instance_number": 0,
     "max_instance_number": 500,
     "cool_down_time": 300,
     "lb_listener_id": "f06c0112570743b51c0e8fbe1f235bab",
     "security_groups": [
       {
          "id": "8a4b1d5b-0054-419f-84b1-5c8a59ebc829"
       }
     ],
     "create_time": "2015-07-23T02:46:29Z",
     "vpc_id": "863ccae2-ee85-4d27-bc5b-3ba2a198a9e2",
     "health_periodic_audit_method": "ELB_AUDIT",
     "health_periodic_audit_time": 5,
     "health_periodic_audit_grace_period": 600,
     "instance_terminate_policy": "OLD_CONFIG_OLD_INSTANCE",
```

```
"is_scaling": false,
    "delete_publicip": false,
    "enterprise_project_id": "c92b1a5d-6f20-43f2-b1b7-7ce35e58e413",
    "multi_az_priority_policy": "PICK_FIRST"
    }
],
"total_number": 1,
"start_number": 0
}
```

2. Select an AS group and record the AS group ID.

Step 3 Create an AS policy for the selected AS group.

API

URI format: POST /autoscaling-api/v1/{project_id}/scaling_policy For details, see **Creating an AS Policy**.

• Example request

This example shows how to create a periodic AS policy named **aspolicy-7a75**. The policy takes effect from 2015-12-14T03:34Z through 2015-12-27T03:34Z. During this period, one instance will be added to AS group with ID **5bc3aa02-b83e-454c-aba1-4d2095c68f8b** at 16:00 every day.

POST: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_policy

Obtain *{endpoint}* from Regions and Endpoint.

Body:

```
{
  "scaling_policy_name": "as-policy-7a75",
  "scaling_policy_action": {
     "operation": "ADD",
     "instance_number": 1
  },
  "cool_down_time": 900,
  "scheduled_policy": {
     "launch_time": "16:00"
     "recurrence_type": "Daily",
     "start_time": "2015-12-14T03:34Z",
     "end_time": "2015-12-27T03:34Z"
  },
  "scaling_policy_type": "RECURRENCE",
  "scaling_group_id": "5bc3aa02-b83e-454c-aba1-4d2095c68f8b"
}
```

Example response

```
"scaling_policy_id": "0h327883-324n-4dzd-9c61-68d03ee191dd"
```

Step 4 Verify the AS policy creation.

API

ł

}

URI format: GET /autoscaling-api/v1/{project_id}/scaling_policy/ {scaling_policy_id}

For details, see **Querying an AS Policy**.

• Example request

This example shows how to query details about the AS policy with ID **0h327883-324n-4dzd-9c61-68d03ee191dd**.

GET: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_policy/fd7d63ce-8f5c-443eb9a0-bef9386b23b3

Obtain *{endpoint}* from Regions and Endpoint.

• Example response

```
{
    "scaling_policy": {
        "scaling_policy_id": "fd7d63ce-8f5c-443e-b9a0-bef9386b23b3",

