1 Change History	1
2 Partner Operation Capability API (Reseller Model)	22
3 API Invoking Methods	28
3.1 RESTful API	
3.1.1 Constructing Requests	28
3.1.2 Authentication	32
3.1.3 Returned Values	33
3.2 Web UI Mode	34
3.3 API Access Permission (Partner)	43
4 Product Management	49
4.1 Quering Product Information	49
4.1.1 Querying Cloud Service Types	49
4.1.2 Querying Resource Types	52
4.1.3 Querying Resources by Cloud Service Type	56
4.1.4 Querying Usage Types	60
4.1.5 Querying Measurement Units	64
4.1.6 Querying the Measurement Unit Number System	68
4.2 Querying the Price of a Product	72
4.2.1 Querying the Price of a Pay-Per-Use Product	72
4.2.2 Querying the Price of a Yearly/Monthly Product	83
4.2.3 Querying the Renewal Price of a Yearly/Monthly Resource	95
5 Customer Management	102
5.1 Customer Registration	102
5.1.1 Verifying Customer Registration Information	102
5.1.2 Sending a Verification Code	105
5.1.3 Creating a Customer	107
5.2 Real-Name Authentication	114
5.2.1 Requesting an Individual Real-Name Authentication	114
5.2.2 Requesting an Enterprise Real-Name Authentication	122
5.2.3 Requesting a Real-Name Authentication Change	129
5.2.4 Querying the Real-Name Authentication Review Result	
5.3 Customer Management	139

5.3.1 Querying Customers	139
5.3.2 Freezing a Customer Account	147
5.3.3 Unfreezing a Customer Account	
6 Managing Huawei Cloud Resellers	154
6.1 Querying Huawei Cloud Resellers	
6.1.1 Querying the List of Huawei Cloud Resellers	
7 Managing Credits	160
7.1 Querying Consumption Quota	160
8 Transaction Management	163
8.1 Managing Customers' Budgets	
8.1.1 Querying Customer Budgets	
8.1.2 Batch Querying Customer Budgets	
8.1.3 Setting Customers' Budgets	
8.2 Coupons Management	
8.2.1 Querying Coupons	
8.3 Managing Yearly/Monthly Orders	
8.3.1 Querying Orders	
8.3.2 Querying Order Details	
8.3.3 Paying Yearly/Monthly Product Orders	
8.3.4 Canceling Orders in the Pending Payment Status	
8.3.5 Querying the Amount of Unsubscription Orders	214
8.4 Managing Yearly/Monthly Resources	
8.4.1 Querying Customer's Yearly/Monthly Resources	217
8.4.2 Renewing Subscription to Yearly/Monthly Resources	224
8.4.3 Unsubscribing from Yearly/Monthly Resources	229
8.4.4 Enabling Automatic Subscription Renewal for Yearly/Monthly Resources	233
8.4.5 Disabling Automatic Subscription Renewal for Yearly/Monthly Resources	235
8.4.6 Enabling/Canceling the Change from Yearly/Monthly to Pay-per-Use upon Expiration	237
8.5 Managing Resource Packages	241
8.5.1 Querying Resource Packages	241
8.5.2 Viewing Resource Package Usage	249
8.5.3 Querying Resource Package Usage Details	254
8.6 Managing Pay-Per-Use Resources	259
8.6.1 Querying Customer's Pay-Per-Use Resources	259
9 Bill Management	267
9.1 Managing Customer Consumptions	267
9.1.1 Querying Customer Resource Usage	267
9.2 Managing Partner Bill	275
9.2.1 Querying Monthly Bills	275
9.2.2 Querying Bill Details of Monthly Expenditures	277
10 Invoice Management	285

10.1 Invoice Management	285
10.1.1 Querying the Invoice List	285
11 Managing Service Tickets	294
12 API to Be Brought Offline	295
12.1 Product Management	
12.1.1 Querying Product Information	295
12.1.1.1 Querying Cloud Service Types (Old)	295
12.1.1.2 Querying Resource Types (Old)	298
12.2 Managing Customers	301
12.2.1 Real-Name Authentication	301
12.2.1.1 Querying the Real-Name Authentication Review Result (Old)	301
12.2.2 Customer Management	304
12.2.2.1 Querying Customers (Old)	304
12.2.2.2 Querying Customers (Old)	311
12.2.2.3 Freezing a Customer Account (Old)	318
12.2.2.4 Unfreezing a Customer Account (Old)	322
12.3 Transaction Management	327
12.3.1 Managing Customer' Budgets	327
12.3.1.1 Querying Customers' Budgets (Old)	327
12.3.1.2 Setting Customers' Budgets (Old)	330
12.3.2 Yearly/monthly Order Management	333
12.3.2.1 Querying Orders (Old)	333
12.3.2.2 Querying Order Details (Old)	345
12.3.2.3 Paying Yearly/Monthly Product Orders (Old)	355
12.3.3 Yearly/Monthly Resource Management	363
12.3.3.1 Querying Customer's Yearly/Monthly Resources (Old)	364
12.3.3.2 Renewing Subscription to Yearly/Monthly Resources (Old)	370
12.3.3.3 Unsubscribing from Yearly/Monthly Resources (Old)	376
12.3.4 Managing Resource Packages	
12.3.4.1 Querying Resource Packages (Old)	
12.4 Bill Management	389
12.4.1 Querying Customer Resource Usage	389
13 Appendix	402
13.1 How Do I Obtain Customers' customer_id or domain_id?	402
13.2 Switching to the HUAWEI CLOUD Page and Binding the HUAWEI CLOUD Account	403
13.3 How Do I Obtain the xaccountType Value?	415
13.4 How Can I Replace a Partner Token with a Customer Token	415
13.5 File Subscription	418
13.6 How Do I Upload the Attachment for Real-Name Authentication?	421
13.7 Support for Discounts or Coupons	421
13.8 Status Code	422

13.10 SDK Overview	447
13.11 SDK-related FAQ	448
13.12 Price Inquiry API Guide	449
13.12.1 Price Inquiry Example of Yearly/Monthly Products (Using the Price Calculator)	449
13.12.2 Price Inquiry Example of Pay-Per-Use Products (Using the Price Calculator)	452

# 1 Change History

Description	Released On
This issue is the seventy-sixth official release.	2024-7-29
This release incorporates the following change:	
Added the V2 API for querying expenditure quotas.	

Description	Released On
This issue is the seventy-fifth official release.	2024-6-28
This release incorporates the following changes:	
<ul> <li>Added the description, "If you need to change the freezing type for an already frozen account, you need to unfreeze the account first", the request parameter, freeze_type, and the CBC.70300007 error code, "If you need to change the freezing type for an already frozen account, you need to unfreeze the account first", to the V2 API for freezing customer accounts.</li> </ul>	
<ul> <li>Added the description, "To unfreeze an account, the unfreezing type must be consistent with the freezing type.", the request parameter, freeze_type, and the CBC.50000053 error code, "Unfreeze customer account failed. Selected object and the frozen object do not match", to the V2 API for unfreezing customer accounts.</li> </ul>	
<ul> <li>Added the CBC.30010035 error code, "Resource deleted", and the CBC.30000067 error code, "Unsubscription not supported. This resource has been deleted or the subscription to this resource has not been synchronized to CBC", to the V1 and V2 for unsubscribing from yearly/monthly resources.</li> </ul>	
<ul> <li>Added the following description to the V2 API for querying prices of pay-per-use products: You can use the price calculator to determine product prices. You can also use the price calculator to get the value of the product_infos request parameter when you call the API for querying product prices. For more details, see price inquiry examples.</li> </ul>	
<ul> <li>Added the following description to the V2 API for querying prices of yearly/monthly products: You can use the price calculator to determine product prices. You can also use the price calculator to get the value of the product_infos request parameter when you call the API for querying product prices. For more details, see price inquiry examples.</li> </ul>	
• Added an enumeration (5: withdrawn) to the request parameter, status in the V2 API for querying coupons.	
<ul> <li>Added an enumeration (3: closed) to the request parameter, status_list in the V2 API for querying customers' yearly/ monthly resources.</li> </ul>	
The V1 API for verifying customer registration information was taken offline.	

Description	Released On
This issue is the seventy-fourth official release.	2024-5-28
This release incorporates the following changes:	
<ul> <li>Added the request parameter, include_relative_resources         (whether to include associated resources for the query), to the         V2 API for querying the renewal price of a yearly/monthly         resource. Added a description for the response parameter,         RenewInquiryResultInfo.resource_id. This parameter indicates         that if the request contains the include_relative_resources field,         the renewal amount of the associated primary resource will be         returned.</li> </ul>	
<ul> <li>Added the request parameters, service_type_code (the ID of the cloud service type), to the V2 API for listing yearly/monthly resources.</li> </ul>	
<ul> <li>Added the CBC.30010069 error code to the V2 API for renewing yearly/monthly subscriptions. This error code indicates that the renewal period does not exist.</li> </ul>	
Added the CBC.99003154 error code to the V1 API for renewing subscriptions to yearly/monthly resources. This error code indicates that the subscription period plus the renewal is too long, so a shorter renewal needs to be selected.	
<ul> <li>Added request parameter service_type_code_list to the V3 API for listing resource packages. This parameter is used to specify the IDs of cloud service types, and the values are case- insensitive.</li> </ul>	
This issue is the seventy-third official release.	2024-4-28
This release incorporates the following changes:	
The V1 API for creating customers was taken offline.	
The V1 API for querying monthly bills was taken offline.	
<ul> <li>Deleted the error code, CBC.99003645 (Unsubscription not supported for this cloud service type), from the V2 API for 8.4.3 Unsubscribing from Yearly/Monthly Resources.</li> </ul>	
<ul> <li>Deleted the error code, CBC.99003631 (The unsubscribed, deleted, or released resource cannot be renewed), from the V2 API for 8.4.2 Renewing Subscription to Yearly/Monthly Resources.</li> </ul>	
<ul> <li>Deleted error code, 400 CBC.99006073 (Project does not exist), from the V2 API for 4.2.1 Querying the Price of a Pay-Per-Use Product.</li> </ul>	
<ul> <li>Launched the V2 API for 8.1.2 Batch Querying Customer Budgets.</li> </ul>	
<ul> <li>Modified the range (for order creation and payment time) queried limit to one year for the 8.3.1 Querying Orders and 12.3.2.1 Querying Orders (Old) APIs.</li> </ul>	

Description	Released On
This issue is the seventy-second official release.  This release incorporates the following change:  Added the error code, CBC.99003647 (Unsubscription not supported for this pay-per-use package.), to the V2 API for renewing yearly/monthly subscriptions. "	2024-2-23
This issue is the seventy-first official release.	2024-1-29
This release incorporates the following changes:	
Added the error code, CBC.99000092 (Incorrect subscription period.), to the V2 API for renewing yearly/monthly subscriptions.	
The V1 API for canceling unpaid orders was taken offline.	
<ul> <li>Added the Product Type Name and Resource Type Name fields to the old API for querying customer resource usage details.</li> </ul>	
• Added the <b>Product Type Name</b> and <b>Resource Type Name</b> fields to the API for querying customer resource usage details.	
<ul> <li>Added the response parameter, budget_type - budget mode, to the V2 API for querying customer budgets.</li> </ul>	
<ul> <li>Added the request parameter, budget_type - budget mode, to the V2 API for setting customer budgets.</li> <li>Added the error code, CBC.50000030 (Setting budgets not supported. This reseller's budget quota is insufficient.).</li> </ul>	
Added the error code, CBC.50000033 (Budget setting permissions have been revoked. This reseller cannot set budgets.).	
This issue is the seventieth official release.	2023-12-26
The V1 API for paying yearly/monthly bills was taken offline.	
The V1 API for querying refund details was taken offline.	
The V1 API for sending verification codes was taken offline.	
The V1 API for querying pay-per-use resource lists was taken offline.	
This issue is the sixty-ninth official release.	2023-11-15
This release incorporates the following change:	
Added the <b>Action</b> column in the <b>API Access Permission (Partner)</b> section.	
This issue is the sixty-eighth official release.	2023-11-1
This release incorporates the following change:	
Removed the API (V1) for querying prices by product specification.	

Description	Released On
This issue is the sixty-seventh official release.	2023-6-29
This release incorporates the following changes:	
Added the enumerations, 4: Savings plan-subscription and 5: Savings plan-hourly billing to the field, Billing Mode, in the bill details generated from the Querying Bill Details of Monthly Expenditures API.	
Added the enumeration, 11: Savings plan, to the field, Billing Mode and added the enumeration, 23: Expenditure-savings plans to the parameter, bill_type in the resource usage details generated from the API, Querying Customer Resource Usage.	
Added the enumeration, 11: Savings plan to the parameter, cycleType for the API, Querying coupons.	
Added the error code, CBC.99000088: Your payment is being processed, to the API, Paying a yearly/monthly order.	
This issue is the sixty-sixth official release.	2023-4-18
This release incorporates the following changes:	
• Added section 3.3 API Access Permission (Partner). An operator account of a partner needs to obtain permissions before accessing APIs. Roles that have according access permissions can be assigned to this account.	
<ul> <li>Added the error code "CBC.30050013: Renewal not supported to 4.2.3 Querying the Renewal Price of a Yearly/Monthly Resource.</li> </ul>	
The V1 API for synchronizing customer real-name authentication information is taken offline.	
This issue is the sixty-fifth official release.	2023-3-30
This release incorporates the following change:	
Added the API for querying the renewal price of a yearly/monthly resource. Customers can query the renewal price of yearly/monthly resources by criteria.	
This issue is the sixty-fourth official release.	2023-2-28
This release incorporates the following change:	
Deleted the enumerated value 7: International driver license of the verified_type field in the API for requesting an individual real-name authentication.	
This issue is the sixty-third official release.	2023-2-9
This release incorporates the following change:	
Added the response parameter <b>fail_resource_infos</b> (used for query the resources that fails to be subscribed to or unsubscribed from) to the APIs for <b>renewing subscription to yearly/monthly resources</b> and <b>unsubscribing from yearly/monthly resources</b> .	

Description	Released On
This issue is the sixty-second official release. This release incorporates the following change: Took the API for querying available discounts of an order offline.	2022-12-27
<ul> <li>This issue is the sixty-first official release.</li> <li>This release incorporates the following changes:</li> <li>Added the error codes CBC.50010085 - Customer association not allowed. The account of this partner has been restricted. and CBC.50010086 - Customer association not allowed. This partner is a Huawei Cloud reseller, and the account of its associated distributor has been restricted. to the V2 API for creating a customer and V1 API for creating a customer.</li> <li>Added the error code CBC.70600026 - Sorry, Huawei Cloud cannot review your real-name authentication information. Please contact your account manager for assistance. to the APIs for requesting an individual real-name authentication, requesting an enterprise real-name authentication, and requesting a real-name authentication change.</li> </ul>	2022-12-13
<ul> <li>This issue is the sixtieth official release.</li> <li>This release incorporates the following changes:</li> <li>Brought the V1 API for enabling automatic subscription renewal for yearly/monthly resources offline.</li> <li>Brought the V1 API for disabling automatic subscription renewal for yearly/monthly resources offline.</li> </ul>	2022-11-17
<ul> <li>This issue is the fifty-ninth official release.</li> <li>This release incorporates the following changes:</li> <li>Added the enumerated value 60: KooGallery product discounts in resales for Settlement Product Type in the Querying Bill Details of Monthly Expenditures API.</li> <li>Brought the V1 API for enabling automatic subscription renewal offline.</li> <li>Brought the V1 API for disabling automatic subscription renewal offline.</li> </ul>	2022-10-31
This issue is the fifty-eighth official release.  This release incorporates the following changes:  Added the V3 API for paying yearly/monthly product orders, and moved the V2 API for paying yearly/monthly product orders to 12 API to Be Brought Offline.	2022-09-27

Description	Released On
This issue is the fifty-seventh official release.	2022-08-30
This release incorporates the following changes:	
<ul> <li>Added the request parameter indirect_partner_id to the API for querying orders. This parameter is used to query the orders of a Huawei Cloud reseller's customer.</li> </ul>	
<ul> <li>Added the request parameter indirect_partner_id to the API for querying order details. This parameter is used to query order details of a Huawei Cloud reseller's customer.</li> </ul>	
Added the request parameter indirect_partner_id to the API for querying the pay-per-use resources of a customer. This parameter is used to query the pay-per-use resources of a Huawei Cloud reseller's customer.	
• Added error code <b>CBC.99000037</b> to the API for <b>querying orders</b> .	
<ul> <li>Added error code CBC.99000037 to the API for querying order details.</li> </ul>	
Added error code CBC.99000037 to the API for querying	
customer's pay-per-use resources.	
This issue is the fifty-sixth official release.	2022-08-16
This release incorporates the following changes:	
<ul> <li>Added the request parameter indirect_partner_id to the API for creating customers to support creating customers for a Huawei Cloud reseller.</li> </ul>	
<ul> <li>Added the request parameter indirect_partner_id to the API for querying customers to support querying the customers of a Huawei Cloud reseller.</li> </ul>	
<ul> <li>Added the request parameter indirect_partner_id to the API for freezing customer accounts to support freezing the accounts of customers of a Huawei Cloud reseller.</li> </ul>	
<ul> <li>Added the request parameter indirect_partner_id to the API for unfreezing customer accounts to support unfreezing the accounts of customers of a Huawei Cloud reseller.</li> </ul>	
<ul> <li>Added the request parameter indirect_partner_id to the API for querying customers' budgets to support querying the budgets set for the customers of a Huawei Cloud reseller.</li> </ul>	
<ul> <li>Added the request parameter indirect_partner_id to the API for setting budgets for customers to support setting budgets for customers of a Huawei Cloud reseller.</li> </ul>	
This issue is the fifty-fifth official release.	2022-08-10
This release incorporates the following change:	
Changed <b>Elite Service Provider</b> to <b>Huawei Cloud Reseller</b> and <b>Marketplace</b> to <b>KooGallery</b> .	

Description	Released On
This issue is the fifty-fourth official release. This release incorporates the following changes:	2022-08-02
• Changed the length of the value for <b>password</b> in the V1 API for create customers. The value can be a string of 8 to 32 characters.	
<ul> <li>Changed the length of the value for password in the V2 API for creating customer. The value can be a string of 8 to 32 characters.</li> </ul>	
This issue is the fifty-third official release.	2022-07-19
This release incorporates the following changes:	
<ul> <li>Added the error code CBC.30010035 to the API for unsubscribing from yearly/monthly resources.</li> </ul>	
Added error code <b>CBC.50010059</b> to the V1 API for creating a customer.	
Added error code CBC.50010059 to the V2 API for creating a customer.	
This issue is the fifty-third official release.	2022-07-05
This release incorporates the following change:	
Added the following description for the API in <b>8.4.3 Unsubscribing from Yearly/Monthly Resources</b> : Confirm the resource information and the refund before unsubscribing from in-use resources. After being unsubscribed from, the resources not in the recycle bin cannot be restored. If you wan to continue using these resources, unsubscribe from the subscription term renewed but not used yet.	
This issue is the fifty-second official release.	2022-06-21
This release incorporates the following change:	
Added the enumerated value 2: Account and resources and changed enumerated value 1: Yes to 1: Only account for the response parameter is_frozen in 5.3.1 Querying Customers.	

Description	Released On
This issue is the fifty-first official release. This release incorporates the following changes:	2022-04-12
<ul> <li>Added the API for querying cloud service types, and moved the old API for querying cloud service types to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the API for querying resource types, and moved the old API for querying resource types to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added service_type_name, indicating the cloud service type, and resource_type_name, indicating the resource type, to the response parameters of the APIs for querying usage types, paying yearly/monthly product orders, querying the amount of unsubscription orders, querying customer's yearly/monthly resources, and querying customer's pay-per-use resources.</li> <li>Added service_type_name, indicating the cloud service type, to</li> </ul>	
the response parameters of the APIs for querying order details and querying resource packages.	
This issue is the fiftieth official release.	2022-03-25
This release incorporates the following change:	
The Prepayment model has been changed to the Authorized Distributor model. The transaction model name in Chinese for Referral has been changed, but the English name remains unchanged.	
This issue is the forty-ninth official release.	2022-03-15
This release incorporates the following change:	
Added error code CBC.99003605 in the response of the V2 API for canceling automatic renewal for yearly/monthly resources.	
This issue is the forty-eighth official release.	2022-01-25
This release incorporates the following changes:	
<ul> <li>Added error code CBC.30010036 in the response of the API for renewing subscription to yearly/monthly resources.</li> </ul>	
<ul> <li>Added error code CBC.99003602 in the response of the API for enabling automatic subscription renewal for yearly/monthly resources.</li> </ul>	
<ul> <li>Added the enumerated value 20: Refund - change for the bill type in the file exported through the API for querying customer resource usage.</li> </ul>	
<ul> <li>Changed 11: Service cross-charging to 11: Special price request for the parameter Settlement Product Type in the file exported through the Querying Bill Details of Monthly Expenditures API.</li> </ul>	
Added section 13.5 File Subscription in 13 Appendix. Partners can subscribe to files in the Partner Center on HUAWEI CLOUD.	

Description	Released On
This issue is the forty-seventh official release.	2022-01-11
This release incorporates the following changes:	
<ul> <li>Added error code CBC.0250 to the response of the API for querying the price of a yearly/monthly product.</li> </ul>	
<ul> <li>Added error code CBC.30050006 in the response of the API for renewing subscription to yearly/monthly resources.</li> </ul>	
Added error code CBC.99003115 to the response of the V2 API for paying yearly/monthly product orders.	
Added error code CBC.99003156 to the response of the V2 API for paying yearly/monthly product orders.	
Added error code <b>CBC.99003156</b> to the response of the V1 API for paying yearly/monthly product orders.	
This issue is the forty-sixth official release.	2021-12-14
This release incorporates the following changes:	
<ul> <li>Changed the description of error code CBC.99000051 to Customer creation failed because this mobile number or email address has been preregistered by Huawei. for the API in 5.1.3 Creating a Customer.</li> </ul>	
Added error code <b>CBC.99000051</b> to the API in Creating a Customer (Old).	
This issue is the forty-fifth official release.	2021-11-30
This release incorporates the following change:	
Deleted error code CBC.99003001 from the API in 8.4.2 Renewing Subscription to Yearly/Monthly Resources.	
This issue is the forty-fourth official release.	2021-11-16
This release incorporates the following changes:	
<ul> <li>Changed the description of error code CBC.99005030 returned by the API in 5.2.1 Requesting an Individual Real-Name Authentication to The partner did not complete real-name authentication or bucket authentication.</li> </ul>	
Added the description of the parameter related to the subscription duration for the API in 9.1.1 Querying Customer Resource Usage. This parameter can be a non-integer in the exported CSV file.	
This issue is the forty-third official release.	2021-11-02
This release incorporates the following change:	
Change the description of the error message for CBC.99003016 to "The resources have expired and been deleted or do not exist." in 8.4.2 Renewing Subscription to Yearly/Monthly Resources.	

Description	Released On
This issue is the forty-second official release.  This release incorporates the following change:  Added the description of anti-injection-reconstruction for input parameter values of <b>Resource Name</b> and <b>Resource Tag</b> in the file of the API for <b>querying customer resource usage</b> .	2021-10-19
<ul> <li>This issue is the forty-first official release.</li> <li>This release incorporates the following changes:</li> <li>Added the V3 API for querying resource packages and moved the V2 API for querying resource packages to 12 API to Be Brought Offline.</li> <li>Added request parameters expire_time_begin and expire_time_end to the API in Querying Customer's Yearly/Monthly Resources. These two parameters are used to query the list of resources that expire in a specified period.</li> </ul>	2021-09-28
<ul> <li>This issue is the fortieth official release.</li> <li>This release incorporates the following changes:</li> <li>Added error code CBC.30000010 to the API for paying yearly/monthly product orders.</li> <li>Added a description for the Unit parameter in 9.1.1 Querying Customer Resource Usage to differentiate the unit of the linear products from that of non-linear products.</li> </ul>	2021-08-31
<ul> <li>This issue is the thirty-ninth official release.</li> <li>This release incorporates the following changes:</li> <li>Added the API for querying customer resource usage.</li> <li>Moved the old API 12.4.1 Querying Customer Resource Usage to 12 API to Be Brought Offline.</li> </ul>	2021-08-13
<ul> <li>This issue is the thirty-eighth official release.</li> <li>This release incorporates the following changes:</li> <li>Deleted the old APIs for requesting an individual real-name authentication, requesting an enterprise real-name authentication, and requesting real-name authentication change, and the API for unsubscribing from yearly/monthly products that fail to be provisioned or changed.</li> <li>Added user_name in the response parameters of the API in 8.3.2 Querying Order Details to specify the order creator returned by the API for querying order details.</li> </ul>	2021-07-13

Description	Released On
This issue is the thirty-seventh official release. This release incorporates the following changes:	2021-06-15
<ul> <li>Added the API for querying the resource packages of a customer in 12.3.4.1 Querying Resource Packages (Old).</li> </ul>	
<ul> <li>Added the API for querying the resource package usage in 8.5.2</li> <li>Viewing Resource Package Usage.</li> </ul>	
<ul> <li>Added the field partnerPreferentialType and changed the calculation method of amount due in 9.2.2 Querying Bill Details of Monthly Expenditures.</li> </ul>	
<ul> <li>Added response parameters salePrice, stepNum, stepNumMeasureId, and partnerPreferentialType in Querying Monthly Bills. These parameters are returned when partnerPreferentialType is set to 1.</li> </ul>	
This issue is the thirty-sixth official release.	2021-04-28
This release incorporates the following change:	
Added Querying Available Discounts of an Order. You can invoke this API to query available discounts when paying an order.	
This issue is the thirty-fifth official release.	2021-02-08
This release incorporates the following change:	
Added fields Settlement Amount, Partner Coupon, Scene, Partner Amount Without Tax, Tax Amount, and Usage Type Name in 9.2.2 Querying Bill Details of Monthly Expenditures. These fields are not displayed for partners in the Asia Pacific region.	
This issue is the thirty-fourth official release.	2021-01-28
This release incorporates the following change:	
Modified <b>5.3.1 Querying Customers</b> . Specifically, added fields <b>xaccount_id</b> , <b>xaccount_type</b> , and <b>customer_level</b> for returning the partner sales platform user ID, partner sales platform ID, and customer level, respectively.	
This issue is the thirty-third official release.	2020-12-30
This release incorporates the following changes:	
Added 4.1.5 Querying Measurement Units and 4.1.6 Querying the Measurement Unit Number System.	
This issue is the thirty-second official release.	2020-12-16
This release incorporates the following changes:	
<ul> <li>Added the V2 interface in 9.2.1 Querying Monthly Bills and moved the V1 interface in Querying Monthly Bills to 12 API to Be Brought Offline.</li> </ul>	
Added the parameter discount_infos and table     DiscountSimpleInfo for the API that is used for paying yearly/     monthly product orders to query available discounts that can be     used for paying yearly/monthly orders.	

Description	Released On
This issue is the thirty-first official release.  This release incorporates the following changes:	2020-12-01
Modified the old API for querying customer resource usage. The system generates the resource usage details from 12:00 to 20:00 (not later than 24:00) every day.	
This issue is the thirtieth official release.  This release incorporates the following changes:	2020-11-18
<ul> <li>Added 4.1.4 Querying Usage Types for querying usage types.</li> </ul>	
<ul> <li>Added 8.4.6 Enabling/Canceling the Change from Yearly/ Monthly to Pay-per-Use upon Expiration for querying resource types.</li> </ul>	
<ul> <li>Added the enumerated value "610: Discount amount" for parameter discount_type in 8.3.1 Querying Orders and 8.3.2 Querying Order Details, as well as 12.3.2.1 Querying Orders (Old) and 12.3.2.2 Querying Order Details (Old) to be brought offline.</li> </ul>	
This issue is the twenty-ninth official release.	2020-11-04
This release incorporates the following changes:	
Added the API in Querying Cloud Service Types (Old).	
Added the API in Querying Resource Types (Old).	
Added <b>4.1.3 Querying Resources by Cloud Service Type</b> for querying resource list by cloud service type.	
This issue is the twenty-eighth official release.	2020-10-21
This release incorporates the following changes:	
Add parameter include_association_result in 5.1.3 Creating a     Customer. When this parameter is called, the result of     associating a partner and its sub-customer will be returned.	
<ul> <li>Moved 14.1.4.6.12 Querying Resource Provisioning Details of an Order to 12 API to Be Brought Offline.</li> </ul>	
This issue is the twenty-seventh official release.	2020-09-28
This release incorporates the following changes:	
Added <b>Table 8-39</b> to support query by language and response parameter <b>product_spec_desc</b> (indicating product specifications) in <b>8.6.1 Querying Customer's Pay-Per-Use Resources</b> .	

Description	Released On
This issue is the twenty-sixth official release.	2020-09-16
This release incorporates the following changes:	
<ul> <li>Added response parameters product_owner_service and commercial_resource in 8.3.2 Querying Order Details.</li> </ul>	
• Changed the default value of <b>measure_id</b> in the following APIs from cent to dollar. After this modification, the unit for the values of currency-related fields is also changed to dollar. Check the currency unit in use during an API call.	
- 8.3.1 Querying Orders	
- 8.3.2 Querying Order Details	
- 8.3.5 Querying the Amount of Unsubscription Orders	
This issue is the twenty-fifth official release.	2020-09-02
This release incorporates the following changes:	
<ul> <li>Added the V2 interface in 5.3.2 Freezing a Customer Account and moved the V1 interface in 12.2.2.3 Freezing a Customer Account (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 5.3.3 Unfreezing a Customer         Account and moved the V1 interface in 12.2.2.4 Unfreezing a</li></ul>	
<ul> <li>Added the V2 interface in 8.1.1 Querying Customer Budgets and moved the V1 interface in 12.3.1.1 Querying Customers' Budgets (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.1.3 Setting Customers' Budgets and moved the V1 interface in 12.3.1.2 Setting Customers' Budgets (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added error codes CBC.99006006, CBC.99006055, and CBC.99006074 in 4.2.1 Querying the Price of a Pay-Per-Use Product and 4.2.2 Querying the Price of a Yearly/Monthly Product.</li> </ul>	

Description	Released On
This issue is the twenty-fourth official release.	2020-06-30
This release incorporates the following changes:	
<ul> <li>Added the V2 interface in 8.3.5 Querying the Amount of Unsubscription Orders and moved the V1 interface in Querying the Amount of Unsubscription Orders to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.4.1 Querying Customer's Yearly/ Monthly Resources and moved the V1 interface in 12.3.3.1 Querying Customer's Yearly/Monthly Resources (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.4.4 Enabling Automatic         Subscription Renewal for Yearly/Monthly Resources and         moved the V1 interface in Enabling Automatic Subscription         Renewal for Yearly/Monthly Resources to 12 API to Be Brought         Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.4.5 Disabling Automatic Subscription Renewal for Yearly/Monthly Resources and moved the V1 interface in Disabling Automatic Subscription Renewal for Yearly/Monthly Resources to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.6.1 Querying Customer's Pay-Per- Use Resources and moved the V1 interface in Querying Customer's Pay-Per-Use Resources to 12 API to Be Brought Offline.</li> </ul>	

Description	Released On
This issue is the twenty-third official release.	2020-06-17
This release incorporates the following changes:	
• Added the V2 interface in 8.3.1 Querying Orders and moved the V1 interface in 12.3.2.1 Querying Orders (Old) to 12 API to Be Brought Offline.	
<ul> <li>Added the V2 interface in 8.3.2 Querying Order Details and moved the V1 interface in 12.3.2.2 Querying Order Details (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 API for paying yearly/monthly product orders.</li> <li>Moved the V1 API from Paying Yearly/Monthly Product Orders (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.3.4 Canceling Orders in the Pending Payment Status and moved the V1 interface in Canceling Orders in the Pending Payment Status to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.4.2 Renewing Subscription to Yearly/Monthly Resources and moved the V1 interface in 12.3.3.2 Renewing Subscription to Yearly/Monthly Resources (Old) to 12 API to Be Brought Offline.</li> </ul>	
<ul> <li>Added the V2 interface in 8.4.3 Unsubscribing from Yearly/ Monthly Resources and moved the V1 interface in 12.3.3.3 Unsubscribing from Yearly/Monthly Resources (Old) to 12 API to Be Brought Offline.</li> </ul>	
This issue is the twenty-second official release.	2020-06-03
This release incorporates the following changes:	
Added the V2 interface in <b>5.1.1 Verifying Customer Registration Information</b> and moved the V1 interface in Verifying Customer Registration Information (Old) to <b>12 API to Be Brought Offline</b> .	
Added the V2 API to <b>5.2.3 Requesting a Real-Name Authentication Change</b> and moved the V1 APIs in 14.1.2.1.2  Sending a Verification Code to <b>12 API to Be Brought Offline</b> .	

Description	Released On
This issue is the twenty-first official release.	2020-05-20
This release incorporates the following changes:	
Added the V2 API in <b>5.2.1 Requesting an Individual Real-Name Authentication</b> , and moved the V1 API for requesting an individual real-name authentication to <b>12 API to Be Brought Offline</b> .	
Added the V2 API in <b>5.2.2 Requesting an Enterprise Real-Name Authentication</b> , and moved the V1 API for requesting an enterprise real-name authentication to <b>12 API to Be Brought Offline</b> .	
Added the V2 API in <b>5.2.3 Requesting a Real-Name Authentication Change</b> , and moved the V1 API for requesting a real-name authentication change to <b>12 API to Be Brought Offline</b> .	
Added the V2 interface in 5.2.4 Querying the Real-Name Authentication Review Result and moved the V1 interface in 12.2.1.1 Querying the Real-Name Authentication Review Result (Old) to 12 API to Be Brought Offline.	
Added the V2 interface in <b>5.3.1 Querying Customers</b> . Added response parameter <b>account_managers</b> . Moved the V1 interface in <b>12.2.1.1 Querying the Real-Name Authentication Review Result (Old)</b> to <b>12 API to Be Brought Offline</b> .	
This issue is the twentieth official release.	2020-04-22
This release incorporates the following changes:	
Added the V2 interface in <b>5.1.3 Creating a Customer</b> and brought the interface in Creating a Customer (Old) offline.	
This issue is the nineteenth official release.	2020-03-25
This release incorporates the following changes:	
Added 4.2.1 Querying the Price of a Pay-Per-Use Product and 4.2.2 Querying the Price of a Yearly/Monthly Product.	
Took the API for querying product prices based on specifications offline.	
This issue is the eighteenth official release.	2020-01-15
This release incorporates the following changes:	
Added 10.1.1 Querying the Invoice List.	
This issue is the seventeenth official release.	2019-12-18
This release incorporates the following changes:	
Added parameter <b>cooperationType</b> in the request of the API in Creating a Customer (Old).	
Modified the description of status codes CBC.4004 and CBC.4005 in <b>5.1.2 Sending a Verification Code</b> .	

Description	Released On
This issue is the sixteenth official release.	2019-11-20
This release incorporates the following changes:	
Added error code CBC.3016 in <b>8.4.2 Renewing Subscription to Yearly/Monthly Resources</b> . This error code indicates that expired resources exist.	
This issue is the fifteenth official release.	2019-10-23
This release incorporates the following changes:	
Added 12.2.2.3 Freezing a Customer Account (Old).	
Added 12.2.2.4 Unfreezing a Customer Account (Old).	
<ul> <li>Added response parameter isFrozen in 12.2.2.1 Querying Customers (Old). This parameter is used to indicate whether the customer account is frozen.</li> </ul>	
<ul> <li>Added request parameter cancelPartnerFrozen in 12.3.1.2         Setting Customers' Budgets (Old). This parameter is used to specify whether to unfreeze the customer account while setting the budget for the customer.     </li> </ul>	
<ul> <li>Added the Amount after Coupons and Amount Due fields in 9.2.2 Querying Bill Details of Monthly Expenditures.</li> </ul>	
This issue is the fourteenth official release.	2019-09-25
This release incorporates the following changes:	
Added 11 Managing Service Tickets.	
This issue is the thirteenth official release.	2019-09-17
This release incorporates the following changes:	
• Added response parameter <b>uplimit</b> in <b>5.1.1 Verifying Customer Registration Information</b> . The parameter indicates whether the number of verification code sending times reaches the upper limit.	
Added the section "12.1.2.2.3-Requesting a Real-Name Authentication Change (Old)".	
This issue is the twelfth official release.	2019-09-04
This release incorporates the following changes:	
• Added response parameter <b>customerType</b> in <b>12.2.2.1 Querying Customers (Old)</b> . The parameter indicates the customer type.	
Added the section "12.1.2.2.1-Requesting an Individual Real- Name Authentication (Old)".	
Added the section "12.1.2.2.2-Requesting an Enterprise Real- Name Authentication (Old)".	
• Added 12.2.1.1 Querying the Real-Name Authentication Review Result (Old).	
Moved the API in Synchronizing Customer Real-Name     Authentication Information to 12 API to Be Brought Offline.	

Description	Released On
This Issue is the eleventh official release.	2019-08-21
This release incorporates the following changes:	
Added 8.3.5 Querying the Amount of Unsubscription Orders.	
<ul> <li>Added periodType, periodNum, and categoryCode to response messages of the API in Querying Monthly Bills.</li> </ul>	
This issue is the tenth official release.	2019-08-14
This release incorporates the following changes:	
Added 14.1.4.6.12 Querying Resource Provisioning Details of an Order.	
<ul> <li>Added parameters Project ID and Project Tag to the file in 12.4.1 Querying Customer Resource Usage.</li> </ul>	
This issue is the ninth official release.	2019-07-24
This release incorporates the following changes:	
<ul> <li>Added error code CBC.0100 in 8.4.1 Querying Customer's Yearly/Monthly Resources.</li> </ul>	
<ul> <li>Moved API in 12.2.2.2 Querying Customers (Old) to 12 API to Be Brought Offline. For details about the new API, see 12.2.2.1 Querying Customers (Old).</li> </ul>	
This issue is the eighth official release.	2019-07-10
This release incorporates the following changes:	
<ul> <li>Added parameter categoryCode in response table Table 8-14 in 8.3.2 Querying Order Details.</li> </ul>	
<ul> <li>Added Bill Type in table 3 in 9.2.2 Querying Bill Details of Monthly Expenditures.</li> </ul>	
<ul> <li>Changed the API for querying customer credit limit to the API for querying customers' budgets in 12.3.1.1 Querying Customers' Budgets (Old).</li> </ul>	
<ul> <li>Changed the API for setting customer credit limit to the API for setting customers' budgets in 12.3.1.2 Setting Customers' Budgets (Old).</li> </ul>	

Description	Released On
This issue is the seventh official release.  This release incorporates the following changes:  In 8.3.1 Querying Orders	2019-06-26
<ul> <li>Added parameters currencyOfficial, amountInfo, and serviceType in Table 8-7.</li> <li>Added response parameter tables Table 8-8 and Table 8-9.</li> <li>Added status code CBC.0100, CBC.0101, CBC.0151, and CBC.0155.</li> <li>In 8.3.2 Querying Order Details</li> <li>Added parameters offset and limit to Table 8-10.</li> <li>Added response parameters currencyOfficial, amountInfo, currencyType, and serviceType in Table 8-13.</li> <li>Added response parameter tables Table 8-14, Table 8-15, and Table 8-16.</li> <li>Added status code CBC.0100, CBC.0101, CBC.0151, and CBC.0155.</li> <li>Added status code CBC.7254 in Creating a Customer (Old).</li> </ul>	
This issue is the sixth official release.  This release incorporates the following changes:  • Added parameter isCloseMarketMs in the request of API in Creating a Customer (Old).	2019-06-14
This issue is the fifth official release.  This release incorporates the following changes:  • Added 9.1 Managing Customer Consumptions.  • Added 13.8 Status Code.  • Added 13.9 Error Codes.	2019-05-22
<ul> <li>This issue is the fourth official release.</li> <li>This release incorporates the following changes:</li> <li>Adjusted the sections in 5 Customer Management, 8 Transaction Management, and 9 Bill Management based on service scenarios in 2 Partner Operation Capability API (Reseller Model).</li> <li>Added 8.3.2 Querying Order Details.</li> <li>Added the API for paying yearly/monthly product orders.</li> <li>Added 8.3.4 Canceling Orders in the Pending Payment Status.</li> <li>Added 8.6.1 Querying Customer's Pay-Per-Use Resources.</li> </ul>	2019-05-10

Description	Released On
This issue is the third official release.	2019-04-29
This release incorporates the following changes:	
Added 2.1.2.1-Synchronizing Customer Real-Name     Authentication Information.	
Added 14.1.1.2.1 Querying Product Prices Based on the Product Specifications (Old).	
Added 8.3.1 Querying Orders.	
Added 8.4.1 Querying Customer's Yearly/Monthly Resources.	
<ul> <li>Added 8.4.2 Renewing Subscription to Yearly/Monthly Resources.</li> </ul>	
Added 8.4.3 Unsubscribing from Yearly/Monthly Resources.	
<ul> <li>Added 8.4.4 Enabling Automatic Subscription Renewal for Yearly/Monthly Resources.</li> </ul>	
Added 8.4.5 Disabling Automatic Subscription Renewal for Yearly/Monthly Resources.	
This issue is the second official release.	2019-04-13
This release incorporates the following changes:	
Added the APIs to be supported and their descriptions in 2 Partner Operation Capability API (Reseller Model).	
This issue is the first official release.	2019-03-22

# Partner Operation Capability API (Reseller Model)

HUAWEI CLOUD provides the operation capabilities in the reseller model for partners to manage customers, credits, coupons, transactions, cloud services, bills, service tickets, products, and invoices on the partner sales platform.

Table 2-1 APIs and descriptions

Scenar io	Sub- Scenari o	API Name	Description
Product t informa manag tion ement query	informa tion	Querying Cloud Service Types	This API is used to query cloud service types on the partner sales platform.
	Querying Resource Types	This API is used to query the resource types on the partner sales platform.	
		Querying Resources by Cloud Service Type	This API is used to query the resource type code and name by associated cloud service on the partner sales platform and to query the price of a pay-per-use or yearly/monthly product.
		Querying Usage Types	This API is used to query resource usage types on the partner sales platform.
	Querying Measurement Units	This API is used to query the resource usage, measurement unit for the duration and amount of a yearly/monthly resource, as well as the measurement unit type on the partner sales platform.	
		Querying the Measurement Unit Number System	This API is used to query the measurement unit number system on the partner sales platform.

Scenar io	Sub- Scenari o	API Name	Description
Product price query	Querying the Price of a Pay-per-Use Product	Partners can query the price of a pay-per- use product by criteria on the sales platform.	
		Querying the Price of a Yearly/ Monthly Product	Partners can use this API to query prices of yearly/monthly products for new subscriptions on their sales platforms.
		Querying the Renewal Price of a Yearly/ Monthly Resource	Customers can query the renewal price of a yearly/monthly resource by criteria on the partner sales platform.
Custo mer manag ement	Custom er registra tion	Verifying Customer Registration Information	This API is used to check whether the account name, and mobile number or email address entered by the customer can be used for registration.
		Sending a Verification Code	If a customer enters an email address during registration, the system sends a registration verification code to the email address to verify the information.
		Creating a Customer	This API is used to create a Huawei Cloud account for a customer when the customer creates an account on your sales platform, and bind the customer account on the partner sales platform to the HUAWEI CLOUD account. In addition, the Huawei Cloud account is bound to the partner account.
	Real- name authent ication	Requesting an Individual Real-name Authenticatio n	This API can be used to submit an individual real-name authentication application.
		Requesting an Enterprise Real-name Authenticatio n	This API can be used to submit an enterprise real-name authentication application.

Scenar io	Sub- Scenari o	API Name	Description
		Requesting a Real-Name Authenticatio n Change	This API can be used to submit a real-name authentication change application.
		Querying the Real-Name Authenticatio n Review Result	If the response to a real-name authentication application or real-name authentication change application indicates that manual review is required, this API can be used to query the review result.
	Custom er	Querying Customers	This API is used to query your customers.
	manage ment	Freezing a Customer Account	A partner can freeze an account of a customer associated with the partner by reseller model.
		Unfreezing a Customer Account	A partner can unfreeze an account of a customer associated with the partner by reseller model.
Reselle r manag ement	Queryin g resellers	Querying Huawei Cloud Resellers	A Huawei Cloud distributor can query the list of its associated Huawei Cloud resellers.
Credit manag ement	Managi ng credits	Querying consumption quota	Partners can query their expenditure quotas.
ction er	er g budget	Querying Customers' Budgets	This API is used to query the budget of a customer for the partner to determine whether to adjust the budget.
ement		8.1.2 Batch Querying Customer Budgets	This API is used to batch query budgets of multiple customers. You can decide whether to adjust budgets for your customers based on the query results.
		Setting Customers' Budgets	This API is used to set or adjust a customer's budget.
	Coupon manage ment	Querying Coupons	Partners can query information about their coupons.

Scenar io	Sub- Scenari o	API Name	Description
	Yearly/ monthl y order manage ment	Querying Orders	After a customer purchases yearly/monthly resources, it can query the orders in different statuses, such as in the pending approval, processing, canceled, completed, and pending payment statuses.
		Querying Order Details	Customers can view order details on the partner sales platform.
		Paying Yearly/ Monthly Product Orders	A customer can invoke this API to pay yearly-monthly product orders in the pending payment status.
		Canceling Orders in the Pending Payment Status	A customer can invoke this API to cancel orders in the pending payment status.
		Querying the Amount of Unsubscriptio n Orders	A customer can query the resources and original orders of the unsubscription amount for an unsubscription order or degrade order on the partner sales platform.
	Yearly/ Monthl y resourc e	Querying Customer's Yearly/ Monthly Resources	A customer can query one or all yearly/monthly resources on the partner sales platform.
	manage ment	Renewing Yearly/ Monthly Resources	A customer can renew subscription to yearly/monthly resources on the partner sales platform.
		Unsubscribin g Yearly/ Monthly Resources	If a customer has subscribed to a yearly/monthly resource, the customer can use this API to unsubscribe from the resource, including the renewed part and currently used part. The customer cannot use the resources after unsubscription.
		Configuring Automatic Renewal for Yearly/ Monthly Resources	A customer can use this API to enable automatic subscription renewal for its long-term yearly/monthly resources to prevent the resources from being deleted when they are expired.

