approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
monitor	MetricMonitorV O object	Indicates the metric monitoring information.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
summary_table_id	String	Summary table ID, which is a read-only string

Table 7-696 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-697 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-698 MetricMonitorVO

Parameter	Type	Description
id	String	ID, which is a string
other_metric_ids	Array of strings	ID of another metric, which is a string
other_metric_names	Array of strings	Name of another indicator. This parameter is read-only.
other_compound_metric_ids	Array of strings	ID of another composite index.
other_compound_metric_names	Array of strings	Name of another compound metric.
expression	String	Alarm expression.
metric_id	String	Mount pointer ID, which is a string

Parameter	Type	Description
front_configs	String	Frontend expression configuration, which is used for front-end data restoration.

Parameter	Type	Description
metric_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

400	BadRequest
401	Unauthorized
403	Forbidden

7.13.4 Deleting Compound Metrics

Function

This API is used to delete compound metrics with specified IDs.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/compound-metrics

Table 7-702 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-703 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none"> • PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-704 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-705 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400

Table 7-706 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-707 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-708 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Delete compound metrics based on the input parameters. Only compound metrics in the draft, offline, or rejected state can be deleted.

```
DELETE https://{endpoint}/v2/{project_id}/design/compound-metrics
```

```
{  
  "ids" : [ "1227990857618227200" ]  
}
```

Example Responses

Status code: 200

The operation succeeds, and the number of deleted compound metrics is returned.

```
{  
  "value" : 1  
}
```

Status code: 400

BadRequest

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user request is illegal."  
}
```

Status code: 401

Unauthorized

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "User authentication failed."  
}
```

Status code: 403

Forbidden

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user does not have permission to call this API."  
}
```

SDK Sample Code

The SDK sample code is as follows.

Java

Delete compound metrics based on the input parameters. Only compound metrics in the draft, offline, or rejected state can be deleted.

```
package com.huaweicloud.sdk.test;

    }
}
```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	The operation succeeds, and the number of deleted compound metrics is returned.
400	BadRequest
401	Unauthorized
403	Forbidden

7.13.5 Viewing Composite Metric Details

Function

This API is used to obtain details about a composite index by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/compound-metrics/{id}

Table 7-709 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-710 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-711 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-712 Response body parameters

Parameter	Type	Description
data	data object	Returned data.

Table 7-713 data

Parameter	Type	Description
value	CompoundMetricVO object	Returned data information.

Table 7-714 CompoundMetricVO

Parameter	Type	Description
id	String	Compound metric ID, which is a string. This parameter is mandatory for update.
name_en	String	Compound metric name in English
name_ch	String	Compound metric name
description	String	Description
dimension_group	String	Statistical dimension ID, which cannot be changed during update
group_name	String	Granularity name, which is read-only.
group_code	String	Granularity code, which is read-only.
compound_type	String	Compound metric type Enumerated values: <ul style="list-style-type: none"> ● EXPRESSION: expression ● PERIODICITY_VALUED_COMPARISON: rate of growth compared to the previous period ● INTERVAL_VALUED_COMPARISON: rate of growth compared to the same period last year
comparison_type	String	Parallel comparison configuration. This parameter is mandatory when compound metric type is parallel growth rate. Enumerated values: <ul style="list-style-type: none"> ● YEAR_TO_YEAR ● MONTH_TO_MONTH ● WEEK_TO_WEEK
metric_ids	Array of strings	Derivative metric. This parameter is mandatory when the compound metric type is PERIODICITY_VALUED_COMPARISON or INTERVAL_VALUED_COMPARISON .

Parameter	Type	Description
metric_names	Array of strings	Indicates the indicator name.
compound_metric_ids	Array of strings	Compound metric information, which is an ID string
compound_metric_names	Array of strings	Compound metric name
cal_fn_ids	Array of strings	Reference function ID, which is a string
cal_exp	String	Calculation expression. This parameter is mandatory when the compound metric type is set to expression. It is in <code>\${index_id} + \${compound#index_id}</code> format, where <code>index_id</code> indicates the ID of the referenced derivative indicator and <code>compound#index_id</code> indicates the ID of the referenced composite indicator.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
data_type	String	Field type
create_by	String	Creator.
update_by	String	Person who updates the information.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
monitor	MetricMonitorV O object	Indicates the metric monitoring information.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
summary_table_id	String	Summary table ID, which is a read-only string

Table 7-715 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.

Parameter	Type	Description
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-716 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is CompoundMetricVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.14 Dimensions

7.14.1 Search Dimension

Function

Search for dimension information based on the Chinese and English names, description, creator, reviewer, status, l3Id, derivative indicator ID list, and modification time.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/dimensions

Table 7-721 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-722 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be approved • PUBLISHED: released • OFFLINE_DEVELOPING: to be approved • OFFLINE: offline • REJECT: rejected
l2_id	No	String	ID of subject area l2, which is a string
derivative_ids	No	Array of strings	IDs of compound metrics based on which dimensions are queried. The value is a string.
begin_time	No	String	Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Mandatory	Type	Description
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
fact_logic_id	No	String	Fact table ID, which is a string
dimension_type	No	String	Dimension type. Options: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: code table dimension• HIERARCHIES: hierarchy dimension
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
biz_catalog_id	No	String	ID of the service catalog to which the belongs.

Request Parameters

Table 7-723 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-724** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-725 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-726 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of DimensionVO objects	DimensionVO information.

Table 7-727 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none"> ● COMMON: common dimension ● LOOKUP: lookup table dimension ● HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.

Parameter	Type	Description
code_table	CodeTableVO object	Reference lookup table, which is read-only.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDataSourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations

Parameter	Type	Description
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-728 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-729 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.

Parameter	Type	Description
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-730 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-731 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.

Parameter	Type	Description
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-732 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-733 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.

Table 7-734 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-735 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-736 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-737 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-738 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.

Parameter	Type	Description
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-739 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.

Parameter	Type	Description
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-740 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection

Parameter	Type	Description
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-741 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-742 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-743 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-744 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-745 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400**Table 7-746** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-747 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-748 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query the dimension list in pagination mode based on search criteria.

```
GET https://{endpoint}/v2/{project_id}/design/dimensions?offset=1&limit=10
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a DimensionVO array and the total number of records.

}
```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a DimensionVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.14.2 Creating a Dimension

Function

This API is used to create a dimension.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/dimensions

Table 7-749 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-750 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID string (It is read-only for creation and mandatory for update.)
name_en	Yes	String	Dimension name in English
dimension_type	Yes	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none"> ● COMMON: common dimension ● LOOKUP: lookup table dimension ● HIERARCHIES: hierarchical dimension
name_ch	Yes	String	Dimension name
description	Yes	String	Description.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
code_table_id	No	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
l2_id	No	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	Yes	String	Business object ID, which is a string
hierarchies	No	Array of DimensionHierarchiesVO objects	Level attribute.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
attributes	Yes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	No	Array of TableMappingVO objects	Table mapping information.

Parameter	Mandatory	Type	Description
datasource	Yes	BizDataSourceRelationVO object	Data source information, which is mandatory for creation or update
owner	Yes	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	No	String	Foreign Table Path
table_type	No	String	Table type
distribute	No	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> HASH: Hashes specified columns and distributes data to specified DNs through mapping. REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	No	String	DISTRIBUTE BY HASH column.
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
configs	No	String	Other Configurations
model_id	No	String	Model ID
model	No	WorkspaceVO object	Model information

Table 7-751 DimensionHierarchiesVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	No	String	Level name.
attrs	No	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.

Parameter	Mandatory	Type	Description
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-752 HierarchiesAttrVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
hierarchies_id	No	String	Level ID, which is a string
attr_id	No	String	Attribute ID, which is a string
level	No	Integer	Indicates the layer.
attr_name_en	No	String	Referenced attribute code.
detail_attr_ids	No	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	No	Array of strings	Details attribute in English.

Table 7-753 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> • FACT_MEASURE: fact table measurement • FUNCTION: function • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	No	String	Serialized service details. The type is string.
biz_info_obj	No	Object	Service details. The type is object.

Parameter	Mandatory	Type	Description
biz_version	No	Integer	Service version.
biz_status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	No	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	No	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	No	String	Submitted At
create_by	No	String	Creator.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	No	String	Review time.
approver	No	String	Reviewer.
email	No	String	Email address of the reviewer.
msg	No	String	Review information.
directory_path	No	String	Directory tree.

Table 7-754 DimensionAttributeVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
code_table_field_id	No	String	Lookup table attribute ID, which is a string
name_en	Yes	String	Field name.
name_ch	Yes	String	Service attribute.
description	No	String	Description.
create_by	No	String	Creator.
data_type	Yes	String	Field type
data_type_extend	No	String	Extended field of the data type.
is_primary_key	Yes	Boolean	Indicates whether a key is a primary key.
is_biz_primary	No	Boolean	Indicates whether it is a service primary key.
is_partition_key	No	Boolean	Indicates whether to partition.
ordinal	Yes	Integer	Sequence number.
not_null	No	Boolean	Indicates whether the value is empty.
stand_row_id	No	String	ID of the associated data standard, which is a string

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.

Table 7-755 TableMappingVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name.
description	No	String	Description.
target_table_id	No	String	Destination table ID, which is a string
src_model_id	No	String	ID of the relational model for the source table. The value is a string.
src_model_name	No	String	Source model name.
view_text	No	String	Source of the collected view. The dws view is used reversely.
target_table_name	No	String	Name of the destination table.
details	No	Array of TableMappingDetailVO objects	Details.

Parameter	Mandatory	Type	Description
source_tables	No	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	No	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	No	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-756 TableMappingDetailVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
mapping_id	No	String	Name.
target_attr_id	No	String	ID of the destination attribute, which is a string
target_attr_name	Yes	String	Sort by destination field.
src_table_ids	No	String	Source table ID.
src_attr_ids	No	String	ID of a field in the source table.
remark	No	String	Description.

Parameter	Mandatory	Type	Description
create_time	No	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
target_attr	No	Object	Target attribute.

Table 7-757 MappingSourceTableVO

Parameter	Mandatory	Type	Description
table1_id	Yes	String	Table 1 ID, which is a string
table2_id	No	String	Table 2 ID, which is a string
table1_name	Yes	String	Name of table 1.
table2_name	No	String	Name of table 2.
join_type	Yes	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection
join_fields	Yes	Array of MappingJoinFieldVO objects	on condition.

Table 7-758 MappingJoinFieldVO

Parameter	Mandatory	Type	Description
field1_id	Yes	String	Attribute 1 ID, which is a string
field2_id	Yes	String	Attribute 2 ID, which is a string
field1_name	Yes	String	Name of attribute 1.
field2_name	Yes	String	Name of attribute 2.

Table 7-759 MappingSourceFieldVO

Parameter	Mandatory	Type	Description
target_field_id	No	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	Yes	String	Target field code.
field_ids	No	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	No	String	Conversion expression.
field_names	No	Array of strings	List of source field names.
changed	No	Boolean	Indicates whether a field is changed.

Table 7-760 BizDatasourceRelationVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
biz_id	No	String	Business object information, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction

Parameter	Mandatory	Type	Description
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	Yes	String	Data connection ID.
db_name	No	String	Indicates the database name.
queue_name	No	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	No	String	Required by the DWS type.

Table 7-761 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Table 7-762 WorkspaceVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.

Parameter	Mandatory	Type	Description
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Response Parameters

Status code: 200

Table 7-763 Response body parameters

Parameter	Type	Description
data	data object	Data, which is the unified outermost data structure of the returned result

Table 7-764 data

Parameter	Type	Description
value	DimensionVO object	Value, which is the unified outer data structure of the returned result

Table 7-765 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: lookup table dimension• HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.

Parameter	Type	Description
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDataSourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations

Parameter	Type	Description
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-766 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldV O objects	Code list attribute information.

Table 7-767 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.

Parameter	Type	Description
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-768 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-769 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.

Parameter	Type	Description
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-770 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-771 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.

Table 7-772 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-773 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-774 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-775 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-776 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.

Parameter	Type	Description
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-777 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.

Parameter	Type	Description
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-778 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection

Parameter	Type	Description
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-779 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-780 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-781 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-782 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-783 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400**Table 7-784** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-785 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-786 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Create a dimension based on the following parameters.

POST `https://{endpoint}/v2/{project_id}/design/dimensions`

```
{
  "id" : 0,

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	The operation succeeds. DimensionVO is returned.
400	BadRequest
401	Unauthorized
403	Forbidden

7.14.3 Updating a Dimension

Function

This API is used to update a dimension.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/dimensions

Table 7-787 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-788 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID string (It is read-only for creation and mandatory for update.)
name_en	Yes	String	Dimension name in English
dimension_type	Yes	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none">● COMMON: common dimension● LOOKUP: lookup table dimension● HIERARCHIES: hierarchical dimension
name_ch	Yes	String	Dimension name
description	Yes	String	Description.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
code_table_id	No	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
l2_id	No	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	Yes	String	Business object ID, which is a string
hierarchies	No	Array of DimensionHierarchiesVO objects	Level attribute.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
attributes	Yes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	No	Array of TableMappingVO objects	Table mapping information.

Parameter	Mandatory	Type	Description
datasource	Yes	BizDataSourceRelationVO object	Data source information, which is mandatory for creation or update
owner	Yes	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	No	String	Foreign Table Path
table_type	No	String	Table type
distribute	No	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> HASH: Hashes specified columns and distributes data to specified DNs through mapping. REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	No	String	DISTRIBUTE BY HASH column.
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
configs	No	String	Other Configurations
model_id	No	String	Model ID
model	No	WorkspaceVO object	Model information

Table 7-789 DimensionHierarchiesVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	No	String	Level name.
attrs	No	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.

Parameter	Mandatory	Type	Description
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-790 HierarchiesAttrVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
hierarchies_id	No	String	Level ID, which is a string
attr_id	No	String	Attribute ID, which is a string
level	No	Integer	Indicates the layer.
attr_name_en	No	String	Referenced attribute code.
detail_attr_ids	No	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	No	Array of strings	Details attribute in English.

Table 7-791 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
biz_info	No	String	Serialized service details. The type is string.
biz_info_obj	No	Object	Service details. The type is object.

Parameter	Mandatory	Type	Description
biz_version	No	Integer	Service version.
biz_status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	No	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	No	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	No	String	Submitted At
create_by	No	String	Creator.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	No	String	Review time.
approver	No	String	Reviewer.
email	No	String	Email address of the reviewer.
msg	No	String	Review information.
directory_path	No	String	Directory tree.

Table 7-792 DimensionAttributeVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
code_table_field_id	No	String	Lookup table attribute ID, which is a string
name_en	Yes	String	Field name.
name_ch	Yes	String	Service attribute.
description	No	String	Description.
create_by	No	String	Creator.
data_type	Yes	String	Field type
data_type_extend	No	String	Extended field of the data type.
is_primary_key	Yes	Boolean	Indicates whether a key is a primary key.
is_biz_primary	No	Boolean	Indicates whether it is a service primary key.
is_partition_key	No	Boolean	Indicates whether to partition.
ordinal	Yes	Integer	Sequence number.
not_null	No	Boolean	Indicates whether the value is empty.
stand_row_id	No	String	ID of the associated data standard, which is a string

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.

Table 7-793 TableMappingVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name.
description	No	String	Description.
target_table_id	No	String	Destination table ID, which is a string
src_model_id	No	String	ID of the relational model for the source table. The value is a string.
src_model_name	No	String	Source model name.
view_text	No	String	Source of the collected view. The dws view is used reversely.
target_table_name	No	String	Name of the destination table.
details	No	Array of TableMappingDetailVO objects	Details.

Parameter	Mandatory	Type	Description
source_tables	No	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	No	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	No	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-794 TableMappingDetailVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
mapping_id	No	String	Name.
target_attr_id	No	String	ID of the destination attribute, which is a string
target_attr_name	Yes	String	Sort by destination field.
src_table_ids	No	String	Source table ID.
src_attr_ids	No	String	ID of a field in the source table.
remark	No	String	Description.

Parameter	Mandatory	Type	Description
create_time	No	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
target_attr	No	Object	Target attribute.

Table 7-795 MappingSourceTableVO

Parameter	Mandatory	Type	Description
table1_id	Yes	String	Table 1 ID, which is a string
table2_id	No	String	Table 2 ID, which is a string
table1_name	Yes	String	Name of table 1.
table2_name	No	String	Name of table 2.
join_type	Yes	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection
join_fields	Yes	Array of MappingJoinFieldVO objects	on condition.

Table 7-796 MappingJoinFieldVO

Parameter	Mandatory	Type	Description
field1_id	Yes	String	Attribute 1 ID, which is a string
field2_id	Yes	String	Attribute 2 ID, which is a string
field1_name	Yes	String	Name of attribute 1.
field2_name	Yes	String	Name of attribute 2.

Table 7-797 MappingSourceFieldVO

Parameter	Mandatory	Type	Description
target_field_id	No	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	Yes	String	Target field code.
field_ids	No	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	No	String	Conversion expression.
field_names	No	Array of strings	List of source field names.
changed	No	Boolean	Indicates whether a field is changed.

Table 7-798 BizDatasourceRelationVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
biz_id	No	String	Business object information, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction

Parameter	Mandatory	Type	Description
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	Yes	String	Data connection ID.
db_name	No	String	Indicates the database name.
queue_name	No	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	No	String	Required by the DWS type.

Table 7-799 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Table 7-800 WorkspaceVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.

Parameter	Mandatory	Type	Description
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Response Parameters

Status code: 200

Table 7-801 Response body parameters

Parameter	Type	Description
data	data object	Data, which is the unified outermost data structure of the returned result

Table 7-802 data

Parameter	Type	Description
value	DimensionVO object	Value, which is the unified outer data structure of the returned result

Table 7-803 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: lookup table dimension• HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.

Parameter	Type	Description
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDataSourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations

Parameter	Type	Description
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-804 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-805 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.

Parameter	Type	Description
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> NUMBER: number STRING: character type DATETIME: date type BLOB: large object (BLOB) OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-806 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-807 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.

Parameter	Type	Description
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-808 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-809 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.

Table 7-810 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-811 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-812 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-813 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-814 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.

Parameter	Type	Description
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-815 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.

Parameter	Type	Description
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-816 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection

Parameter	Type	Description
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-817 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-818 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-819 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-820 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-821 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400**Table 7-822** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-823** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-824** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Update a dimension based on the following parameters.

```
PUT https://{endpoint}/v2/{project_id}/design/dimensions
```

```
{

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	The operation succeeds. DimensionVO is returned.
400	BadRequest
401	Unauthorized
403	Forbidden

7.14.4 Deleting Dimensions

Function

This API is used to delete dimensions with specified IDs.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/dimensions

Table 7-825 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-826 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none"> • PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-827 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-828 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400

Table 7-829 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-830 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-831 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Delete dimensions based on the input parameters. Only dimensions in the draft, offline, or rejected state can be deleted.

```
DELETE https://{endpoint}/v2/{project_id}/design/dimensions
{
  "ids" : [ "1227990857618227200" ]
}
```

Example Responses

Status code: 200

The operation succeeds, and the number of deleted dimensions is returned.

```
{  
  "value" : 1  
}
```

Status code: 400

BadRequest

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user request is illegal."  
}
```

Status code: 401

Unauthorized

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "User authentication failed."  
}
```

Status code: 403

Forbidden

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user does not have permission to call this API."  
}
```

SDK Sample Code

The SDK sample code is as follows.