    }
}
```

----End

6.5 Example 5: Performing Operations on Instances in Batches

Scenarios

This section describes how to perform operations on instances in batches by calling APIs. For details, see **Calling APIs**.

An instance is an ECS in an AS group. AS allows you to add or remove instances to or from an AS group in batches, configure instance protection or cancel the configuration for the instances in an AS group in batches, and set the standby mode or cancel the setting for the instances in an AS group in batches.

Constraints

- After instances are removed from an AS group, the number of instances in the AS group cannot be less than the minimum number of instances.
- After instances are added to an AS group, the number of instances in the AS group cannot be greater than the maximum number of instances.
- Instances can be added to an AS group only when the AS group is in the **INSERVICE** state and has no scaling action in progress.
- Instances can be removed from an AS group only when no scaling action is in progress. Only instances in **INSERVICE** state can be removed from an AS group.
- To add instances to an AS group, ensure that the AZ of the instances must be within that of the AS group and that the instances are in the same VPC as the AS group.

Involved APIs

- **Obtaining a User Token**: Determine the user token that can be used to authenticate the calling of other APIs.
- Querying AS Groups: Determine the AS group in which the instances will be operated in batches.
- **Querying Instances in an AS Group**: Determine the instances to be operated in batches in the specified AS group.
- **Performing Operations on Instances in Batches**: Remove the instances from the AS group in a batch.

Procedure

- **Step 1** Determine the user token that can be used to authenticate the calling of other APIs.
 - 1. View the user token. For details, see **Obtaining a User Token**.
 - 2. Obtain the value of **X-Subject-Token** in the response header.
- **Step 2** Determine the AS group.
 - 1. View AS groups.
 - API

URI format: GET /autoscaling-api/v1/{project_id}/scaling_group For details, see **Querying AS Groups**.

Example request

GET: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group

Obtain *{endpoint}* from Regions and Endpoint.

"start_number": 0
```

- 2. Select an AS group and record the AS group ID.
- **Step 3** Determine the instances.
 - 1. View the instances in the specified AS group.
 - API

URI format: GET /autoscaling-api/v1/{project_id}/scaling_group_instance/ {scaling_group_id}/list

For details, see **Querying Instances in an AS Group**.

- Example request

This example shows how to query enabled, healthy instances in the AS group with ID **e5d27f5c-dd76-4a61-b4bc-a67c5686719a**.

GET: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group_instance/ e5d27f5c-dd76-4a61-b4bc-a67c5686719a/list? life_cycle_state=INSERVICE&health_status=NORMAL

Obtain *{endpoint}* from Regions and Endpoint.

Example response

```
"limit": 10,
"total_number": 1,
"start_number": 0,
"scaling_group_instances": [
   {
      "instance_id": "b25c1589-c96c-465b-9fef-d06540d1945c",
      "scaling_group_id": "e5d27f5c-dd76-4a61-b4bc-a67c5686719a",
      "scaling_group_name": "discuz",
     "life_cycle_state": "INSERVICE",
"health_status": "NORMAL",
      "scaling_configuration_name": "discuz",
      "scaling_configuration_id": "ca3dcd84-d197-4c4f-af2a-cf8ba39696ac",
      "create_time": "2015-07-23T06:47:33Z",
      "instance_name": "discuz_3D210808",
      "protect_from_scaling_down": false
  }
]
```

2. Select instances and record their IDs.

Step 4 Remove the instances from the AS group in a batch.

API

URI format: POST /autoscaling-api/v1/{project_id}/scaling_group_instance/ {scaling_group_id}/action

For details, see Batch Managing Instances.

• Example request

This example shows how to remove and delete instances with IDs instance_id_1 and instance_id_2 from the AS group with ID e5d27f5c-dd76-4a61-b4bc-a67c5686719a in a batch.

POST: https://{Endpoint}/autoscaling-api/ v1/0605767c2e80d5762fd0c0146a10aaf2/scaling_group_instance/e5d27f5cdd76-4a61-b4bc-a67c5686719a/action

Obtain *{endpoint}* from Regions and Endpoint.

Body:

```
{
"action": "REMOVE",
"instances_id": [
"instance_id_1",
"instance_id_2"
],
"instance_delete": "yes"
}
```

• Example response

The HTTP status code **204** is returned.

----End

Permissions Policies and Supported Actions

7.1 Introduction

This section describes fine-grained permissions management for your AS resources. If your account does not need individual IAM users, you may skip this section.

By default, new IAM users do not have any permissions granted. You need to add a user to one or more groups, and assign policies or roles to these groups. The user then inherits permissions from the groups it is a member of. This process is called authorization. After authorization, the user can perform specified operations on AS based on the permissions.

You can grant users permissions by using **roles** and **policies**. Roles: A type of coarse-grained authorization mechanism that defines permissions related to user responsibilities. Policies define API-based permissions for operations on specific resources under certain conditions, allowing for more fine-grained, secure access control of cloud resources.