Scenar io	Sub- Scenari o	API Name	Description
		Canceling Automatic Renewal for Yearly/ Monthly Resources	A customer can disable automatic subscription renewal when needed. After disabling this function, the customer needs to manually renew the subscription to the resources before they expire.
		Enabling/ Canceling the Change from Yearly/ Monthly to Pay-per-Use upon Expiration	A customer can change the billing mode of resources from yearly/monthly to pay-peruse after the resources expire. The pay-peruse mode takes effect upon a yearly/monthly expiration.
	Resourc e packag	Querying Resource Packages	This API is used to query resource packages.
	e manage ment	Querying the Resource Usage	Partners can query the resource package usage of customers on the partner sales platform by resource.
		8.5.3 Querying Resource Package Usage Details	Customer can use this API to query details of resource package usage in their partners' sales platforms.
	Pay- per-use resourc e manage ment	Querying Customer's Pay-per-Use Resources	A partner can query the pay-per-use resources that have been provisioned for customers associated with the partner in the Reseller model.
Cloud service resour ce manag ement	Cloud service resourc e manage ment	Switching from the partner sales platform to the HUAWEI CLOUD portal	This API is used to switch from the partner sales platform to the HUAWEI CLOUD portal using a link to manage cloud service resources.
Bill manag ement	Custom er resourc e usage manage ment	Querying Customer Resource Usage	This API is used to query customer resource usage.

Scenar io	Sub- Scenari o	API Name	Description
	Partner bill manage	9.2.1 Querying Monthly Bills	You can query your monthly bills that cover amount due, expenditures, refunds, and adjustments.
	ment	9.2.2 Querying Bill Details of Monthly Expenditures	A partner can subscribe to the partner bill (customer resource usage) in the HUAWEI CLOUD Partner Center. For details, see File Subscription. Your sales platform will calculate the customer expenditures and generate the customer bills based on this bill and then you can perform reconciliation with HUAWEI CLOUD.
Invoice manag ement	Invoice manage ment	Querying the Invoice List	Partners can query the invoice list.
Manag ing service tickets	Managi ng service tickets	Service ticket management APIs	Partners and customers can submit HUAWEI CLOUD service tickets on the partner sales platform. When receiving the service tickets, the HUAWEI CLOUD aftersales service team will assist the customers to handle the problems related to HUAWEI CLOUD usage.

# 3 API Invoking Methods

# 3.1 RESTful API

The partner sales platform can invoke RESTful APIs provided by HUAWEI CLOUD. Alternatively, customers can switch from the partner sales platform to HUAWEI CLOUD through the web UI to purchase cloud services and manage cloud service resources.

# 3.1.1 Constructing Requests

This section describes the structure of a RESTful API request, and uses the API for creating customers of HUAWEI CLOUD partners as an example to describe how to call an API.

### **Request URI**

A request URI consists of the following:

### {URI-scheme}://{Endpoint}/{resource-path}?{query-string}

Although the request URI is included in the request header, most languages or frameworks require that it be transmitted separately from the request message. Therefore, the request URI is listed independently.

Table 3-1 URI parameter description

Parameter	Description
URI-scheme	Protocol used to transmit requests. All APIs use <b>HTTPS</b> .

Parameter	Description	
Endpoint	Specifies the domain name or IP address of the server bearing the REST service endpoint.	
	The operations API endpoint for partner is <b>bss- intl.myhuaweicloud.com</b> .	
	NOTE	
	<ul> <li>This endpoint is a global endpoint and can be used for all regions in Huawei Cloud (International Website).</li> </ul>	
	TLS 1.2 supported.	
resource-path	Resource path, that is, the API access path. Obtain the path from the URI of the API. For example, the resource-path of the API for creating a customer is /v2/partners/sub-customers.	
query-string	Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of " <i>Parameter name=Parameter value</i> ". For example, ?limit=10 indicates that a maximum of 10 data records will be displayed.	

For example, to obtain the request URI for creating a customer, obtain the corresponding **resource-path** (/v2/partners/sub-customers). Then, construct the URI as follows:

https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers

### **◯** NOTE

To simplify URI display, each API is provided with only **resource-path** and the request method. This is because the **URI-scheme** value of all APIs is **HTTPS**, and the endpoints in a region are the same. Therefore, the two parts are omitted.

## **Request Method**

The HTTP protocol defines the following request methods that can be used to send a request to the server:

Table 3-2 HTTP methods

Method	Description	
GET	Requests a server to return a specified resource.	
PUT	Requests a server to update a specified resource.	
POST	Requests a server to add a resource or perform a special operation.	
DELETE	Requests a server to delete a specified resource (for example, an object).	
HEAD	Requests a server resource header.	
PATCH	Requests a server to update partial content of a specified resource.	
	If the resource does not exist, the PATCH method is used to create a new resource.	

As shown in the URI for creating a customer, the request method is **POST**. The request URI is as follows:

POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers

# **Request Header**

You can also add additional fields to the request header, for example, the fields required by a specified URI and an HTTP method. **Table 3-3** lists common request header fields.

Table 3-3 Common request header fields

Field	Description	Mandatory	Example
Host	Specifies the server domain name and port number of the resources being requested. The value can be obtained from the URL of the service API. If the port number is not specified, the default port is used. The default port number for https is 443.	No This field is mandatory only when AK/SK is used for authenticatio n.	bss- intl.myhuaweicloud.com or bss- intl.myhuaweicloud.com: 443

Field	Description	Mandatory	Example
Content-Type	Specifies the request body MIME type. You are advised to use the default value application/json. For an object or image upload API, the value varies depending on the flow type.	Yes	application/json
Content- Length	Length of the request body. The unit is byte.	No	3495
X-Auth-Token	Specifies the user token. For details about how to obtain a token, see Token Authentication.	No This field is mandatory only when the token is used for authenticatio n.	The following is part of an example token: MIIPAgYJKoZIhvcNAQc- CoIIO8zCCDu8CAQExDTA LBglghkgBZQMEAgEwgg 1QBgkqhkiG9w0BBwGgg g1BBIINPXsidG9rZ

#### □ NOTE

In addition to supporting authentication using tokens, APIs support authentication using AK/SK, which uses SDK to sign a request. During the signature, the **Authorization** (signature authentication) and **X-Sdk-Date** (time when a request is sent) headers are automatically added to the request.

For more details, see Authentication Using AK/SK in Authentication.

The request of the interface for creating a customer is as follows after the request header is added:

POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers Content-Type: application/json X-Auth-Token: MIIPAqYJKoZIhvcNAQcCo...qqq1BBIINPXsidG9rZ

# (Optional) Request Body

This part is optional. A request body is often sent in a structured format (for example, JSON or XML) as defined in the **Content-Type** header field. If the request body contains Chinese characters, these characters must be coded in UTF-8.

Request bodies vary with API. Some APIs do not require a request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to create a customer, you can obtain the required request parameters and parameter description from the API request. The following

is a request carrying the message body, where the request parameters vary with actual condition.

```
POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers HTTP/1.1
Content-Type: application/json
X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

{
    "domain_name": "test",
    "email": "xxx@huawei.com",
    "verification_code": "253xxx",
    "domain_area": "HK",
    "xaccount_id": "35reyxxxx",
    "xaccount_type": "xxx_IDP",
    "password": "xxxxxxxxx",
    "is_close_market_ms": "true",
    "cooperation_type": "1"
}
```

If all data required for the API request is available, you can send the request to call the API through **curl**, **Postman**, or coding.

## 3.1.2 Authentication

You can use either of the following authentication methods when invoking an API:

- Token authentication: Requests are authenticated using tokens. This method is relatively simple.
- AK/SK authentication: Requests are encrypted using the access key ID (AK) and secret access key (SK). AK/SK authentication is recommended because it provides higher security than token authentication.

When a partner invokes some APIs, the customer authentication information is required. The partner can obtain this information only using the method provided in Obtaining a User Token with the assume\_role Method or Obtaining a Temporary Access Key and Security Token Through an Agencysecuritytoken. Therefore, using token authentication is recommended.

#### **Token Authentication**

#### **Ⅲ** NOTE

The validity period of a token is 24 hours. If a token needs to be used, the system caches the token to avoid frequent calling. For details about token validity periods, see **Obtaining a User Token Through Password Authentication** 

A token specifies certain permissions in a computer system. Authenticating using a token adds the token to the request header during API calling to obtain permissions to operate APIs through IAM.

In 3.1.1 Constructing Requests, the process of calling the API for obtaining a user token is described as an example. After obtaining the partner or customer token, add the X-Auth-Token header in a request to specify the token when calling other APIs. For example, if the token is ABCDEFJ...., add X-Auth-Token: ABCDEFJ.... in a request as follows:

Content-Type: application/json X-Auth-Token: ABCDEFJ....

 For details about how to obtain a partner token, see Obtaining a User Token. • For details about how to obtain a customer token, see **Obtaining a User Token with the assume role Method**.

## **AK/SK Authentication**

#### 

AK/SK authentication supports API requests with a body size not larger than 12 MB. For API requests with a larger size, token authentication is recommended.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used together with an SK to sign requests cryptographically.
- SK: secret access key, which is used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

You can use AK/SK to sign requests based on the signature algorithm or use a dedicated signature SDK to sign the requests. For details about how to sign requests and use the signing SDK, see API Request Signing Guide.

#### □ NOTE

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

# 3.1.3 Returned Values

## **Status Code**

After sending a request, you will receive a response containing the status code, response header, and response body.

A status code, a group of digits ranging from 1xx to 5xx, indicates the status of a response. For more information, see **Status Code**.

If **204** is returned for calling the API used to create a customer, the request is successful.

# **Response Header**

Similar to a request, a response also has a header, for example, **Content-Type**.

Figure 3-1 shows the response header for the API used to create a customer.

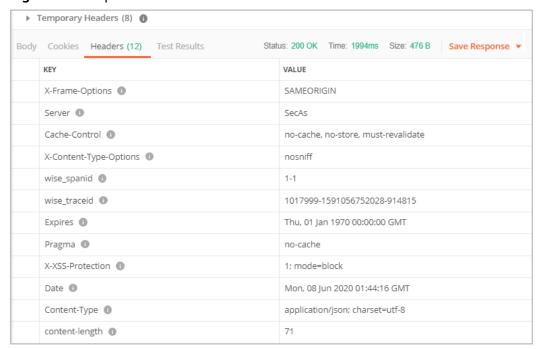

Figure 3-1 Response header for the API used to create a customer

# (Optional) Response Body

The body of a response is often returned in structured format (for example, JSON or XML) as specified in the **Content-Type** header field. The response body transfers content except the response header.

The following is part of the response body for the API used to create a customer:

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time
{
   "domain_id": "08f25edee500d3e70f4ec007d082eb80",
   "domain_name": "testdomainnamexxx"
}
```

If an error occurs during API calling, an error code and a message will be displayed. The following shows an error response body.

```
{
    "error_msg": "The name exists.cse://CBCCustomerRegService/rest/cbc/cbccustomerregservice/v1/
    customer/register[error_code]:CBC.7156[msg]:{\"error_code\":\"CBC.7156\",\"error_msg\":\"domainName
    exist.\"} ",
    "error_code": "CBC.99000038"
}
```

In the preceding information, **error\_code** is an error code, and **error\_msg** describes the error.

# 3.2 Web UI Mode

After logging in to the partner sales platform, a customer can directly switch to HUAWEI CLOUD to purchase cloud services and manage cloud service resources.

The partner sales platform must complete SAML authentication to establish a trust relationship with HUAWEI CLOUD.

## **Prerequisites**

The partner has performed steps in Access Configuration.

#### **SAML Authentication**

Figure 3-2 shows the SAML authentication process.

Partner Browser IAM platform The customer initiates the IAM SAML login request. Queries the IDP Metadata.xml file. Redirects the SAML request message. Initiates the SAML request message. Verifies and builds the SAML response Redirects the SAML message body. response message. Sends the SAML response message The account is bound so that the login is redirected to the service. Redirects to the service.

Figure 3-2 SAML authentication process

- A partner's customer uses a browser to call the HUAWEI CLOUD login link. IAM sends the SAML request.
  - a. The customer uses a browser to call the HUAWEI CLOUD login link. https://auth-intl.huaweicloud.com/authui/saml/login? xAccountType=ZXT&isFirstLogin=false&service=https%3a%2f%2fconsole-intl.huaweicloud.com%2fiam%2f

Parameter	Mand atory	Description	Example
xAccountTy pe	Yes	Indicates the identifier of the partner sales platform, which is globally unique. The value is provided by Huawei. After the partner configures the access parameters on the Partner Center page, the partner ID is generated. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?	ZXT
isFirstLogin	Jin No  If no HUAWEI CLOUD account is bound, this parameter is mandatory and must be set to <b>true</b> . Otherwise, the value can be left empty or set to <b>false</b> .		false
		After the account creation API is successfully called to create a customer account, HUAWEI CLOUD CBC has bound the customer account on the partner sales platform with the customer HUAWEI CLOUD account.	
service	Yes	Indicates the redirection address after login. The encodeURIComponent function is used for coding.	https%3a%2f %2fconsole- intl.huaweicloud.co m%2fiam%2f

b. IAM receives the login request of the partner's customer, locates the **SingleSignOnService** configuration item in the **IDP Metadata.xml** file based on the **xAccountType** value, and sends the **samlRequest** request to the required path.

SigAdg: http://mww.3.org/2020/cl/x1mds1ge.morest=s-ba256
Signature: fuTq+fjycXQlAccVHqff3GutgVtUlqdxdXIzyO25xxfA21688Yn0FPhilidc0p07yt1Pn/Xv8HX7OHE112c411889Ynm6Zf06000M6x9FHJ0WAHhBPBHQIgU3BlacIIdLVelxCXX07L7usu314repcr6hyn6rqYn14c-

Parameter	Description
SAMLRequest	Indicates the response message body. The response message is in XML format. IAM then
	compresses the message, encodes the message using Base64, and URL encodes the message.
	<ul> <li>If the partner uses the SAML toolkits, this parameter can be directly used. The partner does not need to parse the XML file.</li> </ul>
	<ul> <li>If the partner needs to parse the XML file, the partner needs to URL decode the message, decode the message using Base64, and decompress the message (zip.inflate). For details, see Sample Code for Parsing the SAMLRequest.</li> </ul>
RelayState	Indicates the response parameters for SAML.
SigAlg	Indicates the signature algorithm. Huawei uses SHA256 for signatures by default.
	HTTP://WWW.W3.ORG/2001/04/XMLDSIG- MORE#RSA-SHA256
Signature	Indicates the signature. The signature is used to verify the initiator of a request.
	When initiating a request, HUAWEI CLOUD uses the private key to sign SAMLRequest={ SAMLRequest }&RelayState={ RelayS tate } &SigAlg={ SigAlg } in request https://www.test.com/saml/login?
	SAMLRequest={SAMLRequest}&RelayState={RelayState}&SigAlg={SigAlg}&Signature={Signature} and then performs Base64 coding to obtain the signature value.
	The signature algorithm is specified by the <b>SigAlg</b> field.
	When receiving the request, the receiver verifies the signature value using the public key provided by HUAWEI CLOUD (the value in the <ds:x509certificate></ds:x509certificate> tag in the SP Metadata.xml file).
	If the signature verification succeeds, the request is sent by HUAWEI CLOUD, and the follow-up operations can be performed. Otherwise, the request is invalid.

- 2. The partner sales platform generates the SAML response message and sends it to HUAWEI CLOUD IAM.
  - The partner sales platform obtains the HUAWEI CLOUD public key and the response message path of samlResponse from the SP Metadata.xml

file. For details, see **Example, Public Key, and Response Path** in **Obtaining the SP Metadata File**.

b. The partner sales platform generates the SAML response message.

The response message body is in XML format. For the correct response message body and its parameter description, see the following displayed content.

#### **NOTICE**

The following content is for reference only. The description in the comments must be modified. The time and ID defined by SAML vary depending on the message. Therefore, it is recommended that you should not directly modify the response message content. Instead, you shall use the SAML toolkits to generate the response message.

                         PrefixList="xs" />
             </ds:Transform>
          </ds:Transforms>
          <ds:DigestMethod Algorithm="http://www.w3.org/2000/09/xmldsig#sha256" />
          <ds:DigestValue>.....</ds:DigestValue>
        </ds:Reference>
     </ds:SignedInfo>
    <!-- Third-party signature value -->
     <ds:SignatureValue>
    </ds:SignatureValue>
     <ds:KeyInfo>
       <ds:X509Data>
          <!-- Third-party public key certificate -->
          <ds:X509Certificate>
      </ds:X509Certificate>
        </ds:X509Data>
     </ds:KeyInfo>
  </ds:Signature>
```

- iii. Generate the **DigestValue** value for the signature object **Assertion**.
  - 1) Convert **Assertion** according to the algorithm defined in **Transform** of **Signature**.
  - 2) Generate a digest for the object obtained in 1) according to the algorithm specified in **DigestMethod**.
  - 3) Place the generated digest value in the **DigestValue** tag.
- iv. Use the private key in **Step 6** in **Generating a Certificate** to generate the **SignatureValue** value for the **SignedInfo** object signature.
  - Convert SignedInfo according to the algorithm defined in CanonicalizationMethod
  - Generate the signature value for the object obtained in 1) according to the signature algorithm defined in SignatureMethod. Place the obtained signature value in SignatureValue.
- v. Combine the values of **DigestValue** and **SignatureValue** to form the final **Signature** object. Place the value in **Assertion** as its subelement.

The signature is displayed as follows.

```
<saml2:Assertion ID="_2320c40ac7b5e857b2d0d4ea0c8758c3"</p>
IssueInstant="2018-10-30T08:21:41.740Z" Version="2.0"

     xmlns:ds="http://www.w3.org/2000/09/xmldsig#">
   <!-- Third-party signature value -->
    <ds:SignatureValue>
   </ds:SignatureValue>
     <ds:KeyInfo>
       <ds:X509Data>
     <!-- Third-party public key certificate -->
          <ds:X509Certificate>
      </ds:X509Certificate>
       </ds:X509Data>
     </ds:KeyInfo>
  </ds:Signature>
</saml2:Assertion>
```

**Table 3-4** Description of parameters between **<saml2:AttributeValue>** and **</saml2:AttributeValue>** 

Parameter	Description
xUserId	Indicates the user ID of the partner's customer on the partner sales platform. This parameter value equals the value of <b>xAccountId</b> .
xAccountId	Indicates the account ID of the partner's customer on the partner sales platform.

Parameter	Description
bpId	Indicates the partner ID.
	For details, see How Do I Check the Partner ID?
email	Indicates the email address.
	This parameter is optional.
	The parameter must meet the following requirements:
	Must be unique for each customer.
	A maximum of 64 characters
	<ul> <li>Passes the verification using the following regular expression: ^[azA-Z0-9.!#\$%&amp;'*+\\/=?^_`{ }~-]+@[a-zA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?(?:\\. [azA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?)*\$</li> </ul>
name	Indicates the account name transferred on the partner sales platform.
	This parameter is optional.
	The account name must be the same as the value of domain_name in the request for API in 5.1.3 Creating a Customer.

#### 

**Table 3-4** involves the account ID and user ID because HUAWEI CLOUD IAM has the account and user concepts. For details about the two concepts, see "Account" and "IAM User" in **Basic Concepts**.

c. If the customer has logged in to the partner sales platform, the SAML response message is returned directly. Otherwise, the SAML response message is displayed after the login.

Send a POST request to the HUAWEI CLOUD response path **AssertionConsumerService** in **2.a**. The parameters must be in the Form Data format.

TQUq1IFJ7%2FFNMFHF1KQgbKijySZ1M8uQqb%2FKSFxN%2B9S6dvim%2BAatPgbxX9hj0pfR%2BHEXEPzRNnds wX6LQaqPQ%2F%2Bc4IJufmvz7Rue%2FAA%3D%3D&RelayState=\_lidh2rjxc81dnuc72qmpbs1f4bm16r9fgt n8rNI5twTosXm0NhZDj%2BGnfVBfG9T4X5nisoK843vRqzY13CPmb0swQWb%2FFHryetP9deoceEBkTgf81xM] HCPUJ%2BNSZc5aUinPUDIn9gxGsEMosv8f%2FcYPe1GL%2F9iMS1ChGElk18Rmj6Y5F3SVrFEsVVYMckzPPAzł L2Ts%2B4BW8YbdqeUyfIKJwruVfX8KoHdC8xCl8bRN5mOHqAjCMYTQAJrCm%2BBGJVxUXit0gYeqkYH6dYkVf BgDXY1GUeOQqdckhgT36Aiz2GCZwK7lpvhAEFi2xMZGZU4xlKVZNYY1yzfjMB164pMsyd3JDrzZfcbraPnTBa: Upgrade-Insecure-Requests: 1 User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64) AppleWebKit/537.36 (KHTML, like Gecko) Form Data view source view URL encoded SAMLResponse: PD94bWwgdmVyc2lvbj0iMS4wIiBlbmNvZGluZz0iVVRGLTgiPz4KPHNhbWwycDpSZXNwb25 MDAzYmYwYjkxN2NmMCIgSW5SZXNwb25zZVRvPSJfZGNrNG1tMDhxbWRoYzhrNG51aXIwN2hnaGV0ZHFxZzh1bW 11czp@YzpTQU1M0jIuMDpwcm90b2NvbCI+PHNhbWwyOklzc3VlciBGb3JtYXQ9InVybjpvYXNpczpuYW1lczp6 Pmh0dHBzOi8vaWRwLmlzZXNvbC5jb20vaWRwL3NoaWJib2xldGg8L3NhbWwyOklzc3Vlcj48c2FtbDJwO1N0Y) RhdHVzTWVzc2FnZT51cm46b2FzaXM6bmFtZXM6dGM6U0FNTDoyLjA6c3RhdHVzOlN1Y2Nlc3M8L3NhbWwycDp1 IElzc3VlSW5zdGFudD0iMjAxOC0xMC0zMFQwODoyMTo0MS43NDBaIiBWZXJzaW9uPSIyLjAiIHhtbG5zOnNhbW

Parameter	Description
SAMLResponse	Identifies the string obtained by encoding the SAML response message body in <b>2.b</b> using Base64.
RelayState	The value of this parameter is the same as that in the SAML request message.

3. IAM parses the SAMLResponse. When the customer account creation API is called to create an account, HUAWEI CLOUD CBC binds the customer account on the partner sales platform with the HUAWEI CLOUD account. Therefore, the customer can be redirected to the service page and purchase and manage the cloud services.

# 3.3 API Access Permission (Partner)

API access requires authorization. You can attach roles that contain required permissions for accessing specific APIs to accounts as needed in Partner Center. Supported actions of APIs are listed in the following table. The API can be accessed as long as one of its actions is supported.

#### ■ NOTE

For APIs not listed in the table, fine-grained permission verification is not required and all operator accounts can access them.

- For more details, visit:
  - Partner Operation Capability API (Reseller Model)

# 4 Product Management

# **4.1 Quering Product Information**

# 4.1.1 Querying Cloud Service Types

## **Function**

This API is used to query cloud service types on the partner sales platform.

## **Constraints**

This API can be invoked using the partner AK/SK or token.

KooGallery services are not included.

# **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

GET /v2/products/service-types

**Table 4-1** Header parameter

Paramete	Manda	Value	Description
r	tory	Range	
X- Language	No	A maximu m of 8 characte rs	Language. • zh_CN: Chinese • en_US: English Default value: zh_CN

**Table 4-2** Query parameters

Paramete r	Manda tory	Туре	Value Range	Description
offset	No	Integer	0 to 100000 0000	Offset, which starts from 0. The default value is <b>0</b> .  If this parameter is not included in the request, is left empty, or is set to <b>null</b> , the value <b>0</b> is used. This parameter cannot be set to "". <b>NOTE</b> This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. <b>offset</b> indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned.  For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and <b>offset</b> to <b>1</b> , the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
limit	No	Integer	[1-1000	Number of records queried each time. The default value is <b>10</b> .  If this parameter is not included in the request, is left empty, or is set to <b>null</b> , the value <b>10</b> is used. This parameter cannot be set to "".

## **Response Parameters**

Parameter	Туре	Value Range	Description
error_code	String	A maximu m of 20 character s	Error code.  For details, see <b>Returned Values</b> . This parameter is returned only when the query failed.
error_msg	String	A maximu m of 1000 character s	Error description. This parameter is returned only when the query failed.
total_count	Integer	-	Total number.
infos	List <servi ceResour ceInfo&gt;</servi 	A maximu m of 100 values	List of basic resource information. For details, see <b>Table 4-9</b> .

**Table 4-9** ServiceResourceInfo

Parameter	Туре	Value Range	Description
basic_info	BasicInfo Object	-	Basic resource information. For details, see <b>Table 4-10</b> .

Table 4-10 ResourceBasicInfo

Parameter	Туре	Value Range	Description
resource_typ e_code	String	A maximu m of 64 character s	Resource type code. Example: hws.resource.type.general.
product_own er_service	String	A maximu m of 64 character s	Code of the service where a resource belongs. Example: hws.service.type.offline.

Parameter	Туре	Value Range	Description
name	String	A maximu m of 1024 character s	Resource type. Example: general specifications.
description	String	A maximu m of 1024 character s	Resource type description.

## **Example Response**

```

#### **Returned Values**

#### ■ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- **5**xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description	
400	CBC.0100	Invalid parameter.	
403	CBC.0151	Access denied.	
500	CBC.0999	Other errors.	

# 4.1.4 Querying Usage Types

## **Function**

This API is used to query resource usage types on the partner sales platform.

#### **Constraints**

This API can be invoked using the partner AK/SK or token.

## **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

GET /v2/products/usage-types

Table 4-11 Header parameter

Paramete	Manda	Value	Description
r	tory	Range	
X- Language	No	A maximu m of 8 characte rs	Language.  • zh_CN: Chinese  • en_US: English  Default value: zh_CN

Table 4-12 Query parameters

Paramete r	Manda tory	Туре	Value Range	Description
resource_t ype_code	No	String	A maximu m of 64 charact ers	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. If the value is "", it can be used as a filter criterion.
offset	No	Integer	0 to 100000 000	Offset, which starts from 0. The default value is <b>0</b> .  NOTE  This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. <b>offset</b> indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned.  For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and <b>offset</b> to <b>1</b> , the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
limit	No	Integer	1 to 100	Number of records queried each time. The default value is <b>10</b> .

403	CBC.0151	Access denied.	
500	CBC.0999	Other errors.	

## 4.2 Querying the Price of a Product

### 4.2.1 Querying the Price of a Pay-Per-Use Product

### **Function**

Partners can query the price of a pay-per-use product by criteria on the sales platform.

If the tenant who purchases the product enjoys a discount, the discount amount and the final price can be obtained from the query result.

If the tenant has enjoyed multiple types discounts, the system will return the commercial discount amount and the final price preferentially.

### **A** CAUTION

- Ensure that you provide the correct service type, region, resource type, and resource specification are provided. Otherwise, an error may be reported.
- You can use the **price calculator** to determine product prices.
- You can also use the price calculator to get the value of the product\_infos
  request parameter when you call the API for querying product prices. For more
  details, see price inquiry examples.

### **Constraints**

This API can be invoked using the customer token replaced by the partner token.

### Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

### **URI**

POST /v2/bills/ratings/on-demand-resources

### Request

### **Request Parameters**

Parameter	Manda tory	Туре	Value Range	Description
project_id	Yes	String	A maximu m of 64 charact ers	Project ID.  NOTE  If the customer token is used, invoke the API for obtaining a user token with the assume_role method to obtain the project ID of the target region. For details, see Step 2 in How Can I Replace a Partner Token with a Customer Token.  To call this API, an IAM member account must be authorized by the IAM master account. For details, see Creating a User Group and Assigning Permissions.
product_in fos	Yes	List <de mandPr oductIn fo&gt;</de 	A maximu m of 100 values	Indicates the product information list. For details, see <b>Table 4-18</b> .

Parameter	Manda tory	Туре	Value Range	Description
inquiry_pr ecision	No	Integer	-	Precision of the price query result. The default value of this parameter is <b>0</b> (default precision of the price query result).
				<ul> <li>0: The default precision of the query result. The result contains a maximum of six decimal places with the unit of USD, such as USD 0.000001.</li> </ul>
				1: The result contains a maximum of 10 decimal places with the unit of USD, such as USD 1.0000000001.
				NOTE  Value 0 and value 1 make differences only when the query result contains at least six decimal places.

Table 4-18 DemandProductInfo

Parameter	Manda tory	Туре	Value Range	Description
id	Yes	String	A maxim um of 64 charact ers	The ID is used to identify the mapping between the inquiry result and the request and must be unique in an inquiry.
cloud_servi ce_type	Yes	String	A maxim um of 400 charact ers	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.

Parameter	Manda tory	Туре	Value Range	Description
resource_ty pe	Yes	String	A maxim um of 400 charact ers	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.  The relationship between ResourceType and CloudServiceType is as follows: A resource type represents a resource contained in the cloud service type, and the cloud service type is a combination of multiple resource types.

Parameter	Manda tory	Туре	Value Range	Description
resource_s pec	Yes	String	A maxim um of 400 charact ers	Resource specifications. For details, see related cloud service documentation.  The following provides examples of services and resource specifications:  ECS Add .win or .linux to the end of the ECS flavor ID based on the OS type, for example, s2.small.1.linux. Call the API for querying details about flavors and extended flavor information to obtain the flavor IDs.  Bandwidth  12_bgp: dynamic BGP bandwidth billed by traffic  12_sbgp: static BGP bandwidth billed by traffic  19_bgp: dynamic BGP bandwidth  19_sbgp: Static BGP bandwidth  19_share: Shared bandwidth  19_share: Shared bandwidth billed by bandwidth  19_share: Shared bandwidth  19_share: Shared bandwidth  EVS  SATA: common I/O EVS disk  SAS: high I/O EVS disk  GPSSD: general-purpose SSD EVS disk  SSD: ultra-high I/O EVS disk  ESSD: Extreme SSD  GPSSD2.storage: General-purpose SSD V2 storage  GPSSD2.iops: General-purpose SSD V2 iops

Parameter	Manda tory	Туре	Value Range	Description
				- GPSSD2.throughput: General- purpose SSD V2 throughput
region	Yes	String	A maxim um of 64 charact ers	Cloud service region code, for example, ap-southeast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
usage_fact or	Yes	String	A maxim um of 64 charact ers	Usage factor. Usage factors are case-insensitive. The value is the same as the usage factor value in the SDR. The mapping between cloud services and usage factors is as follows:
				• Cloud server: <b>Duration</b>
				Cloud disk: <b>Duration</b>
				EIP: Duration
				Bandwidth: <b>Duration</b> or <b>upflow</b>
				Marketplace image: <b>Duration</b>
				You can call the API in 4.1.4  Querying Usage Types to obtain the value of parameter code in  Table 4-13. The value indicates the billing factor of each cloud service.
usage_valu	Yes	BigDeci	-	Usage value.
е		mal		For example, if you want to inquire a product price by hour, set usageValue to 1 and usageMeasureID to 4 (hour).
usage_mea sure_id	Yes Integer	Integer	A maxim um of 4	Usage unit. You can call the API in 4.1.5 Querying Measurement Units to obtain the value.
			charact ers	For example, if you want to inquire a product price by hour, set usageValue to 1 and usageMeasureID to 4 (hour).
subscriptio n_num	Yes	Integer	[1-1000 0]	Number of subscriptions.

Parameter	Manda tory	Туре	Value Range	Description
available_z one		maxim	Available zone ID. Available zone IDs are case-insensitive.	
			um of 64 charact ers	If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , it cannot be used as a filter criterion.
resource_si ze	No	Integer	[1-2147 83647]	Resource capacity. It can be the subscribed volume size or bandwidth size.
				This parameter is mandatory for a linear product. Linear products are those whose size must be specified during a subscription, such as hard disks and bandwidth. For example, you can select 10 GB or 20 GB during a disk subscription.
				For non-linear products, if this parameter is not included in the request parameters or is set to <b>null</b> , it cannot be used as a filter criterion.
size_measu re_id	No	Integer	A maxim	Resource capacity measurement ID. The options are:
			um of 4 charact ers	• <b>15</b> : Mbit/s (used when the bandwidth is subscribed)
				• <b>17</b> : GB (used when an EVS disk is subscribed to)
				• 14: amount (times)
				This field should be filled together with <b>resource_size</b> or left blank.
				Linear products are those whose size must be specified during a subscription, such as hard disks and bandwidth. For example, you can select 10 GB or 20 GB during a disk subscription.
				For non-linear products, if this parameter is not included in the request parameters or is set to <b>null</b> , it cannot be used as a filter criterion.

### ∩ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.99006006	Product not found.
400	CBC.99006050	Incorrect usage unit.
400	CBC.99006055	The queried amount exceeds the upper limit.
400	CBC.99006074	The billing item does not exist.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

### 4.2.2 Querying the Price of a Yearly/Monthly Product

### **Function**

Partners can use this API to query prices of yearly/monthly products for new subscriptions on their sales platforms.

If the tenant who purchases the product enjoys a discount, the discount amount and the final price can be obtained from the query result.

If the customer enjoys multiple discounts, the system returns the rating result for each discount. The system preferentially uses the rating result of the commercial discount if the customer selects automatic payment.

### **CAUTION**

- Ensure that you provide the correct service type, region, resource type, region and resource specification. Otherwise, an error may be reported.
- You can use the **price calculator** to determine product prices.
- You can also use the price calculator to get the value of the product\_infos
  request parameter when you call the API for querying product prices. For more
  details, see price inquiry examples.

### **Constraints**

This API can be invoked using the customer token replaced by the partner token.

### Debugging

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug SDK code samples.

### **URI**

POST /v2/bills/ratings/period-resources/subscribe-rate

### Request

### **Request Parameters**

Parameter	Manda tory	Туре	Value Range	Description
project_id	Yes	String	A maximu m of 64 charact ers	Project ID.  NOTE  If the customer token is used, invoke the API for obtaining a user token with the assume_role method to obtain the project ID of the target region. For details, see Step 2 in How Can I Replace a Partner Token with a Customer Token.  To call this API, an IAM member account must be authorized by the IAM master account. For details, see Creating a User Group and Assigning Permissions.
product_in fos	Yes	List <per iodProd uctInfo &gt;</per 	A maximu m of 100 values	Product information list. For details, see <b>Table 4-21</b> .

Table 4-21 PeriodProductInfo

Parameter	Manda tory	Туре	Value Range	Description
id	Yes	String	A maxim um of 64 charact ers	The ID is used to identify the mapping between the inquiry result and the request and must be unique in an inquiry.
cloud_servi ce_type	Yes	String	A maxim um of 400 charact ers	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
resource_ty pe	Yes	String	A maxim um of 400 charact ers	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.  The relationship between ResourceType and CloudServiceType is as follows: A resource type represents a resource contained in the cloud service type, and the cloud service type is a combination of multiple resource types.

Parameter	Manda tory	Туре	Value Range	Description
resource_s pec	Yes	String	A maxim um of 400 charact ers	Resource specifications. For details, see related cloud service documentation.  The following provides examples of services and resource specifications:  ECS Add .win or .linux to the end of the ECS flavor ID based on the OS type, for example, s2.small.1.linux. Call the API for querying details about flavors and extended flavor information to obtain the flavor IDs.  Bandwidth  12_bgp: dynamic BGP bandwidth billed by traffic  12_sbgp: static BGP bandwidth billed by traffic  19_bgp: dynamic BGP bandwidth  19_sbgp: Static BGP bandwidth  19_sbgp: Static BGP bandwidth  19_share: Shared bandwidth billed by bandwidth  19_share: Shared bandwidth  Paddress:  5_bgp: dynamic BGP public IP address  RDS: You can call the API for querying database specifications to obtain the RDS specifications.  DCS: You can call the API for querying service specifications to obtain the DCS specifications.  EVS:  SATA: Common I/O  SAS: High I/O

Parameter	Manda tory	Туре	Value Range	Description
				<ul> <li>GPSSD: General-purpose SSD</li> <li>SSD: Ultra-high I/O</li> <li>ESSD: Extreme SSD</li> <li>GPSSD2.storage: General-purpose SSD V2 storage</li> </ul>
region	Yes	String	A maxim um of 64 charact ers	Cloud service region code, for example, ap-southeast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
period_typ e	Yes	Integer	[0-4]	Period type of a yearly/monthly product order.  • 0: Day  • 2: Month  • 3: Year  • 4: Hour
period_nu m	Yes	Integer	[1-2147 83647]	Number of periods of a yearly/ monthly product order.
subscriptio n_num	Yes	Integer	[1-1000 0]	Number of subscriptions of a yearly/monthly product order.
available_z one	No	String	A maxim um of 64 charact ers	AZ identifier, for example, cn-north-1a. AZ identifiers are case-insensitive. Obtain the value from the Availability Zone (AZ) column in Regions and Endpoints.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Parameter	Manda tory	Туре	Value Range	Description
resource_si ze	No	Integer	[1-2147 83647]	Resource capacity. It can be the subscribed volume size or bandwidth size.
				This parameter is mandatory for a linear product. Linear products are those whose size must be specified during a subscription, such as hard disks and bandwidth. For example, you can select 10 GB or 20 GB during a disk subscription.
				For non-linear products, if this parameter is not included in the request parameters or is set to <b>null</b> , it cannot be used as a filter criterion.
size_measu re_id	No	Integer	-	Resource capacity measurement ID. The options are as follows:
				• <b>15</b> : Mbit/s (used when the bandwidth is subscribed)
				• <b>17</b> : GB (used when a cloud disk is subscribed)
				• <b>14</b> : amount
				This parameter is mandatory for a linear product. Linear products are those whose size must be specified during a subscription, such as hard disks and bandwidth. For example, you can select 10 GB or 20 GB during a disk subscription.
				For non-linear products, if this parameter is not included in the request parameters or is set to <b>null</b> , it cannot be used as a filter criterion.

# 4.2.3 Querying the Renewal Price of a Yearly/Monthly Resource

### **Function**

Customers can query the renewal price of a yearly/monthly resource by criteria on the partner sales platform.

### **Ⅲ** NOTE

- If a primary resource has resources attached, the renewal price will include the price of the primary resource and that of the attached. The information of the attached resources can also be accessed through 8.4.1 Querying Customer's Yearly/Monthly Resources.
- Note: When a newly purchased EVS disk is attached to an ECS, the EVS disk is not necessarily an attached resource of the ECS. The precise information of the attached resources can only be accessed through 8.4.1 Querying Customer's Yearly/Monthly Resources.

### **Constraints**

Only customer AK/SK can be used to call the API. Since partners are not allowed to buy products with their own accounts, let alone yearly/monthly products.

### Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug SDK code samples.

### URI

POST /v2/bills/ratings/period-resources/renew-rate

### Request

### Request parameters

Paramet er	Mand atory	Parame ter Type	Value Range	Description
resource _ids	Yes	List <stri ng&gt;</stri 	[1-10]	Primary resource IDs  A maximum of 10 resource IDs are supported.  Determine whether a resource is a primary resource or not by the is_main_resource, a response parameter described in 8.4.1  Querying Customer's Yearly/ Monthly Resources.

Paramet er	Mand atory	Parame ter Type	Value Range	Description
period_ty pe	Yes	Integer	[2 3]	Period type:  • 2: Month  • 3: Year
period_n um	Yes	Integer	[1-11]	Number of periods:  • Month: 1 to 11  • Year: 1 to 3
include_r elative_r esources	No	Boolean	-	Specifies whether to include associated resources for renewal price querying.  • false: Not included.  • true: Included.  If this parameter is not included in the request or is set to "", the default value false is used.

```

### **Status Codes**

### □ NOTE

- 4xx: indicates an error resulting from client, such as the request contains bad syntax or an invalid parameter. You need to check the statement and its format and make a request again.
- 5xx: indicates an error to the Huawei Cloud system, which prevented the system from fulfilling the request from client. You can contact Huawei Cloud customer service to handle the issue.

HTTP Status Code	Error Code	Description
200	CBC.300500 07	Renewal price inquiry is not applicable to non-primary resources.
200	CBC.300500 08	The period type or number of periods for the resource does not exist.
200	CBC.300500 09	The resources have expired and been deleted or do not exist.
200	CBC.300500 10	This operation is not allowed because some resources included in your orders are to be paid.
200	CBC.300500 11	Resources are being unsubscribed from or changed.
200	CBC.300500 13	Renewal not supported.
400	CBC.0100	Incorrect parameter
400	CBC.990060 06	The required product cannot be found.
400	CBC.990060 24	Failed to query product information.
400	CBC.990060 16	Failed to query coupon information.
400	CBC.990060 17	Failed to query customer information.
400	CBC.990060 50	Incorrect usage unit
400	CBC.990060 55	The queried amount exceeds the upper limit.
400	CBC.990060 66	Billing query failed

HTTP Status Code	Error Code	Description
400	CBC.990060 73	Project not found
400	CBC.300500 12	There are duplicate resource IDs.
403	CBC.0151	Access denied
403	CBC.0154	Invalid or expired token
500	CBC.0999	Other errors

# 5 Customer Management

# **5.1 Customer Registration**

## **5.1.1 Verifying Customer Registration Information**

#### **Function**

This API is used to check whether the account name, and mobile number or email address entered by the customer can be used for registration.

For the registration with mobile numbers, whether the number of registered mobile numbers exceeds the upper limit will be checked.

#### **Constraints**

This API can be invoked using the partner AK/SK or token only.

## **Debugging**

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/partners/sub-customers/users/check-identity

#### Request

Param eter	Mand atory	Туре	Value Range	Description
search_ type	Yes	String	[email  mobile  name]	The options are email, mobile, or name.
search_ value	Yes	String	A maximu m of 64 character s	<ul> <li>Mobile number, email address, or account name.</li> <li>The mobile number must comply with the regular expression "^ \d{4}-\d+\$". The value contains the country code and starts with 00. The format is "00XX-XXXXXXXX".</li> <li>The email address must consist of an email prefix and an email domain, as well as the (@) symbol.</li> <li>name: The value must comply with the regular expression "^([a-zA-Z-] ([a-zA-Z0-9]){4,31})\$" and contains 5 to 32 characters. The value cannot start with op_ or shadow_ and cannot contain only digits. It must start with a letter (case-insensitive) or a hyphen (-).</li> </ul>

```
POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers/users/check-identity HTTP/1.1

}
```

## Response

#### Response Parameters

Param eter	Туре	Value Range	Description
error_c ode	String	A maximu m of 16 character s	Error code. For details, see <b>Returned Values</b> . This parameter is returned only when a failure occurs.