Java

Delete dimensions based on the input parameters. Only dimensions in the draft, offline, or rejected state can be deleted.

```
package com.huaweicloud.sdk.test;  
  
import com.huaweicloud.sdk.core.auth.ICredential;  
import com.huaweicloud.sdk.core.auth.BasicCredentials;  
import com.huaweicloud.sdk.core.exception.ConnectionException;  
import com.huaweicloud.sdk.core.exception.RequestTimeoutException;  
import com.huaweicloud.sdk.core.exception.ServiceResponseException;  
import com.huaweicloud.sdk.dataartsstudio.v1.region.DataArtsStudioRegion;  
import com.huaweicloud.sdk.dataartsstudio.v1.*;  
import com.huaweicloud.sdk.dataartsstudio.v1.model.*;  
  
import java.util.List;  
import java.util.ArrayList;  
  
public class DeleteDesignDimensionSolution {  
  
    public static void main(String[] args) {  
        // The AK and SK used for authentication are hard-coded or stored in plaintext, which has great  
        // security risks. It is recommended that the AK and SK be stored in ciphertext in configuration files or  
        // environment variables and decrypted during use to ensure security.  
        // In this example, AK and SK are stored in environment variables for authentication. Before running  
        // this example, set environment variables CLOUD_SDK_AK and CLOUD_SDK_SK in the local environment  
        String ak = System.getenv("CLOUD_SDK_AK");  
        String sk = System.getenv("CLOUD_SDK_SK");  
        String projectId = "{project_id}";  
  
        ICredential auth = new BasicCredentials()
```

```
.withProjectId(projectId)
.withAk(ak)
.withSk(sk);

DataArtsStudioClient client = DataArtsStudioClient.newBuilder()
    .withCredential(auth)
    .withRegion(DataArtsStudioRegion.valueOf("<YOUR REGION>"))
    .build();

7.14.5 Viewing Dimension Details

Function

This API is used to view dimension details by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/dimensions/{id}

Table 7-832 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-833 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-834 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-835** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-836 data

Parameter	Type	Description
value	DimensionVO object	value: unified outer data structure of the returned result.

Table 7-837 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none"> • COMMON: common dimension • LOOKUP: lookup table dimension • HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string

Parameter	Type	Description
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDatasourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">INVALID_TYPE: invalid environmentDEV_TYPE: development environmentPROD_TYPE: production environmentDEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-838 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldV O objects	Code list attribute information.

Table 7-839 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.

Parameter	Type	Description
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-840 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-841 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.

Parameter	Type	Description
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-842 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-843 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.

Table 7-844 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-845 QualityInfoVO

biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-846 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-847 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-848 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.

Parameter	Type	Description
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-849 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.

Parameter	Type	Description
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-850 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection

Parameter	Type	Description
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-851 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-852 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-853 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-854 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-855 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400**Table 7-856** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-857** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-858** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API queries dimension information based on the dimension ID.

```
GET https://{endpoint}/v2/{project_id}/design/dimensions/1222930977286987776
```

Example Responses

Status code: 200

This operation is successful, and the returned data is DimensionVO details.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is DimensionVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.14.6 View Dimension Granularity

Function

This API is used to query the dimension granularity. All dimensions are queried based on tableId. If tableId is not transferred, the granularity of all dimension groups is queried.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/dimension/groups

Table 7-859 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-860 Query Parameters

Parameter	Mandatory	Type	Description
table_id	No	String	ID of the associated table, which is a string
biz_type	No	String	Query by service type. The options are ATOMIC_INDEX (atomic indicator), DERIVATIVE_INDEX (derivative indicator), DIMENSION (dimension), and TIME_CONDITION (time filter). DIMENSION_LOGIC_TABLE (dimension table), FACT_LOGIC_TABLE (fact table), AGGREGATION_LOGIC_TABLE (summary table), TABLE_MODEL (relational modeling table), CODE_TABLE (code table), STANDARD_ELEMENT (data standard), BIZ_METRIC (business metric), COMPOUND_METRIC (compound metric), SUBJECT (subject), ATOMIC_METRIC (atomic metric (new)), DERIVED_METRIC (Derivative (new)), COMPOSITE_METRIC (Compound (new))).
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-861 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-862** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-863 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-864 value

Parameter	Type	Description
main_table	FactLogicTableVO object	Fact table.
dimension_tables	Array of DimensionLogicTableVO objects	Dimension.

Table 7-865 FactLogicTableVO

Parameter	Type	Description
id	String	Fact table ID, which is a string
tb_name	String	Specifies the name of the table.
tb_logic_name	String	Name of a logical entity.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object GUID, which is a string
description	String	Description.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
owner	String	Asset owner.
create_by	String	Creator.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.

Parameter	Type	Description
dw_id	String	Data connection ID.
db_name	String	Database name.
tb_id	String	Data table ID. This parameter is read-only.
dim_table_ids	Array of strings	ID of the associated dimension table.
reversed	Boolean	Indicates whether it is reverse.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
schema	String	Required by the DWS type.
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
table_type	String	Table type
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected

Parameter	Type	Description
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.

Parameter	Type	Description
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
dimensions	Array of FactTableAttributeVO objects	Fact table dimension information, which is read-only.
attributes	Array of FactTableAttributeVO objects	Fact attribute information of the fact table, which is read-only.
mappings	Array of TableMappingVO objects	Table mapping information.
measures	Array of FactTableAttributeVO objects	Fact table measurement information, which is read-only.
table_attributes	Array of FactTableAttributeVO objects	Indicates all attributes of a fact table.
configs	String	Other Configurations
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
quality_id	String	Quality ID, which is a string
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
obs_location	String	Foreign Table Path
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string

Parameter	Type	Description
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-866 FactTableAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
fact_logic_table_id	String	Fact table ID, which is a read-only string
ordinal	Integer	Sequence number.
dimension_id	String	Dimension ID, which is a string
dimension_attr_id	String	Dimension attribute ID, which is a string
role	String	Dimension role.
dimension	DimensionVO object	Indicates the dimension information corresponding to dimension_id. This parameter is read-only.
is_primary_key	Boolean	Indicates whether a key is a primary key.

Parameter	Type	Description
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether the key is a foreign key. This parameter is read-only.
secrecy_levels	Array of SecrecyLevelRecordVO objects	Confidentiality
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
name_en	String	English name of the user.
name_ch	String	Chinese name.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
attribute_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.

Table 7-867 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: lookup table dimension• HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDatasourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-868 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-869 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-870 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.

Table 7-871 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-872 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-873 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-874 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-875 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-876 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-877 SecrecyLevelRecordVO

Parameter	Type	Description
id	String	ID of the security level associated with the attribute. The ID is a string.
secrecyLevel_id	String	Security level ID, which is a string
secrecyLevel_name	String	Security level name.
uuid	String	Data security primary key.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
biz_id	String	Business object ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Updater.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-878 DimensionLogicTableVO

Parameter	Type	Description
id	String	Table ID
tb_name	String	Table name
tb_logic_name	String	Name of a logical entity.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
create_by	String	Creator.
description	String	Description.
dimension_id	String	Dimension ID, which is a string
owner	String	Asset owner.
dimension_type	String	Dimension type. Options: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: code table dimension• HIERARCHIES: hierarchy dimension
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	Data connection ID.
reversed	Boolean	Indicates whether it is reverse.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.

Parameter	Type	Description
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
db_name	String	Database name.
tb_id	String	Data table ID. This parameter is read-only.
schema	String	Required by the DWS type.
table_type	String	Table type
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dimension_name	String	Associated dimension name, which is read-only.
attributes	Array of DimensionLogicTableAttributeVO objects	Field attribute.

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
technical_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
materialization	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
distribute	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
quality_id	String	Quality ID, which is a string
alias	String	Alias

Parameter	Type	Description
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
obs_location	String	Foreign Table Path
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-879 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.

Parameter	Type	Description
description	String	Description.
create_by	String	Creator.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-880 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string

Parameter	Type	Description
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-881 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-882 DimensionLogicTableAttributeVO

Parameter	Type	Description
id	String	Dimension table ID, which is a string
dimension_logic_table_id	String	ID of the dimension table.
ordinal	Integer	No.
dimension_attribute_id	String	Dimension attribute ID, which is a string
name_en	String	Field name, which is read-only.
name_ch	String	Service attribute. This parameter is read-only.
description	String	Description, which is read-only.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key. This parameter is read-only.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether the partition is a primary key partition. This parameter is read-only.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias

Parameter	Type	Description
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Table 7-883 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-884 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-885 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-886 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-887 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-888 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.

Parameter	Type	Description
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.

Parameter	Type	Description
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-889 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-890 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-891 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Query the granularity of the dimension whose table ID is 1169329693619625984 and service type is FACT_LOGIC_TABLE.

```
GET https://{endpoint}/v2/{project_id}/design/dimension/groups?  
biz_type=FACT_LOGIC_TABLE&table_id=1169329693619625984
```

Example Responses

Status code: 200

This operation is successful, and the returned data is DerivativeIndexDimensionVO details.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is DerivativeIndexDimensionVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.14.7 View Reverse Dimension Table Task

Function

View the reverse dimension table task.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/dimension/database

Table 7-892 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-893 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-894 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-895 data

Parameter	Type	Description
value	BatchOperationVO object	value: unified outer data structure of the returned result.

Table 7-896 BatchOperationVO

Parameter	Type	Description
id	String	Batch approval ID, which is a string
tenant_id	String	Project ID.
group_id	String	Group ID, which is a string
biz_name	String	Service name.
biz_id	String	Business ID, which is a string
operation_status	String	Operation result type enumeration. RUNNING(Running), SUCCESS(Operation succeeded), and FAILED(Operation failed). Options: <ul style="list-style-type: none"> ● RUNNING: The task is running. ● SUCCESS: The operation is successful. ● FAILED: The operation fails.
operation_type	String	Indicates the type.
biz_info	String	Service details.
create_by	String	Creator.
remark	String	Indicates the remark information.
total	Integer	Total number.
success	Integer	Number of successful operations.
failed	Integer	Indicates the number of failed operations.

Parameter	Type	Description
rate	String	Indicates the current progress.
logs	String	Logs.
groups	Array of BatchOperationVO objects	Group information.

Status code: 400

Table 7-897 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 401

Table 7-898 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 403

Table 7-899 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	Success
400	BadRequest
401	Unauthorized
403	Forbidden

7.15 Filters

7.15.1 Searching for a Service Filter

Function

Search for filter information by name, description, creator, reviewer, filter group ID, modification time, and status.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/conditions

Table 7-900 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-901 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be approved• PUBLISHED: released• OFFLINE_DEVELOPING: to be approved• OFFLINE: offline• REJECT: rejected
begin_time	No	String	Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Mandatory	Type	Description
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-902 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-903 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-904 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-905 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of ConditionVO objects	ConditionVO information.

Table 7-906 ConditionVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Parameter
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
condition_fn	String	Limit the calculation method. Options: <ul style="list-style-type: none"> • LAST_YEAR: previous year • CURRENT_YEAR: current year • BETWEEN_YEAR: user-defined year range • LAST_MONTH: last month • CURRENT_MONTH: current month • BETWEEN_MONTH: customized month range • LAST_DAY: previous day • CURRENT_DAY: current day • BETWEEN_DAY: customized day range • LAST_HOUR: last hour • CURRENT_HOUR: current hour • BETWEEN_HOUR: customized hour range • LAST_MINUTE: last minute • CURRENT_MINUTE: current minute • BETWEEN_MINUTE: customized minute range
condition_fn_param	String	Limit calculation parameters.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
base_time	Integer	Indicates the reference time.

Table 7-907 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.

Parameter	Type	Description
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-908 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400**Table 7-909** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-910 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-911 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Search for the time filter information.

```
GET https://{endpoint}/v2/{project_id}/design/conditions?condition_type=TIME_CONDITION
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a ConditionVO array and the total number of records.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a ConditionVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.15.2 Viewing Restriction Details

Function

This API is used to query restriction details by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/conditions/{id}

Table 7-912 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-913 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-914 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-915 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-916 data

Parameter	Type	Description
value	ConditionVO object	value: unified outer data structure of the returned result.

Table 7-917 ConditionVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Parameter
name_ch	String	Service attribute.

Parameter	Type	Description
description	String	Description.
create_by	String	Creator.
condition_fn	String	Limit the calculation method. Options: <ul style="list-style-type: none"> • LAST_YEAR: previous year • CURRENT_YEAR: current year • BETWEEN_YEAR: user-defined year range • LAST_MONTH: last month • CURRENT_MONTH: current month • BETWEEN_MONTH: customized month range • LAST_DAY: previous day • CURRENT_DAY: current day • BETWEEN_DAY: customized day range • LAST_HOUR: last hour • CURRENT_HOUR: current hour • BETWEEN_HOUR: customized hour range • LAST_MINUTE: last minute • CURRENT_MINUTE: current minute • BETWEEN_MINUTE: customized minute range
condition_fn_param	String	Limit calculation parameters.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
base_time	Integer	Indicates the reference time.

Table 7-918 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-919 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400

Table 7-920 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-921 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-922 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query restriction details by ID.

```
GET https://{endpoint}/v2/{project_id}/design/conditions/873154196235517965
```

Example Responses

Status code: 200

This operation is successful, and the returned data is ConditionVO details.

```
{
  "data": {
    "value": {
      "id": "873154196235517965",

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is ConditionVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.16 Dimension Tables

7.16.1 Searching for a Dimension Table

Function

Search for dimension table information by Chinese and English names, creator, reviewer, status, and modification time.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/dimension-logic-tables

Table 7-923 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-924 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.
owner	No	String	Query by owner.
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none">● DRAFT: draft● PUBLISH_DEVELOPING: to be approved● PUBLISHED: released● OFFLINE_DEVELOPING: to be approved● OFFLINE: offline● REJECT: rejected

Parameter	Mandatory	Type	Description
sync_status	No	String	Defines the enumeration of the synchronization status. Options: <ul style="list-style-type: none"> ● RUNNING: synchronizing ● NO_NEED: not synchronized ● SUMMARY_SUCCESS: overall success ● SUMMARY_FAILED: overall failure
sync_key	No	Array of strings	Defines the enumeration of synchronization task types. Options: <ul style="list-style-type: none"> ● BUSINESS_ASSET: synchronizes service assets. ● DATA_QUALITY: Create a quality job. ● TECHNICAL_ASSET: synchronizes technology assets. ● META_DATA_LINK: asset association ● PHYSICAL_TABLE: Create a table (production environment). ● DEV_PHYSICAL_TABLE: Create a table in the development environment. ● DLF_TASK: creates a data development job. ● MATERIALIZATION: Data is stored in the database (code table). ● PUBLISH_TO_DLM: publishes data service APIs. ● SUMMARY_STATUS: overall status
l2_id	No	String	ID of subject area l2, which is a string
dimension_id	No	String	ID of the dimension based on which dimension attributes are queried. The ID is a string.

Parameter	Mandatory	Type	Description
begin_time	No	String	Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
biz_catalog_id	No	String	ID of the service catalog to which the belongs.
dimension_type	No	String	Dimension type. Options: <ul style="list-style-type: none"> ● COMMON: common dimension ● LOOKUP: code table dimension ● HIERARCHIES: hierarchy dimension

Request Parameters

Table 7-925 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-926** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-927 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-928 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of DimensionLogicTableVO objects	DimensionVO information.

Table 7-929 DimensionLogicTableVO

Parameter	Type	Description
id	String	Table ID
tb_name	String	Table name
tb_logic_name	String	Name of a logical entity.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
create_by	String	Creator.
description	String	Description.
dimension_id	String	Dimension ID, which is a string
owner	String	Asset owner.
dimension_type	String	Dimension type. Options: <ul style="list-style-type: none"> • COMMON: common dimension • LOOKUP: code table dimension • HIERARCHIES: hierarchy dimension

Parameter	Type	Description
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	Data connection ID.
reversed	Boolean	Indicates whether it is reverse.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
db_name	String	Database name.
tb_id	String	Data table ID. This parameter is read-only.
schema	String	Required by the DWS type.
table_type	String	Table type
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">● DRAFT: draft● PUBLISH_DEVELOPING: to be reviewed● PUBLISHED: released● OFFLINE_DEVELOPING: to be reviewed● OFFLINE: offline● REJECT: rejected

Parameter	Type	Description
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dimension_name	String	Associated dimension name, which is read-only.
attributes	Array of DimensionLogicTableAttributeVO objects	Field attribute.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
technical_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
data_quality	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
materialization	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
distribute	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
quality_id	String	Quality ID, which is a string
alias	String	Alias

Parameter	Type	Description
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
obs_location	String	Foreign Table Path
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-930 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.

Parameter	Type	Description
description	String	Description.
create_by	String	Creator.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-931 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string

Parameter	Type	Description
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-932 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-933 DimensionLogicTableAttributeVO

Parameter	Type	Description
id	String	Dimension table ID, which is a string
dimension_logic_table_id	String	ID of the dimension table.
ordinal	Integer	No.
dimension_attribute_id	String	Dimension attribute ID, which is a string
name_en	String	Field name, which is read-only.
name_ch	String	Service attribute. This parameter is read-only.
description	String	Description, which is read-only.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key. This parameter is read-only.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether the partition is a primary key partition. This parameter is read-only.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias

Parameter	Type	Description
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Table 7-934 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-935 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-936 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-937 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-938 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-939 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.

Parameter	Type	Description
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.

Parameter	Type	Description
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-940 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-941 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-942 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Searches for dimension tables based on search criteria in pagination mode.

```
GET https://{endpoint}/v2/{project_id}/design/dimension-logic-tables?offset=1&limit=10
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a DimensionLogicTableVO array and the total number of records.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a DimensionLogicTableVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.16.2 Deleting Dimension Tables

Function

This API is used to delete dimension tables with specified IDs.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/dimension-logic-tables

Table 7-943 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-944 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none">• PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-945 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-946 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400

Table 7-947 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-948 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-949 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Delete dimension tables based on the input parameters. Only dimension tables in the draft, offline, or rejected state can be deleted.

```
DELETE https://{endpoint}/v2/{project_id}/design/atomic-indexs
{
  "ids" : [ "1227990857618227200" ]
}
```

Example Responses

Status code: 200

The operation succeeds, and the number of deleted dimensions is returned.

```
{
  "value" : 1
}
```

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	The operation succeeds, and the number of deleted dimensions is returned.
400	BadRequest
401	Unauthorized
403	Forbidden

7.16.3 Viewing Dimension Table Details

Function

This API is used to view details about a dimension table by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/dimension-logic-tables/{id}

Table 7-950 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-951 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-952 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-953 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-954 data

Parameter	Type	Description
value	DimensionLogicTableVO object	value: unified outer data structure of the returned result.

Table 7-955 DimensionLogicTableVO

Parameter	Type	Description
id	String	Table ID
tb_name	String	Table name
tb_logic_name	String	Name of a logical entity.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
create_by	String	Creator.
description	String	Description.
dimension_id	String	Dimension ID, which is a string
owner	String	Asset owner.
dimension_type	String	Dimension type. Options: <ul style="list-style-type: none"> • COMMON: common dimension • LOOKUP: code table dimension • HIERARCHIES: hierarchy dimension
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.

Parameter	Type	Description
code_table	CodeTableVO object	Reference lookup table, which is read-only.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	Data connection ID.
reversed	Boolean	Indicates whether it is reverse.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
db_name	String	Database name.
tb_id	String	Data table ID. This parameter is read-only.
schema	String	Required by the DWS type.
table_type	String	Table type
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected

Parameter	Type	Description
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dimension_name	String	Associated dimension name, which is read-only.
attributes	Array of DimensionLogicTableAttributeVO objects	Field attribute.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
materialization	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
distribute	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
quality_id	String	Quality ID, which is a string
alias	String	Alias

Parameter	Type	Description
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
obs_location	String	Foreign Table Path
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-956 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.

Parameter	Type	Description
description	String	Description.
create_by	String	Creator.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-957 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string

Parameter	Type	Description
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-958 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-959 DimensionLogicTableAttributeVO

Parameter	Type	Description
id	String	Dimension table ID, which is a string
dimension_logic_table_id	String	ID of the dimension table.
ordinal	Integer	No.
dimension_attribute_id	String	Dimension attribute ID, which is a string
name_en	String	Field name, which is read-only.
name_ch	String	Service attribute. This parameter is read-only.
description	String	Description, which is read-only.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key. This parameter is read-only.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether the partition is a primary key partition. This parameter is read-only.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias

Parameter	Type	Description
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Table 7-960 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-961 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Table 7-962 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-963 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-964 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-965 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.

Parameter	Type	Description
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.

