3.2.10 Upgrading a Graph.....	47
3.2.11 Binding an EIP.....	50
3.2.12 Unbinding an EIP.....	52
3.2.13 Resizing a Graph.....	54
3.2.14 Restarting a Graph.....	56
3.2.15 Expanding a Graph.....	58

3.3 Backup Management APIs.....	60
3.3.1 Viewing the List of All Backups.....	60
3.3.2 Viewing the Backup List of a Graph.....	64
3.3.3 Adding a Backup.....	68
3.3.4 Deleting a Backup	70
3.4 Metadata Management APIs.....	71
3.4.1 Constraints.....	71
3.4.2 Querying the Metadata List	74
3.4.3 Querying Metadata	76
3.4.4 Adding Metadata	79
3.4.5 Deleting Metadata	83
3.5 Task Center APIs.....	84
3.5.1 Querying Job Status on the Management Plane	84
3.5.2 Querying Job Details in the Job Center.....	89
4 Service Plane APIs.....	95
4.1 Vertex Operation APIs.....	95
4.1.1 Querying Vertices That Meet Filter Criteria.....	95
4.1.2 Querying Vertex Details.....	99
4.1.3 Adding a Vertex.....	101
4.1.4 Deleting a Vertex.....	103
4.1.5 Updating Vertex Properties.....	105
4.1.6 Querying Vertex Data in Batches.....	108
4.1.7 Adding Vertices in Batches.....	110
4.1.8 Deleting Vertices in Batches.....	113
4.1.9 Updating Vertex Properties in Batches.....	114
4.1.10 Adding a Vertex Label.....	118
4.1.11 Deleting a Vertex Label.....	119
4.1.12 Exporting Filtered Vertices.....	121
4.1.13 Deleting Filtered Vertices.....	124
4.2 Edge Operation APIs.....	126
4.2.1 Querying Edges That Meet Filter Criteria.....	126
4.2.2 Querying Edge Details.....	129
4.2.3 Adding an Edge.....	132
4.2.4 Deleting an Edge.....	135
4.2.5 Updating Edge Properties.....	138
4.2.6 Querying Edge Data in Batches.....	141
4.2.7 Adding Edges in Batches.....	144
4.2.8 Deleting Edges in Batches	147
4.2.9 Updating Edge Properties in Batches	150
4.2.10 Exporting Filtered Edges	153
4.2.11 Deleting Filtered Edges	156
4.3 Metadata Operation APIs.....	158

4.3.1 Adding a Label.....	158
4.3.2 Updating a Label.....	161
4.3.3 Querying Graph Metadata Details.....	165
4.3.4 Changing Property Names in Batches.....	168
4.3.5 Deleting a Label.....	170
4.3.6 Adding Labels in Batches.....	172
4.4 Index Operation APIs.....	176
4.4.1 Creating an Index.....	176
4.4.2 Deleting an Index.....	179
4.4.3 Querying Indexes.....	181
4.5 Gremlin Operation APIs.....	183
4.5.1 Executing Gremlin Queries	183
4.6 Algorithm APIs.....	186

6 Appendix.....	302
6.1 Status Codes.....	302
6.2 Error Codes.....	306
6.2.1 Error Codes for Management Plane APIs.....	306
6.2.2 Error Codes for Service Plane APIs.....	313
6.3 Obtaining a Project ID.....	322
6.4 Obtaining an Account ID.....	323

1 Before You Start

1.1 Overview

Welcome to *Graph Engine Service API Reference*. Graph Engine Service (GES) is the first commercial self-built distributed native graph engine with independent intellectual property rights in the industry. It facilitates querying and analysis of graph structure data based on relationships. It is specifically suited for scenarios involving social applications, enterprise relationship analysis, risk control, recommendations, public opinions, and anti-fraud.

This document describes how to use application programming interfaces (APIs) to perform operations on GES resources.

- Management Plane APIs

Management plane APIs provide graph management functions, including creating, stopping, starting, restoring, and upgrading graphs, importing, exporting, and clearing data, creating, querying, and deleting graph backups, and managing metadata. You need to call the management plane APIs to perform these operations.

- Service Plane APIs

Service plane APIs provide graph service functions, including adding, deleting, querying, and modifying vertices, edges, and metadata files, performing Gremlin queries, and running algorithms. You need to call the service plane APIs to perform these operations.

Before calling APIs of GES, ensure that you are familiar with GES concepts.

1.2 API Calling

GES supports Representational State Transfer (REST) APIs, allowing you to call APIs using HTTPS. For details about API calling, see [Making an API Request](#).

1.3 Constraints and Limitations on Using GES

1.3.1 Constraints of Using Service Plane APIs

Two methods are available for you to access the service plane APIs.

- Through the ECS. The VPC for creating the ECS must be the same as that selected during graph creation. If the same security group is selected, you can directly access the APIs. If the security groups are not the same, enable the access permission for the ECS in the security group where the graph is created. That is, enable ports **80** and **443** for inbound traffic and all ports for outbound traffic. The ingress and egress ports support HTTP and HTTPS access respectively. In this scenario, **SERVER_URL** of the APIs is the private access address in the graph details on the GES console or the value of the **privatelp** field in the response body of the management plane API for querying graph details.
- Through the ECS. The VPC for creating the ECS is not the same as that selected during graph creation. You need to create a VPC peering connection between the VPC to which the ECS belongs and the VPC in which the graph is created. In addition, you need to enable the access permission for the ECS in the security group where the graph is created. That is, enable ports **80** and **443** for inbound traffic and all ports for outbound traffic. In this scenario, **SERVER_URL** of the APIs is the private access address in the graph details on the GES console or the value of the **privatelp** field in the response body of the management plane API for querying graph details.
- Through the public network. You need to create an EIP and enable the access permission for the client in the security group where the graph is created, that is, enable ports **80** and **443** for inbound traffic and all ports for outbound traffic. In this scenario, **SERVER_URL** of the APIs is the public access address in the graph details on the GES console or the value of the **publicip** field in the response body of the management plane API for querying graph details (also the EIP you bind or create).

1.3.2 OBS Object Name Restrictions

The OBS object names supported by GES can contain the following characters:

Letters and digits	0-9, a-z, A-Z
Special characters	! - _ . * ' ()
Chinese characters	\u4e00-\u9fa5

The following characters are not supported:

Special characters	\{^%`]">[~<# &@:,=\$=+? and spaces
ASCII control characters	Range: <ul style="list-style-type: none">• 00-1F in hexadecimal form (0-31 in decimal form)• 7F (127 in decimal form)

1.4 Concepts

- User

A user is created by an account in HCS Online to access cloud services. Each user has its own identity credentials (password and access keys). The account name, username, and password will be required for API authentication.
- Region

Regions are geographic areas isolated from each other. Resources are region-specific and cannot be used across regions through internal network connections. For low network latency and quick resource access, select the nearest region.
- AZ

An AZ comprises of one or more physical data centers equipped with independent ventilation, fire, water, and electricity facilities. Computing, network, storage, and other resources in an AZ are logically divided into multiple clusters. AZs within a region are interconnected using high-speed optical fibers to allow you to build cross-AZ high-availability systems.
- Project

Projects group and isolate resources (including compute, storage, and network resources) across physical regions. A default project is provided for each cloud region, and subprojects can be created under each default project. Users can be granted permissions to access all resources in a specific project. For more refined access control, create subprojects under a project and apply for resources in the subprojects. Users can then be assigned permissions to access only specific resources in the subprojects.

1.5 Selecting an API Type or Version

The GES API version corresponds to the software version. 2.2.17 is the start version number. Other versions are modified based on the start version and are backward compatible.

2 Calling APIs

2.1 Making an API Request

2.1.1 Making a Management Plane API Request

This section describes the structure of a REST API request on the management plane of GES.

Request URI

A request URI is in the following format:

{URI-scheme} :// {Endpoint} / {resource-path} ? {query-string}

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

- **URI-scheme:** Protocol used to transmit requests. All APIs use **HTTPS**.
- **Endpoint:** Obtain the endpoint from the administrator.
- **resource-path:** Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the **resource-path** of the API used to obtain a user token is **/v3/auth/tokens**.
- **query-string:** Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, **? limit=10** indicates that a maximum of 10 data records will be displayed.

Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET:** requests the server to return specified resources.
- **PUT:** requests the server to update specified resources.
- **POST:** requests the server to add resources or perform special operations.

- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: same as GET except that the server must return only the response header.
- **PATCH**: requests the server to update partial content of a specified resource. If the resource does not exist, a new resource will be created.

Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows:

Table 2-1 Common request headers

Parameter	Mandatory	Description	Example
Content-Type	Yes	Specifies the request body type or format. This field is mandatory and its default value is application/json . Other values of this field will be provided for specific APIs if any.	application/json
X-Auth-Token	This field is mandatory only for authentication using tokens.	Specifies a user token only for token-based API authentication.	--
X-Project-ID		Specifies a subproject ID. This parameter is mandatory only in multi-project scenarios.	e9993fc787d94b6c886cbaa340f9c0f4
Authorization	This field is mandatory for authentication using AK/SK.	Specifies the signature authentication information. The value is obtained from the request signing result.	-

Parameter	Mandatory	Description	Example
X-Sdk-Date	This field is mandatory for authentication using AK/SK.	Specifies the time when a request is sent. The time is in YYYYMMDDTHHMMSSZ format. The value is the current Greenwich Mean Time (GMT) time of the system.	20150907T101459Z
Host	This field is mandatory for authentication using AK/SK.	Specifies the information about the requested server. The value can be obtained from the URL of the service API. The value is in the <i>hostname[:port]</i> format. Default port used for https requests is port 443 .	code.test.com or code.test.com:443
Content-Length	This field is mandatory for POST and PUT requests, but must be left blank for GET requests.	Specifies the length of the request body. The unit is byte.	3495
X-Language	No	Specifies the request language. Values include: <ul style="list-style-type: none">• zh-cn: Chinese• en-us: English	en-us

NOTE

In addition to supporting token-based authentication, cloud APIs also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header. If the request body contains Chinese characters, these characters must be coded in UTF-8.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

For the API of obtaining a user token, obtain the request parameters and parameter description in the API request. The following provides an example request with a body included. Replace *username*, *domiannname*, ******* (login password), and *xxxxxxxxxxxxxx* (project name) with the actual values.

If all data required for the API request is available, you can send the request to call the API through code. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

2.1.2 Making a Service Plane API Request

This section describes the structure of a REST API on the service plane of GES.

Request URI

A request URI of a service plane API of GES is in the following format:

{URI-scheme} :// {SERVER_URL} / {resource-path} ? {query-string}

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

- **URI-scheme**: Protocol used to transmit requests. All APIs use **HTTPS**.
- **SERVER_URL**: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).
- **resource-path**: Access path of an API for performing a specified operation. Obtain the value from the URI module of the API, for example, **ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=query**.
- **query-string**: Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, **? limit=10** indicates that a maximum of 10 data records will be displayed.

Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET**: requests the server to return specified resources.
- **PUT**: requests the server to update specified resources.
- **POST**: requests the server to add resources or perform special operations.
- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: same as GET except that the server must return only the response header.
- **PATCH**: requests the server to update partial content of a specified resource. If the resource does not exist, a new resource will be created.

Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows:

Table 2-2 Common request headers

Parameter	Mandatory	Description	Example
Content-Type	Yes	Specifies the request body type or format. This field is mandatory and its default value is application/json . Other values of this field will be provided for specific APIs if any.	application/json
X-Auth-Token	Yes	Specifies a user token only for token-based API authentication.	-
X-Language	Yes	Specifies the request language. Values include: <ul style="list-style-type: none">• zh-cn: Chinese• en-us: English	en-us

Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header. If the request body contains Chinese characters, these characters must be coded in UTF-8.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

For the API of obtaining a user token, obtain the request parameters and parameter description in the API request. The following provides an example request with a body included. Replace *username*, *domainname*, ******* (login password), and *xxxxxxxxxxxxxx* (project name) with the actual values.

If all data required for the API request is available, you can send the request to call the API through code. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

2.2 Response

Status Code

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request. For more information, see [Status Codes](#).

Response Header

Similar to a request, a response also has a header, for example, **Content-Type**. [Table 2-3](#) list the response header parameters.

Table 2-3 Response header parameters

Parameter	Description
Content-Length	Specifies the length (in bytes) of the response body.
Date	Specifies the time when a response is returned.
Content-type	Specifies the MIME type of the response body.
TraceID	Specifies the ID returned by the request, facilitating fault locating.

Response Body

The body of a response is often returned in structured format as specified in the **Content-Type** header field. The response body transfers content except the response header.

3 Management Plane APIs

3.1 System Management APIs

3.1.1 Viewing Quotas

Function

This API is used to query tenant quotas.

URI

GET /v1.0/{project_id}/graphs/quotas

Table 3-1 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation.

Request Parameters

Table 3-2 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-3 Response body parameter

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
quotas	GesQuotaResp object	Resource type list. This field is left blank when the request fails.

Table 3-4 GesQuotaResp

Parameter	Type	Description
resources	Array of Quota objects	GES resource quota list

Table 3-5 Quota

Parameter	Type	Description
type	String	Resource type. Available values are as follows: <ul style="list-style-type: none">• "graph"• "backup"• "metadata"
available	Integer	Number of available graphs
edgeVolume	Integer	Number of available edges. The parameter value is valid only when type is "graph".

Example Request

GET https://Endpoint/v1.0/{project_id}/graphs/quotas

Example Response

Status code: 200

OK

```
{  
  "quotas" : {  
    "resources" : [ {  
      "type" : "graph",  
      "available" : 1,  
      "edgeVolume" : 178800  
    }, {  
      "type" : "backup",  
      "available" : 7  
    }, {  
      "type" : "metadata",  
      "available" : 13  
    } ]  
  }  
}
```

Status Codes

Status Code	Description
200	OK

3.2 Graph Management APIs

3.2.1 Querying the Graph List

Function

This API is used to query all graphs owned by the current tenant.

URI

GET /v1.0/{project_id}/graphs

Table 3-6 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation.

Table 3-7 Query parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Start position of the request. The default value is 0 .
limit	No	Integer	Maximum number of resources displayed on a single page. The default value is 10 .

Request Parameters

Table 3-8 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-9 Response body parameter

Parameter	Type	Description
graphCount	Integer	Total number of graphs. This parameter is left blank when the request fails.
graphs	Array of graph_1 objects	Graph list. This parameter is left blank when the request fails.
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Table 3-10 graph_1

Parameter	Type	Description
id	String	Graph ID
name	String	Graph name
createdBy	String	Account of the graph creator
isMultiAz	String	Whether to enable cross-AZ HA
regionCode	String	Region code
azCode	String	AZ code
schemaPath	Array of schemaPath_1 objects	Path for storing the metadata file
edgesetPath	Array of edgesetPath_1 objects	OBS path for storing the edge data set
edgesetFormat	String	Format of the edge data file
edgesetDefaultLabel	String	Default label of the edge data file
vertexsetPath	Array of vertexsetPath_1 objects	OBS path for storing the vertex data set
vertexsetFormat	String	Format of the vertex data file
vertexsetDefaultLabel	String	Default label of the vertex data file
dataStoreVersion	String	Graph version
sys_tags	Array of SysTagsRes objects	Enterprise project information. If this parameter is not specified, this function is disabled (default).

Parameter	Type	Description
status	String	<p>Status code of a graph:</p> <ul style="list-style-type: none"> • 100: Indicates that a graph is being prepared. • 200: indicates that a graph is running. • 201: indicates that a graph is upgrading. • 202: indicates that a graph is being imported. • 203: indicates that a graph is being rolled back. • 204: indicates that a graph is being exported. • 205: indicates that a graph is being cleared. • 206: indicates that the system is preparing for resize. • 207: indicates that the resize is in progress. • 208: Indicates that the resize is being rolled back. • 300: indicates that a graph is faulty. • 303: indicates that a graph fails to be created. • 400: indicates that a graph is deleted. • 900: indicates that a graph is stopped. • 901: indicates that a graph is being stopped. • 920: indicates that a graph is being started.
actionProgress	String	<p>Progress of graph creation</p> <p>NOTE This field is returned only when status is 100.</p>
graphSizeTypeIndex	String	<p>Graph size type index:</p> <ul style="list-style-type: none"> • 0: indicates 10 thousand edges. • 1: indicates 1 million edges. • 2: indicates 10 million edges. • 3: indicates 100 million edges. • 4: indicates 1 billion edges. • 5: indicates 10 billion edges.
vpcId	String	VPC ID
subnetId	String	Subnet ID in the VPC
securityGroupId	String	Security group ID
replication	Integer	Number of replicas. The default value is 1 .

Parameter	Type	Description
created	String	Time when a graph is created
updated	String	Time when a graph is updated
privatelp	String	Private network access address of a graph instance. Users can access the instance using the IP address through the ECS deployed on the private network.
enableHyG	Boolean	Whether to enable HyG. This parameter is valid only for 100-billion-edge graphs.

Table 3-11 schemaPath_1

Parameter	Type	Description
jobId	String	Job ID corresponding to OBS file import
path	String	OBS storage path, excluding OBS endpoint
status	String	OBS file import status: <ul style="list-style-type: none"> • success: Imported successfully. • partiallyFailed: Partially failed. • failed: Failed to import the file.

Table 3-12 edgesetPath_1

Parameter	Type	Description
jobId	String	Job ID corresponding to OBS file import
path	String	OBS storage path, excluding OBS endpoint
status	String	OBS file import status: <ul style="list-style-type: none"> • success: Imported successfully. • partiallyFailed: Partially failed. • failed: Failed to import the file.

Table 3-13 vertexsetPath_1

Parameter	Type	Description
jobId	String	Job ID corresponding to OBS file import
path	String	OBS storage path, excluding OBS endpoint

Parameter	Type	Description
status	String	OBS file import status: <ul style="list-style-type: none"> success: Imported successfully. partiallyFailed: Partially failed. failed: Failed to import the file.

Table 3-14 SysTagsRes

Parameter	Type	Description
key	String	Key of the enterprise project. The value is <code>_sys_enterprise_project_id</code> .
value	String	Enterprise project ID. You can obtain it from the enterprise project.

Example Request

```
GET https://Endpoint/v1.0/{project_id}/graphs?offset=0&limit=10
```

Example Response

Status code: 200

OK

```

3.2.2 Querying Graph Details

Function

This API is used to query the details about a graph based on the graph ID.

URI

GET /v1.0/{project_id}/graphs/{graph_id}

Table 3-15 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Request Parameters

Table 3-16 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-17 Response body parameter

Parameter	Type	Description
graph	graph_1 object	Graph object. If the request fails, this parameter is left empty.
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Table 3-18 graph_1

Parameter	Type	Description
id	String	Graph ID
name	String	Graph name
createdBy	String	Account of the graph creator
isMultiAz	String	Whether to enable cross-AZ HA
regionCode	String	Region code
azCode	String	AZ code
schemaPath	Array of schemaPath_1 objects	Path for storing the metadata file
edgesetPath	Array of edgesetPath_1 objects	OBS path for storing the edge data set
edgesetFormat	String	Format of the edge data file
edgesetDefaultLabel	String	Default label of the edge data file
vertexsetPath	Array of vertexsetPath_1 objects	OBS path for storing the vertex data set
vertexsetFormat	String	Format of the vertex data file
vertexsetDefaultLabel	String	Default label of the vertex data file
dataStoreVersion	String	Graph version
sys_tags	Array of SysTagsRes objects	Enterprise project information. If this parameter is not specified, this function is disabled (default).

Parameter	Type	Description
status	String	<p>Status code of a graph:</p> <ul style="list-style-type: none"> • 100: Indicates that a graph is being prepared. • 200: indicates that a graph is running. • 201: indicates that a graph is upgrading. • 202: indicates that a graph is being imported. • 203: indicates that a graph is being rolled back. • 204: indicates that a graph is being exported. • 205: indicates that a graph is being cleared. • 206: indicates that the system is preparing for resize. • 207: indicates that the resize is in progress. • 208: Indicates that the resize is being rolled back. • 300: indicates that a graph is faulty. • 303: indicates that a graph fails to be created. • 400: indicates that a graph is deleted. • 900: indicates that a graph is stopped. • 901: indicates that a graph is being stopped. • 920: indicates that a graph is being started.
actionProgress	String	<p>Progress of graph creation</p> <p>NOTE This field is returned only when status is 100.</p>
graphSizeTypeIndex	String	<p>Graph size type index:</p> <ul style="list-style-type: none"> • 0: indicates 10 thousand edges. • 1: indicates 1 million edges. • 2: indicates 10 million edges. • 3: indicates 100 million edges. • 4: indicates 1 billion edges. • 5: indicates 10 billion edges.
vpcId	String	VPC ID
subnetId	String	Subnet ID in the VPC
securityGroupId	String	Security group ID
replication	Integer	Number of replicas. The default value is 1 .

Parameter	Type	Description
created	String	Time when a graph is created
updated	String	Time when a graph is updated
privatelp	String	Private network access address of a graph instance. Users can access the instance using the IP address through the ECS deployed on the private network.
enableHyG	Boolean	Whether to enable HyG. This parameter is available for 100-billion-edge graphs only.

Table 3-19 schemaPath_1

Parameter	Type	Description
jobId	String	Job ID corresponding to OBS file import
path	String	OBS storage path, excluding OBS endpoint
status	String	OBS file import status: <ul style="list-style-type: none">• success: Imported successfully.• partiallyFailed: Partially failed.• failed: Failed to import the file.

Table 3-20 edgesetPath_1

Parameter	Type	Description
jobId	String	Job ID corresponding to OBS file import
path	String	OBS storage path, excluding OBS endpoint
status	String	OBS file import status: <ul style="list-style-type: none">• success: Imported successfully.• partiallyFailed: Partially failed.• failed: Failed to import the file.

Table 3-21 vertexsetPath_1

Parameter	Type	Description
jobId	String	Job ID corresponding to OBS file import
path	String	OBS storage path, excluding OBS endpoint

Parameter	Type	Description
status	String	OBS file import status: <ul style="list-style-type: none"> success: Imported successfully. partiallyFailed: Partially failed. failed: Failed to import the file.

Table 3-22 SysTagsRes

Parameter	Type	Description
key	String	Key of the enterprise project. The value is <code>_sys_enterprise_project_id</code> .
value	String	Enterprise project ID. You can obtain it from the enterprise project.

Example Request

```
GET https://Endpoint/v1.0/{project_id}/graphs/{graph_id}
```

Example Response

Status code: 200

OK

```

3.2.3 Creating a Graph

Function

This API is used to create a graph.

URI

POST /v1.0/{project_id}/graphs

Table 3-23 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .

Request Parameters

Table 3-24 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-25 Request body parameters

Parameter	Mandatory	Type	Description
graph	Yes	graph object	Graph type

Table 3-26 graph

Parameter	Mandatory	Type	Description
name	Yes	String	A graph name must start with a letter and contains 4 to 50 characters consisting of letters, digits, hyphens (-), and underscores (_). It cannot contain special characters.

Parameter	Mandatory	Type	Description
graphSizeTypeIndex	Yes	String	<p>Graph size type index:</p> <ul style="list-style-type: none"> 0: indicates 10 thousand edges. 1: indicates 1 million edges. 2: indicates 10 million edges. 3: indicates 100 million edges. 4: indicates 1 billion edges. 5: indicates 10 billion edges.
arch	No	String	<p>Graph instance's CPU architecture type. The value can be x86_64 or aarch64. The default value is x86_64.</p> <ul style="list-style-type: none"> x86_64: X64 64-bit architecture aarch64: Arm 64-bit architecture
dataSource	No	dataSource object	Data source. This field is not set when you create an empty graph.
vpclId	Yes	String	VPC ID
subnetId	Yes	String	Subnet ID in the VPC
securityGroupId	Yes	String	Security group ID
publicIp	No	publicIp object	Public IP address. If the parameter is not specified, public connection is not used by default.
enableMultiAZ	No	Boolean	<p>Whether the created graph supports the cross-AZ mode. The default value is false. If the value is true, the system will create the ECSs in the graph in two AZs.</p> <p>If this parameter is not specified when you create a graph, all ECSs in the graph are created in one AZ.</p>

Parameter	Mandatory	Type	Description
encryption	No	encryptionReq object	Whether to encrypt the graph instance. The graph instance is not encrypted by default.
ltsOperationTrace	No	object	Whether to enable audit logs. This function is disabled by default.
sys_tags	No	Array of SysTagsRes objects	Enterprise project information. If this parameter is not specified, this function is disabled (default).
enableRBAC	No	Boolean	Whether to enable granular permission control for the created graph. The default value is false , indicating that granular permission control is disabled. If this parameter is set to true , no user has the permission to access the graph. To access the graph, you need to call the granular permission control API of the service plane to set the required permissions.
enableHyG	No	Boolean	Whether to enable HyG for the graph. This parameter is available for 100-billion-edge graphs only.

Table 3-27 dataSource

Parameter	Mandatory	Type	Description
type	Yes	String	Data source type. Currently, only OBS is supported.
parameters	Yes	object	Data source parameters.

Table 3-28 parameters

Parameter	Mandatory	Type	Description
schemaPath	Yes	String	OBS path for storing the metadata file. Only files are supported.

Parameter	Mandatory	Type	Description
edgesetPath	Yes	String	OBS path for storing the edge file. Only files are supported.
edgesetFormat	No	String	Format of the edge data set. Currently, only the CSV format is supported. The CSV format is used by default.
edgesetDefaultLabel	No	String	Default label of an edge data set. This parameter is left blank by default.
vertexsetPath	No	String	OBS path for storing the vertex file. Only files are supported.
vertexsetFormat	No	String	Format of the vertex data set. Currently, only the CSV format is supported. The CSV format is used by default.
vertexsetDefaultLabel	No	String	Default label of a vertex data set. This parameter is left blank by default.
logDir	No	String	OBS log storage directory. This directory stores the data that fails to be imported during graph creation and detailed logs.
parallelEdge	No	parallelEdge object	Repetitive edge processing

NOTE

- For details about the value validity of the **schemaPath**, **edgesetPath**, **vertexsetPath**, and **logDir** character strings, see the [OBS Object Name Restrictions](#).

Table 3-29 parallelEdge

Parameter	Mandatory	Type	Description
action	No	String	<p>Processing mode of repetitive edges. The value can be allow, ignore, or override. The default value is allow.</p> <ul style="list-style-type: none"> • allow indicates that repetitive edges are allowed. • ignore indicates that subsequent repetitive edges are ignored. • override indicates that the previous repetitive edges are overwritten.
ignoreLabel	No	Boolean	<p>Whether to ignore labels on repetitive edges. The value is true or false, and the default value is true.</p> <ul style="list-style-type: none"> • true: Indicates that the repetitive edge definition does not contain the label. That is, the <source vertex, target vertex> indicates an edge, excluding the label information. • false: Indicates that the repetitive edge definition contains the label. That is, the <source vertex, target vertex, label> indicates an edge.