Param eter	Туре	Value Range	Description
error_ msg	String	A maximu m of 1024 character s	Error description. This parameter is returned only when a failure occurs.
check_ result	String	A maximu m of 32 character s	<ul> <li>available: The account name, mobile number, or email address is valid.</li> <li>used_by_user: The account name, mobile number, or email address is in use.</li> </ul>

#### **Example Response**

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time
{
    "error_code": "CBC.0000",
    "error_msg": "success",
    "check_result": "available"
}
```

#### **Returned Values**

#### □ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

# 5.1.2 Sending a Verification Code

#### **Function**

If a customer enters an email address during registration, the system sends a registration verification code to the email address to verify the information.

#### **Constraints**

This API can be invoked only by the partner AK/SK or token.

The verification codes are sent only during registration. After invoking this API, you need to invoke the API in **5.1.3 Creating a Customer** to create the registered customers.

## **Debugging**

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/bases/verificationcode/send

#### **Returned Values**

#### ■ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0 100	Parameter error.
400	CBC.9 9000 035	You are not a customer of a partner yet.
400	CBC.9 9004 002	Failed to generate the verification code.
400	CBC.9 9004 003	The verification code is successfully generated but fails to be sent.
400	CBC.9 9004 004	Empty email address./Invalid format.
400	CBC.9 9004 015	The number of verification code sending times has reached the upper limit (15 times per hour, 60 times per day).
401	CBC.0 154	Invalid or expired token.
403	CBC.0 151	Access denied.
500	CBC.0 999	Other errors.

# 5.1.3 Creating a Customer

#### **Function**

This API is used to create a Huawei Cloud account for a customer when the customer creates an account on your sales platform, and bind the customer account on the partner sales platform to the HUAWEI CLOUD account. In addition, the Huawei Cloud account is bound to the partner account.

## **CAUTION**

- After a HUAWEI CLOUD account is created for a customer, SAML authentication is required if the customer wants to switch from the partner sales platform to the Huawei Cloud official website. For details, see "SAML Authentication" in Web UI Mode.
- If you do not enter the email address when creating a customer, the customer cannot receive any email notification from Huawei Cloud. The customer needs to log in to the Huawei Cloud to add the email address by themselves.
- When the API for creating a customer is invoked, Huawei Cloud will synchronously create a Huawei Cloud customer account and send the customer ID and account name to the partner platform. Then, Huawei Cloud associates the customer with the partner asynchronously. To query the association result, you can invoke the API described in 5.3.1 Querying Customers.
- Newly created customers are associated with their partners in the reseller model by default.

#### **Constraints**

- This API can be invoked using the partner AK/SK or token only.
- Huawei Cloud Customer AgreementPrivacy Statement must be displayed on the page for creating a customer on the partner sales platform.
- This API is used to replace the partner token with the customer token to allow the partner to provide or query resources as a customer. Therefore, the partner must obtain the customer authorization before invoking this API.
- Obtain the verification code using the API in 5.1.2 Sending a Verification Code and then invoke this API if you enter the email address when creating a customer.
- The password must contain at least eight characters, which will take effect since August 1, 2022.

## **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/partners/sub-customers

#### Request

Parameter	Mandat ory	Туре	Value Range	Description
domain_are a	Yes	String	A maximum of 2 characters	Two-letter ID representing the country/region of the customer. The ID complies with the ISO 3166 standard.  Example: MX for Mexico
xaccount_id	Yes	String	A maximum of 128 characters	Unique user ID on the partner sales platform. The ID is allocated by the partner.
xaccount_ty pe	Yes	String	A maximum	Platform ID assigned by Huawei to a partner.
			of 64 characters	This value is assigned by Huawei. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?
domain_na me	No	String	[5-32]	HUAWEI CLOUD username of the customer.
				If this parameter is left blank, the value is generated randomly.
				The value cannot start with op_ or shadow_ and cannot contain only digits.
				The verification length is 5 to 32 digits and the verification rules are ^([a-zA-Z]([a-zA-Z0-9])*)\$.
				If this parameter is not included in the request parameters, is set to "", or is set to null, the value is randomly generated.
email	No	String	Α .	Email address.
			maximum of 64 characters	Format: The value must contain @.
		Characters	If this parameter is not included in the request parameters or is set to <b>null</b> , no value is returned. If this parameter is set to "", "" is returned.	

Parameter	Mandat ory	Туре	Value Range	Description
verification_ code	No	String	[6]	Verification code.  Invoke the API described in 5.1.2 Sending a Verification Code to obtain the verification code.  If no email address is available, you do not need to enter the verification code.  If this parameter is not included in the request parameters or is set to null, this parameter will not be used. It cannot be set to "".
password	No	String	The value can be a string of 8 to 32 characters .	<ul> <li>The password must meet the following rules:</li> <li>Contains at least two of the following character types: uppercase letters, lowercase letters, digits, and special characters.</li> <li>Differs from the account name or the account name or the account name in reverse order.</li> <li>Does not contain the email address.</li> <li>If this parameter is left blank, a user does not have a password and cannot directly log in to HUAWEI CLOUD. In this case, the user can only switch to HUAWEI CLOUD from the partner system using SSO.</li> <li>If this parameter is not included in the request parameters or is set to null, the password is randomly generated. This parameter cannot be set to "".</li> </ul>

Parameter	Mandat ory	Туре	Value Range	Description
is_close_ma rket_ms	No	String	A maximum of 10 characters	Whether to disable the marketing message sending function.  • true: Disable this function.  • false: Retain this function enabled (default).  If this parameter is not included in the request parameters, is set to "", or is set to null, false is returned.
indirect_par tner_id	No	String	A maximum of 64 characters	Reseller ID. For details about how to obtain such IDs, see 6.1.1 Querying the List of Huawei Cloud Resellers.  This parameter is mandatory for creating a customer for a Huawei Cloud reseller. If this parameter is not included in the request parameters, is set to "", or is set to null, this parameter will not be used.
include_ass ociation_res ult	No	Boolean		Whether to return the result of associating a partner and sub-customer.  • true: Returns the association result.  • false: Does not return the association result.  The default value is false.  If this parameter is not included in the request parameters, is set to "", or is set to null, false is returned.

```
POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers HTTP/1.1

## Response

#### **Response Parameters**

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 16 characters	Error code. For details, see <b>Returned Values</b> . This parameter is returned only when a failure occurs.
error_msg	String	A maximum of 1024 characters	Error description. This parameter is returned only when a failure occurs.
domain_id	max of 64	A maximum of 64 characters	Customer ID.
			This parameter is returned only when the operation is successful or an error whose code is CBC.99000050 occurs.
domain_na me	String A maximum	* *	HUAWEI CLOUD username of the customer.
		of 64 characters	If the request contains this parameter, the response must contain the same parameter value as the request.
			If the request does not contain this parameter, the response contains a 32-bit character string randomly generated by the system.
			This parameter is returned only when the operation is successful or an error whose code is CBC.99000050 occurs.

#### **Example Response**

```
HTTP/1.1 200 OK

Content-Length: length
Date: response time
{
  "domain_id": "06a7969058802f0c0f01c00b91846780",
  "domain_name": "a0d736359ada40aab6502d1a828c1809"
}
```

#### **Returned Values**

#### □ NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.  Check whether the input parameters meet the requirements according to the request parameter descriptions.
400	CBC.0101	Invalid parameter.
400	CBC.5001005 9	Customer association not supported for distributors.
400	CBC.9900003	The account name already exists.
400	CBC.9900002 8	The email address already exists.
400	CBC.9900003	Invalid account name.
400	CBC.5016	Invalid email address format.
400	CBC.9900003	Duplicate xAccountId.
400	CBC.9900000 4	An exception occurred when the customer authorized rights to the partner.
400	CBC.9900003	Invalid password.
400	CBC.9900003	Currently, registration with HUAWEI CLOUD is not available for users in this country.
400	CBC.9900003	You do not have the permission to operate this Huawei Cloud reseller.
500	CBC.9900005 0	Query for the result of associating partner and its sub-customer timed out. Refer to <b>5.3.1 Querying Customers</b> to check the association result.
400	CBC.9900005	Customer creation failed because this mobile number or email address has been preregistered by Huawei.

HTTP Value	Error Code	Description
400	CBC.9900400 7	Invalid email address.
400	CBC.9900400 8	Invalid verification code.
400	CBC.9900400 9	The verification code is available, but the number of verification failures is greater than 3.
400	CBC.9900401 0	The verification code entered by the client is incorrect.
400	CBC.9900503 5	This API cannot be used by a sandbox account.
401	CBC.0154	Invalid or expired token.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.
400	CBC.5001008	Customer association not allowed. The account of this partner has been restricted.
400	CBC.5001008 6	Customer association not allowed. This partner is a Huawei Cloud reseller, and the account of its associated distributor has been restricted.
400	CBC.5001012 0	Customer development not supported. There are no credits granted for the partner.

## **5.2 Real-Name Authentication**

# 5.2.1 Requesting an Individual Real-Name Authentication

#### **Function**

This API can be used to submit an individual real-name authentication application.

An individual customer can refer to the instructions described in **Overall Process** to complete the real-name authentication.

#### **Constraints**

- This API can be invoked only by the partner account's AK/SK or token.
- To use this API, partners need to enable Upload Photos of Handheld ID Cards Required for Real-Name Authentication on the Benefits and Support > API Configuration > Configure page.
- Images for real-name authentication must be uploaded to the **download** directory of the bucket.

• Only individual certificate authentication can be performed using APIs.

## **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/customers/realname-auths/individual

## Request

Parameter	Manda tory	Туре	Value Range	Description
customer_i d	Yes	String	A maximu m of 64 character s	Customer account ID. You can call the API in 5.3.1 Querying Customers to obtain the customer ID.
identify_ty pe	Yes	Integer	-	Authentication method. <b>0</b> : Using the individual certificate

Parameter	Manda tory	Туре	Value Range	Description
verified_fil e_url	Yes	List <string></string>	A maximu m of 4 character s	<ol> <li>Attachment URL for individual certificate authentication. The URL must be entered in sequence.         Assume that the name of the picture for the passport profile page is abc023 and that for the customer holding the passport profile page is def004.         abc023         def004         Enter the URL in the preceding sequence. The file name is case sensitive.</li> <li>Currently, certificate attachments must be in .jpg, .jpeg, .bmp, .png, .gif, or .pdf format. The maximum size of a single file is 10 MB.</li> <li>The URL is a relative URL and does not need to contain the bucket name or download directory. It only needs to contain the subdirectory and corresponding file name in the download directory. Example:         <ul> <li>If the uploaded attachments are stored in the following location of the bucket, enter abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/abc023.jpg</li> <li>If the uploaded attachments are stored in the following location of the bucket, enter abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download.sipg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download</li></ul></li></ol>

Parameter	Manda tory	Туре	Value Range	Description
				myhuaweicloud.com/ download/test/abc023.jpg
name	Yes	String	A maximu m of 255 character s	Name.
verified_nu mber	Yes	String	A maximu m of 32 character s	Certificate number.
xaccount_t ype	Yes	String	A maximu m of 64 character s	Platform ID assigned by Huawei to a partner. This value is assigned by Huawei. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?

Parameter	Manda tory	Туре	Value Range	Description
verified_ty	No	Integer	-	Certificate type.
pe				<b>3</b> : Passport. Two attachments need to be uploaded: the picture of the profile page, and the picture of the customer holding the passport in hands (the profile page on the front side).
				5: Exit-Entry Permit for Traveling to and from Hong Kong and Macao. Three attachments need to be uploaded: the picture of the front side of Exit-Entry Permit (profile page), the picture of the back side of Exit-Entry Permit, and the picture of the customer holding Exit-Entry Permit in hands (profile page on the front side).
				6: Mainland Travel Permit for Taiwan Residents. Three attachments need to be uploaded: the picture of the front side of Mainland Travel Permit (profile page), the picture of the back side of Mainland Travel Permit, and the picture of the customer holding Mainland Travel Permit in hands (profile page on the front side).
				9: Residence Permit for Hong Kong and Macao Residents. Three attachments need to be uploaded: the picture of the profile side of Residence Permit for Hong Kong and Macao Residents, the picture of the national emblem side of Residence Permit for Hong Kong and Macao Residents, and the picture of the customer holding Residence Permit for Hong Kong and Macao Residents in hands (profile side on the front side).

Parameter	Manda tory	Туре	Value Range	Description
				10: Residence Permit for Taiwan Residents. Three attachments need to be uploaded: the picture of the profile side of Residence Permit for Taiwan Residents, the picture of the national emblem side of Residence Permit for Taiwan Residents, and the picture of the customer holding Residence Permit for Taiwan Residents in hands (profile side on the front side).  This parameter needs to be specified only when
change_ty	No	Integer	[-1]	identify_type is set to 0.  Change type.
pe pe			. · J	-1: First time real-name authentication

## 5.2.2 Requesting an Enterprise Real-Name Authentication

#### **Function**

This API can be used to submit an enterprise real-name authentication application.

An enterprise customer can refer to the instructions described in **Overall Process** to complete the real-name authentication.

#### **Constraints**

- This API can be invoked only by the partner account's AK/SK or token.
- To use this API, partners need to enable Upload Photos of Handheld ID Cards Required for Real-Name Authentication on the Benefits and Support > API Configuration > Configure page.
- Images for real-name authentication must be uploaded to the **download** directory of the bucket.
- Only enterprise certificate authentication can be performed using APIs.

## Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/customers/realname-auths/enterprise

#### Request

Paramete r	Manda tory	Туре	Value Range	Description
customer_i d	Yes	String	A maximum of 64 characters	Customer account ID. You can call the API in 5.3.1 Querying Customers to obtain the customer ID.
identify_ty pe	Yes	Integer	-	Authentication method. 1: Using the enterprise's certificate scanned copy

Paramete r	Manda tory	Туре	Value Range	Description
		List <stri ng&gt;</stri 		1. URL of the certificate attachment file used for enterprise certificate authentication.  The attachment URL must be entered in sequence. Enter the name of the attachment of the enterprise certificate first. If the enterprise personal information is specified in the request, enter the name of the ID card attachment of the enterprise personal information.  The sequence of the enterprise attachments is as follows:  First: picture of the front side of the enterprise certificate  Second: picture of the back side of the enterprise certificate  The sequence of the individual certificate attachments is as follows:  First: picture of the profile side of the personal ID card  Second: picture of the back side of the personal ID card (national emblem side)  If the enterprise does not have a legal entity, and its first attachment is the picture
				of the front side of the enterprise certificate <b>abc.023</b> , and the second is the back side of the enterprise certificate <b>def004</b> , and then upload the attachments in the following sequence:
				abc023
				def004  The file name is case sensitive.
				Currently, certificate     attachments must be

Paramete r	Manda tory	Туре	Value Range	Description
				in .jpg, .jpeg, .bmp, .png, .gif, or .pdf format. The maximum size of a single file is 10 MB.  3. The URL is a relative URL and does not need to contain the bucket name or download directory. It only needs to contain the subdirectory and corresponding file name in the download directory. Example:  • If the uploaded attachments are stored in the following location of the bucket, enter abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/abc023.jpg  • If the uploaded attachments are stored in the following location of the bucket, enter test/abc023.jpg: https://bucketname.obs.Endpoint.myhuaweicloud.com/download/test/abc023.jpg
corp_nam e	Yes	String	A maximum of 255 characters	Organization name. The value cannot contain only digits, special characters, or spaces.
verified_nu mber	Yes	String	A maximum of 32 characters	Enterprise certificate number.
xaccount_t ype	Yes	String	A maximum of 64 characters	Platform ID assigned by Huawei to a partner.  This value is assigned by Huawei. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?

Paramete r	Manda tory	Туре	Value Range	Description
certificate_ type	No	Integer	-	<ul> <li>Enterprise certificate type.</li> <li>0: Enterprise's business license</li> <li>1: Legal entity certificate</li> <li>2: Legal entity registration certificate</li> <li>3: Administrative law enforcement subject certificate</li> <li>4: Organization code certificate</li> <li>99: Others</li> </ul>
reg_countr y	No	String	A maximum of 10 characters	Registration country entered for real-name authentication. Enter the two-letter code that stands for the country.  For example, enter <b>CN</b> for China.
reg_addres s	No	String	A maximum of 256 characters	Enterprise registration address for real-name authentication.
enterprise _person	No	Enterpris ePerson Object	-	Enterprise person information. For details, see <b>Table 5-1</b> .

 Table 5-1
 EnterprisePerson

Parameter	Manda tory	Туре	Value Range	Description
legel_name	Yes	String	A maximum of 255 characters	Legal entity name.
legel_id_nu mber	Yes	String	A maximum of 32 characters	Legal entity card ID.
certifier_rol e	No	String	A maximum of 32 characters	Legal entity role. legalPerson: Legal representative

## Response

#### **Response Parameters**

Status code: 200

Parameter	Туре	Value Range	Description
is_review	Integer	-	Whether to transfer to manual review. This parameter is returned only when the status code is 200.
			• <b>0</b> : No
			• 1: Yes

Status code: 400

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 16 characters	Error code. For details, see <b>Returned Values</b> . This parameter is returned only when a failure occurs.
error_msg	String	A maximum of 1024 characters	Error description. This parameter is returned only when a failure occurs.

Parameter	Туре	Value Range	Description
is_review	Integer	-	Whether to transfer to manual review. This parameter is returned only when the status code is 200.  • 0: No  • 1: Yes
fail_check_it ems	List <strin g&gt;</strin 	-	Error list. This parameter is displayed only when error code CBC.99007004 is returned. For details, see <b>Table</b> 5-2.

Table 5-2 failCheckItems list

Item	Description
IS_DEBT	The customer's account is in arrears.
IS_CREDIT_ACCOUNT	The customer has a credit account and has a credit outstanding amount.
IS_ORG_ACCOUNT	The customer account is an enterprise master account or member account.
MEM_OF_ORG	Your account and the associated master account belong to the same legal entity. Please cancel the association before performing real-name authentication.
MEN_ANSWERING_ORG	You have received an invitation to associate with another account as a member account. Please reject the invitation and then perform real-name authentication.
ORG_INVITING_MEM	Your account is a master account and has invited another member account for association. Please cancel the invitation and then perform real-name authentication.
ORG_HAVE_MEM_EQUITY_APPL YING	Your account is a master account. The equity certificate is being reviewed. Please wait for the certificate to be approved, and then perform real-name authentication.
MEM_OF_ORG_EQUITY_APPLYI NG	Your account is a member account. The equity certificate of the associated master account is being reviewed. Please wait for the certificate to be approved, and then perform real-name authentication.

Item	Description
ORG_HAVE_MEM_EQUITY_APPR OVED	Your account is a master account and already has an equity certificate. Please cancel the member account that as the equity certificate and then perform real-name authentication.
MEM_OF_ORG_EQUITY_APPRO VED	Your account is a member account and already has an equity certificate. Please cancel the association with the master account and then perform real-name authentication.

#### **Example Response**

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time
{
    "is_review": "1"
}
```

#### **Returned Values**

#### ■ NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- **5**xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.01 00	Parameter error.
400	CBC.99 000035	You are not a customer of a partner yet.
400	CBC.99 005030	The partner has not enabled real-name authentication, or the bucket authentication has failed.  For details about how to enable the option, click here.
400	CBC.99 007004	The initiated service operation does not meet the service check item requirement.
400	CBC.99 007188	The customer has passed real-name authentication or is being reviewed.

HTTP Value	Error Code	Description
400	CBC.99 007191	The number of real-name authentication times of the customer exceeds the upper limit.
400	CBC.70 600026	Huawei Cloud cannot review the information you submitted for real-name authentication. Contact your account manager.
403	CBC.01 51	Access denied.
500	CBC.09 99	Unknown error occurred.

# 5.2.3 Requesting a Real-Name Authentication Change

#### **Function**

This API can be used to submit a real-name authentication change application.

For details about how to change an individual account to an enterprise account through real-name authentication, visit Changing an Individual Account to an Enterprise Account.

#### **Constraints**

- This API can be invoked only by the partner account AK/SK or token.
- To use this API, partners need to enable Upload Photos of Handheld ID Cards Required for Real-Name Authentication on the Benefits and Support > API Configuration > Configure page.
- Images for real-name authentication must be uploaded to the **download** directory of the bucket.
- Real-name authentication change through API only supports changing an individual account to an enterprise account.

## Debugging

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

PUT /v2/customers/realname-auths/enterprise

#### Request

Paramete r	Manda tory	Туре	Value Range	Description
customer_i d	Yes	String	A maximum of 64 characters	Customer account ID. You can call the API in 5.3.1 Querying Customers to obtain the customer ID.
identify_ty pe	Yes	Integer	-	Authentication method. 1: Using the enterprise's certificate scanned copy

Paramete r	Manda tory	Туре	Value Range	Description
verified_fil e_url	Yes	List <stri ng&gt;</stri 	A maximum of 4 characters	URL of the certificate attachment file used for enterprise certificate authentication.
				The attachment URL must be entered in sequence. Enter the name of the attachment of the enterprise certificate first. If the enterprise personal information exists, enter the name of the ID card attachment of the enterprise personal information.
				The order of the enterprise certificate attachments is as follows:
				First: Picture of the front side of the enterprise certificate
				Second: Picture of the back side of the enterprise certificate
				The order of the individual certificate attachments is as follows:
				First: Picture of the front side of the personal ID card (profile side)
				Second: Picture of the back side of the personal ID card (national emblem side)
				If the enterprise does not have a legal entity, and its first attachment is the picture of the front side of the enterprise certificate abc.023, and the second attachment is the back side of the enterprise certificate def004, then upload the attachments in the following sequence:
				abc023
				def004
				Enter the URL in the preceding sequence. The file name is case sensitive.
				Currently, certificate attachments can only be in .jpg, .jpeg, .bmp, .png, .gif,

Paramete r	Manda tory	Туре	Value Range	Description
				or .pdf format. The maximum size of a single file is 10 MB.
				The URL is a relative URL and does not need to contain the bucket name or <b>download</b> directory. It only needs to contain the subdirectory and corresponding file name in the <b>download</b> directory. Example:
				If the uploaded attachments are stored in the following location of the bucket, enter <b>abc023.jpg</b> :
				https:// bucketname.obs.Endpoint.myhua weicloud.com/download/ abc023.jpg
				If the uploaded attachments are stored in the following location of the bucket, enter <b>test/ abc023.jpg</b> :
				https:// bucketname.obs.Endpoint.myhua weicloud.com/download/test/ abc023.jpg
corp_nam	Yes	String	Α	Organization name.
е			maximum of 255 characters	The value cannot contain only digits, special characters, or spaces.
verified_nu mber	Yes	String	A maximum of 32 characters	Enterprise certificate number.
change_ty pe	Yes	Integer	[1]	Change type.  1: Change individual real-name authentication to enterprise real-name authentication.
xaccount_t ype	Yes	String	A maximum of 64 characters	Platform ID assigned by Huawei to a partner. This value is assigned by Huawei. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?

Paramete r	Manda tory	Туре	Value Range	Description
certificate_	No	Integer	-	Enterprise certificate type.
type				0: Enterprise's business license
				1: Legal entity certificate
				• 2: Legal entity registration certificate
				3: Administrative law enforcement subject certificate
				<ul> <li>4: Organization code certificate</li> </ul>
				• 99: Others
				If this parameter is not included in the request parameters or is set to <b>null</b> , no value is returned.
reg_countr y	No	String	A maximum of 10 characters	Registration country entered for real-name authentication. Enter the two-letter code that stands for the country.
				For example, enter <b>CN</b> for China.
				If this parameter is not included in the request parameters or is set to <b>null</b> , no value is returned. If this parameter is set to "", "" is returned.
reg_addres s	No	String	A maximum	Enterprise registration address for real-name authentication.
			of 256 characters	If this parameter is not included in the request parameters or is set to <b>null</b> , no value is returned. If this parameter is set to "", "" is returned.
enterprise _person	No	Enterpris ePerson Object	-	Enterprise person information. For details, see <b>Table 5-3</b> . This parameter is reserved.

Table 5-3 EnterprisePerson

This API is used to query your customers.

Visit **Querying Customers** to learn about how to query customers in Partner Center.

#### **Constraints**

This API can be invoked only by the partner AK/SK or token.

# Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/partners/sub-customers/query

# Request

#### Request parameters

Paramete r	Manda tory	Туре	Value Range	Description
account_n ame	No	String	A maximum of 64 characters	Account name. If the customer has created an IAM user, enter the account name of the master account. For details about the two concepts, see "Account" and "IAM User" in Basic Concepts.
				Fuzzy search is supported. Only prefix, suffix, or middle part can be used for fuzzy search. The content you enter for fuzzy search cannot contain spaces.
				If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
customer	No	String	A maximum of 64 characters	Name used by customer for real-name authentication, which can be queried using fuzzy search. Only prefix, suffix, or middle part can be used for fuzzy search. The content you enter for fuzzy search cannot contain spaces.
				If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Paramete r	Manda tory	Туре	Value Range	Description
offset	No	Integer	0 to 40,000,000	Offset, which starts from 0. The default value is 0.  NOTE  This parameter is used for pagination. Retain its default value 0 if pagination is not required. offset indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to 1, the second and subsequent data records are returned.  For example, if there 10 records that meet query conditions, when you set limit to 10 and offset to 1, the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to 0 and limit to 10 for the first page and set offset to 10 and limit to 10 for the second page, then each page will respectively have 10 records.
limit	No	Integer	Maximum value: 100	Number of customers queried each time. The default value is <b>10</b> .
label	No	String	A maximum of 64 characters	Tag. Fuzzy search is supported. Only prefix, suffix, or middle part can be used for fuzzy search. The content you enter for fuzzy search cannot contain spaces. The letters entered for search are casesensitive.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Paramete r	Manda tory	Туре	Value Range	Description
associatio n_type	No	String	A maximum of 2 characters	Association type.  1: Referral 3: Reseller If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
associated _on_begin	No	String	A maximum of 20 characters	Start time of the association time range (UTC time).  Value format: YYYY-MM-DD'T'hh:mm:ss'Z', for example, 2019-05-06T08:05:01Z.  If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion.
associated _on_end	No	String	A maximum of 20 characters	End time of the association time range (UTC time).  Value format: YYYY-MM-DD'T'hh:mm:ss'Z', for example, 2019-05-06T08:05:01Z.  If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion.
customer_ id	No	String	A maximum of 64 characters	Customer account ID. You can call the API for 5.3.1  Querying Customers to obtain the value of this parameter, or you can obtain the value of the domain ID from the response of the API for Creating a Customer.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Paramete r	Manda tory	Туре	Value Range	Description
indirect_p artner_id	No	String	A maximum of 64 characters	Reseller ID. For details about how to obtain the ID, see 6.1.1 Querying the List of Huawei Cloud Resellers. This parameter is mandatory for querying the list of customers of a Huawei Cloud reseller.

#### **Example Request**

# Response

#### Response parameters

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 16 characters	Error code. This parameter is returned only when a failure occurs. For details, see <b>Returned Values</b> .
error_msg	String	A maximum of 1024 characters	Error description. This parameter is returned only when a failure occurs.
customer_inf os	List <custo merInfo&gt;</custo 	-	Customer list. For details, see <b>Table 5-6</b> .
count	Integer	-	Total number of records.

Table 5-6 Customer information

Parameter	Туре	Value Range	Description
customer	String	A maximum of 128 characters	Name that has passed the real- name authentication.
account_nam e	String	A maximum of 128 characters	Account name. If the customer has created an IAM user, the account name of the master account is returned.
customer_id	String	A maximum of 64 characters	Customer account ID.
associated_o n	String	A maximum of 20 characters	Time when a customer is associated with a partner.  The value is UTC time in "yyyy-MM-dd 'T' HH:mm:ss 'Z'" format, such as <b>2019-05-06T08:05:01Z</b> .  HH ranges from 0 to 23, and mm and ss ranges from 0 to 59.
association_t ype	String	A maximum of 2 characters	Association type.  • 1: Referral  • 3: Reseller
label	String	A maximum of 64 characters	Tag.
telephone	String	A maximum of 20 characters	Customer phone number.
verified_statu s	String	A maximum of 5 characters	<ul> <li>Real-name authentication status.</li> <li>-1: The real name is not authenticated.</li> <li>0: Real-name authentication is under review.</li> <li>1: The real-name authentication is not passed.</li> <li>2: The real name is authenticated.</li> </ul>
country_code	String	A maximum of 10 characters	Country code, which is the country code prefix of a phone number. Example: 0086 for China

Parameter	Туре	Value Range	Description
customer_typ e	Integer	-	Customer type.  -1: None  0: Individual  1: Enterprise  When a customer is registered, customerType is -1. The customer can set customerType in the account center or select the enterprise or individual real-name authentication to determine the customer type.
is_frozen	Integer	-	<ul> <li>Whether to freeze the account.</li> <li>0: No</li> <li>1: Only account</li> <li>2: Account and resources</li> </ul>
account_man agers	List <accou ntManager &gt;</accou 	A maximum of 10 managers	Customer manager list. Only 1 account manager can be configured at present. For details, see Table 5-7.
xaccount_id	String	A maximum of 128 characters	Unique user ID on the partner sales platform. The ID is allocated by the partner.
xaccount_typ e	String	A maximum of 64 characters	Platform ID assigned by Huawei to a partner.  This value is assigned by Huawei. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?
customer_lev el	String	A maximum of 64 characters	Customer tier.  • V0  • V1  • V2  • V3  • V4  • V5

Table 5-7 AccountManager

Parameter	Туре	Value Range	Description
account_nam e	String	A maximum of 128 characters	Name of the account manager.

#### **Returned Values**

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx: This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.99000037	You do not have the permission to operate this Huawei Cloud reseller.

HTTP Value	Error Code	Description
401	CBC.0154	Invalid or expired token.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

# 5.3.2 Freezing a Customer Account

#### **Function**

A partner can freeze an account of a customer associated with the partner by reseller model.

Visit **Freezing a Customer Account** to learn about how to freeze a customer account.

#### □ NOTE

If you need to change the freezing type for an already frozen account, you need to unfreeze the account first.

#### **Constraints**

This API can be invoked using the partner AK/SK or token only.

# **Debugging**

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/partners/sub-customers/freeze

#### Request

#### **Request Parameters**

Paramete r	Manda tory	Туре	Value Range	Description
customer_ ids	Yes	List <strin g&gt;</strin 	A maximum of 10 IDs	IDs of customers whose accounts are to be frozen. You can call the API in 5.3.1
				<b>Querying Customers</b> to obtain the customer ID.

Paramete r	Manda tory	Туре	Value Range	Description
reason	Yes	String	A maximum of 256 characters	Account freezing reason.
indirect_p artner_id	No	String	Maximum length: 64 characters	Reseller ID. For details about how to obtain the ID, see 6.1.1 Querying the List of Huawei Cloud Resellers. This parameter is mandatory for freezing the customers of a reseller.
freeze_typ e	No	String		<ul> <li>ACCOUNT: The account will be frozen.</li> <li>ACCOUNT_AND_RESOURC         <ul> <li>E: Both the account and resources in the account will be frozen.</li> </ul> </li> <li>Default value: ACCOUNT         <ul> <li>If this parameter is not included in the request or is set to null, the default value will be used. This parameter cannot be set to an empty string, and enumeration verification will be conducted.</li> </ul> </li> </ul>

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers/freeze HTTP/1.1

**Response Parameters** 

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 20 characters	Error code. This field is not returned when the operation is successful or partially failed. For details, see <b>Returned Values</b> .
error_msg	String	A maximum of 2,000 characters	Error description. This field is not returned when the operation is successful or partially failed.
error_details	List <errord etail&gt;</errord 	-	Error cause description. This field is returned only when the operation is partially failed. For details, see <b>Table 5-8</b> .

#### Table 5-8 ErrorDetail

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 20 characters	Error code.  For details, see <b>Returned Values</b> . The returned status code is 200.
error_msg	String	A maximum of 2,000 characters	Error message.
id	String	A maximum of 256 characters	ID. This parameter corresponds to customer_ids.

#### **Example Response**

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time
{
    "error_details":[]
}
```

#### **Returned Values**

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- **5**xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.99000000	You do not have the operation permission to this customer.
400	CBC.99000035	You are not a customer of a partner yet.
400	CBC.99000037	You do not have the permission to operate this Huawei Cloud reseller.
200	CBC.99005024	This API cannot be invoked because the association type of the customer is incorrect.
200	CBC.70300007	If you need to change the freezing type for an already frozen account, you need to unfreeze the account first.
403	CBC.0150	Invalid operation.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

# **5.3.3 Unfreezing a Customer Account**

#### **Function**

A partner can unfreeze an account of a customer associated with the partner by reseller model.

Visit **Unfreezing a Customer Account** to lean about how to unfreeze a customer account.

■ NOTE

To unfreeze an account, the unfreezing type must be consistent with the freezing type.

#### **Constraints**

This API can be invoked using the partner AK/SK or token only.

# Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/partners/sub-customers/unfreeze

# Request

# 6 Managing Huawei Cloud Resellers

# **6.1 Querying Huawei Cloud Resellers**

# 6.1.1 Querying the List of Huawei Cloud Resellers

#### **Function**

A Huawei Cloud distributor can query its associated Huawei Cloud resellers.

#### **Constraints**

This API can only be invoked using the AK/SK or token of Huawei Cloud distributors.

#### Debugging

You can debug this API API Explorer.

URI

POST /v2/partners/indirect-partners/query

#### Request

Request parameters

Paramete r	Mand atory	Туре	Maximu m Length of Characte rs/Value Range	Description
account_n ame	No	String	64 character s	Account name of a reseller.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
associate d_on_begi n	No	String	20 character s	Start time of the association between a reseller and a distributor.  The time is in the UTC format (time zone is required), for example, 2016-03-28\textsf{T} 00:00:00\textsf{Z}.  If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion.
associate d_on_end	No	String	20 character s	End time of the association between a reseller and a distributor.  The time is in the UTC format (time zone is required), for example, 2016-03-28\textsf{T}00:00:00\textsf{Z}\textsf{.}  If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion.
indirect_p artner_id	No	String	64 character s	Reseller ID. For details about how to obtain such IDs, see 6.1.1 Querying the List of Huawei Cloud Resellers. This parameter is mandatory if you want to query a specific reseller.

Paramete r	Mand atory	Туре	Maximu m Length of Characte rs/Value Range	Description
offset	No	Integer	0 to 40,000,00 0	Offset, starting from <b>0</b> . The default value is <b>0</b> .  NOTE  This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. offset indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned. For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and offset to <b>1</b> , the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have <b>10</b> records.
limit	No	Integer	[1, 100]	Maximum number of records in each query. The default value is <b>10</b> .

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/partners/indirect-partners/query HTTP/1.1

#### Response parameters

Parameter	Туре	Value Limit	Description
error_code	String	20	Error code. For details, see Status Code. This parameter is returned only when a failure occurs.
error_msg	String	2,000	Error description. This parameter is returned only when a failure occurs.
measure_id	Integer	-	Unit. 1: dollar
currency	String	4	Currency type USD
budget_infos	List <budgetl nfo&gt;</budgetl 	100	Customer budget. For details, see #mt_01006/table750511154510.

#### **Table 2 Budget information**

Parameter	Туре	Value Limit	Description
customer_id	String	64	Customer account ID.
budget_amount	BigDecimal	-	Budget granted
used_amount	BigDecimal	-	Used budget. There may be some deviation and latency for the used budget displayed.
budget_type	String	-	Budget type.  MONTHLY: Monthly budget  PACKAGE: One-time budget