Parameter	Type	Description
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-966 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-967 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-968 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to view details about a dimension table by ID.

```
GET https://{endpoint}/v2/{project_id}/design/dimension-logic-tables/1222930979413499904
```

Example Responses

Status code: 200

This operation is successful, and the returned data is DimensionLogicTableVO details.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is DimensionLogicTableVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.17 Fact Tables

7.17.1 Searching for a Fact Table

Function

Search for fact table information by Chinese and English names, creator, reviewer, status, and modification time.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/fact-logic-tables

Table 7-969 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-970 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.
owner	No	String	Query by owner.
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be approved • PUBLISHED: released • OFFLINE_DEVELOPING: to be approved • OFFLINE: offline • REJECT: rejected
sync_status	No	String	Defines the enumeration of the synchronization status. Options: <ul style="list-style-type: none"> • RUNNING: synchronizing • NO_NEED: not synchronized • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure

Parameter	Mandatory	Type	Description
sync_key	No	Array of strings	<p>Defines the enumeration of synchronization task types.</p> <p>Options:</p> <ul style="list-style-type: none"> ● BUSINESS_ASSET: synchronizes service assets. ● DATA_QUALITY: Create a quality job. ● TECHNICAL_ASSET: synchronizes technology assets. ● META_DATA_LINK: asset association ● PHYSICAL_TABLE: Create a table (production environment). ● DEV_PHYSICAL_TABLE: Create a table in the development environment. ● DLF_TASK: creates a data development job. ● MATERIALIZATION: Data is stored in the database (code table). ● PUBLISH_TO_DLM: publishes data service APIs. ● SUMMARY_STATUS: overall status
l3_id	No	String	ID of business object l3, which is a string
begin_time	No	String	<p>Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.</p>

Parameter	Mandatory	Type	Description
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
biz_catalog_id	No	String	ID of the service catalog to which the belongs.

Request Parameters

Table 7-971 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-972 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-973 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-974 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of FactLogicTableVO objects	FactLogicTableVO information.

Table 7-975 FactLogicTableVO

Parameter	Type	Description
id	String	Fact table ID, which is a string
tb_name	String	Specifies the name of the table.
tb_logic_name	String	Name of a logical entity.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object GUID, which is a string
description	String	Description.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
owner	String	Asset owner.
create_by	String	Creator.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	Data connection ID.
db_name	String	Database name.
tb_id	String	Data table ID. This parameter is read-only.
dim_table_ids	Array of strings	ID of the associated dimension table.
reversed	Boolean	Indicates whether it is reverse.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
schema	String	Required by the DWS type.

Parameter	Type	Description
distribute	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> HASH: Hashes specified columns and distributes data to specified DNs through mapping. REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
table_type	String	Table type
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> DRAFT: draft PUBLISH_DEVELOPING: to be reviewed PUBLISHED: released OFFLINE_DEVELOPING: to be reviewed OFFLINE: offline REJECT: rejected
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
dimensions	Array of FactTableAttributeVO objects	Fact table dimension information, which is read-only.
attributes	Array of FactTableAttributeVO objects	Fact attribute information of the fact table, which is read-only.
mappings	Array of TableMappingVO objects	Table mapping information.
measures	Array of FactTableAttributeVO objects	Fact table measurement information, which is read-only.

Parameter	Type	Description
table_attributes	Array of FactTableAttributeVO objects	Indicates all attributes of a fact table.
configs	String	Other Configurations
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
quality_id	String	Quality ID, which is a string
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
obs_location	String	Foreign Table Path
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> • INVALID_TYPE: invalid environment • DEV_TYPE: development environment • PROD_TYPE: production environment • DEV_PROD_TYPE: development and production environment

Parameter	Type	Description
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-976 FactTableAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
fact_logic_table_id	String	Fact table ID, which is a read-only string
ordinal	Integer	Sequence number.
dimension_id	String	Dimension ID, which is a string
dimension_attr_id	String	Dimension attribute ID, which is a string
role	String	Dimension role.
dimension	DimensionVO object	Indicates the dimension information corresponding to dimension_id. This parameter is read-only.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether the key is a foreign key. This parameter is read-only.
secrecy_levels	Array of SecrecyLevelRecordVO objects	Confidentiality
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
name_en	String	English name of the user.
name_ch	String	Chinese name.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
attribute_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.

Table 7-977 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: lookup table dimension• HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDatasourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-978 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldV O objects	Code list attribute information.

Table 7-979 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.

Parameter	Type	Description
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-980 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-981 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.

Parameter	Type	Description
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-982 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-983 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.

Table 7-984 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-985 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-986 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-987 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-988 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-989 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-990 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-991 SecrecyLevelRecordVO

Parameter	Type	Description
id	String	ID of the security level associated with the attribute. The ID is a string.
secrecyLevel_id	String	Security level ID, which is a string
secrecyLevel_name	String	Security level name.
uuid	String	Data security primary key.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
biz_id	String	Business object ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Updater.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-992 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-993 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-994 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-995 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-996 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.

Parameter	Type	Description
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-997 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-998** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-999** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to obtain the fact table list based on search criteria.

```
GET https://{endpoint}/v2/{project_id}/design/fact-logic-tables?  
offset=1&limit=10&name=fact_test_czh_0305_003
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a FactLogicTableVO array and the total number of records.

```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a FactLogicTableVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.17.2 Deleting Fact Tables

Function

This API is used to delete fact tables with specified IDs.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/fact-logic-tables

Table 7-1000 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1001 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string

Parameter	Mandatory	Type	Description
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none">• PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-1002 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-1003 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400

Table 7-1004 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1005 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1006 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Delete fact tables.

```
DELETE https://{endpoint}/v2/{project_id}/design/fact-logic-tables
```

```
{
  "ids" : [ "1114492876374601728" ],
  "del_types" : "PHYSICAL_TABLE"
}
```

Example Responses

Status code: 200

The operation succeeds. The number of deleted fact tables is returned.

```
{
  "value" : 1
}
```

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

SDK Sample Code

The SDK sample code is as follows.

7.17.3 Viewing Fact Table Details

Function

This API is used to view details about a fact table by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/fact-logic-tables/{id}

Table 7-1007 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1008 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-1009 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1010** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1011 data

Parameter	Type	Description
value	FactLogicTableVO object	value: unified outer data structure of the returned result.

Table 7-1012 FactLogicTableVO

Parameter	Type	Description
id	String	Fact table ID, which is a string
tb_name	String	Specifies the name of the table.
tb_logic_name	String	Name of a logical entity.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object GUID, which is a string
description	String	Description.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
owner	String	Asset owner.
create_by	String	Creator.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	Data connection ID.
db_name	String	Database name.
tb_id	String	Data table ID. This parameter is read-only.
dim_table_ids	Array of strings	ID of the associated dimension table.
reversed	Boolean	Indicates whether it is reverse.
partition_conf	String	Partition expression.

Parameter	Type	Description
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
schema	String	Required by the DWS type.
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
table_type	String	Table type
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
dimensions	Array of FactTableAttribu teVO objects	Fact table dimension information, which is read-only.

Parameter	Type	Description
attributes	Array of FactTableAttributeVO objects	Fact attribute information of the fact table, which is read-only.
mappings	Array of TableMappingVO objects	Table mapping information.
measures	Array of FactTableAttributeVO objects	Fact table measurement information, which is read-only.
table_attributes	Array of FactTableAttributeVO objects	Indicates all attributes of a fact table.
configs	String	Other Configurations
physical_table	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
quality_id	String	Quality ID, which is a string
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
obs_location	String	Foreign Table Path
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string

Parameter	Type	Description
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-1013 FactTableAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
fact_logic_table_id	String	Fact table ID, which is a read-only string
ordinal	Integer	Sequence number.
dimension_id	String	Dimension ID, which is a string
dimension_attr_id	String	Dimension attribute ID, which is a string
role	String	Dimension role.
dimension	DimensionVO object	Indicates the dimension information corresponding to dimension_id. This parameter is read-only.
is_primary_key	Boolean	Indicates whether a key is a primary key.

Parameter	Type	Description
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether the key is a foreign key. This parameter is read-only.
secrecy_levels	Array of SecrecyLevelRecordVO objects	Confidentiality
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
name_en	String	English name of the user.
name_ch	String	Chinese name.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
attribute_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.

Table 7-1014 DimensionVO

Parameter	Type	Description
id	String	ID string (It is read-only for creation and mandatory for update.)
name_en	String	Dimension name in English
dimension_type	String	Dimension type (The dimension type can be changed from a common dimension to a hierarchical dimension during an update, and cannot be changed in other scenarios.) Enumerated values: <ul style="list-style-type: none">• COMMON: common dimension• LOOKUP: lookup table dimension• HIERARCHIES: hierarchical dimension
name_ch	String	Dimension name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
code_table_id	String	Referenced lookup table ID (mandatory for creating or updating a lookup table dimension). The value is a string.
code_table	CodeTableVO object	Reference lookup table, which is read-only.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a string
hierarchies	Array of DimensionHierarchiesVO objects	Level attribute.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
attributes	Array of DimensionAttributeVO objects	Dimension attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
datasource	BizDatasourceRelationVO object	Data source information, which is mandatory for creation or update
owner	String	Asset owner, which is mandatory for creating or updating an asset
obs_location	String	Foreign Table Path
table_type	String	Table type
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
configs	String	Other Configurations
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
model_id	String	Model ID
model	WorkspaceVO object	Model information

Table 7-1015 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldV O objects	Code list attribute information.

Table 7-1016 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.

Parameter	Type	Description
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-1017 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Table 7-1018 DimensionHierarchiesVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Level name.

Parameter	Type	Description
attrs	Array of HierarchiesAttrVO objects	Attributes contained in a hierarchy.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1019 HierarchiesAttrVO

Parameter	Type	Description
id	String	ID, which is a string
hierarchies_id	String	Level ID, which is a string
attr_id	String	Attribute ID, which is a string
level	Integer	Indicates the layer.
attr_name_en	String	Referenced attribute code.
attr_name_ch	String	Referenced attribute name, which is read-only.
detail_attr_ids	Array of strings	Details attribute ID, which is a string
detail_attr_name_ens	Array of strings	Details attribute in English.
detail_attr_name_chs	Array of strings	Details attribute in Chinese, which is read-only.
attr	DimensionAttributeVO object	Referenced attribute field, which is read-only.
detail_attrs	Array of DimensionAttributeVO objects	Details field, which is read-only.

Table 7-1020 DimensionAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
dimension_id	String	Dimension ID, which is a read-only string
code_table_field_id	String	Lookup table attribute ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
create_by	String	Creator.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_biz_primary	Boolean	Indicates whether it is a service primary key.
is_partition_key	Boolean	Indicates whether to partition.
ordinal	Integer	Sequence number.
not_null	Boolean	Indicates whether the value is empty.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.

Table 7-1021 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1022 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1023 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1024 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1025 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1026 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1027 BizDatasourceRelationVO

Parameter	Type	Description
id	String	ID, which is a string
biz_id	String	Business object information, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_id	String	Data connection ID.
dw_name	String	Data connection name, which is read-only.
db_name	String	Indicates the database name.

Parameter	Type	Description
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.

Table 7-1028 SecrecyLevelRecordVO

Parameter	Type	Description
id	String	ID of the security level associated with the attribute. The ID is a string.
secrecyLevel_id	String	Security level ID, which is a string
secrecyLevel_name	String	Security level name.
uuid	String	Data security primary key.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
biz_id	String	Business object ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Updater.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1029 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1030 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-1031 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1032 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1033 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.

Parameter	Type	Description
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1034 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1035** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1036** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to view details about a fact table by ID.

GET https://{endpoint}/v2/{project_id}/design/fact-logic-tables/1214584210761940992

Example Responses

Status code: 200

This operation succeeds, and the returned data is FactLogicTableVO details.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is FactLogicTableVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.17.4 Viewing a Reverse Fact Table Task

Function

View the reverse fact table task.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/fact-logic-tables/database

Table 7-1037 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1038 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1039** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1040 data

Parameter	Type	Description
value	BatchOperationVO object	value: unified outer data structure of the returned result.

Table 7-1041 BatchOperationVO

Parameter	Type	Description
id	String	Batch approval ID, which is a string
tenant_id	String	Project ID.
group_id	String	Group ID, which is a string
biz_name	String	Service name.
biz_id	String	Business ID, which is a string
operation_status	String	Operation result type enumeration. RUNNING(Running), SUCCESS(Operation succeeded), and FAILED(Operation failed). Options: <ul style="list-style-type: none">• RUNNING: The task is running.• SUCCESS: The operation is successful.• FAILED: The operation fails.
operation_type	String	Indicates the type.
biz_info	String	Service details.
create_by	String	Creator.
remark	String	Indicates the remark information.
total	Integer	Total number.
success	Integer	Number of successful operations.
failed	Integer	Indicates the number of failed operations.
rate	String	Indicates the current progress.
logs	String	Logs.
groups	Array of BatchOperationVO objects	Group information.

7.18 Summary Tables

7.18.1 Searching for a Summary Table

Function

You can search for summary tables by Chinese and English names, creator, reviewer, status, and modification time. Fuzzy search is supported.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/aggregation-logic-tables

Table 7-1045 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1046 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.
owner	No	String	Query by owner.
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be approved• PUBLISHED: released• OFFLINE_DEVELOPING: to be approved• OFFLINE: offline• REJECT: rejected
sync_status	No	String	Defines the enumeration of the synchronization status. Options: <ul style="list-style-type: none">• RUNNING: synchronizing• NO_NEED: not synchronized• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure

Parameter	Mandatory	Type	Description
sync_key	No	Array of strings	<p>Defines the enumeration of synchronization task types.</p> <p>Options:</p> <ul style="list-style-type: none"> • BUSINESS_ASSET: synchronizes service assets. • DATA_QUALITY: Create a quality job. • TECHNICAL_ASSET: synchronizes technology assets. • META_DATA_LINK: asset association • PHYSICAL_TABLE: Create a table (production environment). • DEV_PHYSICAL_TABLE: Create a table in the development environment. • DLF_TASK: creates a data development job. • MATERIALIZATION: Data is stored in the database (code table). • PUBLISH_TO_DLM: publishes data service APIs. • SUMMARY_STATUS: overall status
l3_id	No	String	ID of business object l3, which is a string
begin_time	No	String	<p>Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.</p>

Parameter	Mandatory	Type	Description
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
biz_catalog_id	No	String	ID of the service catalog to which the belongs.
auto_generate	No	Boolean	Automatically Generated or Not

Request Parameters

Table 7-1047 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1048 Response body parameters

Parameter	Type	Description
data	data object	Returned data.

Table 7-1049 data

Parameter	Type	Description
value	value object	Returned data information.

Table 7-1050 value

Parameter	Type	Description
records	Array of AggregationLogicTableVO objects	Indicates the number of queried aggregation table value objects (AggregationLogicTableVO).
total	Integer	Total number of records that meet the search criteria.

Table 7-1051 AggregationLogicTableVO

Parameter	Type	Description
id	String	Unique system ID of the summary table, which is a string. This parameter is mandatory when you update an SDR table and is not required when you create an SDR table.
tb_name	String	Specifies the English name of the SDR table, which corresponds to the actual physical table name.
tb_logic_name	String	Chinese name of the summary table, which is used for display.
l1_id	String	Subject area group ID, which is a string. This parameter is read-only and does not need to be set during creation and update.
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	ID of the subject to which the summary table belongs, which is a string. This parameter is mandatory.
description	String	Description of the summary table.
owner	String	Asset owner of the summary table.
secret_type	String	Confidentiality type. Options: <ul style="list-style-type: none">• PUBLIC: public• SECRET: secret• CONFIDENTIAL: confidential• SUPER_SECRET: top secret
apply_bg	String	Applicable to bg.

Parameter	Type	Description
create_by	String	Creator of the summary table. This parameter is read-only and does not need to be set during creation and update.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	ID of the data connection where the SDR table is located. The value is a 32-digit hexadecimal number.
db_name	String	Name of the database where the summary table is located.
tb_id	String	Specifies the ID of the table created by the summary table. It is an internal service ID and is read-only. You do not need to set this parameter when creating or updating a table.
schema	String	Specifies the name of the schema where the SDR table is located. This parameter is mandatory for DWS.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Parameter	Type	Description
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Specifies the creation time. This parameter is read-only and does not need to be set during creation and update.
update_time	String	Specifies the update time. This parameter is read-only and does not need to be set during creation and update.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
dimension_group	String	Granularity ID.
group_name	String	Granularity name, which is read-only.
group_code	String	Granularity code, which is read-only.
time_period	AggregationLogi cTableAttribute- VO object	Time period attribute information of the summary table.
table_attributes	Array of AggregationLogi cTableAttribute- VO objects	Attribute information of the summary table. The type is determined based on attribute_type.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
dlf_task	String	Synchronization status. Options: <ul style="list-style-type: none"> ● NO_NEED: not synchronized ● CREATE_SUCCESS: The creation is successful. ● CREATE_FAILED: Creation failed ● UPDATE_SUCCESS: The update is successful. ● UPDATE_FAILED: The update fails. ● SUMMARY_SUCCESS: overall success ● SUMMARY_FAILED: overall failure ● RUNNING: overall running ● OFFLINE: offline
publish_to_dlm	String	Synchronization status. Options: <ul style="list-style-type: none"> ● NO_NEED: not synchronized ● CREATE_SUCCESS: The creation is successful. ● CREATE_FAILED: Creation failed ● UPDATE_SUCCESS: The update is successful. ● UPDATE_FAILED: The update fails. ● SUMMARY_SUCCESS: overall success ● SUMMARY_FAILED: overall failure ● RUNNING: overall running ● OFFLINE: offline

Parameter	Type	Description
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
compression	String	DWS data compression level. The column compression level is no/low/middle/high, and the row compression level is no/yes. Options: <ul style="list-style-type: none"> • NO: no compression • YES: indicates that the file is compressed. • LOW: low-level compression • MIDDLE: medium-level compression • HIGH: high-level compression
obs_location	String	Path of the foreign table.
pre_combine_field	String	Version field.
table_type	String	Table type
dlf_task_id	String	ID of a DLF job.

Parameter	Type	Description
quality_id	String	Quality ID, which is a string
reversed	Boolean	Indicates whether the operation is reverse. This parameter is read-only.
table_version	Integer	If this parameter is set to 2, the summary table is generated and read-only.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
alias	String	Alias
configs	String	Other configurations.
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
api_id	String	API ID
sql	String	SQL statement bound to the SDR table.
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-1052 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1053 AggregationLogicTableAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
aggregation_logic_table_id	String	ID of the summary table, which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name.
name_ch	String	Service attribute.

Parameter	Type	Description
attribute_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
not_null	Boolean	Indicates whether the value is empty.
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
ref_id	String	ID of the object associated with the attribute.
ref_name_ch	String	Chinese name of the object associated with the attribute.
ref_name_en	String	English name of the object associated with the attribute.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias

Table 7-1054 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1055 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1056 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1057 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-1058 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.