NOTE

Policy-based authorization is useful if you want to allow or deny access to an API.

An account has all of the permissions required to call all APIs, but IAM users must have the required permissions specifically assigned. The permissions required for calling an API are determined by the actions supported by the API. Only users that have been granted permissions allowing the actions can call the API successfully. For example, if an IAM user wants to query AS groups using an API, the user must have been granted permissions that allow the **as:groups:list** action.

Supported Actions

Operations supported by a fine-grained policy are specific to APIs. The following describes the headers of the action tables provided in this chapter:

• Permissions: defined by actions in a custom policy.

- APIs: REST APIs that can be called in a custom policy.
- Actions: added to a custom policy to control permissions for specific operations.
- Related actions: actions on which a specific action depends to take effect. When assigning permissions for the action to a user, you also need to assign permissions for the dependent actions.
- IAM projects or enterprise projects: scope of users a permission is granted to. Policies that contain actions supporting both IAM and enterprise projects can be assigned to user groups and take effect in both IAM and Enterprise Management. Policies that only contain actions supporting IAM projects can be assigned to user groups and only take effect for IAM. Such policies will not take effect if they are assigned to user groups in Enterprise Project. Administrators can check whether an action supports IAM projects or enterprise projects in the action list. "√" indicates that the action supports the project and "×" indicates that the action does not support the project. For details about the differences between IAM and enterprise management, see What Are the Differences Between IAM and Enterprise Management?

AS supports the following actions that can be defined in custom policies:

- AS group actions, including actions supported by all AS group APIs, such as the APIs for creating, modifying, and querying an AS group.
- **AS configuration** actions, including actions supported by all AS configuration APIs, such as the APIs for creating, deleting, and querying AS configurations.
- **Instance** actions, including actions supported by all instance APIs, such as the APIs for querying the instances in an AS group and removing instances from an AS group.
- **AS policy** actions, including actions supported by all AS policy APIs, such as the APIs for creating and modifying an AS policy.
- AS policy execution log actions, including the action supported by the API for querying AS policy execution logs.
- **Scaling action log** actions, including actions supported by the APIs for querying scaling action logs.
- **Quota** actions, including actions supported by all AS quota APIs, such as the API for querying AS quotas.
- **Notification** actions, including actions supported by all AS notification APIs, such as the API for querying notifications of an AS group.
- Lifecycle hook actions, including actions supported by all lifecycle hook APIs, such as the API for creating a lifecycle hook.
- **Tag management** actions, including actions supported by all AS tag APIs, such as the API for querying tags.

7.2 AS Groups

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Creating an AS group	POST / autoscaling- api/v1/ {project_id}/ scaling_grou p	as:groups:cr eate	\checkmark	\checkmark
Querying AS groups	GET / autoscaling- api/v1/ {project_id}/ scaling_grou p	as:groups:li st	\checkmark	\checkmark
Querying AS group details	GET / autoscaling- api/v1/ {project_id}/ scaling_grou p/ {scaling_grou p_id}	as:groups:g et	√	\checkmark
Modifying an AS group	PUT / autoscaling- api/v1/ {project_id}/ scaling_grou p/ {scaling_grou p_id}	as:groups:u pdate	√	\checkmark
Deleting an AS group	DELETE / autoscaling- api/v1/ {project_id}/ scaling_grou p/ {scaling_grou p_id}	as:groups:d elete	\checkmark	\checkmark

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Enabling or disabling an AS group	POST / autoscaling- api/v1/ {project_id}/ scaling_grou p/ {scaling_grou p_id}/action	as:groups:a ction	\checkmark	√

