1 Using FunctionGraph to Forward SMN Messages to Slack

Scenarios

Slack, developed by Slack Technologies, is cloud-based instant messaging software. Slack does not have an API to receive HTTPS messages sent from SMN. So, you cannot directly add a Slack subscription to receive SMN notifications. Instead, you need to use FunctionGraph to forward messages to a specified URL.

This section describes how to use FunctionGraph to forward SMN messages to Slack.

Prerequisites

- You have created an SMN message topic, for example, **smn-test**. For details, see [Creating a Topic](#).
- You have downloaded Slack.

Procedure

To use FunctionGraph to send SMN messages to Slack, perform the following operations:

1. [Configuring Slack](#)
2. [Configuring FunctionGraph](#)
3. [Configuring SMN](#)

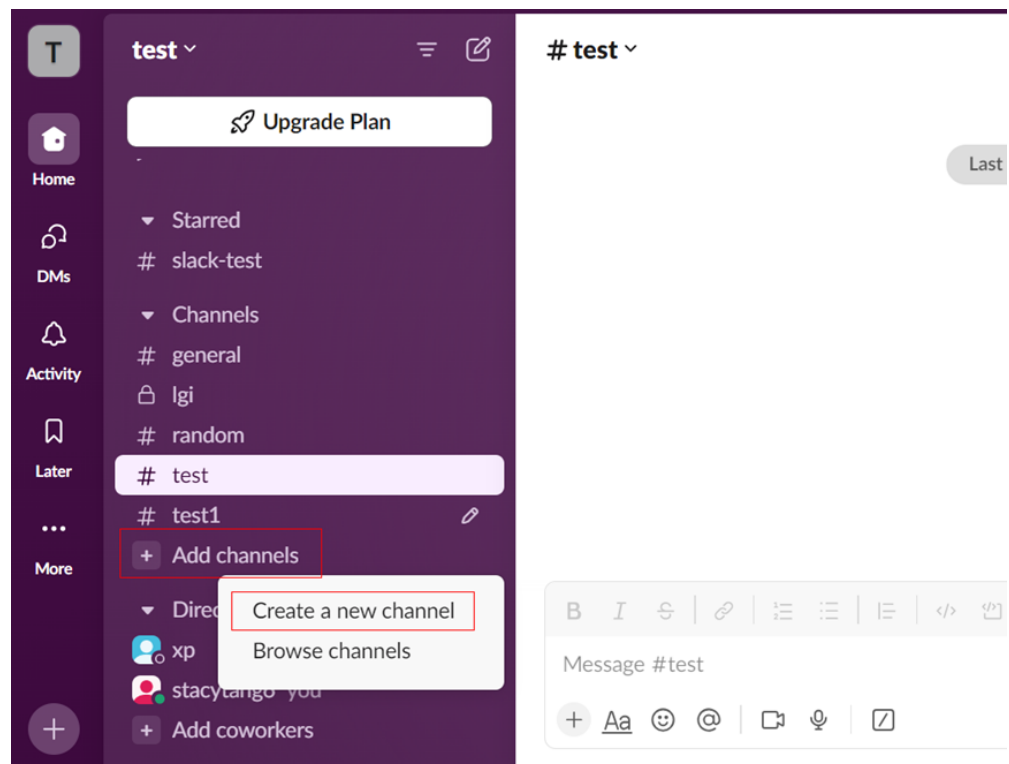

Configuring Slack

NOTE

The following operations are for reference only. For details, visit the [Slack website](#).