Parameter	Type	Description
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1059 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1060** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1061** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Query the first 10 SDR tables that are manually created or queried in fuzzy mode and whose Chinese name contains test_d.

```
GET https://{endpoint}/v2/{project_id}/design/aggregation-logic-tables?offset=1&limit=10&name=test_d&auto_generate=false
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is an AggregationLogicTableVO array and the total number of records.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is an AggregationLogicTableVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.18.2 Creating Summary Tables

Function

Manually create a summary table based on the input parameters.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/aggregation-logic-tables

Table 7-1062 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1063 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1064 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	Unique system ID of the summary table, which is a string. This parameter is mandatory when you update an SDR table and is not required when you create an SDR table.

Parameter	Mandatory	Type	Description
tb_name	Yes	String	Specifies the English name of the SDR table, which corresponds to the actual physical table name.
tb_logic_name	Yes	String	Chinese name of the summary table, which is used for display.
l2_id	No	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	Yes	String	ID of the subject to which the summary table belongs, which is a string. This parameter is mandatory.
description	No	String	Description of the summary table.
owner	Yes	String	Asset owner of the summary table.
secret_type	No	String	Confidentiality type. Options: <ul style="list-style-type: none">• PUBLIC: public• SECRET: secret• CONFIDENTIAL: confidential• SUPER_SECRET: top secret
apply_bg	No	String	Applicable to bg.
queue_name	No	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	Yes	String	ID of the data connection where the SDR table is located. The value is a 32-digit hexadecimal number.
db_name	Yes	String	Name of the database where the summary table is located.

Parameter	Mandatory	Type	Description
schema	No	String	Specifies the name of the schema where the SDR table is located. This parameter is mandatory for DWS.
dw_name	No	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
tb_guid	No	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	No	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .

Parameter	Mandatory	Type	Description
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	No	BizVersionManagementVO object	Service version management. This parameter is read-only.
dimension_group	No	String	Granularity ID.
time_period	No	AggregationLogicTableAttributeVO object	Time period attribute information of the summary table.
table_attributes	No	Array of AggregationLogicTableAttributeVO objects	Attribute information of the summary table. The type is determined based on attribute_type.

Parameter	Mandatory	Type	Description
distribute	No	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	No	String	DISTRIBUTE BY HASH column.
compression	No	String	DWS data compression level. The column compression level is no/low/middle/high, and the row compression level is no/yes. Options: <ul style="list-style-type: none"> • NO: no compression • YES: indicates that the file is compressed. • LOW: low-level compression • MIDDLE: medium-level compression • HIGH: high-level compression
obs_location	No	String	Path of the foreign table.
pre_combine_field	No	String	Version field.
table_type	No	String	Table type
dlf_task_id	No	String	ID of a DLF job.
quality_id	No	String	Quality ID, which is a string
partition_conf	No	String	Partition expression.
dirty_out_switch	No	Boolean	Indicates whether to output abnormal data.
dirty_out_database	No	String	Abnormal data output library.

Parameter	Mandatory	Type	Description
dirty_out_prefix	No	String	Prefix of an exception table.
dirty_out_suffix	No	String	Suffix of an exception table.
alias	No	String	Alias
configs	No	String	Other configurations.
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
api_id	No	String	API ID
sql	No	String	SQL statement bound to the SDR table.
model_id	No	Long	Model ID
model	No	WorkspaceVO object	Model information

Table 7-1065 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
biz_info	No	String	Serialized service details. The type is string.
biz_info_obj	No	Object	Service details. The type is object.

Parameter	Mandatory	Type	Description
biz_version	No	Integer	Service version.
biz_status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	No	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	No	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	No	String	Submitted At
create_by	No	String	Creator.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	No	String	Review time.
approver	No	String	Reviewer.
email	No	String	Email address of the reviewer.
msg	No	String	Review information.
directory_path	No	String	Directory tree.

Table 7-1066 BizVersionManageVO

Parameter	Mandatory	Type	Description
id	No	String	Field ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

biz_id	No	String	Business ID, which is a string
biz_info	No	String	Business object information.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected

Table 7-1067 AggregationLogicTableAttributeVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
aggregation_logic_table_id	No	String	ID of the summary table, which is a string
ordinal	No	Integer	Sequence number.
name_en	Yes	String	Field name.
name_ch	Yes	String	Service attribute.

Parameter	Mandatory	Type	Description
attribute_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
is_primary_key	Yes	Boolean	Indicates whether a key is a primary key.
is_partition_key	Yes	Boolean	Indicates whether the key is a partition key.

Parameter	Mandatory	Type	Description
not_null	No	Boolean	Indicates whether the value is empty.
description	No	String	Description.
data_type	Yes	String	Field type
data_type_extend	No	String	Extended field of the data type.
ref_id	No	String	ID of the object associated with the attribute.
stand_row_id	No	String	ID of the associated data standard, which is a string
alias	No	String	Alias

Table 7-1068 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Table 7-1069 WorkspaceVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.

Parameter	Mandatory	Type	Description
level	No	String	Data governance layers. Options: <ul style="list-style-type: none">• SDI: source data layer• DWI: data integration layer• DWR: data reporting layer• DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Response Parameters

Status code: 200

Table 7-1070 Response body parameters

Parameter	Type	Description
data	data object	Returned data.

Table 7-1071 data

Parameter	Type	Description
value	AggregationLogicTableVO object	Returned data information.

Table 7-1072 AggregationLogicTableVO

Parameter	Type	Description
id	String	Unique system ID of the summary table, which is a string. This parameter is mandatory when you update an SDR table and is not required when you create an SDR table.
tb_name	String	Specifies the English name of the SDR table, which corresponds to the actual physical table name.
tb_logic_name	String	Chinese name of the summary table, which is used for display.
l1_id	String	Subject area group ID, which is a string. This parameter is read-only and does not need to be set during creation and update.
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	ID of the subject to which the summary table belongs, which is a string. This parameter is mandatory.
description	String	Description of the summary table.
owner	String	Asset owner of the summary table.

Parameter	Type	Description
secret_type	String	Confidentiality type. Options: <ul style="list-style-type: none">• PUBLIC: public• SECRET: secret• CONFIDENTIAL: confidential• SUPER_SECRET: top secret
apply_bg	String	Applicable to bg.
create_by	String	Creator of the summary table. This parameter is read-only and does not need to be set during creation and update.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	ID of the data connection where the SDR table is located. The value is a 32-digit hexadecimal number.
db_name	String	Name of the database where the summary table is located.
tb_id	String	Specifies the ID of the table created by the summary table. It is an internal service ID and is read-only. You do not need to set this parameter when creating or updating a table.
schema	String	Specifies the name of the schema where the SDR table is located. This parameter is mandatory for DWS.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
create_time	String	Specifies the creation time. This parameter is read-only and does not need to be set during creation and update.
update_time	String	Specifies the update time. This parameter is read-only and does not need to be set during creation and update.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
dimension_group	String	Granularity ID.
group_name	String	Granularity name, which is read-only.
group_code	String	Granularity code, which is read-only.
time_period	AggregationLogicTableAttributeVO object	Time period attribute information of the summary table.
table_attributes	Array of AggregationLogicTableAttributeVO objects	Attribute information of the summary table. The type is determined based on attribute_type.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
data_quality	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dlf_task	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
publish_to_dlm	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
distribute	String	<p>DISTRIBUTE BY [HASH(column)] REPLICATION].</p> <p>Options:</p> <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.

Parameter	Type	Description
compression	String	DWS data compression level. The column compression level is no/low/middle/high, and the row compression level is no/yes. Options: <ul style="list-style-type: none">• NO: no compression• YES: indicates that the file is compressed.• LOW: low-level compression• MIDDLE: medium-level compression• HIGH: high-level compression
obs_location	String	Path of the foreign table.
pre_combine_field	String	Version field.
table_type	String	Table type
dlf_task_id	String	ID of a DLF job.
quality_id	String	Quality ID, which is a string
reversed	Boolean	Indicates whether the operation is reverse. This parameter is read-only.
table_version	Integer	If this parameter is set to 2, the summary table is generated and read-only.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
alias	String	Alias
configs	String	Other configurations.
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
api_id	String	API ID
sql	String	SQL statement bound to the SDR table.

Parameter	Type	Description
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-1073 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1074 AggregationLogicTableAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
aggregation_logic_table_id	String	ID of the summary table, which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name.
name_ch	String	Service attribute.

Parameter	Type	Description
attribute_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
not_null	Boolean	Indicates whether the value is empty.
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
ref_id	String	ID of the object associated with the attribute.
ref_name_ch	String	Chinese name of the object associated with the attribute.
ref_name_en	String	English name of the object associated with the attribute.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias

Table 7-1075 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1076 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1077 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1078 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-1079 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.

Parameter	Type	Description
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1080 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1081 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1082 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Manually create a summary table based on the input parameters.

```
POST https://{endpoint}/v2/{project_id}/design/aggregation-logic-tables

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is AggregationLogicTableVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.18.3 Update Summary Table

Function

Update the summary table.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/aggregation-logic-tables

Table 7-1083 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1084 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1085 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	Unique system ID of the summary table, which is a string. This parameter is mandatory when you update an SDR table and is not required when you create an SDR table.
tb_name	Yes	String	Specifies the English name of the SDR table, which corresponds to the actual physical table name.
tb_logic_name	Yes	String	Chinese name of the summary table, which is used for display.
l2_id	No	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	Yes	String	ID of the subject to which the summary table belongs, which is a string. This parameter is mandatory.
description	No	String	Description of the summary table.
owner	Yes	String	Asset owner of the summary table.
secret_type	No	String	Confidentiality type. Options: <ul style="list-style-type: none">● PUBLIC: public● SECRET: secret● CONFIDENTIAL: confidential● SUPER_SECRET: top secret
apply_bg	No	String	Applicable to bg.
queue_name	No	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.

Parameter	Mandatory	Type	Description
dw_id	Yes	String	ID of the data connection where the SDR table is located. The value is a 32-digit hexadecimal number.
db_name	Yes	String	Name of the database where the summary table is located.
schema	No	String	Specifies the name of the schema where the SDR table is located. This parameter is mandatory for DWS.
dw_name	No	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
tb_guid	No	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	No	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	No	BizVersionManageVO object	Service version management. This parameter is read-only.
dimension_group	No	String	Granularity ID.
time_period	No	AggregationLogicTableAttributeVO object	Time period attribute information of the summary table.
table_attributes	No	Array of AggregationLogicTableAttributeVO objects	Attribute information of the summary table. The type is determined based on attribute_type.

Parameter	Mandatory	Type	Description
distribute	No	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	No	String	DISTRIBUTE BY HASH column.
compression	No	String	DWS data compression level. The column compression level is no/low/middle/high, and the row compression level is no/yes. Options: <ul style="list-style-type: none"> • NO: no compression • YES: indicates that the file is compressed. • LOW: low-level compression • MIDDLE: medium-level compression • HIGH: high-level compression
obs_location	No	String	Path of the foreign table.
pre_combine_field	No	String	Version field.
table_type	No	String	Table type
dlf_task_id	No	String	ID of a DLF job.
quality_id	No	String	Quality ID, which is a string
partition_conf	No	String	Partition expression.
dirty_out_switch	No	Boolean	Indicates whether to output abnormal data.
dirty_out_database	No	String	Abnormal data output library.

Parameter	Mandatory	Type	Description
dirty_out_prefix	No	String	Prefix of an exception table.
dirty_out_suffix	No	String	Suffix of an exception table.
alias	No	String	Alias
configs	No	String	Other configurations.
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
api_id	No	String	API ID
sql	No	String	SQL statement bound to the SDR table.
model_id	No	Long	Model ID
model	No	WorkspaceVO object	Model information

Table 7-1086 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

aggregation_logic_table_id	No	String	ID of the summary table, which is a string
ordinal	No	Integer	Sequence number.
name_en	Yes	String	Field name.
name_ch	Yes	String	Service attribute.

Parameter	Mandatory	Type	Description
attribute_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
is_primary_key	Yes	Boolean	Indicates whether a key is a primary key.
is_partition_key	Yes	Boolean	Indicates whether the key is a partition key.

Parameter	Mandatory	Type	Description
not_null	No	Boolean	Indicates whether the value is empty.
description	No	String	Description.
data_type	Yes	String	Field type
data_type_extend	No	String	Extended field of the data type.
ref_id	No	String	ID of the object associated with the attribute.
stand_row_id	No	String	ID of the associated data standard, which is a string
alias	No	String	Alias

Table 7-1089 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Table 7-1090 WorkspaceVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.

Parameter	Mandatory	Type	Description
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Response Parameters

Status code: 200

Table 7-1091 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 400

Table 7-1092 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1093 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1094 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is AggregationLogicTableVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.18.4 Deleting Summary Tables

Function

You can delete summary tables in batches. Only tables in the Draft, Offline, or Rejected state can be deleted.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/aggregation-logic-tables

Table 7-1095 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1096 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1097 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none"> • PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-1098 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-1099 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400**Table 7-1100** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1101** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1102 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to delete a summary table based on the input parameter.

```
DELETE https://{endpoint}/v2/{project_id}/design/aggregation-logic-tables
{
  "ids": [ "1227937502401331200" ],
  "del_types": "PHYSICAL_TABLE"
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is the number of deleted data records.

```
{
  "data": {
    "value": 1
  }
}
```

Status code: 400

BadRequest

```
{
  "error_code": "DS.60xx",
  "error_msg": "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code": "DS.60xx",
  "error_msg": "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code": "DS.60xx",
  "error_msg": "The user does not have permission to call this API."
}
```

SDK Sample Code

The SDK sample code is as follows.

Java

7.18.5 Viewing SDR Table Details

Function

This API is used to view details about an SDR table by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/aggregation-logic-tables/{id}

Table 7-1103 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1104 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-1105 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1106 Response body parameters

Parameter	Type	Description
data	data object	Returned data.

Table 7-1107 data

Parameter	Type	Description
value	AggregationLogicTableVO object	Returned data information.

Table 7-1108 AggregationLogicTableVO

Parameter	Type	Description
id	String	Unique system ID of the summary table, which is a string. This parameter is mandatory when you update an SDR table and is not required when you create an SDR table.
tb_name	String	Specifies the English name of the SDR table, which corresponds to the actual physical table name.
tb_logic_name	String	Chinese name of the summary table, which is used for display.

Parameter	Type	Description
l1_id	String	Subject area group ID, which is a string. This parameter is read-only and does not need to be set during creation and update.
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	ID of the subject to which the summary table belongs, which is a string. This parameter is mandatory.
description	String	Description of the summary table.
owner	String	Asset owner of the summary table.
secret_type	String	Confidentiality type. Options: <ul style="list-style-type: none"> • PUBLIC: public • SECRET: secret • CONFIDENTIAL: confidential • SUPER_SECRET: top secret
apply_bg	String	Applicable to bg.
create_by	String	Creator of the summary table. This parameter is read-only and does not need to be set during creation and update.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
dw_id	String	ID of the data connection where the SDR table is located. The value is a 32-digit hexadecimal number.
db_name	String	Name of the database where the summary table is located.
tb_id	String	Specifies the ID of the table created by the summary table. It is an internal service ID and is read-only. You do not need to set this parameter when creating or updating a table.
schema	String	Specifies the name of the schema where the SDR table is located. This parameter is mandatory for DWS.

Parameter	Type	Description
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
tb_guid	String	GUID of the created data catalog technology asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
tb_logic_guid	String	GUID of the created data catalog service asset after the table is released. This parameter is read-only and does not need to be set during creation and update.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
create_time	String	Specifies the creation time. This parameter is read-only and does not need to be set during creation and update.
update_time	String	Specifies the update time. This parameter is read-only and does not need to be set during creation and update.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
dimension_group	String	Granularity ID.
group_name	String	Granularity name, which is read-only.
group_code	String	Granularity code, which is read-only.
time_period	AggregationLogisticTableAttributeVO object	Time period attribute information of the summary table.
table_attributes	Array of AggregationLogisticTableAttributeVO objects	Attribute information of the summary table. The type is determined based on attribute_type.

Parameter	Type	Description
physical_table	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_physical_table	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
technical_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
data_quality	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
dlf_task	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
publish_to_dlm	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
compression	String	DWS data compression level. The column compression level is no/low/middle/high, and the row compression level is no/yes. Options: <ul style="list-style-type: none"> • NO: no compression • YES: indicates that the file is compressed. • LOW: low-level compression • MIDDLE: medium-level compression • HIGH: high-level compression
obs_location	String	Path of the foreign table.
pre_combine_field	String	Version field.
table_type	String	Table type
dlf_task_id	String	ID of a DLF job.

Parameter	Type	Description
quality_id	String	Quality ID, which is a string
reversed	Boolean	Indicates whether the operation is reverse. This parameter is read-only.
table_version	Integer	If this parameter is set to 2, the summary table is generated and read-only.
partition_conf	String	Partition expression.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
alias	String	Alias
configs	String	Other configurations.
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
api_id	String	API ID
sql	String	SQL statement bound to the SDR table.
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none">• INVALID_TYPE: invalid environment• DEV_TYPE: development environment• PROD_TYPE: production environment• DEV_PROD_TYPE: development and production environment
model_id	Long	Model ID
model	WorkspaceVO object	Model information

Table 7-1109 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1110 AggregationLogicTableAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
aggregation_logic_table_id	String	ID of the summary table, which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name.
name_ch	String	Service attribute.

Parameter	Type	Description
attribute_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
not_null	Boolean	Indicates whether the value is empty.
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
ref_id	String	ID of the object associated with the attribute.
ref_name_ch	String	Chinese name of the object associated with the attribute.
ref_name_en	String	English name of the object associated with the attribute.
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias

Table 7-1111 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1112 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1113 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1114 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-1115 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.

Parameter	Type	Description
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1116 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1117 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1118 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to view details about an SDR table by ID.

GET https://{endpoint}/v2/{project_id}/design/aggregation-logic-tables/1209135365252866070

Example Responses

Status code: 200

This operation succeeds, and the returned data is AggregationLogicTableVO details.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is AggregationLogicTableVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19 Business Metrics

7.19.1 Querying Service Indicator Information

Function

Search for service indicator information by name, creator, and modification time.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/biz-metrics

Table 7-1119 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1120 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
owner	No	String	Query by owner.
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be approved • PUBLISHED: released • OFFLINE_DEVELOPING: to be approved • OFFLINE: offline • REJECT: rejected
sync_status	No	String	Defines the enumeration of the synchronization status. Options: <ul style="list-style-type: none"> • RUNNING: synchronizing • NO_NEED: not synchronized • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure

Parameter	Mandatory	Type	Description
sync_key	No	Array of strings	<p>Defines the enumeration of synchronization task types.</p> <p>Options:</p> <ul style="list-style-type: none"> • BUSINESS_ASSET: synchronizes service assets. • DATA_QUALITY: Create a quality job. • TECHNICAL_ASSET: synchronizes technology assets. • META_DATA_LINK: asset association • PHYSICAL_TABLE: Create a table (production environment). • DEV_PHYSICAL_TABLE: Create a table in the development environment. • DLF_TASK: creates a data development job. • MATERIALIZATION: Data is stored in the database (code table). • PUBLISH_TO_DLM: publishes data service APIs. • SUMMARY_STATUS: overall status
biz_catalog_id	No	String	ID of the service catalog to which the belongs.
begin_time	No	String	<p>Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.</p>

Parameter	Mandatory	Type	Description
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1121 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1122 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1123 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1124 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of BizMetricVO objects	BizMetricVO information.

Table 7-1125 BizMetricVO

Parameter	Type	Description
id	String	ID, which is a string. This parameter is mandatory for update and is left empty for creation.
name	String	Metric name.
code	String	Indicator code, which is read-only.
name_alias	String	Indicates the indicator alias.

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
status	String	<p>Release status of an entity. This parameter is read-only and does not need to be set during creation and update.</p> <p>Options:</p> <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_catalog_id	String	ID of the business architecture, which is a string

Parameter	Type	Description
biz_catalog_path	String	Path of the process architecture to which the process belongs. This parameter is read-only.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
data_origin	String	Data source.
unit	String	Metering unit.
time_filters	String	Statistical period (time limit).
dimensions	String	Statistical dimension.
general_filters	String	Statistical caliber and modifiers.
interval_type	String	Refresh frequency. Options: <ul style="list-style-type: none">• MINUTE: every minute• HOUR: every hour• DAY: every day• WEEK: weekly• MONTH: every month• YEAR: every year• REAL_TIME: real-time• HALF_HOUR: every half an hour• QUART: every 15 minutes• DOUBLE_WEEK: every two weeks• HALF_YEAR: every half year• HALF_DAY: every half day
apply_scenario	String	Application scenarios
technical_metric	String	Associated technical metric, which is an ID string
technical_metric_name	String	Name of the associated technical indicator. This parameter is read-only.

Parameter	Type	Description
technical_metric_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
measure	String	Measurement object.
owner	String	Indicator owner.
owner_department	String	Indicator management department.
destination	String	Set the purpose.
guid	String	GUID after asset synchronization. This parameter is read-only.
definition	String	Indicator definition.
expression	String	Indicates the calculation formula.
remark	String	Description.

Parameter	Type	Description
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
biz_metric	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
self_defined_fields	Array of SelfDefinedField-VO objects	Custom Fields

Table 7-1126 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.

Parameter	Type	Description
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1128 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400

Table 7-1129 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1130** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1131** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query the first 10 service indicator data records and return the service indicator set.