Table 3-30 publicIp

Parameter	Mandatory	Type	Description
publicBindType	No	String	<p>Binding type of an EIP. The value can be either of the following:</p> <ul style="list-style-type: none"> • auto_assign • bind_existing
eipId	No	String	<p>ID of an EIP. When publicBindType is set to bind_existing, its value is the ID of an EIP that has been created but has not been bound. When publicBindType is set to auto_assign, its value is set to null.</p>

Table 3-31 encryptionReq

Parameter	Mandatory	Type	Description
enable	No	Boolean	Whether to enable the encryption feature. The value can be true or false . The default value is false .
masterKeyId	No	String	ID of the user master key created by the Data Encryption Workshop (DEW) in the project where the graph is created.

Table 3-32 SysTagsRes

Parameter	Mandatory	Type	Description
key	No	String	Key of the enterprise project. Enter _sys_enterprise_project_id .
value	No	String	Enterprise project ID. You can obtain it from the enterprise project.

Response Parameters

Status code: 200

Table 3-33 Response body parameters

Parameter	Type	Description
id	String	Graph ID
name	String	Graph name
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Example Request

```
POST https://Endpoint/v1.0/{project_id}/graphs
{
  "graph": {
    "name": "demo",

  }
}
```

Example Responses

Status code: 200

OK

```
{
  "id": "f1529b88-c958-493e-8452-fccfe932cde1",
  "name": "demo"
}
```

Returned Values

Status Code	Description
200	OK

3.2.4 Stopping a Graph

Function

This API is used to stop a graph. After the graph is created, you can disable it if it is not used temporarily.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-34 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-35 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: <ul style="list-style-type: none">• stop

Request Parameters

Table 3-36 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-37 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of the graph stopping job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Task Center APIs .

Example Request

POST https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/action?action_id=stop

Example Response

Status code: 200

OK

```
{
  "jobId" : "ff8080816025a0a1016025a5a2700007"
}
```

Status code: 400

Bad Request

```
{
  "errorCode" : "GES.7001",
  "errorMessage" : "The graph is not running."
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.5 Starting a Graph

Function

This API is used to start a graph. You can disable a graph if it is not used temporarily.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-38 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-39 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: <ul style="list-style-type: none">• start

Request Parameters

Table 3-40 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-41 Request body parameters

Parameter	Mandatory	Type	Description
graph_backup_id	No	String	Backup ID associated during graph startup. If this parameter is configured, the graph starts from the backup. If this parameter is left blank, the graph starts from the status when it was closed last time. For details about how to back up a graph, see section Adding a Backup .

Response Parameters

Status code: 200

Table 3-42 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of the graph startup job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Task Center APIs .

Example Request

```
https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/action?action_id=start
{
    "graph_backup_id" : "08a898ae-3ff8-40e8-a7ed-03afe05aedbb"
}
```

Example Response

Status code: 200

OK

```
{  
    "jobId" : "ff8080816025a0a1016025a5a2700007"  
}
```

Status code: 400

Bad Request

```
{  
    "errorCode" : "GES.7015",  
    "errorMessage" : "The graph is not running or stopped."  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.6 Deleting a Graph

Function

This API is used to delete a graph.

URI

DELETE /v1.0/{project_id}/graphs/{graph_id}

Table 3-43 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-44 Query parameters

Parameter	Mandatory	Type	Description
keepBackup	No	Boolean	Whether to retain the backups of a graph after it is deleted. By default, one automatic backup and two manual backups are retained. If this parameter is left empty, no backups are retained.

Request Parameters

Table 3-45 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-46 Response body parameter

Parameter	Type	Description
jobId	String	ID of the graph deletion job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Task Center APIs .
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Example Request

```
DELETE https://Endpoint/v1.0/{project_id}/graphs/{graph_id}
```

Example Response

Example response with status code **200**:

OK

```
{  
    "jobId" : "ff8080816025a0a1016025a5a2700007"  
}
```

Status code: 400

Bad Request

```
{  
    "errorCode" : "GES.7000",  
    "errorMessage" : "The graph does not exist or has been deleted."  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.7 Incrementally Importing Data to Graphs

Function

This API is used to import data to graphs incrementally.

To prevent failures in restoring the imported graph data during system restarting, do not delete the data stored on OBS when the graph is in use.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-47 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .

Parameter	Mandatory	Type	Description
graph_id	Yes	String	Graph ID

Table 3-48 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: • import-graph

Request Parameters

Table 3-49 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-50 Request body parameters

Parameter	Mandatory	Type	Description
edgesetPath	No	String	Edge file directory or name
edgesetFormat	No	String	Format of the edge data set. Currently, only the CSV format is supported. The CSV format is used by default.
vertexsetPath	No	String	Vertex file directory or name
vertexsetFormat	No	String	Format of the vertex data set. Currently, only the CSV format is supported. The CSV format is used by default.
schemaPath	No	String	Path for storing the metadata file of the new data.

Parameter	Mandatory	Type	Description
logDir	No	String	Directory for storing logs of imported graphs. This directory stores the data that fails to be imported during graph creation and detailed error causes.
parallelEdge	No	Object	Repetitive edge processing
action	No	String	<p>Processing mode of repetitive edges. The value can be allow, ignore, or override. The default value is allow.</p> <ul style="list-style-type: none"> • allow indicates that repetitive edges are allowed. • ignore indicates that subsequent repetitive edges are ignored. • override indicates that the previous repetitive edges are overwritten.
ignoreLabel	No	Boolean	<p>Whether to ignore labels on repetitive edges. The value is true or false, and the default value is true.</p> <ul style="list-style-type: none"> • true: Indicates that the repetitive edge definition does not contain the label. That is, the <source vertex, target vertex> indicates an edge, excluding the label information. • false: Indicates that the repetitive edge definition contains the label. That is, the <source vertex, target vertex, label> indicates an edge.
delimiter	No	String	Field separator in a CSV file. The default value is comma (,). The default element separator in a field of the list/set type is semicolon (;).

Parameter	Mandatory	Type	Description
trimQuote	No	String	Field quote character in a CSV file. The default value is double quotation marks (""). It is used to enclose a field if the field contains separators or line breaks.
offline	No	Boolean	<p>Whether offline import is selected. The value is true or false, and the default value is false.</p> <ul style="list-style-type: none"> • true: Offline import is selected. The import speed is high, but the graph is locked and cannot be read or written during the import. • false: Online import is selected. Compared with offline import, online import is slower. However, the graph can be read (cannot be written) during the import.

NOTE

- For details about the value validity of the `edgesetPath`, `vertexsetPath`, `schemaPath`, and `logDir` character strings, see the [OBS Object Name Restrictions](#).

Response Parameters

Status code: 200

Table 3-51 Response body parameter

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Parameter	Type	Description
jobId	String	<p>Indicates the ID of an asynchronous job.</p> <p>NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs.</p>

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs/{graph_id}/action?action_id=import-graph
{
  "edgesetPath": "testbucket/demo_movie/edges/",
  "edgesetFormat": "csv",
  "vertexsetPath": "testbucket/demo_movie/vertices/",
  "vertexsetFormat": "csv",
  "schemaPath": "testbucket/demo_movie/incremental_data_schema.xml",
  "logDir": "testbucket/importlogdir",
  "parallelEdge": {
    "action": "override",
    "ignoreLabel": true
  },
  "delimiter": ",",
  "trimQuote": "\'",
  "offline": true
}
```

Example Response

Status code: 200

OK

```
{
  "jobId": "b4f2e9a0-0439-4edd-a3ad-199bb523b613"
}
```

Status code: 400

Bad Request

```
{
  "errorMessage": "parameter format error",
  "errorCode": "GES.8013"
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.8 Exporting a Graph

Function

This API is used to export a graph.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-52 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-53 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: • export-graph

Request Parameters

Table 3-54 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-55 Request body parameters

Parameter	Mandatory	Type	Description
graphExportPath	Yes	String	OBS path to which a graph is exported

Parameter	Mandatory	Type	Description
edgeSetName	Yes	String	Exported edge file name
vertexSetName	Yes	String	Exported vertex file name
schemaName	Yes	String	Name of the exported metadata file

 NOTE

- For details about the value validity of the **graphExportPath** character strings, see the [OBS Object Name Restrictions](#).

Response Parameters

Status code: 200

Table 3-56 Response body parameter

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of an asynchronous job NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

 NOTE

- For details about the value validity of the **graphExportPath** character strings, see the [OBS Object Name Restrictions](#).

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs{graph_id}/action?action_id=export-graph
```

```
{
  "graphExportPath" : "demo_movie/",
  "edgeSetName" : "set_edge.csv",
  "vertexSetName" : "set_vertex.csv",
```

```
    "schemaName" : "set_schema.xml"  
}
```

Example Response

Status code: 200

OK

```
{  
    "jobId" : "f99f60f1-bba6-4cde-bd1a-ff4bdd1fd500000168232"  
}
```

Status code: 400

Bad Request

```
{  
    "errorMessage" : "graph [demo] is not found",  
    "errorCode" : "GES.8011"  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.9 Clearing a Graph

Function

This API is used to clear all data in a graph.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-57 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-58 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: • clear-graph
clear-metadata	No	Boolean	Whether to clear the metadata associated with the graph. You are advised to clear it.

Request Parameters

Table 3-59 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-60 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of an asynchronous job. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs/{graph_id}/action?action_id=clear-graph&clear-metadata=true
```

Example Response

Status code: 200

OK

```
{  
    "jobId" : "ff8080816025a0a1016025a5a2700007"  
}
```

Status code: 400

Bad Request

```
{  
    "errorMessage" : "graph [demo] is not found",  
    "errorCode" : "GES.8012"  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.10 Upgrading a Graph

Function

This API is used to upgrade a graph. The GES version is periodically upgraded. You can upgrade your graphs as required.

URI

```
POST /v1.0/{project_id}/graphs/{graph_id}/action
```

Table 3-61 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-62 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: • upgrade

Request Parameters

Table 3-63 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-64 Request body parameters

Parameter	Mandatory	Type	Description
upgradeVersion	Yes	String	Target version, which must be later than the current version
forceUpgrade	No	Boolean	Whether to upgrade forcibly. The value is true or false , and the default value is false . <ul style="list-style-type: none"> • true: forcible upgrades, which will interrupt running tasks, such as long algorithm execution tasks. As a result, a small number of requests may fail. • false: non-forcible upgrades, which will wait for running services to complete. The upgrade process may be slow.

Response Parameters

Status code: 200

Table 3-65 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of an asynchronous job NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs{graph_id}/action?action_id=upgrade
{
  "upgradeVersion" : "1.1.8",
  "forceUpgrade" : false
}
```

Example Response

Status code: 200

OK

```
{
  "jobId" : "f99f60f1-bba6-4cde-bd1a-ff4bdd1fd500000168232"
}
```

Status code: 400

Bad Request

```
{
  "errorMessage" : "graph [demo] is not found",
  "errorCode" : "GES.8011"
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.11 Binding an EIP

Function

This API enables you to access GES by binding an elastic IP (EIP).

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-66 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-67 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: <ul style="list-style-type: none">• bindEip

Request Parameters

Table 3-68 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-69 Request body parameters

Parameter	Mandatory	Type	Description
eipld	Yes	String	ID of the elastic IP address For details about how to query the EIP ID, see .

Response Parameters

Status code: 200

Table 3-70 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs{graph_id}/action?action_id=bindEip
{
  "eipld" : "02bd6dc1-5be8-430e-a4cd-2b0f6d0bb042"
}
```

Example Response

Status code: 200

OK

```
{ }
```

Status code: 400

Bad Request

```
{
  "errorMessage" : "graph [demo] is not found",
  "errorCode" : "GES.8011"
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.12 Unbinding an EIP

Function

If you do not need to use the EIP, this API enabled you to unbind the EIP to release network resources.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-71 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-72 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: <ul style="list-style-type: none">• unbindEip

Request Parameters

Table 3-73 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-74 Request body parameters

Parameter	Mandatory	Type	Description
eipId	Yes	String	ID of the elastic IP address. For details about how to query the EIP ID, see .

Response Parameters

Status code: 200

Table 3-75 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs{graph_id}/action?action_id=unbindEip
{
  "eipId" : "02bd6dc1-5be8-430e-a4cd-2b0f6d0bb042"
}
```

Example Responses

Status code: 200

OK

```
{ }
```

Status code: 400

Bad Request

```
{
  "errorMessage" : "graph [demo] is not found",
  "errorCode" : "GES.8011"
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.13 Resizing a Graph

Function

This API is used to resize a graph instance.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/resize

Table 3-76 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Request Parameters

Table 3-77 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-78 Request body parameters

Parameter	Mandatory	Type	Description
resize	Yes	GraphSizeTypeIndexReq object	Resize is an object.

Table 3-79 GraphSizeTypeIndexReq

Parameter	Mandatory	Type	Description
graphSizeTypeIndex	Yes	String	Graph flavor type. Currently, the value can be 2 , 3 , 4 , or 5 , indicating that a graph can be scaled out to support 10 million, 100 million, 1 billion, or 10 billion edges, respectively.

Response Parameters

Status code: 200

Table 3-80 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	Indicates the ID of the resize job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs/{graph_id}/resize
```

```
{  
  "resize" : {
```

```
    "graphSizeTypeIndex" : "2"  
}
```

Example Response

Status code: 200

OK

```
{ }
```

Status code: 400

Bad Request

```
{  
  "errorCode" : "GES.7001",  
  "errorMessage" : "The graph is not running."  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.14 Restarting a Graph

Function

This API is used to forcibly start a graph in the importing, exporting, running, or clearing state. If a graph is forcibly restarted, asynchronous tasks of the graph are failed state and the graph is stopped and started.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/action

Table 3-81 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-82 Query parameters

Parameter	Mandatory	Type	Description
action_id	Yes	String	Graph action ID The value can be: <ul style="list-style-type: none">• restart

Request Parameters

Table 3-83 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-84 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of a forcible restart job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Task Center APIs .

Example Request

```
POST https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/action?action_id=restart
```

Example Response

Status code: 200

OK

{}

Status code: 400

Bad Request

```
{  
  "errorMessage": "The request is invalid.",  
  "errorCode": "GES.7016"  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.2.15 Expanding a Graph

Function

This API is used to expand multiple secondary nodes dynamically. The expanded secondary nodes can process read requests, improving read performance.

This API is not supported by graphs of the 10,000-edge and 10-billion-edge types.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/expand

Table 3-85 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Request Parameters

Table 3-86 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-87 Request body parameters

Parameter	Mandatory	Type	Description
expand	Yes	ReplicationReq object	expand is an object.

Table 3-88 ReplicationReq

Parameter	Mandatory	Type	Description
replication	Yes	String	Number of new nodes to expand

Response Parameters

Status code: 200

Table 3-89 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Parameter	Type	Description
jobId	String	ID of the expansion job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Task Center APIs .

Example Request

```
POST http://Endpoint/v1.0/{project_id}/graphs/{graph_id}/expand
{
  "expand" : {
    "replication" : "1"
  }
}
```

Example Responses

Status code: 200

OK

```
{
  "jobId" : "ff8080816025a0a1016025a5a2700007"
}
```

Status code: 400

Bad Request

```
{
  "errorCode" : "GES.7015",
  "errorMessage" : "The graph is not running or stopped."
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.3 Backup Management APIs

3.3.1 Viewing the List of All Backups

Function

This API is used to query the list of all backups.

URI

GET /v1.0/{project_id}/graphs/backups

Table 3-90 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .

Table 3-91 Query parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of resources displayed on a single page. The default value is 10 .
offset	No	Integer	Start position of the request. The default value is 0 .

Request Parameters

Table 3-92 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-93 Response body parameter

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.

Parameter	Type	Description
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
backupCount	Integer	Total number of backups. This parameter is left blank when the request fails.
backupList	Array of backup objects	List of all backups under the current project ID. This parameter is left blank when the request fails.

Table 3-94 backup

Parameter	Type	Description
id	String	Backup ID
name	String	Backup name
backupMethod	String	Backup method. The value can be auto or manual .
graphId	String	ID of the graph associated with the backup
graphName	String	Name of the graph associated with the backup
graphStatus	String	Status of the graph associated with the backup
graphSizeTypeIndex	String	Size of the graph associated with the backup
dataStoreVersion	String	Version of the graph associated with the backup
arch	String	CPU architecture of the graph node associated with the backup
status	String	Backup status: <ul style="list-style-type: none">• backing_up: indicates that a graph is being backed up.• success: indicates that a graph is successfully backed up.• failed: indicates that a graph fails to be backed up.
startTimestamp	Long	Start timestamp of a backup job
startTime	String	Backup start time

Parameter	Type	Description
endTimestamp	Long	End timestamp of a backup job
endTime	String	Backup end time
size	Long	Backup file size (MB)
duration	Long	Backup duration (seconds)
encrypted	Boolean	Whether to encrypt backup data. The value true indicates that the backup data is encrypted. The default value false indicates that the backup data is not encrypted.

Example Request

```
GET https://Endpoint/v1.0/{project_id}/graphs/backups?offset=0&limit=2
```

Example Response

Example response with status code **200**:

OK

```
{
  "backupCount": 3,
  "backupList": [
    {
      "id": "ada3e720-ab87-48cb-bff7-3ec5ae1a9652",
      "name": "ges060803_nodelete-20210608135513",
      "backupMethod": "manual",
      "graphId": "4c5f882d-a813-4d78-a8e3-6d3212ddd121",

3.3.2 Viewing the Backup List of a Graph

Function

This API is used to query the backup list of a graph.

URI

GET /v1.0/{project_id}/graphs/{graph_id}/backups

Table 3-95 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Table 3-96 Query parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of resources displayed on a single page. The default value is 10 .
offset	No	Integer	Start position of the request. The default value is 0 .

Request Parameters

Table 3-97 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-98 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.

Parameter	Type	Description
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
backupCount	Integer	Total number of backups. This field is left blank when the request fails.
backupList	Array of backup objects	List of backups of the specified graph under the current project. This parameter is left blank if the request fails.

Table 3-99 backup

Parameter	Type	Description
id	String	Backup ID
name	String	Backup name
backupMethod	String	Backup method. The value can be auto or manual .
graphId	String	ID of the graph associated with the backup
graphName	String	Name of the graph associated with the backup
graphStatus	String	Status of the graph associated with the backup
graphSizeTypeIndex	String	Size of the graph associated with the backup
dataStoreVersion	String	Version of the graph associated with the backup
arch	String	CPU architecture of the graph node associated with the backup
status	String	Backup status: <ul style="list-style-type: none">• backing_up: indicates that a graph is being backed up.• success: indicates that a graph is successfully backed up.• failed: indicates that a graph fails to be backed up.
startTimestamp	Long	Start timestamp of a backup job
startTime	String	Backup start time

Parameter	Type	Description
endTimestamp	Long	End timestamp of a backup job
endTime	String	Backup end time
size	Long	Backup file size (MB)
duration	Long	Backup duration (seconds)
encrypted	Boolean	Whether to encrypt backup data. The value true indicates that the backup data is encrypted. The default value false indicates that the backup data is not encrypted.

Example Request

```
GET https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/backups?offset=0&limit=2
```

Example Response

Example response with status code **200**:

OK

```
{
  "backupCount": 2,
  "backupList": [
    {
      "id": "ada3e720-ab87-48cb-bff7-3ec5ae1a9652",

      "endTimestamp": 1623242004000,
    }
  ]
}
```

```
        "endTime": "2021-06-09T12:33:24",
        "size": 1,
        "duration": 0,
        "encrypted": false
    }
]
```

Status code: 400

Bad Request

```
{
    "errorCode" : "GES.7000",
    "errorMessage" : "The graph does not exist or has been deleted."
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.3.3 Adding a Backup

Function

This API is used to add a backup. If data in the current graph is incorrect or faulty, you can start the backup graph to restore the data.

URI

POST /v1.0/{project_id}/graphs/{graph_id}/backups

Table 3-100 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID

Request Parameters

Table 3-101 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-102 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	ID of the graph backup job. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Task Center APIs .

Example Request

POST https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/backups

Example Response

Example response with status code **200**:

OK

```
{  
    "jobId" : "ff8080815f9a3c84015f9a438ff70001"  
}
```

Status code: 400

Bad Request

```
{  
    "errorCode" : "GES.7000",  
    "errorMessage" : "The graph does not exist or has been deleted."  
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.3.4 Deleting a Backup

Function

This API is used to delete a backup.

URI

DELETE /v1.0/{project_id}/graphs/{graph_id}/backups/{backup_id}

Table 3-103 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
backup_id	Yes	String	Graph backup ID
graph_id	Yes	String	Graph ID

Request Parameters

Table 3-104 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-105 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Example Request

```
DELETE https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/backups/{backupId}
```

Example Response

Status code: 200

OK

```
{}
```

Status code: 400

Bad Request

```
{
  "errorMessage": "Parameter error!",
  "errorCode": "GES.0001"
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.4 Metadata Management APIs

3.4.1 Constraints

[Table 3-106](#) and [Table 3-107](#) list the metadata types.

Table 3-106 Metadata property constraints

Data Type	Constraints
char	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
char array	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
float	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
double	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
bool	<ul style="list-style-type: none">• Equal to (=)• Not equal to (!=)

Data Type	Constraints
long	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
int	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
date	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)
enum	<ul style="list-style-type: none">• Equal to (=)• Not equal to (!=)
string	<ul style="list-style-type: none">• Less than (<)• Greater than (>)• Equal to (=)• Not equal to (!=)• In range (range)• Greater than or equal to (>=)• Less than or equal to (<=)

Table 3-107 Property-level constraints

Property Level	Constraints	Description
Single value/ Multiple values	has	This property is contained.

Property Level	Constraints	Description
Single value/ Multiple values	hasNot	This property is not contained.

3.4.2 Querying the Metadata List

Function

This API is used to query the metadata list.

URI

GET /v1.0/{project_id}/graphs/metadata

Table 3-108 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .

Table 3-109 Query parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of resources displayed on a single page. The default value is 10 .
offset	No	Integer	Start position of the request. The default value is 0 .

Request Parameters

Table 3-110 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-111 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
schemaCount	Integer	Number of returned metadata files. This parameter is left blank if the request fails.
schemaList	Array of metadata objects	List of all metadata files under the current project ID. This parameter is left blank if the request fails.

Table 3-112 metadata

Parameter	Type	Description
id	String	Metadata ID
name	String	Metadata name
description	String	Metadata description
status	String	Whether the metadata is available
metadataPath	String	Metadata path.
createTimestamp	String	Metadata creation timestamp
lastUpdateTimestamp	String	Last timestamp when the metadata is upgraded

Example Request

GET https://Endpoint/v1.0/{project_id}/graphs/metadatas?offset=10&limit=100

Example Response

Status code: 200

OK

```
{
  "schemaCount": 1,
  "schemaList": [
    {
      "id": "ff7dddc4-6402-43d7-9aed-c5ec677b47fa",
      "name": "schema_demo",
      "description": "",
      "status": "200",
      "metadataPath": "ges-graphs/demo_movie/schema.xml",
      "startTime": "2018-07-23T02:59:41",
      "lastUpdateTime": "2018-07-23T02:59:41"
    }
  ]
}
```

Status code: 500

Internal Server Error

```
{
  "errorCode": "GES.7006",
  "errorMessage": "The underlying graph engine has internal error."
}
```

Status Code

Status Code	Description
200	OK
500	Internal Server Error

3.4.3 Querying Metadata

Function

This API is used to query the metadata of a graph.

URI

GET /v1.0/{project_id}/graphs/metadata/{metadata_id}

Table 3-113 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
metadata_id	Yes	String	Metadata ID

Request Parameters

Table 3-114 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-115 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
gesMetadata	GesMetaDat a object	Object for storing metadata message information.

Table 3-116 GesMetaData

Parameter	Type	Description
labels	Array of Label objects	Label data structure set

Table 3-117 Label

Parameter	Type	Description
name	String	Label name
properties	Object	Property map

Example Request

```
GET https://Endpoint/v1.0/{project_id}/graphs/metadatas/{metadata_id}
```

Example Response

Example response with status code **200**:

OK

```
{
  "gesMetadata": {
    "labels": [
      {
        "name": "friends",
        "properties": null
      },

{
    "errorCode": "GES.7006",
    "errorMessage": "The underlying graph engine has internal error."
}
```

Status Code

Status Code	Description
200	OK
500	Internal Server Error

3.4.4 Adding Metadata

Function

This API is used to add the metadata.

URI

POST /v1.0/{project_id}/graphs/metadatas

Table 3-118 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .

Request Parameters

Table 3-119 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Table 3-120 Request body parameters

Parameter	Mandatory	Type	Description
metadataPath	Yes	String	Metadata storage address
name	Yes	String	Metadata name, which contains 1 to 64 characters consisting of only letters, digits, and underscores (_)
description	Yes	String	Metadata description
isOverwrite	Yes	Boolean	Whether to overwrite existing files
gesMetadata	Yes	Object	Object for storing metadata message information.

Response Parameters

Status code: 200

Table 3-121 Response body parameter

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
id	String	Metadata ID
name	String	Metadata name

Example Request

```
POST https://Endpoint/v1.0/{project_id}/graphs/metadata
{
    "metadataPath": "gesdata/demo_movie/schema.xml",
    "name": "movie_schema",
    "description": "xxxx",
    "isOverwrite": "true",
    "encryption": {
        "enable": true,
        "masterKeyId": "2fc79d04-7010-4f63-9534-d8de74ab67e0"
    },
    "gesMetadata": {
        "labels": [
            {
                "name": "friends",
                "properties": null
            },
            {
                "name": "movie",
                "properties": [
                    {
                        "dataType": "string",
                        "name": "ChineseTitle",
                        "cardinality": "single"
                    },
                    {
                        "dataType": "int",
                        "name": "Year",
                        "cardinality": "single"

}  
}
```

Example Response

Example response with status code **200**:

OK

```
{  
    "id" : "ff8080815f9a3c84015f9a438ff70001",  
    "name" : "movie_schema"  
}
```

Status code: 500

Internal Server Error

```
{  
    "errorCode" : "GES.2067",  
}
```

```
        "errorMessage" : "name: 1 to 64 characters, only letters, digits, and underscores(_) are allowed."  
    }
```

Status Code

Status Code	Description
200	OK
500	Internal Server Error

3.4.5 Deleting Metadata

Function

This API is used to delete the metadata.

URI

DELETE /v1.0/{project_id}/graphs/metadatas/{metadata_id}

Table 3-122 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
metadata_id	Yes	String	Metadata ID

Request Parameters

Table 3-123 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	Indicates the user token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-124 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Example Request

```
DELETE https://Endpoint/v1.0/{project_id}/graphs/metadata/{metadata_id}
```

Example Response

Status code: 200

OK

```
{}
```

Status code: 400

Bad Request

```
{
  "errorCode": "GES.7024",
  "errorMessage": "The metadata is not exist or has been deleted."
}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.5 Task Center APIs

3.5.1 Querying Job Status on the Management Plane

Function

This API is used to query the execution status of a job. Asynchronous APIs that are used to create, stop, start, delete, and import graphs will return job IDs after

commands are sent. You can query the job execution status according to the job IDs.