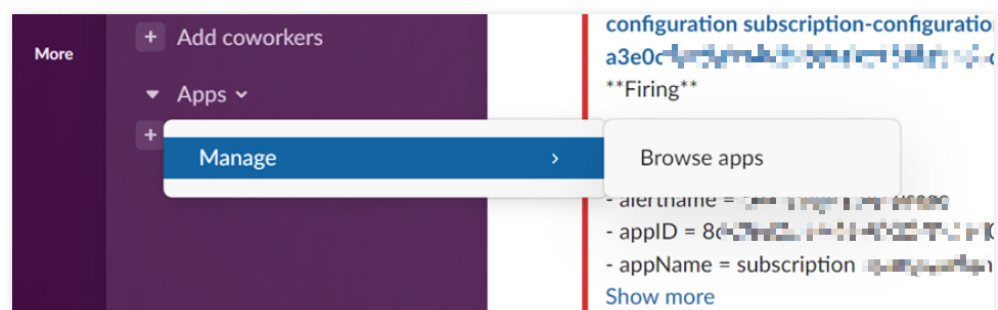

1. Create or select a channel on Slack.

Figure 1-1 Creating a channel

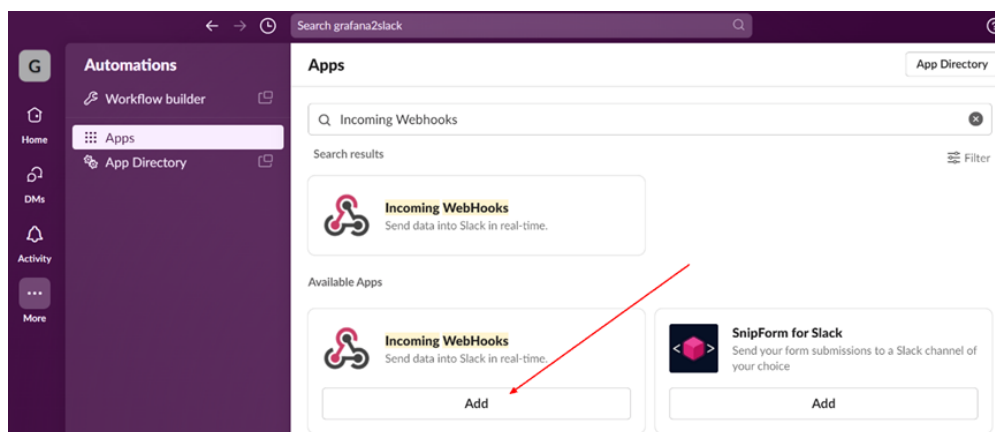

2. Choose **Apps > Manage > Browse apps**.

Figure 1-2 Choosing Apps

3. Search for **Incoming Webhooks** and click **Add**.

Figure 1-3 Adding Incoming Webhooks

4. Click **Configuration** to go to the configuration page and obtain the Webhook URL.

Figure 1-4 Clicking Configuration

Incoming WebHooks

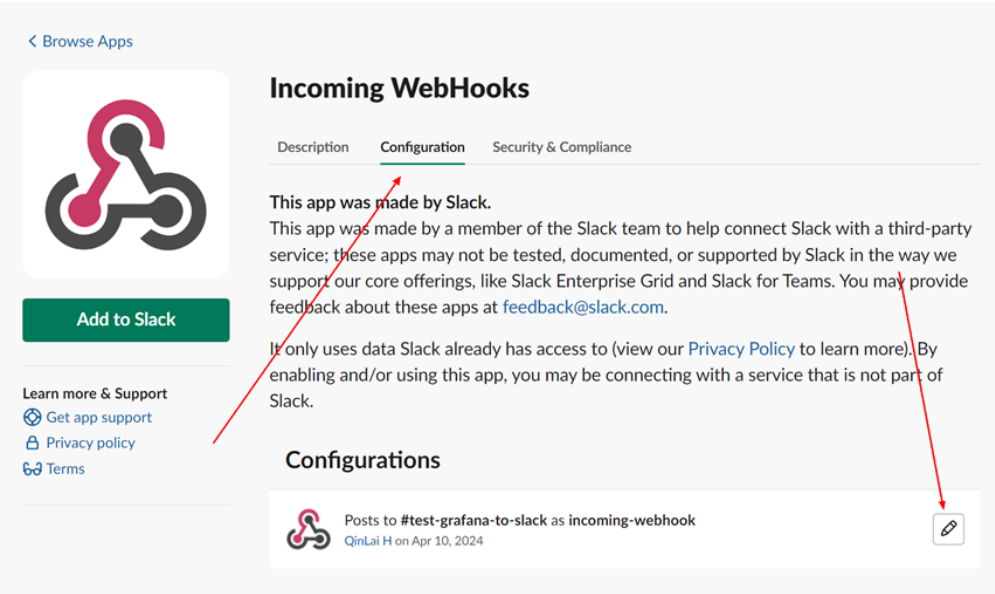

Incoming WebHooks

Please note, this is a legacy custom integration - an outdated way deprecated and possibly removed in the future. **We do not recon**