```
GET https://{endpoint}/v2/{project_id}/design/biz-metrics?offset=1&limit=10
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a BizMetricVO array and the total number of records.

```

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a BizMetricVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19.2 Creating a Service Indicator

Function

Create a service indicator.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/biz-metrics

Table 7-1132 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1133 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1134 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string. This parameter is mandatory for update and is left empty for creation.
name	Yes	String	Metric name.
name_alias	No	String	Indicates the indicator alias.

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> • FACT_MEASURE: fact table measurement • FUNCTION: function • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_catalog_id	Yes	String	ID of the business architecture, which is a string
data_origin	No	String	Data source.
unit	No	String	Metering unit.

Parameter	Mandatory	Type	Description
time_filters	Yes	String	Statistical period (time limit).
dimensions	No	String	Statistical dimension.
general_filters	No	String	Statistical caliber and modifiers.
interval_type	Yes	String	Refresh frequency. Options: <ul style="list-style-type: none"> • MINUTE: every minute • HOUR: every hour • DAY: every day • WEEK: weekly • MONTH: every month • YEAR: every year • REAL_TIME: real-time • HALF_HOUR: every half an hour • QUART: every 15 minutes • DOUBLE_WEEK: every two weeks • HALF_YEAR: every half year • HALF_DAY: every half day
apply_scenario	No	String	Application scenarios
technical_metric	No	String	Associated technical metric, which is an ID string

Parameter	Mandatory	Type	Description
technical_metric_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

measure	No	String	Measurement object.
owner	Yes	String	Indicator owner.
owner_department	Yes	String	Indicator management department.

Parameter	Mandatory	Type	Description
destination	Yes	String	Set the purpose.
definition	Yes	String	Indicator definition.
expression	Yes	String	Indicates the calculation formula.
remark	No	String	Description.
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	No	BizVersionManagementVO object	Service version management. This parameter is read-only.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
self_defined_fields	No	Array of SelfDefinedFieldVO objects	Custom Fields

Table 7-1135 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string

Parameter	Mandatory	Type	Description
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

measure	String	Measurement object.
owner	String	Indicator owner.
owner_department	String	Indicator management department.
destination	String	Set the purpose.
guid	String	GUID after asset synchronization. This parameter is read-only.
definition	String	Indicator definition.
expression	String	Indicates the calculation formula.
remark	String	Description.

Parameter	Type	Description
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
biz_metric	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
self_defined_fields	Array of SelfDefinedField-VO objects	Custom Fields

Table 7-1141 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.

Parameter	Type	Description
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1142 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1143 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400

Table 7-1144 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1145** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1146** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Create a service indicator based on the request parameters.

```
POST https://{endpoint}/v2/{project_id}/design/biz-metrics
```

```
{
  "code" : null,
  "biz_catalog_id" : "1200479561188536320",
  "name" : "test_create_biz_metrics",
  "name_alias" : "",
  "destination" : "Business personnel describe the purpose of setting the business metric.",
  "definition" : "For example, calculate the average value of a field in a database table by month.",
```

```
"expression" : "avg(table.column)",
"data_origin" : "",
"unit" : "",
"time_filters" : "Monthly",
"dimensions" : "test_czh_0305_001",
"general_filters" : "",
"interval_type" : "HOUR",
"apply_scenario" : "",
"technical_metric" : "",
"measure" : "",
"owner_department" : "data owner dept",
"owner" : "test_uesr",
"remark" : "What should I pay attention to?",
"self_defined_fields" : [ ]
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is BizMetricVO.

```
{
  "data" : {

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is BizMetricVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19.3 Updating Service Indicators

Function

Updated service indicators.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/biz-metrics

Table 7-1147 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1148 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1149 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string. This parameter is mandatory for update and is left empty for creation.
name	Yes	String	Metric name.
name_alias	No	String	Indicates the indicator alias.

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> • FACT_MEASURE: fact table measurement • FUNCTION: function • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_catalog_id	Yes	String	ID of the business architecture, which is a string
data_origin	No	String	Data source.
unit	No	String	Metering unit.

Parameter	Mandatory	Type	Description
time_filters	Yes	String	Statistical period (time limit).
dimensions	No	String	Statistical dimension.
general_filters	No	String	Statistical caliber and modifiers.
interval_type	Yes	String	Refresh frequency. Options: <ul style="list-style-type: none"> ● MINUTE: every minute ● HOUR: every hour ● DAY: every day ● WEEK: weekly ● MONTH: every month ● YEAR: every year ● REAL_TIME: real-time ● HALF_HOUR: every half an hour ● QUART: every 15 minutes ● DOUBLE_WEEK: every two weeks ● HALF_YEAR: every half year ● HALF_DAY: every half day
apply_scenario	No	String	Application scenarios
technical_metric	No	String	Associated technical metric, which is an ID string

Parameter	Mandatory	Type	Description
technical_metric_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
measure	No	String	Measurement object.
owner	Yes	String	Indicator owner.
owner_department	Yes	String	Indicator management department.

Parameter	Mandatory	Type	Description
destination	Yes	String	Set the purpose.
definition	Yes	String	Indicator definition.
expression	Yes	String	Indicates the calculation formula.
remark	No	String	Description.
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	No	BizVersionManagementVO object	Service version management. This parameter is read-only.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
self_defined_fields	No	Array of SelfDefinedFieldVO objects	Custom Fields

Table 7-1150 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string

Parameter	Mandatory	Type	Description
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> • FACT_MEASURE: fact table measurement • FUNCTION: function • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	No	String	Serialized service details. The type is string.
biz_info_obj	No	Object	Service details. The type is object.

Parameter	Mandatory	Type	Description
biz_version	No	Integer	Service version.
biz_status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	No	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	No	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	No	String	Submitted At
create_by	No	String	Creator.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	No	String	Review time.
approver	No	String	Reviewer.
email	No	String	Email address of the reviewer.
msg	No	String	Review information.
directory_path	No	String	Directory tree.

Table 7-1151 BizVersionManageVO

Parameter	Mandatory	Type	Description
id	No	String	Field ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

biz_id	No	String	Business ID, which is a string
biz_info	No	String	Business object information.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Table 7-1152 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Response Parameters

Status code: 200

Table 7-1153 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1154 data

Parameter	Type	Description
value	Object	value: unified outer data structure of the returned result.

Table 7-1155 BizMetricVO

Parameter	Type	Description
id	String	ID, which is a string. This parameter is mandatory for update and is left empty for creation.
name	String	Metric name.
code	String	Indicator code, which is read-only.
name_alias	String	Indicates the indicator alias.

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
status	String	<p>Release status of an entity. This parameter is read-only and does not need to be set during creation and update.</p> <p>Options:</p> <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_catalog_id	String	ID of the business architecture, which is a string

Parameter	Type	Description
biz_catalog_path	String	Path of the process architecture to which the process belongs. This parameter is read-only.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
data_origin	String	Data source.
unit	String	Metering unit.
time_filters	String	Statistical period (time limit).
dimensions	String	Statistical dimension.
general_filters	String	Statistical caliber and modifiers.
interval_type	String	Refresh frequency. Options: <ul style="list-style-type: none"> • MINUTE: every minute • HOUR: every hour • DAY: every day • WEEK: weekly • MONTH: every month • YEAR: every year • REAL_TIME: real-time • HALF_HOUR: every half an hour • QUART: every 15 minutes • DOUBLE_WEEK: every two weeks • HALF_YEAR: every half year • HALF_DAY: every half day
apply_scenario	String	Application scenarios
technical_metric	String	Associated technical metric, which is an ID string
technical_metric_name	String	Name of the associated technical indicator. This parameter is read-only.

Parameter	Type	Description
technical_metric_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
measure	String	Measurement object.
owner	String	Indicator owner.
owner_department	String	Indicator management department.
destination	String	Set the purpose.
guid	String	GUID after asset synchronization. This parameter is read-only.
definition	String	Indicator definition.
expression	String	Indicates the calculation formula.
remark	String	Description.

Parameter	Type	Description
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
biz_metric	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
self_defined_fields	Array of SelfDefinedField-VO objects	Custom Fields

Table 7-1156 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.

Parameter	Type	Description
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is BizMetricVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19.4 Delete Business Metrics

Function

Delete a service indicator.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/biz-metrics

Table 7-1162 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1163 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1164 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none"> ● PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-1165 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-1166 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400**Table 7-1167** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1168** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1169** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to delete a service indicator based on the row service indicator ID.

```
DELETE https://{endpoint}/v2/{project_id}/design/biz-metrics
{
  "ids" : [ "1231252097002024960" ]
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is the number of deleted data records.

```
{
  "value": 1
}
```

Status code: 400

BadRequest

```
{
  "error_code": "DS.60xx",
  "error_msg": "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code": "DS.60xx",
  "error_msg": "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code": "DS.60xx",
  "error_msg": "The user does not have permission to call this API."
}
```

7.19.5 Viewing Indicator Details

Function

This API is used to view indicator details by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/biz-metrics/{id}

Table 7-1170 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1171 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-1172 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1173 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1174 data

Parameter	Type	Description
value	BizMetricVO object	value: unified outer data structure of the returned result.

Table 7-1175 BizMetricVO

Parameter	Type	Description
id	String	ID, which is a string. This parameter is mandatory for update and is left empty for creation.
name	String	Metric name.
code	String	Indicator code, which is read-only.
name_alias	String	Indicates the indicator alias.

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description

destination	String	Set the purpose.
guid	String	GUID after asset synchronization. This parameter is read-only.
definition	String	Indicator definition.
expression	String	Indicates the calculation formula.
remark	String	Description.

Parameter	Type	Description
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
biz_metric	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
self_defined_fields	Array of SelfDefinedField-VO objects	Custom Fields

Table 7-1176 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.

Parameter	Type	Description
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1177 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1178 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400

Table 7-1179 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1180 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1181 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query service indicator details based on the service indicator ID.

GET https://{endpoint}/v2/{project_id}/design/biz-metrics/1231249989901135872

Example Responses

Status code: 200

This operation is successful, and the returned data is BizMetricVO details.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is BizMetricVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19.6 Viewing Indicator Dimension Information

Function

View the indicator dimension information.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/biz-metrics/dimensions

Table 7-1182 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1183 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1184 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1185 Response body parameters

Parameter	Type	Description

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a dimension name array.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19.7 View Metric Owner Information

Function

View the metric owner information.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/biz-metrics/owners

Table 7-1190 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1191 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1192 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1193 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 400

Table 7-1194 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1195 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1196 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

View the business metric owner set.

GET https://{endpoint}/v2/{project_id}/design/biz-metrics/owners

Example Responses

Status code: 200

This operation succeeds, and the returned data is an array of metric owner names.

```
{
  "data" : {
    "value" : [ "test_uesr" ]
  }
}
```

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is an array of metric owner names.
400	BadRequest
401	Unauthorized
403	Forbidden

7.19.8 Obtains indicator association information.

Function

This API is used to obtain the current metric graph.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/metric-relations/{id}

Table 7-1197 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1198 Query Parameters

Parameter	Mandatory	Type	Description
biz_type	Yes	String	Metric type.

Request Parameters

Table 7-1199 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1200 Response body parameters

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is MetricRelationVOList.
400	BadRequest
401	Unauthorized
403	Forbidden

7.20 Version Information

7.20.1 Searching for Version Information

Function

Search for version information by name, creator, and modification time.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/versions

Table 7-1206 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1207 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
biz_id	No	String	Business definition ID, which is a string
biz_type	No	String	Query by service type. The options are ATOMIC_INDEX (atomic indicator), DERIVATIVE_INDEX (derivative indicator), DIMENSION (dimension), and TIME_CONDITION (time filter). DIMENSION_LOGIC_TABLE (dimension table), FACT_LOGIC_TABLE (fact table), AGGREGATION_LOGIC_TABLE (summary table), TABLE_MODEL (relational modeling table), CODE_TABLE (code table), STANDARD_ELEMENT (data standard), BIZ_METRIC (business metric), COMPOUND_METRIC (compound metric), SUBJECT (subject), ATOMIC_METRIC (atomic metric (new)), DERIVED_METRIC (Derivative (new)), COMPOSITE_METRIC (Compound (new))).

Parameter	Mandatory	Type	Description
begin_time	No	String	Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1208 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1209 Response body parameters

Parameter	Type	Description
data	data object	Returned data.

Table 7-1210 data

Parameter	Type	Description
value	value object	Returned data information.

Table 7-1211 value

Parameter	Type	Description
records	Array of PublishVersionVO objects	Number of queried version value objects (PublishVersionVO).
total	Integer	Total number of records that meet the search criteria.

Table 7-1212 PublishVersionVO

Parameter	Type	Description
id	String	Version ID, which is a string
version_name	String	Version name.
version_tag	String	Version flag, which is read-only.
description	String	Version description.
biz_id	String	Business object ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Service details. This parameter is read-only.
biz_info_vo	Object	Business object.
effect_objs	String	Impact information. This parameter is read-only.
change_props	String	Indicates the change information. This parameter is read-only.
sql_ddl	String	SQL script, which is read-only.

Parameter	Type	Description
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
technical_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
data_quality	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
dlf_task	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
materialization	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
publish_to_dlm	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
biz_metric	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
is_current_version	Boolean	Indicates whether the version is the current version. This parameter is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator, which is read-only.

Status code: 400

Table 7-1213 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1214 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1215 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Query the version information based on the service object ID.

```
GET https://{endpoint}/v2/{project_id}/design/versions?biz_id=1193199235202428928
```

Example Responses

Status code: 200

This operation is successful. The returned data is a PublishVersionVO array and the total number of records.

```

Status Codes

Status Code	Description
200	This operation is successful. The returned data is a PublishVersionVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.20.2 Comparing Versions

Function

This API is used to compare two versions with different IDs.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/design/versions/compare

Table 7-1216 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1217 Query Parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	Array of entity IDs, which is a string

Request Parameters

None

Response Parameters

Status code: 200

Table 7-1218 Response body parameters

Parameter	Type	Description
data	data object	Data, which is the unified outer data structure of the returned result

Table 7-1219 data

Parameter	Type	Description
value	PublishVersionVO object	CatalogVO information

Table 7-1220 PublishVersionVO

Parameter	Type	Description
id	String	Version ID, which is a string
version_name	String	Version name.
version_tag	String	Version flag, which is read-only.
description	String	Version description.
biz_id	String	Business object ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Service details. This parameter is read-only.
biz_info_vo	Object	Business object.
effect_objs	String	Impact information. This parameter is read-only.
change_props	String	Indicates the change information. This parameter is read-only.
sql_ddl	String	SQL script, which is read-only.

Parameter	Type	Description
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
dlf_task	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
materialization	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
publish_to_dlm	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
biz_metric	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
is_current_version	Boolean	Indicates whether the version is the current version. This parameter is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator, which is read-only.

Status code: 400

Table 7-1221 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1222 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1223 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Compare version 1295786824106741760 with 1301676931971940352.

```
POST https://{endpoint}/v1/{project_id}/design/versions/compare?
ids=1295786824106741760&&ids=1301676931971940352
{ }
```

Example Responses

Status code: 200

The operation succeeds. **PublishVersionVO** is returned.

403	Forbidden

7.21 ER Modeling

7.21.1 Lookup Table Model List

Function

Query table model information in relational modeling by Chinese and English names, creator, reviewer, status, and modification time. The table model information includes logical entities, physical tables, and attributes.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/table-model

Table 7-1224 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1225 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.

Parameter	Mandatory	Type	Description
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be approved• PUBLISHED: released• OFFLINE_DEVELOPING: to be approved• OFFLINE: offline• REJECT: rejected
sync_status	No	String	Defines the enumeration of the synchronization status. Options: <ul style="list-style-type: none">• RUNNING: synchronizing• NO_NEED: not synchronized• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure

Parameter	Mandatory	Type	Description
sync_key	No	Array of strings	<p>Defines the enumeration of synchronization task types.</p> <p>Options:</p> <ul style="list-style-type: none"> • BUSINESS_ASSET: synchronizes service assets. • DATA_QUALITY: Create a quality job. • TECHNICAL_ASSET: synchronizes technology assets. • META_DATA_LINK: asset association • PHYSICAL_TABLE: Create a table (production environment). • DEV_PHYSICAL_TABLE: Create a table in the development environment. • DLF_TASK: creates a data development job. • MATERIALIZATION: Data is stored in the database (code table). • PUBLISH_TO_DLM: publishes data service APIs. • SUMMARY_STATUS: overall status
begin_time	No	String	<p>Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.</p>

Parameter	Mandatory	Type	Description
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
model_id	Yes	String	ID of the relational modeling model.
biz_catalog_id	No	String	ID of the service catalog to which the belongs.

Request Parameters

Table 7-1226 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1227 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1228 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1229 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of TableModelVO objects	TableModelVO information.

Table 7-1230 TableModelVO

Parameter	Type	Description
id	String	ID, which is a string
model_id	String	ID of the relational model, which is a string
parent_table_id	String	Parent table ID, which is a string
parent_table_name	String	Parent table name, which is read-only.
parent_table_code	String	Parent table code, which is read-only.
related_logic_table_id	String	ID of the associated logical entity, which is a string
related_logic_table_name	String	Name of an associated logical entity.
related_logic_table_model_id	String	ID of the model associated with a logical entity, which is a string
related_logic_table_model_name	String	Name of the model associated with a logical entity.
model	WorkspaceVO object	Model information
data_format	String	Data Format,
obs_bucket	String	OBS bucket.
obs_location	String	Foreign Table Path
configs	String	Other configurations.
table_type	String	Table type, which is read-only.
owner	String	Person in charge.
tb_name	String	Table name.
dw_id	String	Data connection ID.

Parameter	Type	Description
db_name	String	Indicates the database name.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.
extend_info	String	Indicates the extension information.
tb_guid	String	GUID after table materialization. This parameter is read-only.
tb_id	String	Data table ID. This parameter is read-only.
logic_tb_name	String	Name of a logical entity.
logic_tb_guid	String	GUID of a logical entity. This parameter is read-only.
description	String	Description.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
logic_tb_id	String	ID of a logical entity, which is a string
biz_catalog_id	String	ID of the business catalog, which is a string
catalog_path	String	Path of the home service category: {"l1Id":"","l2Id":"","l3Id":""}.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagRecordVO objects	Read-only table tags
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
attributes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
relations	Array of RelationVO objects	Relationship.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a read-only string
partition_conf	String	Partition expression.
dfl_task_id	String	ID of a DLF job.
use_recently_partition	Boolean	Indicates whether to use the latest partition.
reversed	Boolean	Indicates whether it is reverse.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
quality_owner	String	Quality owner.
quality_id	String	Quality ID, which is a string

Parameter	Type	Description
distributed	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distributed_column	String	DISTRIBUTE BY HASH column.
is_partition	Boolean	Indicates whether the table is a partition table. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
technical_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Message
has_related_physical_table	Boolean	Indicates whether an associated physical table exists.
has_related_logical_table	Boolean	Indicates whether an associated logical entity exists.

Table 7-1231 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> SDI: source data layer DWI: data integration layer DWR: data reporting layer DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1232 TagRecordVO

Parameter	Type	Description
id	String	ID, which is a string
tag_id	String	Tag ID, which is a string
tag_name	String	Tag name.

Parameter	Type	Description
biz_id	String	Entity ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1233 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1234 TableModelAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
obs_location	String	OBS path, which is a subpath.
create_by	String	Creator.
update_by	String	Person who updates the information.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether a key is a foreign key.
extend_field	Boolean	Indicates whether an attribute is inherited.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
ordinal	Integer	Sequence number.
table_model_id	String	ID of the relational model, which is a string
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagVO objects	Read-only table tags
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
code	String	Logical Attribute Code
related_logic_attr_id	String	ID of the associated logical attribute, which is a string
related_logic_attr_name	String	Associated Logical Entity Attribute Name (Zh)
related_logic_attr_name_en	String	Associated Logical Entity Attribute Name (En)

Table 7-1235 TagVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Label name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Table 7-1236 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1237 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1238 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1239 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1240 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1241 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1242 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1243 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1244 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.

Parameter	Type	Description
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMappingVO objects	Table attribute information, which is read-only.

Table 7-1245 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1246 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400**Table 7-1247** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1248** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1249** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query information about the first 10 relational modeling tables in pagination query mode.