#### Example response

```
HTTP/1.1 200 OK

Content-Type: application/json;charset=UTF-8

Content-Length: length

Date: response time

#### **Status Code**

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- **5**xx: This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

Status Code	Error Code	Description
400	CBC.0100	Invalid parameter.
400	CBC.99000037	You do not have the permission to operate this Huawei Cloud reseller.
403	CBC.0151	Access denied.
403	CBC.0150	Invalid operation.

Status Code	Error Code	Description
500	CBC.0999	Other errors.

# 8.1.3 Setting Customers' Budgets

#### **Function**

This API is used to set or adjust a customer's budget.

Click here to learn about how to query the budget of a customer.

#### **Constraints**

This API can be invoked only by the partner account AK/SK or token.

# **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/partners/sub-customers/budget

# Request

#### **Request Parameters**

Para meter	Mand atory	Туре	Value Limit	Description
custo mer_i d	Yes	String	64	Customer account ID. You can call the API in <b>5.3.1 Querying Customers</b> to obtain the customer ID.
budge t_amo unt	Yes	BigDecima l	(0-2147 483647]	Target amount, which can be accurate to two decimal places. Unit: USD
cancel _partn er_fro zen	No	String	-	Whether to unfreeze the account when setting the customer budget.  • 0: No  • 1: Yes  The default value is 0.  If this parameter is not included in the request parameters, is set to "", or is set to null, the default value 0 is used.

Para meter	Mand atory	Туре	Value Limit	Description
indirec t_part ner_id	No	String	64	Reseller ID. For details about how to obtain the ID, see 6.1.1 Querying the List of Huawei Cloud Resellers. This parameter is mandatory for querying the list of customers of a Huawei Cloud reseller. If this parameter is not included in the request parameters, is set to "", or is set to null, this parameter will not be used.
budge t_type	No	String	-	Budget type  MONTHLY: Monthly budget  PACKAGE: One-time budget  The default value is MONTHLY.  If this parameter is not included in the request parameters or is set to null, the default value MONTHLY is used. The value of this parameter cannot be an empty string.

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/partners/sub-customers/budget HTTP/1.1

# Response

#### **Response Parameters**

Parameter	Туре	Value Limit	Description
error_code	String	20	Error code. For details, see  Returned Values. This parameter is returned only when a failure occurs.
error_msg	String	2000	Error description. This parameter is returned only when a failure occurs.

#### **Example Response**

HTTP/1.1 204 No Content Content-Type: application/json;charset=UTF-8 Content-Length: *length* 

Date: response time

#### **Returned Values**

#### **Ⅲ** NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.500000 30	Setting budgets not supported. This reseller's budget quota is insufficient.
400	CBC.500000 33	Budget setting permissions have been revoked. This reseller cannot set budgets.
400	CBC.990000 37	You do not have the permission to operate this Huawei Cloud reseller.
400	CBC.990050 24	This API cannot be invoked because the association type of the customer is incorrect.
403	CBC.0151	Access denied.
403	CBC.0150	Invalid operation.
500	CBC.0999	Other errors.

# 8.2 Coupons Management

# 8.2.1 Querying Coupons

#### **Function**

Partners can query information about their coupons.

Partners can following the instructions described in **Viewing Cash Coupons** to view the issued cash coupons in Partner Center, and view details about a cash coupon.

**◯** NOTE

Huawei Cloudinternational website does not provide flexi-purchase coupons or discount coupons.

#### **Constraints**

When this API is invoked using the AK/SK or token of a partner, coupons of this partner and of this partner's resellers will be returned. If you need to query the coupons of a customer, use the token of this customer.

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

GET /v2/promotions/benefits/coupons

The following table describes the parameters.

Table 8-2 Request parameters

Paramete r	Manda tory	Туре	Value Range	Description
coupon_id	No	String	A maximu m of 64 character s	Coupon ID.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
order_id	No	String	A maximu m of 64 character s	Order ID.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
promotion _plan_id	No	String	A maximu m of 64 character s	Promotion plan ID.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
coupon_ty pe	No	Integer	[1-4]	Coupon type.  • 1: Cash coupon  If this parameter is not included in the request parameters, is left empty, or is set to <b>null</b> , it cannot be used as a filter criterion. It cannot be set to "".

Paramete r	Manda tory	Туре	Value Range	Description
status	No	Integer	[1-5]	Customer coupon status.  1: Inactivated 2: To be used 3: Used 4: Expired 5: Withdrawn If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.  NOTE For used, expired, and reclaimed coupons, data within 12 months after expiration can be queried.
active_star t_time	No	String	A maximu m of 64 character s	Activation time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z The range of HH is 0-23, and the range of mm and ss is 0-59.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.
active_end _time	No	String	A maximu m of 64 character s	End time.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z The range of HH is 0-23, and the range of mm and ss is 0-59.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.

Paramete r	Manda tory	Туре	Value Range	Description
offset	No	Integer	0 to maximu m integer	Offset, which starts from 0. The default value is <b>0</b> .  NOTE  This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. <b>offset</b> indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned.  For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and <b>offset</b> to <b>1</b> , the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
limit	No	Integer	[1-100]	Number of coupons queried each time. The default value is <b>10</b> .
source_id	No	String	A maximu m of 255 character s	Coupon source. If the coupon is sent by a partner, the parameter value is the partner ID.  To query coupons issued by a partner, enter the partner ID.  If this parameter is not included, is left empty, or is set to <b>null</b> , it cannot be used as a filter criterion. If it is set to "", it can be used as a filter criterion.

# **Request Message**

### **Request Parameters**

No.

### **Example Request**

GET https://bss-intl.myhuaweicloud.com/v2/promotions/benefits/coupons HTTP/1.1 Content-Type: application/json X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

## **Response Message**

### **Response Parameters**

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 16 characters	Error code. For details, see <b>Returned Values</b> .
error_msg	String	A maximum of 1024 characters	Error description.
count	Integer	-	Total number of records that meet the search criteria.
user_coupon s	List <iquer yUserCoup onsResult&gt;</iquer 	-	Coupon records. For details, see <b>Table 8-3</b> .

Table 8-3 IQueryUserCouponsResult

Parameter	Туре	Description
coupon_id	String	Coupon ID.
coupon_code	String	Coupon code.
status	Integer	Coupon status  1: Inactivated 2: To be used 3: Used 4: Expired 5: Withdrawn
customer_id	String	Customer account ID.
coupon_type	Integer	Coupon type.  • 1: Cash coupon
measure_id	Integer	Measurement unit. 1: Dollar
face_value	Double	Coupon amount.
valid_time	String	Effective time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z
expire_time	String	Expiration time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z" format, such as 2019-05-06T08:05:01Z

Parameter	Туре	Description
order_id	String	Order ID.  NOTE  If a coupon is used for multiple times, order IDs involved are separated by semicolons (;). If a coupon is used in a combined payment, order IDs involved are separated by commas (,). Example: CS1904011928GIBHC1,CS1904011928GIBHC2,CS1 904011928GIBHC3;CS1904011928GIBHCB.  Not all returned orders used the coupon.
promotion_plan _id	String	Promotion plan ID.
plan_name	String	Promotion plan name.
plan_desc	String	Promotion plan description.
media_type	Integer	Medium type.  • 1: E-coupon  • 2: Paper coupon
fetch_method	Integer	Obtaining method.  1: Claimed online 2: Redeemed online 3: Issued online 4: Obtained offline 5: Rewarded based on events
use_limits	List <lcouponu seLimitInfoV2&gt;</lcouponu 	Coupon usage limits. For details, see <b>Table 8-4</b> .
active_time	String	Activation time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z
reserve_time	String	Usage time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z
promotion_id	String	Promotion ID.
create_time	String	Creation time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z
coupon_version	Integer	Coupon version.  • 2: Coupons can be used repeatedly.
balance	Double	Coupon balance. Unit: USD
lock_order_id	String	ID of the order for the coupon.

Parameter	Туре	Description	
coupon_usage	String	Coupon usage.	
is_frozen	String	Whether a coupon is frozen.  • 0: No  • 1: Yes	
currency	String	Currency. The options are as follows:	
extend_param1	String	Extended field.	
source_id	String	<ul> <li>Coupon source.</li> <li>If the coupon is sent by a partner, the parameter value is the partner ID.</li> <li>If the coupon is issued for an activity, the parameter value is the activity ID.         <ul> <li>Coupons redeemed by cloud beans: Cloud bean ID</li> <li>Coupons issued as rewards of accumulated consumption: Consumption accumulation reward ID</li> <li>Coupons issued as rewards for lucky draw: Lucky draw ID</li> <li>Coupons issued based on events: Event ID</li> <li>Customized coupons: Creator ID</li> </ul> </li> </ul>	

Table 8-4 ICouponUseLimitInfoV2

Parameter	Туре	Description
use_limiti_info_i d	String	Usage limit ID.
limit_key	String	Usage limit. For details about the value, see <b>Table 8-5</b> .
value1	String	Value 1.
value2	String	Value 2.
value_unit	String	Value unit.
limit_type	String	Limit type.
promotion_plan _id	String	Promotion plan ID.

Table 8-5 limit\_key requirements for ICouponUseLimitInfo

Key	Meaning	Description	Remarks
baseValue	Order amount.	value1 specifies the lower limit of the order amount, and value2 specifies the upper limit of the order amount.	Cash coupons, flexi-purchase coupons, and discount coupons are supported.
serviceType	Cloud service type.	Only <b>value1</b> is valid. To obtain a specific cloud service type, call the API in <b>4.1.1 Querying Cloud Service Types</b> .	Cash coupons, flexi-purchase coupons, and discount coupons are supported.
regionCode	Region code.	value1 specifies the region code, and value2 specifies the region name.	Cash coupons, flexi-purchase coupons, and discount coupons are supported.
productId	Product ID	You can configure multiple product IDs. Separate them using commas (,).	Cash coupons, flexi-purchase coupons, and discount coupons are supported.
subscribeTyp e	Order type.	Only value1 is valid. The value can be:  • new: Order placement  • renew: Order renewal  • change: Order change	Cash coupons, flexi-purchase coupons, and discount coupons are supported.
firstOrderInS ervice	Restriction for the first-time purchase.	Only <b>value1</b> is valid.	Cash coupons, flexi-purchase coupons, and discount coupons are supported.
cycleNum	Number of periods.	Only <b>value1</b> is valid.	Cash coupons, flexi-purchase coupons, and discount coupons are supported.

Key	Meaning	Description	Remarks
cycleType	Trial use period type.	<ul> <li>0: Yearly/monthly (unlimited)</li> <li>1. Yearly/monthly (yearly)</li> <li>2: Yearly/monthly (monthly)</li> <li>3: Yearly/monthly (daily)</li> <li>4: Yearly/monthly (hourly)</li> <li>5: Pay-per-use</li> <li>6: General purpose</li> <li>7: One-off payment</li> <li>8: Reserved instance</li> <li>11: Savings plan</li> </ul>	Cash coupons, flexi-purchase coupons, and discount coupons are supported. Discount coupons support only the yearly/ monthly mode.
simultaneou sUseWithEm powerDiscou nt	Whether cash coupons can be used together with authorized discounts.	Whether cash coupons can be used with authorized discounts (including commercial discounts and discounts authorized by partners).  • 0: No  • 1: Yes	Cash coupons, flexi-purchase coupons, and discount coupons are supported. The value for discount coupons can only be <b>0</b> .

Key	Meaning	Description	Remarks
usageTimes	Whether coupons can be used for multiple times.	The value is specified in value1. The value can be:  O: Used for unlimited times  T: Used for only once  N: Used for N times. (For cash coupons of the old version, N is fixed at 1.)	<ul> <li>When CouponType is set to 2 (discount coupons), this parameter can only be set to 1, and if this parameter is not specified or is set to a non-1 value, the parameter value is 1.</li> <li>When CouponType is set to 1 (cash coupons) (or 4 (flexi-purchase coupons), if this parameter is not specified or is set to a value other than 0 or 1, the parameter value is 0.</li> </ul>
isOnlyForStri ctSelected	Whether the coupons can only be used for Featured Products on KooGallery	The value is specified in value1. The value can be:  • 0: No  • 1: Yes If there is no such restriction, the value is 0. This restriction applies only to flexi-purchase coupons.	Flex-purchase coupons are supported.

Key	Meaning	Description	Remarks
isRebate	Whether coupons are counted in to the partner incentive rebates.	The value is specified in value1. The value can be:  • 0: No  • 1: Yes This restriction applies only to flexi-purchase coupons.	Flex-purchase coupons are supported.
serviceTypeB lackList	Service type blacklist.	Service type blacklist. The service type code is specified in <b>value1</b> . This restriction applies only to flexi-purchase coupons.	Flex-purchase coupons are supported.
minConsume Discount	Minimum customer consumpti on discount.	The value is specified in <b>value1</b> . The value ranges from 0 to 1 (excluding 0 and 1).	Cash coupons and flexi- purchase coupons are supported.
isForAnnualC ontracts	Whether coupons can only be used for yearly/ monthly (one-year) orders.	The value can be:  • 0: No  • 1: Yes	Cash coupons and discount coupons are supported.
simultaneou sUseWithPro motionProdu ct	Whether cash coupons can be used together with promotion al products.	The value is specified in value1. The value can be:  • 0: No  • 1: Yes	Cash coupons and discount coupons are supported.
simultaneou sUseWithPro motionDisco unt	Whether cash coupons can be used together with promotion discounts.	The value is specified in <b>value1</b> . The value can be:  • 0: No  • 1: Yes	Cash coupons are supported.

Key	Meaning	Description	Remarks
simultaneou sUseWithDis countCoupo n	Whether cash coupons can be used together with discount coupons.	The value is specified in value1. The value can be:  • 0: No  • 1: Yes	Cash coupons are supported.

500	CBC.0999	Other errors

# 8.3 Managing Yearly/Monthly Orders

# 8.3.1 Querying Orders

#### **Function**

After a customer purchases yearly/monthly resources, it can query the orders in different statuses, such as in the pending approval, processing, canceled, completed, and pending payment statuses.

A partner can log in to Partner Center and follow the instructions described in **Viewing a Customer's Orders** to view orders of a customer.

#### 

If you want to query the resource information of a specified order, invoke this API to obtain the order ID and then invoke the API described in **8.4.1 Querying Customer's Yearly/Monthly Resources**. Enter the order ID in the request to query the resource information.

### **Constraints**

This API can be invoked using the AK/SK or token of the partner or of the partner's customer. If partner's AK/SK or token is used, the orders paid by all customers of the partner can be queried.

# Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

GET /v2/orders/customer-orders

**Table 8-6** Query parameters

Param eter	Manda tory	Туре	Value Range	Description
order_ id	No	String	A maximu m of 64 characte rs	Order ID. Order IDs are case insensitive.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.  NOTE  When special characters are used for query,
		<b>.</b>		perform the URL code conversion. For example, % should be converted to %25.
custo mer_i d	No	String	A maximu m of 64 characte rs	Customer account ID. To obtain the customer ID, call the API in 5.3.1  Querying Customers.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
create _time_ begin	No	String	A maximu m of 20 characte rs	Start time of order creation.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range
				of <i>mm</i> and <i>ss</i> is 0-59.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. The range queried cannot exceed one year.
create _time_ end	No	String	A maximu m of 20 characte rs	End time of order creation.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. The range queried cannot exceed one year.

Param eter	Manda tory	Туре	Value Range	Description
service _type_ code	No	String	A maximu m of 64 characte rs	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. Cloud service type code is case insensitive.  You can call 4.1.1 Querying Cloud Service Types to obtain a specific service type.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
status	No	Integer	-	Order status. The value can be:  1: Pending approval  3: Processing  4: Canceled  5: Completed  6: Pending payment  9: To be confirmed  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
order_ type	No	String	A maximu m of 64 characte rs	Order type. The value can be:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
limit	No	Integer	1 to 100	Number of orders queried each time. The default value is <b>10</b> .  If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the default value <b>10</b> is used.

Param eter	Manda tory	Туре	Value Range	Description
offset	No	Integer	0 to a maximu	Offset, which starts from 0. The default value is <b>0</b> .
			m integer	If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the default value <b>10</b> is used.
				NOTE  This parameter is used for pagination. Retain its default value 0 if pagination is not required. offset indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to 1, the second and subsequent data records are returned.
				For example, if there 10 records that meet query conditions, when you set limit to 10 and offset to 1, the second to the tenth records are returned.
				If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
order_ by	No	String	A maximu	Sorting order of the orders. This parameter is case insensitive.
		m of 36 characte	You can sort the orders by creation time.	
			rs	If you set the value to <b>createTime</b> , the system sorts orders by creation time in ascending order. If you set the value to <b>-createTime</b> , the system sorts orders by creation time in descending order.
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
payme nt tim	No	String	A maximu	Start time of order payment.
e_begi n	e_begi		m of 20 characte rs	UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as <b>2019-05-06T08:05:01Z</b>
				The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. The range queried cannot exceed one year.

Param eter	Manda tory	Туре	Value Range	Description
payme	No	String	Α .	End time of order payment.
nt_tim e_end			maximu m of 20 characte	UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as <b>2019-05-06T08:05:01Z</b>
			rs	The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. The range queried cannot exceed one year.
indirec t_part ner_id	No	String	A maximu m of 64 characte rs	Reseller ID. For details about how to obtain such IDs, see Query Huawei Cloud Resellers.
metho	No	String	64	Query method.
d				oneself: Query your own orders.
				sub_customer: Query customer orders that are paid for by you.
				If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the default value <b>oneself</b> is used.

## Response

**Response Parameters** 

Parameter	Туре	Maximum Length	Description
error_code	String	20	Status code. For details, see <b>Returned Values</b> .
error_msg	String	2000	Error description.
total_count	Integer	An integer greater than or equal to 0	An integer greater than or equal to 0.  Number of records that match the query conditions.
order_infos	List <custo merOrder V2&gt;</custo 	-	- Order details. For details, see <b>Table 8-7</b> .

**Table 8-7** CustomerOrderV2

Parameter	Туре	Maximu m Length	Description
order_id	String	64	Order ID
customer_id	String	A maximu m of 64 character s	Customer account ID.
service_type _code	String	A maximu m of 64 character s	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.
service_type _name	String	A maximu m of 200 character s	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
source_type	Integer	-	Customer order source type. The value can be:  1. Customer 2. Agent 3: Contract 4: Distributor

Parameter	Туре	Maximu m Length	Description
status	Integer		Order status. The value can be:  1: Pending approval 2: Pending refund 3: Processing 4: Canceled 5: Completed 6: Pending payment 9: To be confirmed 10: To be shipped 11: To be received 12: Pending pick-up 13: Exchange in progress
order_type	Integer	-	Order type. The value can be:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment
official_am ount	Double	-	Order amount (list price). In the unsubscription order, this amount equals the value of amount_after_discount.
amount_aft er_discount	Double	-	Order amount after a discount (excluding the vouchers or cards).
measure_id	Integer	-	Order amount unit.  • 1: 1 Yuan/Dollar
create_time	String	A maximu m of 20 character s	Creation time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as  2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.

Parameter	Туре	Maximu m Length	Description
payment_ti me	String	A maximu m of 20 character s	Payment time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as  2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
currency	String	A maximu m of 4 character s	Currency code.
contract_id	String	A maximu m of 64 character s	Contract ID.
amount_inf o	AmountInf oV2 Object	-	Order details For details, see <b>Table 8-8</b> .

**Table 8-8** AmountInfoV2

Parameter	Туре	Value Range	Description
discounts	List <disco untItemV2 &gt;</disco 	-	Item For details, see <b>Table 8-9</b> .
flexipurchas e_coupon_a mount	Double	-	Flexi-purchase coupon amount (reserved).
coupon_am ount	Double	-	Cash coupon amount.
stored_card _amount	Double	-	Stored-value card amount (reserved).
commission _amount	Double	-	Handling fee (only for unsubscription orders).
consumed_ amount	Double	-	Consumptions (only for unsubscription orders).

**Table 8-9** DiscountItemV2

Parameter	Туре	Val ue Ra nge	Description
discount_ty pe	String	A ma xim um of 8 cha ract ers	<ul> <li>200: Promotion product discount</li> <li>300: Promotion discount coupon</li> <li>301: Promotion coupon</li> <li>302: Promotion flexi-purchase coupon</li> <li>500: Specified discount for agent subscription</li> <li>501: Specified exemption for agent subscription</li> <li>502: Specified buy-it-now price for agent subscription</li> <li>600: Discount specified in the discount and rebate contract</li> <li>601: Discount specified in the channel frame contract</li> <li>602: Discount specified in the designated-purpose fund contract</li> <li>603: Discount specified in the directly signed offline contract</li> <li>604: Discount specified in the authorized telemarketing contract</li> <li>605: Discount specified in the commercial contract</li> <li>606: Discount specified in the channel commercial contract</li> <li>607: Partner authorized discount</li> <li>609: Discount amount</li> <li>700: Promotion discount</li> <li>800: Top-up account discount</li> </ul>
discount_a mount	Double	-	Discounted amount.

### **Returned Values**

#### **□** NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.0101	Invalid parameter.
400	CBC.990000 37	You do not have the permission to operate this reseller.
400	CBC.300000 10	Operation not supported because the order is invalid or does not exist.

HTTP Value	Error Code	Description
403	CBC.0155	Request denied.  The possible causes are as follows: The account authentication information is incorrect. The account or member account does not have the
		permission to call the API.
500	CBC.0999	Other errors.

# 8.3.2 Querying Order Details

### **Function**

Customers can view order details on the partner sales platform.

For details about how to view order details in Billing Center, see **Viewing Order Details**.

### ■ NOTE

If you want to query the resource information of a specified order, invoke the API described in **8.4.1 Querying Customer's Yearly/Monthly Resources** and enter the order ID in the request to query the resource information.

### **Constraints**

This API can be invoked using the AK/SK or token of the partner or AK/SK or token of the partner's customer.

# Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

### **URI**

GET /v2/orders/customer-orders/details/{order\_id}

The following table describes the parameters.

Table 8-10 Path parameters

Param	Mand	Value	Description
eter	atory	Range	
order_i d	Yes	A maximu m of 64 characte rs	Order ID.  The system will return the orders if the orders are queried.

**Table 8-11** Query parameters

Parameter	Mandatory	Value Range	Description
offset	No	0 to a maximum	Offset, which starts from 0. The default value is <b>0</b> .
		integer	If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the default value <b>0</b> is used.
			NOTE  This parameter is used for pagination. Retain its default value 0 if pagination is not required. offset indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to 1, the second and subsequent data records are returned.
			For example, if there 10 records that meet query conditions, when you set limit to 10 and offset to 1, the second to the tenth records are returned.
			If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
limit	No	1 to 100	Number of records displayed per page. The default value is <b>10</b> .
			If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the default value <b>10</b> is used.
indirect_par tner_id	No	A maximum of 64	Reseller ID. For details about how to obtain such IDs, see Query Huawei Cloud Resellers.
	characters		This parameter is mandatory only when a distributor queries order details of customers associated with its resellers. Otherwise, the order details of the distributor's own customers will be queried.

**Table 8-12** Message header parameter

Parameter	Manda tory	Туре	Value Range	Description
X-Language	No	String	A maximu m of 10 character s	Language. • zh_CN: Chinese • en_US: English Default value: zh_CN

## Request

## Response

### **Response Parameters**

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 20 characters	Status code. For details, see <b>Returned Values</b> .
error_msg	String	A maximum of 2,000 characters	Error description.
order_info	Customer OrderEntit yV2 Object	-	Order details. For details, see <b>Table 8-13</b> .
total_count	Integer	-	Order item ID array.
order_line_i tems	List <order LineItemE ntityV2&gt;</order 	-	ID of the primary order item mapping the order item. For details, see <b>Table 8-14</b> .

**Table 8-13** CustomerOrderEntityV2

Parameter	Туре	Maximum Length	Description
order_id	String	64	Order ID.
customer_i d	String	A maximum of 64 characters	Customer account ID.
service_typ e_code	String	-	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.
service_typ e_name	String	A maximum of 200 characters	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
source_type	Integer	-	Customer order source type. The value can be:  1. Customer 2. Agent 3: Contract 4: Distributor
status	Integer	-	Order status. The value can be:  1: Pending approval 2: Pending refund 3: Processing 4: Canceled 5: Completed 6: Pending payment 9: To be confirmed 10: To be shipped 11: To be received 12: Pending pick-up 13: Exchange in progress

Parameter	Туре	Maximum Length	Description
order_type	Integer	-	Order type. The value can be:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment
official_am ount	Double	-	Order amount (list price). In the unsubscription order, this amount equals the value of amount_after_discount.
amount_aft er_discount	Double	-	Order amount after a discount (excluding the vouchers or cards).
measure_id	Integer	-	Order amount unit.  • 1: 1 Yuan/Dollar
create_time	String	A maximum of 20 characters	Creation time.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
payment_ti me	String	A maximum of 20 characters	Payment time.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
amount_inf o	AmountInf oV2 Object	-	Order deduction details. For details, see <b>Table 8-15</b> .
currency	String	A maximum of 4 characters	Currency code.

Parameter	Туре	Maximum Length	Description
contract_id	String	A maximum of 64 characters	Contract ID.
user_name	String	A maximum of 64 characters	<ul> <li>Order creator name</li> <li>If the order is placed by the customer, the login name of the operator who places the order is returned.</li> <li>If the order is placed by the operation personnel at the background, Operation personnel is returned.</li> <li>If the order is automatically placed by the operation system, Operation system is returned.</li> </ul>

 Table 8-14 OrderLineItemEntityV2

Parameter	Туре	Value Range	Description
order_line_i tem_id	String	A maximum of 64 characters	Order ID.
service_typ e_code	String	A maximum of 64 characters	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.
service_typ e_name	String	A maximum of 200 characters	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
product_id	String	A maximum of 64 characters	Product ID.
product_spe c_desc	String	A maximum of 512 characters	Product specification description.

Parameter	Туре	Value Range	Description
period_type	Integer	-	Period type. The options are as follows:  • 0: Day  • 1: Week  • 2: Month  • 3: Year  • 4: Hour  • 5: One-off  • 6: Pay-per-use (reserved)  • 7: By usage report (reserved)
period_num	Integer	-	Number of periods.  NOTE  The value of this parameter is <b>null</b> for an unsubscription order.
effective_ti me	String	A maximum of 20 characters	Effective time.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
expire_time	String	A maximum of 20 characters	Expiration time.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
subscription _num	Integer	-	Number of subscriptions.
amount_aft er_discount	Double	-	Order amount after a discount (excluding the vouchers or cards).
official_am ount	Double	-	Order amount (list price). In the unsubscription order, the amount is equal to the value of currencyAfterDiscount.
amount_inf o	AmountInf oV2 Object	-	Order deduction details. For details, see <b>Table 8-15</b> .
currency	String	A maximum of 4 characters	Currency code.

Parameter	Туре	Value Range	Description
category_co de	String	A maximum of 64 characters	Product catalog code.
product_ow ner_service	String	A maximum of 64 characters	Type code of a cloud service.  Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
commercial _resource	string	A maximum of 64 characters	Type code of a commercial resource.  Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.

Table 8-15 AmountInfoV2

Parameter	Туре	Value Range	Description
discounts	List <disco untItemV2 &gt;</disco 	-	Fee item. For details, see <b>Table 8-16</b> .
flexipurchas e_coupon_a mount	Double	-	Flexi-purchase coupon amount (reserved).
coupon_am ount	Double	-	Cash coupon amount.
stored_card _amount	Double	-	Stored-value card amount (reserved).
commission _amount	Double	-	Handling fee (only for unsubscription orders).
consumed_ amount	Double	-	Consumption amount (only for unsubscription orders).

**Table 8-16** DiscountItemV2

Parameter	Туре	Val ue Ra nge	Description
discount_ty pe	String	A ma xim um of 8 cha ract ers	<ul> <li>200: Promotion product discount</li> <li>300: Promotion discount coupon</li> <li>301: Promotion coupon</li> <li>302: Promotion flexi-purchase coupon</li> <li>500: Specified discount for agent subscription</li> <li>501: Specified exemption for agent subscription</li> <li>502: Specified buy-it-now price for agent subscription</li> <li>600: Discount specified in the discount and rebate contract</li> <li>601: Discount specified in the channel frame contract</li> <li>602: Discount specified in the designated-purpose fund contract</li> <li>603: Discount specified in the directly signed offline contract</li> <li>604: Discount specified in the authorized telemarketing contract</li> <li>605: Discount specified in the commercial contract</li> <li>606: Discount specified in the channel commercial contract</li> <li>607: Partner authorized discount</li> <li>609: Discount amount</li> <li>700: Promotion discount</li> <li>800: Top-up account discount</li> </ul>
discount_a mount	Double	-	Discounted amount.

### **Returned Values**

#### ∩ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.0101	Invalid parameter.
400	CBC.990000 37	You do not have the permission to operate this reseller.
400	CBC.300000 10	Operation not supported because the order is invalid or does not exist.
403	CBC.0155	Request denied.  The possible causes are as follows: The account authentication information is incorrect. The account or member account does not have the permission to call the API.
500	CBC.0999	Other errors.

# 8.3.3 Paying Yearly/Monthly Product Orders

### **Function**

A customer can invoke this API to pay yearly-monthly product orders in the pending payment status.

Customers can follow the instructions described in **Payment** to pay yearly/monthly product orders in the pending payment status in Billing Center.

#### □ NOTE

- This API supports both monthly settlement and balance payment. Monthly settlement is preferred.
- Balance payment includes cash account payment and credit account payment. If both accounts have balance, the cash account payment is preferred.
- Restrictions for using a discount and coupon at the same time:
  - If the restriction attribute of a coupon contains field simultaneousUseWithEmpowerDiscount with a value of 0, the coupons, commercial discounts, and partner-authorized discounts cannot be used together.
  - If the restriction attribute of a coupon contains field minConsumeDiscount and the values of discount\_ratio for all the order items are less than the value of minConsumeDiscount, the discount and coupon cannot be used at the same time.
  - If the restriction attribute of a coupon contains field simultaneousUseWithPromotionDiscount with a value of **0**, the discount and coupon cannot be used at the same time.
- When this API is invoked by a unified accounting member, if their enterprise master account has coupons available for the orders, the coupons are automatically applied without the need to include coupon IDs in a request.

### **Constraints**

This API can be invoked only by the customer AK/SK or token.

### **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v3/orders/customer-orders/pay

### Request

#### **Request Parameters**

Paramete r	Mand atory	Туре	Maxim um Length of Charac ters	Description
order_id	Yes	String	A maxim um of 64 charact ers	Order ID.  The value is the same as the order_id value in the response message of invoking the API described in 8.3.1 Querying Orders or the order_ids value in the response message of API described in 8.4.2 Renewing Subscription to Yearly/Monthly Resources.

Paramete r	Mand atory	Туре	Maxim um Length of Charac ters	Description
use_coupo n	Yes	String	[YES  NO]	Whether coupons are used for order payment. If this parameter is set to YES, the coupon_infos field is mandatory. If this parameter is set to NO, the value of coupon_infos is ignored.  • YES: indicates that the coupons are used for payment.  • NO: indicates that the coupons are not used for payment.
use_disco unt	Yes	String	[YES  NO]	Whether a discount is used for the order payment. If this parameter is set to YES, the discount_infos field is mandatory. If this parameter is set to NO, the value of discount_infos is ignored.  • YES: indicates that the discount is used for payment.  • NO: indicates that the discount is not used for payment.
coupon_in fos	No	List <cou ponSimpl eInfo&gt;</cou 	A maxim um of 3 IDs are support ed.	For details, see Table 8-17.  This parameter is reserved.  If use_coupon is set to YES, this parameter is mandatory. If use_coupon is set to NO, this parameter can be left empty.  Otherwise, a message indicating parameter error is displayed.  CAUTION  When this API is invoked by a unified accounting member, if their enterprise master account has coupons available for the orders, the coupons are automatically applied without the need to include coupon IDs in a request.

Paramete r	Mand atory	Туре	Maxim um Length of Charac ters	Description
discount_i nfos	No	List <disc ountSim pleInfo&gt;</disc 	Only one discoun t ID is allowed	For details, see <b>Table 8-18</b> .  Discount ID list.  If <b>use_discount</b> is set to <b>YES</b> , this parameter is mandatory. If <b>use_discount</b> is set to <b>NO</b> , this parameter can be left empty.  Otherwise, a message indicating parameter error is displayed.

Table 8-17 CouponSimpleInfo

Paramet er	Manda tory	Туре	Maxim um Length of Charac ters	Description
id	Yes	String	A maxim um of 64 charact ers	Coupon ID.
type	Yes	Integer	[300-3 03]	Coupon type.  • 300: Discount coupon (reserved)  • 301: Promotion coupon  • 302: Promotion flexi-purchase coupon (reserved)  • 303: Promotion stored-value card (reserved)

Table 8-18 DiscountSimpleInfo

Paramet er	Manda tory	Туре	Maxim um Length of Charac ters	Description
id	Yes	String	A maxim um of 64 charact ers	Discount ID.
type	Yes	Integer	[0,2,3]	Discount type.  • 0: promotion discount  • 2: commercial discount  • 3: discount granted by a partner

### **Example Request**

# Response

### **Response Parameters**

Status code: 204

**Success** is returned by default.

Status code: 400

Parameter	Туре	Maximu m Length of Charact ers	Description
error_code	String	A maximu m 10 character s	Error code. For details, see <b>Returned Values</b> .
error_msg	String	A maximu m of 256 character s	Error description.
quota_info s	List <quotal nfo&gt;</quotal 	-	List of the resources whose quota or capacity is insufficient.  For details, see Table 8-19.  This parameter is valid only when error_code is set to CBC.99003141.  If the quota is insufficient, notify the customer to submit a service ticket on the HUAWEI CLOUD official website to increase the quota and then pay the order.  If the capacity is insufficient, notify the customer to place an order again.  If the specifications have changed, notify the customer to place an order again.
enterprise_ project_aut h_result	List <enterp riseProject&gt;</enterp 	-	Information about the enterprise project whose fund is insufficient. For details, see Table 8-20. This parameter is valid only when error_code is set to CBC.99003155.

Table 8-19 QuotaInfo

Parameter	Туре	Description
region	String	Cloud service region code, for example, apsoutheast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .

Parameter	Туре	Description
service_typ e_code	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.
resource_ty pe_code	String	Resource type code. For example, the resource type code of VM is <b>hws.resource.type.vm</b> .
		The relationship between ResourceType and CloudServiceType is as follows: A resource type represents a resource contained in the cloud service type, and the cloud service type is a combination of multiple resource types.
resource_sp ec_code	String	Resource specifications of the subscribed cloud service products.
		For example, the resource specification of a small-scale VM is <b>s2.small.1.linux</b> .
service_typ e_name	String	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
resource_ty pe_name	String	Resource type. For example, the resource type of ECS is <b>Cloud Host</b> .
auth_result	Integer	Verification result of the change of the cloud service quota, capacity, or specifications.
		1: The quota is insufficient.
		2: The capacity is insufficient.
		3: The resource specifications are incorrect. This value is valid only when the resource specifications change between the time when a customer places an order and the time when the customer pays the order.
		4: The associated resource information is incorrect. This value is valid only when the resource specifications change between the time when a customer places an order and the time when the customer pays the order.
		99: Other errors. This value is valid only when the resource specifications change between the time when a customer places an order and the time when the customer pays the order.
available_z	String	AZ ID.
one		For details, see the AZ names of regions listed on the <b>Regions and Endpoints</b> , for example, <b>cn-north-1a</b> .

Table 8-20 EnterpriseProject

Parameter	Туре	Description
enterprise_ project_id	String	<ul> <li>ID of the enterprise project where an order belongs.</li> <li>0: ID of a default project</li> <li>-1 or null: Non-project ID</li> </ul>
enterprise_ project_na me	String	Enterprise project name.
auth_statu s	Integer	Verification result of the enterprise project's fund quota.
		10: The fund quota is insufficient./The project is invalid.
		11: The organization budget quota is insufficient.

#### **Example Response**

HTTP/1.1 204 No Content

Content-Type: application/json;charset=UTF-8

Content-Length: *length* Date: *response time* 

#### **Returned Values**

#### □ NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to
  have been caused by the client, for example, the request contains bad syntax or
  incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Status Code	Error Code	Description
400	CBC.99000046	Insufficient budget.
500	CBC.30000010	Operation not allowed because the order is invalid or does not exist.
400	CBC.99003106	The order status has changed and no payment can be made.
400	CBC.99003108	This discount cannot be used for this order.
400	CBC.99003110	The order has not been paid before the expiration time. Please re-submit the order.
400	CBC.99003112	The coupon or stored-value card has been used.

HTTP Status Code	Error Code	Description	
400	CBC.99003116	The restriction to selected coupon regulates that the coupon cannot be used with the discount at the same time.	
400	CBC.99003117	The selected discount is less than the minimum discount rate configured for the selected coupon.  Note: For example, if the minimum discount rate configured for a coupon is 90% and the selected discount is less than 90% in all order lines, the discount cannot be used.	
400	CBC.99003141	The cloud service quota or capacity is insufficient, or the resource specifications have changed.	
400	CBC.99003147	Discounts and cash coupons cannot be both used.	
400	CBC.99003155	The enterprise project's fund quota is insufficient, or the project is invalid.	
400	CBC.99003156	Coupons applicable to KooGallery products cannot be used together with dedicated coupons.	
400	CBC.99003162	The payment time must be earlier than the specified effective time.	
400	CBC.99003198	Insufficient budget of the organization.	
400	CBC.99005003	Insufficient balance.	
400	CBC.99005036	Payment via API not allowed for this customer. (Payment by balance and monthly-settled payment are not allowed.)	
400	CBC.99006093	Failed to obtain the tax rate.	
400	CBC.7281	Renewal, unsubscription, or payment not supported. Your account has been frozen.	
400	CBC.99008040	Too many attempts.	
500	CBC.0999	Other errors.	
400	CBC.99000088	Your payment is being processed.	
400	CBC.99000089	Operation failed. Sub-orders of a combine order cannot be processed independently.	

## 8.3.4 Canceling Orders in the Pending Payment Status

#### **Function**

A customer can invoke this API to cancel orders in the pending payment status.

Customers can follow the instructions described in **Cancellation** to cancel yearly/monthly product orders in the pending payment status in Billing Center.

■ NOTE

Only the orders in the pending payment status can be canceled.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token.

#### **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

PUT /v2/orders/customer-orders/cancel

#### Request

#### **Request Parameters**

Param eter	Manda tory	Туре	Value Range	Description
order_i d	Yes	String	A maximu m of 64 characte rs	Order ID.  The value is the same as the value of order_id in the response of the API described in 8.3.1 Querying Orders.

#### **Example Request**

```
PUT https://bss-intl.myhuaweicloud.com/v2/orders/customer-orders/cancel HTTP/1.1
Content-Type: application/json
X-Auth-Token: MIIPAgYJKoZlhvcNAQcCo...ggg1BBIINPXsidG9rZ
{
    "order_id": "CS170926155954NO7"
}
```

#### Response

Table 8-21 Response parameters

Para mete r	Туре	Value Range	Description
error_ code	String	A maximum of 10 characters	Status code. For details, see <b>Returned Values</b> .
error_ msg	String	A maximum of 256 characters	Error description.

#### **Example Response**

HTTP/1.1 204 No Content Content-Type: application/json;charset=UTF-8 Content-Length: *length* Date: *response time* 

#### **Returned Values**

#### □ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.9900501	Orders in this state cannot be canceled.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.
400	CBC.9900008	Operation failed. Sub-orders of a combine order cannot be processed independently.

## 8.3.5 Querying the Amount of Unsubscription Orders

#### **Function**

A customer can guery the resources and original orders of the unsubscription amount for an unsubscription order or degrade order on the partner sales platform.

#### □ NOTE

- After you invoke the API in 8.4.3 Unsubscribing from Yearly/Monthly Resources to generate an unsubscription order ID, you can invoke this API to query the resources and amount of an unsubscription order. For example, after you invoke the API in 8.4.3 Unsubscribing from Yearly/Monthly Resources, you can invoke this API to query the original order ID and original subscription renewal order ID.
- You can query original order IDs for only unsubscription orders generated after May 2018.

#### **Constraints**

This API can be invoked using the customer token replaced by the partner token.

#### Debugging

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

GET /v2/orders/customer-orders/refund-orders

**Table 8-22** Query parameters

Paramet er	Mandat ory	Туре	Value Range	Description
order_id	Yes	String	A maximum of 64 characters	ID of an unsubscription or degrade order.

#### Request

**Request Parameters** 

None

#### **Example Request**

GET https://bss-intl.myhuaweicloud.com/v2/orders/customer-orders/refund-orders? order id=CS1904190917GIBHC HTTP/1.1 Content-Type: application/json

X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

## Response

Parameter	Туре	Description
error_code	String	Status code. For details, see <b>Status Code</b> .
error_msg	String	Error description.
total_coun t	Integer	Total queries.
refund_inf os	List <orderref undInfoV2&gt;</orderref 	Resource list. For details, see <b>Table 8-23</b> .

**Table 8-23** OrderRefundInfoV2

Parameter	Туре	Description	
id	String	Record ID.	
amount	BigDecimal	Amount.	
		A negative number indicates the unsubscription amount.	
		A positive number indicates the handling fee for unsubscription.	
measure_id	String	Fee unit.	
		• 1: 1 Yuan/Dollar	
customer_i d	String	Customer account ID.	
resource_ty pe_code	String	Resource type code. For example, the VM resource type code of ECS is <b>hws.resource.type.vm</b> .	
service_typ e_code	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.	
resource_ty pe_name	String	Resource type. For example, the resource type of ECS is <b>Cloud Host</b> .	
service_typ e_name	String	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .	
region_cod e	String	Cloud service region code, for example, apsoutheast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .	

Parameter	Туре	Description
base_order _id	String	ID of the original order corresponding to the unsubscription amount, consumption amount, or unsubscription handling fee.

#### **Example Response**

#### **Status Code**

#### **◯** NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- **5**xx: This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.9900502 6	The order is not a degrade or unsubscription order.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

## 8.4 Managing Yearly/Monthly Resources

## 8.4.1 Querying Customer's Yearly/Monthly Resources

#### **Function**

A customer can query one or all yearly/monthly resources on the partner sales platform.

#### 

If you need to renew resources that already take effect after you successfully invoke this API, you can invoke the API described in **4.2.2 Querying the Price of a Yearly/Monthly Product** to query the price for the yearly/monthly resources and then invoke the API described in **8.4.2 Renewing Subscription to Yearly/Monthly Resources** to renew the subscription.

#### **Constraints**

- This API can be invoked using the customer AK/SK or token only.
- This API queries resources successfully provisioned only.
- If the parameter is left empty, for example, no parameter is transferred, the
  value is null, the value is an empty JSON array, or the value is an empty
  string, a specified number of resources (specified by limit, which is 10 by
  default) are returned for the user.

#### **Debugging**

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/orders/suscriptions/resources/query

#### Request

**Request Parameters** 

 Table 8-24 Request parameters

Para mete	Manda tory	Туре	Value Range	Description
r				
resou rce id	No	list <stri ng&gt;</stri 	[0-50]	Resource IDs.
S	_		Queries resources with the specified resource IDs. When <b>only_main_resource</b> is <b>0</b> , the system queries the specified resources and their auxiliary resources. A maximum of 50 IDs can be used at the same time.	
				If this parameter is not included in the request parameters, is left empty, or is set to <b>null</b> , it cannot be used as a filter criterion. Records that meet other search criteria are returned.
				NOTE A resource ID is allocated by a cloud service after the resource is provisioned, such as server_id for ECS.
order _id	No	maxim	Order ID. This parameter can be used for querying the resources in a specified order.	
	um of 64 charact ers	64 charact	If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion. Records that meet other search criteria are returned.	
				NOTE When special characters are used for query, perform the URL code conversion. For example, % should be converted to %25.

Para mete r	Manda tory	Туре	Value Range	Description
only_ main _reso urce	No	Integer	0, 1	Whether to query only the primary resources. This parameter is invalid when <b>resource_ids</b> are IDs of attached resources. In this case, the system queries the attached resources.
				• <b>0</b> : Queries both the primary resources and attached resources.
				• 1: Queries only the primary resources.
				The default value is <b>0</b> .
				If this parameter is not included in the request parameters or is set to <b>null</b> , the default value <b>0</b> is used.
				NOTE
				A primary resource takes the primary position in the associated resources.
				<ul> <li>For ECS, ECS is the primary resource, and EVS is the attached resource.</li> </ul>
				<ul> <li>For VPC, if the shared bandwidth is used, the bandwidth is the primary resource, and EIPs are the attached resource. If the exclusive bandwidth is used, EIPs are the primary resources, and the bandwidth is the attached resource.</li> </ul>
statu	No	list <int< td=""><td>[0-10]</td><td>Resource status.</td></int<>	[0-10]	Resource status.
s_list		eger>	[0-10]	Queries resources in a specified status. If there are multiple statuses, separate them using commas (,).
				• 2: Provisioned
				• 3: Closed
				• <b>4</b> : Frozen
				• <b>5</b> : Expired
				If this parameter is not included in the request parameters, is left empty, or is set to <b>null</b> , it cannot be used as a filter criterion. Resources in all statuses are returned.

Para mete r	Manda tory	Туре	Value Range	Description
offset	No	Integer	0 to 214748 3646	Offset, starting from <b>0</b> . The default value is <b>0</b> . <b>NOTE</b> This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. <b>offset</b> indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned.
				For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and <b>offset</b> to <b>1</b> , the second to the tenth records are returned.
				If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
limit	No	Integer	1 to 500	Number of records queried each time. The default value is <b>10</b> .
expir e_tim e_beg in	No	String	20	Start time of a period during which there are expired resources. The time is in the UTC format <i>yyyy-MM-dd'T'HH:mm:ss'Z'</i> , for example, <b>2019-05-06T08:05:01Z</b> . The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion. Records that meet other search criteria are returned.
expir e_tim e_end	No	String	20	End time of a period during which there are expired resources. The time is in the UTC format <i>yyyy-MM-dd'T'HH:mm:ss'Z'</i> , for example, <b>2019-05-06T08:05:01Z</b> . The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion. Records that meet other search criteria are returned.

Para mete r	Manda tory	Туре	Value Range	Description
servic e_typ e_cod e	No	String	64	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. You can call the 4.1.1 Querying Cloud Service Types API to query the type of a cloud service.  If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion. This parameter cannot be left empty or set to an empty string. There will be parameter verification.

#### **Example Request**

## 8.4.2 Renewing Subscription to Yearly/Monthly Resources

#### **Function**

A customer can renew subscription to yearly/monthly resources on the partner sales platform.

When subscription to yearly/monthly resources of a customer is about to expire, the customer can renew the subscription to the resources.

Customers can follow the instructions described in **Manually Renewing a Resource** to renew the subscription to the yearly/monthly resources in Billing Center.

#### ■ NOTE

- If a primary resource has resources attached, the system renews the subscription to both
  the primary resource and its attached ones after this API is invoked. You can invoke
  8.4.1 Querying Customer's Yearly/Monthly Resources to obtain the details of the
  attached resources.
- If a newly purchased EVS disk is attached to an ECS, but this disk is not the attached to
  any of the ECS primary resources, you must invoke 8.4.1 Querying Customer's Yearly/
  Monthly Resources to obtain the details of the ECS primary resources and its attached
  ones.
- This API supports automatic payment. For details about how to use discounts or coupons during payment, see 13.7 Support for Discounts or Coupons.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token. This is because that partners cannot buy products by themselves.

#### **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/orders/subscriptions/resources/renew

#### Request

#### **Request Parameters**

Para mete r	Manda tory	Туре	Value Range	Description
resou rce_id s	Yes	List <str ing&gt;</str 	[1-10]	Resource IDs. Only the primary resource ID is supported. A maximum of 10 resource IDs can be configured.
				To determine the primary resources, query is_main_resource in the response of the API described in 8.4.1 Querying Customer's Yearly/Monthly Resources.
perio d_typ e	Yes	Integer	2, 3	Period type. The value can be:  • 2: month  • 3: year
perio d_nu m	Yes	Integer	1 to 11	Number of periods.  • Month: 1 to 11  • Year: 1 to 3

Para mete r	Manda tory	Туре	Value Range	Description
expire _polic y	No	Integer	0 to 3	Expiration policy. This field has been discarded. Do not use this field. This parameter will not take effect.  O: Entering a grace or retention period 1: Yearly/monthly to pay-per-use 2: Automatic unsubscription 3: Automatic renewal
is_aut o_pay	No	Integer	0, 1	Whether enable automatic payment.  • 0: No  • 1: Yes  If this parameter is not included in the request parameters or is set to <b>null</b> , the default value is <b>0</b> indicating not to enable the automatic payment.

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/orders/subscriptions/resources/renew HTTP/1.1
Content-Type: application/json

Status code: 200

**Table 8-26** Response body parameters

Parameter	Туре	Description
order_ids	List <string></string>	List of order IDs generated when resource subscription is renewed.
fail_resource _infos	List <failresou rceInfo&gt;</failresou 	List of resources that failed to be renewed. This parameter has a value only when there are resources that fail to be renewed. For details, see <b>Table 8-27</b> .  This parameter is reserved.

Table 8-27 FailResourceInfo

Parameter	Туре	Description
error_code	String	Error code.  For details, see Error Codes.  This parameter is reserved.
error_msg	String	Error description. This parameter is reserved.
resource_id	String	Resource ID. This parameter is reserved.

Status code: 400

**Table 8-28** Response body parameters

Parameter	Туре	Description
error_code	String	Status code. For details, see <b>Returned Values</b> .
error_msg	String	Error description.
order_ids	List <string></string>	List of order IDs generated when resource subscription is renewed.
expiredReso List <string> urcelds</string>		List of expired or non-existent resources.  This parameter has a value only when the error code is CBC.99003016.

```
Example Response
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time
   "order_ids": [
"CS19040119281JMYC"
   ],
"fail_resource_infos":[]
```

#### **Returned Values**

#### □ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.300100 36	Renewal is only supported for primary resources.
400	CBC.300100 69	The renewal period does not exist.
400	CBC.300500 06	Automatic order payment failed.
400	CBC.990000 92	Incorrect subscription period.
400	CBC.990031 00	This operation is not allowed because some resources are included in your orders to be paid.
400	CBC.7281	Renewal, payment, or unsubscription not supported. Your account has been frozen.
400	CBC.990030 16	The resources have expired and been deleted or do not exist.
400	CBC.990031 44	You have orders in progress and cannot perform the current operation.
400	CBC.990031 54	The sum of the existing and renewal durations has exceeded the maximum allowed. Select another renewal duration.
400	CBC.990036 34	Resources in discount packages must be renewed as a whole and cannot be renewed together with other resources.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

## 8.4.3 Unsubscribing from Yearly/Monthly Resources

#### **Function**

If a customer has subscribed to a yearly/monthly resource, the customer can use this API to unsubscribe from the resource, including the renewed part and currently used part. The customer cannot use the resources after unsubscription.

Customers can follow the instructions described in **Unsubscription** to unsubscribe from the yearly/monthly resources in Billing Center.

#### □ NOTE

- A yearly/monthly resource can be unsubscribed from only after it has been successfully paid and provisioned.
- If a primary resource has resources attached, the system cancels the subscription to both
  the primary resource and its attached ones after this API is invoked. You can invoke
  8.4.1 Querying Customer's Yearly/Monthly Resources to obtain the details of the
  attached resources.
- If a newly purchased EVS disk is attached to an ECS, but this disk is not the attached to
  any of the ECS primary resources, you must invoke 8.4.1 Querying Customer's Yearly/
  Monthly Resources to obtain the details of the ECS primary resources and its attached
  ones.
- After invoking this API, you can also invoke the API described in 8.3.5 Querying the
   Amount of Unsubscription Orders to query the orders corresponding to the
   unsubscription order amounts.
- Confirm the resource information and the refund before unsubscribing from in-use resources. After being unsubscribed from, the resources not in the recycle bin cannot be restored. If you wan to continue using these resources, unsubscribe from the subscription term renewed but not used yet.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token. This is because that partners cannot buy products by themselves.

## Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/orders/subscriptions/resources/unsubscribe

#### Request

**Request Parameters** 

Param eter	Manda tory	Туре	Value Range	Description
resour	Yes	List <str< td=""><td>Α</td><td>Resource IDs.</td></str<>	Α	Resource IDs.
ce_ids		ing>	maxi mum 10 IDs	Up to 10 resource IDs can be entered at a time. Only IDs of primary resources and child resources that are attached to primary resources are supported. The parent resource ID is required in whole-set sales scenarios.
				Determine whether a resource is a primary resource based on is_main_resource in the response of the API described in 8.4.1 Querying Customer's Yearly/Monthly Resources.
unsub	Yes	Integer	1, 2	Unsubscription type. The value can be:
scribe_ type				1: Unsubscribe from the resource and its renewal periods.
				2: Unsubscribe from only the resource renewal periods.
unsub scribe	No	Integer	1 to 5	Unsubscription cause. The value can be:
reason				1: The product is of poor usability.
_type				2: The product functions cannot meet the requirements.
				3: Customers do not know how to use the product, or the product operations are complex.
				4: Customers are not satisfied with the service.
				• 5: Others
unsub scribe_ reason	No	String	A maxi mum of 512 charac ters	Unsubscription reason, which is generally specified by the customer.

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/orders/subscriptions/resources/unsubscribe HTTP/1.1

  ],
  "fail_resource_infos":[]
}
```

#### **Returned Values**

#### □ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.300000 67	Unsubscription not supported. This resource has been deleted or the subscription to this resource has not been synchronized to CBC.
400	CBC.990030 12	The resource ID does not exist.
400	CBC.990031 00	This operation is not allowed because some resources are included in your orders to be paid.
400	CBC.990031 28	The resource does not have renewed periods or the renewed periods have taken effect, and the renewal periods cannot be unsubscribed.
400	CBC.990031 85	The associated resources of a cloud service cannot be operated independently.
400	CBC.990036 43	For cloud services for which invoices have been issued, unsubscription is not supported.
400	CBC.990036 47	Unsubscription not supported for this pay-per-use package.
400	CBC.990036 49	Unsubscription not supported for cloud services in trial use.
400	CBC.990036 52	Unsubscription is not supported for DevCloud packages.
400	CBC.990036 54	If there is a bandwidth add-on package, you cannot unsubscribe from the renewal period.
400	CBC.990036 56	Operation not allowed. Your resource has been frozen.
400	CBC.990060 66	An error occurred during the query of the fee information.
403	CBC.0151	Access denied.
400	CBC.990036 51	Unsubscription not supported. An operation associated with this instance is in progress.

HTTP Value	Error Code	Description
500	CBC.0999	Other errors.

## 8.4.4 Enabling Automatic Subscription Renewal for Yearly/ Monthly Resources

#### **Function**

A customer can use this API to enable automatic subscription renewal for its long-term yearly/monthly resources to prevent the resources from being deleted when they are expired.

Customers can follow the instructions described in **Enabling Auto-Renewal** to enable automatic subscription renewal for yearly/monthly resources in Billing Center.

#### □ NOTE

- The customer can enable automatic subscription renewal only after the customer successfully pays its yearly/monthly resource order.
- For details about the yearly/monthly products supporting automatic subscription renewal, see **Auto-Renewal Rules**.
- Before invoking this API, you can invoke the API described in 8.4.1 Querying
   Customer's Yearly/Monthly Resources to query the resource ID, resource expiration
   date, and deduction policy after the resource is expired.
- After you enable automatic subscription renewal, the fee will be deducted at 03:00 7 days before the product expiration date. Ensure that you have enough budget. If the first attempt to deduct the fee fails due to the insufficient budget, the system will continue the attempts at 03:00 every day until the fee is deducted successfully, or will retain the product resources till the last allowed day.
- The renewed period is the same as the original resource subscription period.

#### Constraints

This API can be invoked only by the customer AK/SK or token.

## **Debugging**

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### URI

POST /v2/orders/subscriptions/resources/autorenew/{resource\_id}

The following table describes the parameters.

**Table 8-29** Path parameters

Param eter	Manda tory	Value Range	Description
resourc e_id	maxim um of 64	maxim um of 64	Resource ID.  You can obtain the resource ID by invoking the API described in 8.4.1 Querying Customer's Yearly/Monthly Resources.
		charact ers	The attached resource IDs will be configured together when you configure primary resource IDs.
			<ul> <li>For example, ECS is the primary resource, and EVS is the attached resource.</li> </ul>
			<ul> <li>If the shared bandwidth is used, the bandwidth is the primary resource, and EIPs are the attached resource.</li> </ul>
			<ul> <li>If the exclusive bandwidth is used, EIPs are the primary resources, and the bandwidth is the attached resource.</li> </ul>
			If automatic renewal is enabled for the secondary resource, the primary resource will also be renewed.

## Request

500	CBC.0999	Other errors.

## 8.4.5 Disabling Automatic Subscription Renewal for Yearly/ Monthly Resources

#### **Function**

A customer can disable automatic subscription renewal when needed. After disabling this function, the customer needs to manually renew the subscription to the resources before they expire.

Customers can follow the instructions described in **Disabling Auto-Renewal** to disable automatic subscription renewal for yearly/monthly resources in Billing Center.

#### ∩ NOTE

- The prerequisite is that you have invoked the API described in 8.4.4 Enabling
   Automatic Subscription Renewal for Yearly/Monthly Resources to enable automatic
   subscription renewal, or have configured the expiration policy to automatic renewal
   when you invoke the API described in 8.4.2 Renewing Subscription to Yearly/Monthly
   Resources.
- Yearly/monthly resources supporting the disabling of automatic subscription renewal are same as those supporting the enabling of automatic subscription renewal.
- Before invoking this API, you can invoke the API described in 8.4.1 Querying
   Customer's Yearly/Monthly Resources to query the resource ID, resource expiration
   date, and deduction policy after the resource is expired.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token.

#### **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

DELETE /v2/orders/subscriptions/resources/autorenew/{resource\_id}

# 8.4.6 Enabling/Canceling the Change from Yearly/Monthly to Pay-per-Use upon Expiration

#### **Function**

A customer can change the billing mode of resources from yearly/monthly to payper-use after the resources expire. The pay-per-use mode takes effect upon a yearly/monthly expiration.

Customers can follow the instructions described in From Yearly/Monthly to Payper-Use to enable the change from yearly/monthly to pay-per-use upon expiration in Billing Center.