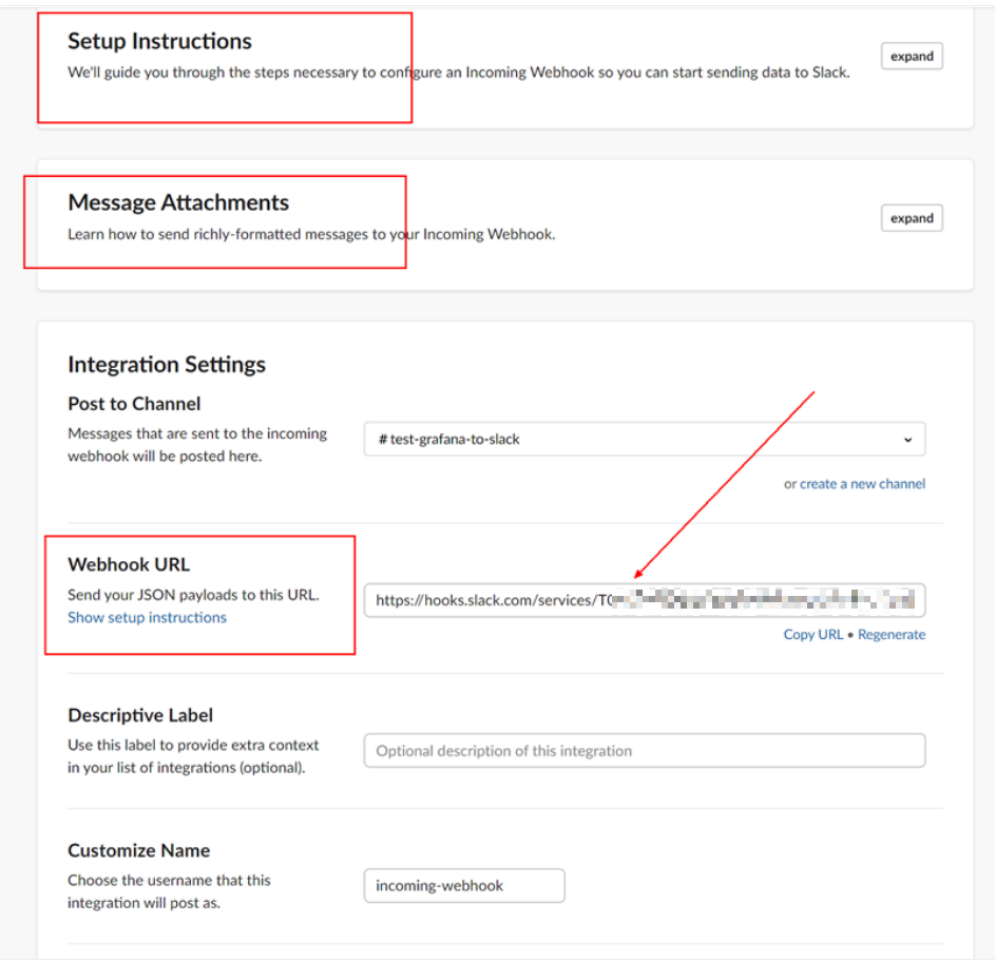

Incoming Webhooks are a simple way to post messages from external payloads, which includes the message and a few other optional fields. [Message Attachments](#) can also be used in Incoming Webhooks