```
GET https://{endpoint}/v2/{project_id}/design/table-model?
offset=1&limit=10&model_id=1217123720355803136&no_attr=true
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a TableModelVO array and the total number of records.

```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a TableModelVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.2 Creating a Table Model

Function

Create a table model in relational modeling, including logical entities and physical tables.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/table-model

Table 7-1250 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1251 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1252 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
model_id	Yes	String	ID of the relational model, which is a string
parent_table_id	No	String	Parent table ID, which is a string
related_logic_table_id	No	String	ID of the associated logical entity, which is a string
model	No	WorkspaceVO object	Model information
data_format	No	String	Data Format,
obs_bucket	No	String	OBS bucket.
obs_location	No	String	Foreign Table Path
configs	No	String	Other configurations.
owner	No	String	Person in charge.
tb_name	Yes	String	Table name.
dw_id	No	String	Data connection ID.
db_name	No	String	Indicates the database name.
queue_name	No	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	No	String	Required by the DWS type.

Parameter	Mandatory	Type	Description
extend_info	No	String	Indicates the extension information.
logic_tb_name	Yes	String	Name of a logical entity.
description	Yes	String	Description.
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
logic_tb_id	No	String	ID of a logical entity, which is a string
biz_catalog_id	No	String	ID of the business catalog, which is a string
catalog_path	No	String	Path of the home service category: { "l1Id": "", "l2Id": "", "l3Id": "" }.
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
attributes	Yes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	No	Array of TableMappingVO objects	Table mapping information.
relations	No	Array of RelationVO objects	Relationship.

Parameter	Mandatory	Type	Description
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_name	No	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l2_id	No	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
partition_conf	No	String	Partition expression.
dlf_task_id	No	String	ID of a DLF job.
use_recently_partition	No	Boolean	Indicates whether to use the latest partition.
reversed	No	Boolean	Indicates whether it is reverse.
dirty_out_switch	No	Boolean	Indicates whether to output abnormal data.
dirty_out_database	No	String	Abnormal data output library.
dirty_out_prefix	No	String	Prefix of an exception table.
dirty_out_suffix	No	String	Suffix of an exception table.
quality_owner	No	String	Quality owner.
quality_id	No	String	Quality ID, which is a string

Parameter	Mandatory	Type	Description
distribute	No	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> HASH: Hashes specified columns and distributes data to specified DNs through mapping. REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	No	String	DISTRIBUTE BY HASH column.
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
code	No	String	Message

Table 7-1253 WorkspaceVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> SDI: source data layer DWI: data integration layer DWR: data reporting layer DM: data mart layer

Parameter	Mandatory	Type	Description
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1254 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.

Parameter	Mandatory	Type	Description
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
biz_info	No	String	Serialized service details. The type is string.
biz_info_obj	No	Object	Service details. The type is object.

Parameter	Mandatory	Type	Description
biz_version	No	Integer	Service version.
biz_status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	No	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	No	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	No	String	Submitted At
create_by	No	String	Creator.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	No	String	Review time.
approver	No	String	Reviewer.
email	No	String	Email address of the reviewer.
msg	No	String	Review information.
directory_path	No	String	Directory tree.

Table 7-1255 TableModelAttributeVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name_en	Yes	String	Field name.
name_ch	Yes	String	Service attribute.
description	No	String	Description.
obs_location	No	String	OBS path, which is a subpath.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
data_type	Yes	String	Field type
data_type_extend	No	String	Extended field of the data type.
is_primary_key	Yes	Boolean	Indicates whether a key is a primary key.
is_partition_key	No	Boolean	Indicates whether the key is a partition key.
is_foreign_key	No	Boolean	Indicates whether a key is a foreign key.
extend_field	No	Boolean	Indicates whether an attribute is inherited.
not_null	No	Boolean	Indicates whether the value is empty.

Parameter	Mandatory	Type	Description
ordinal	No	Integer	Sequence number.
table_model_id	No	String	ID of the relational model, which is a string
stand_row_id	No	String	ID of the associated data standard, which is a string
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
code	No	String	Logical Attribute Code
related_logic_attr_id	No	String	ID of the associated logical attribute, which is a string

Table 7-1256 TableMappingVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name.
description	No	String	Description.
target_table_id	No	String	Destination table ID, which is a string
src_model_id	No	String	ID of the relational model for the source table. The value is a string.
src_model_name	No	String	Source model name.
view_text	No	String	Source of the collected view. The dws view is used reversely.
target_table_name	No	String	Name of the destination table.
details	No	Array of TableMappingDetailVO objects	Details.

Parameter	Mandatory	Type	Description
source_tables	No	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	No	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	No	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-1257 TableMappingDetailVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
mapping_id	No	String	Name.
target_attr_id	No	String	ID of the destination attribute, which is a string
target_attr_name	Yes	String	Sort by destination field.
src_table_ids	No	String	Source table ID.
src_attr_ids	No	String	ID of a field in the source table.
remark	No	String	Description.

Parameter	Mandatory	Type	Description
create_time	No	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
target_attr	No	Object	Target attribute.

Table 7-1258 MappingSourceTableVO

Parameter	Mandatory	Type	Description
table1_id	Yes	String	Table 1 ID, which is a string
table2_id	No	String	Table 2 ID, which is a string
table1_name	Yes	String	Name of table 1.
table2_name	No	String	Name of table 2.
join_type	Yes	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection
join_fields	Yes	Array of MappingJoinFieldVO objects	on condition.

Table 7-1259 MappingJoinFieldVO

Parameter	Mandatory	Type	Description
field1_id	Yes	String	Attribute 1 ID, which is a string
field2_id	Yes	String	Attribute 2 ID, which is a string
field1_name	Yes	String	Name of attribute 1.
field2_name	Yes	String	Name of attribute 2.

Table 7-1260 MappingSourceFieldVO

Parameter	Mandatory	Type	Description
target_field_id	No	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	Yes	String	Target field code.
field_ids	No	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	No	String	Conversion expression.
field_names	No	Array of strings	List of source field names.
changed	No	Boolean	Indicates whether a field is changed.

Table 7-1261 RelationVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
source_table_id	No	String	Source table ID, which is a string
target_table_id	No	String	Destination table ID, which is a string
name	Yes	String	Relationship name.
source_table_name	No	String	Name of the source table.

Parameter	Mandatory	Type	Description
target_table_name	No	String	Name of the destination table.
role	No	String	Role.
tenant_id	No	String	Tenant ID.
source_type	No	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none">• ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity.• ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity.• ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity.• ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.

Parameter	Mandatory	Type	Description
target_type	No	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none">• ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity.• ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity.• ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity.• ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-1262 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Response Parameters

Status code: 200

Table 7-1263 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1264 data

Parameter	Type	Description
value	TableModelVO object	value: unified outer data structure of the returned result.

Table 7-1265 TableModelVO

Parameter	Type	Description
id	String	ID, which is a string
model_id	String	ID of the relational model, which is a string
parent_table_id	String	Parent table ID, which is a string
parent_table_name	String	Parent table name, which is read-only.
parent_table_code	String	Parent table code, which is read-only.
related_logic_table_id	String	ID of the associated logical entity, which is a string
related_logic_table_name	String	Name of an associated logical entity.
related_logic_table_model_id	String	ID of the model associated with a logical entity, which is a string
related_logic_table_model_name	String	Name of the model associated with a logical entity.
model	WorkspaceVO object	Model information
data_format	String	Data Format,
obs_bucket	String	OBS bucket.
obs_location	String	Foreign Table Path
configs	String	Other configurations.
table_type	String	Table type, which is read-only.

Parameter	Type	Description
owner	String	Person in charge.
tb_name	String	Table name.
dw_id	String	Data connection ID.
db_name	String	Indicates the database name.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.
extend_info	String	Indicates the extension information.
tb_guid	String	GUID after table materialization. This parameter is read-only.
tb_id	String	Data table ID. This parameter is read-only.
logic_tb_name	String	Name of a logical entity.
logic_tb_guid	String	GUID of a logical entity. This parameter is read-only.
description	String	Description.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
logic_tb_id	String	ID of a logical entity, which is a string
biz_catalog_id	String	ID of the business catalog, which is a string
catalog_path	String	Path of the home service category: {"l1Id":"","l2Id":"","l3Id":""}.

Parameter	Type	Description
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagRecordVO objects	Read-only table tags
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
attributes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
relations	Array of RelationVO objects	Relationship.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a read-only string
partition_conf	String	Partition expression.
dlf_task_id	String	ID of a DLF job.
use_recently_partition	Boolean	Indicates whether to use the latest partition.
reversed	Boolean	Indicates whether it is reverse.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
quality_owner	String	Quality owner.
quality_id	String	Quality ID, which is a string

Parameter	Type	Description
distributed	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distributed_column	String	DISTRIBUTE BY HASH column.
is_partition	Boolean	Indicates whether the table is a partition table. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Message
has_related_physical_table	Boolean	Indicates whether an associated physical table exists.
has_related_logical_table	Boolean	Indicates whether an associated logical entity exists.

Table 7-1266 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> SDI: source data layer DWI: data integration layer DWR: data reporting layer DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1267 TagRecordVO

Parameter	Type	Description
id	String	ID, which is a string
tag_id	String	Tag ID, which is a string
tag_name	String	Tag name.

Parameter	Type	Description
biz_id	String	Entity ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1268 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1269 TableModelAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
obs_location	String	OBS path, which is a subpath.
create_by	String	Creator.
update_by	String	Person who updates the information.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether a key is a foreign key.
extend_field	Boolean	Indicates whether an attribute is inherited.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
ordinal	Integer	Sequence number.
table_model_id	String	ID of the relational model, which is a string
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagVO objects	Read-only table tags
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
code	String	Logical Attribute Code
related_logic_attr_id	String	ID of the associated logical attribute, which is a string
related_logic_attr_name	String	Associated Logical Entity Attribute Name (Zh)
related_logic_attr_name_en	String	Associated Logical Entity Attribute Name (En)

Table 7-1270 TagVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Label name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Table 7-1271 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1272 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1273 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1274 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1275 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1276 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1277 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1278 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1279 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.

Parameter	Type	Description
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMapping VO objects	Table attribute information, which is read-only.

Table 7-1280 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1281 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400**Table 7-1282** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1283** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1284** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Create a physical table based on the request parameters.

POST https://{endpoint}/v2/{project_id}/design/table-model

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is TableModelVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.3 Updating a Table Model

Function

Updates a table model and its attributes, including logical entities and physical tables, in relational modeling.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/table-model

Table 7-1285 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1286 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1287 Request body parameters

Parameter	Mandatory	Type	Description
id	Yes	String	ID, which is a string
model_id	Yes	String	ID of the relational model, which is a string
parent_table_id	No	String	Parent table ID, which is a string
model	No	WorkspaceVO object	Model information
data_format	No	String	Data Format,
obs_bucket	No	String	OBS bucket.
obs_location	No	String	OBS path.
configs	No	String	Other configurations.
owner	No	String	Owner of the instance.
tb_name	Yes	String	Table name.
dw_id	No	String	Data connection ID.
db_name	No	String	Indicates the database name.
queue_name	No	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	No	String	Required by the DWS type.
extend_info	No	String	Indicates the extension information.
logic_tb_name	Yes	String	Name of a logical entity.
description	Yes	String	Description.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
logic_tb_id	No	String	ID of a logical entity, which is a string
biz_catalog_id	No	String	ID of the business catalog, which is a string
catalog_path	No	String	Path of the home service category. The format is {"l1Id":"958408897973161984","l2Id":"958408897973161985","l3Id":"958408897973161986"}.
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	No	BizVersionManagementVO object	Service version management. This parameter is read-only.
attributes	Yes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	No	Array of TableMappingVO objects	Table mapping information.
relations	No	Array of RelationVO objects	Relationship.

Parameter	Mandatory	Type	Description
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_name	No	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l2_id	No	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
partition_conf	No	String	Partition Expression
dlf_task_id	No	String	ID of a DLF job.
use_recently_partition	No	Boolean	Indicates whether to use the latest partition.
reversed	No	Boolean	Indicates whether it is reverse.
dirty_out_switch	No	Boolean	Indicates whether to output abnormal data.
dirty_out_database	No	String	Abnormal data output library.
dirty_out_prefix	No	String	Prefix of an exception table.
dirty_out_suffix	No	String	Suffix of an exception table.
quality_owner	No	String	Quality owner.
quality_id	No	String	Quality ID, which is a string

Parameter	Mandatory	Type	Description
distribute	No	String	DISTRIBUTE BY [HASH(column)] REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	No	String	DISTRIBUTE BY HASH column.
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
has_related_physical_table	No	Boolean	Indicates whether a physical table is associated.
has_related_logical_table	No	Boolean	Indicates whether a logical entity is associated.

Table 7-1288 WorkspaceVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.

Parameter	Mandatory	Type	Description
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1289 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string

Parameter	Mandatory	Type	Description
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> • FACT_MEASURE: fact table measurement • FUNCTION: function • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	No	String	Serialized service details. The type is string.
biz_info_obj	No	Object	Service details. The type is object.

Parameter	Mandatory	Type	Description
biz_version	No	Integer	Service version.
biz_status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	No	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	No	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	No	String	Submitted At
create_by	No	String	Creator.
l1	No	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	No	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.

Parameter	Mandatory	Type	Description
l3	No	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	No	String	Review time.
approver	No	String	Reviewer.
email	No	String	Email address of the reviewer.
msg	No	String	Review information.
directory_path	No	String	Directory tree.

Table 7-1290 BizVersionManageVO

Parameter	Mandatory	Type	Description
id	No	String	Field ID, which is a string

Parameter	Mandatory	Type	Description
biz_type	No	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> ● AGGREGATION_LOGIC_TABLE: summary table ● ATOMIC_INDEX: atomic metric ● ATOMIC_METRIC: atomic metric (new) ● BIZ_CATALOG: process architecture directory ● BIZ_METRIC: service indicator ● CODE_TABLE: code table ● COMMON_CONDITION: general filter ● COMPOSITE_METRIC: Compound Metric (new) ● COMPOUND_METRIC: compound metric ● CONDITION_GROUP: restriction group ● DEGENERATE_DIMENSION: degenerate dimension ● DERIVATIVE_INDEX: derivative indicator ● DERIVED_METRIC: derivative indicator (new) ● DIMENSION: dimension ● DIMENSION_ATTRIBUTE: dimension attribute ● DIMENSION_HIERARCHIES: dimension level ● DIMENSION_LOGIC_TABLE: dimension table ● DIMENSION_TABLE_ATTRIBUTE: dimension attribute ● DIRECTORY: directory ● FACT_ATTRIBUTE: fact table attribute ● FACT_DIMENSION: fact table dimension ● FACT_LOGIC_TABLE: fact table

Parameter	Mandatory	Type	Description
			<ul style="list-style-type: none"> ● FACT_MEASURE: fact table measurement ● FUNCTION: function ● INFO_ARCH: information architecture (used for modifying themes in batches) ● MODEL: model ● QUALITY_RULE: quality rule ● SECRECY_LEVEL: security level ● STANDARD_ELEMENT: data standard ● STANDARD_ELEMENT_TEMPLATE: data standard template ● SUBJECT: theme ● Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables ● SUMMARY_INDEX: summary table indicator attribute ● SUMMARY_TIME: time period attribute of the SDR table ● TABLE_MODEL: relationship model (logical model/physical model) ● TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) ● TABLE_MODEL_LOGIC: logical entity ● TABLE_TYPE: table type ● TAG: tag ● TIME_CONDITION: time restriction
biz_id	No	String	Business ID, which is a string
biz_info	No	String	Business object information.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Table 7-1291 TableModelAttributeVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name_en	Yes	String	Field name.
name_ch	Yes	String	Service attribute.
description	No	String	Description.
obs_location	No	String	OBS path, which is a subpath.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
data_type	Yes	String	Field type
data_type_extend	No	String	Extended field of the data type.
is_primary_key	Yes	Boolean	Indicates whether a key is a primary key.
is_partition_key	No	Boolean	Indicates whether the key is a partition key.
is_foreign_key	No	Boolean	Indicates whether a key is a foreign key.
extend_field	No	Boolean	Indicates whether an attribute is inherited.

Parameter	Mandatory	Type	Description
not_null	No	Boolean	Indicates whether the value is empty.
ordinal	No	Integer	Sequence number.
table_model_id	No	String	ID of the relational model, which is a string
stand_row_id	No	String	ID of the associated data standard, which is a string
alias	No	String	Alias
self_defined_fields	No	Array of SelfDefinedFieldVO objects	User-defined item.
code	No	String	Logical Attribute Code
related_logic_attr_id	No	String	ID of the associated logical attribute, which is a string

Table 7-1292 TableMappingVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name.
description	No	String	Description.
target_table_id	No	String	Destination table ID, which is a string
src_model_id	No	String	ID of the relational model for the source table. The value is a string.
src_model_name	No	String	Source model name.
view_text	No	String	Source of the collected view. The dws view is used reversely.
target_table_name	No	String	Name of the destination table.
details	No	Array of TableMappingDetailVO objects	Details.

Parameter	Mandatory	Type	Description
source_tables	No	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	No	Array of MappingSourceFieldVO objects	Mapped field information.
create_time	No	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-1293 TableMappingDetailVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
mapping_id	No	String	Name.
target_attr_id	No	String	ID of the destination attribute, which is a string
target_attr_name	Yes	String	Sort by destination field.
src_table_ids	No	String	Source table ID.
src_attr_ids	No	String	ID of a field in the source table.
remark	No	String	Description.

Parameter	Mandatory	Type	Description
create_time	No	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	No	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.
target_attr	No	Object	Target attribute.

Table 7-1294 MappingSourceTableVO

Parameter	Mandatory	Type	Description
table1_id	Yes	String	Table 1 ID, which is a string
table2_id	No	String	Table 2 ID, which is a string
table1_name	Yes	String	Name of table 1.
table2_name	No	String	Name of table 2.
join_type	Yes	String	Association type. Options: <ul style="list-style-type: none"> • LEFT: left outer join • RIGHT: right outer join • INNER: inner join • FULL: full connection
join_fields	Yes	Array of MappingJoinFieldVO objects	on condition.

Table 7-1295 MappingJoinFieldVO

Parameter	Mandatory	Type	Description
field1_id	Yes	String	Attribute 1 ID, which is a string
field2_id	Yes	String	Attribute 2 ID, which is a string
field1_name	Yes	String	Name of attribute 1.
field2_name	Yes	String	Name of attribute 2.

Table 7-1296 MappingSourceFieldVO

Parameter	Mandatory	Type	Description
target_field_id	No	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	Yes	String	Target field code.
field_ids	No	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	No	String	Conversion expression.
field_names	No	Array of strings	List of source field names.
changed	No	Boolean	Indicates whether a field is changed.

Table 7-1297 RelationVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
source_table_id	No	String	Source table ID, which is a string
target_table_id	No	String	Destination table ID, which is a string
name	Yes	String	Relationship name.
source_table_name	No	String	Name of the source table.

Parameter	Mandatory	Type	Description
target_table_name	No	String	Name of the destination table.
role	No	String	Role.
tenant_id	No	String	Tenant ID.
source_type	No	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none">• ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity.• ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity.• ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity.• ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.

Parameter	Mandatory	Type	Description
target_type	No	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Table 7-1298 SelfDefinedFieldVO

Parameter	Mandatory	Type	Description
fd_name_ch	No	String	Chinese name of a user-defined item.
fd_name_en	No	String	English name of a customized item.
not_null	No	Boolean	Whether a parameter is mandatory.
fd_value	No	String	Attribute value

Response Parameters

Status code: 200

Table 7-1299 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1300 data

Parameter	Type	Description
value	TableModelVO object	value: unified outer data structure of the returned result.

Table 7-1301 TableModelVO

Parameter	Type	Description
id	String	ID, which is a string
model_id	String	ID of the relational model, which is a string
parent_table_id	String	Parent table ID, which is a string
parent_table_name	String	Parent table name, which is read-only.
parent_table_code	String	Parent table code, which is read-only.
related_logical_table_id	String	ID of the associated logical entity, which is a string
related_logical_table_name	String	Name of an associated logical entity.
related_logical_table_model_id	String	ID of the model associated with a logical entity, which is a string
related_logical_table_model_name	String	Name of the model associated with a logical entity.
model	WorkspaceVO object	Model information
data_format	String	Data Format,
obs_bucket	String	OBS bucket.
obs_location	String	Foreign Table Path
configs	String	Other configurations.
table_type	String	Table type, which is read-only.

Parameter	Type	Description
owner	String	Person in charge.
tb_name	String	Table name.
dw_id	String	Data connection ID.
db_name	String	Indicates the database name.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.
extend_info	String	Indicates the extension information.
tb_guid	String	GUID after table materialization. This parameter is read-only.
tb_id	String	Data table ID. This parameter is read-only.
logic_tb_name	String	Name of a logical entity.
logic_tb_guid	String	GUID of a logical entity. This parameter is read-only.
description	String	Description.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
logic_tb_id	String	ID of a logical entity, which is a string
biz_catalog_id	String	ID of the business catalog, which is a string
catalog_path	String	Path of the home service category: {"l1Id":"","l2Id":"","l3Id":""}.

Parameter	Type	Description
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagRecordVO objects	Read-only table tags
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
attributes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
relations	Array of RelationVO objects	Relationship.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.

Parameter	Type	Description
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a read-only string
partition_conf	String	Partition expression.
dlf_task_id	String	ID of a DLF job.
use_recently_partition	Boolean	Indicates whether to use the latest partition.
reversed	Boolean	Indicates whether it is reverse.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
quality_owner	String	Quality owner.
quality_id	String	Quality ID, which is a string

Parameter	Type	Description
distributed	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> • HASH: Hashes specified columns and distributes data to specified DNs through mapping. • REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distributed_column	String	DISTRIBUTE BY HASH column.
is_partition	Boolean	Indicates whether the table is a partition table. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Message
has_related_physical_table	Boolean	Indicates whether an associated physical table exists.
has_related_logical_table	Boolean	Indicates whether an associated logical entity exists.

Table 7-1302 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> SDI: source data layer DWI: data integration layer DWR: data reporting layer DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1303 TagRecordVO

Parameter	Type	Description
id	String	ID, which is a string
tag_id	String	Tag ID, which is a string
tag_name	String	Tag name.

Parameter	Type	Description
biz_id	String	Entity ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1304 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1305 TableModelAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
obs_location	String	OBS path, which is a subpath.
create_by	String	Creator.
update_by	String	Person who updates the information.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether a key is a foreign key.
extend_field	Boolean	Indicates whether an attribute is inherited.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
ordinal	Integer	Sequence number.
table_model_id	String	ID of the relational model, which is a string
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagVO objects	Read-only table tags
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Logical Attribute Code
related_logic_attr_id	String	ID of the associated logical attribute, which is a string
related_logic_attr_name	String	Associated Logical Entity Attribute Name (Zh)
related_logic_attr_name_en	String	Associated Logical Entity Attribute Name (En)

Table 7-1306 TagVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Label name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Table 7-1307 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1308 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1309 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1310 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1311 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1312 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1313 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1314 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1315 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.

Parameter	Type	Description
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMapping VO objects	Table attribute information, which is read-only.

Table 7-1316 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1317 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400**Table 7-1318** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1319** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1320** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Update the physical table based on the request parameters.

PUT https://{endpoint}/v2/{project_id}/design/table-model

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is TableModelVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.4 Deleting a Table Model

Function

Deletes a table model and its attributes, including logical entities and physical tables, from relational modeling.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/table-model

Table 7-1321 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1322 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1323 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none">● PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-1324 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-1325 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400

Table 7-1326 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message

Parameter	Type	Description
data	Object	Returned data information.

Status code: 401

Table 7-1327 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1328 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Delete the physical table based on the request parameters.