7.3 AS Configurations

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Creating an AS configuration	POST / autoscaling- api/v1/ {project_id}/ scaling_confi guration	as:configs:c reate	\checkmark	\checkmark
Querying AS configurations	GET / autoscaling- api/v1/ {project_id}/ scaling_confi guration	as:configs:li st	\checkmark	\checkmark
Querying AS configuration details	GET / autoscaling- api/v1/ {project_id}/ scaling_confi guration/ {scaling_confi iguration_id}	as:configs:g et	\checkmark	\checkmark
Deleting an AS configuration	DELETE / autoscaling- api/v1/ {project_id}/ scaling_confi guration/ {scaling_conf iguration_id}	as:configs:d elete	\checkmark	\checkmark

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Batch deleting AS configurations	POST / autoscaling- api/v1/ {project_id}/ scaling_confi gurations	as:configs:b atchDelete	\checkmark	\checkmark

7.4 Instances

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Querying instances in an AS group	GET / autoscaling- api/v1/ {project_id}/ scaling_grou p_instance/ {scaling_grou p_id}/list	as:instances :list	V	√
Removing instances from an AS group	DELETE / autoscaling- api/v1/ {project_id}/ scaling_grou p_instance/ {instance_id}	as:instances :delete	\checkmark	\checkmark
Performing operations on instances in batches	POST / autoscaling- api/v1/ {project_id}/ scaling_grou p_instance/ {scaling_grou p_id}/action	as:instances :batchActio n	\checkmark	\checkmark

7.5 AS Policies

Permission	API Action		IAM Project	Enterprise Project
Creating an AS policy	POST / autoscaling- api/v1/ {project_id}/ scaling_policy	as:policies:c reate	\checkmark	\checkmark
Modifying an AS policy	PUT / autoscaling- api/v1/ {project_id}/ scaling_policy / {scaling_polic y_id}	as:policies:u pdate	\checkmark	\checkmark
Querying AS policies	GET / autoscaling- api/v1/ {project_id}/ scaling_policy / {scaling_grou p_id}/list	as:policies:li st	\checkmark	\checkmark
Querying AS policy details	GET / autoscaling- api/v1/ {project_id}/ scaling_policy / {scaling_polic y_id}	as:policies:g et	\checkmark	\checkmark
Executing, enabling, or disabling an AS policy	POST / autoscaling- api/v1/ {project_id}/ scaling_policy / {scaling_polic y_id}/action	as:policies:a ction	\checkmark	\checkmark

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Deleting an AS policy	DELETE / autoscaling- api/v1/ {project_id}/ scaling_policy / {scaling_polic y_id}	as:policies:d elete	\checkmark	√
Creating an AS policy	POST / autoscaling- api/v2/ {project_id}/ scaling_policy	as:policies:c reate	\checkmark	\checkmark
Modifying an AS policy	PUT / autoscaling- api/v2/ {project_id}/ scaling_policy / {scaling_polic y_id}	as:policies:u pdate	\checkmark	\checkmark
Querying AS policies	GET / autoscaling- api/v2/ {project_id}/ scaling_policy / {scaling_reso urce_id}/list	as:policies:li st	\checkmark	\checkmark

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Querying AS policies	GET / autoscaling- api/v2/ {project_id}/ scaling_polic y{? scaling_resou rce_id, scaling_resou rce_type ,scal ing_policy_na me, scaling_policy _id,scaling_p olicy_type,sta rt_number,li mit,sort_by,or der}	as:groups:g et as:policies:li st	√	√
Querying AS policy details	GET / autoscaling- api/v2/ {project_id}/ scaling_policy / {scaling_polic y_id}	as:policies:g et	V	√
Performing operations on AS policies in batches	POST / autoscaling- api/v1/ {project_id}/ scaling_polici es/action	as:policies:b atchAction	~	√

7.6 AS Policy Execution Logs

Permission	API	Action	IAM Project	Enterprise Project
Querying AS policy execution logs	GET / autoscaling- api/v1/ {project_id}/ scaling_policy _execute_log/ {scaling_polic y_id}	as:policyExe cuteLogs:lis t	√	\checkmark