Figure 1-5 Obtaining the Webhook URL

5. Save the obtained Webhook URL.

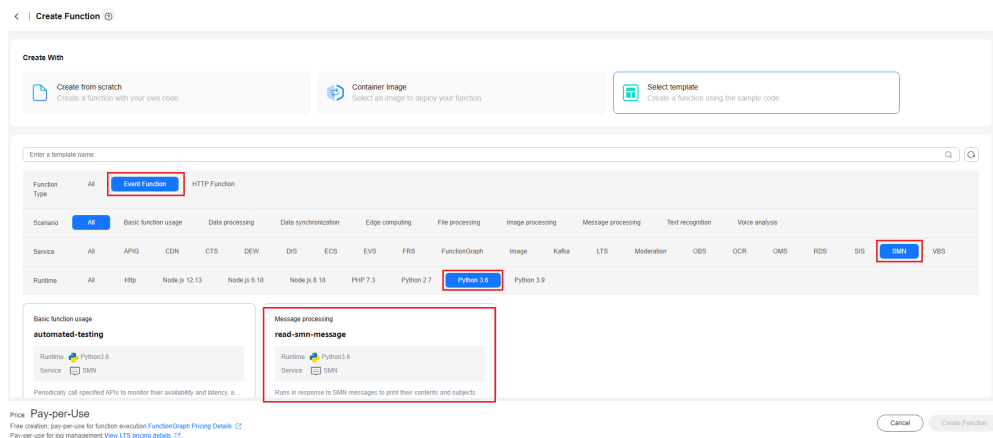

Figure 1-6 Saving the Webhook URL

Configuring FunctionGraph

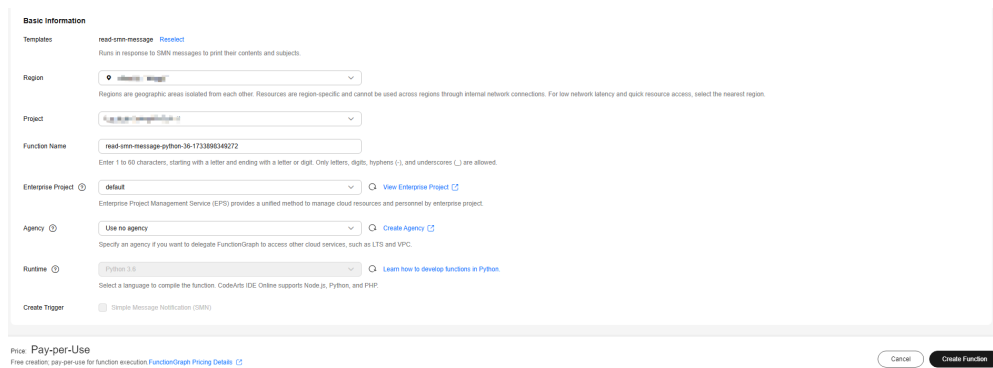

1. Log in to the **FunctionGraph console**. In the navigation pane, choose **Functions > Function List**.
2. Click **Create Function** in the upper right corner and choose **Select template**.
3. Select the template shown in **Figure 1-7** and click **Configure**.