#### **◯** NOTE

- The customer can enable the change from yearly/monthly to pay-per-use only after it has paid the yearly/monthly subscription.
- The billing mode of solution portfolio products cannot be changed from yearly/monthly to pay-per-use.
- Before invoking this API, you can invoke the API described in 8.4.1 Querying
   Customer's Yearly/Monthly Resources to query the resource ID, resource expiration
   date, and deduction policy after the resource is expired.
- With the change from yearly/monthly to pay-per-use enabled, after a yearly/monthly package expires, you will be billed for subsequently used resources on a pay-per-use basis.
- To cancel the change from yearly/monthly to pay-per-use, you must enable the change by calling the API described in 8.4.6 Enabling/Canceling the Change from Yearly/ Monthly to Pay-per-Use upon Expiration or set the expiration policy to Pay-per-Use After Expiration by calling the API described in 8.4.2 Renewing Subscription to Yearly/ Monthly Resources.

#### **REST API**

This API can be invoked only by the customer AK/SK or token.

#### **Debugging**

You can debug the API in API Explorer which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/orders/subscriptions/resources/to-on-demand

The following table describes the parameters.

#### Request

#### **Request Parameters**

Paramete r	Mand atory	Туре	Value Range	Description
operation	Yes	String	A maxim um of 64 charact ers	Used to enable or cancel the change from yearly/monthly to pay-per-use.  • SET_UP: Enable  • CANCEL: Cancel

Paramete r	Mand atory	Туре	Value Range	Description
resource_i ds	Yes	list <strin g&gt;</strin 	[1-100]	Resource ID.  You can obtain the resource ID by invoking the API described in 8.4.1  Querying Customer's Yearly/ Monthly Resources.  A maximum of 100 IDs of only primary resources can be set. After this parameter is set, both the primary resource and its attached resources are changed to pay-peruse resources. This field is mandatory.
				You can refer to parameter is_main_resource in the response of the API described in 8.4.1 Querying Customer's Yearly/Monthly Resources to check whether the resource is primary.

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/orders/subscriptions/resources/to-on-demand HTTP/1.1 Content-Type: application/json
X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

}
```

#### **Returned Values**

#### □ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx: This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.99003609	The billing mode of this product type cannot be changed to pay-per-use.
200	CBC.99003610	The billing mode of resources in the grace or retention period cannot be changed to pay-peruse.
400	CBC.99003611	The billing mode of pay-per-usage packages cannot be changed to pay-per-use.
400	CBC.99003012	The resource ID does not exist.
400	CBC.99003622	The billing mode of solutions cannot be changed to pay-per-use.
400	CBC.99003623	Cannot be changed to the pay-per-use billing mode because there are transactions being processed.
400	CBC.99003624	Cannot be changed to the pay-per-use billing mode because the resource has been frozen due to security reasons.
400	CBC.99003626	Cannot be changed to the pay-per-use billing mode because this account has been frozen.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

## **8.5 Managing Resource Packages**

## **8.5.1 Querying Resource Packages**

#### **Function**

This API is used to query resource packages.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token.

If a resource package has expired for more than 18 months, its information cannot be queried.

## Debugging

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v3/payments/free-resources/query

**Table 8-32** Header parameter

Paramete	Manda	Value	Description
r	tory	Range	
X- Language	No	A maximu m of 8 characte rs	Language.  • zh_CN: Chinese  • en_US: English  Default value: zh_CN

## Request

#### **Request Parameters**

Paramete r	Manda tory	Туре	Value Range	Description
region_co de	No	String	A maximu m of 64 characte	Cloud service region code, for example, ap-southeast-1. Obtain the value from the Region column in Regions and Endpoints.
			rs	If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , it cannot be used as a filter criterion.
order_id	No	String	A maximu m of 64 characte rs	Order ID.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
product_id	No	String	A maximu m of 64 characte rs	Resource package ID.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Paramete r	Manda tory	Туре	Value Range	Description
product_n ame	No	String	A maximu m of 256 characte rs	Resource package name.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
enterprise _project_id	No	String	A maximu m of 64 characte rs	Enterprise project ID.  This parameter is mandatory if you want to query the resources of an enterprise project.  If this parameter is not included in the request parameters, is set to "", or is set to null, the resources not included in the enterprise project are queried.
status	No	Integer	(0, 4)	Status:  O: Not effective  1: In effect  2: Used up  3: Expired  4: Unsubscribed  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
offset	No	Integer	(0, 999999)	Offset, starting from <b>0</b> . The default value is <b>0</b> .  NOTE  This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. <b>offset</b> indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned.  For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and <b>offset</b> to <b>1</b> , the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.

Paramete r	Manda tory	Туре	Value Range	Description
limit	No	Integer	(1, 1000)	Number of records queried each time. The default value is <b>10</b> .
service_ty pe_code_li	No	List <stri ng&gt;</stri 	[0-10]	The ID of the cloud service type. The value is case-insensitive.
st				For example, the cloud service type code of OBS is hws.service.type.obs. You can call the 4.1.1 Querying Cloud Service Types API to query the type of a cloud service.
				If this parameter is not included in the request, is left empty, or is set to <b>null</b> , it cannot be used as a filter criterion, and records that meet other search criteria are returned.

#### **Example Request**

## Response

Parameter	Туре	Value Range	Description
error_code	String	20	Error code.
			For details, see <b>Returned Values</b> . This parameter is returned only when the query failed.

Parameter	Туре	Value Range	Description
error_msg	String	1000	Error description. This parameter is returned only when the query failed.
free_resourc e_packages	List <freer esourcePac kage&gt;</freer 	-	Resource package list. For details, see  Table 8-33.
total_count	Integer	-	Total number of records

Table 8-33 FreeResourcePackage

Parameter	Туре	Value Range	Description
order_instan ce_id	String	A maxim um of 64 charact ers	Identifier of a subscribed resource package.
order_id	String	A maxim um of 64 charact ers	Order ID. If the value of <b>source_type</b> is <b>1</b> , this parameter is left empty.
product_id	String	A maxim um of 64 charact ers	Resource package ID.
product_na me	String	A maxim um of 256 charact ers	Resource package name.
enterprise_pr oject_id	String	A maxim um of 64 charact ers	Enterprise project ID.

Parameter	Туре	Value Range	Description
enterprise_pr oject_scope	Integer	(0, 1)	Enterprise projects for which resource packages are used:  • 0: All enterprise projects  • 1: Specific enterprise projects
effective_tim e	String	A maxim um of 20 charact ers	Time when a resource package is purchased. The value is in UTC format.
expire_time	String	A maxim um of 20 charact ers	Expiration time of a resource package. The value is in UTC format.
status	Integer	(0, 4)	Status:  O: Not effective  1: In effect  2: Used up  3: Expired  4: Unsubscribed
service_type_ code	String	A maxim um of 64 charact ers	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.
service_type_ name	String	A maxim um of 200 charact ers	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
region_code	String	A maxim um of 64 charact ers	Cloud service region code, for example, ap-southeast-1. Obtain the value from the Region column in Regions and Endpoints.

Parameter	Туре	Value Range	Description
source_type	Integer	(0, 1)	Source of a resource package. The options are as follows:  • 0: Order  • 1: Gifted by DevCloud
bundle_type	String	[ATOMI C_PKG  BUNDL E_PKG]	Bundle binding type. The options are as follows:  • ATOMIC_PKG: Atomic package  • BUNDLE_PKG: Combined package
quota_reuse _mode	Integer	(1,2)	<ul> <li>Use model. The options are as follows:</li> <li>1: Resettable Indicates that the purchased pay-peruse resource package can be reset at a specified period. For example, if you purchase a 1-year 40 GB pay-per-use resource package with quota_reuse_mode set to 1 and quota_reuse_cycle to 4, then the resource package will be reset each month (you will get 40 GB resource each month) within the year.</li> <li>2: Not resettable Indicates that the purchased resource package will not be reset. For example, if you purchase a 1-year 40 GB pay-per-use resource package with quota_reuse_mode set to 2, the resource package will not be reset, and you will get 40 GB resource within the year.</li> </ul>
free_resourc es	List <freer esource&gt;</freer 	-	For details about resource items (ID-specific) in a resource package, see <b>Table 8-34</b> .

Table 8-34 FreeResource

Parameter	Туре	Value Range	Description
free_resourc e_id	String	A maximu m of 64 charact ers	Resource ID. A resource package contains multiple resources, and each resource has a usage type.

Parameter	Туре	Value Range	Description
usage_type_ name	String	A maximu m of 1024 charact ers	Usage type name.
amount	String	A maximu m of 32 charact ers	Remaining resource quota of a package whose <b>quota_reuse_mode</b> is <b>Resettable</b> , that is, the remaining resource quota in the current reset period.
original_amo unt	String	A maximu m of 32 charact ers	Original resource quota of a package whose <b>quota_reuse_mode</b> is <b>Resettable</b> , that is, the total resource quota in each reset period.
measure_id	Integer	-	Measurement unit of the quota of a free resource package. You call the API in <b>4.1.5 Querying Measurement Units</b> to obtain the value.

## Response

### **Response Parameters**

Parameter	Туре	Maxim um Length of Charac ters	Description
error_code	String	20	Error code.  For details, see <b>Returned Values</b> . This parameter is returned only when the query failed.
error_msg	String	1000	Error description. This parameter is returned only when the query failed.
free_resourc es	List <freer esourceDe tail&gt;</freer 	_	Resource information (resource details) in a resource package. For details, see <b>Table 8-36</b> .

Table 8-36 FreeResourceDetail

Parameter	Туре	Maxim um Length of Charact ers	Description
free_resourc e_id	String	A maxim um of 64 charact ers	Resource ID. A resource package contains multiple resources, and a resource has a usage type.
free_resourc e_type_nam e	String	-	Resource type name.
quota_reuse _cycle	Integer	-	Reset period. This parameter is valid only when <b>quota_reuse_mode</b> is set to <b>1</b> (Resettable).  • 1: Hour  • 2: Day  • 3: Week  • 4: Month  • 5: Year

Parameter	Туре	Maxim um Length of Charact ers	Description
quota_reuse _cycle_type	Integer	_	<ul> <li>Reset period type. This field is valid only when quota_reuse_mode is set to 1 (Resettable).</li> <li>1: Reset by calendar period Indicates that the resource package is reset by calendar month or calendar year. For example, if you set quota_reuse_cycle to 4 (month) and quota_reuse_cycle_type to 1, the resource package is reset on the first day of each month.</li> <li>2: Reset by order period Indicates that the resource package is reset by order period. For example, if you set quota_reuse_cycle to 4 (month), quota_reuse_cycle_type to 2, and you purchase this resource package on the 15th day of the month, then the resource package will be reset on the 15th day of each month.</li> </ul>
usage_type_ name	String	-	Usage type name.
start_time	String	-	<ul> <li>Start time. The value is in UTC format.</li> <li>If quota_reuse_mode is set to 1, the value is the start time of the reset period for the current time.</li> <li>If quota_reuse_mode is set to 2, the value is the time when the purchased instance takes effect.</li> </ul>
end_time	String	-	<ul> <li>If quota_reuse_mode is set to 1, the value is the end time of the reset period for the current time.</li> <li>If quota_reuse_mode is set to 2, the value is the time when the purchased instance becomes invalid.</li> </ul>
amount	BigDecima l	-	Remaining resource quota of a package whose <b>quota_reuse_mode</b> is <b>Resettable</b> , that is, the remaining resource quota in the current reset period.

Parameter	Туре	Maxim um Length of Charact ers	Description
original_amo unt	BigDecima l	-	Original resource quota of a package whose <b>quota_reuse_mode</b> is <b>Resettable</b> , that is, the total resource quota in each reset period.
measure_id	Integer	-	Measurement unit of the quota of a free resource package. Call the API in 4.1.5  Querying Measurement Units to obtain the value.

## 8.5.3 Querying Resource Package Usage Details

#### **Function**

Customers can query the resource usage details on the partner sales platform.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token.

### Debugging

You can debug this API in **API Explorer**. Automatic authentication is supported. API Explorer can automatically generate and debug example SDK code.

#### **URI**

GET /v2/bills/customer-bills/free-resources-usage-records

Table 8-37 Request parameters

Paramete r	Mand atory	Туре	Value Range	Description
free_resou rce_id	No	String	A maximum of 64 characters	Resource ID. A resource package contains multiple resources, and a resource has a usage type. The resource ID is obtained from the response of the API in 8.5.1  Querying Resource Packages.  If this parameter is not included in the request parameters or is left empty, it cannot be used as
product_id	No	String	A	a filter criterion.  Product ID, that is, resource
			maximum of 64 characters	package ID.  If this parameter is not included in the request parameters or is
				left empty, it cannot be used as a filter criterion.

Paramete r	Mand atory	Туре	Value Range	Description
resource_t ype_code	No	String	A maximum of 64 characters	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion.
deduct_ti me_begin	Yes	String	A maximum of 10 characters	Start time of resources deduction, which is in <i>YYYY-MM-DD</i> format (GMT+08:00).
deduct_ti me_end	Yes	String	A maximum of 10 characters	End time of resource deduction, which is in YYYY-MM-DD format (GMT+08:00).  NOTE  The gap between the start time and end time must be less than or equal to 90 days.
offset	No	Integer	0 to maximum integer	Offset, starting from <b>0</b> . The default value is <b>0</b> .  NOTE  This parameter is used for pagination. Retain its default value <b>0</b> if pagination is not required. offset indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to <b>1</b> , the second and subsequent data records are returned.  For example, if there 10 records that meet query conditions, when you set limit to <b>10</b> and offset to <b>1</b> , the second to the tenth records are returned.  If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have <b>10</b> records.
limit	No	Integer	[1-1000]	Maximum number of records in each query. The default value is <b>10</b> .

## 8.6 Managing Pay-Per-Use Resources

## 8.6.1 Querying Customer's Pay-Per-Use Resources

#### **Function**

A partner can query the pay-per-use resources that have been provisioned for customers associated with the partner in the Reseller model.

#### **Constraints**

This API can be invoked using the partner AK/SK or token only.

• The data obtained using this API is for reference only because it has a delay, and the delay for each cloud service is different.

### **Debugging**

You can debug the API in **API Explorer** which supports automatic authentication. API Explorer can automatically generate and debug example SDK code.

#### **URI**

POST /v2/partners/sub-customers/on-demand-resources/query

Table 8-39 Header parameter

## Request

#### **Request Parameters**

Param eter	Man dato ry	Туре	Value Range	Description
custom er_id	Yes	String	A maximu m of 64 character s	Customer account ID.  To obtain the customer ID, call the API in 5.3.1 Querying Customers.
region_ code	No	String	A maximu m of 64 character	Cloud service region code, for example, ap-southeast-1. Obtain the value from the Region column in Regions and Endpoints.
			S	If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , it cannot be used as a filter criterion.

Param eter	Man dato ry	Туре	Value Range	Description
service_ type_co de	No	String	A maximu m of 64 character s	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
resourc e_ids	No	List <stir ng&gt;</stir 	A maximu m of 50 IDs	Uses IDs to query resources in a batch. It is used to query the resources corresponding to specified resource IDs. A maximum of 50 IDs can be transferred at the same time. If this parameter is not included in the request parameters, is left empty, or is set to <b>null</b> , it cannot be used as a filter criterion.
effectiv e_time_ begin	No	String	A maximu m of 20 character s	Start time of the validity period.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z.  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
effectiv e_time_ end	No	String	A maximu m of 20 character s	End time of the validity period.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, such as 2019-05-06T08:05:01Z.  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Param eter	Man dato ry	Туре	Value Range	Description
offset	No	Integer	0 to maximu m integer	Offset, which starts from 0. The default value is 0.  NOTE  This parameter is used for pagination. Retain its default value 0 if pagination is not required. offset indicates the offset relative to the first data record among all that meets the conditions configured. If you set offset to 1, the second and subsequent data records are returned.
				For example, if there 10 records that meet query conditions, when you set limit to 10 and offset to 1, the second to the tenth records are returned.
				If there are 20 records that meet query conditions, when you set offset to <b>0</b> and limit to <b>10</b> for the first page and set offset to <b>10</b> and limit to <b>10</b> for the second page, then each page will respectively have 10 records.
limit	No	Integer	1 to 100	Number of records queried each time. The default value is <b>10</b> .
status	No	Integer	1 to 6	Resource status.  1: Normal (provisioned)  2: Grace period  3. Freezing  4: Changing  5: Canceling  If this parameter is not included in the request parameters or is set to <b>null</b> , it cannot be used as a filter criterion.
indirect _partne r_id	No	String	A maximu m of 64 character s	Reseller ID. For details about how to obtain such IDs, see Query Huawei Cloud Resellers. This parameter is mandatory only when a distributor queries pay-per-use resources of customers associated with its resellers. Otherwise, the pay-per-use resources of the distributor's own customers will be queried.

## Response

#### **Response Parameters**

Param eter	Туре	Description	
error_c ode	String	Status code. For details, see <b>Returned Values</b> .	
error_ msg	String	Error description.	
resourc es	List <customerre sourcev2=""></customerre>	Customer resources. For details, see <b>Table 8-40</b> .	
total_c ount	Integer	Total number of query records.	

#### Table 8-40 CustomerResourceV2

Param eter	Туре	Description	
custom er_id	String	Customer account ID.	
region_ code	String	Cloud service region code, for example, apsoutheast-1. Obtain the value from the Region column in Regions and Endpoints.	
availabi lity_zon e_code	String	AZ code.	
service _type_c ode	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.	

Param eter	Туре	Description	
resourc e_type_ code	String	Resource type code. For example, the VM resource type code of ECS is <b>hws.resource.type.vm</b> .	
service _type_n ame	String	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .	
resourc e_type_ name	String	Resource type. For example, the resource type of ECS is <b>Cloud Host</b> .	
resourc e_id	String	Resource ID.	
resourc e_nam e	String	Resource instance name.	
effectiv e_time	String	Effective time. UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as <b>2019-05-06T08:05:01Z</b> . The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format,	
		such as <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.	
expire_ time	String	Expiration time. UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, such as <b>2019-05-06T08:05:01Z</b> . The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format,	
		such as <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.	
status	Integer	Resource status.  1: Normal (provisioned) 2: Grace period 3. Freezing 4: Changing 5: Canceling 6: Canceled	
resourc e_spec_ code	String	Specification of a cloud service resource. For example, a VM resource specification is s2.small.1.linux (.win or .linux should be added at the end of the specification).	

Param eter	Туре	Description	
resourc e_info	String	Capacity of pay-per-use resources.  The value is in "resourceInfo": "{\"specSize\":40.0}" format.	
product _spec_d esc	String	Product specification description. Example:  • ECS: General computing-plus   c6.2xlarge.4   8 vCPUs   32 GB   Linux  • Disk: EVS_SATA_LXH01   40.0 GB	

```

```

#### **Returned Values**

#### ■ NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Parameter error.
400	CBC.9900000 0	You do not have the operation permission to the customer.

HTTP Value	Error Code	Description
400	CBC.9900003	You do not have the permission to operate this reseller.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

# 9 Bill Management

## 9.1 Managing Customer Consumptions

## 9.1.1 Querying Customer Resource Usage

#### **Function**

This API is used to query customer resource usage.

#### NOTICE

The resource usage data has a latency. Therefore, the data cannot be used when there are high requirements on data accuracy, such as for usage monitoring or budget control.

#### File

A partner can subscribe to the customer resource usage in HUAWEI CLOUD Partner Center to learn the resource usage of the customer. For details, see **File Subscription**.

#### **Ⅲ** NOTE

- The system generates the customer resource usage file containing the data generated till the previous day from 12:00 to 20:00 (GMT+8:00) (not later than 24:00) every day. Therefore, the partner needs to configure a schedule task in the partner sales platform to obtain the customer resource usage file at 24:00 every day.
- The partner who subscribes to the customer resource usage in Partner Center can obtain the resource usage details file as of the following day (GMT+08:00).
- 1. Link to obtain the file

https://bucketname.obs.Endpoint.myhuaweicloud.com/customerUsage/filename

Table 9-1 Parameter description

Parameter	Description	
bucketnam e	Name of an OBS bucket. Only OBS buckets purchased on Huawei Cloud in the Hong Kong region can be used. For details about how to create a bucket, see <b>Creating a Bucket</b> .	
	NOTE You cannot use your account to buy OBS buckets. Instead, you can use your customers' accounts to do so.	
Endpoint	Domain name or IP address of the server bearing the REST service endpoint. Obtain this value from <b>Regions and Endpoints</b> .	
customerUs age	Name of the folder for storing the customer resource usage details uploaded by the system.	
filename	File name.	
	The file name format is customerUsageV2_YYYYMM_YYYYMMDD.tar.gz.	
	The file is a compressed package.	
	• YYYYMM indicates the month of the data to be exported. For example, if the data for February 2019 is exported, YYYYMM should be 201902.	
	• YYYYMMDD specifies the date when the customer resource usage data is exported. For example, if the file name is customerUsageV2_201902_20190301.tar.gz, the data generated from February 1, 2019 to February 28, 2019 is exported on March 1, 2019.	
	Files in the package are in the format of customerUsageV2_YYYYMM_YYYYMMDD_XXXXXXXX.csv.  Each .csv file contains 100,000 records.	

#### 2. Generation time of the resource usage details

Resource usage data is summarized by month. The monthly usage details contain incremental data starting from the first day of each month. The usage details may change after being generated. Therefore, obtain the latest data.

- The system generates the resource usage details from 12:00 to 20:00 (GMT+8:00) (not later than 24:00) every day.
- The usage details of each month are generated on the first day of the following month. For example, the usage details of July are generated on August 1.
- The month-to-date usage details of the current month and all usages details of the last month are generated on the second to fourth day of the current month. For example, the usage details of August 1 and August 2 and of July are generated on August 3.
- The usage details of this month are generated on the fifth day to the end of this month. For example, the usage details from August 1 to August 5 are generated on August 6.

#### 3. File fields

File: customerUsageV2\_YYYYMM\_YYYYMMDD\_XXXXXXXXXcsv

Paramete r	Туре	Maximum Length of Characters	Description
Billing Cycle	String	256	Billing cycle of the consumption record
Customer ID	String	256	Domain ID of a customer
Transactio n Time	String	256	Transaction time in the format of UTC
Billing Mode	String	8	Billing mode. The options are as follows:
			• 1: Yearly/monthly
			• 3: Pay-per-use
			10: Reserved instances
			• 11: Savings plan

Paramete r	Туре	Maximum Length of Characters	Description
Bill Type	String	8	Bill type:
			1: Expenditure - purchase
			2: Expenditure - renewal
			3: Expenditure - change
			• 4: Refund - unsubscription
			• 5: Expenditure - use
			8: Expenditure - auto-renewal
			9: Adjustment - compensation
			• 12: Expenditure - hourly billing
			13: Expenditure - unsubscription handling fee
			14: Expenditure - month-end deduction for support plan
			• 15: Expenditure - tax
			• 16: Adjustment - deduction
			17: Expenditure - difference amount (min. guaranteed-actual)
			NOTE Expenditure-difference amount (min. guaranteed-actual) determines the fees that a customer needs to pay if the customer does not reach the minimum expenditure limit stipulated in the signed contract. This rule is applicable to direct sales customers and referral customers who use postpaid method.
			• 20: Refund - change
			• 23: Expenditure-savings plans
			• 24: Refund-changing to Pay-Per-Use
			• 100: Refund - unsubscription tax
			• 101: Adjustment - tax compensation
			• 102: Adjustment - tax deduction
Resource ID	String	256	Resource instance ID If the resource is a reserved instance, the value is the reserved instance ID.

Paramete r	Туре	Maximum Length of Characters	Description
Resource Name	String	256	Resource name entered when a customer creates a resource instance.  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Resource Tag	String	11,000	Resource tag. Customers can set tags when managing resources.
			If a customer purchases a resource package product that is not specific to a certain resource, this field is left empty.  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by nonpure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Service Type Code	String	64	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
Resource Type Code	String	100	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.
Product ID	String	256	Product ID.
Product Name	String	256	Product name
Specificati ons	String	256	Product specifications.  Example: General Computing s2.small.1  1vCPUs 1GB linux
Region Code	String	64	Cloud service region code, for example, ap-southeast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
Project ID	String	256	ID of the project to which a resource belongs. You can select a project when purchasing a resource.

Paramete r	Туре	Maximum Length of Characters	Description
Order ID/ Transactio n ID	String	256	Order ID generated when a customer places the order. This parameter is available only for yearly/monthly products. In other cases, this parameter is left empty.
Order Type	String	256	Order type. This parameter is available only for yearly/monthly products. This parameter is left empty in the following cases:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use
			15: Price adjustment
Period Number	String	256	Duration of a yearly/monthly subscription.  NOTE  This parameter is available only for yearly/monthly products. In other cases, this parameter is left empty.  The value can be an integer, or a decimal.
Period Type	String	256	Period type for yearly/monthly products. This parameter is available only for yearly/monthly products. In other cases, this parameter is left empty.  • 0: Daily  • 2: Monthly  • 3: Yearly  • 4: Hourly  • 99: Unknown
Usage Type	String	256	Usage type, which can be obtained by calling the API described in 4.1.4  Querying Usage Types.
Usage	String	256	Total resource usage

Paramete r	Туре	Maximum Length of Characters	Description
Usage Unit	String	256	Usage unit To obtain the unit, call the API in 4.1.5 Querying Measurement Units.
Package Usage	String	256	Used amount of the package. The used resources are not calculated using the pay-per-use price.
Unit (Package Usage)	String	256	Unit of the usage in the package To obtain the unit, call the API in 4.1.5 Querying Measurement Units.
Reserved Instance Usage	String	256	Used reserved instance. The used resources are not calculated using the pay-per-use price.
Unit (Reserved Instance Usage)	String	256	Usage unit for reserved instance To obtain the unit, call the API in 4.1.5 Querying Measurement Units.
Expenditur e Amount	String	256	Transaction price listed on the HUAWEI CLOUD official website, excluding the commercial discount provided by HUAWEI CLOUD for partners Unit: USD NOTE If HUAWEI CLOUD writes off the outstanding amount as required or refunds the over-deducted amount, a record with the negative amount will be generated.
Unit Price	String	256	Unit price of a pay-per-use product. This parameter has a value only when the price is the same. For tiered billing, this parameter is left empty.

Paramete r	Туре	Maximum Length of Characters	Description
Unit	String	256	Unit of the product.
			<ul> <li>The unit of linear products is USD/ {linear unit}/month or USD/{linear unit}/hour.</li> </ul>
			The unit of non-linear products is USD/month or USD/hour.
			NOTE  The linear unit is the unit of linear products (those come in sizes). For example, the linear unit of the hard disk is GB, and that of the bandwidth is Mbit/s.
			For example, 0.6 USD/10,000 times. The unit price is 0.6, the price unit is dollar, and the step is 10,000 times. The unit price is 0.6 and the price unit is USD/10,000 times.
Combined Order No	String	256	The combined order number generated when a customer places orders. This parameter is available only for yearly/monthly products. In other cases, this parameter is left empty.
			This parameter is reserved.
Product Type Name	String	200	Product type name
Resource Type Name	String	200	Resource type name

## 9.2 Managing Partner Bill

## 9.2.1 Querying Monthly Bills

#### **Function**

You can query your monthly bills that cover amount due, expenditures, refunds, and adjustments.

For details about how to query monthly bills in the Partner Center, click here.

#### ■ NOTE

The partner bill for each month is generated before 12:00 (Beijing Time) on the fifth day of the next month.

#### **Constraints**

This API can be invoked only by the partner account AK/SK or token.

### Debugging

You can debug the API in **API Explorer** which supports automatic authentication.API Explorer can automatically generate and debug example SDK code.

#### URI

GET /v2/bills/partner-bills/postpaid-bill-summary

The following table describes the parameters.

**Table 9-2** Query parameters

Parameter	Manda tory	Туре	Value Range	Description
bill_cycle	Yes	String	A maximum of 10 characters	Month when a bill is generated. Format: YYYY-MM

### Request

Request parameters

None

**Example Request** 

 ${\tt GET\ https://bss-intl.myhuaweicloud.com/v2/bills/partner-bills/postpaid-bill-summary?bill\_cycle=2020-12\ HTTP/1.1}$ 

Content-Type: application/json

X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

## Response

#### Response parameters

Parameter	Туре	Value Range	Description
error_code	String	A maximum of 16 characters	Error code. For details, see Returned Values. This parameter is returned only when a failure occurs.
error_msg	String	A maximum of 1024 characters	Error description. This parameter is returned only when a failure occurs.
bill_cycle	String	A maximum of 10 characters	Month when a bill is generated. This parameter is returned only when the query is successful. Format: YYYY-MM
initial_amount _due	BigDecimal	-	Amount due (tax included) in a bill.  Amount due (output tax included) = Expenditures + Refunds + Adjustments
consume_amo unt	BigDecimal	-	Expenditures in a bill.
refunds	BigDecimal	-	Refunds in a bill.
adjustments	BigDecimal	-	Partner's adjustments in a billing cycle, for example, arrears write-offs.
tax_amount	BigDecimal	-	Output tax in a bill, which is not included in the amount due.
currency	String	A maximum of 8 characters	This parameter is returned only when the query is successful. USD

### Example Response

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time
{
    "bill_cycle": "2020-12",
```

```
"initial_amount_due": 90,

"consume_amount": 140,

"refunds": -30,

"adjustments": -20,

"tax_amount": 10,

"currency": "USD"
}
```

#### **Returned Values**

#### ∩ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Value	Error Code	Description
400	CBC.0100	Invalid parameter
403	CBC.0151	Access denied.
500	CBC.0999	Other errors

## 9.2.2 Querying Bill Details of Monthly Expenditures

#### **Function**

This API is used to query bill details of monthly expenditures.

For details about how to query the bill details of monthly expenditures in the Partner Center, click **here**.

#### Bill File

A partner can subscribe to the partner bill (customer resource usage) in the HUAWEI CLOUD Partner Center. For details, see **File Subscription**. Your sales platform will calculate the customer expenditures and generate the customer bills based on this bill and then you can perform reconciliation with HUAWEI CLOUD.

1. Link to Obtain the File https://bucketname.obs.Endpoint.myhuaweicloud.com/customerBill/filename

**Table 9-3** Parameter descriptions

Parameter	Description
bucketna me	OBS bucket name. Only OBS buckets purchased on Huawei Cloud in the Hong Kong region can be used. For details about how to create a bucket, see Creating a Bucket.
	NOTE You cannot use your account to buy OBS buckets. Instead, you can use your customers' accounts to do so.
Endpoint	Domain name or IP address of the server bearing the REST service endpoint. Obtain this value from <b>Regions and Endpoints</b> .
customerB ill	Name of the folder for storing the partner bill details file uploaded by the system.
filename	File name.  • The name of a bill details file is in customerBill_YYYYMM.tar.gz format.  In the preceding command, customerBill_YYYYMM.tar.gz is a compressed package. The files contained in the package are named in customerBill_YYYYMM_xxxx.csv format. Each
	CSV file contains 100,000 records.

#### 2. File Generation Cycle

The file is generated each natural month.

The system automatically creates the file of previous month before 12:00 (Beijing Time) at the fifth day of each month and uploads the file to the created OBS bucket. If the upload fails on the current day, the system uploads the file again next day. If the upload still fails, the system uploads the file the day after that day. The system can try a maximum of five times. Every time when the upload fails, the system sends a failure notification email to the email address of the partner.

#### 3. File Fields

Parameter	Typ e	Value Limit	Description
Customer ID	Strin g	64	Domain ID of a customer.
Product ID	Strin g	64	Product ID
Product type code	Strin g	64	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.

Parameter	Typ e	Value Limit	Description
Resource type code	Strin g	100	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.
Cloud service region code	Strin g	64	Cloud service region code, for example, apsoutheast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
Billing mode	Strin g	2	<ul> <li>0: Yearly/monthly</li> <li>1: Pay-per-use</li> <li>2: Reserved instance-upfront payment</li> <li>3: Reserved instance-hourly billing</li> <li>4: Savings plan-subscription</li> <li>5: Savings plan-hourly billing</li> <li>6: Savings plan-discount</li> </ul>
Official website price	BigD ecim al	-	List price or promotional price at which customers purchased Huawei Cloud products, in USD.
Fee generation time	Strin g	32	Time when fees are generated. The format is <i>YYYY-MM</i> , indicating year-month.
Order ID	Strin g	64	Order ID. This field is available only for yearly/monthly subscriptions.
Usage	BigD ecim al	-	Usage (usage of packages and reserved instances not included). This field is available only for pay-per-use subscriptions.
Usage Unit	Inte ger	-	Usage unit. You can call the API in 4.1.5  Querying Measurement Units to obtain the value.
Whether a spot ECS	Strin g	1	2: Yes
Cash coupon amount	BigD ecim al	-	Cash coupon amount, in USD. It specifies the amount deducted using cash coupons.
Flexi- purchase coupon amount	BigD ecim al	-	Flexi-purchase coupon amount

Parameter	Typ e	Value Limit	Description
Stored-value card amount	BigD ecim al	-	Stored-value card amount
Settlement	Inte	-	<b>0</b> : Common product
product type	ger		1: Promotional product
			2: Hybrid hosting products
			5: Stored-value card
			<b>6</b> : Marketplace products
			7: Spot ECSs
			8: FCS (reserved)
			11: Special price request
			<b>60</b> : KooGallery product discounts in resales
Partner preference ratio	BigD ecim al	-	Discount percentage for each settlement type. Leave this parameter empty when Partner Preferential Type is set to 1.
Currency	Strin g	3	USD
Billing cycle	Strin g	32	Billing cycle, in the <i>YYYY-MM</i> format.
Customer account	Strin g	64	HUAWEI CLOUD username of the customer.
Customer name	Strin g	192	Name used by the customer for real-name authentication. If the customer does not perform real-name authentication, this field is left blank.
Product name	Strin g	576	Product name.
Product type name	Strin g	192	Cloud service name, which can be obtained by calling the API in 4.1.1 Querying Cloud Service Types.
Resource type name	Strin g	192	Resource type name, which can be obtained by calling the API in 4.1.2 Querying Resource Types.
Cloud service region name	Strin g	96	Cloud service region. Obtain the value from the Region column in <b>Regions and Endpoints</b> .
Package Usage	BigD ecim al	-	Used amount of the package. The used resources are not calculated using the payper-use price.

Parameter	Typ e	Value Limit	Description
Unit (Package Usage)	Inte ger	-	Package usage unit. For details, see <b>Usage Unit</b> . If the package usage is 0, this field is left blank.
Reserved Instance Usage	BigD ecim al	-	Used reserved instance. The used resources are not calculated using the pay-per-use price.
Unit (Reserved Instance Usage)	Inte ger	-	Reserved instance usage unit. For details, see <b>Usage Unit</b> . If the reserved instance usage is 0, this field is left blank.
Bill Type	Strin g	1	Type of a bill item.  • 0: Expenditure  • 1: Unsubscription  • 2: Huawei write-off
BizID	Strin g	64	Business ID.
BizItemID	Strin g	64	Business item ID.
Amount After Coupons	BigD ecim al	-	Consumption amount of a customer, excluding the amount of flexi-purchase coupons, cash coupons, and stored-value cards.
Amount Due	BigD ecim al	-	Bill amount that a partner must pay.
Specification s	Strin g	256	Product specifications, such as General Computing s2.small.1 1vCPUs 1GB linux. General Computing s2.small.1 1vCPUs 1GB linux

Parameter	Typ e	Value Limit	Description
Billing item	Strin g	256	Billing item To obtain a specific billing item, call the API in 4.1.4 Querying Usage Types.  The value is the same as the usage type in SDRs. The mappings between cloud services and usage types are as follows:  • ECS: Duration  • EVS: Duration  • EIP: Duration  • Bandwidth: Duration (by bandwidth) or upflow (by traffic)  • Marketplace image: Duration
Unit Price	BigD ecim al	-	<ul> <li>Unit price.</li> <li>For the unit price of a pay-per-use product, this parameter has a value only when the price is the same. For tiered billing, this parameter is left empty.</li> <li>Unit price of a yearly/monthly product is returned only in the following scenarios: <ul> <li>Yearly/monthly subscription, renewal, specification downsizing, specification upgrade, and capacity expansion</li> <li>Simple pricing</li> </ul> </li> <li>Unit price of a reserved instance is returned only in the following scenarios: <ul> <li>Subscription, renewal, specification downsizing, specification upgrade, capacity expansion, and pay-per-use</li> <li>Simple pricing</li> </ul> </li> </ul>
Unit	Strin g	256	Price unit  For example, the price is 0.6 yuan/10,000 times. The unit price is 0.6, the price unit is yuan, and the step is 10,000 times. The unit price is 0.6 and the price unit is yuan/ 10,000 times.

Parameter	Typ e	Value Limit	Description
Payment	BigD ecim al	-	<ul> <li>When Partner Preferential Type is set to 0, the settlement amount is calculated as follows: Settlement amount = List price x (1 - Partner discount ratio).</li> <li>When Partner Preferential Type is set to 1, the settlement amount is calculated based on the fixed unit price. The settlement amount includes the cash coupon amount and does not include the tax amount.</li> </ul>
			Unit: USD (\$) This parameter is returned only when a partner uses coupons.
Partner cash coupon amount	BigD ecim al	-	Amount of the cash coupon that is deducted after a discount is used. Unit: USD (\$)
Whether to Refund Coupons	Strin g	-	Whether to refund partner's cash coupon generated during the refund. Unit: USD (\$)  • Y: yes  • N: no  This parameter is returned only when a coupon quota has been converted for partner use only.
Cash Payment	BigD ecim al	-	Amount that needs to pay after partner's cash coupons are deducted. Unit: USD (\$)  This parameter is returned only when a partner uses coupons.  NOTE  • If Scene is set to Y, this parameter value is calculated as follows: Partner amount without tax = Settlement amount - Partner coupon  • If Scene is set to N, the partner amount without tax equals the settlement amount.
Tax Amount	BigD ecim al	-	Tax amount. If tax determination is not involved or the tax base is 0, the tax amount is 0. Unit: USD (\$)  This parameter is returned only when a coupon quota has been converted for partner use only.

Parameter	Typ e	Value Limit	Description
Billing Item Name	Strin g	-	Usage type name. To obtain a specific type, call the API in <b>4.1.4 Querying Usage Types</b> .
Partner Preferential Type	Strin g	-	Partner Preferential Type. The options are as follows:  • 0: Discount  • 1: Fixed unit price
Combined Order No.	Strin g	256	The combined order number generated when a customer places orders. This parameter is available only for yearly/monthly products. In other cases, this parameter is left empty.

#### ■ NOTE

- When **Partner Preferential Type** is set to **0**, Amount due = List price x (1 Partner discount ratio) Partner coupon + Tax amount.
- When **Partner Preferential Type** is set to **1**, Amount due = Settlement amount Partner coupon + Tax amount.

# 10 Invoice Management

# 10.1 Invoice Management

# 10.1.1 Querying the Invoice List

## **Function**

Partners can query the invoice list.

Log in to Partner Center, and choose **Financial Information** > **Invoices** in the left navigation pane. The invoice list is displayed.

## **Constraints**

This API can be invoked using the partner AK/SK or token.

## **Debugging**

You can debug the API in API Explorer. Automatic authentication is supported. API Explorer can automatically generate and debug example SDK code.

## **URI**

GET /v1.0/{domain id}/payments/intl-invoices

Paramete	Manda	Value	Description
r	tory	Range	
domain_id	Yes	A maximu m of 64 characte rs	Partner ID. For details, see How Do I Check the Partner ID?

Table 10-1 Request parameters

Parameter	Mandat ory	Туре	Value Range	Description
start_time	Yes	String	A maximu m of 64 character s	Invoice application start time  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example,  2019-05-06T08:05:01Z.
end_time	Yes	String	A maximu m of 64 character s	Invoice application end time UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, for example, 2019-05-06T08:05:01Z.
offset	Yes	Integer	[1-99999	Page number.
limit	Yes	Integer	[1-100]	Number of records displayed per page.

# **Request Message**

# **Response Message**

## **Response Parameters**

Parameter	Туре	Value Range	Description
error_code	String	A maxim um of 20 charact ers	Error code. For details, see <b>Returned Values</b> . This parameter is returned only when the query failed.

Parameter	Туре	Value Range	Description
error_msg	String	A maxim um of 1000 charact ers	Error description. This parameter is returned only when the query failed.
count	Integer	-	Number of records. This parameter is returned only when the query is successful.
invoices	List <intlinv oiceReque stInfo&gt;</intlinv 	_	Invoice list. For details, see <b>Table 10-2</b> .

Table 10-2 IntlinvoiceRequestInfo

Parameter	Туре	Value Range	Description
requestId	String	A maxim um of 64 charact ers	Request ID
cancelReaso n	String	A maxim um of 256 charact ers	Rejection reason
titleType	Integer	[0-1]	Title type  • 0: Individual customer  • 1: Corporate customer
channelType	Integer	-	Channel type <b>0</b> : HUAWEI CLOUD
invoiceType	Integer	[0-1]	<ul><li>Invoice type</li><li>0: Special VAT invoice</li><li>1: General VAT invoice</li></ul>

Parameter	Туре	Value Range	Description
invoiceTitle	String	A maxim um of 1024 charact ers	Invoice title
invoiceAmou nt	Number	-	Invoiced amount (USD)
invoiceMeth od	Integer	[0-2]	<ul> <li>Invoicing method</li> <li>0: Invoicing by bill</li> <li>1: Invoicing by payment</li> <li>2: Invoicing by order</li> </ul>
invoiceClass	Integer	[0-1]	Invoice type  • 0: Tax invoice  • 1: Business invoice
invoiceState	Integer	-	<ul> <li>Invoicing state</li> <li>0: Draft</li> <li>1: Waiting for the first trial</li> <li>4: Waiting for the export invoice file</li> <li>5: Waiting for the invoice file backfile</li> <li>6: Waiting for the mail confirmation</li> <li>7: Waiting for receipt confirmation</li> <li>8: Complete</li> <li>9: Refunded</li> <li>11: Waiting for rebut audit</li> <li>13: Invoice return audit</li> <li>14: Waiting return cis notify</li> <li>15: Invoice return failed</li> </ul>
applyOpera	String	A maxim um of 32 charact ers	Invoice applicant
addressInfo	PostAddres sInfoIntl	-	Address information. For details, see Table 10-3.

Parameter	Туре	Value Range	Description
applyTime	String	A maxim um of 64 charact ers	Application time (UTC time)
invoiceMode	String	0	Invoice type <b>0</b> : Paper invoice
email	String	A maxim um of 400 charact ers	Email receiving the electronic invoice
requestMode	String	[0-2]	<ul> <li>Application type</li> <li>0: Invoice creation application</li> <li>1: Invoice return application</li> <li>2: Invoice change application</li> </ul>
srcRequestId	String	A maxim um of 64 charact ers	Original application ID when the invoice is returned
salesId	String	A maxim um of 64 charact ers	Signing entity ID
invoiceNo	String	A maxim um of 32 charact ers	Invoice number

Parameter	Туре	Value Range	Description
tradeType	Integer	-	<ul> <li>Transaction type</li> <li>3: Settlement by credit card</li> <li>4: Settlement by billing</li> <li>5: Invoicing by payment</li> <li>6: BP settle by billing</li> <li>7: Invoicing by recharge</li> <li>8: Order payment online</li> <li>10: Invoicing by refund</li> </ul>
billCycle	String	A maxim um of 64 charact ers	Billing cycle
taxList	List <taxinf o&gt;</taxinf 	-	Tax information list. For details, see  Table 10-4.

Table 10-3 PostAddressInfoIntl

Parameter	Туре	Value Range	Description
address	String	A maximu m of 1024 charact ers	Recipient address
recipients	String	A maximu m of 1024 charact ers	Recipient
zipCode	String	A maximu m of 256 charact ers	Post code of the recipient address

Parameter	Туре	Value Range	Description
mobilePhone	String	A maximu m of 256 charact ers	Recipient mobile number

## Table 10-4 TaxInfo

Parameter	Туре	Value Range	Description
taxClass	String	A maxim um of 64 charact ers	Tax type  • VAT  • ISS  • WHT  • GST
taxRate	String	A maxim um of 64 charact ers	Tax rate
subTaxClass	String	A maxim um of 64 charact ers	Tax subtype  PIS COFINS CGST SGST IGST WHT VAT
taxAmount	Number	-	Tax amount Unit: USD (\$)

# 12.2.2 Customer Management

## 12.2.2.1 Querying Customers (Old)

## **Function**

This API is used to query your customers.

### □ NOTE

This API will be brought offline soon. For details about the API for querying the customer list, see **5.3.1 Querying Customers**.

## Web UI

You can log in to the Partner Center to query your customers.

- **Step 1** In the navigation, click **Sales** > **Customer Business** > **My Customers**.
- **Step 2** Set search criteria to search for customers.

You can search for customers by the association type, association time, customer name, salesperson name, expenditure this month, resource expiration date, mobile number, or customer tag.

----End

## **REST API**

This API is used to guery your customers on the partner sales platform.

## **◯** NOTE

This API can be invoked only by the partner account AK/SK or token.

If a customer queried does not exist, the HTTP code **200** is returned by the API and an empty list is returned in the response.

## 1. URI

POST /v1.0/{partner\_id}/partner/customer-mgr/query

The following table describes the parameters.

Paramet	Mand	Value	Description
er	atory	Range	
partner_i d	Yes	A maximu m of 64 character s	Partner ID (assigned by Huawei).  For details about how to obtain the partner ID, see How Do I Check the Partner ID?  The system does not verify this parameter.

## 2. Request

Request parameters

Paramet er	Mand atory	Туре	Value Range	Description
domainN ame	No	String	A maximum of 128 characters	Account name. If the customer has created an IAM user, enter the account name of the master account. For details about the two concepts, see "Account" and "IAM User" in Basic Concepts.  Fuzzy search is supported. Only prefix, suffix, or middle part can be used for fuzzy search. The content you
				enter for fuzzy search cannot contain spaces.
				If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , it cannot be used as a filter criterion.