7.7 Scaling Action Logs

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Querying scaling action logs	GET / autoscaling- api/v1/ {project_id}/ scaling_activit y_log/ {scaling_grou p_id}	as:acivityLo gs:list	\checkmark	√
Querying scaling action logs (V2)	GET / autoscaling- api/v2/ {project_id}/ scaling_activit y_log/ {scaling_grou p_id}	as:acivityLo gs:list	\checkmark	√

7.8 Quotas

Permission	API	Action	IAM Project	Enterprise Project
Querying AS quotas	GET / autoscaling- api/v1/ {project_id}/ quotas	as:quotas:g et	\checkmark	√
Querying AS policy and instance quotas	GET / autoscaling- api/v1/ {project_id}/ quotas/ {scaling_grou p_id}	as:quotas:g et	\checkmark	\checkmark

7.9 Notifications

Permission	API	Action	IAM Project	Enterprise Project
Configuring a notification for an AS group	PUT / autoscaling- api/v1/ {project_id}/ scaling_notific ation/ {scaling_grou p_id}	as:notificati ons:set	\checkmark	√
Querying notifications of an AS group	GET / autoscaling- api/v1/ {project_id}/ scaling_notific ation/ {scaling_grou p_id}	as:notificati ons:list	√	√

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Deleting a notification of an AS group	DELETE / autoscaling- api/v1/ {project_id}/ scaling_notific ation/ {scaling_grou p_id}/ {topic_urn}	as:notificati ons:delete	\checkmark	\checkmark

7.10 Lifecycle Hooks

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Creating a lifecycle hook	POST / autoscaling- api/v1/ {project_id}/ scaling_lifecyc le_hook/ {scaling_grou p_id}	as:lifecycle Hooks:crea te	V	√
Querying lifecycle hooks	GET / autoscaling- api/v1/ {project_id}/ scaling_lifecyc le_hook/ {scaling_grou p_id}/list	as:lifecycle Hooks:list	\checkmark	√
Querying lifecycle hook details	GET / autoscaling- api/v1/ {project_id}/ scaling_lifecyc le_hook/ {scaling_grou p_id}/ {lifecycle_hoo k_name}	as:lifecycle Hooks:get	~	\checkmark

Permission	ΑΡΙ	Action	IAM Project	Enterprise Project
Modifying a lifecycle hook	PUT / autoscaling- api/v1/ {project_id}/ scaling_lifecyc le_hook/ {scaling_grou p_id}/ {lifecycle_hoo k_name}	as:lifecycle Hooks:upd ate	\checkmark	\checkmark
Calling back an instance lifecycle hook	PUT / autoscaling- api/v1/ {project_id}/ scaling_instan ce_hook/ {scaling_grou p_id}/callback	as:instance Hooks:actio n	\checkmark	√
Querying instance suspension	GET / autoscaling- api/v1/ {project_id}/ scaling_instan ce_hook/ {scaling_grou p_id}/list	as:instance Hooks:list	\checkmark	√
Deleting a lifecycle hook	DELETE / autoscaling- api/v1/ {project_id}/ scaling_lifecyc le_hook/ {scaling_grou p_id}/ {lifecycle_hoo k_name}	as:lifecycle Hooks:dele te	√	√

7.11 Tags

Permission	API	Action	IAM Project	Enterprise Project
Querying tags	GET / autoscaling- api/v1/ {project_id}/ {resource_type }/tags	as:tags:list	\checkmark	×
Querying tags of a resource	GET / autoscaling- api/v1/ {project_id}/ {resource_type }/ {resource_id}/ tags	as:tags:get	\checkmark	×
Updating or deleting a tag	POST / autoscaling- api/v1/ {project_id}/ {resource_type }/ {resource_id}/ tags/action	as:tags:set	\checkmark	×
Querying resources	POST / autoscaling- api/v1/ {project_id}/ {resource_type }/ resource_insta nces/action	as:tagReso urces:list	\checkmark	×

A_{Appendix}

A.1 AS Metrics

Function

This section describes metrics reported by AS to Cloud Eye as well as their namespaces and dimensions. You can use APIs provided by Cloud Eye to view the AS metrics and the alarms generated by Cloud Eye for AS.