URI

GET /v1.0/{project_id}/graphs/{graph_id}/jobs/{job_id}/status

Table 3-125 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_id	Yes	String	Graph ID
job_id	Yes	String	Job ID

Request Parameters

Table 3-126 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-127 Response body parameters

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobId	String	Job ID

Parameter	Type	Description
status	String	Job status: <ul style="list-style-type: none"> • pending • running • success • failed
jobType	String	Job type
jobName	String	Job name
relatedGraph	String	Associated graph name
beginTime	String	Job start time (UTC). The format is (yyyy-MM-dd HH:mm:ss).
endTime	String	Job end time (UTC). The format is (yyyy-MM-dd HH:mm:ss).
jobDetail	JobDetail object	This parameter is returned only when jobName is set to ImportGraph and is used to display graph import details.
failReason	String	Job failure cause
jobProgress	Double	Job execution progress. It is a reserved field, and not used currently.

Table 3-128 JobDetail

Parameter	Type	Description
schemaPath	Array of schemaPath objects	Path for storing metadata
edgesetPath	Array of edgesetPath objects	Path for storing the edge data set
vertexsetPath	Array of vertexsetPath objects	Path for storing the vertex data set

Table 3-129 schemaPath

Parameter	Type	Description
path	String	OBS storage path

Parameter	Type	Description
log	String	Import log
status	String	OBS file status: <ul style="list-style-type: none">● success: Imported successfully.● Failed: Failed to import the file.● partFailed: Partially failed.
cause	String	Import failure cause

Table 3-130 edgesetPath

Parameter	Type	Description
path	String	OBS storage path
log	String	Import log
status	String	OBS file status: <ul style="list-style-type: none">● success: Imported successfully.● Failed: Failed to import the file.● partFailed: Partially failed.
cause	String	Import failure cause
totalLines	Long	Total number of imported lines. The value -1 indicates that this field is not returned in the current version.
failedLines	Long	Lines failed to be imported. The value -1 indicates that this field is not returned in the current version.
successfulLines	Long	Lines imported successfully. The value -1 indicates that this field is not returned in the current version.

Table 3-131 vertexsetPath

Parameter	Type	Description
path	String	OBS storage path
log	String	Import log

Parameter	Type	Description
status	String	OBS file status: <ul style="list-style-type: none"> success: Imported successfully. Failed: Failed to import the file. partFailed: Partially failed.
cause	String	Import failure cause
totalLines	Long	Total number of imported lines. The value -1 indicates that this field is not returned in the current version.
failedLines	Long	Lines failed to be imported. The value -1 indicates that this field is not returned in the current version.
successfulLines	Long	Lines imported successfully. The value -1 indicates that this field is not returned in the current version.

Example Request

GET https://Endpoint/v1.0/{project_id}/graphs/{graph_id}/jobs/{job_id}/status

Example Response

Status code: 200

OK

}
```

Status Code

Status Code	Description
200	OK
400	Bad Request

3.5.2 Querying Job Details in the Job Center

Function

This API is used to query asynchronous job details in the job center on the management plane. Asynchronous jobs include creating, closing, starting, deleting, adding, importing, exporting, and upgrading graphs, as well as adding backups.

URI

GET /v1.0/{project_id}/graphs/jobs

Table 3-132 URI parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .

Table 3-133 Query parameters

Parameter	Mandatory	Type	Description
endTime	No	String	Job end date. Currently, only the date is supported. The format is <i>yyyy-MM-dd</i> , for example, 2019-03-27.
graph_name	No	String	Associated graph name
limit	No	String	Maximum number of resources displayed on a single page. The default value is 10 .
offset	No	String	Start position of the request. The default value is 0 .
startTime	No	String	Job start date. Currently, only the date is supported. The format is <i>yyyy-MM-dd</i> , for example, 2019-03-27.
status	No	String	Job status. Possible values: <ul style="list-style-type: none"> • running • waiting • success • failed

Request Parameters

Table 3-134 Parameters in the request header

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API. (The token is the value of X-Subject-Token in the response header.)

Response Parameters

Status code: 200

Table 3-135 Response body parameter

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
jobCount	Integer	Total number of jobs
jobList	Array of Job objects	Task list

Table 3-136 Job

Parameter	Type	Description
jobId	String	Job ID
status	String	Job status. <ul style="list-style-type: none">• pending• running• success• failed
jobType	String	Task type
jobName	String	Task name
relatedGraph	String	Associated graph name
beginTime	String	Job start time (UTC). The format is yyyy-MM-dd'T'HH:mm:ss.
endTime	String	Job end time (UTC). The format is yyyy-MM-dd'T'HH:mm:ss.
jobDetail	JobDetail object	This parameter is returned only when jobName is set to ImportGraph and is used to display graph import details.
failReason	String	Job failure cause
jobProgress	Double	Job execution progress. It is a reserved field, and not used currently.

Table 3-137 JobDetail

Parameter	Type	Description
schemaPath	Array of schemaPath objects	Path for storing metadata
edgesetPath	Array of edgesetPath objects	Path for storing the edge data set
vertexsetPath	Array of vertexsetPat h objects	Path for storing the vertex data set

Table 3-138 schemaPath

Parameter	Type	Description
path	String	OBS storage path
log	String	Import log
status	String	OBS file status: <ul style="list-style-type: none">• success: Imported successfully.• Failed: Failed to import the file.• partFailed: Partially failed.
cause	String	Import failure cause

Table 3-139 edgesetPath

Parameter	Type	Description
path	String	OBS storage path
log	String	Import log
status	String	OBS file status: <ul style="list-style-type: none">• success: Imported successfully.• Failed: Failed to import the file.• partFailed: Partially failed.
cause	String	Import failure cause
totalLines	Long	Total number of imported lines. The value -1 indicates that this field is not returned in the current version.

Parameter	Type	Description
failedLines	Long	Lines failed to be imported. The value -1 indicates that this field is not returned in the current version.
successfulLines	Long	Lines imported successfully. The value -1 indicates that this field is not returned in the current version.

Table 3-140 vertexsetPath

Parameter	Type	Description
path	String	OBS storage path
log	String	Import log
status	String	OBS file status: <ul style="list-style-type: none"> • success: Imported successfully. • Failed: Failed to import the file. • partFailed: Partially failed.
cause	String	Import failure cause
totalLines	Long	Total number of imported lines. The value -1 indicates that this field is not returned in the current version.
failedLines	Long	Lines failed to be imported. The value -1 indicates that this field is not returned in the current version.
successfulLines	Long	Lines imported successfully. The value -1 indicates that this field is not returned in the current version.

Example Request

4 Service Plane APIs

4.1 Vertex Operation APIs

4.1.1 Querying Vertices That Meet Filter Criteria

Function

This API is used to query vertices that meet filter criteria.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=query
- Parameter description

Table 4-1 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- **Request example**
POST https://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?
action_id=query
{

```
"offset":0,  
"limit":2,  
"labels": ["movies",  
          "user"],  
"vertexFilters": [  
    {"propertyName":"Age",  
     "predicate": "=",  
     "values":["18-24"]  
 }  
 ]  
}
```

 **NOTE**

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Parameter description

Table 4-2 Request body parameter description

Parameter	Mandatory	Type	Description
labels	Either labels or vertexFilters is mandatory.	String	Filter criteria of the vertex type
vertexFilters	Either labels or vertexFilters is mandatory.	Json	Filter criteria, in JSONArray format. Vertices are filtered by property.
offset	No	Integer	Start position of the request
limit	No	Integer	Maximum number of resources displayed on a single page. The default value is 10 .
sorts	No	Json	Result sorting property, in JSONArray format

Table 4-3 sorts parameter description

Parameter	Mandatory	Type	Description
key	Either Key or propertyName is mandatory.	String	Possible values are id , label , and property , which indicate that IDs, labels, or properties are sorted.
propertyName	Either Key or propertyName is mandatory.	String	Property name

Parameter	Mandatory	Type	Description
orderValue	No	String	Possible values are incr and decr , which indicate ascending and descending order respectively. The default value is incr .

Table 4-4 vertexFilters parameter structure

Parameter	Mandatory	Type	Description
propertyName	Yes	String	Property name
predicate	Yes	String	Logical relationship. Possible values are = , < , > , <= , >= , range , has , hasNot .
values	No	String	Property value.
type	No	String	Logical relationship of filter criteria. Possible values are and and or . The default value is and .

- Example 1 for vertexFilters

```
[
{
  "propertyName": "Gender",
  "predicate": "=",
  "values": ["F"]
},
{
  "propertyName": "Age",
  "predicate": "range",
  "values": ["18-24", "56+"],
  "type": "or"
}
]
```

Response

Table 4-5 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.

Parameter	Mandatory	Type	Description
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the vertex query job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Querying Job Status on the Service Plane .

- Response example (successful request)

Http Status Code: 200

```
{
  "jobId": "03e774f5-29ea-4187-9508-5435f3892ead016886200",
  "jobType": 1
}
```

- Response example (failed request)

Http Status Code: 400

```
{
  "errorMessage": "Bad Request, parameter labels and vertexFilters cannot all be null",
  "errorCode": "GES.8203"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-6 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Service internal error.
503 Service Unavailable	Service unavailable.

4.1.2 Querying Vertex Details

Function

This API is used to query the vertex information (such as the label and property) based on the vertex ID.

URI

- **URI format**
GET /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/detail?vertexIds={vertex_ids}
- **Parameter description**

Table 4-7 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
vertexIds	Yes	String	IDs of the vertices to be queried. When multiple IDs are specified by vertexIds , separate the IDs with commas (,) in the URL.

Request

- **Request example**
GET http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/detail?vertexIds=Ray

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

Table 4-8 Parameter description

Parameter	Type	Description
errorMessage	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.

Parameter	Type	Description
errorCode	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
data	Json	Query results

Table 4-9 data parameter description

Parameter	Type	Description
vertices	List	Vertex result set. If no corresponding vertices are found, the value of vertices is empty.

- Response example (successful request)

Http Status Code: 200

```
{
  "data": {
    "vertices": [
      {
        "id": "Ray",
        "label": "user",
        "properties": {
          "Occupation": [
            "college/grad student"
          ],
          "ChineseName": [
            "Lei"
          ],
          "Zip-code": [
            "90241"
          ],
          "Gender": [
            "M"
          ],
          "Age": [
            "18-24"
          ]
        }
      }
    ]
  }
}
```

- Response example (failed request)

Http Status Code: 400

```
{
  "errorMessage": "graph [demo] is not found",
  "errorCode": "GES.8204"
}
```

Return Value

- Normal

200

- Abnormal

Table 4-10 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.3 Adding a Vertex

Function

This API is used to add a vertex.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices
- Parameter description

Table 4-11 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
POST
http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices
{
 "vertex":"Lily",
 "label":"user",
 "properties":{

```

    "Age": [
        "under 18"
    ],
    "Gender": [
        "F"
    ],
    "Occupation": [
        "artist"
    ],
    "Zip-code": [
        "98133"
    ]
}
}

```

 **NOTE**

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Parameter description

Table 4-12 Request body parameter description

Parameter	Mandatory	Type	Description
vertex	Yes	String	Vertex name
label	Yes	String	Label of a vertex. If no label exists, set it to _DEFAULT_ .
properties	No	Json	Value of each property

Response

- Parameter description

Table 4-13 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.

Parameter	Mandatory	Type	Description
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "vertex [Lily] already exists",
  "errorCode": "GES.8000"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-14 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.4 Deleting a Vertex

Function

This API is used to delete a vertex.

URI

- **URI format**
`DELETE /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/{vertex_id}`
- Parameter description

Table 4-15 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
vertexId	Yes	String	Vertex name

Request

- Request example
`DELETE
http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/Lily`

SERVERT_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

- Parameter description

Table 4-16 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "vertex [Lily] does not exist",
  "errorCode": "GES.8000"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-17 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.5 Updating Vertex Properties

Function

This API is used to update vertex property values. The operations include ADD, UPDATE, and DEL.

URI

- URI format
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/{vertex_id}/properties?action?action_id={actionId}`
- Parameter description

Table 4-18 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
vertexId	Yes	String	Vertex name
actionId	Yes	String	Operator. Possible values: <ul style="list-style-type: none">• UPDATE: Update the value of a property.• ADD: Add the value to a property. When the property's cardinality is single, the operation is the same as that of UPDATE. When cardinality is list or set, the operator adds a value to a set.• DEL: Delete a property value.

Request

- Request example

```
POST  
http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/Lily/properties/action?  
action_id={actionId}  
{  
    "properties":{  
        "Age": [  
            "under 18"  
        ],  
        "Gender": [  
            "F"  
        ]  
    }  
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Parameter description

Table 4-19 Request body parameter description

Parameter	Mandatory	Type	Description
properties	Yes	Json	Value of each property

Parameter	Mandatory	Type	Description
label	No	String	Name of a label

Response

- Parameter description

Table 4-20 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "vertex [Lily] does not exist",
  "errorCode": "GES.8220"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-21 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.

Return Value	Description
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.6 Querying Vertex Data in Batches

Function

This API is used to query the vertex data (such as the labels and properties) in batches based on the vertex IDs.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=batch-query
- Parameter description

Table 4-22 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=batch-query
{
 "vertices":
 ["27003509_Station Building",
 "39636392_Badaling Great Wall"]
}

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Table 4-23 Request body parameter description

Parameter	Mandatory	Type	Description
vertices	Yes	String	Vertex ID array to be queried

Response

- Parameter description

Table 4-24 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
data	No	Json	The data field is contained when the query is successful, and the data field contains the vertices query result.
result	Yes	String	Query result. If the query is successful, the value is success . If the query fails, the value is failed .

- Response example (successful request)

```
Http Status Code: 200
{
    "data": {
        "vertices": [
            {
                "id": "27003509_Station Building",
                "label": "tag",
                "properties": {
                    "popularity": [
                        0
                    ],
                    "name": [
                        "Station Building"
                    ],
                    "alias": [
                        "Guanghua Road Office",
                        "Headquarters",
                        "Giant Underpants",
                        "Headquarters Building"
                    ]
                }
            },
            ...
        ]
    }
},
```

```
{  
    "id": "39636392_Badaling Great Wall",  
    "label": "tag",  
    "properties": {  
        "popularity": [  
            0  
        ],  
        "name": [  
            "Badaling Great Wall"  
        ],  
        "alias": [  
            "Great Wall"  
        ]  
    }  
}  
}  
"result": "success"
```

- Response example (failed request)

Http Status Code: 400

```
{  
    "errorMessage": " Bad Request, parameter vertices cannot be null",  
    "errorCode": "GES.8214"  
}
```

4.1.7 Adding Vertices in Batches

Function

This API is used to add vertices in batches.

URI

- URI format
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=batch-add`
- Parameter description

Table 4-25 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
`POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=batch-add`

```
{  
    "vertices": [  
        {  
            "vertex": "150",  
            "label": "tag",  
            "properties": {  
                "popularity": [0],  
                "name": ["Badaling Great Wall"],  
                "alias": ["Great Wall"]  
            }  
        }  
    ]  
}
```

```
"label": "movie",
"properties": {
    "movieid": [
        "150"
    ],
    "title": [
        "testmoive"
    ],
    "genres": [
        "Comedy"
    ]
},
{
    "vertex": "6",
    "label": "movie",
    "properties": {
        "movieid": [
            "6"
        ],
        "title": [
            "testmoive_exist_id"
        ],
        "genres": [
            "Comedy"
        ]
    }
},
"overrideExists": true
}
```

NOTE

- **SERVER_URL**: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).
- In the example, if vertex **6** already exists in the graph, properties of vertex **6** are overwritten.
- Parameter description

Table 4-26 Request body parameter description

Parameter	Mandatory	Type	Description
vertices	Yes	Json	Vertex array to be added. You are advised to add a maximum of 10,000 vertices at a time.
overrideExists	No	Boolean	Whether to overwrite the existing vertices in the vertices parameter. The default value is false , indicating that existing vertices are ignored. The value true indicates that existing vertices in the vertices parameter are overwritten.

Table 4-27 vertices parameter description

Parameter	Mandatory	Type	Description
vertex	Yes	String	Vertex name
label	Yes	String	Vertex label
properties	No	Json	Value of each property

Response

- Parameter description

Table 4-28 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "vertex [Lily] already exists",
  "errorCode": "GES.8000"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-29 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.8 Deleting Vertices in Batches

Function

This API is used to delete vertices in batches based on the vertex IDs.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=batch-delete
- Parameter description

Table 4-30 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
POST http://{\$SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?
action_id=batch-delete
{
 "vertices":
 ["27003509_Station Building",
 "39636392_Badaling Great Wall"]
}

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Table 4-31 Request body parameter description

Parameter	Mandatory	Type	Description
vertices	Yes	String	Vertex ID array to be deleted

Response

- Parameter description

Table 4-32 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

Http Status Code: 200

```
{  
    "result": "success"  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
    "errorMessage": "Bad Request, parameter vertices cannot be null",  
    "errorCode": "GES.8214"  
}
```

4.1.9 Updating Vertex Properties in Batches

Function

This API is used to update vertex properties in batches.

URI

- URI format

```
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/properties/action?action_id={actionId}
```

- Parameter description

Table 4-33 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
actionId	Yes	String	Operator. Possible values: <ul style="list-style-type: none"> • batch-update: Update the value of a property. • batch-add: Add the value to a property. When the property's cardinality is single, the operation is the same as that of batch-update. When cardinality is list or set, the operator adds a value to a set. • batch-del: Delete a property value.

Request

- Request example

```
POST
http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/properties?action=
action_id=batch-update
{
    "vertices": [
        {
            "vertex": "150",
            "label": "movie",
            "properties": {
                "movieid": [
                    "150"
                ],
                "title": [
                    "testmoive"
                ],
                "genres": [
                    "Comedy"
                ]
            }
        },
        {
            "vertex": "6",
            "properties": {
                "title": [
                    "testmoive_exist_id"
                ],
                "genres": [
                    "Comedy"
                ]
            }
        }
    ]
}
```

```
        }
    ],
    "ignoreError": true
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Parameter description

Table 4-34 Request body parameter description

Parameter	Mandatory	Type	Description
vertices	Yes	Json	Vertex array to be updated
ignoreError (2.2.13)	No	Boolean	Whether to ignore the update error of specific vertices. The default value is false , indicating that an error that causes the update failure must be detected. For example, if the vertex to be updated does not exist, an error is reported and no vertex is updated. If the value is true , similar errors are ignored and other vertex properties without errors are updated.

Table 4-35 vertices parameter description

Parameter	Mandatory	Type	Description
vertex	Yes	String	Vertex name
label	No	String	Vertex label
properties	Yes	Json	Value of each property to be updated

Response

- Parameter description

Table 4-36 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "vertex [Lily] does not exist",
  "errorCode": "GES.8220"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-37 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.10 Adding a Vertex Label

Function

This API is used to add a vertex label.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/{vertex_id}/labels
- **Parameter description**

Table 4-38 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
vertex_id	Yes	String	Vertex name

Request

- **Request example**
POST
http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/{vertex_id}/labels
{
 "label":"user"
}

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- **Parameter description**

Table 4-39 Request body parameter description

Parameter	Mandatory	Type	Description
label	Yes	String	Vertex label

Response

- **Parameter description**

Table 4-40 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

- Response example (successful request)

```
Http Status Code: 200
{
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "Same label [user] already exists",
  "errorCode": "GES.8213"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-41 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.11 Deleting a Vertex Label

Function

This API is used to delete a vertex label.

URI

- **URI format**
`DELETE /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/{vertex_id}/labels/{label_name}`
- Parameter description

Table 4-42 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
vertex_id	Yes	String	Vertex name
label_name	Yes	String	Vertex label

Request

- Request example
`DELETE http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/46/labels/movie`

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

- Parameter description

Table 4-43 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Parameter	Mandatory	Type	Description
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

Http Status Code: 200
{
}

- Response example (failed request)

Http Status Code: 400
{
 "errorMessage": "Vertex [46] does not have label [movie]",
 "errorCode": "GES.8182"
}

Return Value

- Normal
200
- Abnormal

Table 4-44 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.1.12 Exporting Filtered Vertices

Function

This API is used to export the vertex set that meets the filter criteria.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=export
- Parameter description

Table 4-45 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example (Only the asynchronous mode is supported.)

```
POST https://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/vertices?action_id=export
{
  "labels": [
    "movies",
    "user"
  ],
  "vertexFilters": [
    {
      "propertyName": "Age",
      "predicate": "=",
      "values": [
        "18-24"
      ]
    }
  ],
  "exportPath": "demo_movie/",
  "fileName": "export_movie_and_user.csv",
  "obsParameters": {
    "accessKey": "XXXX",
    "secretKey": "XXXX"
  }
}
```

- Parameter description

Table 4-46 Request body parameter description

Parameter	Mandatory	Type	Description
labels	Either labels or vertexFilters is mandatory.	String	Filter criteria of the vertex type
vertexFilters	Either labels or vertexFilters is mandatory.	Json	Filter criteria, in JSONArray format. Vertices are filtered by property. For details, see Table 4-4 .
exportPath	Yes	String	Export path
fileName	No	String	Name of the exported file

Parameter	Mandatory	Type	Description
obsParameters	Yes	String	OBS authentication parameters. For details, see Table 4-234 .

Response

Table 4-47 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the edge query job NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

- Response example (successful request)

Http Status Code: 200

```
{  
    "jobId": "03e774f5-29ea-4187-9508-5435f3892ead016886200",

}
```

- Response example (failed request)

Http Status Code: 400

```
{  
    "errorMessage": "Bad Request, parameter labels and vertexFilters cannot all be null",  
    "errorCode": "GES.8203"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-48 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Service internal error.
503 Service Unavailable	Service unavailable.

4.1.13 Deleting Filtered Vertices

Function

This API is used to delete the vertex set that meets the filter criteria.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?action_id=delete

Request

- Request example (Only the asynchronous mode is supported.)
POST https://[SERVER_URL]/ges/v1.0/{project_id}/graphs/{graph_name}/vertices/action?
action_id=delete

```
{  
  "labels": [  
    "movies",  
    "user"  
  ],  
  "vertexFilters": [  
    {  
      "propertyName": "Age",  
      "predicate": "=",  
      "values": [  
        "18-24"  
      ]  
    }  
  ]  
}
```
- Parameter description

Table 4-49 Request body parameter description

Parameter	Mandatory	Type	Description
labels	Either labels or vertexFilters is mandatory.	String	Filter criteria of the vertex type

Parameter	Mandatory	Type	Description
vertexFilters	Either labels or vertexFilters is mandatory.	Json	Filter criteria, in JSONArray format. Vertices are filtered by property. For details, see Table 4-4 .

Response

Table 4-50 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the vertex query job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Querying Job Status on the Service Plane .

- Response example (successful request)

Http Status Code: 200

```
{
  "jobId": "03e774f5-29ea-4187-9508-5435f3892ead016886200",
  "jobType": 1
}
```

- Response example (failed request)

Http Status Code: 400

```
{
  "errorMessage": "Bad Request, parameter labels and vertexFilters cannot all be null",
  "errorCode": "GES.8203"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-51 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Service internal error.
503 Service Unavailable	Service unavailable.

4.2 Edge Operation APIs

4.2.1 Querying Edges That Meet Filter Criteria

Function

This API is used to query edges that meet filter criteria.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=query
- Parameter description

Table 4-52 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=query
{
 "offset":"0",
 "limit":"20",
 "labels":[]

```

        "rate"
    ],
    "edgeFilters":[
        {
            "propertyName":"Score",
            "predicate":">>=",
            "values":[
                "2"
            ]
        },
        {
            "propertyName":"Datetime",
            "predicate": "range",
            "values":[
                "1998-12-27 01:00:00",
                "2000-12-31 00:12:38"
            ],
            "type": "or"
        }
    ]
}

```

 **NOTE**

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Table 4-53 Request body parameter description

Parameter	Mandatory	Type	Description
labels	Either labels or edgeFilters is mandatory.	String	Filter criteria of the relationship type
edgeFilters	Either labels or edgeFilters is mandatory.	String	Filter criteria, in JSONArray format. Vertices are filtered by property.
offset	No	Integer	Start position of the request
limit	No	Integer	Expected number of edges returned by a query
sorts	No	Json	Result sorting property. It is in JSONArray format.

Table 4-54 sorts parameter description

Parameter	Mandatory	Type	Description
key	Either Key or propertyName is mandatory.	String	Possible values are label and property , which indicate that labels or properties are sorted.

Parameter	Mandatory	Type	Description
propertyName	Either Key or propertyName is mandatory.	String	Property name
orderValue	No	String	Possible values are incr and decr , which indicate ascending and descending order respectively. The default value is incr .

Table 4-55 edgeFilters parameter structure

Parameter	Mandatory	Type	Description
propertyName	Yes	String	Property name
predicate	Yes	String	Logical relationship. Possible values are = , < , > , <= , >= , range , has , hasNot
values	No	String	Property value.
type	No	String	Logical relationship of filter criteria. Possible values are and and or . The default value is and .

Response

Table 4-56 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the edge query job NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

- Response example (successful request)

Http Status Code: 200

```
{  
  "jobId": "f9987cab-64d3-4b3d-ac43-e91ae0c21bef168127124",  
  "jobType": 0  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
  "errorMessage": "Bad Request, parameter labels and edgeFilters cannot all be null",  
  "errorCode": "GES.8103"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-57 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.2 Querying Edge Details

Function

This API is used to query the detailed information about an edge based on the source vertex, target vertex, and index of the edge. Information about edges and properties is returned.

URI

- URI format

```
GET /ges/v1.0/{project_id}/graphs/{graph_name}/edges/detail?  
source={sourceVertex}&target={targetVertex}&index={index}
```

- Parameter description

Table 4-58 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
sourceVertex	Yes	String	Source vertex of an edge
targetVertex	Yes	String	Target vertex of an edge
index	No	Integer	Edge index. If this parameter is not set, all edges between the source and target vertices are queried

Request

- Request example

```
GET http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/detail?  
source=Ray&target=Rocky&index=6
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

Table 4-59 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
data	No	Json	Query results. This parameter is left blank when the query fails.

Table 4-60 data parameter description

Parameter	Mandatory	Type	Description
edges	Yes	List	Edge result set. If no corresponding edges are found, the value of edges is empty.

- Response example (successful request)

Http Status Code: 200

```
{  
  "data": {  
    "edges": [  
      {  
        "index": "6",  
        "source": "Ray",  
        "label": "rate",  
        "properties": {  
          "value": 100  
        }  
      }  
    ]  
  }  
}
```

```
        "Score": [
            3
        ],
        "Datetime": [
            "2000-11-22 19:23:05"
        ]
    },
    "target": "Rocky"
}
]
```

- Response example (failed request)

Http Status Code: 400

```
{
"errorMessage":"graph [demo] is not found",
"errorCode":"GES.8107"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-61 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.3 Adding an Edge

Function

This API is used to add an edge.