Paramet er	Mand atory	Туре	Value Range	Description
name	No	String	A maximum	Real-name authentication name.
	of 128 characters		Fuzzy search is supported. Only prefix, suffix, or middle part can be used for fuzzy search. The content you enter for fuzzy search cannot contain spaces.	
				If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , it cannot be used as a filter criterion.
offset	No	Intger	[1- Maximum allowed integer]	Page to be queried. By default, the first page is queried.
limit	No	Intger	[1-100]	Number of records on each page.
				The default value is 10, and the maximum value is 100.
label	No	String	A maximum	Tag. Fuzzy search is supported.
			of 64 characters	If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion. Only prefix, suffix, or middle part can be used for fuzzy search. The content you enter for fuzzy search cannot contain spaces. The letters entered for search are case-sensitive.

Paramet er	Mand atory	Туре	Value Range	Description
cooperati onType	No	String	A maximum of 1 character	Association type.  1: Referral 2: Authorized Distributor 3: indicates Reseller. Note: Currently, only Referral and Reseller are supported. If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
cooperati onTimeSt art	No	String	A maximum of 20 characters	Start time of the association time range (UTC time).  The value is in "yyyy-MM-dd 'T' HH:mm:ss 'Z'" format, such as 2019-05-06T08:05:01Z.  This parameter must be used together with cooperationTimeEnd.  If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion. It cannot be set to "".
cooperati onTimeE nd	No	String	A maximum of 20 characters	End time of the association time range (UTC time). The value is in "yyyy-MM-dd 'T' HH:mm:ss 'Z'" format, such as 2019-05-06T08:05:01Z. This parameter must be used together with cooperationTimeStart. If this parameter is not included in the request parameters or is set to null, it cannot be used as a filter criterion. It cannot be set to "".

## Request Example

POST https://bss-intl.myhuaweicloud.com/v1.0/{partner\_id}/partner/customer-mgr/query HTTP/1.1 Content-Type: application/json X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

#### 3. Response

## Response parameters

Paramete r	Manda tory	Туре	Value Range	Description
error_code	No	String	A maximum of 16 characters	Error code. For details, see 4.
error_msg	No	String	A maximum of 1024 characters	Error description.
customerl nfoList	No	List <cust omerInfo &gt;</cust 	-	Customer list. For details, see <b>Table 12-9</b> .
count	No	Integer	-	Total number of records.

Table 12-9 CustomerInfo

Paramete r	Manda tory	Туре	Value Range	Description
name	No	String	A maximum of 128 characters	Real-name authentication name.
domainNa me	Yes	String	A maximum of 128 characters	Account name. If the customer has created an IAM user, the account name of the master account is returned.
customerl d	Yes	String	A maximum of 64 characters	Customer

Paramete r	Manda tory	Туре	Value Range	Description
cooperatio nTime	No	String	A maximum of 20 characters	Time when a customer is associated with a partner. The value is UTC time in "yyyy-MM-dd 'T' HH:mm:ss 'Z'" format, such as 2019-05-06T08:05:01Z. HH ranges from 0 to 23, and mm and ss ranges from 0 to 59.
cooperatio nType	No	String	A maximum of 1 character	Association type.  1: Referral 2: Authorized Distributor 3: indicates Reseller. Note: Currently, only Referral and Reseller are supported.
label	No	String	A maximum of 64 characters	Tag. Fuzzy search is supported.
telephone	No	String	A maximum of 20 characters	Customer phone number.
verifiedSta tus	No	String	A maximum of 5 characters	Real-name authentication status.  • -1: The real name is not authenticated.  • 0: Real-name authentication is under review.  • 1: The real-name authentication is not passed.  • 2: The real name is authenticated.
countryCo de	No	String	A maximum of 10 characters	Country code, which is the country code prefix of a phone number.  Example: 0086 for China

Paramete r	Manda tory	Туре	Value Range	Description
customerT	No	Integer	[-1,0,1]	Customer type.      -1: None     0: Individual     1: Enterprise When a customer is registered, customerType is -1. The customer can set customerType in the account center or select the enterprise or individual real-name authentication to determine the customer type.
isFrozen	No	Integer	[0,1]	Whether to freeze the account.  • 0: No  • 1: Yes

## Example response

```
HTTP/1.1 200 OK

# 12.2.2.3 Freezing a Customer Account (Old)

#### **Function**

A partner can freeze an account of a customer associated with the partner by reseller model.

#### □ NOTE

This API will be unavailable soon. For details about how to freeze a customer account, see **5.3.2 Freezing a Customer Account**.

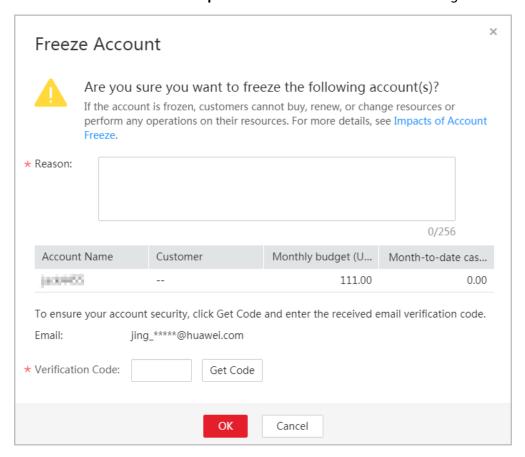

#### Web UI

When a customer is associated with a partner by reseller model, the customer account is frozen by default. When the account is frozen, the customer cannot purchase, renew the subscription to, change, or properly use the resources. The partner can select **Unfreeze Account** when setting the budget for the customer to unfreeze the account.

Alternatively, partners can switch to the **My Customers** page to unfreeze accounts of reseller customers.

- **Step 1** Use your account to log in to **HUAWEI CLOUD**.
- **Step 2** In the drop-down list of your account name, click **Partner Center** to go to the Partner Center.

- **Step 3** In the navigation tree, choose **Customer Business** > **My Customers**.
- Step 4 Click Freeze Account in the Operation column in the row of the target customer.

- **Step 5** Enter the reason.
- **Step 6** Click **Get Code** and enter the obtained verification code.
- Step 7 Click OK.

A message is displayed indicating that the account is frozen.

To unfreeze the customer's account, click **Unfreeze Account** in the **Operation** column.

----End

#### **REST API**

Partners can freeze accounts of customers associated with the partners in reseller model on the partner sales platform. When the accounts are frozen, the customers cannot purchase, renew the subscription to, change, or properly use the resources.

■ NOTE

This API can be invoked using the partner AK/SK or token only.

400	CBC.5004	You do not have the operation permission to the customer.

# 12.2.2.4 Unfreezing a Customer Account (Old)

#### **Function**

A partner can unfreeze an account of a customer associated with the partner by reseller model.

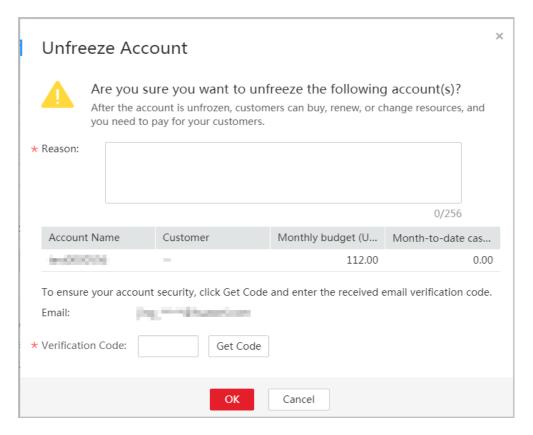

#### ■ NOTE

This API will be brought offline. For details about the new API for unfreezing a customer Account, see **5.3.3 Unfreezing a Customer Account**.

#### Web UI

Alternatively, partners can switch to the **My Customers** page to unfreeze accounts of reseller customers.

- **Step 1** Use your account to log in to **Huawei Cloud**.
- **Step 2** In the drop-down list of your account name, click **Partner Center** to go to the Partner Center.
- **Step 3** In the navigation, click **Sales** > **Customer Business** > **My Customers**.
- **Step 4** Click **Unfreeze Account** in the **Operation** column in the row of the target customer.

- **Step 5** Enter the reason.
- **Step 6** Click **Get Code** and enter the obtained verification code.
- Step 7 Click OK.

A message is displayed indicating that the account is unfrozen.

----End

#### **REST API**

Partners can unfreeze accounts of customers associated with the partners in reseller model on the partner sales platform. After the accounts are unfrozen, fees generated when the customers purchase, renew the subscription to, and change resources are paid by the partners.

#### □ NOTE

This API can be invoked using the partner AK/SK or token only.

#### 1. URI

POST /v1.0/{partner\_id}/partner/customer-mgr/unfrozens The following table describes the parameters.

## 4. Returned Values

## □ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Status Code	Error Code	Description
400	CBC.0100	Parameter error.
403	CBC.0150	Invalid operation.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

# 12.3 Transaction Management

# 12.3.1 Managing Customer' Budgets

## 12.3.1.1 Querying Customers' Budgets (Old)

#### **Function**

This API is used to query the budget of a customer for the partner to determine whether to adjust the budget.

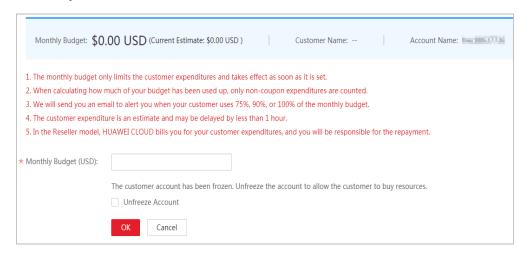

#### **◯** NOTE

This API will be brought offline. For details about the new API for querying customers' budgets, see **8.1.1 Querying Customer Budgets**.

#### Web UI

You can log in to the Partner Center to query the budgets of your customers.

- **Step 1** Use your partner account to log in to **Huawei Cloud**.
- **Step 2** In the upper right corner, choose **Partner Center** from the drop-down list of your account name to go to the Partner Center.
- **Step 3** In the navigation pane, choose **Customer Business** > **Customer Management**.
- **Step 4** On the displayed page, select the target customer, and click **Set Monthly Budget** in the **Operation** column.

#### ----End

#### **REST API**

You can use REST APIs to guery customers' budgets on your sales platform.

## □ NOTE

This API can be invoked only by the partner account AK/SK or token.

#### 1. URI

GET /v1.0/{partner\_id}/partner/account-mgr/credit The following table describes the parameters.

Table 12-15 Path parameters

Parameter	Manda tory	Value Range	Description
partner_id	Yes	A maximu m of 64 characte rs	Partner ID (assigned by Huawei). For details about how to obtain the partner ID, see How Do I Check the Partner ID?

Table 12-16 Query parameters

Parameter	Mand atory	Туре	Value Range	Description
customer_id	Yes	String	A maximu m 64 character s	Customer account ID. For details, see How Do I Obtain Customer's customer_id and domain_id Values?

#### 2. Request

**Request Parameters** 

None

## **Example Request**

GET https://bss-intl.myhuaweicloud.com/v1.0/*{partner\_id}*/partner/account-mgr/credit?customer\_id=c8c346e9d924403c9e87c1cfe9b0b13f HTTP/1.1

Content-Type: application/json

X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

#### 3. Response

Parameter	Manda tory	Туре	Value Range	Description
error_code	No	String	A maximum of 16 characters	Error code. For details, see 4. This parameter is returned only when the query fails.

Parameter	Manda tory	Туре	Value Range	Description
error_msg	No	String	A maximum of 1024 characters	Error description. This parameter is returned only when a failure occurs.
creditAmoun t	No	Double	-	Budget.
usedAmount	No	Double	-	Used budget. The data displayed on the system may have certain deviation and latency.
measureId	No	Integer	-	Unit: 1: dollar
currency	No	String	A maximum of 8 characters	Currency: USD

## **Example Response**

```
HTTP/1.1 200 OK
Content-Type: application/json;charset=UTF-8
Content-Length: length
Date: response time

{
    "creditAmount": 1000,
    "usedAmount": 526,
    "measureId": 1,
    "currency": "USD"
}
```

#### 4. Returned Values

#### **◯** NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Status Code	Error Code	Description
400	CBC.0100	Parameter error.
403	CBC.0150	Access denied.

HTTP Status Code	Error Code	Description
403	CBC.0151	Other errors.
500	CBC.0999	This API cannot be invoked because the association type of the customer is incorrect.
500	CBC.5024	Invalid operation.

## 12.3.1.2 Setting Customers' Budgets (Old)

#### **Function**

This API is used to set or adjust a customer's budget.

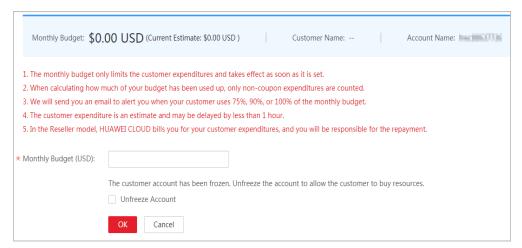

## **NOTE**

This API will be brought offline. For details about the new API for setting customers' budgets, see **8.1.3 Setting Customers' Budgets**.

#### Web UI

You can log in to the Partner Center to set the budgets your customers.

- **Step 1** Use your partner account to log in to **Huawei Cloud**.
- **Step 2** In the upper right corner, choose **Partner Center** from the drop-down list of your account name to go to the Partner Center.
- **Step 3** In the navigation pane, choose **Customer Business** > **Customer Management**.
- **Step 4** On the displayed page, select the target customer, and click **Set Monthly Budget** in the **Operation** column.

**Step 5** Enter a value and click **OK**.

A message indicating that the monthly budget has been set successfully is displayed.

□ NOTE

If partners have enabled the verification code function, a verification code is required.

Step 6 Click OK.

----End

## **REST API**

You can use REST APIs to set customers' budgets on your sales platform.

This API can be invoked only by the partner account AK/SK or token.

#### 1. URI

POST /v1.0/{partner\_id}/partner/account-mgr/credit

The following table describes the parameters.

Parameter	Manda tory	Value Range	Description
partner_id	Yes	A maxim um 64 charact ers	Partner ID (assigned by Huawei). For details about how to obtain the partner ID, see How Do I Check the Partner ID?

#### 2. Request

**Request Parameters** 

Parameter	Mand atory	Туре	Value Range	Description
customerId	Yes	String	A maximu m 64 characte rs	Customer account ID. For details, see How Do I Obtain Customer's customer_id and domain_id Values?
adjustmentA mount	Yes	Double	-	New budget, which can be accurate to two decimal places.
measureId	Yes	Integer	-	Unit: 1: dollar

Parameter	Mand atory	Туре	Value Range	Description
cancelPartne rFrozen	No	String	1	Whether to unfreeze the account when setting the customer budget.
				0: No
				1: Yes
				The default value is <b>0</b> .
				If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the default value <b>0</b> is used.

## **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v1.0/{partner_id}/partner/account-mgr/credit HTTP/1.1 Content-Type: application/json X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

# 12.3.2 Yearly/monthly Order Management

## 12.3.2.1 Querying Orders (Old)

## **Function**

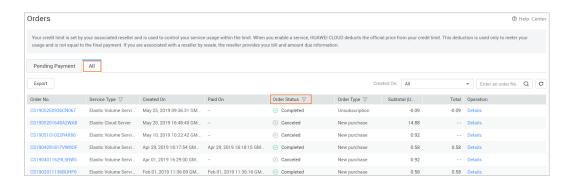

After a customer purchases yearly/monthly resources, it can query the orders in different statuses, such as in the pending approval, processing, canceled, completed, and pending payment statuses.

#### □ NOTE

This API will be brought offline soon. For details about the API for querying orders, see **8.3.1 Querying Orders**.

#### Web UI

Log in to the Billing Center and switch to the **Orders** page. On the displayed page, click the **All** tab to view the orders in different statuses, such as pending approval, processing, canceled, completed, and pending payment.

#### REST API

After a customer purchases yearly/monthly resources, it can query the orders in different status on the partner sales platform, such as in the pending approval, processing, canceled, completed, and pending payment statuses.

#### 

- This API can be invoked using the AK/SK or token of the partner or of the partner's customer. If the partner AK/SK or token is used, orders of only the customers associated in the Reseller model can be queried.
- If you want to query the resource information of a specified order, invoke this API to
  obtain the order ID and then invoke the API described in 12.3.3.1 Querying Customer's
  Yearly/Monthly Resources (Old). Enter the order ID in the request to query the
  resource information.

#### 1. URI

GET /v1.0/{domain\_id}/common/order-mgr/orders/detail The following table describes the parameters.

Table 12-17 URI parameters

Parame ter	Manda tory	Maxim um Length of Charac ters	Description
domain _id	Yes	A maxim um of 64 charact ers	<ul> <li>A partner id should be entered if the partner's AK/SK or token is used. For details about how to obtain the partner ID, see How Do I Check the Partner ID?</li> <li>A customer account ID should be entered if the customer AK/SK or token is used. For details, see How Do I Obtain Customer's customer_id and domain_id Values?</li> </ul>

Table 12-18 Request parameters

Parame ter	Manda tory	Туре	Maxi mum Lengt h of Chara cters/ Value Range	Description
order_id	No	String	A maxi mum of 64 charac ters	Order ID.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. If this parameter is set to "" or null, it can be used as a filter criterion.
custome r_id	No	String	A maxi mum of 64 charac ters	Customer account ID. For details, see How Do I Obtain Customer's customer_id and domain_id Values? If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.
create_ti me_begi n	No	String	A maxi mum of 64 charac ters	Start time of order creation.  UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, for example, 2019-05-06T08:05:01Z.  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.  The range queried cannot exceed one year.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.

Parame ter	Manda tory	Туре	Maxi mum Lengt h of Chara cters/ Value Range	Description
create_ti me_end	No	String	A maxi mum of 64 charac ters	End time of order creation.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, 2019-05-06T08:05:01Z.  The range of <i>HH</i> is 0 - 23, and the range of <i>mm</i> and <i>ss</i> is 0 - 59.  The range queried cannot exceed one year.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.
service_t ype	No	String	A maxi mum of 64 charac ters	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. If this parameter is set to "" or null, it can be used as a filter criterion.
status	No	String	A maxi mum of 64 charac ters	Order status. The value can be:  1: Pending approval  3: Processing  4: Canceled  5: Completed  6: Pending payment  9: To be confirmed  If this parameter is not included in the request parameters, is left empty, or is set to null, it cannot be used as a filter criterion. It cannot be set to "".

Parame ter	Manda tory	Туре	Maxi mum Lengt h of Chara cters/ Value Range	Description
order_ty pe	No	String	A maxi mum of 64 charac ters	Order type. The value can be:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-peruse 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment If this parameter is not included in the request parameters, is left empty, or is set to null, it cannot be used as a filter criterion. It cannot be set to "".
page_siz e	Yes	Integer	[1-100 ]	Number of rows on a page.
page_in dex	Yes	Integer	[1- Maxi mum intege r]	Current page number. If the value of this parameter exceeds <b>1000000</b> , the default value <b>1</b> is used.

Parame ter	Manda tory	Туре	Maxi mum Lengt h of Chara cters/ Value Range	Description
sort	No	String	A maxi	Sorting order of the orders.
			mum	You can sort the orders by creation time.
	ch	of 36 charac ters	If you set the value to <b>createTime</b> , the system sorts orders by creation time in ascending order. If you set the value to <b>-createTime</b> , the system sorts orders by creation time in descending order.	
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.
paymen	No	String	A	Start time of order payment.
t_time_b egin			maxi mum of 64 charac ters	UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .
				The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				The interval between the order creation time and termination cannot exceed one year.
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.

Parame ter	Manda tory	Туре	Maxi mum Lengt h of Chara cters/ Value Range	Description
paymen	No	String	A maxi	End time of order payment.
t_time_e nd			mum of 64	UTC time in "yyyy-MM- dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .
			charac ters	The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
				The interval between the order creation time and termination cannot exceed one year.
				If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. It cannot be set to "" or null.
method	No	String	64	Query method.
				• oneself: Query your own orders.
				sub_customer: Query customer orders that are paid for by you.
				If this parameter is not included in the request parameters, is set to "", or is set to null, the default value oneself is used.

#### 2. Request

**Request Parameters** 

None

## **Example Request**

GET https://bss-intl.myhuaweicloud.com/v1.0/{domain\_id}/common/order-mgr/orders/detail? page\_size=5&page\_index=1 HTTP/1.1
Content-Type: application/json
X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

## Response

Parameter	Туре	Description	
error_code	String	Error code.	
		For details, see <b>4</b> .	

Parameter	Туре	Description	
error_msg	String	Error description.	
data	Result	Order list For details, see <b>Table 12-19</b> .	

Table 12-19 Result

Parameter	Туре	Description
pageSize	Integer	Number of rows on a page.
pageIndex	Integer	Current page number.
totalSize	Integer	Number of records that match the query conditions.
orderInfos	List <custo merOrder&gt;</custo 	Order details. For details, see <b>Table 12-20</b> .

Table 12-20 CustomerOrder

Parameter	Туре	Description
orderId	String	Order ID.
baseOrderId	String	Parent order ID (order ID before splitting).  When a cloud service is renewed or changed or a cloud service is unsubscribed, a new order ID (orderId value) is generated. In this case, baseOrderId indicates the original ID before the renewal, change, or unsubscription.  This field has been discarded.
beld	String	Partner business entity ID.
customerId	String	Customer ID.
sourceType	Integer	Customer order source type. The value can be:  1. Customer 2. Agent 3: Contract 4: Distributor

Parameter	Туре	Description
status	Integer	Order status. The value can be:  1: Pending approval  3: Processing  4: Canceled  5: Completed  6: Pending payment  9: To be confirmed
orderType	Integer	Order Type:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment
currency	Double	Order amount (original price). In the unsubscription order, the amount is equal to the value of currencyAfterDiscount.
currencyAft erDiscount	Double	Order amount after a discount (excluding the vouchers or cards)
measureld	Integer	Order amount unit.  1: Dollar 2: Dime 3: Cent
measureNa me	String	Amount unit name.
createTime	String	Creation time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
paymentTi me	String	Payment time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.

Parameter	Туре	Description
lastUpdateT	String	Latest status update time.
ime		UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .
		The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
needAudit	Boolean	Whether the approval is required.
currencyTyp e	String	Currency code.
contractId	String	Contract ID.
currencyOffi	Double	Order amount (list price).
cial		In the unsubscription order, the amount is equal to the value of <b>currencyAfterDiscount</b> .
amountInfo	AmountInf	Order deduction details.
	0	For details, see <b>Table 12-21</b> .
serviceType	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.

Table 12-21 AmountInfo

Parameter	Туре	Description
discountList	List <discou< td=""><td>Fee item.</td></discou<>	Fee item.
	ntltem>	For details, see <b>Table 12-22</b> .
cashcoupon Amount	Double	Flexi-purchase coupon amount (reserved).
couponAmo unt	Double	Cash coupon amount.
cardAmount	Double	Stored-value card amount (reserved).
commission Amount	Double	Handling fee (only for unsubscription orders).
consumedA mount	Double	Consumption amount (only for unsubscription orders).

Table 12-22 DiscountItem

Parameter	Туре	Description
discountTyp	String	Discount type.
е		<b>200</b> : Promotion product discount
		<b>300</b> : Promotion discount coupon
		<b>301</b> : Promotion coupon
		<b>302</b> : Promotion flexi-purchase coupon
		<b>500</b> : Specified discount for agent subscription
		<b>501</b> : Specified exemption for agent subscription
		<b>502</b> : Specified buy-it-now price for agent subscription
		<b>600</b> : Discount specified in the discount and rebate contract
		<b>601</b> : Discount specified in the channel frame contract
		<b>602</b> : Discount specified in the designated-purpose fund contract
		<b>603</b> : Discount specified in the directly signed offline contract
		<b>604</b> : Discount specified in the authorized telemarketing contract
		<b>605</b> : Discount specified in the commercial contract
		<b>606</b> : Discount specified in the channel commercial contract
		<b>607</b> : Partner authorized discount
		<b>609</b> : discount for adjusting an order price
		<b>610</b> : Discount amount
		<b>700</b> : Promotion discount
		<b>800</b> : Top-up account discount
discountAm ount	Double	Discounted amount.

#### 4. Status Code

#### **Ⅲ** NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Statu s Code	Error Code	Description
200	CBC.0 000	Succeeded.
400	CBC.0 100	Incorrect parameter.
400	CBC.0 101	Invalid parameter.
403	CBC.0 151	Access denied.

HTTP Statu s Code	Error Code	Description
403	CBC.0 155	Request denied.  The possible causes are as follows: The account authentication information is incorrect. The account or member account does not have the permission to call the API.
500	CBC.0 999	Other errors.

## 12.3.2.2 Querying Order Details (Old)

## **Function**

A customer can invoke this API to query order bills.

#### **Ⅲ** NOTE

This API will be brought offline soon. For details about the API for querying order details, see **8.3.2 Querying Order Details**.

#### Web UI

A customer can switch to the **Orders** page in the Billing Center to query order details.

- Step 1 Go to the My Orders page.
- **Step 2** To view a cloud service order, click the **Cloud Services** tab.
- **Step 3** You can filter orders by creation time, order number, or product name.

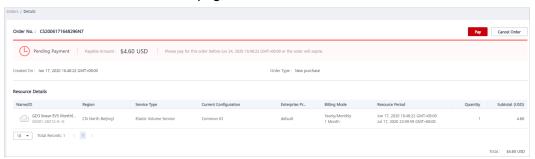

**Step 4** Click **Details** for the target order.

#### **□** NOTE

If the order status is **Processing**, indicates that resources are being created and indicates that the order contains a resource that failed to be created.

• If the cloud service order status is **Pending Payment**, you can pay or cancel the order on the order details page.

• If your cloud service order has any resources that fail to be provisioned, you will be automatically unsubscribed from the resources.

#### 

When an account manager places an order on behalf of the customer in accordance with the contract, the contract information will be displayed on the order details page. The account manager can then click the contract name to go to the contract details page.

#### ----End

#### REST API

A customer can query order details on the partner sales platform.

#### **Ⅲ** NOTE

- This API can be invoked using the AK/SK or token of the partner or AK/SK or token of the partner's customer.
- If you want to query the resource information of a specified order, invoke the API
  described in 12.3.3.1 Querying Customer's Yearly/Monthly Resources (Old) and enter
  the order ID in the request to query the resource information.
- 1. URI

GET /v1.0/{domain\_id}/common/order-mgr/orders/{order\_id} The following table describes the parameters.

Table 12-23 URI parameters

Paramet er	Mandat ory	Maximu m Length of Characte rs	Description
domain_i d	Yes	A maximu m of 64 character s	<ul> <li>The value will be Partner ID if the partner's AK/SK or token is used. For details about how to obtain the partner ID, see How Do I Check the Partner ID?</li> <li>A customer account ID should be entered if the customer AK/SK or token is used. For details, see How Do I Obtain Customer's customer_id and domain_id Values?</li> </ul>
order_id	Yes	A maximu m of 64 character	Order ID.  The system will return the orders if the orders are queried.

Table 12-24 Request parameters

Paramet er	Mandat ory	Value Range	Description
offset	No	[1- Maximu m integer]	Page number. If this parameter is not input, the default value is 1. If the value of this parameter exceeds 1000000, the default value 1 is used.
			If this parameter is not included in the request parameters, the value 1 is used. It cannot be set to "". If this parameter is left empty or is set to null, the value of orderInfo in the response is null.
limit	No	[1-100]	Number of records displayed on each page. If this parameter is not input, the default value is <b>10</b> .
			If this parameter is not included in the request parameters, is left <b>empty</b> , or is set to <b>null</b> , the value <b>10</b> is used. This parameter cannot be set to "".

# 2. Request Request Parameters

#### None

GET https://bss-intl.myhuaweicloud.com/v1.0/{domain\_id}/common/order-mgr/orders/CS\*\*\*\*\*O7

Content-Type: application/json X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

#### 3. Response

Parameter	Туре	Description	
error_code	String	Error code. For details, see 4.	
error_msg	String	Error description.	
orderInfo	Customer OrderEntit y	Order details. This parameter is available only when <b>offset</b> is set to <b>1</b> .  For details, see <b>Table 12-25</b> .	
count	Integer	Number of order items	
orderlineIte ms	List <order LineItemE ntity&gt;</order 	Order items in an order For details, see <b>Table 12-26</b> .	

**Table 12-25** CustomerOrderEntity

Parameter	Туре	Description	
orderId	String	Order ID	
baseOrderId	String	Parent order ID (order ID before splitting). This parameter is returned only for renewal orders.	
beld	String	Partner business entity ID.	
customerId	String	Customer ID.	
sourceType	Integer	Customer iD.  Customer order source type. The value can be:  1. Customer  2. Agent  3: Contract  4: Distributor	

Parameter	Туре	Description
status	Integer	Order status. The value can be:  1: Pending approval 3: Processing 4: Canceled 5: Completed 6: Pending payment 9: To be confirmed
orderType	Integer	Order type. The value can be:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment
currency	Double	Order amount (original price).  In the unsubscription order, the amount is equal to the value of currencyAfterDiscount.
currencyAft erDiscount	Double	Order amount after a discount (excluding the vouchers or cards)
measureId	Integer	Order amount unit.  1: Dollar 2: Dime 3: Cent
measureNa me	String	Amount unit name.
createTime	String	Creation time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
paymentTi me	String	Payment time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.

Parameter	Туре	Description
lastUpdateT	String	Latest status update time.
ime		UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .
		The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
needAudit	Boolean	Whether the approval is required.
currencyOffi	Double	Order amount (list price).
cial		In the unsubscription order, the amount is equal to the value of <b>currencyAfterDiscount</b> .
amountInfo	AmountInf	Order deduction details.
	0	For details, see <b>Table 12-27</b> .
currencyTyp e	String	Currency code.
contractId	String	Contract ID.
serviceType	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.

Table 12-26 OrderLineItemEntity

Parameter	Туре	Description
orderLineIte mld	String	Order item ID.
cloudServic eType	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
productId	String	Product ID.
productSpec Desc	String	Product specification description.

Parameter	Туре	Description
periodType	Integer	Period type.  • 0: Day  • 1: Week  • 2: Month  • 3: Year  • 4: Hour  • 5: One-off  • 6: Pay-per-use (reserved)  • 7: By usage report (reserved)
periodNum	Integer	Number of periods.
validTime	String	Effective time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
expireTime	String	Expiration time.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, <b>2019-05-06T08:05:01Z</b> .  The range of <i>HH</i> is 0-23, and the range of <i>mm</i> and <i>ss</i> is 0-59.
subscription Num	Integer	Number of subscriptions.
currency	Double	Order amount (original price). In the unsubscription order, the amount is equal to the value of currencyAfterDiscount.
currencyAft erDiscount	Double	Order amount after a discount (excluding the vouchers or cards).
currencyOffi cial	Double	Order amount (list price). In the unsubscription order, the amount is equal to the value of currencyAfterDiscount.
amountInfo	AmountInf o	Order deduction details. For details, see <b>Table 12-27</b> .
currencyTyp e	String	Currency code.
categoryCo de	String	Product catalog code.

Table 12-27 AmountInfo

Parameter	Туре	Description
discountList	List <discou ntltem&gt;</discou 	Fee item.
		For details, see <b>Table 12-28</b> .
cashcoupon Amount	Double	Flexi-purchase coupon amount (reserved).
couponAmo unt	Double	Cash coupon amount.
cardAmount	Double	Stored-value card amount (reserved).
commission Amount	Double	Handling fee (only for unsubscription orders).
consumedA mount	Double	Consumption amount (only for unsubscription orders).

Table 12-28 DiscountItem

Parameter	Туре	Description
discountTyp e	String	Discount type.
		<b>200</b> : Promotion product discount
		<b>300</b> : Promotion discount coupon
		<b>301</b> : Promotion coupon
		<b>302</b> : Promotion flexi-purchase coupon
		<b>500</b> : Specified discount for agent subscription
		<b>501</b> : Specified exemption for agent subscription
		<b>502</b> : Specified buy-it-now price for agent subscription
		<b>600</b> : Discount specified in the discount and rebate contract
		<b>601</b> : Discount specified in the channel frame contract
		<b>602</b> : Discount specified in the designated-purpose fund contract
		<b>603</b> : Discount specified in the directly signed offline contract
		<b>604</b> : Discount specified in the authorized telemarketing contract
		<b>605</b> : Discount specified in the commercial contract
		<b>606</b> : Discount specified in the channel commercial contract
		<b>607</b> : Partner authorized discount
		<b>609</b> : Discount for adjusting an order price
		<b>610</b> : Discount amount
		<b>700</b> : Promotion discount
		<b>800</b> : Top-up account discount
discountAm ount	Double	Discounted amount.

#### 4. Status Code

#### 

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Statu s Code	Error Code	Description
200	CBC.0 000	Succeeded.
400	CBC.0 100	Incorrect parameter.
400	CBC.0 101	Invalid parameter.
403	CBC.0 151	Access denied.
403	CBC.0 155	Request denied.  The possible causes are as follows: The account authentication information is incorrect. The account or member account does not have the permission to call the API.
500	CBC.0 999	Other errors.

## 12.3.2.3 Paying Yearly/Monthly Product Orders (Old)

## **Function**

## □ NOTE

This API will be brought offline soon. For details about the API for paying yearly/monthly product orders, see 8.3.3 Paying Yearly/Monthly Product Orders.

A customer can invoke this API to pay yearly-monthly product orders in the pending payment status.

Customers can follow the instructions described in **Payment** to pay yearly/monthly product orders in the pending payment status in Billing Center.

#### 

- This API supports both monthly settlement and balance payment. Monthly settlement is preferred.
- Balance payment includes cash account payment and credit account payment. If both accounts have balance, the cash account payment is preferred.
- Restrictions for using a discount and coupon at the same time:
  - If the restriction attribute of a coupon contains field **simultaneousUseWithEmpowerDiscount** with a value of **0**, the discount and coupon cannot be used at the same time.
  - If the restriction attribute of a coupon contains field **simultaneousUseWithContractDiscount** with a value of **0**, the discount and coupon cannot be used at the same time.
  - If the restriction attribute of a coupon contains field **minConsumeDiscount** and the values of **discount\_ratio** for all the order items are less than the value of **minConsumeDiscount**, the discount and coupon cannot be used at the same time.
  - If the restriction attribute of a coupon contains field **simultaneousUseWithPromotionDiscount** with a value of **0**, the discount and coupon cannot be used at the same time.
- When this API is invoked by a unified accounting member, if their enterprise master
  account has coupons available for the orders, the coupons are automatically applied
  without the need to include coupon IDs in a request.

## **Constraints**

This API can be invoked only by the customer AK/SK or token.

#### **URI**

POST /v2/orders/customer-orders/pay

## Request

#### **Request Parameters**

Paramete r	Mand atory	Туре	Maxim um Length of Charac ters	Description
order_id	Yes	String	A maxim um of 64 charact ers	Order ID.  The value is the same as the order_id value in the response message of invoking the API described in 8.3.1 Querying Orders or the order_ids value in the response message of API described in 8.4.2 Renewing Subscription to Yearly/Monthly Resources.

Paramete r	Mand atory	Туре	Maxim um Length of Charac ters	Description
coupon_in fos	No	List <cou ponSimpl eInfoOrd erPay&gt;</cou 	[0-3]	This parameter is reserved.  For details, see <b>Table 12-29</b> .  If this parameter is not included in
				If this parameter is not included in request parameters, is set to <b>null</b> , or is set to an empty array, no coupons are used in payment.
				CAUTION  When this API is invoked by a unified accounting member, if their enterprise master account has coupons available for the orders, the coupons are automatically applied without the need to include coupon IDs in a request.
discount_i	No	List <disc< td=""><td rowspan="3">[0-1]</td><td>Discount ID list.</td></disc<>	[0-1]	Discount ID list.
nfos		ountSim pleInfo>		For details, see <b>Table 12-30</b> .
				If this parameter is not included in request parameters, is set to <b>null</b> , or is set to an empty array, no discount is used in payment.

**Table 12-29** CouponSimpleInfoOrderPay

Paramet er	Manda tory	Туре	Maxim um Length of Charac ters	Description
id	Yes	String	A maxim um of 64 charact ers	Coupon ID.

Paramet er	Manda tory	Туре	Maxim um Length of Charac ters	Description
type	Yes	Integer	[300-3 03]	<ul> <li>Coupon type.</li> <li>300: Discount coupon (reserved)</li> <li>301: Promotion coupon</li> <li>302: Promotion flexi-purchase coupon (reserved)</li> <li>303: Promotion stored-value card (reserved)</li> </ul>

Table 12-30 DiscountSimpleInfo

Paramet er	Manda tory	Туре	Maxim um Length of Charac ters	Description
id	Yes	String	A maxim um of 64 charact ers	Discount ID.
type	Yes	Integer	[0,2,3,6 09]	<ul> <li>Discount type.</li> <li>0: promotion discount</li> <li>2: commercial discount</li> <li>3: discount granted by a partner</li> <li>609: discount for adjusting an order price</li> <li>NOTE  Once the discount 609 (discount for adjusting an order price) is used during order payment, the discount must be used and the discount type cannot be changed.</li> </ul>

## **Example Request**

POST https://bss-intl.myhuaweicloud.com/v2/orders/customer-orders/pay HTTP/1.1 Content-Type: application/json

## Response

## **Response Parameters**

Status code: 204

**Success** is returned by default.

Status code: 400

Parameter	Туре	Maximu m Length of Charact ers	Description
error_code	String	A maximu m of 10 character s	Error code. For details, see <b>Status Codes</b> .
error_msg	String	A maximu m of 256 character s	Error description.

Parameter	Туре	Maximu m Length of Charact ers	Description
quota_info s	List <quotal nfo&gt;</quotal 		List of the resources whose quota or capacity is insufficient.  For details, see Table 12-31.  This parameter is valid only when error_code is set to CBC.99003141.  If the quota is insufficient, notify the customer to submit a service ticket on the HUAWEI CLOUD official website to increase the quota and then pay the order.  If the capacity is insufficient, notify the customer to place an order again.  If the specifications have changed, notify the customer to place an order again.
enterprise_ project_aut h_result	List <enterp riseProject&gt;</enterp 	-	Information about the enterprise project whose fund is insufficient.  For details, see <b>Table 12-32</b> .  This parameter is valid only when <b>error_code</b> is set to <b>CBC.99003155</b> .

Table 12-31 QuotaInfo

Parameter	Туре	Description
region	String	Cloud service region code, for example, apsoutheast-1. Obtain the value from the Region column in Regions and Endpoints.
service_typ e_code	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs.
resource_ty pe_code	String	Resource type code. For example, the resource type code of VM is <b>hws.resource.type.vm</b> .
		The relationship between ResourceType and CloudServiceType is as follows: A resource type represents a resource contained in the cloud service type, and the cloud service type is a combination of multiple resource types.

Parameter	Туре	Description
resource_sp ec_code	String	Resource specifications of the subscribed cloud service products.  For example, the resource specification of a small-scale VM is <b>s2.small.1.linux</b> .
service_typ e_name	String	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
resource_ty pe_name	String	Resource type. For example, the resource type of ECS is <b>Cloud Host</b> .
auth_result	Integer	<ul> <li>Verification result of the change of the cloud service quota, capacity, or specifications.</li> <li>1: The quota is insufficient.</li> <li>2: The capacity is insufficient.</li> <li>3: The resource specifications are incorrect. This value is valid only when the resource specifications change between the time when a customer places an order and the time when the customer pays the order.</li> <li>4: The associated resource information is incorrect. This value is valid only when the resource specifications change between the time when a customer places an order and the time when the customer pays the order.</li> <li>99: Other errors. This value is valid only when the resource specifications change between the time when a customer places an order and the time when the customer places an order and the time when the customer pays the order.</li> </ul>
available_z one	String	AZ ID.  For details, see the AZ names of regions listed on the Regions and Endpoints, for example, cn-north-1a.

Table 12-32 EnterpriseProject

Parameter	Туре	Description
enterprise_ project_id	String	<ul> <li>ID of the enterprise project where an order belongs.</li> <li>0: ID of a default project</li> <li>- 1 or null: Non-project ID</li> </ul>
enterprise_ project_na me	String	Enterprise project name.

Parameter	Туре	Description
auth_statu s	Integer	Verification result of the enterprise project's fund quota.
		10: The fund quota is insufficient or the project is invalid.
		11: The organization budget quota is insufficient.

### **Example Response**

HTTP/1.1 204 No Content Content-Type: application/json;charset=UTF-8 Content-Length: *length* Date: *response time* 

## **Status Codes**

## □ NOTE

- **4***xx*. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Status Code	Error Code	Description
400	CBC.99000046	Insufficient budget.
500	CBC.30000010	Operation not allowed because the order is invalid or does not exist.
400	CBC.99003106	The order status has changed and no payment can be made.
400	CBC.99003108	This discount cannot be used for this order.
400	CBC.99003110	The order has not been paid before the expiration time. Please re-submit the order.
400	CBC.99003112	The coupon or stored-value card has been used.
400	CBC.99003116	The restriction to selected coupon regulates that the coupon cannot be used with the discount at the same time.

HTTP Status Code	Error Code	Description
400	CBC.99003117	The selected discount is less than the minimum discount rate configured for the selected coupon.
		Note: For example, if the minimum discount rate configured for a coupon is 90% and the selected discount is less than 90% in all order lines, the discount cannot be used.
400	CBC.99003141	The cloud service quota or capacity is insufficient, or the resource specifications have changed.
400	CBC.99003147	Discounts and cash coupons cannot be both used.
400	CBC.99003151	This discount cannot be used together with other discounts.
400	CBC.99003155	Insufficient enterprise project fund quota, or invalid project.
400	CBC.99003156	Coupons applicable to KooGallery products cannot be used together with dedicated coupons.
400	CBC.99003162	The validity period set for the bandwidth add-on package cannot be earlier than the system time.
400	CBC.99003198	Insufficient budget of the organization.
400	CBC.99005003	Insufficient balance.
400	CBC.99006093	Failed to obtain the tax rate.
400	CBC.99005036	Payment via API not allowed for this customer. (Payment by balance and monthly-settled payment are not allowed.)
400	CBC.99008040	Too many attempts.
400	CBC.7281	Renewal, unsubscription, or payment not supported. Your account has been frozen.
500	CBC.0999	Other errors.
400	CBC.99000089	Operation failed. Sub orders of a combine order cannot be processed independently.

# 12.3.3 Yearly/Monthly Resource Management

## 12.3.3.1 Querying Customer's Yearly/Monthly Resources (Old)

## **Function**

A customer can query one or all yearly/monthly resources on the partner sales platform.

#### Note:

- This API can be invoked by the customer AK/SK or token.
- This API can only be used to query resources successfully provisioned.

## URI

GET /v1.0/{domain\_id}/common/order-mgr/resources/detail

The following table describes the parameters.

Table 12-33 URI parameters

Parame ter	Mandat ory	Maximu m Length of Characte rs	Description
domain _id	Yes	A maximu m of 64 character s	Customer account ID. For details, see How Do I Obtain Customer's customer_id and domain_id Values?

**Table 12-34** Request parameters

Parame ter	Mandat ory	Туре	Maxim um Length of Charac ters/ Value Range	Description
resource _ids	No	String	A maxim um of 4096 charact ers	Resource IDs.  Queries resources with the specified resource IDs. When only_main_resource is 0, the system queries the specified resources and their auxiliary resources. A maximum of 50 IDs can be queried at the same time. Use commas (,) to separate multiple IDs.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. If this parameter is set to "" or null, it can be used as a filter criterion.  NOTE  A resource ID is allocated by a cloud service after the resource is provisioned, such as server_id in ECS.
order_id	No	String	A maxim um of 64 charact ers	Order ID.  This parameter can be used for querying the resources in a specified order.  If this parameter is not included in the request parameters or is left empty, it cannot be used as a filter criterion. If this parameter is set to "" or null, it can be used as a filter criterion.

Parame ter	Mandat ory	Туре	Maxim um Length of Charac ters/ Value Range	Description
only_ma in_resou rce	No	Integer	[0 1]	Whether to query only the primary resources. This parameter is invalid when resource_ids are IDs of attached resources. In this case, the system queries the attached resources.  • 0: Queries both the primary resources and attached resources.  • 1: Queries only the primary resources.  The default value is 0.  If this parameter is not included in the request parameters, is left empty, or is set to null, the default value 0 is used. This parameter cannot be set to "".  NOTE  A primary resource takes the primary position in the associated resources.  • For ECS, ECS is the primary resource, and EVS is the attached resource.  • For VPC, if the shared bandwidth is used, the bandwidth is the primary resource, and EIPs are the attached resource. If the exclusive bandwidth is used, EIPs are the primary resources, and the bandwidth is the attached resource.
status_li st	No	String	-	Resource status.  Queries resources in a specified status. If there are multiple statuses, separate them using commas (,).  • 2: Provisioned  • 4: Frozen  • 5: Expired  If this parameter is not included in the request parameters or is left empty, resources in all statuses will be returned. This parameter cannot be set to "" or null.

Parame ter	Mandat ory	Туре	Maxim um Length of Charac ters/ Value Range	Description
page_no	No	Integer	An integer greater than or equal to 1	Page number.  The default value is 1.  If this parameter is not included in the request parameters, is left empty, or is set to null, the default value 1 is used. This parameter cannot be set to "".
page_siz e	No	Integer	[1-500]	Number of records on each page.  The default value is 10. The maximum value is 500.  If this parameter is not included in the request parameters, is left empty, or is set to null, the default value 10 is used. This parameter cannot be set to "".

## Request

## **Request Parameters**

None

## **Example Request**

GET https://bss-intl.myhuaweicloud.com/v1.0/{domain\_id}/common/order-mgr/resources/detail? resource\_ids=*b38\*\*\*\*\*62e,249\*\*\*\*\*c07*&only\_main\_resource=*1*&page\_no=*1*&page\_size=*100* HTTP/1.1 Content-Type: application/json

## Response

## **Response Parameters**

Parameter	Туре	Description
error_code	String	Error code.
		For details, see <b>Status Code</b> .
error_msg	String	Error description.

Parameter	Туре	Description
data	List <resourceins tance=""></resourceins>	Resource list. For details, see <b>Table 12-35</b> .
total_count	Integer	Total number of records. The default value is <b>0</b> .

**Table 12-35** ResourceInstance

Parameter	Туре	Description
id	String	Internal ID of the resource to be provisioned. The ID generated after the resource is provisioned is <b>resourceID</b> .
resource_id	String	Resource ID.
resource_nam e	String	Resource instance name.
region_code	String	Region code.
cloud_service _type_code	String	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
resource_type _code	String	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.
resource_spec _code	String	Specification of a cloud service resource. For example, a VM resource specification is <b>s2.small.1.linux</b> (.win or .linux should be added at the end of the specification).
project_code	String	Resource project ID.
product_id	String	Product ID.
main_resourc e_id	String	Primary resource ID.
is_main_resou rce	Integer	Primary resource or not.  • 0: No  • 1: Yes

Parameter	Туре	Description
status	Integer	Resource status.  • 2: Provisioned  • 3: Closed (not visible to customers)  • 4: Frozen  • 5: Expired
valid_time	String	Effective time of a resource.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, 2019-05-06T08:05:01Z.
expire_time	String	Expiration time of a resource.  UTC time in "yyyy-MM-dd'T'HH:mm:ss'Z'" format, for example, 2019-05-06T08:05:01Z.
next_operatio n_policy	Integer	<ul> <li>Next billing policy.</li> <li>0: Entering the grace period upon expiration</li> <li>1: Yearly/monthly to pay-per-use</li> <li>2: Automatically deleted upon expiration (directly deleted from resources that take effect)</li> <li>3: Automatically renewed upon expiration</li> <li>4: Automatically frozen upon expiration</li> <li>5: Automatically deleted upon expiration (deleted from resources in the retention period)</li> <li>NOTE Only 3 indicates that the resource is automatically renewed. In other cases, the expiration policy for non-automatic renewal is used.</li> </ul>

## **Example Response**

#### **Status Code**

#### ∩ NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Statu s Code	Error Code	Description
200	CBC.0000	Succeeded.
400	CBC.0100	Incorrect parameter.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

## 12.3.3.2 Renewing Subscription to Yearly/Monthly Resources (Old)

#### **Function**

When subscription to yearly/monthly resources of a customer is about to expire, the customer can renew the subscription to the resources.

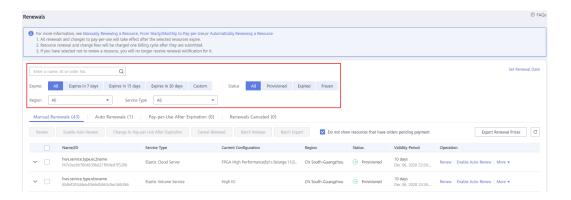

#### 

This API will be brought offline. For details about the new API for renewing subscription to yearly/monthly resources, see **8.4.2 Renewing Subscription to Yearly/Monthly Resources**.

#### Web UI

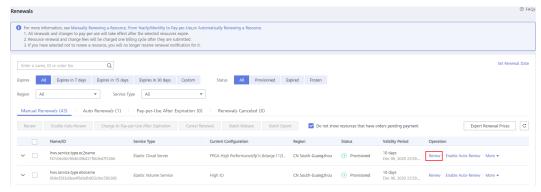

Customers can manually renew subscription to yearly/monthly resources when the subscription is about to expire in the Billing Center.

- **Step 1** Go to the **Renewals** page.
- **Step 2** Set the search criteria.

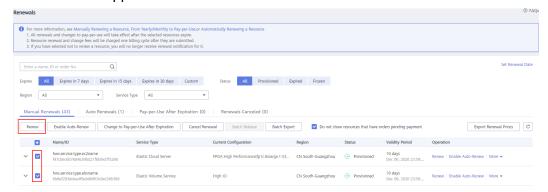

#### 

- Customers who have enabled enterprise project management can set the search criteria to filter an enterprise project and query its resources that are to be renewed.
- You can click **Set Renewal Date** to set the expiration date of resources. For details, see **Setting a Renewal Date**.
- Under the Manual Renewals, Auto Renewals, Pay-per-Use After Expiration, and Renewals Canceled tabs, you can query all resources to be renewed.
- You can manually renew resources under the Manual Renewals, Auto Renewals, Pay-per-Use After Expiration, and Renewals Canceled tabs.
- **Step 3** All resources that need to be manually renewed can be moved to the **Manual Renewals** tab. For details, see **Restoring to Manual Renewal**.
- **Step 4** Renew resources separately or in batches.
  - Separate renewal: Click **Renew** in the **Operation** column for the desired resource.

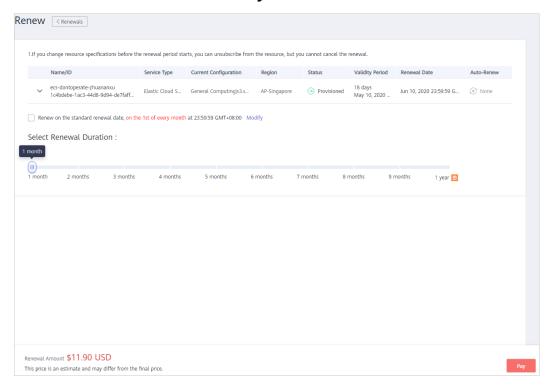

• Batch renewal: Select the check boxes for the desired resources, and click **Renew** in the upper left corner.

#### □ NOTE

- On the Renewals page, resources that have orders pending payment are hidden by default. You can unselect Do not show resources that have orders pending payment to show them.
- When you renew a resource that has an order pending payment, the following message
  will be displayed: "The resource has an order pending payment. You can renew it only
  after you pay or cancel the order." You can click the order number in the dialog box to
  go to the order details page. After you pay or cancel the order, the resource becomes
  renewable.

Step 5 Select a renewal duration and click Pay.

**Step 6** Select discounts and a payment option, and click **Pay**.

----End

#### **REST API**

A customer can renew subscription to yearly/monthly resources on the partner sales platform.

#### **Ⅲ** NOTE

- This API can be invoked only by the customer AK/SK or token. This is because that partners cannot by products by themselves.
- After you invoke this API, if a primary resource ID has an attached resource ID, the system will renew the subscription to both the primary resource and attached resource.
  - For example, ECS is the primary resource, and EVS is the attached resource.
  - If the shared bandwidth is used, the bandwidth is the primary resource, and EIPs are the attached resource.
  - If the exclusive bandwidth is used, EIPs are the primary resources, and the bandwidth is the attached resource.
- This API supports automatic payment. Discounts and coupons can be used for automatic payment. For details about how to use discounts or coupons during payment, see 13.7 Support for Discounts or Coupons.

#### 1. URI

POST /v1.0/{domain\_id}/common/order-mgr/resources/renew The following table describes the parameters.

Table 12-36 URI parameter description

Parame	Mand	Value	Description
ter	atory	Range	
domain_ id	Yes	A maxim um 64 charac ters	Customer account ID. For details, see How Do I Obtain Customer's customer_id and domain_id Values?

### 2. Request

**Request Parameters** 

Parame ter	Mand atory	Туре	Value Range	Description
resource _ids	Yes	List <str ing&gt;</str 	[1-10]	Resource IDs.  Only the primary resource ID is supported. A maximum of 10 resource IDs can be configured.
				To determine the primary resources, query is_main_resource in the response of the API described in 12.3.3.1 Querying Customer's Yearly/Monthly Resources (Old).

Parame ter	Mand atory	Туре	Value Range	Description
period_t ype	Yes	Integer	[2 3]	Period type. The value can be:  • 2: Month  • 3: Year
period_n um	Yes	Integer	[1-11]	Number of periods.  • Month: 1 to 11  • Year: 1 to 3
expire_ mode	No	Integer	[0-3]	<ul> <li>Expiration policy (This field has been discarded. Do not use it.)</li> <li>0: Enter the grace period.</li> <li>1: Change billing mode to payper-use.</li> <li>2: Automatic unsubscription</li> <li>3: Automatic renewal</li> </ul>
isAutoP ay	No	Integer	[0-1]	Whether enable automatic payment.  • 0: No  • 1: Yes  If this parameter is left empty, default value 0 is used (automatic payment disabled).  If this parameter is not included in the request parameters, is set to "", or is set to null, the value 0 is used. This parameter cannot be left empty.

#### **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v1.0/{domain_id}/common/order-mgr/resources/renew HTTP/1.1
Content-Type: application/json
X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

{
    "resource_ids": ["53fe****068b"],
    "period_type":2,
    "period_num":2,
    "expire_mode":0
```