Namespace

SYS.AS

Metrics

Metric	Name	Description	Value Range	Remarks
cpu_util	CPU Usage	Average CPU usage of all instances in a monitored object	≥ 0%	The monitored object is an AS group.
mem_util	Memory Usage	Average memory usage of all instances in a monitored object	≥ 0%	The monitored object is an AS group.
				NOTE This metric is unavailable if the image has no installed.

Metric	Name	Description	Value Range	Remarks
network_inco ming_bytes_r ate_inband	Inband Incoming Rate	Average number of incoming bytes per second on all instances in a monitored object	≥ 0	The monitored object is an AS group.
network_outg oing_bytes_ra te_inband	Inband Outgoing Rate	Average number of outgoing bytes per second on all instances in a monitored object	≥ 0	The monitored object is an AS group.
instance_num	Number of Instances	Number of available instances in a monitored object	≥ 0	The monitored object is an AS group. Available ECSs are INSERVICE instances in an AS group.
disk_read_byt es_rate	Disks Read Rate	Number of bytes read from all instances in a monitored object per second	≥ 0	The monitored object is an AS group.
disk_write_by tes_rate	Disks Write Rate	Number of bytes written to all instances in a monitored object per second	≥ 0	The monitored object is an AS group.
disk_read_req uests_rate	Disk Read Requests	Number of read requests sent to all instances in a monitored object per second	≥ 0	The monitored object is an AS group.
disk_write_re quests_rate	Disks Write Requests	Number of write requests sent to all instances in a monitored object per second	≥ 0	The monitored object is an AS group.

For details about whether your OS supports the **Memory Usage**, **Inband Outgoing Rate**, and **Inband Incoming Rate** metrics, see *Elastic Cloud Server User Guide*.

Dimension

Кеу	Value
AutoScalingGroup	AS group ID

A.2 Error Codes

Description

This section provides the meanings of error codes returned by AS APIs.