URI

- URI format
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges`
- Parameter description

Table 4-62 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges
{
    "source": "Lily",
    "target": "Rocky",
    "label": "rate",
    "properties": {"Score": [5], "Datetime": ["2018-01-01 20:30:05"]},
    "parallelEdge": {
        "action": "override",
        "ignoreLabel": true
    }
}
```

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex name
target	Yes	String	Target vertex name
label	No	String	Label of an edge. If no label exists, set it to _DEFAULT_ .
properties	No	Json	Value of each property
parallelEdge	No	Object	Repetitive edge processing

Parameter	Mandatory	Type	Description
action	No	String	<p>Processing mode of repetitive edges. The value can be allow, ignore, or override. The default value is allow.</p> <ul style="list-style-type: none"> • allow indicates that repetitive edges are allowed. • ignore indicates that subsequent repetitive edges are ignored. • override indicates that the previous repetitive edges are overwritten.
ignoreLabel	No	Boolean	<p>Whether to ignore labels on repetitive edges. The value is true or false, and the default value is true.</p> <ul style="list-style-type: none"> • true: Indicates that the repetitive edge definition does not contain the label. That is, the <source vertex, target vertex> indicates an edge, excluding the label information. • false: Indicates that the repetitive edge definition contains the label. That is, the <source vertex, target vertex, label> indicates an edge.

Response

- Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success",
  "data": {"index": "0"}
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "edge source vertex [Lily] does not exist",
  "errorCode": "GES.8000"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-63 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.4 Deleting an Edge

Function

This API is used to delete an edge based on the specified property value or index.

URI

- URI format
`DELETE /ges/v1.0/{project_id}/graphs/{graph_name}/edges?
source={sourceVertex}&target={targetVertex}&index={index}&label={label}&property={name}&value={
value}`
- Parameter description

Table 4-64 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex name
target	Yes	String	Target vertex name
index	No	Integer	Edge index <ul style="list-style-type: none">● If property has been set, ignore this parameter.● If property is not set, the edge is deleted based on index.● If neither property nor index is set, all edges between source and target are deleted.
label	No	String	Indicates the label of an edge, which can accelerate the search of property values. This parameter must be used together with property .
property	No	String	Property name of the edge to be deleted. This parameter must be used together with value .
value	No	String	Indicates the property value of the edge to be deleted. This parameter must be used together with property .

Request

- Request example

```
DELETE http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges?  
source=Vivian&target=Lethal Weapon&index=0&label=rate&property=Score&value=5
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

- Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "edge source vertex [Lily] does not exist",
  "errorCode": "GES.8000"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-65 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.5 Updating Edge Properties

Function

This API is used to update edge property values. The operations include ADD, UPDATE, and DEL.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/properties/action?
action_id={actionId}&source={sourceVertex}&target={targetVertex}&index={index}
- **Parameter description**

Table 4-66 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
actionId	Yes	String	Operator. Possible values: <ul style="list-style-type: none">• update: Update a property value.• add: Add a property value. When the property's cardinality is single, the operation is the same as that of UPDATE. When cardinality is list or set, the operator adds a value to a set.• del: Delete a property value.
sourceVertex	Yes	String	Source vertex of an edge
targetVertex	Yes	String	Target vertex of an edge
index	No	Integer	Edge index. If this parameter is not set, properties of the first edge between vertices are modified.

Request

- **Request example**
POST
http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/properties/action?
action_id=update&source=Lily&target=Tom&index=1
{
 "properties": {
 "Rating": ["7"],
 }
}

```
        "Datetime":["2020-12-27 23:44:41"]
    },
    "targetProperties": [
    {
        "label": "rate",
        "properties": [
            "Rating"
        ]
    }
]
```

 **NOTE**

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Parameter description

Table 4-67 Request body parameter description

Parameter	Mandatory	Type	Description
properties	Yes	Json	Value of each property
label	No	String	Name of a label
targetProperties	No	Array	<p>Properties used to determine duplicate edges.</p> <ul style="list-style-type: none">• If this parameter is not left blank, other properties of duplicate edges (with the same source vertex and target vertex) that has the same property value as the input property value will be overwritten. If there are multiple specified properties, the properties of the first edge that is matched based on the property input sequence are modified.• If this parameter is left blank or no property is specified for the input edge, the first edge that meets the criteria is updated. <p>For details about the property elements, see Table 4-68.</p>

Table 4-68 targetProperty parameter description

Parameter	Mandatory	Type	Description
label	Yes	String	Label name. The label of duplicate edges is determined by the property.

Parameter	Mandatory	Type	Description
properties	Yes	Array	Value of each property. The property list of duplicate edges is determined by the property. Currently, only a single property is supported. If multiple properties are entered, the first property is used.

Response

- Parameter description

Table 4-69 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "edge [Lily-Tom-1] does not exist",
  "errorCode": "GES.8221"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-70 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.6 Querying Edge Data in Batches

Function

This API is used to query the detailed information about edges in batches based on the source vertices, target vertices, and indexes of the edges. Information about edges and properties is returned.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=batch-query
- **Parameter description**

Table 4-71 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- **Example request**
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=batch-query
{
 "edges": [
 {"source": "39631050_Landscape",
 "target": "27803870_Landmark building"}]

```
},{  
    "index": "0",  
    "source": "27803870_Landmark building",  
    "target": "27661363_Jiuhua Hot Spring"  
}  
]
```

- Request body parameter description

Table 4-72 Request body parameter description

Parameter	Mandatory	Type	Description
edges	Yes	Json	Edge array to be queried

Table 4-73 edges parameter description

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex of an edge
target	Yes	String	Target vertex of an edge
index	No	String	Edge index

Response

- Parameter description

Table 4-74 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
data	No	String	The data field is contained when the query is successful, and the data field contains the edges query result.

- Response example of a successful request

```
{  
  "data": {  
    "edges": [  
      {  
        "index": "24",  
        "source": "39631050_Landscape",  
        "label": "superclassOf",  
        "properties": {  
          "popularity": [  
            0  
          ]  
        },  
        "target": "27803870_Landmark building"  
      },  
      {  
        "index": "0",  
        "source": "27803870_Landmark building",  
        "label": "superclassOf",  
        "properties": {  
          "popularity": [  
            0  
          ]  
        },  
        "target": "27661363_Jiuhua Hot Spring"  
      }  
    ]  
  }  
}
```

- Response example of a successful request

```
{  
  "data": {  
    "edges": [  
      {  
        "source": "Vivian",

```

4.2.7 Adding Edges in Batches

Function

This API is used to add edges in batches.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=batch-add
- **Parameter description**

Table 4-75 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- **Request example**
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=batch-add
{
 "edges": [
 {
 "source": "46",
 "target": "39",

]
}

```
],
"parallelEdge": {
  "action": "override",
  "ignoreLabel": true
},
"createNotExist": true
}
```

 NOTE

- **SERVICE_URL**: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).
- In the example, if vertices **666** and **777** are not in the original graph, create vertices **666** and **777**, retain the default value of each label, and add an edge.

- Request body parameter description

Parameter	Mandatory	Type	Description
edges	Yes	Json	Edge array to be added
parallelEdge	No	Object	Repetitive edge processing
action	No	String	<p>Processing mode of repetitive edges. The value can be allow, ignore, or override. The default value is allow.</p> <ul style="list-style-type: none">• allow indicates that repetitive edges are allowed.• ignore indicates that subsequent repetitive edges are ignored.• override indicates that the previous repetitive edges are overwritten.
ignoreLabel	No	Boolean	<p>Whether to ignore labels on repetitive edges. The value is true or false, and the default value is true.</p> <ul style="list-style-type: none">• true: Indicates that the repetitive edge definition does not contain the label. That is, the <source vertex, target vertex> indicates an edge, excluding the label information.• false: Indicates that the repetitive edge definition contains the label. That is, the <source vertex, target vertex, label> indicates an edge.

Parameter	Mandatory	Type	Description
createNotExists	No	Boolean	<p>Whether to add source or target vertices that do not exist in the edges parameter before adding edges. The default value is false, which does not affect the original functions and semantics.</p> <p>If this parameter is set to true, source or target vertices that do not exist in the edges parameter are added prior to the edges.</p>

Table 4-76 edges parameter description

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex of an edge
target	Yes	String	Target vertex of an edge
label	Yes	String	Edge label
properties	No	Json	Value of each property

Response

- Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success",
  "data": {
    "edges": [
      {
        "index": "7",
        "source": "46",
        "target": "39"
      },
      {
        "index": "0",
        "source": "46",
        "target": "38"
      }
    ]
  }
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "edge source vertex [Lily] does not exist",
  "errorCode": "GES.8000"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-77 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.8 Deleting Edges in Batches

Function

This API is used to delete edges in batches based on the source vertices, target vertices, and indexes of the edges.

URI

- URI format

POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=batch-delete

- Parameter description

Table 4-78 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=batch-delete
{
  "edges": [
    {
      "source": "39631050_Landscape",
      "target": "27803870_Landmark building"
    },
    {
      "index": "0",
      "source": "27803870_Landmark building",
      "target": "27661363_Beijing Jiuhua Hot Spring"
    }
  ],
  "ignoreError": true
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Table 4-79 Request body parameter description

Parameter	Mandatory	Type	Description
edges	Yes	Json	Edge array to be deleted
executionMode	No	String	sync indicates the synchronous mode, and async indicates the asynchronous mode. The default value is sync .
ignoreError	No	Boolean	Whether to ignore errors, for example, the edge to delete does not exist. The default value is false , indicating that errors will not be ignored. Errors in JSON format cannot be ignored.

Table 4-80 edges parameter description

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex of an edge
target	Yes	String	Target vertex of an edge
index	No	String	Edge index
label	No	String	Label of an edge. If the index parameter is set, this parameter is ignored. If the index parameter is not set, an edge that meets the source , target , and label conditions is deleted. If the specified label value does not exist in the schema or the edge with the same label does not exist, no edge will be deleted.

Response

- Sync mode

Table 4-81 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "parameter does not contain 'source'",
  "errorCode": "GES.8000"
}
```

- Async mode

Table 4-82 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the deletion job. This parameter is left blank when the request fails. This ID can be used as a parameter to obtain the deletion result through the API for querying the job status.
jobType	No	Integer	Job type. This parameter is left blank when the request fails.

- Response example (successful request)

Http Status Code: 200

```
{  
  "jobId": "500dea8f-9651-41fe-8299-c20f13a032ea",  
  "jobType": 3  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
  "errorMessage": "graph [test_117d] is not found",  
  "errorCode": "GES.8402"  
}
```

4.2.9 Updating Edge Properties in Batches

Function

This API is used to update edge properties in batches.

URI

- URI format
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/properties/action?action_id={actionId}`
- Parameter description

Table 4-83 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
actionId	Yes	String	Operator. Possible values: <ul style="list-style-type: none">• batch-update: Update the value of a property.• batch-add: Add the value to a property. When the property's cardinality is single, the operation is the same as that of batch-update. When cardinality is list or set, the operator adds a value to a set.• batch-del: Delete a property value.

Request

- Request example

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/properties/action?  
action_id=batch-update  
{  
    "edges": [  
        {  
            "source": "46",  
            "target": "39",  
            "properties": {  
                "Rating": [  
                    5  
                ],  
                "Datetime": [  
                    "2018-01-01T00:00:05"  
                ]  
            }  
        },  
        {  
            "source": "46",  
            "target": "38",  
            "index": "0",  
            "properties": {  
                "Rating": [  
                    4  
                ],  
                "Datetime": [  
                    "2018-01-01T00:00:05"  
                ]  
            }  
        }  
    ],  
    "ignoreError": true  
}
```

 NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Parameter	Mandatory	Type	Description
edges	Yes	Json	Edge array to be updated
ignore Error	No	Boolean	<p>Whether to ignore the update error of specific edges. The default value is false, indicating that an error that causes the update failure must be detected. For example, if the edge to be updated does not exist, an error is reported and no edge is updated.</p> <p>If the value is true, similar errors are ignored and other edge properties without errors are updated.</p>

Table 4-84 edges parameter description

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex of an edge
target	Yes	String	Target vertex of an edge
index	No	String	Edge index. If this parameter is not set, the first edge between vertices is updated.
properties	Yes	Json	Value of each property

Response

- Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.

Parameter	Mandatory	Type	Description
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "edge source vertex [46] does not exist",
  "errorCode": "GES.8221"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-85 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.10 Exporting Filtered Edges

Function

This API is used to export the edge set that meets the filter criteria.

URI

- URI format

```
POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=export
```

Request

- Request example (Only the asynchronous mode is supported.)

```
POST https://{{SERVER_URL}}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=export
{
    "labels": [
        "rate"
    ],
    "edgeFilters": [
        {
            "propertyName": "Score",
            "predicate": ">=",
            "values": [
                "2"
            ]
        },
        {
            "propertyName": "Datetime",
            "predicate": "range",
            "values": [
                "1998-12-27 01:00:00",
                "2000-12-31 00:12:38"
            ],
            "type": "or"
        }
    ],
    "exportPath": "demo_movie/",
    "fileName": "export_rate.csv",
    "obsParameters": {
        "accessKey": "XXXXXXX",
        "secretKey": "XXXXXXX"
    }
}
```

- Parameter description

Table 4-86 Request body parameter description

Parameter	Mandatory	Type	Description
export Path	Yes	String	Export path
fileName	No	String	Name of the exported file
obsParameters	Yes	String	OBS authentication parameters. For details, see Table 4-234 .
labels	Either labels or edgeFilters is mandatory.	String	Filter criteria of the relationship type

Parameter	Mandatory	Type	Description
edgeFilters	Either labels or edgeFilters is mandatory.	String	Filter criteria, in JSONArray format. Vertices are filtered by property. For details, see Table 4-55 .

Response

Table 4-87 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the edge query job NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

- Response example (successful request)

Http Status Code: 200

```
{  
    "jobId": "03e774f5-29ea-4187-9508-5435f3892ead016886200",  
    "jobType": 0  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
    "errorMessage": "Bad Request, parameter labels and vertexFilters cannot all be null",  
    "errorCode": "GES.8103"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-88 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.2.11 Deleting Filtered Edges

Function

This API is used to delete the edge set that meets the filter criteria.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=delete

Request

- Request example (Only the asynchronous mode is supported.)
POST https://{{SERVER_URL}}/ges/v1.0/{project_id}/graphs/{graph_name}/edges/action?action_id=delete

```
{
  "labels": [
    "rate"
  ],
  "edgeFilters": [
    {
      "propertyName": "Score",
      "predicate": ">=",
      "values": [
        "2"
      ],
      {
        "propertyName": "Datetime",
        "predicate": "range",
        "values": [
          "1998-12-27 01:00:00",
          "2000-12-31 00:12:38"
        ],
        "type": "or"
      }
    ]
  }
}
```
- Parameter description

Table 4-89 Request body parameter description

Parameter	Mandatory	Type	Description
labels	Either labels or edgeFilters is mandatory.	String	Filter criteria of the relationship type
edgeFilters	Either labels or edgeFilters is mandatory.	String	Filter criteria, in JSONArray format. Vertices are filtered by property. For details, see Table 4-55 .

Response

Table 4-90 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the edge query job NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

- Response example (successful request)

Http Status Code: 200

```
{  
    "jobId": "f9987cab-64d3-4b3d-ac43-e91ae0c21bef168127124",  
    "jobType": 0  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
    "errorMessage": "Bad Request, parameter labels and edgeFilters cannot all be null",  
    "errorCode": "GES.8103"  
}
```

Return Value

- Normal
200

- Abnormal

Table 4-91 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.3 Metadata Operation APIs

4.3.1 Adding a Label

Function

This API is used to add labels.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels
- **Parameters**

Table 4-92 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Example request

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels
{
  "name": "book",
  "properties": [
    {
      "property": {
        "name": "Title",
        "cardinality": "single",
        "dataType": "string"
      }
    },
    {
      "property": {
        "name": "Version",
        "cardinality": "single",
        "dataType": "string"
      }
    },
    {
      "property": {
        "name": "Category",
        "typeName1": "science",
        "typeName2": "literature",
        "typeNameCount": "2",
        "dataType": "enum"
      }
    }
  ]
}
```

 NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameters

Table 4-93 Request body parameters

Parameter	Mandatory	Type	Description
name	Yes	String	Name of a label A label name can contain a maximum of 256 characters. Only letters, digits, spaces, and special characters %,@,#,\$,:,?,*,.,+- are allowed.
properties	Yes	Json	Property array to be added. The array element is property. For details about the parameters, see Table 4-94 .

Table 4-94 property parameters

Parameter	Mandatory	Type	Description
name	Yes	String	Property name 1. A property name can contain a maximum of 256 characters. 2. A property name cannot contain <, >, &, ASCII 14,15 or 30. 3. The property under a label must be unique.
cardinality	Yes	String	Cardinality type of a property. Possible values: <ul style="list-style-type: none">• single• list• set
dataType	Yes	String	Data type of a property. For details, see the metadata types in Table 3-106 .
typeNameCount	No (This parameter is mandatory if dataType is enum .)	String	Total number of parameters of the enum type. This parameter controls the typeName quantity.
typeName*	No (This parameter is mandatory if dataType is enum .)	String	Names of parameters of the enum type. For example, if the value of typeNameCount is 2, the parameter contains typeName1:science and typeName2:literature .

Response

- Parameters

Table 4-95 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Parameter	Mandatory	Type	Description
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "label already exists",
  "errorCode": "GES.8801"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-96 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	No resources found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.3.2 Updating a Label

Function

In the current version, this API can only add properties to the end of existing labels, but cannot delete existing properties or update the property sequence.

URI

- URI format
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/{label_name}/properties`
- Parameter description

Table 4-97 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
label_name	Yes	String	Label name

Request

- Example request

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/{label_name}/properties
{
  "name": "book",
  "properties": [
    {
      "property": {
        "name": "Title",
        "cardinality": "single",
        "dataType": "string"
      }
    },
    {
      "property": {
        "name": "Version",
        "cardinality": "single",
        "dataType": "string"
      }
    },
    {
      "property": {
        "name": "Category",
        "typeName1": "science",
        "typeName2": "literature",
        "typeNameCount": "2",
        "dataType": "enum"
      }
    }
  ]
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Table 4-98 Request body parameter description

Parameter	Mandatory	Type	Description
name	Yes	String	Name of a label. A label name can contain a maximum of 256 characters. Only letters, digits, spaces, and special characters %,@,#,\$,:,*,.,+,- are allowed.
properties	Yes	Json	Property array to be appended. The array element is property. For details about the parameters, see Table 4-99 .

Table 4-99 property parameters

Parameter	Mandatory	Type	Description
name	Yes	String	Property name 1. A property name can contain a maximum of 256 characters. 2. A property name cannot contain <, >, &, ASCII 14,15 and 30. 3. The property under a label must be unique.
cardinality	Yes	String	Composite type of a property. Possible values: <ul style="list-style-type: none">• single• list• set
dataType	Yes	String	Data type of a property. For details, see the metadata types in Table 3-106 .
typeNameCount	No (This parameter is mandatory if dataType is enum .)	String	Total number of parameters of the enum type. This parameter controls the typeName quantity.
typeName*	No (This parameter is mandatory if dataType is enum .)	String	Names of parameters of the enum type. For example, if the value of typeNameCount is 2, the parameter contains typeName1:science and typeName2:literature .

Response

- Parameter description

Table 4-100 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "label already exists",
  "errorCode": "GES.8801"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-101 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.3.3 Querying Graph Metadata Details

Function

This API is used to query graph metadata details.

URI

- URI format
GET /ges/v1.0/{project_id}/graphs/{graph_name}/schema
- Parameter description

Table 4-102 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
GET http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/schema

 NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

Table 4-103 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.

Parameter	Mandatory	Type	Description
data	No	Json	Query results. This parameter is left blank when the request fails.

Table 4-104 data parameter description

Parameter	Type	Description
schema	List	Definitions of each label and associated property field

- Response example (successful request)

Http Status Code: 200

```
{
  "data": {
    "schema": [
      {
        "label": "__DEFAULT__"
      },
      {
        "label": "friends"
      },
      {
        "label": "movie",
        "properties": [
          {
            "name": "ChineseTitle",
            "type": "string",

        }
    ]
}
}
```

- Response example (failed request)

Http Status Code: 400

```
{
    "errorMessage": "graph [demo] is not found",
    "errorCode": "GES.8003"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-105 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.3.4 Changing Property Names in Batches

Function

This API is used to change property names in batches.

URI

- **URI format**
PUT /ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/properties
- **Parameter description**

Table 4-106 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- **Request example**
PUT http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/properties
{
 "labels": [
 {"label": "movie",
 "originPropertyName": "title",
 "updatedPropertyName": "movie_title"}],
 {"label": "movie",
 "originPropertyName": "newProperty",
 "updatedPropertyName": "xxxxProperty"}]}

```
{  
    "label": "user",  
    "originPropertyName": "gender",  
    "updatedPropertyName": "sexuality"  
}  
]  
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Table 4-107 Request body parameter description

Parameter	Mandatory	Type	Description
labels	Yes	JsonArray	Label array
label	Yes	String	Name of a label
originPropertyName	Yes	String	Original property name
updatedPropertyName	Yes	String	New property name

Response

- Parameter description

Table 4-108 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
updated_count	No	Integer	Number of properties that are successfully updated

- Response example (successful request)

```
Http Status Code: 200  
{  
    "updated_count": 4  
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "label name does not exist",
  "errorCode": "GES.8807"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-109 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.3.5 Deleting a Label

Function

This API is used to delete a label as well as the vertices and edges associated with the label.

URI

- **URI format**
`DELETE /ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/{labelName}`
- Parameter description

Table 4-110 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Parameter	Mandatory	Type	Description
label_name	Yes	String	Name of a label

Request

- Request example

```
DELETE http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/{labelName}
```

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

- Parameter description

Table 4-111 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
data	No	Json	Query results. This parameter is left blank when the request fails.

Table 4-112 data parameter description

Parameter	Type	Description
outputs	int	Number of deleted vertices or edges when a label is deleted.

- Response example (successful request)

```
Http Status Code: 200
{
    "data": {
        "outputs": 3
    },
    "status": "success"
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
  "errorMessage": "graph [demo] is not found",  
  "errorCode": "GES.8003"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-113 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.3.6 Adding Labels in Batches

Function

This API is used to add labels in batches.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels/action?action_id=batch-add
- Parameter description

Table 4-114 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/schema/labels?action?  
action_id=batch-add  
{  
    "labels": [  
        {  
            "name": "book",  
            "properties": [  
                {  
                    "property": {  
                        "name": "title",  
                        "cardinality": "single",  
                        "dataType": "string"  
                    }  
                }  
            ]  
        },  
        {  
            "name": "movie",  
            "properties": [  
                {  
                    "property": {  
                        "name": "movieid",  
                        "cardinality": "single",  
                        "dataType": "int"  
                    }  
                }  
            ]  
        }  
    ]  
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Table 4-115 label parameter description

Parameter	Mandatory	Type	Description
name	Yes	String	Name of a label A label name can contain a maximum of 256 characters. Only letters, digits, spaces, and special characters %,@,#,\$,:,?,*,.+,- are allowed.
properties	Yes	Json	Property array to be added. The array element is property. For details about the parameters, see Table 4-116 .

Table 4-116 property parameter description

Parameter	Mandatory	Type	Description
name	Yes	String	Property name 1. A property name can contain a maximum of 256 characters. 2. A property name cannot contain <, >, &, ASCII 14, 15 or 30. 3. The property under a label must be unique.
cardinality	Yes	String	Cardinality type of a property. Possible values: <ul style="list-style-type: none">• single• list• set
dataType	Yes	String	Data type of a property. For details, see the metadata types in Table 3-106 .
typeNameCount	No (This parameter is mandatory if dataType is enum .)	String	Total number of parameters of the enum type. This parameter controls the typeName quantity.
typeName*	No (This parameter is mandatory if dataType is enum .)	String	Names of parameters of the enum type. For example, if the value of typeNameCount is 2, the parameter contains typeName1:science and typeName2:literature .

Response

- Parameter description

Table 4-117 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	If the execution is successful, the value of result is success .
data	No	Json	If some labels fail to be added, this field contains the names of the failed labels and the failure causes.

- Response example (successful request)

```
Http Status Code: 200
{
  "result": "success"
}
```

- Request example (successful request)

```
Http Status Code: 200
{
  "result": "partial success",
  "data": {
    "failed": [
      {
        "cause": "label name is invalid which can only contain letters, digits, space, %, @, #, $, :, ?, *, ., +, - and _",
        "labelName": "book<"
      }
    ]
  }
}
```

- Response example (failed request)

```
Http Status Code: 400
{
  "errorMessage": "label already exists",
  "errorCode": "GES.8801"
}
```

Return Value

- Normal
200
- Abnormal

Table 4-118 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.4 Index Operation APIs

4.4.1 Creating an Index

Function

This API is used to create indexes based on the specified information such as indexName and IndexType. Currently, GES supports composite indexes.

- Composite indexes include global vertex indexes (GlobalCompositeVertexIndex) and global edge indexes (GlobalCompositeEdgeIndex). Composite indexes can be used to create indexes on labels and properties. Indexes can accelerate the query speed.

Index Feature Comparison

Feature	Fuzzy Search	Speed	Flexibility	Predicate Supported
Composite indexes	No	Fast	Fixed composite property keys only	No

URI

- URI format
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/indices`
- Parameter description

Table 4-119 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Sample request (composite index)

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/indices
{
    "indexName": "ageIndex",
    "indexType": "GlobalCompositeVertexIndex",
    "hasLabel": "true",
    "indexProperty": ["age"]
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

Table 4-120 Request body parameter description

Parameter	Mandatory	Type	Description
indexName	Yes	String	Index name. Only letters, digits, hyphens (-), and underscores (_) are allowed. Other characters are not allowed. The index name can contain a maximum of 63 characters.
indexType	Yes	String	Index type. The value is case-sensitive. GlobalCompositeVertexIndex is a global composite vertex index.

Parameter	Mandatory	Type	Description
indexProperty	No (If hasLabel is false or null , this parameter is mandatory.)	String	Index property list. The property types that can be used to create indexes include integer, float, double, long, enum, char array, string, and date.

Response

- Parameter description

Table 4-121 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of an asynchronous job NOTE <ul style="list-style-type: none">You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs.
jobType	No	String	Type of an asynchronous job
result	No	String	If the execution is successful, the value of result is success .

- Response example (successful request)

Http Status Code: 200

```
{  
  "jobId": "f99f60f1-bba6-4cde-bd1a-ff4bdd1fd500000168232",  
  "jobType": 8  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
  "errorMessage": "graph [demo] is not found",  
  "errorCode": "GES.8603"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-122 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.4.2 Deleting an Index

Function

This API is used to delete an index based on the specified indexName.

URI

- URI format
`DELETE /ges/v1.0/{project_id}/graphs/{graph_name}/indices/{indexName}`
- Parameter description

Table 4-123 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name
indexName	Yes	String	Index name

Request

- Request example
`DELETE http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/indices/ageIndex`

 NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

- Parameter description

Table 4-124 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of an asynchronous job NOTE <ul style="list-style-type: none">You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs.
jobType	No	String	Type of an asynchronous job

- Response example (successful request)

Http Status Code: 200

```
{  
  "jobId": "fb74314e-a82d-41b2-8900-96e2559fa0d9000168232",  
  "jobType": 9  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
  "errorMessage": "graph [demo] is not found",  
  "errorCode": "GES.8604"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-125 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.4.3 Querying Indexes

Function

This API is used to query all indexes created on a graph.