## 3. Response

**Response Parameters** 

Parameter	Туре	Description	
error_code	String	Status code. For details, see 4.	
error_msg	String	Error description.	
order_ids	List <string></string>	List of order IDs generated when resource subscription is renewed.	
expiredReso urcelds	List <string></string>	List of resources that cannot be renewed due to expiration.	
		This parameter has a value only when the error code is 3016.	

## **Example Response**

```
HTTP/1.1 200 OK

Content-Type: application/json;charset=UTF-8

Content-Length: length

Date: response time

{
    "error_code": "CBC.0000",
    "error_msg": "success",
    "order_ids": ["xxxxxxxxxx"],
    "expiredResoucelds":[]
}
```

#### 4. Returned Values

#### **Ⅲ** NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Statu s Code	Error Code	Description
200	CBC.0000	Success.
200/ 400	CBC.0100	Invalid input parameter.
500	CBC.0999	Other errors.
403	CBC.0151	Access denied.
200	CBC.7281	You cannot renew or cancel subscription because your account has been frozen.

HTTP Statu s Code	Error Code	Description	
200	CBC.3016	Expired resources exist.	
200	CBC.9900314 4	You have orders in progress and cannot perform the current operation.	
400	CBC.9900315	Subscription plus renewal too long. Select shorter renewal.	
200	CBC.3144	You have orders in progress and cannot perform the current operation.	
200	CBC.9900363	Resources that are being unsubscribed, deleted, or released cannot be renewed.	
200	CBC.3001003	Renewal is only supported for primary resources.	
200	CBC.3001006 9	The renewal period does not exist.	
200	CBC.3005000 6	Automatic order payment failed.	

## 12.3.3.3 Unsubscribing from Yearly/Monthly Resources (Old)

## **Function**

If a customer has subscribed to a yearly/monthly resource, the customer can use this API to unsubscribe from the resource, including the renewed part and currently used part. The customer cannot use the resources after unsubscription.

#### ∩ NOTE

This API will be brought offline. For details about the new API for unsubscribing from yearly/monthly resources, see **8.4.3 Unsubscribing from Yearly/Monthly Resources**.

## Web UI

If a customer has subscribed to a yearly/monthly resource, the customer can use this API to unsubscribe from the resource in the Billing Center.

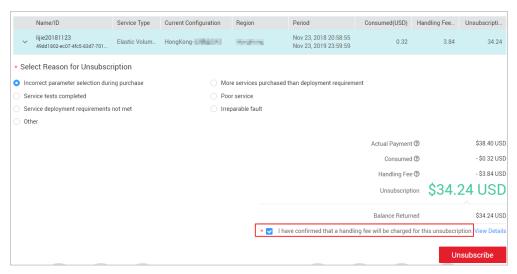

- **Step 1** Go to the **Unsubscriptions** page.
- Step 2 Click the Succeeded Resources tab.
- **Step 3** Unsubscribe from resources separately or in batches.
  - Unsubscribe from a single resource: Click Unsubscribe for a resource from which you want to unsubscribe.

 Batch unsubscribe from resources: Select the target resources from the resource list and click **Unsubscribe** in the upper left corner of the resource list.

**Step 4** View the unsubscription information, select **I have confirmed that a handling fee** will be charged for this unsubscription, and click **Unsubscribe**.

----End

#### **REST API**

A customer can unsubscribe from its yearly/monthly resources on the partner sales platform.

A yearly/monthly resource can be unsubscribed from only after it has been successfully paid and provisioned.

#### **□** NOTE

- This API can be invoked only by the customer AK/SK or token. This is because that partners cannot buy products by themselves.
- After you invoke this API, if a primary resource ID has an attached resource ID, the system will unsubscribe from both the primary resource and attached resource.
  - For example, ECS is the primary resource, and EVS is the attached resource.
  - If the shared bandwidth is used, the bandwidth is the primary resource, and EIPs are the attached resource.
  - If the exclusive bandwidth is used, EIPs are the primary resources, and the bandwidth is the attached resource.
- After invoking this API, you can also invoke the API described in Querying the Amount
  of Unsubscription Orders to query the orders corresponding to the unsubscription order
  amounts.

#### 1. URI

POST /v1.0/{domain\_id}/common/order-mgr/resources/delete The following table describes the parameters.

Table 12-37 URI parameter description

Paramete	Mandat	Value	Description
r	ory	Range	
domain_id	Yes	A maximum 64 character s	Customer account ID. For details, see How Do I Obtain Customer's customer_id and domain_id Values?

#### 2. Request

#### Request Parameters

Paramete r	Mandat ory	Туре	Value Range	Description
resourceld s	Yes	List <strin g&gt;</strin 	[1-10]	Resource IDs.  A maximum of 10 resource IDs can be entered at a time. Only the primary resource IDs can be entered.  Determine whether a resource is a primary resource based on is_main_resource in the response of the API described in 12.3.3.1  Querying Customer's Yearly/Monthly Resources (Old).

Paramete r	Mandat ory	Туре	Value Range	Description
unSubTyp e	Yes	Integer	[1-2]	Unsubscription type. The value can be:
				<ul> <li>1: Unsubscribe from the resource and its renewal periods.</li> </ul>
				2: Unsubscribe from only the resource renewal periods.
unsubscri beReason	No	Integer	[1-5]	Unsubscription cause. The value can be:
Туре				1: The product is of poor usability.
				• 2: The product functions cannot meet the requirements.
				• 3: Customers do not know how to use the product, or the product operations are complex.
				• 4: Customers are not satisfied with the service.
				• 5: Others
				If this parameter is not included in the request parameters, is set to "", or is set to null, no value is returned.
unsubscri beReason	No	String	A maxim um of	Unsubscription reason, which is generally specified by the customer.
			512 charact ers	If this parameter is not included in the request parameters, is set to "", or is set to null, no value is returned.

## **Example Request**

    "orderIds": ["xxxxxxxxxxx"]
}
```

#### 4. Returned Values

#### **Ⅲ** NOTE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Statu s Code	Error Code	Description	
200	CBC.0000	Success.	
400	CBC.0100	Invalid input parameter.	
403	CBC.0151	Access denied.	
500	CBC.0999	Other errors.	
200	CBC.3185	The cloud service can only be unsubscribed from as a whole.	

HTTP Statu s Code	Error Code	Description	
200	CBC.3000006 7	Unsubscription not supported. This resource has been deleted or the subscription to this resource has not been synchronized to CBC.	
200	CBC.7281	You cannot renew or cancel subscription because your account has been frozen.	
200	CBC.9900301	Resource ID not found.	
200	CBC.9900310	This operation is not allowed because some resources are included in your orders to be paid.	
200	CBC.9900606 6	An error occurred during fee inquiry.	
200	CBC.9900364 5	Unsubscription not supported for this cloud service type.	
400	CBC.9900365	Unsubscription not allowed for this cloud service in the Marketplace.	
200	CBC.9900365 6	Operation not allowed. Your resource has been frozen.	

# 12.3.4 Managing Resource Packages

## 12.3.4.1 Querying Resource Packages (Old)

## **Function**

This API is used to query resource packages.

□ NOTE

This API will be taken offline. For details about the API for querying resource packages, see **Querying Resource Packages**.

#### **Constraints**

This API can be invoked only by the customer AK/SK or token.

If a resource package has expired for more than 18 months, its information cannot be queried.

## **URI**

POST /v2/payments/free-resources/query

**Table 12-38** Header parameter

Paramete	Manda	Value	Description
r	tory	Range	
X- Language	No	A maximu m of 8 characte rs	Language.  • zh_CN: Chinese  • en_US: English  Default value: zh_CN  If this parameter is not included in the request parameters or is left empty, the value zh_CN is used. This parameter cannot be set to "" or null.

## Request

## **Request Parameters**

Paramete r	Manda tory	Туре	Value Range	Description
region_co de	No	String	A maximu m of 64 characte	Cloud service region code, for example, ap-southeast-1. Obtain the value from the Region column in Regions and Endpoints.
				If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
order_id	No	String	A maximu m of 64 characte rs	Order ID.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
product_id	No	String	A maximu m of 64 characte rs	Resource package ID.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.

Paramete r	Manda tory	Туре	Value Range	Description
product_n ame	No	String	A maximu m of 256 characte rs	Resource package name.  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
enterprise _project_id	No	String	A maximu m of 64 characte rs	Enterprise project ID.  This parameter is mandatory if you want to query the resources of an enterprise project.  If this parameter is not included in the request parameters, is set to "", or is set to null, the resources not included in the enterprise project are queried.
status	No	Integer	[0, 4]	Status:  O: Not effective  1: In effect  2: Used up  3: Expired  4: Unsubscribed  If this parameter is not included in the request parameters, is set to "", or is set to null, it cannot be used as a filter criterion.
offset	No	Integer	[0, 9999]	Page number. Enter <i>N</i> if you want to query the <i>N</i> page, for example, enter <b>1</b> to query the first page.  If you enter <b>0</b> , the first page is queried by default.  If this parameter is not included in the request parameters, is set to "", or is set to <b>null</b> , the first page is queried by default. This parameter cannot be left empty.
limit	No	Integer	[1, 1000]	Number of records queried each time. The default value is <b>10</b> .  If this parameter is not included in the request parameters, is set to <b>""</b> , or is set to <b>null</b> , the value <b>10</b> is used. This parameter cannot be left empty.

## **Example Request**

```
POST https://bss-intl.myhuaweicloud.com/v2/payments/free-resources/query HTTP/1.1
Content-Type: application/json
X-Auth-Token: MIIPAgYJKoZIhvcNAQcCo...ggg1BBIINPXsidG9rZ

{
    "region_code": "cn-north-7",
    "order_id": "CS21043011259RWXXTA",
    "product_id": "90301-296014-0--0",
    "product_name": "HUAWEI CLOUD WeLink",
    "enterprise_project_id": null,
    "status": 1,
    "offset": 0,
    "limit": 10
}
```

## Response

## **Response Parameters**

Parameter	Туре	Value Range	Description
error_code	String	20	Error code.  For details, see <b>Status Codes</b> . This parameter is returned only when the query failed.
error_msg	String	1000	Error description. This parameter is returned only when the query failed.
free_resourc e_packages	List <freer esourcePac kage&gt;</freer 	-	Resource package list. For details, see Table 12-39.
total_count	Integer	-	Total number of records.

Table 12-39 FreeResourcePackage

Parameter	Туре	Value Range	Description
order_instan ce_id	String	A maxim um of 64 charact ers	Identifier of a subscribed resource package.
order_id	String	A maxim um of 64 charact ers	Order ID. If the value of <b>source_type</b> is <b>1</b> , this parameter is left empty.

Parameter	Туре	Value Range	Description
product_id	String	A maxim um of 64 charact ers	Resource package ID.
product_na me	String	A maxim um of 256 charact ers	Resource package name.
enterprise_pr oject_id	String	A maxim um of 64 charact ers	Enterprise project ID.
enterprise_pr oject_scope	Integer	[0, 1]	Enterprise projects for which resource packages are used:  • 0: All enterprise projects  • 1: Specific enterprise projects
effective_tim e	String	A maxim um of 20 charact ers	Time when a resource package is purchased. The value is in UTC format.
expire_time	String	A maxim um of 20 charact ers	Expiration time of a resource package. The value is in UTC format.
status	Integer	[0, 4]	Status:  • 0: Not effective  • 1: In effect  • 2: Used up  • 3: Expired  • 4: Unsubscribed

Parameter	Туре	Value Range	Description
service_type_ code	String	A maxim um of 64 charact ers	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
service_type_ name	String	A maxim um of 200 charact ers	Cloud service type. For example, the cloud service type of ECS is <b>Elastic Cloud Server</b> .
region_code	String	A maxim um of 64 charact ers	Cloud service region code, for example, ap-southeast-1. Obtain the value from the Region column in Regions and Endpoints.
source_type	Integer	[0, 1]	Source of a resource package. The options are as follows:  • 0: Order  • 1: Gifted by DevCloud
bundle_type	String	[ATOMI C_PKG  BUNDL E_PKG]	Bundle binding type. The options are as follows:  • ATOMIC_PKG: Atomic package  • BUNDLE_PKG: Combined package

Parameter	Туре	Value Range	Description
quota_reuse _mode	Integer	[1, 2]	<ul> <li>Use model. The options are as follows:</li> <li>1: Resettable     Indicates that the purchased pay-peruse resource package can be reset at a specified period. For example, if you purchase a 1-year 40 GB pay-per-use resource package with quota_reuse_mode set to 1 and quota_reuse_cycle to 4, then the resource package will be reset each month (you will get 40 GB resource each month) within the year.</li> <li>2: Not resettable Indicates that the purchased resource package will not be reset. For example, if you purchase a 1-year 40 GB pay-per-use resource package with quota_reuse_mode set to 2, the</li> </ul>
			resource package will not be reset, and you will get 40 GB resource within the year.
free_resourc es	List <freer esource&gt;</freer 	-	For details about resource items (ID-specific) in a resource package, see <b>Table 12-40</b> .

Table 12-40 Free resources

Parameter	Туре	Value Range	Description
free_resourc e_id	String	A maximu m of 64 charact ers	Resource ID. A resource package contains multiple resources, and each resource has a usage type.
usage_type_ name	String	A maximu m of 1024 charact ers	Usage type name.

Parameter	Туре	Value Range	Description
amount	BigDecima l	A maximu m of 64 charact ers	Remaining resource quota of a package whose <b>quota_reuse_mode</b> is <b>Resettable</b> , that is, the remaining resource quota in the current reset period.
original_amo unt	BigDecima l	A maximu m of 64 charact ers	Original resource quota of a package whose <b>quota_reuse_mode</b> is <b>Resettable</b> , that is, the total resource quota in each reset period.
measure_id	Integer	-	Measurement unit of the quota of a free resource package. You call the API in 4.1.5 Querying Measurement Units to obtain the value.

## **Example Response**

#### **Status Codes**

#### **Ⅲ** NOTE

- 4xx: This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx. This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

HTTP Status Code	Error Code	Description
400	CBC.0100	Parameter error.
403	CBC.0151	Access denied.
500	CBC.0999	Other errors.

# 12.4 Bill Management

## 12.4.1 Querying Customer Resource Usage

#### **Function**

This API is used to query customer resource usage.

This API will be taken offline. For details about the API for querying customer resource usage, see **9.1.1 Querying Customer Resource Usage**.

#### **NOTICE**

The resource usage data has a latency. Therefore, the data cannot be used when there are high requirements on data accuracy, such as for usage monitoring or budget control.

#### File

A partner can subscribe to the customer resource usage in HUAWEI CLOUD Partner Center to learn the partner's resource utilization.

The system generates the customer resource usage file containing the data generated till the previous day from 12:00 to 20:00 (GMT+8:00) (not later than 24:00) every day. Therefore, it is recommended that the partner sales platform obtains the customer resource usage file at 24:00 every day.

### 1. Link to obtain the file

https://bucketname.obs.Endpoint.myhuaweicloud.com/customerUsage/filename

Table 12-41 Parameter description

Parameter	Description
bucketnam e	Name of an OBS bucket. Only OBS buckets purchased on HUAWEI CLOUD in the Hong Kong region can be used. For details about how to create an OBS bucket, see <b>Creating a Bucket</b> .
	NOTE You cannot use your account to buy OBS buckets. Instead, you can use your customers' accounts to do so.
Endpoint	Domain name or IP address of the server bearing the REST service endpoint. Obtain this value from Regions and Endpoints.
customerUs age	Name of the folder for storing the customer resource usage details uploaded by the system.
filename	Specifies the file name.
	The file is named in the customerUsage_YYYYMM_YYYYMMDD.tar.gz format.
	The file is a compressed package.
	YYYYMM indicates the month of the data to be exported. For example, if the data for February 2019 is exported, YYYYMM should be <b>201902</b> .
	YYYYMMDD specifies the date when the customer resource usage data is exported. For example, if the file name is customerUsage_201902_20190301.tar.gz, the data generated from February 1, 2019 to February 28, 2019 is exported on March 1, 2019.
	The files in the compressed package are named in the format of
	customerUsage_MonthlyYearly_YYYYMM_YYYYMMDD_XXX XXXXX.csv,
	customerUsage_PerByUse_YYYYMM_YYYYMMDD_XXXXXXX XX.csv, or
	customerUsage_RI_YYYYMM_YYYYMMDD_XXXXXXXX.csv.

### 2. Generation time of the resource usage details

The resource usage data is summarized by month. The monthly usage details contain incremental data starting from the first day of each month. The data of usage detail may change after being generated. Use the latest data.

The system generates the resource usage details from 12:00 to 20:00 (GMT +8:00) (not later than 24:00) every day.

- The usage details of each month are generated on the first day of the following month. For example, the usage details of July are generated on August 1.
- The month-to-date usage details of the current month and all usages details of the last month are generated on the second to fourth day of the current month. For example, the usage details of August 1 and August 2 and of July are generated on August 3.
- The usage details of this month are generated on the fifth day to the end of this month. For example, the usage details from August 1 to August 5 are generated on August 6.

### 3. File fields

Yearly/monthly resources (usage of reseller customers only)
 customerUsage\_MonthlyYearly\_YYYYMM\_YYYYMMDD\_XXXXXXXX.csv

Paramet er	Туре	Value Limit	Description
Customer	String	256	Domain ID of a customer.
Expenditu re or Unsubscri ption Time	String	256	UTC.
Resource ID	String	256	Resource instance ID.
Resource Name	String	256	Name entered when a customer creates a resource instance.  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Product Type Code	String	64	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
Resource Type Code	String	100	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.
Product ID	String	256	Product ID.

Paramet er	Туре	Value Limit	Description
Product Name	String	256	Product name.
Product Specificat ions	String	256	Product specifications, such as General Computing s2.small.1  1vCPUs 1GB linux
Region	String	64	Cloud service region code, for example, ap-southeast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
Order No.	String	256	Order ID generated when a customer places the order.
Order Type	String	256	Order Type:  1: New purchase 2: Renewal 3: Change 4: Unsubscription 10: Yearly/monthly to pay-per-use 11: Pay-per-use to yearly/monthly 13: Trial 14: Commercial use 15: Price adjustment
Duration	String	256	Duration of a yearly/monthly subscription.
Period Type	String	256	Duration type of a yearly/monthly subscription.  0: Daily  1: Weekly  2: Monthly  3: Yearly  4: Hourly  5: One-off
Amount( USD)	String	256	Transaction price listed on the HUAWEI CLOUD official website, excluding the commercial discount provided by HUAWEI CLOUD for partners. The unit is US Dollar.
Project ID	String	256	ID of the project to which a resource belongs. You can select a project when purchasing a resource.

Paramet er	Туре	Value Limit	Description
Resource Tag	String	11,000	Resource tag. Customers can set tags when managing resources. If a yearly/monthly subscription is not intended for a specific resource, leave this field empty.
			NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Combine d Order No	String	256	The combined order number generated when a customer places orders. This parameter is available only for yearly/monthly products. In other cases, this parameter is left empty.  This parameter is reserved.
Product Type Name	String	200	Product type name
Resource Type Name	String	200	Resource type name.

Pay-per-use resources (usage of reseller customers only)
 customerUsage\_PerByUse\_YYYYMM\_YYYYMMDD\_XXXXXXXX.csv

Paramet er	Туре	Value Range	Description
Customer	String	256	Domain ID of a customer.
Expenditu re Time	String	256	Transaction time in the format of UTC.
Billing Cycle	String	256	Billing cycle of the consumption record.
Resource ID	String	256	Resource instance ID.

Paramet er	Туре	Value Range	Description
Resource Name	String	256	Name entered when a customer creates a resource instance.  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Product Type Code	String	64	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
Resource Type Code	String	100	Resource type code. For example, the VM resource type code of ECS is hws.resource.type.vm. To obtain a specific resource type, call the API in 4.1.2 Querying Resource Types.
Product ID	String	256	Product ID.
Product Name	String	256	Product Name.
Product Specificat ions	String	256	Product specifications, such as General Computing s2.small.1  1vCPUs 1GB linux
Region	String	64	Cloud service region code, for example, ap-southeast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
Billing Item	String	256	Usage factor. (Usage type) The value is the same as the usage factor in SDRs. The mappings between cloud services and usage factors are as follows:  ECS: Duration  EVS: Duration  EIP: Duration  Bandwidth: Duration (by bandwidth) or upflow (by traffic)  Marketplace image: Duration

Paramet er	Туре	Value Range	Description
Usage	String	256	Total resource usage.
Package Usage	String	256	Used amount of the package. The used resources are not calculated using the pay-per-use price.
Reserved Instance Usage	String	A maximum of 256 characters	Used reserved instance. The used resources are not calculated using the pay-per-use price.

Paramet er	Туре	Value Range	Description
Unit	String	256	Usage unit. The optional values are as follows:
			• <b>0</b> : DAY (duration)
			• 1: YUAN (currency)
			• 2: JIAO (currency)
			• <b>3</b> : FEN (currency)
			• <b>4</b> : Hour (duration)
			• <b>5</b> : MINUTE (duration)
			• <b>6</b> : SECOND (duration)
			• <b>7</b> : EB (traffic)
			• <b>8</b> : PB (traffic)
			• <b>9</b> : TB (traffic)
			• <b>10</b> : GB (traffic)
			• 11: MB (traffic)
			• <b>12</b> : KB (traffic)
			• 13: Byte (traffic)
			• 14: amount (quantity)
			• 15: Mbps (traffic)
			• <b>16</b> : Byte (capacity)
			• 17: GB (traffic)
			• 18: KLOC (number of lines)
			• <b>19</b> : YEAR (period)
			• 20: MONTH (period)
			• <b>21</b> : MB (traffic)
			• 22: GHz (frequency)
			• 23: CORE (quantity)
			• <b>24</b> : DAY (period)
			• 25: HOUR (period)
			• <b>30</b> : number (quantity)
			• 31: Thousand times (quantity)
			• 32: Million times (quantity)
			• 33: Billion times (quantity)
			• 34: bps (bandwidth)
			• 35: kbps (bandwidth)
			• 36: Mbps (bandwidth)
			• 37: Gbps (bandwidth)
			• 38: Tbps (bandwidth)

Paramet er	Туре	Value Range	Description
			• <b>39</b> : GB-seconds (capacity-duration)
			• <b>40</b> : times (quantity)
			• 41: PCS (quantity)
			• <b>42</b> : Thousand PCS (quantity)
			• 43: PCS (quantity)
			• <b>44</b> : Thousand PCS (quantity)
			• <b>45</b> : Query Per Second (query rate)
			• 46: Man/Day (quantity)
			• <b>47</b> : TB (capacity)
			• <b>48</b> : PB (capacity)
Amount( USD)	String	A maximum of 256 characters	Transaction price listed on the HUAWEI CLOUD official website, excluding the commercial discount provided by HUAWEI CLOUD for partners. The unit is US Dollar.  If HUAWEI CLOUD writes off the outstanding amount as required or refunds the over-deducted amount, a record with the negative amount will be generated.
Project ID	String	256	ID of the project to which a resource belongs. You can select a project when purchasing a resource.
Resource Tag	String	11,000	Resource tag. Customers can set tags when managing resources.  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Unit Price	String	256	Unit price of a pay-per-use product. This parameter has a value only when the price is the same. For tiered billing, this parameter is left empty.

Paramet er	Туре	Value Range	Description
Unit(Unit Price)	String	256	Unit(Unit Price) For example, the price is \$0.6 USD/ 10,000 times. The unit price is 0.6, the price unit is US Dollar, and the step is 10,000 times. The unit price is 0.6 and the price unit is US Dollar/ 10,000 times.
Product Type Name	String	200	Product type name
Resource Type Name	String	200	Resource type name.

Reserved instances (usage of reseller customers only)
 customerUsage\_RI\_YYYYMM\_YYYYMMDD\_XXXXXXXX.csv

Paramete r	Туре	Value Range	Description
Customer	String	A maximum of 256 characters	Domain ID of a customer.
Expenditu re or Unsubscri ption Time	String	256	UTC.
Expenditu re Type	String	256	<ol> <li>Subscription</li> <li>Renewal</li> <li>Change</li> <li>Unsubscription</li> <li>Automatic renewal</li> <li>Recurring fee for reserved instances</li> </ol>
Reserved Instance ID	String	256	ID of a purchased reserved instance.

Paramete r	Туре	Value Range	Description
Reserved Instance Name	String	256	Name of a reserved instance.  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Product Type Code	String	64	Cloud service type code. For example, the cloud service type code of OBS is hws.service.type.obs. To obtain a specific service type, call the API in 4.1.1 Querying Cloud Service Types.
Region	String	64	Cloud service region code, for example, ap-southeast-1. Obtain the value from the <b>Region</b> column in <b>Regions and Endpoints</b> .
Product	String	256	Product ID.
Order No.	String	256	Order ID of a reserved instance order.
Amount( USD)	String	256	Transaction price listed on the HUAWEI CLOUD official website, excluding the commercial discount provided by HUAWEI CLOUD for partners. The unit is US Dollar.
Project ID	String	A maximum of 256 characters	ID of the project to which a resource belongs. You can select a project when purchasing a resource.
Resource Tag	String	11,000	Resource tag. Customers can set tags when managing resources. Currently, the reserved instance does not belong to a specific resource.
			This field is left blank (reserved).  NOTE  If the entered character strings are risky, such as {"=", "+", "-", "@"}, followed by non-pure numbers, then double quotation marks will be added for that field, one at the beginning of the field and the other at the end.
Product Type Name	String	200	Product type name

# 13 Appendix

# 13.1 How Do I Obtain Customers' customer\_id or domain\_id?

You can direct customers to Huawei Cloud from your sales platform. If a customer creates a Huawei Cloud account after being directed from your own platform, the **customer\_id** can be obtained from the association result notification sent by Huawei Cloud. For details, see **Basic Configuration**. If you invoke a CBC API to create an account for a customer, the **customer\_id** is returned through the **domainId** field in the response.

You can sign in to Huawei Cloud using your customers' accounts and passwords to obtain **customer id** from the **My Credential** page.

Visit My Credential at https://console-intl.huaweicloud.com/iam/#/myCredential.

# 13.2 Switching to the HUAWEI CLOUD Page and Binding the HUAWEI CLOUD Account

The following describes how to bind a customer account on the partner sales platform with the HUAWEI CLOUD account on the web UI. You can create a HUAWEI CLOUD account and bind it with the customer account, or directly bind an existing HUAWEI CLOUD account with the customer account. The following scenarios are involved:

- A customer has created an account on the partner sales platform and does not have a HUAWEI CLOUD account. The customer needs to create such an account and bind it with the account on the partner sales platform.
- Before creating an account on the partner sales platform, a customer has created a HUAWEI CLOUD account. The customer needs to create an account on the partner sales platform and bind it with the HUAWEI CLOUD account.

Subsequent operations, such as product purchasing and subscription query, depend on the customer's HUAWEI CLOUD account in this scenario.

**Figure 13-1** shows the procedure for binding a HUAWEI CLOUD account with a customer account on the partner sales platform and notifying the binding result.

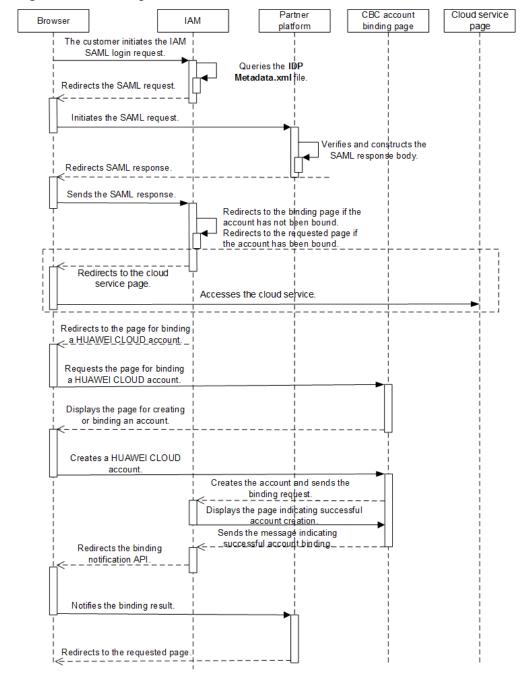

Figure 13-1 Binding a HUAWEI CLOUD account

- 1. A partner's customer uses a browser to call the HUAWEI CLOUD login link. IAM sends the SAML request.
  - a. The customer uses a browser to call the HUAWEI CLOUD login link. https://auth-intl.huaweicloud.com/authui/saml/login? xAccountType=ZX7&isFirstLogin=true&service=https%3a%2f %2fconsole-intl.huaweicloud.com%2fiam%2f

Parameter	Mand atory	Description	Example
xAccountTy pe	Yes	Indicates the identifier of the partner sales platform, which is globally unique. The value is provided by Huawei. After the partner configures the access parameters on the Partner Center page, the partner ID is generated. For details about how to obtain the platform ID, see How Do I Obtain the xaccountType Value?	ZXT
isFirstLogin	No	If no HUAWEI CLOUD account is bound, this parameter is mandatory and must be set to <b>true</b> . Otherwise, the value can be left empty or set to <b>false</b> .	true
service	No	Indicates the redirection address after login. The encodeURIComponent function is used for coding.	https%3a%2f %2fconsole- intl.huaweicloud.co m%2fiam%2f

b. IAM receives the login request of the partner's customer, locates the **SingleSignOnService** configuration item in the **IDP Metadata.xml** file based on the **xAccountType** value, and sends the **samlRequest** request to the required path.

Parameter	Description
SAMLRequest	Indicates the response message body.  The response message is in XML format. IAM then compresses the message, encodes the message using Base64, and URL encodes the message.  If the partner uses the SAML toolkits, this parameter can be directly used. The partner does not need to parse the XML file.  If the partner needs to parse the XML file, the partner needs to URL decode the message, decode the message using Base64, and decompress the message (zip.inflate). For details, see Sample Code for Parsing the SAMLRequest.
RelayState	Indicates the response parameters for SAML.
SigAlg	Indicates the signature algorithm. Huawei uses SHA256 for signatures by default. HTTP://WWW.W3.ORG/2001/04/XMLDSIG-MORE#RSA-SHA256
Signature	Indicates the signature. The signature is used to verify the initiator of a request.  When initiating a request, HUAWEI CLOUD uses the private key to sign  SAMLRequest={ SAMLRequest }&RelayState={ RelayS tate } &SigAlg={ SigAlg } in request https://www.test.com/saml/login? SAMLRequest={SAMLRequest }&RelayState={ RelayState} &SigAlg={ SigAlg}&Signature={ Signature } and then performs Base64 coding to obtain the signature value.  The signature algorithm is specified by the SigAlg field.  When receiving the request, the receiver verifies the signature value using the public key provided by HUAWEI CLOUD (the value in the <ds:x509certificate></ds:x509certificate> tag in the SP Metadata.xml file).  If the signature verification succeeds, the request is sent by HUAWEI CLOUD, and the follow-up operations can be performed. Otherwise, the request is invalid.

- 2. The partner sales platform generates the SAML response message and sends it to HUAWEI CLOUD IAM.
  - a. The partner sales platform obtains the HUAWEI CLOUD public key and the response message path of **samlResponse** from the **SP Metadata.xml**

- file. For details, see **Example, Public Key, and Response Path** in **Obtaining the SP Metadata File**.
- b. The partner sales platform constructs the response message body **response.xml** for the SAML response.

The response message body is in XML format. For the correct response message body and its parameter description, see the following displayed content.

#### **NOTICE**

The following content is for reference only. The description in the comments must be modified. The time and ID defined by SAML vary depending on the message. Therefore, it is recommended that you should not directly modify the response message content. Instead, you shall use the SAML toolkits to generate the response message.

</saml2p:Response>
```

The partner signature value is in standard XML format, and the signature type is **enveloped-signature**. You are advised to use the SAML library provided by a third party for signature.

The signature procedure is as follows.

Obtain the signature object (Assertion).

```
<saml2:Assertion ID="_2320c40ac7b5e857b2d0d4ea0c8758c3"
IssueInstant="2018-10-30T08:21:41.740Z" Version="2.0"
    xmlns:saml2="urn:oasis:names:tc:SAML:2.0:assertion"
    xmlns:xsd="http://www.w3.org/2001/XMLSchema">
......
</saml2:Assertion>
```

ii. Obtain the tag object (Signature).

```
<ds:Signature
  xmlns:ds="http://www.w3.org/2000/09/xmldsig#">
  <ds:SignedInfo>
     <ds:CanonicalizationMethod Algorithm="http://www.w3.org/2001/10/xml-exc-
c14n#"/>
     <ds:SignatureMethod Algorithm="http://www.w3.org/2000/09/xmldsig#rsa-</p>
sha256" />
     <ds:Reference URI="#_2320c40ac7b5e857b2d0d4ea0c8758c3">
        <ds:Transforms>
          <ds:Transform Algorithm="http://www.w3.org/2000/09/xmldsig#enveloped-</p>
signature" />
          <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#">
             <ec:InclusiveNamespaces
               xmlns:ec="http://www.w3.org/2001/10/xml-exc-c14n#"
                         PrefixList="xs" />
             </ds:Transform>
          </ds:Transforms>
          <ds:DigestMethod Algorithm="http://www.w3.org/2000/09/xmldsig#sha256" />
          <ds:DigestValue>.....</ds:DigestValue>
        </ds:Reference>
     </ds:SignedInfo>
    <!-- Third-party signature value -->
     <ds:SignatureValue>
    </ds:SignatureValue>
     <ds:KeyInfo>
       <ds:X509Data>
          <!-- Third-party public key certificate -->
          <ds:X509Certificate>
      </ds:X509Certificate>
        </ds:X509Data>
```

```
</ds:KeyInfo>
</ds:Signature>
```

- iii. Generate the **DigestValue** value for the signature object **Assertion**.
  - 1) Convert **Assertion** according to the algorithm defined in **Transform** of **Signature**.
  - 2) Generate a digest for the object obtained in 1) according to the algorithm specified in **DigestMethod**.
  - 3) Place the generated digest value in the **DigestValue** tag.
- iv. Use the private key in **Step 6** in **Generating a Certificate** to generate the **SignatureValue** value for the **SignedInfo** object signature.
  - 1) Convert **SignedInfo** according to the algorithm defined in **CanonicalizationMethod**
  - Generate the signature value for the object obtained in 1) according to the signature algorithm defined in SignatureMethod. Place the obtained signature value in SignatureValue.
- v. Combine the values of **DigestValue** and **SignatureValue** to form the final **Signature** object. Place the value in **Assertion** as its subelement.

The signature is displayed as follows.

```
<saml2:Assertion ID=" 2320c40ac7b5e857b2d0d4ea0c8758c3"</p>
IssueInstant="2018-10-30T08:21:41.740Z" Version="2.0"
  xmlns:saml2="urn:oasis:names:tc:SAML:2.0:assertion"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <ds:Signature
     xmlns:ds="http://www.w3.org/2000/09/xmldsig#">
   <!-- Third-party signature value -->
    <ds:SignatureValue>
   </ds:SignatureValue>
     <ds:KeyInfo>
       <ds:X509Data>
     <!-- Third-party public key certificate -->
          <ds:X509Certificate>
      </ds:X509Certificate>
       </ds:X509Data>
     </ds:KevInfo>
  </ds:Signature>
</saml2:Assertion>
```

**Table 13-1** Description of parameters between **<saml2:AttributeValue>** and **</saml2:AttributeValue>** 

Parameter	Description	
xUserId	Indicates the user ID of the partner's customer on the partner sales platform.	
xAccountId	ccountId Indicates the account ID of the partner's customer on the partner sales platform.	

Parameter	Description	
bpld	Indicates the partner ID.	
	For details, see How Do I Check the Partner ID?	
email	Indicates the email address.	
	This parameter is optional.	
	The parameter must meet the following requirements:	
	Must be unique for each customer.	
	A maximum of 64 characters	
	<ul> <li>Passes the verification using the following regular expression: ^[azA-Z0-9.!#\$%&amp;'*+\\/=?^_`{ }~-]+@[a-zA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?(?:\\. [azA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?)*\$</li> </ul>	
name	Indicates the HUAWEI CLOUD account name of the partner.	
	This parameter is optional.	
	The parameter must meet the following requirements:	
	Must be 5 to 32 characters long.	
	Can contain only letters, digits, hyphens (-), and underscores (_), and cannot start with a digit. Can contain spaces in the middle.	
	<ul> <li>Passes the verification using the following regular expression: ^([a-zA-Z\\_\\-][0-9a-zA-Z\\_\\-]*)+\$</li> </ul>	

### 

**Table 13-1** involves the account ID and user ID because HUAWEI CLOUD IAM has account and user concepts. For details about the two concepts, see "Account" and "IAM User" in **Basic Concepts**.

c. If the customer has logged in to the partner sales platform, the SAML response message is returned directly. Otherwise, the SAML response message is displayed after the login.