Figure 1-7 Selecting a template

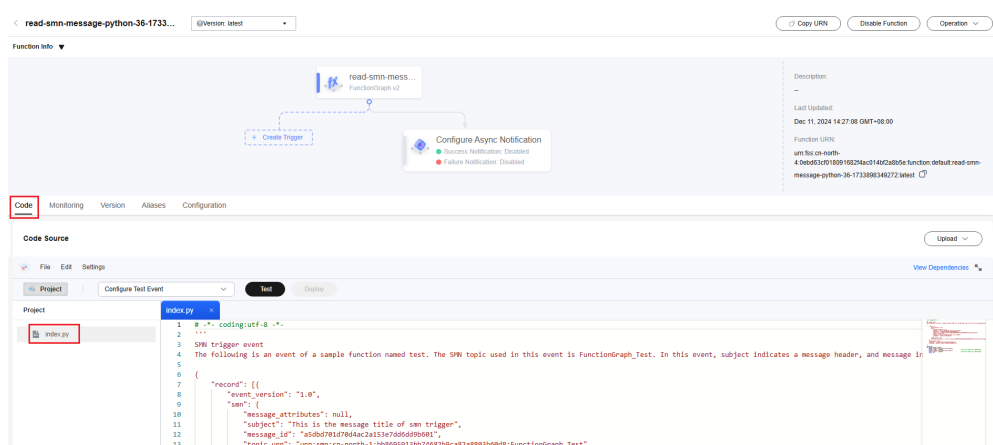

4. Set the function name, select an agency, retain default values for other parameters, and click **Create Function**.

Figure 1-8 Configuring basic information

5. On the configuration details page, click the **Code** tab and edit the code in **index.py**.

Figure 1-9 Editing the code

The following is an example of the code sent to Slack: (In actual use, set **webhook_url** to the Webhook URL obtained from Slack or perform other operations as required.)

```
# -*- coding:utf-8 -*-
import json
import requests

def handler(event, context):
    # Common part: Construct the body fields required by the destination address. event contains all
    # fields sent by SMN.
    payload = {'text': event["record"][0]["smn"]["message"]}

    # Forwarding part: Call a Slack API to forward messages to the Slack platform.
    try:
        webhook_url = 'Webhook URL obtained from Slack'
        response = requests.post(webhook_url, json=payload)
        response.raise_for_status()
        print('Message sent successfully')
    except requests.exceptions.RequestException as e:
        print(f'Error sending message to Slack: {e}')

    return event
```

6. After the editing is complete, press **Ctrl+S** to save the modification and update the code.
7. Click **Create Trigger**.
8. Set the following parameters:
 - **Trigger Type:** Select **Simple Message Notification (SMN)**.
 - **Topic Name:** Select a topic, for example, **smn-test**.

Figure 1-10 Creating a trigger

9. Click **OK**. After the topic is created, all messages sent to the topic are forwarded to the destination address through FunctionGraph.

Configuring SMN

1. Log in to the [SMN console](#). In the navigation pane, choose **Topic Management > Topics**.
2. Locate the topic **smn-test** and click **Add Subscription** in the **Operation** column.
3. Set the following parameters:
 - **Protocol**: Select **FunctionGraph (function)**.
 - **Endpoint**: Select a created function, for example, **smn-test**.

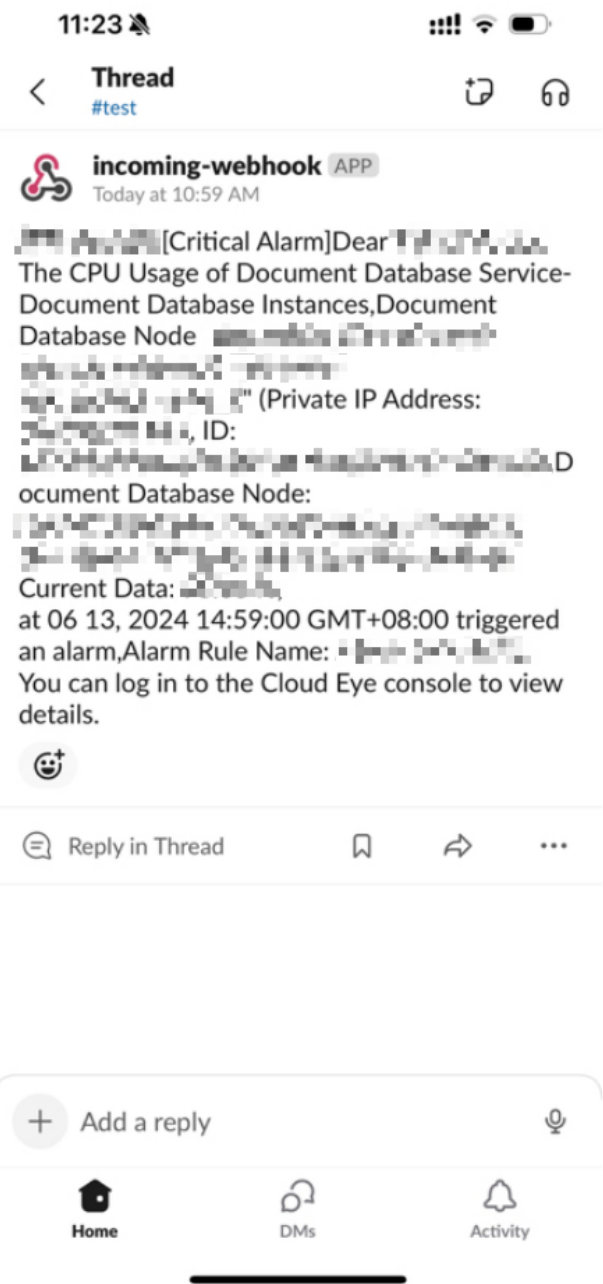

Figure 1-11 Adding a subscription

4. Click **OK**.
5. Locate the topic **smn-test** and click **Publish Message** in the **Operation** column.
6. Set the following parameters:
 - **Message Format**: Select **Text**.
 - **Message**: Enter the message content.
7. Click **OK** to publish the message.