URI

- URI format
GET /ges/v1.0/{project_id}/graphs/{graph_name}/indices
- Parameter description

Table 4-126 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example
GET http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/indices

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Response

- Parameter description

Table 4-127 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
result	No	String	Query results. If the query is successful, success is displayed.
indices	No	List	Indexes of the query results
indexType	No	String	Index types of the query results
indexName	No	String	Index names of the query results
indexProperty	No	List	Index properties of the query results

- Response example (successful request)

Http Status Code: 200

```
{
  "data": {
    "result": "success",
    "indices": [
      {
        "indexType": "GlobalCompositeVertexIndex",
        "indexName": "ageIdx",
        "indexProperty": [
          "age"
        ],
        "hasLabel": "true"
      }
    ]
  }
}
```

- Response example of a successful request

Http Status Code: 200

```
{}
```

```
"data": {  
    "indices": [  
        {  
            "indexType": "GlobalCompositeVertexIndex",  
            "indexName": "ageIdx",  
            "indexProperty": [  
                "age"  
            ],  
            "hasLabel": true  
        }  
    ],  
    "result": "success"  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
    "errorMessage": "graph [demo] is not found",  
    "errorCode": "GES.8605"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-128 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.5 Gremlin Operation APIs

4.5.1 Executing Gremlin Queries

Function

This API is used to return the query result of a Gremlin statement.

URI

- **URI format**
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-gremlin-query`
- Parameter description

Table 4-129 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- **Request example**
`POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-gremlin-query`

```
{  
    "command": "g.V().limit(100)"  
}
```
- **NOTE**
 - **SERVER_URL:** Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).
 - The size of the request body cannot exceed 64 MB.
- Request body parameter description

Table 4-130 Request body parameter description

Parameter	Mandatory	Type	Description
command	Yes	String	Query command (Gremlin language)

Response

- Parameter description

Table 4-131 Response description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
data	No	Json	Query results. This parameter is left blank when the request fails.

- **Response example (successful request)**

Http Status Code: 200

```
{  
  "data": {  
    "runtime": 0.775425022,  
    "vertices": [  
      {  
        "id": "Vivian",  
        "label": "user",  
        "properties": {  
          "Occupation": [  
            "artist"  
          ],  
          "ChineseName": [  
            "Vivian"  
          ],  
          "Zip-code": [  
            "98133"  
          ],  
          "Gender": [  
            "F"  
          ],  
          "Age": [  
            "25-34"  
          ]  
        }  
      },  
      ....  
    ]  
  }  
}
```

- **Response example (failed request)**

Http Status Code: 400

```
{

  property: g1 for class: Script4",  
  "errorCode": "GES.8503"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-132 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.6 Algorithm APIs

4.6.1 Running Algorithms

Function

This API is used to run specified algorithms based on entered parameters.

URI

- URI format
POST /ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-algorithm
- Parameter description

Table 4-133 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- Request example

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-algorithm
{
  "algorithmName": "pagerank",
  "parameters": {
    "alpha": 0.85,
    "convergence": 0.00001,
    "max_iterations": 1000,
    "directed": true
  }
}
```

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

For details about the parameters, see [Table 4-136](#).

Response

Table 4-134 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
job_id	No	String	ID of the algorithm execution job. This parameter is left blank when the request fails. NOTE You can view the job execution status and obtain the return result by querying the job ID. For details, see Job Management APIs .

Parameter	Mandatory	Type	Description
jobType	No	Integer	Job type. This parameter is left blank when the request fails.

- Response example (successful request)

Http Status Code: 200

```
{  
  "jobId": "4448c9fb-0b16-4a78-8d89-2a137c53454a001679122",  
  "jobType": 1  
}
```

- Response example (failed request)

Http Status Code: 400

```
{  
  "errorMessage": "graph [demo] is not found",  
  "errorCode": "GES.8402"  
}
```

Return Value

- Normal
200
- Abnormal

Table 4-135 Return code for failed requests

Return Value	Description
400 Bad Request	Request error.
401 Unauthorized	Authentication failed.
403 Forbidden	No operation permission.
404 Not Found	The requested resource was not found.
500 Internal Server Error	Internal service error.
503 Service Unavailable	Service unavailable.

4.6.2 Algorithm API Parameter References

4.6.2.1 Common Algorithm Parameters

Algorithm request

- Request body example

```
{  
  "algorithmName": "XXX",  
  "parameters": {  
    ...  
  }  
}
```

```
}
```

- Request body parameter description

Table 4-136 Request body parameter description

Parameter	Mandatory	Type	Description
algorithm_name	Yes	String	Algorithm name. Possible values: <ul style="list-style-type: none">• pagerank• personalrank• kcore• k_hop• shortest_path• all_shortest_paths• filtered_shortest_path• sssp• shortest_path_of_vertex_sets• n_paths• closeness• label_propagation• louvain• link_prediction• node2vec• realtime_recommendation• common_neighbors• connected_component• degree_correlation• triangle_count• cluster_coefficient• filtered_circle_detection
parameters	Yes	Json	Algorithm parameters. For details, see the parameter description of each algorithm.

Table 4-137 New Body parameters of version 2.1.7

Parameter	Mandatory	Type	Description
executionMode	No	String	<ul style="list-style-type: none">• sync: synchronous• async: asynchronous <p>The default value is async. Supported algorithms:<ul style="list-style-type: none">• k_hop• shortest_path• all_shortest_paths• filtered_shortest_path• shortest_path_of_vertex_sets• n_paths• realtime_recommendation</p>
offset	No	Integer	<p>Synchronization result offset. The default value is 0.</p> <p>NOTE This parameter is valid when executionMode is sync. Supported algorithms:<ul style="list-style-type: none">• k_hop• shortest_path• all_shortest_paths• shortest_path_of_vertex_sets• n_paths• realtime_recommendation</p>
limit	No	Integer	<p>Maximum number of returned synchronization results. The maximum value is 100000. The default value is 100000.</p> <p>NOTE This parameter is valid when executionMode is sync. Supported algorithms:<ul style="list-style-type: none">• k_hop• shortest_path• all_shortest_paths• shortest_path_of_vertex_sets• n_paths• realtime_recommendation</p>

Table 4-138 New Body parameters of version 2.2.4

Parameter	Mandatory	Type	Description
vertex_filter	No	Json	Filter criteria for the vertices on a path. Supported algorithms: <ul style="list-style-type: none">• filtered_shortest_path For details about the format, see Table 4-246 in "Filtered-query API".
edge_filter	No	Json	Filter criteria for the edges (relationships) on a path. Supported algorithms: <ul style="list-style-type: none">• filtered_shortest_path For details about the format, see Table 4-246 in "Filtered-query API".
filters	No	Json	Filter criteria. Each element in the array corresponds to a filter. This parameter applies only to filtered circle detection. For details about the format, see filters element formats .

Result

Execute specified algorithms based on the input parameters and query the algorithm results.

- Response when an algorithm is successfully executed:

```
{  
    "data": {  
        "outputs": {  
            $response_data //Result of each algorithm. The results vary with the algorithm.  
            "runtime": 1.365867,  
            "data_return_size": 3,  
            "data_offset": 0,  
            "data_total_size": 100  
        }  
    },  
    "status": "complete"  
}
```

NOTE

response_data indicates the result of each algorithm. The results vary with algorithms.

- Response when an algorithm fails to be executed:

```
Http Status Code: 400  
{  
    "errorMessage": "Running algorithm [XXXX] error: YYYYYYYYYY!",  
    "errorCode": "GES.8301"  
}
```

- Parameter description

Table 4-139 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.
status	No	String	Returned job status for a successful query. Possible values are waiting , running , and complete . This parameter is left blank when the query fails.
data	No	Json	Algorithm execution result. This parameter is left blank when the query fails.

- Parameter description

Table 4-140 outputs parameter description

Parameter	Type	Description
response_data	Json	Result returned after an algorithm is executed NOTE The results vary with algorithms. For details, see parameter descriptions of each algorithm.
runtime	Double	Algorithm execution time. The unit is second.
data_return_size	Integer	Number of records returned from a query
data_offset	Integer	Result offset of a query
data_total_size	Integer	Total amount of result data generated by asynchronous jobs.

NOTE

Parameters **data_return_size**, **data_offset**, and **data_total_size** are used for pagination queries. After each of some algorithms (Shortest Path, Closeness Centrality, Link Prediction, Degree Correlation, Triangle Count, and Cluster Coefficient) is executed, only one value is returned and the result does not contain the parameter.

4.6.2.2 PageRank

Table 4-141 Parameter description

Parameter	Man dato ry	Description	Type	Value Range	Default Value
alpha	No	Weight coefficient (also called damping coefficient)	Double	A real number between 0 and 1 (excluding 0 and 1)	0.85
convergence	No	Convergence	Double	A real number between 0 and 1 (excluding 0 and 1)	0.00001
max_iterations	No	Maximum iterations	Integer	1 to 2000	1000
directed	No	Whether to consider the edge direction	Boolean	true or false	true

 **NOTE****Iterations and convergence**

The algorithm is terminated when either the maximum number of iterations is reached or the convergence precision is met.

1. Generally, a smaller convergence precision and larger number of iterations lead to a better effect of the algorithm.
2. To meet a certain convergence precision, you should set the number of iterations as large as possible.
3. A larger number of iterations means a longer algorithm running time. To ensure that the algorithm runs at a certain number of iterations (that is, in a fixed duration), you should set the convergence precision as small as possible.

Table 4-142 response_data parameter description

Parameter	Type	Description
pagerank	List	PageRank value of each vertex. The format is as follows: [{vertexId:rankValue},...], where vertexId is of the string type. rankValue is of the double type.

4.6.2.3 PersonalRank

Table 4-143 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Vertex ID	String	-	-
alpha	No	Weight coefficient	Double	A real number between 0 and 1 (excluding 0 and 1)	0.85
convergence	No	Convergence	Double	A real number between 0 and 1 (excluding 0 and 1)	0.00001
max_iterations	No	Maximum iterations	Integer	1 to 2000	1000
directed	No	Whether to consider the edge direction	Boolean	true or false	true

 NOTE

For details about algorithm iterations and convergence, see [Iterations and Convergence of PageRank](#).

Table 4-144 response_data parameter description

Parameter	Type	Description
source	String	-
personalrank	List	PersonalRank value of each vertex. The format is as follows: [{vertexId:rankValue},...], where vertexId is of the string type. rankValue is of the double type.

4.6.2.4 K-core

Table 4-145 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
k	Yes	Number of cores The algorithm returns vertices whose number of cores is greater than or equal to k.	Integer	Greater than or equal to 0	-

Table 4-146 response_data parameter description

Parameter	Type	Description
coreness	List<Map<String, Integer>>	Coreness value ($\text{coreness} \geq k$) of each vertex. The format is as follows: [{vertexId:corenessValue},...], where vertexId is of the string type. corenessValue is of the integer type.

4.6.2.5 K-hop

Table 4-147 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
k	Yes	Number of hops	Integer		-
source	Yes	Vertex ID	String	-	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
mode	No	Direction <ul style="list-style-type: none">• OUT: Hop from the outgoing edges• IN: Hop from the incoming edges• All: Hop from edges in both directions	String	OUT, IN, or ALL	OUT

Table 4-148 response_data parameter description

Parameter	Type	Description
vertices	List	ID of the vertex within k hops. The format is as follows: [vertexId,...], where vertexId is of the string type.
source	String	Source vertex ID
k	Integer	Number of hops
k_hop_neighbors	Integer	Number of vertices within k hops (excluding the source vertex)

4.6.2.6 Shortest Path

Table 4-149 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex ID of a path	String	-	-
target	Yes	Target vertex ID of a path	String	-	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
weight	No	Weight of an edge	String	Empty or character string <ul style="list-style-type: none"> Empty: The default weight and distance of edges are 1. Character string: The property of the corresponding edge is the weight. If the edge does not have a property, the weight is 1 by default. NOTE The weight of an edge must be greater than 0 .	-
directed	No	Whether to consider the edge direction	Boolean	The value can be true or false .	false
timeWindow	No	Time window used for time filtering	Json	For details, see Table 4-150 . NOTE timeWindow does not support the shortest path with weight. That is, parameters timeWindow and weight cannot be both specified.	-

Table 4-150 timeWindow parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
filterName	Yes	Name of the time property used for time filtering	String	Character string: The property on the corresponding vertex/edge is used as the time.	-
filterType	No	Filtering by vertex or edge	String	V : filtering by vertex E : filtering by edge BOTH : filtering by vertex and edge	BOTH
startTime	No	Start time	String	Date character string or timestamp	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
endTime	No	End time	String	Date character string or timestamp	-

Table 4-151 response_data parameter description

Parameter	Type	Description
path	List	Shortest path. The format is as follows: [vertexId,...] where vertexId is of the string type.
source	String	Source vertex ID
target	String	Target vertex ID

4.6.2.7 All Shortest Paths

Table 4-152 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex ID of a path	String	-	-
target	Yes	Target vertex ID of a path	String	-	-
directed	No	Whether to consider the edge direction	Boolean	true or false	false

Table 4-153 response_data parameter description

Parameter	Type	Description
paths	List	All shortest paths between the source vertex and target vertex. The format is as follows: [[path1],[path2]]

Parameter	Type	Description
paths_number	Integer	Number of paths
source	String	Source vertex ID
target	String	Target vertex ID

4.6.2.8 Filtered Shortest Path

Request

- Parameter description

Table 4-154 parameters parameter description

Parameter	Mandatory	Type	Description
source	Yes	String	Source vertex ID of a path
target	Yes	String	Target vertex ID of a path
directed	No	Boolean	Whether to consider the edge direction. The default value is false .

  "errorCode": "GES.8402"
}
```

4.6.2.9 SSSP

Table 4-157 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Vertex ID	String	-	-
directed	No	Whether to consider the edge direction	Boolean	true or false	true

Table 4-158 response_data parameter description

Parameter	Type	Description
distance	List	Path length of each vertex in the graph from the source vertex. The format is as follows: [{vertexId:distanceValue},...], where vertexId is of the string type. distanceValue is of the double type.
source	String	Source vertex ID

4.6.2.10 Shortest Path of Vertex Sets

Table 4-159 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources	Yes	Source vertex ID set	String	The value is in the standard CSV format. IDs are separated by commas (,), for example, Alice, Nana . The maximum ID number is 100000.	-
targets	Yes	Target vertex ID set	String	The value is in the standard CSV format. IDs are separated by commas (,), for example, Alice, Nana . The maximum ID number is 100000.	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
directed	No	Whether to consider the edge direction	Boolean	true or false	false
timeWindow	No	Time window used for time filtering	Json	For details, see Table 4-160 .	-

Table 4-160 timeWindow parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
filterName	No	Name of the time property used for time filtering	String	Character string: The property on the corresponding vertex/edge is used as the time.	-
filterType	No	Filtering by vertex or edge	String	V: filtering by vertex E: filtering by edge BOTH : filtering by vertex and edge	BOTH
startTime	No	Start time	String	Date character string or timestamp	-
endTime	No	End time	String	Date character string or timestamp	-

Table 4-161 response_data parameter description

Parameter	Type	Description
path	List	Shortest path. The format is as follows: [vertexId,...] where vertexId is of the string type.

Parameter	Type	Description
source	String	Source vertex ID
target	String	Target vertex ID

4.6.2.11 n-Paths

Table 4-162 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex ID of a path	String	-	-
target	Yes	Target vertex ID of a path	String	-	-
directed	No	Whether to consider the edge direction	Boolean	true or false	false
n	No	Number of paths	Integer	1 to 100	10
k	No	Number of hops	Integer	1 to 10	5

Table 4-163 response_data parameter description

Parameter	Type	Description
paths	List	Paths between the source vertex and target vertex. The format is as follows: [[path1],[path2]]
paths_number	Integer	Number of paths
source	String	Source vertex ID
target	String	Target vertex ID

4.6.2.12 Closeness Centrality

Table 4-164 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	ID of the vertex to be calculated	String	-	-

Table 4-165 response_data parameter description

Parameter	Type	Description
closeness	Double	Closeness centrality degree
source	String	Vertex ID to be calculated

4.6.2.13 Label Propagation

Table 4-166 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
coverage	No	Convergence	Double	A real number between 0 and 1 (excluding 0 and 1)	0.00001
max_iterations	No	Maximum iterations	Integer	1 to 2000	1000

Parameter	Mandatory	Description	Type	Value Range	Default Value
initial	No	Name of the property used as the initialization label on a vertex	String	<p>Empty or character string</p> <ul style="list-style-type: none">• Empty: Each vertex is allocated with a unique initialization label. This method is applicable to scenarios where no vertex label information exists.• Character string: The value of the property field corresponding to each vertex is used as the initialization label (the type is string, and the initialization label field is left blank for a vertex with unknown labels). This method is applicable to scenarios where some vertex labels are marked to predict unknown vertex labels. <p>NOTE If the value of initial is a character string, the number of vertices with initialization labels must be greater than 0 and less than the total number of vertices.</p>	-

 NOTE

For details about algorithm iterations and convergence, see [Iterations and Convergence of PageRank](#).

Table 4-167 response_data parameter description

Parameter	Type	Description
community	List	Community corresponding to each vertex. The format is: [{vertexId:communityId},...] where vertexId is of the string type. communityId is of the string type.

4.6.2.14 Louvain

Table 4-168 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
convergence	No	Convergence	Double	A real number between 0 and 1 (excluding 0 and 1)	0.00001
max_iterations	No	Maximum iterations	Integer	1 to 2000	100
weight	No	Weight of an edge	String	<p>Empty or null character string</p> <ul style="list-style-type: none">Empty: The default weight and distance of edges are 1.Character string: The property of the corresponding edge is the weight. If the edge does not have a property, the weight is 1 by default. <p>NOTE The weight of an edge must be greater than 0.</p>	weight

 **NOTE**

For details about algorithm iterations and convergence, see [Iterations and Convergence of PageRank](#).

Table 4-169 response_data parameter description

Parameter	Type	Description
modularity	Double	Modularity
community_num	Integer	Number of communities

Parameter	Type	Description
community	List	Community corresponding to each vertex. The format is: [{vertexId:communityId},...] where vertexId is of the string type. communityId is of the string type.

4.6.2.15 Link Prediction

Table 4-170 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex ID	String	-	-
target	Yes	Target vertex ID	String	-	-

Table 4-171 response_data parameter description

Parameter	Type	Description
source	String	Source vertex ID
target	String	Target vertex ID
link_prediction	Double	Link prediction result

4.6.2.16 Node2vec

Table 4-172 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
P	No	Rollback parameter	Double	Greater than 0	1
Q	No	Forward parameter	Double	Greater than 0	1

Parameter	Mandatory	Description	Type	Value Range	Default Value
dim	No	Mapping dimension	Integer	An integer between 1 and 200 (including 1 and 200)	50
walkLength	No	Random walk length	Integer	An integer between 1 and 100 (including 1 and 100)	40
walkNumber	No	Number of random walk steps of each vertex.	Integer	An integer between 1 and 100 (including 1 and 100)	10
iterations	No	Number of iterations	Integer	An integer between 1 and 100 (including 1 and 100)	10

Table 4-173 response_data parameter description

Parameter	Type	Description
embedding	List	<p>Vector representation of each vertex mapped to the Euclidean space. The format is as follows:</p> <p>[{vertexId:vectorValue}]</p> <p>where</p> <p>vertexId is of the string type.</p> <p>vectorValue: is an euclidean vector, for example, [-0.485, -0.679, 0.356].</p>

4.6.2.17 Real-time Recommendation

Table 4-174 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources	Yes	Vertex ID. Multiple vertices are supported.	String	The number of source vertices cannot exceed the upper limit (30 by default, which can be changed using source_limit). Use commas (,) to separate the IDs.	-
alpha	No	Weight coefficient. A larger value indicates a longer step.	Double	A real number between 0 and 1 (excluding 0 and 1)	0.85
N	No	Total number of walk steps	Integer	1 to 200000	10000
nv	No	Parameter indicating that the walk process ends ahead of schedule: minimum number of access times of a potential recommended vertex NOTE If a vertex is accessed during random walk and the number of access times reaches nv , the vertex will be recorded as the potential recommended vertex.	Integer	1 to 10	5

Parameter	Mandatory	Description	Type	Value Range	Default Value
np	No	<p>Parameter indicating that the walk process ends ahead of schedule: number of potential recommended vertices</p> <p>NOTE If the number of potential recommended vertices of a source vertex reaches np, the random walk for the source vertex ends ahead of schedule.</p>	Integer	1 to 2000	1000
label	No	<p>Expected type of the vertex to be output.</p> <p>NOTE</p> <ul style="list-style-type: none"> • Expected type of the vertex to be output. If the value is null, the original calculation result of the algorithm is output without considering the vertex type. • If the value is not null, vertices with the label are filtered from the calculation result. 	String	Vertex label	-
directed	No	Whether to consider the edge direction	Boolean	true or false	true
source_limit	No	Maximum number of source vertices	Int	1~100000	30
restricted	No	<p>Whether to accept invalid source vertices</p> <p>restricted=true: If a vertex that does not exist in the graph is passed to sources, an error is reported.</p> <p>restricted=false: A vertex that does not exist in the graph can be passed to sources. However, if all source vertices do not exist, an error is reported.</p>	Boolean	true or false	true

Table 4-175 response_data parameter description

Parameter	Type	Description
score	List	Score of each vertex, which reflects the recommendation degree. A larger value indicates a higher recommendation degree. The format is as follows: [{vertexId: scoreValue},...] where vertexId is of the string type. scoreValue is of the double type.
sources	List	ID of the source vertex

4.6.2.18 Common Neighbors

Table 4-176 parameters parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex ID	String	-	-
target	Yes	Target vertex ID	String	-	-

Table 4-177 response_data parameter description

Parameter	Type	Description
vertices	List	Common neighbor vertices. The format is as follows: [vertexId,...], where vertexId is of the string type
common_nei_ghbors	Integer	Number of common neighbor vertices
source	String	Source vertex ID
target	String	Target vertex ID

4.6.2.19 Connected Component

This algorithm can run without specifying its **parameters**.

Table 4-178 response_data parameter description

Parameter	Type	Description
Max_WCC_size	Integer	Maximum number of vertices in the largest connected component
Max_WCC_id	String	ID of the largest connected component
community	List	Connected component set (community) corresponding to each vertex. The format is [{vertexId:communityId},...]. where vertexId is of the string type. communityId is of the string type.

4.6.2.20 Degree Correlation

Table 4-179 response_data parameter description

Parameter	Type	Description
degree_correlation	Double	Degree correlation

4.6.2.21 Triangle Count

Table 4-180 Parameter description

Parameter	Mandatory	Description	Type	Value Range
statistics	No	Whether to export only the total statistical result. <ul style="list-style-type: none">• true: Export only the statistical result.• false: Export the number of triangles corresponding to each vertex.	Boolean	true or false . The default value is true .

Table 4-181 response_data parameter description

Parameter	Type	Description
triangle_count	Integer	Number of triangles
vertex_triangles	List	<p>Number of triangles on each vertex. The format is as follows: [{vertexId : vertexTriangleCount},...], where</p> <p>vertexId is of the string type. vertexTriangleCount is of the integer type.</p>

4.6.2.22 Cluster Coefficient

Table 4-182 response_data parameter description

Parameter	Type	Description
cluster_coefficient	Double	Cluster coefficient

4.6.2.23 Common Neighbors of Vertex Sets

Table 4-183 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources (2.2.6)	Yes	Source vertex ID set	String	<p>The value is in the standard CSV format. IDs are separated by commas (,), for example, Alice, Nana. The maximum ID number is 100000.</p>	-
targets (2.2.6)	Yes	Target vertex ID set	String	<p>The value is in the standard CSV format. IDs are separated by commas (,), for example, Mike,Amy. The maximum ID number is 100000.</p>	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
restricted (2.2.13)	No	Whether other constraints are included	Boolean	<p>true or false</p> <ul style="list-style-type: none"> false: There is no additional constraint. The found common neighbors are the intersection of the neighborhoods corresponding to the source vertex set and target vertex set. true: There are additional constraints. The found common neighbors are not only the intersection of the neighborhoods corresponding to the source vertex set and target vertex set, but each vertex in the common neighbor set has at least two neighboring vertices in the source vertex set and target vertex set. 	true

Table 4-184 response_data parameter description

Parameter	Type	Description
vertices	List	Common neighbor vertices. The format is as follows: [vertexId,...], where vertexId is of the string type.
common_neighbors	Integer	Number of common neighbors

4.6.2.24 All Shortest Paths of Vertex Sets

Table 4-185 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources	Yes	Source vertex ID set	String	The value is in the standard CSV format. IDs are separated by commas (,), for example, Alice, Nana . The maximum ID number is 100000.	-
targets	Yes	Target vertex ID set	String	The value is in the standard CSV format. IDs are separated by commas (,), for example, Alice, Nana . The maximum ID number is 100000.	-
directed	No	Whether to consider the edge direction	Boolean	true or false . It is a Boolean value.	false

Table 4-186 response_data parameter description

Parameter	Type	Description
paths	List	All shortest paths between the source vertex and target vertex. The format is as follows: [[path1],[path2]]
source	String	Source ID of a path
target	String	Target ID of a path