Example of Returned Error Information

{"error":{"code":"AS.0001","message":"System error."}}

Error Code Description

If an error code starting with **APIGW** is returned after you call an API, rectify the fault by referring to the instructions provided in **API Gateway Error Codes**.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
500	AS. 0001	System error.	System error.	Try again later or contact technical support.
400	AS. 0002	Request body is null.	The message body is empty.	Enter a valid message body.
401	AS. 0005	The token of the header in the request is null.	The header in the request carries no or an empty token.	Enter a valid token.
401	AS. 0006	The token of the header in the request is incorrect.	The header in the request carries an incorrect, invalid, or expired token.	Enter a valid token.
404	AS. 0007	The requested resource [%s] could not be found.	The requested resources are not found.	Use the correct URL parameter.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 0008	Incorrect ProjectID.	The project id value carried in the URL is different from that resolved from the token.	Check whether the parameter in the URL matches that in the token.
403	AS. 0011	You do not have the rights to perform the operation.	You do not have the rights to perform the operation.	Check whether te_admin, as_adm, or other required roles exist.
403	AS. 0012	The user role is suspended.	Your rights to perform the operation have been frozen.	Check whether your user roles include op_suspended , the frozen one.
403	AS. 0013	Your rights to perform the operation are disabled.	Your rights to perform the operation are disabled.	Check whether your user roles include op_restricted , the restricted one.
400	AS. 0022	Request body error	The request is invalid.	Check whether the request body is in standard JSON format or whether an unsupported parameter exists.
400	AS. 0026	Scaling action is not allowed in the cooling duration.	No scaling action is allowed in the cooldown period.	Try again later.
400	AS. 0031	Policy does not allow [%s] to be performed.	Fine-grained authentication failed because no authentication item is specified.	Add the required authorization item.
400	AS. 0033	The api version is illegal, only v1 and v2.	Invalid API ID.	Enter a correct API ID.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 0034	Failed to execute the policy because the AS group is in active state.	Failed to trigger the AS policy because a scaling action in the AS group is in progress.	An AS policy can be automatically triggered only when there is no in-progress scaling action in the AS group. Try again later.
400	AS. 1001	The value of parameter Start number is invalid.	The start number value is invalid.	Enter a valid start number value.
400	AS. 1002	The value of parameter Limit is invalid.	The limit value is invalid.	Enter a valid limit value.
400	AS. 1003	The AS configuration ID is null.	The AS configuration ID is empty.	Add an AS configuration ID.
400	AS. 1004	The AS configuration does not exist.	The AS configuration does not exist.	Use a correct AS configuration ID.
400	AS. 1006	The AS configuration is in use.	The AS configuration is being used by an AS group and cannot be deleted.	Change this AS configuration for the AS group to another one and delete the AS configuration.
400	AS. 1007	The AS configuration name is null.	The AS configuration name is empty.	Add an AS configuration name.
400	AS. 1008	The AS configuration name is too long.	The AS configuration name is too long.	Use an AS configuration name of proper length.
400	AS. 1009	The AS group ID is null.	The AS group ID is not specified.	Add an AS group ID.
400	AS. 1011	The instance configuration information is null.	The instance_config field is not specified.	Enter a valid instance_config value.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 1014	The image ID in the AS configuration is null.	The image ID is not specified.	Add an image ID.
400	AS. 1015	The image in the AS configuration does not exist.	The image in the AS configuration does not exist.	Use a correct image ID.
400	AS. 1016	The specification ID in the AS configuration cannot be null.	The flavor ID is not specified.	Add a flavor ID.
400	AS. 1017	The specification [%s] in the AS configuration does not exist.	The flavor of the AS configuration does not exist.	Use a correct flavor ID.
400	AS. 1018	The specification [%s] and image is not match.	The flavor and image do not match.	Check whether the flavor matches the image. If not, modify the configuration.
400	AS. 1019	The disk of this type is not applicable to the ECS.	The flavor and disk do not match.	Check whether the flavor matches the disk type. If not, change the resources.
400	AS. 1021	The image in the AS configuration is not activated.	The image in the AS configuration is not activated.	Use a correct image ID.
400	AS. 1022	The image in the AS configuration is not available.	The image in the AS configuration is unavailable.	Use a correct image ID.
400	AS. 1023	Invalid AS configuration name.	The AS configuration name is invalid.	Use a valid AS configuration name.
400	AS. 1024	The number of AS configurations exceeds the upper limit.	The number of AS configurations exceeds the upper limit.	Delete idle AS configurations or apply for a higher quota.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 1025	The user login mode in the AS configuration is not unique.	The user login mode in the AS configuration is not unique.	Use account-and- password or key- pair login mode only.
400	AS. 1026	The user login mode in the AS configuration is empty.	The user login mode in the AS configuration is empty.	Use account-and- password or key- pair login mode only.
400	AS. 1027	The scaling config personality is invalid.	The user AS configuration is invalid.	Enter a valid personality value.
400	AS. 1028	The disk in the AS configuration is null.	The disk in the AS configuration is empty.	Enter a valid disk value.
400	AS. 1029	The number of system disks in the AS configuration is invalid.	The number of system disks in the AS configuration is invalid.	Ensure that there is only one system disk.
400	AS. 1030	The size of the system disk in the AS configuration is less than the specification required.	The size of the system disk in the AS configuration is smaller than the requirement.	Use a proper system disk size.
400	AS. 1031	The size of the disk in the AS configuration is not correct.	The size of the disk in the AS configuration is invalid.	Use a proper disk size.
400	AS. 1032	The ECS type [%s] in the AS configuration do not support 24 disks.	The number of disks in the AS configuration exceeds 24.	Ensure that the number of disks does not exceed the limit.
400	AS. 1033	Parameter volumeType in the AS configuration is invalid.	The volumeType of the disk in the AS configuration is invalid.	Use a valid volume_type value.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 1034	Parameter diskType in the AS configuration is invalid.	The diskType in the AS configuration is invalid.	Use a valid disk_type value.
400	AS. 1035	Parameter adminPass in the AS configuration is invalid.	The password in the AS configuration fails to meet the complexity requirements.	Use passwords that meet complexity requirements.
400	AS. 1036	32-bit operating system (OS) does not support the specification [%s] with 4G memory.	The memory of 32- bit OS exceeds 4 GB.	Change the image or the policy.
400	AS. 1038	Batch deleting the AS configuration failed.	Deleting AS configurations in batches fails.	If this error code is returned, use parameter Message to obtain the configuration ID and the failure cause.
400	AS. 1039	The number of AS configurations is beyond the maximum limit.	The number of AS configurations to be deleted in batches exceeds the upper limit.	Delete a maximum of 50 AS configurations at a time.
400	AS. 1040	The list of AS config to be deleted is null.	The AS configuration list is empty.	Add the IDs of the AS configurations to be deleted in batches.
400	AS. 1041	The eip info of scaling config is null.	The eip field in the public_ip field is empty.	Ensure that the eip field is not empty when specifying the public_ip field.
400	AS. 1042	The bandwidth size of eip is invalid.	The bandwidth size is invalid.	Enter a valid bandwidth.