```
DELETE https://{endpoint}/v2/{project_id}/design/table-model
{
  "ids" : [ "1231921671028518912" ],
  "del_types" : "PHYSICAL_TABLE"
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is the number of deleted data records.

```
{  
  "value" : 1  
}
```

Status code: 400

BadRequest

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user request is illegal."  
}
```

Status code: 401

Unauthorized

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "User authentication failed."  
}
```

Status code: 403

Forbidden

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user does not have permission to call this API."  
}
```

SDK Sample Code

The SDK sample code is as follows.

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is the number of deleted data records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.5 Querying a Relationship

Function

Search for relationship information by relationship name (fuzzy query is supported), creator, start time, and end time.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/relation

Table 7-1329 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1330 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.

Parameter	Mandatory	Type	Description
begin_time	No	String	Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1331 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1332** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1333 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1334 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of RelationVO objects	RelationVO information.

Table 7-1335 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.

Parameter	Type	Description
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMappingVO objects	Table attribute information, which is read-only.

Table 7-1336 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400

Table 7-1337 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1338** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1339** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to obtain the relationship list based on request parameters.

```
GET https://{endpoint}/v2/{project_id}/design/relation?offset=1&limit=100
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a RelationVO array and the total number of records.

```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a RelationVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.6 Viewing Relationship Details

Function

This API is used to obtain relationship details by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/relation/{id}

Table 7-1340 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1341 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-1342 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1343 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1344 data

Parameter	Type	Description
value	RelationVO object	value: unified outer data structure of the returned result.

Table 7-1345 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.

Parameter	Type	Description
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMapping VO objects	Table attribute information, which is read-only.

Table 7-1346 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string

Parameter	Type	Description
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400

Table 7-1347 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1348 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1349 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API queries relationship details by ID to obtain the relationship list.

GET https://{endpoint}/v2/{project_id}/design/relation/1225137038202957824

Example Responses

Status code: 200

This operation is successful, and the returned data is RelationVO details.

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is RelationVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.7 Querying All Relationships in a Model

Function

This API is used to query all relationships in a model.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/{model_id}/table-model/relation

Table 7-1350 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
model_id	Yes	String	ID of the relational model, which is a string. The value of model_id can be obtained from the API used to obtain a model .

Table 7-1351 Query Parameters

Parameter	Mandatory	Type	Description
table_ids	No	String	IDs of tables. The value is a string.
biz_type	No	String	Type of a table. Options: <ul style="list-style-type: none"> • TABLE_MODEL: relationship modeling (logical entity/physical table) • FACT_LOGIC_TABLE: fact table
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1352 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1353** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1354 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1355 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of records objects	RelationVO information.

Table 7-1356 records

Parameter	Type	Description
tables	Array of TableModelVO objects	TableModelVO information.
inheritances	Array of objects	Level information.
relations	Array of RelationVO objects	RelationVO information.

Table 7-1357 TableModelVO

Parameter	Type	Description
id	String	ID, which is a string
model_id	String	ID of the relational model, which is a string
parent_table_id	String	Parent table ID, which is a string
parent_table_name	String	Parent table name, which is read-only.
parent_table_code	String	Parent table code, which is read-only.
related_logical_table_id	String	ID of the associated logical entity, which is a string
related_logical_table_name	String	Name of an associated logical entity.

Parameter	Type	Description
related_logic_table_model_id	String	ID of the model associated with a logical entity, which is a string
related_logic_table_model_name	String	Name of the model associated with a logical entity.
model	WorkspaceVO object	Model information
data_format	String	Data Format,
obs_bucket	String	OBS bucket.
obs_location	String	Foreign Table Path
configs	String	Other configurations.
table_type	String	Table type, which is read-only.
owner	String	Person in charge.
tb_name	String	Table name.
dw_id	String	Data connection ID.
db_name	String	Indicates the database name.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.
extend_info	String	Indicates the extension information.
tb_guid	String	GUID after table materialization. This parameter is read-only.
tb_id	String	Data table ID. This parameter is read-only.
logic_tb_name	String	Name of a logical entity.
logic_tb_guid	String	GUID of a logical entity. This parameter is read-only.
description	String	Description.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
logic_tb_id	String	ID of a logical entity, which is a string
biz_catalog_id	String	ID of the business catalog, which is a string
catalog_path	String	Path of the home service category: {"l1Id":"","l2Id":"","l3Id":""}.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagRecordVO objects	Read-only table tags
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
attributes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
relations	Array of RelationVO objects	Relationship.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a read-only string
partition_conf	String	Partition expression.
dfl_task_id	String	ID of a DLF job.

Parameter	Type	Description
use_recently_partition	Boolean	Indicates whether to use the latest partition.
reversed	Boolean	Indicates whether it is reverse.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
quality_owner	String	Quality owner.
quality_id	String	Quality ID, which is a string
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
is_partition	Boolean	Indicates whether the table is a partition table. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Message
has_related_physical_table	Boolean	Indicates whether an associated physical table exists.
has_related_logical_table	Boolean	Indicates whether an associated logical entity exists.

Table 7-1358 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> SDI: source data layer DWI: data integration layer DWR: data reporting layer DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1359 TagRecordVO

Parameter	Type	Description
id	String	ID, which is a string
tag_id	String	Tag ID, which is a string
tag_name	String	Tag name.

Parameter	Type	Description
biz_id	String	Entity ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1360 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1361 TableModelAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
obs_location	String	OBS path, which is a subpath.
create_by	String	Creator.
update_by	String	Person who updates the information.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether a key is a foreign key.
extend_field	Boolean	Indicates whether an attribute is inherited.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
ordinal	Integer	Sequence number.
table_model_id	String	ID of the relational model, which is a string
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagVO objects	Read-only table tags
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
code	String	Logical Attribute Code
related_logic_attr_id	String	ID of the associated logical attribute, which is a string
related_logic_attr_name	String	Associated Logical Entity Attribute Name (Zh)
related_logic_attr_name_en	String	Associated Logical Entity Attribute Name (En)

Table 7-1362 TagVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Label name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Table 7-1363 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1364 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1365 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1366 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1367 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1368 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1369 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1370 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1371 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Table 7-1372 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.

Parameter	Type	Description
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.

Parameter	Type	Description
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMapping VO objects	Table attribute information, which is read-only.

Table 7-1373 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400

Table 7-1374 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1375** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1376** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query all relationships in a model. The first 100 relationships are queried.

```
GET https://{endpoint}/v2/{project_id}/design/1208450696123420672/table-model/relation?offset=1&limit=100&no_version_detail=true
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is RelationVO.

7.21.8 Viewing Table Model Details

Function

This API is used to obtain model table details by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/table-model/{id}

Table 7-1377 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1378 Query Parameters

Parameter	Mandatory	Type	Description
latest	No	Boolean	Indicates whether to query the latest.

Request Parameters

Table 7-1379 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1380 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1381 data

Parameter	Type	Description
value	TableModelVO object	value: unified outer data structure of the returned result.

Table 7-1382 TableModelVO

Parameter	Type	Description
id	String	ID, which is a string
model_id	String	ID of the relational model, which is a string
parent_table_id	String	Parent table ID, which is a string
parent_table_name	String	Parent table name, which is read-only.
parent_table_code	String	Parent table code, which is read-only.
related_logical_entity_id	String	ID of the associated logical entity, which is a string

Parameter	Type	Description
related_logic_table_name	String	Name of an associated logical entity.
related_logic_table_model_id	String	ID of the model associated with a logical entity, which is a string
related_logic_table_model_name	String	Name of the model associated with a logical entity.
model	WorkspaceVO object	Model information
data_format	String	Data Format,
obs_bucket	String	OBS bucket.
obs_location	String	Foreign Table Path
configs	String	Other configurations.
table_type	String	Table type, which is read-only.
owner	String	Person in charge.
tb_name	String	Table name.
dw_id	String	Data connection ID.
db_name	String	Indicates the database name.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.
extend_info	String	Indicates the extension information.
tb_guid	String	GUID after table materialization. This parameter is read-only.
tb_id	String	Data table ID. This parameter is read-only.
logic_tb_name	String	Name of a logical entity.
logic_tb_guid	String	GUID of a logical entity. This parameter is read-only.
description	String	Description.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
logic_tb_id	String	ID of a logical entity, which is a string
biz_catalog_id	String	ID of the business catalog, which is a string
catalog_path	String	Path of the home service category: {"l1Id":"","l2Id":"","l3Id":""}.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagRecordVO objects	Read-only table tags
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Parameter	Type	Description
attributes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
relations	Array of RelationVO objects	Relationship.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a read-only string
partition_conf	String	Partition expression.
dfl_task_id	String	ID of a DLF job.

Parameter	Type	Description
use_recently_partition	Boolean	Indicates whether to use the latest partition.
reversed	Boolean	Indicates whether it is reverse.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
quality_owner	String	Quality owner.
quality_id	String	Quality ID, which is a string
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none"> HASH: Hashes specified columns and distributes data to specified DNs through mapping. REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
is_partition	Boolean	Indicates whether the table is a partition table. This parameter is read-only.
physical_table	String	Synchronization status. Options: <ul style="list-style-type: none"> NO_NEED: not synchronized CREATE_SUCCESS: The creation is successful. CREATE_FAILED: Creation failed UPDATE_SUCCESS: The update is successful. UPDATE_FAILED: The update fails. SUMMARY_SUCCESS: overall success SUMMARY_FAILED: overall failure RUNNING: overall running OFFLINE: offline

Parameter	Type	Description
dev_physical_table	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
meta_data_link	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
data_quality	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only

Parameter	Type	Description
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> INVALID_TYPE: invalid environment DEV_TYPE: development environment PROD_TYPE: production environment DEV_PROD_TYPE: development and production environment
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Message
has_related_physical_table	Boolean	Indicates whether an associated physical table exists.
has_related_logical_table	Boolean	Indicates whether an associated logical entity exists.

Table 7-1383 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> SDI: source data layer DWI: data integration layer DWR: data reporting layer DM: data mart layer

Parameter	Type	Description
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1384 TagRecordVO

Parameter	Type	Description
id	String	ID, which is a string
tag_id	String	Tag ID, which is a string
tag_name	String	Tag name.

Parameter	Type	Description
biz_id	String	Entity ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1385 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1386 TableModelAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
obs_location	String	OBS path, which is a subpath.
create_by	String	Creator.
update_by	String	Person who updates the information.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether a key is a foreign key.
extend_field	Boolean	Indicates whether an attribute is inherited.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
ordinal	Integer	Sequence number.
table_model_id	String	ID of the relational model, which is a string
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagVO objects	Read-only table tags
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
code	String	Logical Attribute Code
related_logic_attr_id	String	ID of the associated logical attribute, which is a string
related_logic_attr_name	String	Associated Logical Entity Attribute Name (Zh)
related_logic_attr_name_en	String	Associated Logical Entity Attribute Name (En)

Table 7-1387 TagVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Label name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Table 7-1388 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1389 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1390 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1391 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1392 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1393 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1394 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1395 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1396 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.

Parameter	Type	Description
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMappingVO objects	Table attribute information, which is read-only.

Table 7-1397 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1398 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400

Table 7-1399 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1400 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1401 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to obtain model table details by ID.

```
GET https://{endpoint}/v2/{project_id}/design/table-model/1231932180633112576
```

Example Responses

Status code: 200

This operation is successful, and the returned data is TableModelVO details.

Status Codes

Status Code	Description
200	This operation is successful, and the returned data is TableModelVO details.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.9 Obtaining a Model

Function

This API is used to obtain information about all models in the current space.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/workspaces

Table 7-1402 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1403 Query Parameters

Parameter	Mandatory	Type	Description
workspace_type	No	String	Defines the enumeration of model workspace types. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
dw_type	No	String	Data Connection Type

Request Parameters

Table 7-1404 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1405** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1406 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1407 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of WorkspaceVO objects	WorkspaceVO information.

Table 7-1408 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1409 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1410 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1411 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to obtain information about all models in the current space.

GET https://{endpoint}/v2/{project_id}/design/workspaces

Example Responses

Status code: 200

This operation succeeds. The returned data is a WorkspaceVO array and the total number of data records.

```

Status Codes

Status Code	Description
200	This operation succeeds. The returned data is a WorkspaceVO array and the total number of data records.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.10 Creating a Model Workspace

Function

Create a model workspace.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/workspaces

Table 7-1412 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1413 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1414 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Parameter	Mandatory	Type	Description
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Response Parameters

Status code: 200

Table 7-1415 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1416 data

Parameter	Type	Description
value	WorkspaceVO object	value: unified outer data structure of the returned result.

Table 7-1417 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.

Parameter	Type	Description
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.

Parameter	Type	Description
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400**Table 7-1418** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1419** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1420** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Create a model workspace.

```
POST https://{endpoint}/v2/{project_id}/design/workspaces
{
  "name": "test_create_model",
  "table_model_prefix": "",
  "description": "this is a demo.",
  "type": "THIRD_NF",
  "frequent": false,
  "is_physical": "true",
  "dw_type": "DWS"
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is WorkspaceVO.

```
{
  "data": {
    "value": {
      "id": "1231989920109842432",
      "name": "test_create_model",
      "description": "this is a demo.",
      "is_physical": true,
      "frequent": false,
      "top": true,
      "level": null,
      "dw_type": "DWS",
      "create_time": "2024-04-22T15:28:06.22+08:00",
      "update_time": "2024-04-22T15:28:06.22+08:00",
      "create_by": "test_uesr",
      "update_by": "test_uesr",
      "type": "THIRD_NF",
      "biz_catalog_ids": null,
      "databases": null,
      "table_model_prefix": ""
    }
  }
}
```

Status code: 400

BadRequest

```
{
  "error_code": "DS.60xx",
  "error_msg": "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code": "DS.60xx",
  "error_msg": "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

7.21.11 Updating the Model Workspace

Function

Update the model workspace.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/workspaces

Table 7-1421 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1422 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1423 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name	Yes	String	Name of the workspace.
description	No	String	Description.
is_physical	No	Boolean	Indicates whether a table is a physical table.
frequent	No	Boolean	Indicates whether it is commonly used.
top	No	Boolean	Hierarchical governance.
level	No	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	No	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_by	No	String	Creator.
update_by	No	String	Person who updates the information.

Parameter	Mandatory	Type	Description
type	Yes	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	No	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	No	Array of strings	Array of database names.
table_model_prefix	No	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Response Parameters

Status code: 200

Table 7-1424 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1425 data

Parameter	Type	Description
value	WorkspaceVO object	value: unified outer data structure of the returned result.

Table 7-1426 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.

Parameter	Type	Description
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.

Parameter	Type	Description
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1427 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1428 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1429 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Update the model workspace.

PUT `https://{endpoint}/v2/{project_id}/design/workspaces`

```
{
  "id": "1231989920109842432",
  "name": "test_update_model",
  "table_model_prefix": "",
  "description": "this is a demo.",
  "type": "THIRD_NF",
  "frequent": false,
  "is_physical": "true",
  "dw_type": "DWS"
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is WorkspaceVO.

```
{
  "data": {
    "value": {
      "id": "1231989920109842432",
      "name": "test_update_model",
      "description": "this is a demo.",
      "is_physical": true,
      "frequent": false,
      "top": true,
      "level": null,
      "dw_type": "DWS",
      "create_time": "2024-04-22T15:28:06+08:00",
      "update_time": "2024-04-22T15:31:31.913+08:00",
      "create_by": "test_uesr",
      "update_by": "test_uesr",
      "type": "THIRD_NF",
      "biz_catalog_ids": null,
      "databases": null,
      "table_model_prefix": ""
    }
  }
}
```

Status code: 400

BadRequest

```
{
  "error_code": "DS.60xx",
  "error_msg": "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code": "DS.60xx",
  "error_msg": "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

7.21.12 Deleting a Model Workspace

Function

Deletes a model workspace.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/workspaces

Table 7-1430 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1431 Query Parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	Array of entity IDs, which is a string

Request Parameters

Table 7-1432 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1433** Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-1434 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400**Table 7-1435** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1436** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1437** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to delete a model workspace by ID.

```
DELETE https://{endpoint}/v2/{project_id}/design/workspaces?ids=1231989920109842432
```

Example Responses

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

7.21.13 Viewing Details About a Model

Function

This API is used to query the workspace details of a physical or logical model.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/workspaces/{model_id}

Table 7-1438 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
model_id	Yes	String	ID of the relational model, which is a string. The value of model_id can be obtained from the API used to obtain a model .

Request Parameters

Table 7-1439 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1440 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1441 data

Parameter	Type	Description
value	WorkspaceVO object	value: unified outer data structure of the returned result.

Table 7-1442 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.

Parameter	Type	Description
level	String	Data governance layers. Options: <ul style="list-style-type: none">• SDI: source data layer• DWI: data integration layer• DWR: data reporting layer• DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400

Table 7-1443 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1444** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1445** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query the workspace details of a physical or logical model.