4.6.2.25 Filtered Circle Detection

Request example

```
Post http://{}/ges/v1.0/1/graphs/movie/action?action_id=execute-algorithm
{
    "algorithmName": "filtered_circle_detection",
    "parameters": {
        "n": 10,
        "statistics": true,
        "output_format": "edgeld"
```

```

},
"filters": [
  {
  },
  {
    "operator": "out",

Parameters

Table 4-187 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources	No	Set of source vertex IDs to be queried	String	-	The value is in the standard CSV format. IDs are separated by commas (,), for example, Alice, Nana .
n	No	Upper limit of the number of enumerated circles that meet the filter criteria	Integer	[1,100000]	100
statistics	No	Whether to export the number of circles that meet the filter criteria	Boolean	true or false	false
batch_number	No	Number of source vertices for batch processing	Integer	[1,1000]	10

Parameter	Mandatory	Description	Type	Value Range	Default Value
output_format	No	Output format	String	vertexId, edgeId, or edgeObject	edgeObject
filters	Yes	Filter criteria. Each element in the array corresponds to a filter.	Json	-	-

Table 4-188 filters element formats

Parameter	Mandatory	Description	Type	Value Range	Default Value
operator	No	Direction of the query to be performed at the current layer	String	out, in, or both	out
edge_filter	No	Filter criteria for the current layer. For details, see Table 4-246 in the Filtered-query API .	Json	-	-
vertex_filter	No	Filter criteria of vertices at the current layer. For details, see Table 4-246 in the Filtered-query API .	Json	-	-
times	No	Number of layers queried using the same filter criteria	Integer	[1,10]	1

NOTE

- Filter criteria at the first layer are used to filter source vertices. Therefore, only the **vertex_filter** parameter is valid.
- Filter criteria at the last layer are used to filter source vertices.
- The circle length ranges from 3 to 10. Therefore, the number of filtering layers is 4 to 11.

Table 4-189 response_data parameter description

Parameter	Mandatory	Type	Description
circles	Yes	List	<p>Set of circles found. The format is [[circle1], [circle2], ...]. The circle format is as follows:</p> <ul style="list-style-type: none">• If output_format is edgeObject, the format is [{"source": sourceld, "target": targetId, "index": edgeIndex}, ...], where sourceld, targetId, and edgeIndex are of the string type.• If output_format is edgeld, the format is [sourceld-targetId-edgeIndex,...], where sourceld-targetId-edgeIndex is of the string type.• If output_format is vertexId, the format is [vertexId, ...], where vertexId is of the string type.
runtime	Yes	Double	Algorithm running time
n	Yes	Integer	Maximum number of enumerated circles
circle_number	No	Integer	When statistics is set to true , the number of circles that meet filter criteria is displayed.

4.6.2.26 Subgraph Matching

Table 4-190 Parameter description

Parameter	Mandatory	Description	Type	Value Range
edges	Yes	Edge set of the subgraph to be matched. The vertex ID must be of the size_t type.	String	The value is in standard CSV format. The start and end vertices of an edge are separated by a comma (,), and edges are separated by a newline character (\n). For example, 1,2\n2,3 .

Parameter	Mandatory	Description	Type	Value Range
vertices	Yes	Label of each vertex on the subgraph to be matched.	String	The value is in standard CSV format. Vertices and their labels are separated by commas (,), and labels are separated by newline characters (\n). For example, 1,BP\n2,FBP\n3,CP.
directed	No	Whether to consider the direction of the graph	Boolean	The value can be true or false . The default value is true .
n	No	Maximum number of subgraphs to be searched for	Integer	The value range is [1,100000]. The default value is 100 .
batch_number	No	Number of queries processed in batches each time	Integer	The value range is [1,1000000]. The default value is 10000 .
statistics	No	Whether to display the number of all subgraphs that meet the conditions	Boolean	The value can be true or false . The default value is false .

Table 4-191 response_data parameter description

Parameter	Mandatory	Type	Description
subgraphs	Yes	List	Subgraphs with the same pattern of the pattern_graph . The value is in the [[subgraph1],[subgraph2], ...] format. Each subgraph is in the [vertex1,vertex2, ...] format, where vertex is of the string type. The vertices of each subgraph correspond to those of pattern_graph .
pattern_graph	Yes	List	Graph pattern. The value is in the [vertex1,vertex2, ...] format, where vertex is of the string type.
subgraph_number	No	Integer	Number of matched graphs. When statistics is set to true , the total number of graphs that meet query conditions is displayed.

4.6.2.27 Filtered All Pairs Shortest paths

Table 4-192 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources	Yes	Set of start vertex IDs. The value is in the standard CSV input format, that is, multiple vertex IDs are separated by commas (,).	String	The number of source vertices cannot exceed 10,000.	-
targets	Yes	Set of end vertex IDs. The value is in the standard CSV input format, that is, multiple vertex IDs are separated by commas (,).	String	The number of target vertices cannot exceed 10,000.	-
directed	No	Whether the edges are directed	Boolean	The value can be true or false .	false
cutoff	No	Maximum length	Integer	1-100	6
path_limit	No	Maximum number of paths	Integer	<ul style="list-style-type: none">For synchronous tasks: The value ranges from 1 to 100000. The default value is 100000.For asynchronous tasks: The value ranges from 1 to 1000000. The default value is 1000000.	100000/100000

 NOTE

- Synchronous tasks: Number of source vertices x Number of target vertices x Maximum path length (**cutoff**) <= 1000000, Maximum number of paths (**path_num**) x Maximum path length (**cutoff**) <= 1000000.
- This algorithm checks memory capacity. When the memory is insufficient, the error "memory is not enough" is reported.

Table 4-193 response_data parameter description

Parameter	Type	Description
batch_paths	List	<p>Batch paths. Format: [paths_element,...] where</p> <p>Paths_element indicates the path from a source to a target. The format is as follows:</p> <pre>{ "paths": [["Alice", "Janet", "Sue", "Serena", "Bonnie"]], "source": "Alice", "target": "Bonnie" },</pre>
paths_number	Integer	Number of paths

4.6.2.28 Filtered All Shortest Paths

Parameters

Table 4-194 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex ID	String	- -	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
target	Yes	Target vertex ID	String	-	-
directed	No	Whether the edges are directed	Boolean	The value can be true or false .	false

Table 4-195 response_data parameter description

Parameter	Type	Description
paths	List	Paths between the source and target vertices. The format is as follows: [[path1],[path2]] where For the format of each path, see Shortest Path .
paths_number	Integer	Number of paths
source	String	Source vertex ID
target	String	Target vertex ID

Example Request

```
POST /ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-algorithm
{
    "algorithmName": "filtered_all_shortest_paths",

Table 4-196 response_data parameter description

Parameter	Type	Description
paths	List	Paths between the source and target vertices. The format is as follows: [[path1],[path2]] where For the format of each path, see Shortest Path .
paths_number	Integer	Number of paths
source	String	Source vertex ID
target	String	Target vertex ID

4.6.2.29 TopicRank

Table 4-197 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
sources	Yes	Node ID. You can specify multiple node IDs in CSV format and separate them with commas (,).	String	Currently, a maximum of 100000 IDs are allowed.	-

Parameter	Mandatory	Description	Type	Value Range	Default Value
actived_p	No	Initial weight of the sources vertex.	Double	The value ranges from 0 to 100000.	1
default_p	No	Initial weight of a non-source vertex	Double	The value ranges from 0 to 100000.	1
filtered	No	Whether to filter results	Boolean	The value can be true or false .	false
only_neighbors	No	Whether to display only the neighboring vertices of the sources	Boolean	The value can be true or false .	false
alpha	No	Weight coefficient	String	The value is a real number between 0 and 1.	0.85
convergence	No	Convergence	String	The value is a real number between 0 and 1.	0.00001
max_iterations	No	Maximum iterations	Integer	The value ranges from 1 to 2000.	1000
directed	No	Whether the edges are directed	Boolean	The value can be true or false .	true
num_thread	No	Number of threads	Integer	The value ranges from 1 to 40.	4

Table 4-198 response_data parameter description

Parameter	Type	Description
topicrank	List	TopicRank value of each vertex. The format is as follows: [{vertexId:rankValue},...], where vertexId is of the string type. rankValue is of the double type.

4.6.2.30 Filtered n-Paths (2.2.22)

Introduction

The filtered n-Paths algorithm is used to find no more than n k-hop loop-free paths between the source and target vertices. The start vertex (source), end vertex (target), number of hops (k), number of paths (n), and filter criteria (filters) are the parameters for the algorithm.

- Algorithm name: filtered_n_paths
- filtered_n_paths

Applicable Scope

Any network

Request Parameters

Table 4-199 Body format

Field	Mandatory	Type	Description
algorithmName	Yes	String	The value is filtered_n_paths .
parameters	Yes	JSON format	For details about the format, see Table 4-200 .
filters	Yes	Json Array	Filter criteria. Each element in the array corresponds to a filter. For details about the format, see Table 4-201 .

Table 4-200 Parameter description

Parameter	Mandatory	Description	Type	Value Range	Default Value
source	Yes	Source vertex	String	Internal vertices	None
target	Yes	Target vertex	String	Internal vertices	None
k	Yes	Number of hops	Int	[2,6]	2
n	Yes	Number of paths	Int	[1,1000]	1

Table 4-201 filters element format

Parameter	Mandatory	Type	Value Range	Default Value	Description
edge_filter	No	json	N/A	N/A	Filter criteria for full-graph edge query
vertex_filter	No	json	None	None	Filter criteria for full-graph vertex query

Table 4-202 response_data parameter description

Field	Mandatory	Type	Description
path_length	Yes	int	Path length
paths_number	Yes	int	Number of paths
paths	Yes	JSONArray	Path set. Example value: ["111","119","58","96","82","57","56"] .
source	Yes	String	Source vertex
target	Yes	String	Target vertex

Example Request

```
POST http://IP:PORT/ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-algorithm
{
    "algorithmName": "filtered_n_paths",
    "filters": [
```

4.7 Path APIs

4.7.1 Querying Path Details

Function

This API is used to query the path details. All possible paths will be listed.

URI

- **URI format**
POST /ges/v1.0/{project_id}/graphs/{graph_name}/paths/action?action_id=query-detail
- **Parameter description**

Table 4-203 URI parameter description

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which is used for resource isolation. For details, see Obtaining a Project ID .
graph_name	Yes	String	Graph name

Request

- **Request example**
post http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/paths/action?action_id=query-detail
{
 "paths": [
 [
 "Ray",
 "Lethal Weapon",
 "Alice"
]
]
}

```
    ],
  "directed":false
}
```

NOTE

SERVER_URL: Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

Table 4-204 Request body parameter description

Parameter	Mandatory	Type	Description
paths	Yes	List	Set of paths to be queried
directed	No	Boolean	Whether the querying path is directional or non-directional: true: directional false: non-directional default=false

Response

Table 4-205 Parameter description

Parameter	Mandatory	Type	Description
errorMessage	No	String	System prompt. <ul style="list-style-type: none">If execution succeeds, this parameter may be left blank.If execution fails, this parameter is used to display the error message.
errorCode	No	String	System prompt. <ul style="list-style-type: none">If execution succeeds, this parameter may be left blank.If execution fails, this parameter is used to display the error code.
data	No	Json	Query results. This parameter is left blank when the query fails.

Table 4-206 data parameter description

Parameter	Type	Description
outputs	Json	Query results containing the paths
paths	List	<p>Collection of paths that contain detailed vertex and edge information, in JSONArray format</p> <p>NOTE</p> <p>In the returned paths:</p> <ul style="list-style-type: none">• If the vertex does not exist, the corresponding position is {}.• If there is no edge between vertices, the corresponding position is {"edges": []}.

              {
                "source": "Ray",
                "target": "Lethal Weapon",
                "index": "1",
                "label": "rate",
                "properties": {
                  "Score": [2],
                  "Datetime": ["2000-11-22 19:16:16"]
                }
              }
            ]
          },
          {
            "id": "Alice",
            "label": "user",
            "properties": {
              "ChineseName": ["Alice"],
              "Gender": ["F"],
              "Age": ["25-34"],
              "Occupation": ["academic/educator"],
              "Zip-code": ["79928"]
            }
          }
        ]
      }
    }
  }
}
```

- ```
 }
 }

● Response example (failed request)
Http Status Code: 400
{
 "errorMessage": "graph [demo] is not found",
 "errorCode": "GES.8107"
}
```

## Return Value

- Normal  
200
- Abnormal

**Table 4-207** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.8 Graph Statistics APIs

### 4.8.1 Querying General Information About a Graph

#### Function

This API is used to query the general information about a graph, such as the numbers of vertices and edges.

#### URI

- URI format  
GET /ges/v1.0/{project\_id}/graphs/{graph\_name}/summary?label\_details={labelDetails}
- Parameter description

**Table 4-208** URI parameter description

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                         |
|--------------|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| project_id   | Yes       | String  | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> .                                                                                                         |
| graph_name   | Yes       | String  | Graph name                                                                                                                                                                                                          |
| labelDetails | No        | Boolean | Whether to return the number of vertices and edges under each label. The default value is <b>false</b> . If this parameter is set to <b>true</b> , the numbers of vertices and edges under each label are returned. |

## Request

- Request example

```
GET http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/summary?label_details=true
```

### NOTE

**SERVER\_URL:** Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

## Response

**Table 4-209** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message. |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.    |
| data         | No        | Json   | Query results. This parameter is left blank when the request fails.                                                                              |

**Table 4-210** data parameter description

| Parameter    | Mandatory | Type    | Description                                                                                                                                               |
|--------------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| vertexNum    | Yes       | Integer | Number of vertices in a graph                                                                                                                             |
| edgeNum      | Yes       | Integer | Number of edges in a graph                                                                                                                                |
| labelDetails | Yes       | Json    | Numbers of vertices and edges under each label. To properly display this parameter, create vertex and edge indexes based on <a href="#">Table 4-211</a> . |

**Table 4-211** Description of each element in **labelDetails** when the execution is successful

| Parameter     | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labelInVertex | No        | Json   | <p>Number of vertices under each label. If the number of vertices under a label is 0, the label is not displayed.</p> <p>To include this parameter in the response, create an index by referring to <a href="#">Creating an Index</a>. During index creation, set <b>indexType</b> to <b>GlobalCompositeVertexIndex</b>, set <b>hasLabel</b> to <b>true</b>, and leave <b>indexProperty</b> blank.</p> |
| labelInEdge   | No        | Json   | <p>Number of edges under different labels. If the number of edges under a label is 0, the label is not displayed.</p> <p>To include this parameter in the response, create an index by referring to <a href="#">Creating an Index</a>. During index creation, set <b>indexType</b> to <b>GlobalCompositeEdgeIndex</b>, set <b>hasLabel</b> to <b>true</b>, and leave <b>indexProperty</b> blank.</p>   |
| errorMessage  | No        | String | System prompt. If execution succeeds, this parameter is left blank. If execution fails, this parameter is used to display the error message.                                                                                                                                                                                                                                                           |
| errorCode     | No        | String | System prompt. If execution succeeds, this parameter is left blank. If execution fails, this parameter is used to display the error code.                                                                                                                                                                                                                                                              |

- Response example 1 of a successful request (The numbers of vertices and edges under each label are returned.)

Http Status Code: 200

```
{
 "data": {
 "vertexNum": 146,
 "labelDetails": {
 "labelInVertex": {
 "movie": 46,
 "user": 100
 },
 "labelInEdge": {
 "default": 450,
 "rate": 1209
 }
 },
 "edgeNum": 1659
 }
}
```

- Response example 2 of a successful request (The numbers of vertices and edges under each label fail to be returned.)

Http Status Code: 200

```
{
 "data": {
 }
```

```

 "vertexNum": 146,
 "labelDetails": {
 "errorMessage": "Label index in vertices is not found.Label index in edges is not found.",
 "errorCode": "GES.8017"
 },
 "edgeNum": 1659
}
}

```

- Example response 3 of a successful request (Only the number of vertices under each label is returned.)

Http Status Code: 200

```
{
{
 "data": {
 "vertexNum": 146,
 "labelDetails": {
 "errorMessage": "Label index in edges is not found.",
 "labelInVertex": {
 "movie": 46,
 "user": 100
 },
 "errorCode": "GES.8017"
 },
 "edgeNum": 1659
 }
}
}
```

- Example response of a successful request

Http Status Code: 200

```
{
"jobId": "f99f60f1-bba6-4cde-bd1a-ff4bdd1fd500000168232"
}
```

- Example response of a failed request

Http Status Code: 400

```
{
 "errorMessage": "graph [demo] is not found",
 "errorCode": "GES.8001"
}
```

## Return Value

- Normal  
200
- Abnormal

**Table 4-212** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.8.2 Querying the Graph Version

### Function

This API is used to query the graph version.

### URI

- **URI format**  
GET /ges/v1.0/{project\_id}/graphs/{graph\_name}/version
- **Parameter description**

**Table 4-213** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

### Request

- **Request example**  
GET http://{SERVER\_URL}/ges/v1.0/{project\_id}/graphs/{graph\_name}/version

**SERVER\_URL:** Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

### Response

**Table 4-214** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message. |

| Parameter | Mandatory | Type   | Description                                                                                                                                   |
|-----------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| errorCode | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code. |
| version   | No        | String | Query results. This parameter is left blank when the request fails.                                                                           |

- Response example (successful request)

Http Status Code: 200  
{  
    "version":"2.0.0"  
}

- Response example (failed request)

Http Status Code: 404  
{  
    "errorMessage":"Not found. Please check the input parameters.",  
    "errorCode": "GES.8000"  
}

## Return Value

- Normal  
200
- Abnormal

**Table 4-215** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.9 Subgraph Operation APIs

### 4.9.1 Querying a Subgraph

#### Function

This API is used to query the subgraphs formed by the entered vertices and edges between the vertices.

#### URI

- **URI format**  
POST /ges/v1.0/{project\_id}/graphs/{graph\_name}/subgraphs/action?action\_id=query
- **Parameter description**

**Table 4-216** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

#### Request

- **Request example**  
{  
    "vertices": [  
        "Ray",  
        "Ella",  
        "Lethal Weapon"  
    ]  
}
- **Parameter description**

**Table 4-217**

| Parameter | Mandatory | Type   | Description                                                                                                                                                                          |
|-----------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| vertices  | Yes       | String | Vertex ID array of the subgraph<br><b>NOTE</b><br>The maximum number of vertices that can be entered is 100,000. If the number of vertices exceeds this limit, an error is reported. |

## Response

**Table 4-218** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                         |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.                                                                                                                                                    |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.                                                                                                                                                       |
| data         | No        | Json   | <p>The <b>data</b> field is contained when the query is successful, and the <b>data</b> field contains the subgraph query result.</p> <p><b>NOTE</b><br/>The maximum number of subgraph edges that can be returned is 100,000. If the number of edges exceeds this limit, an error is reported.</p> |

200
- Abnormal

**Table 4-219** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.9.2 Executing an Algorithm on a Subgraph

### Introduction

This API is used to adjust the subgraph creation type based on the input and executes an algorithm on the generated subgraph.

## URL

POST /ges/v1.0/{project\_id}/graphs/{graph\_name}/subgraphs/action?action\_id=execute-algorithm

## Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                          |
|------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. Obtain the project ID by following the instructions in "Obtaining the Project ID". |
| graph_name | Yes       | String | Graph name                                                                                                                           |

## Request

- Example request

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/subgraphs/action?
action_id=execute-algorithm
{
 "algorithmName": "connected_component",
 "subgraphCreator": {
 "name": "filtered",
 "parameters": {
 "edge_filter": {
 "property_filter": {
 "leftvalue": {
 "label_name": "labelName"
 },
 "predicate": "=",
 "rightvalue": {
 "value": "PHYSICAL_LINK"
 }
 }
 }
 }
 },
 "parameters": {
 "num_thread": 4
 }
}
```

- Parameters

**Table 4-220** Request body parameter description

| Parameter     | Mandatory | Type   | Description                                                                                                                                 |
|---------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------|
| algorithmName | Yes       | String | Algorithm name<br>Available values are as follows: <ul style="list-style-type: none"> <li>• connected_component</li> <li>• kcore</li> </ul> |

| Parameter       | Mandatory | Type | Description                                                                                                                                |
|-----------------|-----------|------|--------------------------------------------------------------------------------------------------------------------------------------------|
| parameters      | Yes       | JSON | Algorithm parameters <ul style="list-style-type: none"><li>• <a href="#">connected_component</a></li><li>• <a href="#">Kcore</a></li></ul> |
| subgraphCreator | Yes       | Json | Subgraph parameters For details, see <a href="#">subgraphCreator parameters</a> .                                                          |

**Table 4-221** subgraphCreator parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                                                                                       |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name       | No        | String | Type of the subgraph creator<br>The values are as follows: <ul style="list-style-type: none"><li>• filtered (currently available)<br/>The following value will be available in the future:</li><li>• import_edgelist...</li></ul> |
| parameters | Yes       | JSON   | The parameter format varies according to the name of the subgraph creator.                                                                                                                                                        |

**Table 4-222** Parameters when name=filtered

| Parameter     | Mandatory | Type   | Description               |
|---------------|-----------|--------|---------------------------|
| vertex_filter | No        | String | Vertex filtering criteria |
| edge_filter   | No        | String | Edge filtering criteria   |

## Response

**Table 4-223** Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message. |

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                               |
|-----------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| errorCode | No        | String  | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.                                                                                                             |
| job_id    | No        | String  | ID of the algorithm execution job. This parameter is left blank if the request fails.<br><b>NOTE</b><br>You can view the job execution status and obtain the return result by querying the job ID. For details, see <a href="#">Job Management APIs</a> . |
| jobType   | No        | Integer | Task type. This parameter is left blank if the request fails.                                                                                                                                                                                             |

- Response example (successful request)

```
Http Status Code: 200
{
 "jobId": "4448c9fb-0b16-4a78-8d89-2a137c53454a001679122",
 "jobType": 1
}
```

- Response example (failed request)

```
Http Status Code: 400
{
 "errorMessage": "graph [demo] is not found",
 "errorCode": "GES.8402"
}
```

## Return Value

- Normal  
200
- Abnormal

**Table 4-224** Return code for failed requests

| Return Value              | Description              |
|---------------------------|--------------------------|
| 400 Bad Request           | Request error.           |
| 401 Unauthorized          | Authentication failed.   |
| 403 Forbidden             | No operation permission. |
| 404 Not Found             | No resources found.      |
| 500 Internal Server Error | Internal service error.  |
| 503 Service Unavailable   | Service unavailable.     |

## 4.10 Job Management APIs

### 4.10.1 Querying Job Status on the Service Plane

#### Function

This API is used to query the execution status of a job. After asynchronous APIs such as those for querying vertices and edges or executing algorithms are used, job IDs are returned. You can use the job ID to query the execution status of a job.

#### URI

- **URI format**  
GET /ges/v1.0/{project\_id}/graphs/{graph\_name}/jobs/{job\_id}/status?offset={offset}&limit={limit}
- **Parameter description**

**Table 4-225** URI parameter description

| Parameter  | Mandatory | Type    | Description                                                                                                 |
|------------|-----------|---------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String  | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| job_id     | Yes       | String  | Job ID                                                                                                      |
| offset     | No        | Integer | Offset of a query. The default value is <b>0</b> .                                                          |
| limit      | No        | Integer | Maximum number of records that can be queried. The default value is <b>100000</b> .                         |

#### Request

- **Request example**  
GET http://{SERVER\_URL}/ges/v1.0/{project\_id}/graphs/{graph\_name}/jobs/{job\_id}/status?offset=0&limit=2

#### NOTE

**SERVER\_URL:** Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

#### Response

- **Parameter description**

**Table 4-226** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                           |
|--------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.                                                                                      |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.                                                                                         |
| status       | No        | String | Returned job status after the query is successful. Possible values: <ul style="list-style-type: none"><li>• pending</li><li>• running</li><li>• success</li><li>• failed</li></ul> This parameter is left blank when the query fails. |
| data         | No        | Json   | Algorithm execution result. This parameter is left blank when the query fails.                                                                                                                                                        |

- Parameter description

**Table 4-227** data parameter description

| Parameter        | Mandatory | Type    | Description                                                |
|------------------|-----------|---------|------------------------------------------------------------|
| vertices         | No        | List    | Vertex-associated algorithm result                         |
| edges            | No        | List    | Edge-associated algorithm result                           |
| outputs          | No        | Json    | Other results                                              |
| data_return_size | No        | Integer | Number of records returned after a query                   |
| data_offset      | No        | Integer | Result offset of a query                                   |
| data_total_size  | No        | Integer | Total amount of result data generated by asynchronous jobs |

## 4.10.2 Canceling a Job

### Function

This API is used to cancel a job that has been submitted.

Job IDs returned by asynchronous APIs that are used to query vertices or edges that meet filter criteria, run algorithms, and add indexes can be canceled. If the job execution is complete or fails, you cannot cancel this job.

#### NOTE

Only jobs returned by APIs used to query vertices or edges that meet filter criteria, run algorithms, and add indexes can be canceled. If you cancel jobs returned by other APIs, an error message stating **Unsupported Operation** is reported.