Send a POST request to the HUAWEI CLOUD response path **AssertionConsumerService** in **2.a**. The parameters must be in the Form Data format.

IElzc3VlSW5zdGFudD@iMjAxOC@xMC@zMFQwODoyMTo@MS43NDBaIiBWZXJzaW9uPSIyLjAiIHhtbG5zOnNhbW

Parameter	Description
SAMLResponse	Identifies the string obtained by encoding the SAML response message body in <b>2.b</b> using Base64.
RelayState	The value of this parameter is the same as that in the SAML request message.

- 3. Create a HUAWEI CLOUD account and bind it with the customer account on the partner sales platform.
  - After the SAML response message is returned, IAM checks whether there is a HUAWEI CLOUD account already bound with the customer account on the partner sales platform based on the response message. If the required HUAWEI CLOUD account exists, the partner can directly log in to HUAWEI CLOUD. If the required HUAWEI CLOUD account does not exist, the page for creating and binding a HUAWEI CLOUD account is displayed.
  - Figure 13-2 shows the page for creating a HUAWEI CLOUD account. The partner configures the required parameters on the page for creating a HUAWEI CLOUD account and clicks Create And Bind to create a HUAWEI CLOUD account and bind the account with the customer account on the partner sales platform.

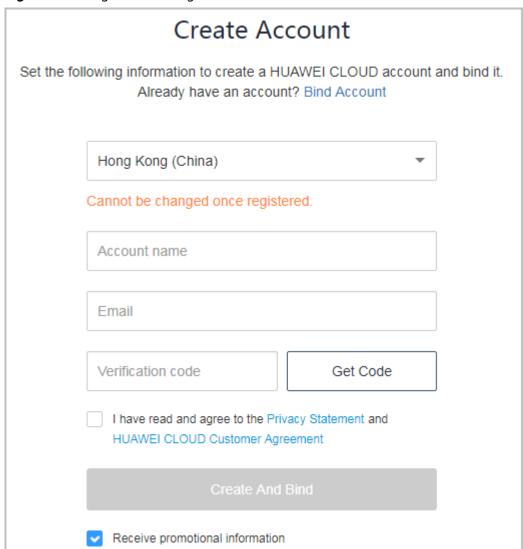

Figure 13-2 Page for creating a HUAWEI CLOUD account

 If the partner's customer already has a HUAWEI CLOUD account, click Bind Account on the page shown in Figure 13-3. On the displayed page, configure the required parameters as prompt and click Bind Account to bind the HUAWEI CLOUD account with the customer account on the partner sales platform.

### 

The customer cannot bind its customer account on the partner sales platform to its existing HUAWEI CLOUD account if this account is in one of the following conditions:

- In arrears
- Associated to another partner
- Used to sign a special contract with HUAWEI CLOUD, such as offline directly-signed contract, authorized telemarketing contract with discounts, or directly-signed special offer contract) with HUAWEI CLOUD
- A consulting partner account in use or pending approval
- An enterprise subaccount or an enterprise primary account associated with an enterprise subaccount
- Containing consumption records or resource provisioned
- Containing valid reserved instances

Figure 13-3 Page for binding a HUAWEI CLOUD account

- 4. HUAWEI CLOUD notifies the account binding result using the binding notification API provided by the partner through browser redirection.
  - a. Obtain the request parameters bindRequest, SigAlg, and Signature.
  - b. Decode the signature using Base64 and use the signature algorithm **SigAlg** to perform signature verification for the **bindRequest** parameters.

### ∩ NOTE

HUAWEI CLOUD uses the private key used for SAML interconnection to verify the signature. The partner uses the public key (value of the <ds:X509Certificate></ds:X509Certificate> tag in the SP Metadata.xml file) used by HUAWEI CLOUD for SAML interconnection to verify the signature.

c. If the signature verification succeeds, decode the binding request using Base64 to obtain JSON strings and perform required operations based on the JSON data processing procedure. If the signature verification fails, the request is invalid and the processing is terminated.

## 13.3 How Do I Obtain the xaccountType Value?

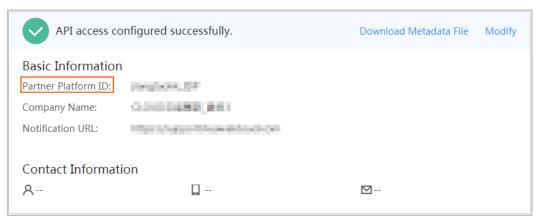

The xaccountType value is the system ID of your partner sales platform. You can obtain the ID of your partner sales platform on the **Configure** page.

### **NOTICE**

To obtain the value of **xaccountType**, you need to configure the access parameters on the **Support Center > API Management** page of Partner Center first.

For details, see **Configuring the Access Parameters**.

After you configure the access parameters, you can obtain the **xaccountType** value (**Partner Platform ID** value) on the **Configure** page.

# 13.4 How Can I Replace a Partner Token with a Customer Token

### **Operations**

1. Invoke the IAM API to obtain your Huawei Cloud account token. For details, see **Obtaining a User Token Through Password Authentication**.

### **MOTE**

For details about the IAM API endpoints, see **Regions and Endpoints**. If the **scope** field in the request body is **domain**, use the endpoint with **Region** being **All**. If the **scope** field is set to **project**, you can use the endpoint with **Region** being **All**, or the endpoint of the region to which the project belongs.

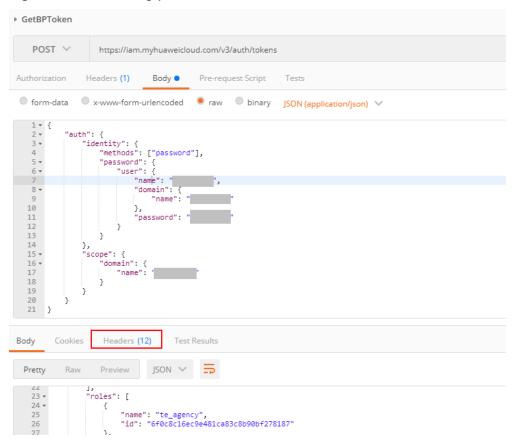

In this step, no token needs to be transferred. You only need to add **Content-Type** to the header, and set its value to **application/json**. As shown in **Figure 13-4**, the **x-subject-token** field in the red box on the **Headers** tab is your account token.

Example request

```
{
 "auth": {
```

```
"identity": {
        "methods": [
           "password"
        "password": {
           "user": {
             "name": "Partner's Huawei Cloud account",
             "domain": {
             "name": "Partner's Huawei Cloud account",
              "password": "XXXXX"
          }
       }
     "scope": {
        "domain": {
           "name": "Partner's Huawei Cloud account",
  }
}
```

Figure 13-4 Obtaining partner's HUAWEI CLOUD account token

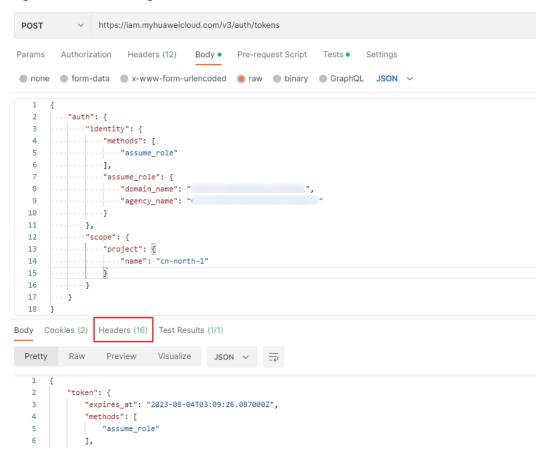

2. Invoke the IAM API to obtain the customer account token. For details, see **Obtaining an Agency Token**.

Add Content-Type and X-Auth-Token to the request header. Set Content-Type to application/json and X-Auth-Token to the BP token obtained in 1. As shown in Figure 13-5, the x-subject-token field in the red box on the Headers tab is the customer account token. A partner can use the customer's HUAWEI CLOUD account token to perform operations on resources in the customer's HUAWEI CLOUD account.

### Example request:

Figure 13-5 Obtaining customer's HUAWEI CLOUD account token

### Response body descriptions

readonly indicates that the account has the Tenant Guest permissions.
 te\_admin indicates that the account has the Tenant Administrator permissions.

Figure 13-6 Permissions descriptions

Information marked in the red box in Figure 13-7 is the project ID.

### Figure 13-7 Project ID

```
}
"project": {
    "domain": {
       "name": "_____",
       "id": "2aa29cbca17a4822abd096610e378ffa"
    "name":"cn-north-1",
   "id": "74610f3a5ad941998e91f076297ecf27"

       "name": "[[]]",
"id": "e5b8b8758ce94763a6e2f93b3b3ffcba"
```

## 13.5 File Subscription

Partners can subscribe to files in the Partner Center on HUAWEI CLOUD.

### 

- A reseller partner can subscribe to the files that contain customer resource usage details and the files that contain customer resource usage details and partner bill.
- Do not enable **Default Encryption** when other tenants have obtained the permission to access your OBS bucket.

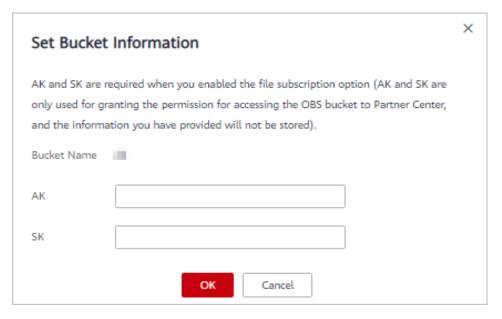

### **Procedure**

- **Step 1** Use the partner account to log in to Partner Center. In the navigation pane on the left, choose Benefits and Support > API Management.
- Step 2 Click File Subscription.
- **Step 3** If the partner has enabled real-name authentication, the bucket information is displayed on the **File Subscription** page.

Select the files to be subscribed to and click **Save**.

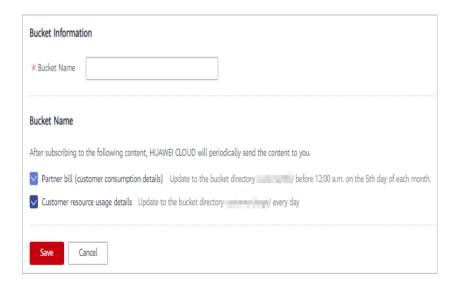

In the **Set Bucket Information** dialog box, enter the AK and SK of the OBS bucket and click **OK**.

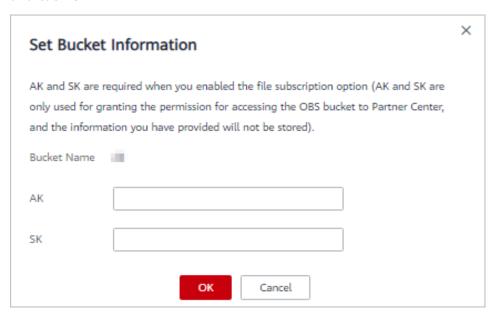

**Step 4** If the partner has not enabled real-name authentication, the bucket information is not displayed on the **File Subscription** page.

Enter the OBS bucket name, select the files to be subscribed to, and click Save.

In the **Set Bucket Information** dialog box, enter the AK and SK of the OBS bucket and click **OK**.

### **<u>A</u>** CAUTION

- AK and SK are mandatory.
- If your account is in arrears, pay off the outstanding fees in a timely manner. Otherwise, you cannot receive the subscription files. If you do not renew the subscription or pay off the outstanding fees after the retention period ends, the OBS bucket will be released, and the data stored in the bucket will be deleted. You are not allowed to subscribe files.

----End

# 13.6 How Do I Upload the Attachment for Real-Name Authentication?

If a partner's customers buy products from HUAWEI CLOUD Chinese mainland website and want to perform real-name authentication, customers need to upload pictures of the certificates for HUAWEI CLOUD to read to complete the real-name authentication.

### **Procedure**

- **Step 1** Log in to the HUAWEI CLOUD Partner Center using your partner account. In the navigation pane on the left, choose **Support Center** > **API Management**.
- **Step 2** Click the **Configure** icon in the flowchart to switch to the **Configure** page. Enable **Upload Photos of Handheld ID Cards Required for Real-Name Authentication**.

### **MOTE**

Skip this step if **Upload Photos of Handheld ID Cards Required for Real-Name Authentication** has been enabled when partners **configure the access parameters**.

**Step 3** For details about how to create an OBS bucket, see **Creating a Bucket**.

### 

- A partner account cannot be used to purchase resources. Therefore, partners need to use a common HUAWEI CLOUD account to log in to the system and create a bucket.
- To change a bucket, partners need to go to the configuration modification page, cancel subscription to all files, and disable attachment uploading for real-name authentication. Then, the partners can add a bucket on the configuration modification page.
- Different partners cannot share the same bucket.
- Only OBS buckets purchased on Huawei Cloud in the Hong Kong region can be used.
- **Step 4** Upload the attachment for real-name authentication to the OBS bucket created by the partner. For details, see **Object Upload Overview**.

----End

# 13.7 Support for Discounts or Coupons

When a partner invokes the interface described in **8.4.2 Renewing Subscription to Yearly/Monthly Resources** to renew the subscription, it can configure automatic payment.

• If the **isAutoPay** parameter is set to **1**, automatic payment is enabled. Discounts and coupons can be used in automatic payment.

For details about the payment rules, see **Rule Description** in **Auto-Renewal Rules**.

### 13.8 Status Code

**Table 13-2** lists the HTTP response status code.

Table 13-2 HTTP response status code

Status Code	Coding	Description
100	Continue	The client continues sending the request.  This interim response is used to inform the client that the initial part of the request has been received and has not yet been rejected by the server.
101	Switching Protocols	Switching protocols. The target protocol must be more advanced than the source protocol.  For example, the current HTTP protocol is switched to a later version.
201	Created	The request for creating a resource or task has been fulfilled.
202	Accepted	The request has been accepted, but the processing has not been completed.
203	Non-Authoritative Information	The server successfully processed the request, but is returning information that may be from another source.
204	NoContent	The server has successfully processed the request, but has not returned any content.  The status code is returned in response to an HTTP OPTIONS request.
205	Reset Content	The server has fulfilled the request, but the requester is required to reset the content.
206	Partial Content	The server has processed certain GET requests.
300	Multiple Choices	There are multiple options for the location of the requested resource. The response contains a list of resource characteristics and addresses from which the customer or customer agent (such as a browser) can choose the most appropriate one.
301	Moved Permanently	The requested resource has been assigned a new permanent URI, and the new URI is contained in the response.
302	Found	The requested resource resides temporarily under a different URI.

Status Code	Coding	Description
303	See Other	Retrieve a location.
		The response to the request can be found under a different URI and should be retrieved using a GET or POST method.
304	Not Modified	The requested resource has not been modified. In such a case, there is no need to retransmit the resource since the client still has a previously-downloaded copy.
305	Use Proxy	The requested resource must be accessed through a proxy.
306	Unused	The HTTP status code is no longer used.
400	BadRequest	Invalid request.  The client should not repeat the request without modifications.
401	Unauthorized	The status code is returned after the client provides the authentication information, indicating that the authentication information is incorrect or invalid.
402	Payment Required	This status code is reserved for future use.
403	Forbidden	The server understood the request, but is refusing to fulfill it.
		The client should not repeat the request without modifications.
404	NotFound	The requested resource cannot be found.
		The client should not repeat the request without modifications.
405	MethodNotAllowed	The method specified in the request is not supported for the requested resource.
		The client should not repeat the request without modifications.
406	Not Acceptable	The server cannot fulfill the request according to the content characteristics of the request.
407	Proxy Authentication Required	This status code is similar to 401, but indicates that the client must first authenticate itself with the proxy.
408	Request Time-out	The request timed out.
		The client may repeat the request without modifications at any later time.

Status Code	Coding	Description
409	Conflict	The request could not be processed due to a conflict.
		This status code indicates that the resource that the client attempts to create already exits, or the request fails to be processed because of the update of the conflict request.
410	Gone	The requested resource is no longer available. The status code indicates that the requested resource has been deleted permanently.
411	Length Required	The server refuses to process the request without a defined Content-Length.
412	Precondition Failed	The server does not meet one of the preconditions that the requester puts on the request.
413	Request Entity Too Large	The request is larger than that a server is able to process. The server may close the connection to prevent the client from continuing the request. If the server cannot process the request temporarily, the response will contain a Retry-After header field.
414	Request-URI Too Large	The URI provided was too long for the server to process.
415	Unsupported Media Type	The server is unable to process the media format in the request.
416	Requested range not satisfiable	The requested range is invalid.
417	Expectation Failed	The server fails to meet the requirements of the Expect request-header field.
422	UnprocessableEnti- ty	The request is well-formed but is unable to be processed due to semantic errors.
429	TooManyRequests	The client has sent more requests than its rate limit is allowed within a given amount of time, or the server has received more requests than it is able to process within a given amount of time. In this case, it is advisable for the client to re-initiate requests after the time specified in the Retry-After header of the response expires.
500	InternalServerError	The server is able to receive the request but it could not understand the request.

Status Code	Coding	Description
501	Not Implemented	The server does not support the requested function.
502	Bad Gateway	The server is acting as a gateway or proxy and receives an invalid request from a remote server.
503	ServiceUnavailable	The requested service is invalid.  The client should not repeat the request without modifications.
504	ServerTimeout	The request cannot be fulfilled within a given time. This status code is returned to the client only when the <b>Timeout</b> parameter is specified in the request.
505	HTTP Version not supported	The server does not support the HTTP protocol version used in the request.

### 13.9 Error Codes

When a partner invokes an operations API provided by Huawei Cloud, the response body contains the error code and error code description.

### NOTICE

- 4xx. This class of HTTP status code is intended for situations in which the error seems to have been caused by the client, for example, the request contains bad syntax or incorrect parameters. You must ensure the request is correct.
- 5xx: This class of HTTP status code is intended for cases in which the Huawei Cloud server is aware that it has encountered an error or is otherwise incapable of performing the request. In this case, contact Huawei Cloud customer service.

### **Error Code Structure Format**

```
"error_code": "xxxx",
"error_msg": "xxxx"
```

#### **Error Codes**

Table 13-3 Error codes

Status Code	Error Code	Error Message	Description
200	CBC.0000	Success.	Succeeded.
403	CBC.0150	Access denied. The customer does not belong to the website you are now at.	Access failed. You are not a client of this website.
400	CBC.180000 16	Insufficient permissions. Contact your associated partner.	Insufficient permissions. Contact your partner.
400	CBC.180000 48	Too many independent accounting members. Specify a member account for query.	Too many independent accounting members. Specify a member account for query.
200	CBC.3002	The resource has been locked.	The resource has been locked.
200	CBC.3006	Unsupported cloud service type.	Unsupported cloud service type.
200	CBC.3016	Expired resources exist.	Expired resources exist.
200	CBC.300500 07	It is not a primary resource, and the renewal quotation is not allowed.	Renewal price inquiry is not available for non-primary resources.
200	CBC.300500 08	The period type or number of periods for the resource does not exist.	The period type or the number of periods for the resource is unavailable.
200	CBC.300500 09	The resources do not exist or has been deleted due to expiration.	The resources have expired and been deleted or do not exist.

Status Code	Error Code	Error Message	Description
200	CBC.300500 10	This operation is not allowed because some resources are included in the unpaid orders.	Some resources are included in your orders to be paid. The operation is not supported.
200	CBC.300500 11	The resources are being unsubscribed from or changed.	Resources are being unsubscribed from or changed.
200	CBC.300500 13	The product cannot be renewed.	Renewal not supported.
200	CBC.3106	The order status has changed and no payment can be made.	The order status has changed and no payment can be made.
200	CBC.3112	The coupon or stored-value card has been used.	The coupon or stored-value card has been used.
200	CBC.3124	Resources have been unsubscribed from.	Resources have been unsubscribed from.
200	CBC.3144	Operation not supported. There is an order in progress for this resource.	You have orders in progress and cannot perform the current operation.
200	CBC.3128	The resource does not have renewed periods or its renewed periods have taken effect, and the renewal periods cannot be unsubscribed from.	The resource does not have renewed periods or its renewed periods have taken effect, and the renewal periods cannot be unsubscribed from.
200	CBC.3141	Cloud service quota or capacity is insufficient, or the resource specifications have changed.	Cloud service quota or capacity is insufficient, or the resource specifications have changed.

Status Code	Error Code	Error Message	Description
200	CBC.3155	Insufficient enterprise project fund quota, or invalid project.	Insufficient enterprise project fund quota, or invalid project.
200	CBC.3162	The add-on package you purchased does not meet payment requirements.	The add-on package you purchased does not meet payment requirements.
200	CBC.3185	The cloud service can only be unsubscribed from as a whole.	The cloud service can only be unsubscribed from as a whole.
200	CBC.3638	Subscription to bandwidth add-on packages cannot be renewed.	Subscription to bandwidth add- on packages cannot be renewed.
200	CBC.3640	Bandwidth add-on packages cannot be unsubscribed from.	Bandwidth add-on packages cannot be unsubscribed from.
200	CBC.5005	The customer is being authenticated by HUAWEI CLOUD.	The customer is being authenticated by HUAWEI CLOUD.
400	CBC.500000 30	Setting budgets not supported. This reseller's budget quota is insufficient.	Setting budgets not supported. This reseller's budget quota is insufficient.
400	CBC.500000 33	Budget setting permissions have been revoked. This reseller cannot set budgets.	Budget setting permissions have been revoked. This reseller cannot set budgets.
200	CBC.500000 45	No frequent operations are allowed for the same coupon quota.	No frequent operations are allowed for the same coupon quota. You are in the process of allocating coupon quotas. Wait until the process ends.

Status Code	Error Code	Error Message	Description
200	CBC.5006	The customer type (individual/ enterprise) is different from the customer type stored in HUAWEI CLOUD.	The customer type (individual/ enterprise) is different from the customer type stored in HUAWEI CLOUD.
200	CBC.5007	The subscribed products must belong to the same region.	The subscribed products must belong to the same region.
200	CBC.5020	Partial failure.	Partial failure.
200	CBC.5023	The account type does not match the association type.	The account type does not match the association type.
200	CBC.5024	This API cannot be invoked because the association type of the customer is incorrect.	This API cannot be invoked because the association type of the customer is incorrect.
200	CBC.5041	Resources in this order have been unsubscribed.	Resources in this order have been unsubscribed.
200	CBC.5042	Resources cannot be found.	Resources cannot be found.
200	CBC.6001	Required param resource id or riInstanceId is null or empty.	The resource ID or reserved instance ID is empty.
200	CBC.6055	Calculate result exceeds max value.	The queried amount exceeds the upper limit.
200	CBC.6006	The required product cannot be found.	The required product cannot be found.
400	CBC.0100	parameter error.	Invalid parameter.
400	CBC.0101	Invalid parameter.	Invalid parameter.
400	CBC.180000 14	Inactive Cost Management.	Cost Center not enabled.

Status Code	Error Code	Error Message	Description
400	CBC.180000 53	Insufficient permissions. Contact your enterprise master.	Insufficient permissions. Contact your enterprise master.
500	CBC.300000 10	Invalid order (maybe the order does not exist), unable to operate.	Operation not allowed because the order is invalid or does not exist.
400	CBC.300000 67	Unsubscription not supported. This resource has been deleted or the subscription to this resource has not been synchronized to CBC.	Unsubscription not supported. This resource has been deleted or the subscription to this resource has not been synchronized to CBC.
400	CBC.300000 52	The resource or account has been already frozen.	Operation not allowed. Your resource has been frozen.
400	CBC.300100 35	resource deleted.	Resource deleted.
400	CBC.300100 36	Renewal is only supported for primary resources.	Renewal is only supported for primary resources.
400	CBC.300100 69	The renewal period does not exist.	The renewal period does not exist.
400	CBC.300500 06	Automatic order payment failed.	Automatic order payment failed.
400	CBC.300500 12	Duplicate resource ID.	There are duplicate resource IDs.
400	CBC.5001	You has not been a partner.	You are not a partner yet.
400	CBC.5002	The customer does not exist.	The customer does not exist.
400	CBC.5003	Insufficient balance.	Insufficient balance.

Status Code	Error Code	Error Message	Description
400	CBC.5004	You do not have the operation permission to the customer.	You do not have the operation permission to the customer.
200	CBC.500000 53	Unfreezing customer account failed. Selected object and the frozen object do not match.	Unfreeze customer account failed. Selected object and the frozen object do not match.
400	CBC.500100 59	Customer association not supported for distributors.	Customer association not supported for distributors.
400	CBC.500100 85	Customer association not allowed. The account of this partner has been restricted.	Customer association not allowed. The account of this partner has been restricted.
400	CBC.500100 86	Customer association not allowed. This partner is a Huawei Cloud reseller, and the account of its associated distributor has been restricted.	Customer association not allowed. This partner is a Huawei Cloud reseller, and the account of its associated distributor has been restricted.
400	CBC.500101 20	Customer development not supported. There are no credits granted for the partner.	Customer development not supported. There are no credits granted for the partner.
200	CBC.703000 07	Account frozen. To change the frozen scope, unfreeze the account first.	Changing freezing objects failed. Unfreeze this account first.

Status Code	Error Code	Error Message	Description
400	CBC.706000 26	Huawei Cloud cannot review the information you submitted for real-name authentication. Contact your account manager.	Sorry, Huawei Cloud cannot review your real-name authentication information. Please contact your account manager for assistance.
400	CBC.7151	Expired verification code.	Expired verification code.
400	CBC.7152	Incorrect verification code.	Incorrect verification code.
400	CBC.7188	The customer has passed real-name authentication or is being reviewed.	The customer has passed real- name authentication or is being reviewed.
400	CBC.7191	The number of real-name authentication times of the customer exceeds the upper limit.	The number of real-name authentication times of the customer exceeds the upper limit.
400	CBC.7202	Real-name authentication failed.	Real-name authentication failed.
400	CBC.7219	Real-name authentication information does not match the facial image.	Real-name authentication information does not match the facial image.
400	CBC.7253	The picture of the ID card is invalid or blurred.	The picture of the ID card is invalid or blurred.
400	CBC.7254	Currently, registration with HUAWEI CLOUD is not available to users in this country.	Currently, registration with HUAWEI CLOUD is not available to users in this country.
400	CBC.7255	The ID information or mobile number is incorrect.	The ID information or mobile number is incorrect.

Status Code	Error Code	Error Message	Description
400	CBC.7256	The legal entity information is incorrect.	The legal entity information is incorrect.
400	CBC.7257	The enterprise information is incorrect.	The enterprise information is incorrect.
400	CBC.7265	You are a partner and cannot be authenticated as an individual using your real name.	You are a partner and cannot be authenticated as an individual using your real name.
400	CBC.7267	The member account is being associated with a master account and cannot perform realname authentication again.	The member account is being associated with a master account and cannot perform real-name authentication again.
400	CBC.7281	Renewal, payment, or unsubscription not supported. Your account has been frozen.	Renewal, unsubscription, or payment not supported. Your account has been frozen.
400	CBC.990000 00	You do not have the operation permission to the customer.	You do not have the operation permission to the customer.
400	CBC.990000 04	An exception occurred when the customer authorized rights to the partner.	An exception occurred when the customer authorized rights to the partner.
400	CBC.990000 26	Incorrect verification code.	Incorrect verification code.
400	CBC.990000 27	Expired verification code.	Expired verification code.
400	CBC.990000 28	The email address already exists.	Invalid email address. Email already in-use.

Status Code	Error Code	Error Message	Description
400	CBC.990000 31	Invalid DomainName.	Invalid DomainName.
400	CBC.990000 32	Invalid email address.	Invalid email address.
400	CBC.990000 34	Currently, registration with HUAWEI CLOUD is not available to users in this country.	Currently, registration with HUAWEI CLOUD is not available to users in this country.
400	CBC.990000 35	This customer has not been associated with you.	You are not a customer of a partner yet.
400	CBC.990000 36	Invalid password.	Invalid password.
400	CBC.990000 37	You do not have the permission to operate this Huawei Cloud reseller.	You do not have the permission to operate this Huawei Cloud reseller.
400	CBC.990000 38	The account name already exists.	The account name already exists.
400	CBC.990000 39	xAccountId exists.	Duplicate xAccountId.
400	CBC.990000 46	Insufficient budget.	Insufficient budget.
400	CBC.990000 49	BindType can not be resale.	The customer associated in Reseller model has no account balance.
400	CBC.990000 51	Customer creation failed because this mobile number or email address has been preregistered by Huawei.	Customer creation failed because this mobile number or email address has been preregistered by Huawei.
400	CBC.990000 55	Referral model not supported.	Referral model not supported.

Status Code	Error Code	Error Message	Description
400	CBC.990000 82	You have exceeded the maximum verification code requests allowed.	Maximum verification code requests reached.
400	CBC.990000 88	We have received your payment and it is currently being processed. Please do not attempt to make the payment again.	Your payment is being processed.
400	CBC.990000 89	The current operation can only be performed on combined orders.	Operation failed. Sub-orders of a combine order cannot be processed independently.
400	CBC.990000 92	Incorrect subscription period.	Incorrect subscription period.
400	CBC.990030 04	The resource has dependencies.	The resource has dependencies.
400	CBC.990030 12	The resource ID does not exist.	The resource ID does not exist.
400	CBC.990030 16	The resources have expired and been deleted or do not exist.	The resources have expired and been deleted or do not exist.
400	CBC.990031 00	This operation is not allowed because some resources are included in your orders to be paid.	This operation is not allowed because some resources are included in your orders to be paid.
400	CBC.990031 06	The order status has changed and no payment can be made.	The order status has changed and no payment can be made.
400	CBC.990031 08	Unavailable discount.	Unavailable discount.

Status Code	Error Code	Error Message	Description
400	CBC.990031 10	The order has not been paid before the expiration time. Please resubmit the order.	The order has not been paid before the expiration time. Please re-submit the order.
400	CBC.990031 12	The coupon or stored-value card has been used.	The coupon or stored-value card has been used.
400	CBC.990031 15	An error occurred. Try again later.	An error occurred. Try again later.
400	CBC.990031 16	The restriction to selected coupon regulates that the coupon cannot be used with the discount at the same time.	The restriction to selected coupon regulates that the coupon cannot be used with the discount at the same time.
400	CBC.990031	The selected discount is less than the minimum discount rate configured for the selected coupon.  Note: For example, if the minimum discount rate configured for a coupon is 90% and the selected discount is less than 90% in all order lines, the discount cannot be used.	The selected discount is less than the minimum discount rate configured for the selected coupon.  Note: For example, if the minimum discount rate configured for a coupon is 90% and the selected discount is less than 90% in all order lines, the discount cannot be used.
400	CBC.990031 24	Resources have been unsubscribed from.	Resources have been unsubscribed from.

Status Code	Error Code	Error Message	Description
400	CBC.990031 28	The resource does not have renewed periods or its renewed periods have taken effect, and the renewal periods cannot be unsubscribed from.	The resource does not have renewed periods or its renewed periods have taken effect, and the renewal periods cannot be unsubscribed from.
400	CBC.990031 41	Cloud service quota or capacity is insufficient, or the resource specifications have changed.	Cloud service quota or capacity is insufficient, or the resource specifications have changed.
400	CBC.990031 44	Operation not supported. There is an order in progress for this resource.	You have orders in progress and cannot perform the current operation.
400	CBC.990031 47	Discounts and cash coupons cannot be used together.	Discounts and cash coupons cannot be used together.
400	CBC.990031 51	This discount cannot be used together with other discounts.	This discount cannot be used together with other discounts.
400	CBC.990031 54	The sum of the existing and renewal durations has exceeded the maximun. Select another renewal duration.	Subscription plus renewal too long. Select shorter renewal.
400	CBC.990031 55	Insufficient enterprise project fund quota, or invalid project.	Insufficient enterprise project fund quota, or invalid project.

Status Code	Error Code	Error Message	Description
400	CBC.990031 56	Coupons applicable to Marketplace products cannot be used together with dedicated coupons.	Coupons applicable to KooGallery products cannot be used together with dedicated coupons.
400	CBC.990031 62	The payment time must be earlier than the specified effective time.	The payment time must be earlier than the specified effective time.
400	CBC.990031 85	The cloud service can only be unsubscribed from as a whole.	The cloud service can only be unsubscribed from as a whole.
400	CBC.990031 98	Insufficient organization budget.	Insufficient budget of the organization.
400	CBC.990036 02	Automatic renewal is not supported for expired or frozen resources.	Automatic renewal is not supported for expired or frozen resources.
400	CBC.990036 05	Theautomatic renewal has been canceled. The current operation cannot be performed.	Automatic renewal has been canceled and you cannot perform the current operation.
400	CBC.990036 09	The billing mode of this product type cannot be converted into pay-per-use.	The billing mode of this product type cannot be converted into pay-per-use.
200	CBC.990036 10	The billing mode of resources in the grace or retention period cannot be converted into pay-per-use.	The billing mode of resources in the grace or retention period cannot be converted into payper-use.

Status Code	Error Code	Error Message	Description
400	CBC.990036 11	The billing mode of pay-per-usage packages cannot be converted into pay-per-use.	The billing mode of pay-per- usage packages cannot be converted into pay-per-use.
400	CBC.990036 22	The billing mode of solutions cannot be converted into pay-per-use.	The billing mode of solutions cannot be converted into payper-use.
400	CBC.990036 23	Cannot be converted into the pay-per-use billing mode because there are transactions being processed.	Cannot be converted into the pay-per-use billing mode because there are transactions being processed.
400	CBC.990036 24	Cannot be converted into the pay-per-use billing mode because the resource has been frozen due to security reasons.	Cannot be converted into the pay-per-use billing mode because the resource has been frozen due to security reasons.
400	CBC.990036 26	Cannot be converted into the pay-per-use billing mode because this account has been frozen.	Cannot be converted into the pay-per-use billing mode because this account has been frozen.
400	CBC.990036 31	Unsubscribed,dele ted, and released resources cannot be renewed.	Resources that are being unsubscribed, deleted, or released cannot be renewed.
400	CBC.990036 34	Resources in discount packages must be renewed as a whole and cannot be renewed together with other resources.	Resources in discount packages must be renewed as a whole and cannot be renewed together with other resources.

Status Code	Error Code	Error Message	Description
400	CBC.990036 38	Subscription to bandwidth add-on packages cannot be renewed.	Subscription to bandwidth add- on packages cannot be renewed.
400	CBC.990036 43	Unsubscriptionis not allowed for cloud services that have been invoiced.	For cloud services for which invoices have been issued, unsubscription is not supported.
400	CBC.990036 45	Unsubscription not supported for the service type of the resource.	Unsubscription not supported for this cloud service type.
400	CBC.990036 47	Unsubscription not supported for this pay-per-use package.	Unsubscription not supported for this pay-per-use package.

## 13.10 SDK Overview

This document provides the SDKs of different programming languages for partners and the addresses for obtaining the latest SDK versions.

### **Generating SDK Code Online**

Use API Explorer to dynamically generate SDK code.

#### **SDKs**

**Table 1** lists the SDK versions supported by partners. You can view SDK updates, obtain installation packages, and view user guides in GitHub.

Table 13-4 SDKs

Programming Languages	GitHub Address	Documentation
Java	huaweicloud-sdk-java-v3	Java SDK Usage Guide

Programming Languages	GitHub Address	Documentation
Python	huaweicloud-sdk- python-v3	Python SDK Usage Guide
Go	huaweicloud-sdk-go-v3	Go SDK User Guide
NodeJs	huaweicloud-sdk-nodejs- v3	Node.js SDK User Guide
.NET	huaweicloud-sdk-net-v3	.Net SDK Usage Guide
PHP	huaweicloud-sdk-php-v3	PHP SDK User Guide'
C++	huaweicloud-sdk-cpp-v3	C++ SDK User Guide

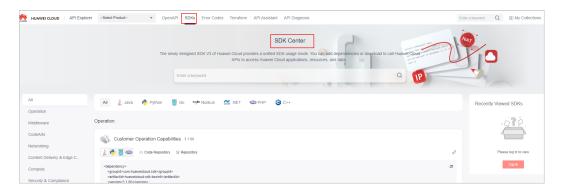

# 13.11 SDK-related FAQ

#### How Do I Update the SDK Version?

The SDK version will be updated in parallel after a product is updated. If the current version is not the latest, you are advised to update the SDK version.

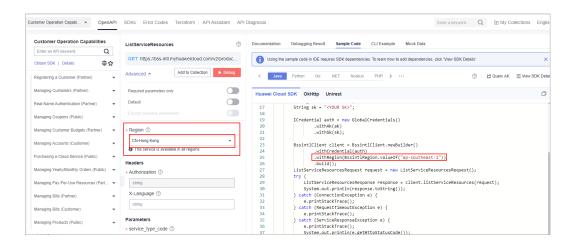

After logging in to the SDK Center, you can access and use SDK V3.

You can select an SDK by service and language in SDK Center. The code repository, Nuget repository, and related APIs are included.

### Can I Modify the Region of an SDK?

The region of an SDK is a global domain name and cannot be modified. If you modify the region, APIs cannot be debugged. The following figure shows an example in Java.

## 13.12 Price Inquiry API Guide

# 13.12.1 Price Inquiry Example of Yearly/Monthly Products (Using the Price Calculator)

The request parameters for querying the price of a yearly/monthly product using an API can be obtained through the **price calculator**.

ECS is used as an example:

Region: CN North-Beijing4

AZ: General AZ

Billing Mode: Yearly/Monthly

CPU Architecture: x86

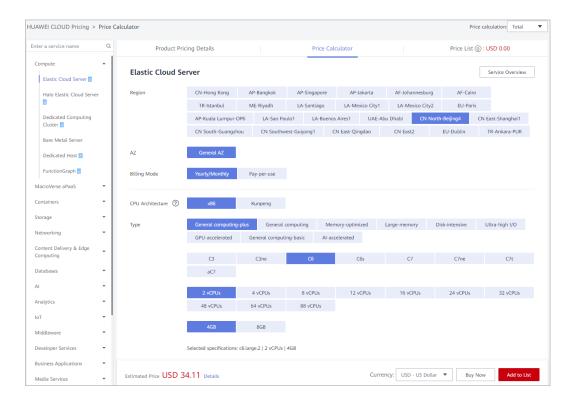

Type: General computing-plus C6 | 2 vCPUs | 4 GB

System Disk: General Purpose SSD 40 G

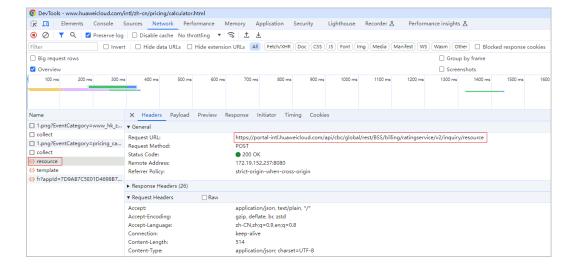

**Required Duration: 1 Month** 

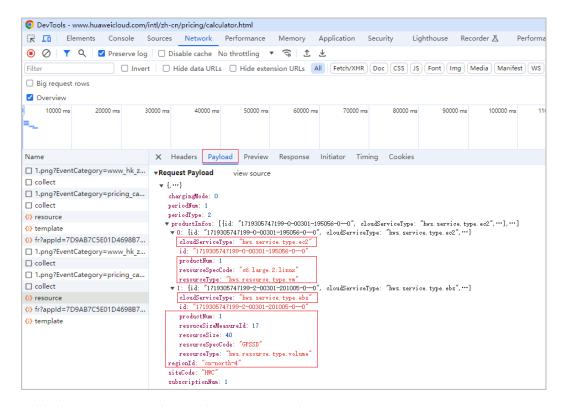

Quantity: 1

**Step 1** Go to the **Price Calculator** page and press F12 to open the console. Set the parameters based on the example.

**Step 2** Click **Network** > **resource** > **Payload** to view request parameters.

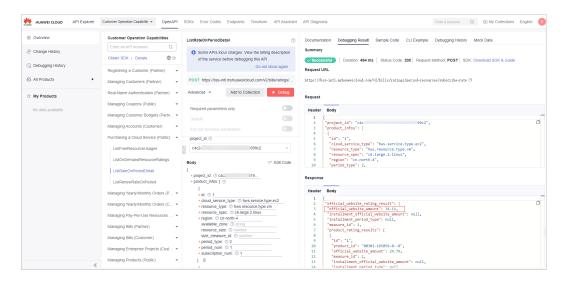

**Step 3** Add the parameters obtained in **Step 2** to the request.

As there are two products, an ECS and a disk, involved, two **product\_infos** structures are required. The following shows an example of a **product\_infos** structure.

```
"project_id": "84c5******fb2420",
"product_infos": [
      "id": "1",
      "cloud_service_type": "hws.service.type.ec2",
      "resource_type": "hws.resource.type.vm",
      "resource_spec": "c6.large.2.linux",
     "region": "cn-north-4",
"period_type": 2,
      "period_num": 1,
      "subscription_num": 1
   {
     "id": "2",
      "cloud_service_type": "hws.service.type.ebs",
      "resource_type": "hws.resource.type.volume",
     "resource_spec": "GPSSD",
      "region": "cn-north-4",
      "resource size": 40,
     "size_measure_id": 17,
      "period_type": 2,
      "period_num": 1,
      "subscription_num": 1
]
```

**Step 4** (Optional) Go to **API Explorer** and add **product\_infos** to the request body. The same results will return as that obtained using the price calculator.

----End

# 13.12.2 Price Inquiry Example of Pay-Per-Use Products (Using the Price Calculator)

The request parameters for querying the price of a pay-per-use product using an API can be obtained through the **price calculator**.

ECS is used as an example:

Region: CN North-Beijing4

AZ: General AZ

Billing Mode: Pay-per-use

CPU Architecture: x86

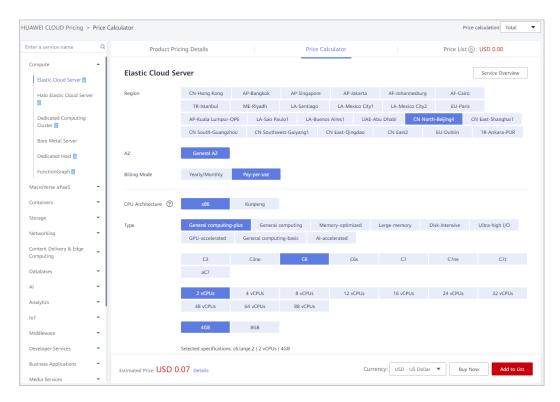

Type: General computing-plus C6 | 2 vCPUs | 4 GB

System Disk: General Purpose SSD 40 GB

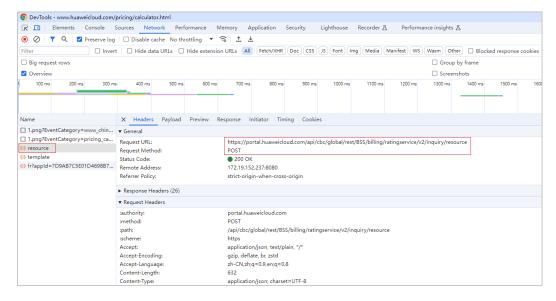

**Required Duration: 1 Month** 

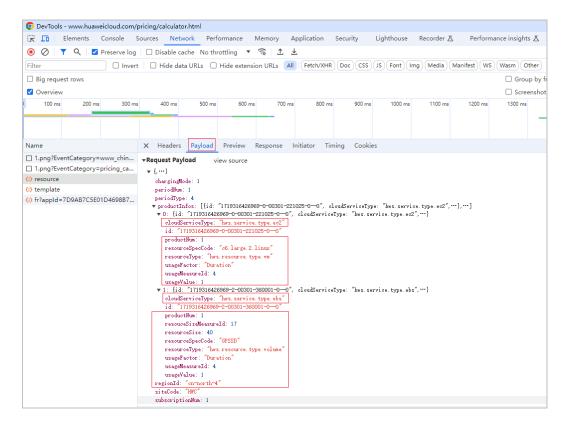

Quantity: 1

**Step 1** Go to the **Price Calculator** page and press F12 to open the console. Set the parameters based on the example.

**Step 2** Click **Network** > **resource** > **Payload** to view request parameters.

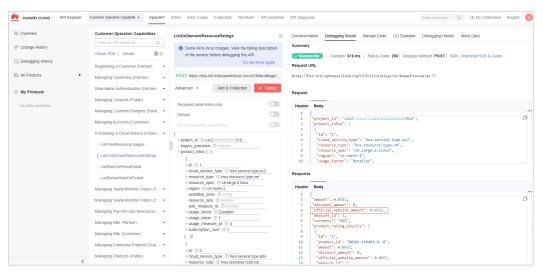

**Step 3** Add the parameters obtained in **Step 2** to the request.

As there are two products, an ECS and a disk, involved, two **product\_infos** structures are required. The following shows an example of a **product\_infos** structure.

```
"project_id": "c4c24*****599c2",
"product_infos": [
      "cloud_service_type": "hws.service.type.ec2",
      "resource_type": "hws.resource.type.vm",
"resource_spec": "c6.large.2.linux",
      "region": "cn-north-4",
      "usage_factor": "Duration",
      "usage_value": 1,
      "usage_measure_id": 4,
      "subscription_num": 1
   },
      "id": "2",
      "cloud_service_type": "hws.service.type.ebs",
      "resource_type": "hws.resource.type.volume", "resource_spec": "GPSSD",
      "region": "cn-north-4",
      "resource_size": 40,
      "size_measure_id": 17,
      "usage_factor": "Duration",
      "usage_value": 1,
      "usage_measure_id": 4,
      "subscription_num": 1
]
```

**Step 4** (Optional) Go to **API Explorer** and add **product\_infos** to the request body. The same results will return as that obtained using the price calculator.

----End