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 1043	The eip type of scaling config is invalid.	The EIP type is invalid.	Use a valid EIP type.
400	AS. 1044	The bandwidth charging mode of eip is invalid.	The bandwidth billing model of the AS configuration is invalid.	Use a valid bandwidth billing model.
400	AS. 1045	The bandwidth type of eip is invalid.	The bandwidth type is invalid.	Use a valid bandwidth.
400	AS. 1046	The bandwidth size of eip is null.	The bandwidth size is not specified.	Add the bandwidth value of the AS configuration.
400	AS. 1047	The bandwidth charging mode of eip is null.	The bandwidth billing model is not specified.	Specify a proper bandwidth billing model.
400	AS. 1048	The bandwidth id of eip is null.	The shared bandwidth ID of the AS configuration is not specified.	Add the shared bandwidth ID.
400	AS. 1049	Parameter userdata in the AS configuration is invalid.	Parameter userdata in the AS configuration is invalid.	Use a valid userdata .
400	AS. 1050	The user login mode in the AS configuration is illegal.	The user login mode in the AS configuration is invalid.	Use a valid login mode.
400	AS. 1052	Parameter metadata in the AS configuration is invalid.	The metadata in the AS configuration is invalid.	Use a valid metadata , whose maximum length is 512 bytes and the key value cannot contain spaces, \$, or periods(.).

HTT P Stat us Cod e	Error Code	Error Message	Description	Solution
400	AS. 1053	The data image is not available.	The data image in the AS configuration is unavailable.	Use a valid data image.
400	AS. 1054	The size of the data disk in the AS configuration is less than the data image required.	The size of the data disk in the AS configuration is smaller than what the data image requires.	Use a proper data disk.
400	AS. 1055	The system disk is not support to data image.	A data disk image cannot be used to create a system disk.	Refer to the error code description.
400	AS. 1056	The data image in the AS configuration does not exist.	The data image in the AS configuration does not exist.	Use a valid data image ID.
400	AS. 1057	The DSS of the disk in the AS configuration is not available.	The selected DSS device is unavailable.	Use a correct DSS device.
400	AS. 1058	The type of dss in the AS configuration is incorrect.	The selected DSS device does not support the disk type.	Change the DSS device or disk type.
400	AS. 1059	The capacity of dss in the AS configuration is not enough.	The storage space on the selected DSS device is insufficient.	Change the DSS device.