### URI

- **URI format**  
`DELETE /ges/v1.0/{project_id}/graphs/{graph_name}/jobs/{job_id}`
- **Parameter description**

**Table 4-229** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| job_id     | Yes       | String | Job ID                                                                                                      |
| graph_name | Yes       | String | Graph name                                                                                                  |

## Request

- Request example

```
DELETE http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/jobs/{job_id}
```

**SERVER\_URL:** Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

## Response

- Parameter description

**Table 4-230** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message. |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.    |

- Response example (successful request)

```

## Return Value

- Normal  
200
- Abnormal

**Table 4-231** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.10.3 Exporting Job Execution Results to Files

### Function

This API is used to export the execution result (**result**) of an asynchronous job (**jobId**) to a file.

The following algorithms are supported:

- PageRank, PersonalRank, and Pixie
- Louvain, Label Propagation, and Connected Component
- K-Core
- SSSP, Shortest Path (including Time Window Shortest Path), Shortest Path of Vertex Sets, All Shortest Paths, and n Paths
- Triangle Count, Cluster Coefficient, Degree Correlation, and Closeness
- Link Prediction
- Betweenness, edge\_betweenness, and od\_betweenness

### URI

- **URI format**  
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/jobs/{job_id}/action?action_id=export-result`
- Parameter description

**Table 4-232** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

| Parameter | Mandatory | Type   | Description                                 |
|-----------|-----------|--------|---------------------------------------------|
| job_id    | Yes       | String | ID of the job corresponding to the response |

## Request

- Parameter description

**Table 4-233** Request parameters

| Parameter     | Mandatory | Type   | Description                                                                   |
|---------------|-----------|--------|-------------------------------------------------------------------------------|
| exportPath    | Yes       | String | Export path                                                                   |
| fileName      | No        | String | Name of the exported file                                                     |
| obsParameters | Yes       | String | OBS authentication parameters. For details, see <a href="#">Table 4-234</a> . |

**Table 4-234** obsParameters parameter description

| Parameter | Mandatory | Type   | Description |
|-----------|-----------|--------|-------------|
| accessKey | Yes       | string | AK value    |
| secretKey | Yes       | string | SK value    |

- Request example

POST /ges/v1.0/{project\_id}/graphs/{graph\_name}/jobs/{job\_id}/action?action\_id=export-result

- Exporting the result to OBS

```
{
 "exportPath": "demo_movie/",
 "fileName": "louvain",
 "obsParameters": {
 "accessKey": "xxxx",
 "secretKey": "xxxx"
 }
}
```

## Response

- Parameter description

**Table 4-235** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                  |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.                                                             |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.                                                                |
| job_id       | No        | String | ID of an asynchronous job.<br>You can view the job execution status and obtain the return result by querying the job ID. For details, see <a href="#">Querying Job Status on the Service Plane (1.0.0)</a> . |

- Response example (successful request)

```
HttpStatusCode: 200
{
 "jobId": "f99f60f1-bba6-4cde-bd1a-ff4bdd1fd500000168232"
}
```

- Response example (failed request)

```
HttpStatusCode: 400
{
 "errorMessage": "graph [demo] is not found",
 "errorCode": "GES.8011"
}
```

## Return Value

- Normal  
200
- Abnormal

**Table 4-236** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## Exporting the Result in CSV Format

For example, the content of **Louvain.csv** is as follows:

```
modularity: 0.4269691347613425,
#community_num: 4,
#runtime: 0.003784,
#data_total_size: 34
#community:
1,1
2,1
...
```

## 4.10.4 Querying the Job List

### Function

After the ID of an asynchronous job is returned, if the job ID at the service layer is lost and cannot be obtained through the API, a new API is provided to query all asynchronous jobs stored in the engine. The job ID, job status, and original request of each job are returned.

### URI

- **URI format**  
GET /ges/v1.0/{project\_id}/graphs/{graph\_name}/jobs/status?limit={limit}&offset={offset}
- **Parameter description**

**Table 4-237** URI parameter description

| Parameter  | Mandatory | Type    | Description                                                                                                 |
|------------|-----------|---------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String  | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| offset     | No        | Integer | Offset of a query. The default value is <b>0</b> .                                                          |
| job_id     | Yes       | String  | ID of the job corresponding to the response                                                                 |
| limit      | No        | Integer | Maximum number of records that can be queried. The default value is <b>100000</b> .                         |

### Request

- **Request example**  
GET /ges/v1.0/1/graphs/movie/jobs/status

## Response

**Table 4-238** Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                   |
|--------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.                              |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.                                 |
| result       | Yes       | String | Query result. If the query is successful, the value is <b>success</b> . If the query fails, the value is <b>failed</b> .                                                      |
| jobs         | No        | Json   | Job status list stored in the system. If execution succeeds, this parameter is contained in the response. The following table describes the structure of a single jobs field. |

**Table 4-239** Job status structure

| Parameter | Mandatory | Type   | Description                                                                         |
|-----------|-----------|--------|-------------------------------------------------------------------------------------|
| jobId     | Yes       | String | JobId                                                                               |
| request   | Yes       | Json   | Request content, including the command, URL, and body.                              |
| status    | Yes       | String | Job status. The value can be <b>pending</b> , <b>running</b> , or <b>complete</b> . |

## Return Value

- Normal  
200
- Abnormal

**Table 4-240** Return code for failed requests

| Return Value     | Description              |
|------------------|--------------------------|
| 400 Bad Request  | Request error.           |
| 401 Unauthorized | Authentication failed.   |
| 403 Forbidden    | No operation permission. |

| Return Value              | Description             |
|---------------------------|-------------------------|
| 404 Not Found             | No resources found.     |
| 500 Internal Server Error | Internal service error. |
| 503 Service Unavailable   | Service unavailable.    |

## 4.11 Querying K Hop Vertices or Edges Using a Filter

### Function

This API filters the k-hop process layer by layer, and lists the k hop vertices or edges that meet the filtering criteria.

### URI

- URI format  
POST /ges/v1.0/{project\_id}/graphs/{graph\_name}/action?action\_id=filtered-query
- Parameter description

**Table 4-241** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

### Request

- Request example
  - Synchronization

```
POST /ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=filtered-query
{
 "executionMode": "sync",
 "visualized": "false",
 "filters": [
 {
 "operator": "outV"
 },
 {
 "operator": "out",
 "edge_filter": {
 "property_filter": {
 "leftvalue": {
 "label_name": "labelName"
 },
 "predicate": "=",
 "rightvalue": {
 "label_name": "labelName"
 }
 }
 }
 }
]
}
```

```

 "value": "rate"
 }
}
],
"full_path": false,
"vertices": [
 "tr_10"
]
}
```

- **Asynchronization**

```
POST /ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=filtered-query
{
 "executionMode": "async",
 "visualized": "false",
 "filters": [
 {
 "operator": "outV"
 },
 {
 "operator": "out",
 "edge_filter": {
 "property_filter": {
 "leftvalue": {
 "label_name": "labelName"
 },
 "predicate": "=",
 "rightvalue": {
 "value": "rate"
 }
 }
 }
 }
],
 "full_path": false,
 "vertices": [
 "tr_10"
]
}
```

- **Nested property\_filter**

```
{
 "executionMode": "sync",
 "filters": [
 {
 "operator": "outV",
 "vertex_filter": {
 "property_filter": {
 "leftvalue": {
 "property_name": "genres"
 },
 "predicate": "PREFIX",
 "rightvalue": {
 "value": "A|"
 }
 }
 },
 "predicate": "&",
 "rightvalue": {
 "property_filter": {
 "leftvalue": {
 "label_name": "labelName"
 },
 "predicate": "=",
 "rightvalue": {
 "value": "movie"
 }
 }
 }
 }
]
}
```

```
 }
 }
 }
],
 "vertices": [
 "tr_3"
]
}
```

- Request body parameter description

 **NOTE**

- If **executionMode** is set to **sync**, the number of returned vertices cannot exceed 100,000.

**Table 4-242** Request body parameter description

| Parameter      | Mandatory | Type          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------|-----------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| execution Mode | No        | String        | <ul style="list-style-type: none"><li><b>sync</b>: synchronous</li><li><b>async</b>: asynchronous</li></ul> The default value is <b>sync</b> , indicating synchronous response.                                                                                                                                                                                                                                                                                                                                                              |
| vertices       | Yes       | Array of Json | List of IDs of source vertices to be queried                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| query_type     | No        | String        | Possible values are <b>Default</b> , <b>AllVertices</b> , <b>SimpleEdges</b> , <b>Path</b> . <ul style="list-style-type: none"><li><b>Default</b> indicates the default mode, that is, the <math>k</math> hop is returned.</li><li><b>AllVertices</b> returns details about all vertices within <math>k</math> hops.</li><li><b>SimpleEdges</b> returns all edges within <math>k</math> hops, contain only the ID and label information of the edges.</li><li><b>Path</b> returns the path information, that is, the set of paths.</li></ul> |
| by             | No        | Array of Json | Specified output field. This parameter is valid only when <b>query_type</b> is set to <b>Default</b> or <b>AllVertices</b> . Currently, only one layer is supported. If no field is specified, all content is output by default.                                                                                                                                                                                                                                                                                                             |
| edges          | No        | Array of Json | List of edges to be queried. Either this parameter or <b>vertices</b> is selected. For details, see <a href="#">Table 4-243</a> .                                                                                                                                                                                                                                                                                                                                                                                                            |
| filters        | Yes       | Array of Json | Filter criteria. Each element in the array corresponds to a filter. For details about the formats, see <a href="#">Table 4-244</a> .                                                                                                                                                                                                                                                                                                                                                                                                         |

| Parameter          | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                   |
|--------------------|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| full_path          | No        | Boolean | <p>Whether to return a complete path. The default value is <b>false</b>.</p> <ul style="list-style-type: none"><li>• If the value is <b>true</b>, the paths from the source vertex to all leaf vertices are returned.</li><li>• If the value is <b>false</b>, the paths from the source vertex to the leaf vertices at layer <b>k</b> are returned.</li></ul> |
| visualized         | No        | Boolean | <p>Whether to enable visualization. The default value is <b>false</b>. In asynchronous mode:</p> <ul style="list-style-type: none"><li>• When <b>visualized</b> is <b>false</b>, the job query result is returned on multiple pages.</li><li>• When <b>visualized</b> is <b>true</b>, the job query result is returned on one page.</li></ul>                 |
| restricted(2.2.28) | No        | Boolean | <p>Whether to verify the input. The default value is <b>true</b>.</p> <ul style="list-style-type: none"><li>• <b>true</b>: If <b>vertices</b> contains vertices that do not exist, the query exits and an error is reported.</li><li>• <b>false</b>: The system filters out vertices that do not exist and then performs the query task.</li></ul>            |

**Table 4-243 edges element formats**

| Parameter | Mandatory | Type   | Description                             |
|-----------|-----------|--------|-----------------------------------------|
| source    | Yes       | String | Source vertex ID                        |
| target    | Yes       | String | Target vertex ID                        |
| index     | No        | String | Indexes of edges in the source edge set |

**Table 4-244 Filters element formats**

| Parameter     | Mandatory | Type        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------|-----------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| operator      | Yes       | String      | <p>Query type. Possible values:</p> <ul style="list-style-type: none"><li>• <b>inV</b>: incoming vertex</li><li>• <b>outV</b>: outgoing vertex</li><li>• <b>bothV</b>: incoming and outgoing vertices</li><li>• <b>vertex</b>: all vertices. Filtering is available only at the first layer. If vertices are input in the beginning, the first-layer output is the input vertices. If no vertices are input in the beginning, all vertices are output at the first layer.</li><li>• <b>in</b>: incoming edge</li><li>• <b>out</b>: outgoing edge</li><li>• <b>both</b>: incoming and outgoing edges</li><li>• <b>edge</b>: all edges. Filtering is available only at the first layer. The usage is similar to that of vertices</li></ul> <p>The query result of the previous layer is the input of the next layer.</p> <ul style="list-style-type: none"><li>• If the result of the previous layer is a vertex, the corresponding operations can be <b>inV</b>, <b>outV</b>, <b>bothV</b>, <b>in</b>, <b>out</b>, and <b>both</b>.</li><li>• If the result of the previous layer is an edge, the corresponding operation can be <b>inV</b>, <b>outV</b>, and <b>bothV</b>.</li></ul> |
| vertex_filter | No        | Json String | This parameter is optional when <b>operator</b> is set to <b>inV</b> , <b>outV</b> , or <b>bothV</b> . For details about the formats, see <a href="#">Table 4-246</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| edge_filter   | No        | Json String | This parameter is optional when <b>operator</b> is set to <b>in</b> , <b>out</b> , or <b>both</b> . #### NOTE

- The left value set is supported. The left value in the body is a string.
- The right value set is supported. If you select **No**, only the first character string in the set is matched even if the right value set is supported.
- Boolean value matching. When the right value is **true**, the value is identified as true for matching. Otherwise, the value is identified as false for matching.

## Response

- Synchronous response
  - Parameter description

**Table 4-250** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message. |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.    |
| data         | No        | Json   | Query results. This parameter is left blank when the query fails.                                                                                |

**Table 4-251** **data** parameter description

| Parameter | Mandatory | Type | Description                                                                                                                                               |
|-----------|-----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| vertices  | No        | List | Vertex result set. If the last layer of <b>filters</b> is vertex filtering, the <b>data</b> contains vertices.                                            |
| edges     | No        | List | Edge result set. If the last layer of <b>filters</b> is edge filtering, the <b>data</b> contains edges.                                                   |
| paths     | No        | List | Path set. This parameter is available only when <b>with_path</b> is set to <b>true</b> . For details about the formats, see <a href="#">Table 4-252</a> . |

**Table 4-252** **path** parameter description

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| source    | Yes       | String | Source vertex ID |
| target    | Yes       | String | Target vertex ID |
| index     | Yes       | String | Edge index       |
| label     | Yes       | String | Edge label       |

## Return Value

- Normal  
200
- Abnormal

**Table 4-254** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.12 Updating Specified Properties of Vertices and Edges by Importing a File

### Function

This API is used to update specified properties of vertices and edges by importing a file.

**NOTE**

To prevent failures in restoring the updated graph data during system restarting, do not delete the data stored on OBS when the graph is in use.

## URL

- **URI format**  
POST /v1.0/{project\_id}/graphs/{graph\_name}/action?action\_id=import-properties
- **Parameter description**

**Table 4-255** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

## Request

- **Request example**

```
POST http://Endpoint/v1.0/{project_id}/graphs/{graph_name}/action?action_id=import-properties
{
 "vertexsetPath": "datasets/movie/movie.csv",
 "vertexsetFormat": "csv",
 "vertexProperties": [
 {
 "label": "movie",
 "properties": [
 "genres"
]
 }
],
 "edgesetPath": "datasets/movie/ranking_edge.csv",
 "edgesetFormat": "csv",
 "edgeProperties": [
 {
 "label": "rate",
 "properties": [
 "Datetime"
]
 }
],
 "targetProperties": [
 {
 "label": "rate",
 "properties": [
 "Rating"
]
 }
],
 "delimiter": ",",
 "trimQuote": "\'",
 "obsParameters": {
 "accessKey": "XXXXXXXX",
 "secretKey": "XXXXXXXX"
 }
}
```

```
 }
 "vertexFileContainLabel": true
}
```

- Parameter description

The format of the CSV file for updating properties is as follows:

- Vertex file (including **label**): vertex ID,**label**,**property\_1**...**property\_n**
- Vertex file (excluding **label**): vertex ID,**property\_1**...**property\_n**
- Edge file: source vertex ID, target vertex ID, label, edge ID, **property\_1**...**property\_n**

**Table 4-256** Request body parameter description

| Parameter        | Mandatory                                                       | Type   | Description                                                                                                       |
|------------------|-----------------------------------------------------------------|--------|-------------------------------------------------------------------------------------------------------------------|
| vertexsetPath    | Either <b>vertexsetPath</b> or <b>edgesetPath</b> is mandatory. | String | Vertex file directory or name                                                                                     |
| vertexsetFormat  | No                                                              | String | Format of the vertex data set. Currently, only the CSV format is supported.<br>The CSV format is used by default. |
| vertexProperties | Mandatory if <b>vertexsetPath</b> exists                        | Json   | Label of a vertex and list of properties to be updated in a vertex file, in JSONArray format                      |
| edgesetPath      | Either <b>vertexsetPath</b> or <b>edgesetPath</b> is mandatory. | String | Edge file directory or name                                                                                       |
| edgesetFormat    | No                                                              | String | Format of the edge data set. Currently, only the CSV format is supported.<br>The CSV format is used by default.   |
| edgeProperties   | Mandatory if <b>edgesetPath</b> exists                          | Json   | Label of an edge and list of properties to be updated in an edge file, in JSONArray format                        |
| targetProperties | Mandatory if <b>edgesetPath</b> exists                          | Json   | Indicates property information used to distinguish duplicate edges in the edge file, in JSONArray format.         |

| Parameter              | Mandatory | Type      | Description                                                                                                                                                           |
|------------------------|-----------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| delimiter              | No        | Character | Field separator in a CSV file. The default value is comma (,). The default element separator in a field of the list/set type is semicolon (;).                        |
| trimQuote              | No        | Character | Field quote character in a CSV file. The default value is double quotation marks (""). It is used to enclose a field if the field contains separators or line breaks. |
| obsParameters          | Yes       | String    | OBS authentication parameters. For details, see <a href="#">Table 4-234</a> .                                                                                         |
| vertexFileContainLabel | No        | Boolean   | Whether the vertex file contains label information. This parameter is optional. The default value is <b>true</b> .                                                    |

**Table 4-257 vertexProperties parameter description**

| Parameter  | Mandatory | Type   | Description                                                                                                                |
|------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------|
| label      | Yes       | String | Name of a label                                                                                                            |
| properties | Yes       | Json   | Properties to be updated, in JSONArray format. The sequence of the properties must be the same as that in the vertex file. |

**Table 4-258 edgeProperties parameter description**

| Parameter  | Mandatory | Type   | Description                                                                                                              |
|------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------|
| label      | Yes       | String | Name of a label                                                                                                          |
| properties | Yes       | Json   | Properties to be updated, in JSONArray format. The sequence of the properties must be the same as that in the edge file. |

**Table 4-259 targetProperties parameter description**

| Parameter  | Mandatory | Type   | Description                                                                         |
|------------|-----------|--------|-------------------------------------------------------------------------------------|
| label      | Yes       | String | Name of a label                                                                     |
| properties | Yes       | Json   | Edge ID properties, in JSONArray format. Currently, only one property is supported. |

- Parameter description

**Table 4-260 Parameter description**

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                   |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message.                                              |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.                                                 |
| job_id       | No        | String | ID of an asynchronous job<br><b>NOTE</b><br>You can view the job execution status and obtain the return result by querying the job ID. For details, see <a href="#">Job Management APIs</a> . |

- Response example (successful request)

Http Status Code: 200

```
{
 "jobId": "b4f2e9a0-0439-4edd-a3ad-199bb523b613"
}
```

- Response example (failed request)

Http Status Code: 400

```
{
 "errorMessage": "parameter format error",
 "errorCode": "GES.8013"
}
```

## Return Value

- Normal  
200
- Abnormal

**Table 4-261** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.13 Deleting Vertices and Edges by Files

### Function

This API is used to delete vertices and edges by reading the files.

### URL

- URI format  
POST /v1.0/{project\_id}/graphs/{graph\_name}/action?action\_id=delete-by-file
- Parameters

**Table 4-262** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

### Request

- Request example

```
POST http://Endpoint/v1.0/{project_id}/graphs/{graph_name}/action?action_id=delete-by-file
{
 "vertexsetPath": "datasets/movie/movie.csv",
 "vertexsetFormat": "csv",
 "edgesetPath": "datasets/movie/ranking_edge.csv",
 "edgesetFormat": "csv",
 "targetProperties": [
 {
 "label": "rate",
 "properties": [
```

```
 "Rating"
]
}
],
"delimiter": ",",
"trimQuote": "\'",
"obsParameters": {
"accessKey": "XXXXXXX",
"secretKey": "XXXXXXX"
}
}
```

- Parameters

**Table 4-263** Request body parameter description

| Parameter        | Mandatory                                                       | Type      | Description                                                                                                                                              |
|------------------|-----------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| vertexsetPath    | Either <b>vertexsetPath</b> or <b>edgesetPath</b> is mandatory. | String    | Vertex file directory or name                                                                                                                            |
| vertexsetFormat  | No                                                              | String    | Format of the vertex data set. Currently, only the CSV format is supported.<br>The CSV format is used by default.                                        |
| edgesetPath      | Either <b>vertexsetPath</b> or <b>edgesetPath</b> is mandatory. | String    | Edge file directory or name                                                                                                                              |
| edgesetFormat    | No                                                              | String    | Format of the edge data set. Currently, only the CSV format is supported.<br>The CSV format is used by default.                                          |
| targetProperties | No                                                              | Json      | Indicates property information used to distinguish duplicate edges in the edge file, in JSONArray format. For details, see <a href="#">Table 4-264</a> . |
| delimiter        | No                                                              | Character | Field separator in a CSV file. The default value is comma (,). The default element separator in a field of the list/set type is semicolon (;).           |

| Parameter     | Mandatory | Type      | Description                                                                                                                                                              |
|---------------|-----------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| trimQuote     | No        | Character | Field quote character in a CSV file. The default value is double quotation marks (""). They are used to enclose a field if the field contains separators or line breaks. |
| obsParameters | Yes       | String    | OBS authentication parameters. For details, see <a href="#">Table 4-234</a> .                                                                                            |

**Table 4-264 targetProperties parameter description**

| Parameter  | Mandatory | Type   | Description                                                                         |
|------------|-----------|--------|-------------------------------------------------------------------------------------|
| label      | Yes       | String | Name of a label                                                                     |
| properties | Yes       | Json   | Edge ID properties, in JSONArray format. Currently, only one property is supported. |

 **NOTE**

The format of the CSV file for updating properties is as follows:

- Vertex file: Vertex ID
- Edge file (excluding the label): source vertex ID and destination vertex ID
- Edge file (including the label): source vertex ID, destination vertex ID, label, and edge ID

## Response

- Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |
|--------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| errorMessage | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error message. |
| errorCode    | No        | String | System prompt. If execution succeeds, this parameter may be left blank. If execution fails, this parameter is used to display the error code.    |

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                         |
|-----------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| job_id    | No        | String | ID of an asynchronous job<br>You can view the job execution status and obtain the return result by querying the job ID. For details, see <a href="#">Querying Job Status on the Service Plane</a> . |

- Response example (successful request)

Http Status Code: 200

```
{
 "jobId": "b4f2e9a0-0439-4edd-a3ad-199bb523b613"
}
```

- Response example (failed request)

Http Status Code: 400

```
{
 "errorMessage": "parameter format error",
 "errorCode": "GES.8013"
}
```

## Return Value

- Normal  
200
- Abnormal

**Table 4-265** Return code for failed requests

| Return Value              | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## 4.14 Cypher Operation API

### Function

Cypher is a widely used declarative graph database query language. It can be used to query data in GES and returns results. Graph statistics are used in Cypher implementation. Currently, the label-based vertex and edge indexes are used during Cypher query and compilation. To use Cypher normally, create indexes by referring to [Cypher Prerequisites](#).

## URL

- **URI format**  
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-cypher-query`
- **Parameter description**

**Table 4-266** URI parameter description

| Parameter  | Mandatory | Type   | Description                                       |
|------------|-----------|--------|---------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. |
| graph_name | Yes       | String | Graph name                                        |

## Request

- **Request example**

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/action?action_id=execute-cypher-query
{
 "statements": [
 {
 "statement": "match (n) return n limit 1",
 "parameters": {},
 "resultDataContents": ["row"],
 "includeStats": false
 }
]
}
```

- **Parameter description**

**Table 4-267** Request body parameter description

| Parameter  | Mandatory | Type | Description                                                                                                                            |
|------------|-----------|------|----------------------------------------------------------------------------------------------------------------------------------------|
| statements | Yes       | List | Statement group that contains one or more statements.<br><b>statements parameter description</b> describes the format of each element. |

**Table 4-268** **statements** parameter description

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| statement | Yes       | String | Cypher statement |

| Parameter              | Mandatory | Type           | Description                                                                                                                                                                                                                                                                                                                              |
|------------------------|-----------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| parameters             | Yes       | Json           | Cypher statement parameters, which are used for parameterized query. By default, this parameter is left blank.<br>For details, see <a href="#">Parameterized queries</a> .                                                                                                                                                               |
| resultDataContents     | No        | String or List | Format of the returned result. You can set one or more formats. Available values are <b>row</b> , <b>graph</b> , and <b>raw</b> (added in version 2.2.27).                                                                                                                                                                               |
| includeStats           | No        | Boolean        | Whether the returned result contains addition, deletion, and modification statistics. If this parameter is not set, the returned result does not contain the information by default.                                                                                                                                                     |
| executionMode (2.2.23) | No        | String         | Execution mode. Set this parameter to <b>sync</b> for synchronous execution and to <b>async</b> for asynchronous execution. If this parameter is not set, the execution is synchronous by default. For details about how to obtain the query result in asynchronous mode, see <a href="#">Querying Job Status on the Service Plane</a> . |
| limit (2.2.23)         | No        | Int            | Maximum number of results of the asynchronous query. This parameter is valid only when <b>executionMode</b> is <b>sync</b> . The default value is <b>100000</b> .                                                                                                                                                                        |

## Response

- Parameter description

**Table 4-269** Parameter description

| Parameter | Mandatory | Type | Description                                                                                                  |
|-----------|-----------|------|--------------------------------------------------------------------------------------------------------------|
| results   | Yes       | List | A List. Each element is the return result of a Cypher statement.                                             |
| errors    | Yes       | List | A list. Each element in the list contains the code and message information in the form of character strings. |

**Table 4-270** Elements of the results parameter

| Parameter | Mandatory | Type | Description                                                                                                                      |
|-----------|-----------|------|----------------------------------------------------------------------------------------------------------------------------------|
| columns   | Yes       | List | Name of a returned field                                                                                                         |
| data      | Yes       | List | Returned data value. Each element indicates a record.                                                                            |
| stats     | No        | Json | Addition, deletion, and modification statistics                                                                                  |
| plan      | No        | Json | If the cypher statement contains the explain prefix, this field contains the query plan. Otherwise, this field is not displayed. |

**Table 4-271** Elements of the data parameter

| Parameter | Mandatory | Type | Description                                                                                                                                                                  |
|-----------|-----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| row       | No        | List | Content of a specific row. Each element corresponds to a field in the row. This parameter is displayed only when <b>resultDataContents</b> is empty or contains <b>row</b> . |
| meta      | No        | List | Type of each field in a row. This parameter is displayed only when <b>resultDataContents</b> is empty or contains <b>row</b> .                                               |
| graph     | No        | Json | Returns the information in a row in graph format. This parameter is displayed only when <b>resultDataContents</b> contains <b>graph</b> .                                    |

- Normal

200

- Abnormal

**Table 4-273** Return code for failed requests

| Response Code             | Description                           |
|---------------------------|---------------------------------------|
| 400 Bad Request           | Request error.                        |
| 401 Unauthorized          | Authentication failed.                |
| 403 Forbidden             | No operation permission.              |
| 404 Not Found             | The requested resource was not found. |
| 500 Internal Server Error | Internal service error.               |
| 503 Service Unavailable   | Service unavailable.                  |

## Cypher Prerequisites

The current Cypher query compilation process uses the label-based vertex and edge indexes. To use Cypher normally, use the [index creation API](#) to create indexes. The following is an example:

- Example for creating a vertex label index:

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/indices
{
 "indexName": "cypher_vertex_index",
 "indexType": "GlobalCompositeVertexIndex",
 "hasLabel": "true",
 "indexProperty": []
}
```

- Example for creating an edge label index:

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/indices
{
 "indexName": "cypher_edge_index",
 "indexType": "GlobalCompositeEdgeIndex",
 "hasLabel": "true",
 "indexProperty": []
}
```

### NOTE

1. You must create two indexes (vertex label index and edge label index) at the same time to use Cypher for query.
2. If a vertex index or an edge index whose **hasLabel** is **true** and **indexProperty** is empty exists in the graph, you do not need to create the vertex index or edge index again.
3. The API for creating an index is an asynchronous API. To check whether the index is successfully created, use the [API for querying the job status](#).

## Basic Operations

| Operation                                             | Cypher Statement                                                         |
|-------------------------------------------------------|--------------------------------------------------------------------------|
| Querying vertices                                     | match (n) return n                                                       |
| Querying edges                                        | match (n)-[r]->(m) return n, r, m                                        |
| Querying paths                                        | match (n:user)-[r]->(m:movie)-->(s:series)<br>return n,r,m,s             |
| Querying information by specifying filtering criteria | match(n:user) where n.userid>=5 return n                                 |
| Grouping and aggregation                              | match(n:movie) return n.genres, count(*)                                 |
| Deduplication                                         | match(n:movie) return distinct n.genres                                  |
| Sorting                                               | match(n:movie) return n order by n.movieid                               |
| Creating vertices                                     | create (n:user{userid:1}) return n                                       |
| Creating edges                                        | match (n:user{userid:15}),(m:movie{movieid:10}) create (n)-[r:rate]->(m) |
| Deleting vertices                                     | match (n:user{userid:1}) delete n                                        |
| Modifying labels                                      | match (n:user{userid:1}) set n:movie return n                            |
| Modifying properties                                  | match (n:user{userid:1}) set n.userid=2 return n                         |

## Compatibility for Cypher Implementation

- Clauses supported by Cypher  
Cypher implements a couple of clauses. You can combine clauses to implement different query semantics, including vertex and edge filtering, multi-hop query, sorting and deduplication, and grouping and aggregation. Currently, GES supports the following Cypher clauses:

**Table 4-274** Clauses supported by Cypher

| Clause | Support             | Example                                                                           |
|--------|---------------------|-----------------------------------------------------------------------------------|
| match  | Partially supported | match (n:movie) return n                                                          |
| return | Supported           | return [1,2,3] as p                                                               |
| with   | Supported           | match (n) with labels(n) as label, count(*) as count<br>where count > 10 return * |
| where  | Supported           | match (n:movie) where n.movieid > 10 return n                                     |

| Clause          | Support   | Example                                                    |
|-----------------|-----------|------------------------------------------------------------|
| order by        | Supported | match (n:movie) return n order by n.genres                 |
| skip            | Supported | match (n:movie) return n order by n.genres skip 5          |
| limit           | Supported | match (n:movie) return n order by n.genres skip 5 limit 10 |
| create          | Supported | create (n:user{`_ID_` : 'Jack'}) return n                  |
| delete          | Supported | match (n:movie)-[r]-(m:user) delete r                      |
| set             | Supported | match (n:user{userid:0}) set n.gender='M' return n         |
| call procedures | Supported | call db.schema()                                           |
| unwind          | Supported | unwind [1, 2, 3] as p return p                             |

#### NOTE

- 1. Currently, union, merge, foreach, and optional operations are not supported. Cypher statements cannot be used to add or delete indexes. These operations will be supported in later versions.
- 2. GES metadata is not schema-free, and the vertex and edge label properties are strictly restricted. Therefore, the remove operation is not supported.
- 3. The order by clause does not support the sorting of the list type. When Cardinality of the property value is not single, the sorting result is unknown.