Viewing the Received Message

After a message is published, you can receive the message on Slack. [Figure 1-12](#) shows an example.

Figure 1-12 Message received on Slack

2 Sending Messages to Microsoft Teams Through SMN

Scenarios

Microsoft Teams is a robust communication and collaboration tool. It combines features like instant messaging, video conferencing, file storage, and Microsoft 365 to meet diverse team collaboration requirements.

This section describes how to send messages to Microsoft Teams through SMN to improve work efficiency and team collaboration capabilities.

Prerequisites

- You have created an SMN message topic, for example, **smn-test**. For details, see [Creating a Topic](#).
- You have downloaded Microsoft Teams.

Procedure

To send messages to Microsoft Teams through SMN, perform the following steps:

1. [Configuring Microsoft Teams](#)
2. [Configuring SMN](#)

Configuring Microsoft Teams

NOTE

The following operations are for reference only. For details, see [Microsoft Teams official documents](#).

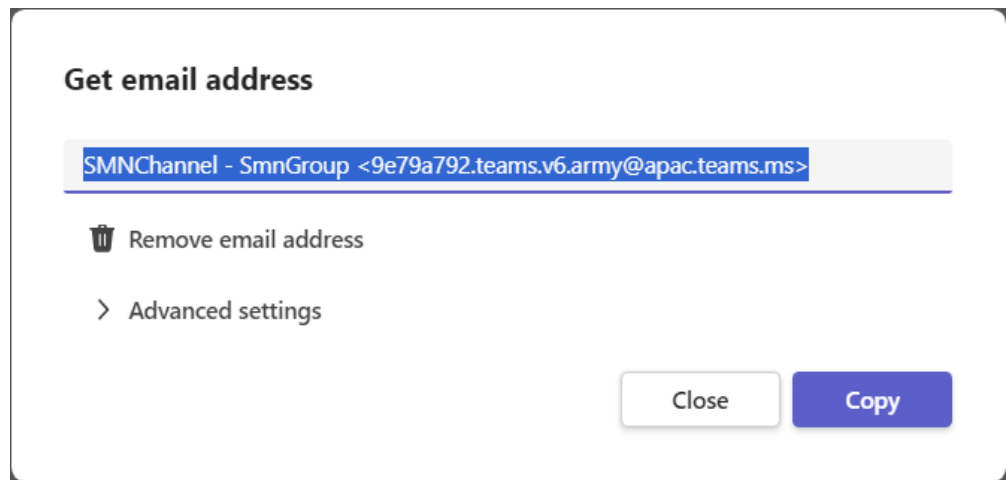

1. Create a team on Microsoft Teams and obtain its email address.

Figure 2-1 Obtaining an email address

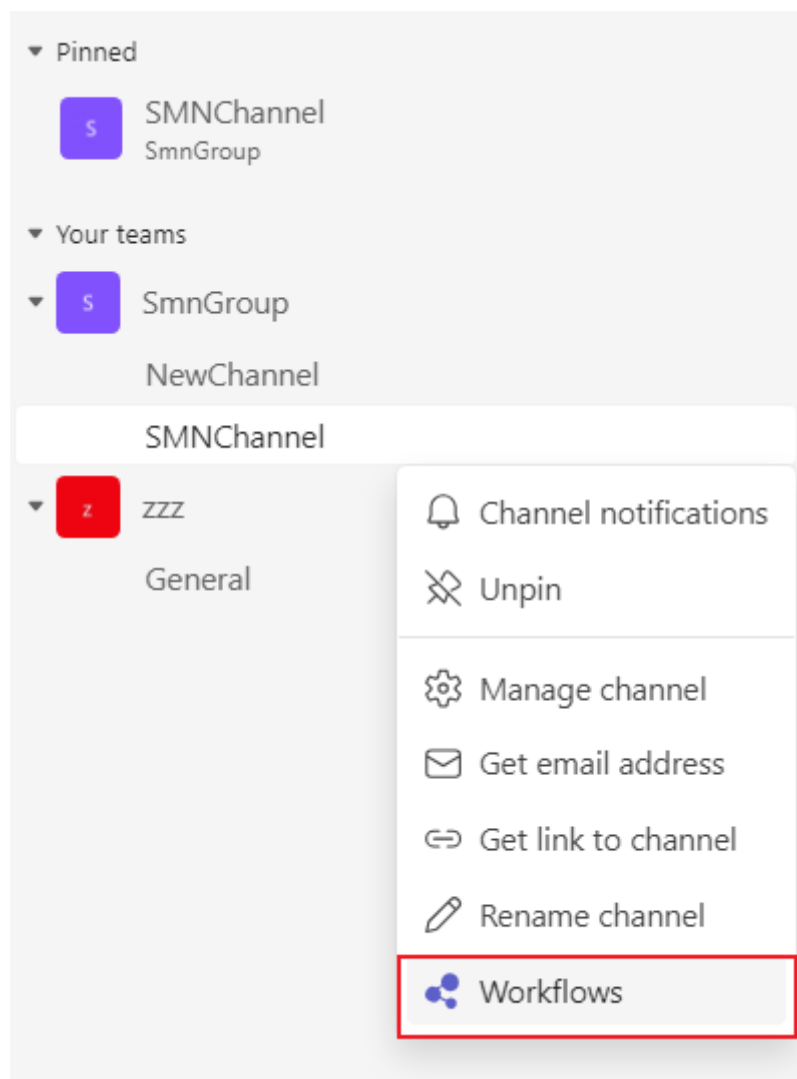

2. Click **Copy** to copy the email address.

Figure 2-2 Copying the email address

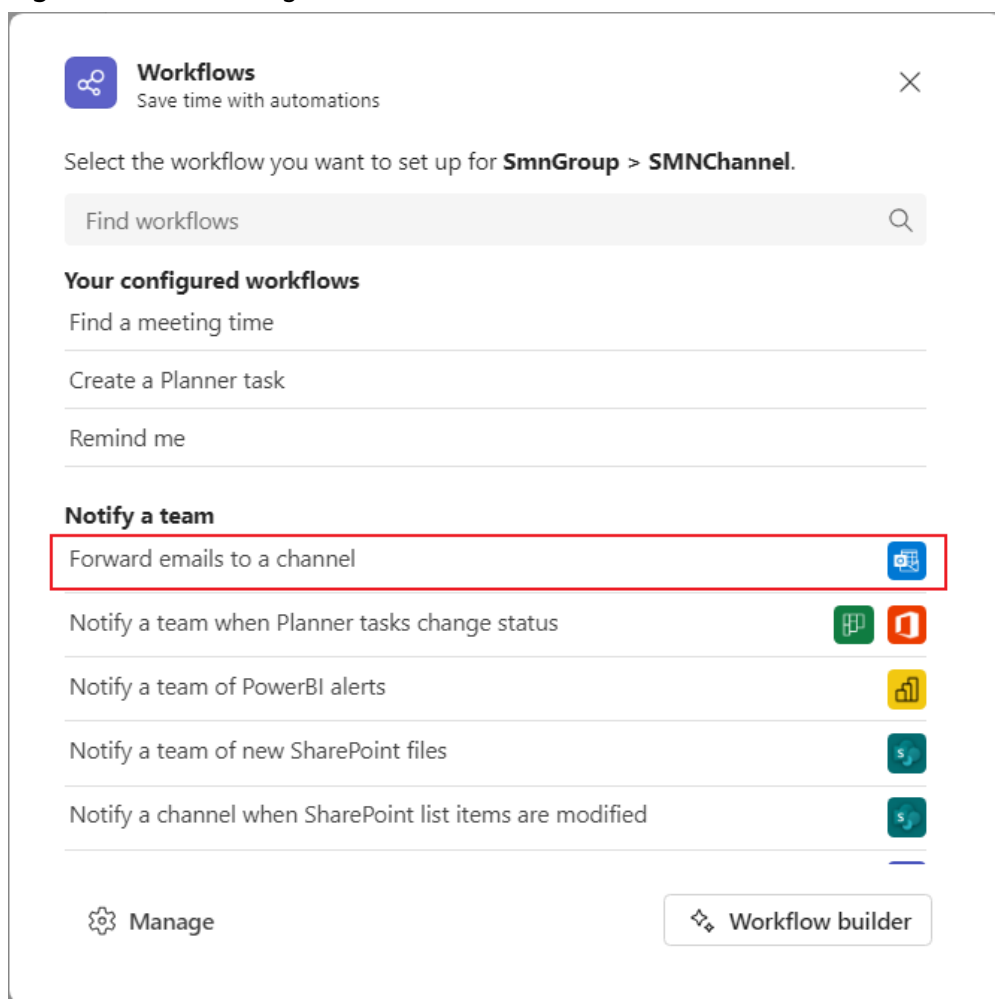

3. On Microsoft Teams, choose **Workflows**.

Figure 2-3 Choosing Workflows

4. Select **Forward emails to a channel**.

Figure 2-4 Forwarding emails to a channel

Configuring SMN

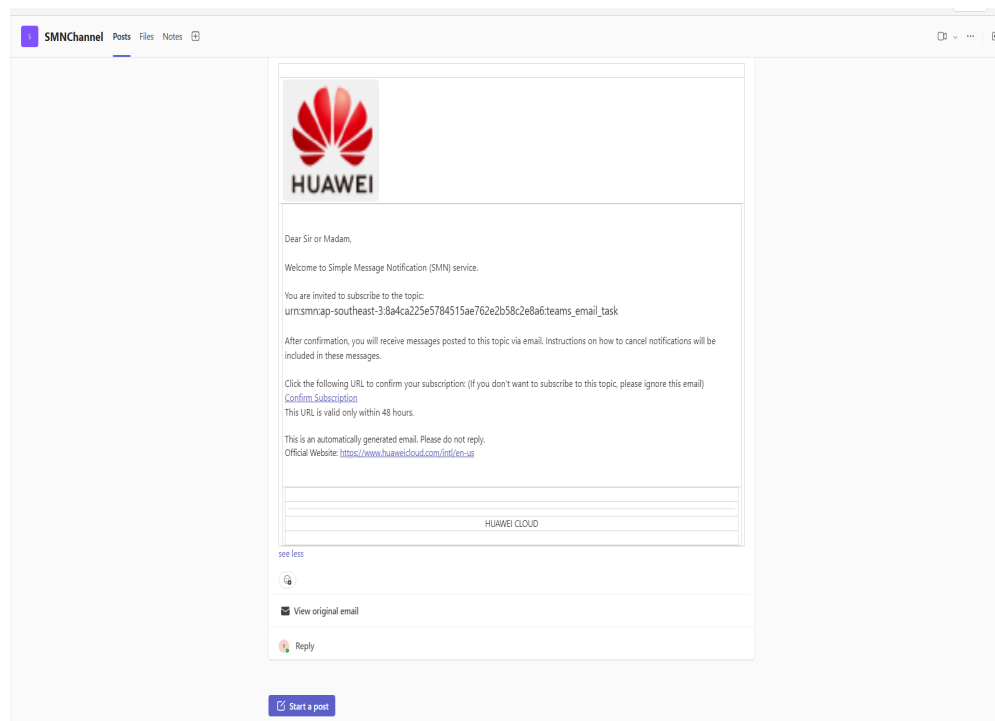

1. Log in to the [SMN console](#). In the navigation pane, choose **Topic Management > Topics**.
2. Locate the topic **smn-test** and click **Add Subscription** in the **Operation** column.
3. Set the following parameters:
 - **Protocol:** Select **Email**.
 - **Endpoint:** Enter the email address copied in step 2, for example, **smn-test**.
4. Click **OK**.

Figure 2-5 Adding a subscription

You will receive a subscription confirmation email on the Microsoft Teams page.

Figure 2-6 Subscription confirmation email

5. Click the **Confirm Subscription** link. The subscription status on the SMN console becomes **Confirmed**

Figure 2-7 Subscription confirmed

6. Locate the topic **smn-test** and click **Publish Message** in the **Operation** column.
7. Set the following parameters:
 - **Message Format:** Select **Text**.
 - **Message:** Enter the message content.
8. Click **OK** to publish the message. For example, enter the message content **send SMN messages to teams**.

Publish Message

Basic Information

Topic Name

teams_email_task

Subject