- Parameterized queries

Cypher supports parameterized query. The value types such as numeric and character string in the query statement are extracted as parameters to accelerate the compilation of the query, thereby improving the query speed.

The following provides several examples of parameterized queries:

- Parameterized query request example 1

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/action?
action_id=execute-cypher-query
{
 "statements": [
 {
 "statement": "match (n:user) where n.occupation = $occupation return n",
 "parameters": {
 "occupation" : "artist"
 },
 "resultDataContents": ["row"]
 }
]
}
```

- Parameterized query request example 2

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/action?
action_id=execute-cypher-query
{
 "statements": [
 {
 "statement": "match (n:user {`Zip-code`:'98133'}) set n = $props return n",
 "parameters": {
 "props": {

```

```
 "gender": "M",
 "age": "56+"
 },
},
"resultDataContents": ["row"]
}
```

#### NOTE

Parameterized queries do not apply to the following scenarios, where the following query statements cannot be executed properly:

- Property key value, for example, `match (n) where n.$param = 'something'`
  - Vertex label, for example, `match (n:user) set n:$code`
- Supported data types
- Currently, GES supports 10 data types: char, char\_array, float, double, Boolean, long, Integer, date, enum, and string. Both Boolean and numeric types are supported in the Cypher syntax. The mapping between other types and Cypher is as follows:

**Table 4-275** Mapping between types of GES and Cypher

| GES Type   | Cypher type | Description                                                                                                                                                                                                            |
|------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| char       | String      | -                                                                                                                                                                                                                      |
| char_array | String      | -                                                                                                                                                                                                                      |
| string     | String      | -                                                                                                                                                                                                                      |
| enum       | String      | The Cypher syntax does not provide the enumeration-related syntax. During Cypher query, enum is output as a string. When Cypher is used to set properties, values that are not in the enumeration list fail to be set. |
| date       | Temporal    | Currently, dates can be input and output in the GES date format, but cannot be input by calling the Cypher date function.                                                                                              |

**Table 4-276** Special types supported by Cypher

| Type         | Support   | Example                                                         |
|--------------|-----------|-----------------------------------------------------------------|
| Node         | Supported | <code>match (n) return n limit 10</code>                        |
| Relationship | Supported | <code>match (n)-[r]-(m) return r limit 10</code>                |
| List         | Supported | <code>return [1,2,3] as li</code>                               |
| Map          | Supported | <code>match (n)--&gt;(m) return {start:id(n), end:id(m)}</code> |

| Type              | Support       | Example                                             |
|-------------------|---------------|-----------------------------------------------------|
| Path              | Supported     | match p=(n1)-[:friends*1..2]-(n2) return p limit 10 |
| Point,<br>Spatial | Not supported | -                                                   |

### NOTE

For the special types listed in [Special types supported by Cypher](#), only the list type is used to match multi-value properties in GES. Other types cannot be set to the value of a property of a vertex or edge by using the set statement.

- Expressions

The where clause in Cypher queries supports multiple expressions, which can be combined to form various filter criteria. Currently, the following expressions are supported:

| Operation Type         | Expression    | Example                                                         |
|------------------------|---------------|-----------------------------------------------------------------|
| Logical operations     | and           | match (n:user) where n.age='Under 18' and n.gender='F' return n |
|                        | or            | match(n:user) where n.`Zip-code`='22181' or n.userid=6 return n |
|                        | not           | match(n:movie) where not n.genres contains 'Drama' return n     |
| Null value judgment    | is null       | match (n) where n.userid is null return n                       |
|                        | is not null   | match (n) where n.userid is not null return n                   |
| Comparison calculation | >,>=,<,<=,=,< | match(n:user) where n.userid>=5 return n                        |
| String comparisons     | starts with   | match(n:movie) where n.genres starts with 'Comedy' return n     |
|                        | ends with     | match(n:movie) where n.genres ends with 'Drama' return n        |
|                        | contains      | match(n:movie) where n.genres contains 'Drama' return n         |
| List-related operation | in            | match(n:student) where 'math' in n.courses return n             |

| Operation Type | Expression | Example                                                                                                                                                                                               |
|----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | []         | <pre>match(n:user) return n['userid'] with [1, 2, 3, 4] as list return list[0] with [1, 2, 3, 4] as list return list[0..1] match p=(n)--&gt;(m) return [x in nodes(p) where x.gender='F' id(x)]</pre> |

### NOTE

The where clause in Cypher queries does not support case expressions, arithmetic operators, and regular expression matching.

- Functions and procedures

- Function

During grouping, aggregation, and vertex and edge operations, Cypher supports a series of functions. Currently, the following functions are supported:

- a. Aggregate function

Currently, the **count** and **collect** aggregate functions are supported.

| Function        | Description                          | Example                                                               |
|-----------------|--------------------------------------|-----------------------------------------------------------------------|
| count           | Returns the total number of results. | <pre>match (n) return count(*) match (n) return count(n.userid)</pre> |
| collect(2.2.17) | Collects results in a list.          | <pre>match (n:movie) return n.genres, collect(n) as movieList</pre>   |

- b. Common function

Based on the types of input parameters, common functions are classified into vertex and edge functions, path functions, list functions, and value functions.

**Table 4-277** Vertex and edge functions

| Function | Description                 | Example                               |
|----------|-----------------------------|---------------------------------------|
| id       | Obtains the ID of a vertex. | <pre>match (n) return id(n)</pre>     |
| labels   | Obtains labels of a vertex. | <pre>match (n) return labels(n)</pre> |

| Function | Description                   | Example                         |
|----------|-------------------------------|---------------------------------|
| type     | Obtains the label of an edge. | match(n)-[r]-(m) return type(r) |

**Table 4-278** Path functions (2.2.19)

| Function      | Description                             | Example                                                    |
|---------------|-----------------------------------------|------------------------------------------------------------|
| nodes         | Obtains the list of vertices on a path. | match p=(n)-[:friends*1..2]-(m)<br>return nodes(p)         |
| relationships | Obtains the list of edges on a path.    | match p=(n)-[:friends*1..2]-(m)<br>return relationships(p) |
| length        | Obtains the path length.                | match p=(n)-[:friends*1..2]-(m)<br>return length(p)        |

**Table 4-279** List functions

| Function | Description                          | Example                                  |
|----------|--------------------------------------|------------------------------------------|
| head     | Obtains the first element of a list. | with [1,2,3,4] as list return head(list) |
| last     | Obtains the last element of a list.  | with [1,2,3,4] as list return last(list) |
| size     | Obtains the list length.             | with [1,2,3,4] as list return size(list) |

**Table 4-280** Value functions

| Function          | Description                   | Example                                                            |
|-------------------|-------------------------------|--------------------------------------------------------------------|
| toString(2.2 .21) | Converts a value to a string. | match (n) where<br>toString(labels(n)) contains<br>'movi' return n |

**Table 4-281** Predicate functions (2.2.19)

| Function | Description                                                          | Example                   |
|----------|----------------------------------------------------------------------|---------------------------|
| all      | If all elements meet the expression, <b>true</b> is returned.        | all (x in p where x>1)    |
| any      | If any element meets the expression, <b>true</b> is returned.        | any (x in p where x>1)    |
| none     | If all elements cannot meet the expression, <b>true</b> is returned. | none (x in p where x>1)   |
| single   | If only one element meets the expression, <b>true</b> is returned.   | single (x in p where x>1) |

 NOTE

- Aggregate functions such as **avg()**, **max()**, and **min()**, and mathematical functions such as **sin()** and **cos()**, will be available in later versions.
- Procedure

Currently, GES supports the following procedures.

| Procedure                                              | Statement                      |
|--------------------------------------------------------|--------------------------------|
| Obtaining graph mode information                       | call db.schema()               |
| Obtaining vertex labels                                | call db.labels()               |
| Obtaining edge labels                                  | call db.relationshipTypes()    |
| Querying the Cypher statements that are being executed | call dbms.listQueries()        |
| Terminating a Cypher statement based on <b>queryId</b> | call dbms.killQuery('queryId') |

- Vertex ID compatibility
  - Cypher does not provide the syntax for setting the ID when a vertex is added. In GES, an ID of the character string type is required to uniquely identify a vertex. To be compatible with the Cypher syntax, the current create statement uses a special identifier **\_ID\_** to specify the ID of a vertex. For example, the **create(n{\_ID\_:'123456'})** statement creates a vertex whose ID is 123456.
  - If the ID is not specified, a random ID is generated for the vertex.

 NOTE

The `_ID_` identifier is supported only in the create statement. The match and set clauses do not support the `_ID_` identifier. In the match clause, you can use the `id()` function to obtain the vertex ID.

- Parallel edge processing policy in vertex adding

When using Cypher to add edges, you can add duplicate edges. The duplicate edges are defined as two edges with the same source vertex and target vertex.

## 4.15 Granular Permission Control APIs

### 4.15.1 Authorization

#### Function

GES graph instances support granular permission control. The granularity is refined to the traverse, read, and write permissions set for specific properties of specific labels. The following table describes the GES granular permission control data model. This API is used to grant permissions to a user.

| Access         | Operation | Object                                               | Graph Instance | Application Scope                   | Scenario                                                                                                                                                   |
|----------------|-----------|------------------------------------------------------|----------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Grant / Revoke | traverse  | LABEL (* indicates all labels.)                      | Single         | -                                   | Vertex: External IDs and label names of vertices can be accessed.<br>Edge: Two vertices have the traverse permission to access the edge ID and label name. |
| Grant / Revoke | read      | PROPERTY (Separate multiple values with commas (,).) | Single         | Label Name (* indicates all labels) | The traverse permission is required.                                                                                                                       |
| Grant / Revoke | write     | PROPERTY (Separate multiple values with commas (,).) | Single         | Label Name (* indicates all labels) | The traverse permission is required.                                                                                                                       |
| Grant / Revoke | schem a   | GRAPH                                                | Single         | graph                               | Metadata management (modifying property names, clearing schemas, and importing schemas)                                                                    |

**NOTE**

- The granular permission control APIs are available only when RBAC is enabled for the created graph instance. For details, see the [Creating a Graph](#). You need to add the `enableRBAC` parameter and set it to `true` when you call the graph creation API.
- To authorize granular permission, you must be a . To call the granular permission APIs, the token obtained for accessing a domain is required..
- Users with the traverse permission can view all vertices and edges with the same label, but cannot view the properties of these vertices and edges.

**URI**

- URI format**  
`POST /ges/v1.0/{project_id}/graphs/{graph_name}/rbac/action?action_id=grant`
- Parameter description**

**Table 4-282** URI parameter description

| Parameter  | Mandatory | Type   | Description                                                                                                 |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID, which is used for resource isolation. For details, see <a href="#">Obtaining a Project ID</a> . |
| graph_name | Yes       | String | Graph name                                                                                                  |

**Request**

- Request example**

```
POST http://{SERVER_URL}/ges/v1.0/{project_id}/graphs/{graph_name}/rbac/action?action_id=grant
{
 "userId": "test1",
 "acl": [
 {
 "type": "read",
 "detail": [
 {
 "label": "person",
 "properties": ["crime", "Occupation"]
 },
 {
 "label": "inmate"
 }
],
 "type": "write",
 "detail": [
 {
 "label": "person",
 "properties": ["crime", "Occupation"]
 },
 {
 "label": "inmate"
 },
 {
 "label": "Leader"
 },
 {
 "label": "Friend"
 },
 {
 "label": "Colleague"
 },
 {
 "label": "QQGroup"
 },
 {
 "label": "QQ_owner"
 }
]
 }
]
}
```

```
 }, {
 "label": "QQ"
 }, {
 "label": "phone"
 }, {
 "label": "Phone_owner"
 }]
 }, {
 "type": "traverse",
 "detail": [
 {
 "label": "person"
 },
 {
 "label": "inmate"
 },
 {
 "label": "Leader"
 },
 {
 "label": "Friend"
 },
 {
 "label": "Colleague"
 }
]
 }
 }
```

#### NOTE

**SERVER\_URL:** Address for accessing a graph. For details about its value, see [Constraints of Using Service Plane APIs](#).

- Request body parameter description

**Table 4-283** Request body parameter description

| Parameter  | Mandatory | Type      | Description                                                                                         |
|------------|-----------|-----------|-----------------------------------------------------------------------------------------------------|
| graph_name | Yes       | String    | Graph name                                                                                          |
| userId     | Yes       | String    | Grantee                                                                                             |
| acl        | Yes       | JSONArray | Authorization details                                                                               |
| type       | Yes       | String    | Permission type. The value can be <b>read</b> , <b>write</b> , <b>traverse</b> , or <b>schema</b> . |
| detail     | Yes       | JSONArray | Permission details                                                                                  |
| label      | Yes       | String    | Label name                                                                                          |
| properties |           | List      | Properties                                                                                          |

## Response

- Parameter description

**Table 4-284** Parameter description

| Parameter    | Mandatory | Type   | Description                                                                                                                                      |

# 5 GES Metrics

## Function

This chapter describes metrics reported by GES as well as their namespaces, lists, and dimensions. You can use APIs to query the metric information generated for GES.

## Namespace

SYS.GES

## Metrics

**Table 5-1** GES metrics

| Metric ID                  | Name                  | Description                                                                                                                                    | Value Range                      | Monitored Object |
|----------------------------|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|------------------|
| ges001_vertex_util         | Vertex Capacity Usage | Capacity usage of vertices in a graph instance. The value is the ratio of the number of used vertices to the total vertex capacity.<br>Unit: % | 0 to 100<br>Value type: Float    | GES instance     |
| ges002_edge_util           | Edge Capacity Usage   | Capacity usage of edges in a graph instance. The value is the ratio of the number of used edges to the total edge capacity.<br>Unit: %         | 0 to 100<br>Value type: Float    | GES instance     |
| ges003_average_import_rate | Average Import Rate   | Average rate of importing vertices or edges to a graph instance<br>Unit: count/s                                                               | 0 to 400000<br>Value type: Float | GES instance     |

| Metric ID                              | Name                                         | Description                                                                                                                                                              | Value Range                | Monitored Object |
|----------------------------------------|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|------------------|
| ges004_request_count                   | Request Quantity                             | Number of requests received by a graph instance<br>Unit: count                                                                                                           | ≥ 0<br>Value type: Integer | GES instance     |
| ges005_average_response_time           | Average Response Time                        | Average response time of requests received by a graph instance<br>Unit: ms                                                                                               | ≥ 0<br>Value type: Integer | GES instance     |

## Dimensions

**Table 5-2 Dimensions**

| Key         | Value        |
|-------------|--------------|
| instance_id | GES instance |

## Mapping Between Task Types and Names

**Table 5-3** Task types and corresponding task names

| Type | Name                                       |
|------|--------------------------------------------|
| 100  | Querying a vertex                          |
| 101  | Creating a vertex                          |
| 102  | Deleting a vertex                          |
| 103  | Modifying a vertex property                |
| 104  | Adding a vertex label                      |
| 105  | Deleting a vertex label                    |
| 200  | Querying an edge                           |
| 201  | Creating an edge                           |
| 202  | Deleting an edge                           |
| 203  | Modifying an edge property                 |
| 300  | Querying schema details                    |
| 301  | Adding a Label                             |
| 302  | Modifying a Label                          |
| 303  | Querying a Label                           |
| 304  | Modifying a property                       |
| 400  | Querying graph details                     |
| 401  | Clearing a graph                           |
| 402  | Incrementally importing graph data online  |
| 403  | Creating a graph                           |
| 405  | Deleting a graph                           |
| 406  | Exporting a graph                          |
| 407  | filtered_khop                              |
| 408  | Querying path details                      |
| 409  | Incrementally importing graph data offline |
| 500  | Creating a graph backup                    |
| 501  | Restoring a graph from a backup            |
| 601  | Creating an index.                         |

| Type | Name                          |
|------|-------------------------------|
| 602  | Querying an index             |
| 603  | Updating an index             |
| 604  | Deleting an index             |
| 700  | Running the algorithm         |
| 800  | Querying an asynchronous task |

# 6 Appendix

## 6.1 Status Codes

[Table 6-1](#) describes status codes.

**Table 6-1** Status codes

| Status Code | Message                       | Description                                                                                                                                                                                |
|-------------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 100         | Continue                      | The client should continue with its request.<br>This interim response is used to inform the client that part of the request has been received and has not yet been rejected by the server. |
| 101         | Switching Protocols           | The protocol should be switched. The protocol can only be switched to a newer protocol.<br>For example, the current HTTP protocol is switched to a later version of HTTP.                  |
| 201         | Created                       | The request has been fulfilled and a new resource has been created.                                                                                                                        |
| 202         | Accepted                      | The request has been accepted, but the processing has not been completed.                                                                                                                  |
| 203         | Non-Authoritative Information | The server has successfully processed the request, but is returning information that may be from another source.                                                                           |
| 204         | NoContent                     | The request has been fulfilled, but the HTTP response does not contain a response body.<br>The status code is returned in response to an HTTP OPTIONS request.                             |

| Stat<br>us<br>Cod<br>e | Message              | Description                                                                                                                                                                                                                       |
|------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 205                    | Reset Content        | The server has successfully processed the request, but does not return any content.                                                                                                                                               |
| 206                    | Partial Content      | The server has successfully processed the partial GET request.                                                                                                                                                                    |
| 300                    | Multiple Choices     | There are multiple options for the location of the requested resource. The response contains a list of resource characteristics and addresses from which a user terminal (such as a browser) can choose the most appropriate one. |
| 301                    | Moved<br>Permanently | The requested resource has been assigned a new permanent URI, and the new URI is contained in the response.                                                                                                                       |
| 302                    | Found                | The requested resource resides temporarily under a different URI.                                                                                                                                                                 |
| 303                    | See Other            | The response to the request can be found under a different URI.<br>The response to the request can be found under a different URI, and should be retrieved using a GET or POST method.                                            |
| 304                    | Not Modified         | The requested resource has not been modified. In such a case, there is no need to retransmit the resource since the client still has a previously-downloaded copy.                                                                |

| 504                    | ServerTimeout                   | The request cannot be fulfilled within a given time. This status code is returned to the client only when the <b>Timeout</b> parameter is specified in the request.                                                                                                                                                                                                                                          |
| 505                    | HTTP Version not supported      | The server does not support the HTTP protocol version used in the request.                                                                                                                                                                                                                                                                                                                                   |

## 6.2 Error Codes

### 6.2.1 Error Codes for Management Plane APIs

If an error occurs in API calling, no result is returned. Identify the cause of error based on the error codes of each API. If an error occurs in API calling, HTTP status code 4xx or 5xx is returned. The response body contains the specific error code and information. If you are unable to identify the cause of an error, contact technical personnel and provide the error code so that we can help you solve the problem as soon as possible.

If an error code starting with **APIGW** is returned after you call an API, rectify the fault by referring to the instructions provided in .

**Table 6-2** Error codes

| Status Code | Error Code | Error Message                                 | Description                                   | Solution                                                                                                                                                                                                                                                  |
|-------------|------------|-----------------------------------------------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 400         | GES. 0001  | Incorrect parameter.                          | Incorrect parameter.                          | <ol style="list-style-type: none"><li>1. Check whether the project ID or graph ID in the URL is correct.</li><li>2. Check whether the request header is correct, for example, whether <b>X-Auth-Token</b> is correct.</li></ol>                           |
| 400         | GES. 7000  | The graph does not exist or has been deleted. | The graph does not exist or has been deleted. | <ol style="list-style-type: none"><li>1. Call the graph query API to query all graphs.</li><li>2. Check whether the project ID or graph ID in the URL is correct.</li></ol>                                                                               |
| 400         | GES. 7001  | The graph is not running.                     | The graph is not running.                     | <ol style="list-style-type: none"><li>1. Call the graph query API to query all graphs.</li><li>2. View the graph list returned in the preceding step and check whether the graph status corresponding to the graph ID in the URL is <b>200</b>.</li></ol> |
| 400         | GES. 7002  | The graph is being backed up.                 | The graph is being backed up.                 | <ol style="list-style-type: none"><li>1. Call the graph query API to query all graphs.</li><li>2. View the graph list returned in the preceding step and check whether the graph status corresponding to the graph ID in the URL is <b>903</b>.</li></ol> |

| Status Code | Error Code | Error Message                                                           | Description                                                             | Solution                                                                                                                                                                                                                                                                |

| 400         | GES. 7064  | Failed to create the ECS.                                   | Failed to create the ECS.                                   | See the returned <b>errorMessage</b> or download the microservice log on the management plane, search for the ID of failed task in the log, and contact IaaS O&M personnel.                |
| 400         | GES. 7065  | Failed to query the image because the image does not exist. | Failed to query the image because the image does not exist. | Check whether the image ID configured on the GES management plane exists.                                                                                                                  |
| 400         | GES. 7066  | Failed to query the flavor.                                 | Failed to query the flavor.                                 | Check whether the flavor ID configured on the GES management plane exists.                                                                                                                 |
| 400         | GES. 7067  | Insufficient ECS quota.                                     | Insufficient ECS quota.                                     | Check whether the flavor ID configured on the GES management plane exists.                                                                                                                 |
| 400         | GES. 7068  | Invalid request parameters.                                 | Invalid request parameters.                                 | During graph creation, parameters in the request for calling the IaaS API are invalid. Obtain detailed information based on the returned <b>errorMessage</b> and contact customer service. |
| 400         | GES. 7069  | The metadata file is too large.                             | The metadata file is too large.                             | The metadata file on OBS or that in the request body exceeds 10 MB.                                                                                                                        |
| 400         | GES. 7070  | Failed to parse the metadata file.                          | Failed to parse the metadata file.                          | When creating metadata, the metadata file on OBS or in the request body does not comply with the metadata standards. Create a metadata file or request body correctly.                     |

## 6.2.2 Error Codes for Service Plane APIs

If an error occurs in API calling, no result is returned. Identify the cause of error based on the error codes of each API. If an error occurs in API calling, HTTP status code 4xx or 5xx is returned. The response body contains the specific error code and information. If you are unable to identify the cause of an error, contact

technical personnel and provide the error code so that we can help you solve the problem as soon as possible.

If an error code starting with **APIGW** is returned after you call an API, rectify the fault by referring to the instructions provided in .

**Table 6-3** Error codes

| Status Code | Error Code | Error Message                                            | Description                                              | Solution                                                                                                                                                                                                                                  |
|-------------|------------|----------------------------------------------------------|----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 400         | GES. 8000  | Incorrect parameter format.                              | Incorrect parameter format.                              | Check whether the request body is the same as that described in the document.                                                                                                                                                             |
| 400         | GES. 8001  | Failed to query graph statistics.                        | Failed to query graph statistics.                        | <ol style="list-style-type: none"><li>1. If the network fluctuates, try again later.</li><li>2. If the fault persists, report the error information in <b>errorMessage</b> to technical personnel.</li></ol>                              |
| 500         | GES. 8002  | Graph statistics query error.                            | Graph statistics query error.                            | <ol style="list-style-type: none"><li>1. Check whether the token has expired. If it is expired, obtain a new one.</li><li>2. If the fault persists, report the error information in <b>errorMessage</b> to technical personnel.</li></ol> |
| 400         | GES. 8005  | Incorrect parameter.                                     | Incorrect parameter.                                     | <ol style="list-style-type: none"><li>1. Check whether the project ID in the URL is correct.</li><li>2. Check whether the request header is correct, for example, whether <b>X-Auth-Token</b> is correct.</li></ol>                       |
| 400         | GES. 8006  | Invalid resource access.                                 | Invalid resource access.                                 | Check whether the project ID in the URL is correct.                                                                                                                                                                                       |
| 400         | GES. 8007  | Invalid token.                                           | Invalid token.                                           | Check whether the token is correct.                                                                                                                                                                                                       |
| 400         | GES. 8008  | An error occurs in the underlying authentication system. | An error occurs in the underlying authentication system. | Try again later or contact technical personnel.                                                                                                                                                                                           |

| Status Code | Error Code | Error Message                                                     | Description                                                                             | Solution                                                                                                                                                                                                            |

## 6.3 Obtaining a Project ID

### Obtaining a Project ID by Calling an API

You can obtain a project ID by calling an API

For details about API authentication, see [Making a Management Plane API Request](#).

The following is an example response. The value of **id** under **projects** is the project ID. The following is an example response. If GES is deployed in the *xxx* region, the value of **name** in the response body is *xxx*, and the value of **id** in **projects** is the project ID.

```
{
 "projects": [
 {
 "domain_id": "65382450e8f64ac0870cd180d14e684b",
 "is_domain": false,
 "parent_id": "65382450e8f64ac0870cd180d14e684b",
 "name": "xxx",
 "description": "",
 "links": {
 "next": null,
 "previous": null,
 "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"
 },
 "id": "a4a5d4098fb4474fa22cd05f897d6b99",
 "enabled": true
 }
],
 "links": {
 "next": null,
 "previous": null,
 "self": "https://www.example.com/v3/projects"
 }
}
```

## Obtaining a Project ID from the Console

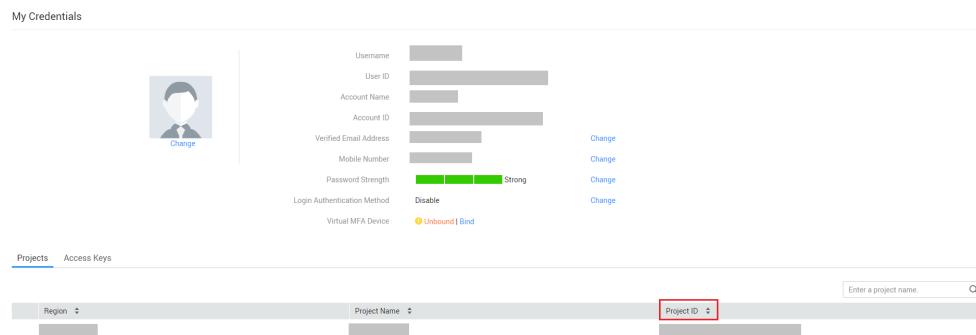

A project ID is required for some URLs when an API is called.

To obtain a project ID, perform the following operations:

1. Register an account and log in to the management console.
2. Click the username and select **My Credentials** from the drop-down list.

In the project list on the **My Credentials** page, select a project ID based on the region and project. For example, select **5a3314075bfa49b9ae360f4ecd333695** for **Project ID**.

**Figure 6-1** Obtaining a project ID

## 6.4 Obtaining an Account ID

An account ID (**domain-id**) is required for some URLs when an API is called. To obtain the account ID, perform the following operations:

1. Register an account and log in to the management console.
2. Click the username and select **My Credentials** from the drop-down list.

On the **My Credentials** page, view the **Account ID**.