```
GET https://{endpoint}/v2/{project_id}/design/workspaces/1208730797675311104
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is WorkspaceVO details.

```
{
  "data" : {
    "value" : {
      "id" : "1208730797675311104",

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is WorkspaceVO details.

Status Code	Description
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.14 Querying Destination Tables and Fields (To Be Offline)

Function

Query the destination table and fields (to be brought offline).

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/{model_id}/table-model/relation/fields

Table 7-1446 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
model_id	Yes	String	ID of the relational model, which is a string. The value of model_id can be obtained from the API used to obtain a model .

Table 7-1447 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].

Parameter	Mandatory	Type	Description
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1448 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1449 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 400

Table 7-1450 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1451 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1452 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message

Parameter	Type	Description
data	Object	Returned data information.

Example Requests

None

Example Responses

Status code: 200

Success

```

403	Forbidden

7.21.15 Exporting DDL Statements of Tables in a Model

Function

Exports DDL statements of a specified table based on the model ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/workspaces/{model_id}/export

Table 7-1453 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
model_id	Yes	String	ID of the relational model, which is a string. The value of model_id can be obtained from the API used to obtain a model .

Table 7-1454 Query Parameters

Parameter	Mandatory	Type	Description
tb_names	No	Array of strings	Name of the table to be exported.

Parameter	Mandatory	Type	Description
with_db	No	Boolean	The exported DDL package does not contain the database name.

Request Parameters

Table 7-1455 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1456 Response body parameters

Parameter	Type	Description
data	data object	Returned data information.

Table 7-1457 data

Parameter	Type	Description
value	String	DDL statement of the table exported from the API

Status code: 400**Table 7-1458** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1459** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1460 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Export the DDL of the class and trl_aSCb01c tables in the model whose ID is 1217123720355803136. The DDL contains the database name.

```
GET https://{endpoint}/v2/{project_id}/design/workspaces/1217123720355803136/export?with_db=true&tb_names=class&tb_names=trl_aSCb01c
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is DDL text information.

```
{
  "data" : {
    "value" : "CREATE TABLE IF NOT EXISTS ${database}.class (\n      class_id BIGINT NOT NULL comment '1111',\n      class_name VARCHAR(1024) NOT NULL comment '2222',\n      teacher VARCHAR(255) comment '3333'\n,\nPRIMARY KEY(class_id)\n);\nALTER TABLE ${database}.pd_test COMMENT 'None';\nCREATE TABLE IF NOT EXISTS ${database}.logic_{$A_2} (\n      id VARCHAR(255)\n);\nALTER TABLE ${database}.logic_{$A_2} COMMENT 'aaa';"
  }
}
```

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is DDL text information.
400	BadRequest
401	Unauthorized
403	Forbidden

7.21.16 Converting a Logical Model to a Physical Model

Function

This API is used to convert a logical model to a physical model and displays information of the physical model.

Exception: If attributes of the target model such as **id** are **null**, call the following API for obtaining the operation result to obtain the error message: GET https://{endpoint}/v1/{project_id}/design/operation-results?operation_type=TRANSFORM_LOGIC_MODEL&operation_id={model_id}, where {model_id} is the path parameter of this API.

Constraints and limitations:

1. If **target_model_id** does not match **target_model_name**, the former takes precedence over the latter.
2. If **target_model_id** does not match **dw_type**, no model can be found and a message is displayed.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v1/{project_id}/design/workspaces/{model_id}/transform

Table 7-1461 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
model_id	Yes	String	ID of the relational model, which is a string. The value of model_id can be obtained from the API used to obtain a model .

Request Parameters

Table 7-1462 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1463 Request body parameters

Parameter	Mandatory	Type	Description
target_model_id	No	String	ID of the target relational model, which is a string Note: If an existing target_model_name is used, this parameter is mandatory and its value must be the same as the existing model ID.
target_model_name	Yes	String	Name of the workspace.
description	No	String	Description.
update_existing_tables	No	Boolean	Indicates whether to update an existing table.
ids	No	Array of strings	List of the IDs of the logical entities to be materialized
dw_type	Yes	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
connection_id	No	String	ID of the data connection to which the converted physical table belongs.
database	No	String	Database to which the converted physical table belongs.
queue	No	String	Queue to which the converted physical table belongs (only for DLI).
schema	No	String	Schema to which the physical table belongs after conversion (only for DWS and PostgreSQL).

Response Parameters

Status code: 200

Table 7-1464 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1465 data

Parameter	Type	Description
value	WorkspaceVO object	value: unified outer data structure of the returned result.

Table 7-1466 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS, MRS_HIVE, POSTGRESQL, MRS_SPARK, CLICKHOUSE, MYSQL, ORACLE, or DORIS.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none">• THIRD_NF: relational modeling• DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Status code: 400**Table 7-1467** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1468 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1469** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Convert a logical model whose **model_id** is **1184439352260976640** to a physical model.

```
PUT https://{endpoint}/v1/{project_id}/design/workspaces/1184439352260976640/transform
```

```
{
  "target_model_id" : "1234524753512017920",
  "target_model_name" : "dws0429",
  "update_exist_tables" : false,
  "description" : "",
  "dw_type" : "DWS",
  "connection_id" : "92558783022c4ac88965e045b7c7078c",
  "database" : "gaussdb",
  "schema" : "public",
  "ids" : [ "1238437092523188266" ]
}
```

Example Responses

Status code: 200

The operation succeeds. The target physical **WorkspaceVO** is returned. The conversion result can be obtained from the API used to obtain the batch operation result.

```
{
  "data" : {
    "value" : {
```

```

7.21.17 Obtaining the Operation Result

Function

This API is used to obtain the result of a batch operation, for example, converting a logical model to a physical model or reversing a database.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/design/operation-results

Table 7-1470 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1471 Query Parameters

Parameter	Mandatory	Type	Description
operation_type	Yes	String	Batch operation type. Enumerated values include: <ul style="list-style-type: none">• ER_REVERSE_DB: reversing a database for relational modeling• TRANSFORM_LOGIC_MODEL: converting a logical model to a physical model
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].

Parameter	Mandatory	Type	Description
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
operation_id	No	String	ID of the batch operation. For converting a logical model to a physical table, set this parameter to the model_id of the logical model. For reversing a database, set this parameter to the model_id of the target model. The value of model_id can be obtained from the API used to obtain a model .

Request Parameters

Table 7-1472 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1473 Response body parameters

Parameter	Type	Description
data	data object	Data, which is the unified outermost data structure of the returned result

Table 7-1474 data

Parameter	Type	Description
value	BatchOperationVO object	Value, which is the unified outer data structure of the returned result

Table 7-1475 BatchOperationVO

Parameter	Type	Description
id	String	Batch approval ID, which is a string
tenant_id	String	Project ID.
group_id	String	Group ID, which is a string
biz_name	String	Service name.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
operation_status	String	Operation result type enumeration. RUNNING(Running), SUCCESS(Operation succeeded), and FAILED(Operation failed). Options: <ul style="list-style-type: none">• RUNNING: The task is running.• SUCCESS: The operation is successful.• FAILED: The operation fails.
operation_type	String	Indicates the type.
biz_info	String	Service details.
create_by	String	Creator.
remark	String	Indicates the remark information.
total	Integer	Total number.
success	Integer	Number of successful operations.
failed	Integer	Indicates the number of failed operations.
rate	String	Indicates the current progress.
logs	String	Logs.
groups	Array of BatchOperationV O objects	Group information.

Status code: 400**Table 7-1476** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1477 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1478 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Obtain the result of converting a logical model whose **model_id** is **1184439352260976640** to a physical model.

```
GET https://{endpoint}/v1/{project_id}/design/operation-results?
operation_type=TRANSFORM_LOGIC_MODEL&operation_id=1184439352260976640
```

Example Responses

Status code: 200

The operation succeeds. **BatchOperationVO** is returned.

Status Codes

Status Code	Description
200	The operation succeeds. BatchOperationVO is returned.
400	BadRequest

Status Code	Description
401	Unauthorized
403	Forbidden

7.22 Import and Export

7.22.1 Import models, relationship modeling, dimension modeling, code tables, service indicators, and process architecture.

Function

Import models, relationship modeling, dimension modeling, code tables, service indicators, and process architecture.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/models/action

Table 7-1479 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1480 Query Parameters

Parameter	Mandatory	Type	Description
action-id	Yes	String	<p>Action to be executed. Select an import action based on the imported object.</p> <p>Options:</p> <ul style="list-style-type: none"> • import_relation: Import a relationship model (logical entity/physical table). • import_dimension: imports dimension tables and fact tables. • import_codetable: import lookup table • import_datastandard: data import standard • import_bizmetric: imports service metrics. • import_bizcatalog: imports the BPA. • import_atomic: imports atomic metrics. • import_derivative: imports derivative indicators. • import_compound: Import a compound metric. • import_aggregation: Import the summary table.
model_id	No	String	ID of a relational modeling model. This parameter is mandatory when a model (import_relation) is imported.
directory_id	No	String	ID of the target directory. This parameter is optional and takes effect for importing a lookup table (import_datastandard) or data standard (import_datastandard).
skip-exist	No	Boolean	Indicates whether to overwrite the existing entity.

Request Parameters

Table 7-1481 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.
X-Language	No	String	Default value: en-us . This parameter is optional, but is mandatory for import and export APIs. Available options include zh-cn and en-us , indicating Chinese and English, respectively.

Table 7-1482 FormData parameters

Parameter	Mandatory	Type	Description
file	Yes	File	The size of the Excel file to be imported must be less than 4 MB, and the number of lines must be less than 3000.

Response Parameters

Status code: 200

Table 7-1483 Response body parameters

Parameter	Type	Description
data	data object	Returned data information.

Table 7-1484 data

Parameter	Type	Description
uuid	String	Unique ID returned by the import API

Status code: 400

Table 7-1485 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 401

Table 7-1486 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 403

Table 7-1487 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Example Requests

Upload the model Excel file and submit it through the form. The file is a specific file.

```
POST https://{endpoint}/v2/{project_id}/design/models/action?action-id=import_relation&skip_exist=false&model_id=1208730797675311104
```

Example Responses

Status code: 200

Success. The returned data is the UUID of the import task. You can query the import result based on the UUID.

```
{
  "data" : {
    "uuid" : "82f70d35-f61a-46dc-a245-0b86905e82d1"
  }
}
```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	Success. The returned data is the UUID of the import task. You can query the import result based on the UUID.
400	BadRequest
401	Unauthorized
403	Forbidden

7.22.3 Querying the Import Result

Function

Query the processing result of importing the Excel file. The value of uuid is the result returned by the `/design/models/action` or `/design/catalogs/action` API.

Calling Method

For details, see [Calling APIs](#).

URI

GET `/v2/{project_id}/design/catalogs/process-import`

Table 7-1497 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1498 Query Parameters

Parameter	Mandatory	Type	Description
uuid	Yes	String	Processing result of an import to be queried.

Request Parameters

Table 7-1499 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1500** Response body parameters

Parameter	Type	Description
data	DsProcessImportResultVO object	data: unified outermost data structure of the returned result.

Table 7-1501 DsProcessImportResultVO

Parameter	Type	Description
status	String	Unique value of the import, which is used to query the import result. Options: <ul style="list-style-type: none">importing: The file is being imported.fail: The import fails.success: The import is successful.
group	BatchOperationVO object	Group information.
rate	String	Indicates the current progress.

Table 7-1502 BatchOperationVO

Parameter	Type	Description
id	String	Batch approval ID, which is a string
tenant_id	String	Project ID.
group_id	String	Group ID, which is a string
biz_name	String	Service name.
biz_id	String	Business ID, which is a string
operation_status	String	Operation result type enumeration. RUNNING(Running), SUCCESS(Operation succeeded), and FAILED(Operation failed). Options: <ul style="list-style-type: none">RUNNING: The task is running.SUCCESS: The operation is successful.FAILED: The operation fails.
operation_type	String	Indicates the type.
biz_info	String	Service details.
create_by	String	Creator.
remark	String	Indicates the remark information.
total	Integer	Total number.
success	Integer	Number of successful operations.

Parameter	Type	Description
failed	Integer	Indicates the number of failed operations.
rate	String	Indicates the current progress.
logs	String	Logs.
groups	Array of BatchOperationVO objects	Group information.

Status code: 400**Table 7-1503** Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 401**Table 7-1504** Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 403**Table 7-1505** Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Example Requests

Query the Excel import result based on the UUID.

```
GET https://{endpoint}/v2/{project_id}/design/catalogs/process-import?uuid=5a8b96cc-6ee1-429b-b6a9-b26b5f669218
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is DsProcessImportResultVO.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is DsProcessImportResultVO.
400	BadRequest
401	Unauthorized
403	Forbidden

7.22.4 Exporting Service Data

Function

Export service data based on request parameters. The following data can be exported: code table, data standard, atomic metric, derivative metric, compound metric, summary table, service metric, theme, process, logical model, physical model, dimension, and fact table.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/export-model

Table 7-1506 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1507 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1508 Request body parameters

Parameter	Mandatory	Type	Description
ids	No	Array of strings	List of exported object IDs, for example, IDs of several logical models. The list is a string.
asyn	No	Boolean	Indicates whether to export data asynchronously. The options are true (asynchronous) and false (synchronous).

Parameter	Mandatory	Type	Description
type	No	String	Exported service type. The options are ER (relational modeling), Directory_CodeTable (code table directory), Directory_Standard (standard directory), DIM (dimension modeling), codeTable (code table), and dataStandard. directory_id is used to export code tables and data standards in a specified directory. model_id and biz_catalog_id are used to export specified models and service tables in a directory. import_bizcatalog is used to export the process architecture. import_bizmetric is used to export service indicators.
directory_id	No	String	Directory ID, which is a string
biz_catalog_id	No	String	ID of the service layer, which is a string
biz_catalog_id_list	No	Array of strings	ID list of the service catalog to which the service belongs.
model_id	No	String	ID of the relational model to which the model belongs. This parameter is required for exporting a relational model. The ID is a string.

Response Parameters

Status code: 200

Table 7-1509 Response body parameters

Parameter	Type	Description
data	data object	Returned data information.

Table 7-1510 data

Parameter	Type	Description
uuid	String	Unique ID returned by the import API

Status code: 400

Table 7-1511 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1512 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1513 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Export service data whose model ID is 1213499006739791872 and table IDs are 1226583503525818368 and 1217121407599800322 from the relational modeling.

Status Codes

Status Code	Description
200	Success
400	BadRequest
401	Unauthorized
403	Forbidden

7.22.5 Obtain the Excel export result.

Function

Obtain the Excel export result based on the UUID returned when the service data (/export-model) is exported.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/export-result

Table 7-1514 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1515 Query Parameters

Parameter	Mandatory	Type	Description
uuid	Yes	String	UUID returned when the export API is requested.

Request Parameters

Table 7-1516 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.

Parameter	Mandatory	Type	Description
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1517 Response body parameters

Parameter	Type	Description
data	data object	Export result object.

Table 7-1518 data

Parameter	Type	Description
status	String	Unique value of the export, which is used to query the import result. importing (exporting), fail (export failure), and success (export success). Options: <ul style="list-style-type: none"> importing: The data is being exported. fail: The export fails. success: The export is successful.
group	BatchOperationVO object	Group information, which can be ignored during export.
rate	String	Indicates the current progress.

Table 7-1519 BatchOperationVO

Parameter	Type	Description
id	String	Batch approval ID, which is a string
tenant_id	String	Project ID.

Parameter	Type	Description
group_id	String	Group ID, which is a string
biz_name	String	Service name.
biz_id	String	Business ID, which is a string
operation_status	String	Operation result type enumeration. RUNNING(Running), SUCCESS(Operation succeeded), and FAILED(Operation failed). Options: <ul style="list-style-type: none"> • RUNNING: The task is running. • SUCCESS: The operation is successful. • FAILED: The operation fails.
operation_type	String	Indicates the type.
biz_info	String	Service details.
create_by	String	Creator.
remark	String	Indicates the remark information.
total	Integer	Total number.
success	Integer	Number of successful operations.
failed	Integer	Indicates the number of failed operations.
rate	String	Indicates the current progress.
logs	String	Logs.
groups	Array of BatchOperationVO objects	Group information.

Status code: 400

Table 7-1520 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 401

Table 7-1521 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 403**Table 7-1522** Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Example Requests

Query the export result based on uuid(fd653968-864b-45f6-9842-2b125d2dbfb7) returned by the /export-model API. The query result is the export status. After the export is complete, a binary file is returned.

```
GET https://{endpoint}/v2/{project_id}/design/export-result?uuid=fd653968-864b-45f6-9842-2b125d2dbfb7
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is DsProcessImportResultVO.

```
{
  "data" : {
    "status" : "importing",
    "group" : null,
    "rate" : "0"
  }
}
```

7.23 Customized Items

7.23.1 Querying Customized Items

Function

Query customized items (including table customized items, attribute customized items, theme customized items, and service indicator customized items).

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/customized-fields

Table 7-1523 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1524 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].

Parameter	Mandatory	Type	Description
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.
type	Yes	String	Type of a customized item. Options: <ul style="list-style-type: none"> • TABLE: table customized item • ATTRIBUTE: customized attribute item • SUBJECT: theme customization item • METRIC: service indicator customization item

Request Parameters

Table 7-1525 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1526 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1527 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1528 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of CustomizedFields VO objects	CustomizedFieldsVO information.

Table 7-1529 CustomizedFieldsVO

Parameter	Type	Description
id	String	ID, which is a string
name_ch	String	Chinese name of a user-defined item.
name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
optional_values	String	Sorting order. Options: If there are multiple optional values, separate them with semicolons (;).
type	String	Type of a customized item. Options: <ul style="list-style-type: none">• TABLE: table customized item• ATTRIBUTE: customized attribute item• SUBJECT: theme customization item• METRIC: service indicator customization item
ordinal	Integer	System sorting field. You do not need to set this parameter when creating or modifying a record.
description	String	Description of a user-defined item.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400

Table 7-1530 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1531** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1532** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query customized items of a table.

```
GET https://{endpoint}/v2/{project_id}/design/customized-fields?type=TABLE
```

Example Responses

Status code: 200

This API is used to query customized items. The returned result is the CustomizedFieldsVO set.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This API is used to query customized items. The returned result is the CustomizedFieldsVO set.
400	BadRequest
401	Unauthorized
403	Forbidden

7.23.2 Modifying a Customized Item

Function

Modify customized items (including table customized items, attribute customized items, theme customized items, and service indicator customized items).

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/customized-fields

Table 7-1533 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1534 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1535 Request body parameters

Parameter	Mandatory	Type	Description
type	Yes	String	Type of a customized item. Options: <ul style="list-style-type: none"> • TABLE: table customized item • ATTRIBUTE: customized attribute item • SUBJECT: theme customization item • METRIC: service indicator customization item
fields	No	Array of CustomizedFieldsVO objects	List of customized items.

Table 7-1536 CustomizedFieldsVO

Parameter	Mandatory	Type	Description
id	No	String	ID, which is a string
name_ch	Yes	String	Chinese name of a user-defined item.
name_en	Yes	String	English name of a customized item.
not_null	Yes	Boolean	Whether a parameter is mandatory.
optional_values	No	String	Sorting order. Options: If there are multiple optional values, separate them with semicolons (;).
type	Yes	String	Type of a customized item. Options: <ul style="list-style-type: none"> • TABLE: table customized item • ATTRIBUTE: customized attribute item • SUBJECT: theme customization item • METRIC: service indicator customization item

Parameter	Mandatory	Type	Description
ordinal	No	Integer	System sorting field. You do not need to set this parameter when creating or modifying a record.
description	No	String	Description of a user-defined item.

Response Parameters

Status code: 200

Table 7-1537 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1538 data

Parameter	Type	Description
value	Array of CustomizedFieldsVO objects	Data connection information array

Table 7-1539 CustomizedFieldsVO

Parameter	Type	Description
id	String	ID, which is a string
name_ch	String	Chinese name of a user-defined item.
name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
optional_values	String	Sorting order. Options: If there are multiple optional values, separate them with semicolons (;).

Parameter	Type	Description
type	String	Type of a customized item. Options: <ul style="list-style-type: none"> • TABLE: table customized item • ATTRIBUTE: customized attribute item • SUBJECT: theme customization item • METRIC: service indicator customization item
ordinal	Integer	System sorting field. You do not need to set this parameter when creating or modifying a record.
description	String	Description of a user-defined item.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Status code: 400

Table 7-1540 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1541 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1542 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to modify a customized item of a table.

PUT https://{endpoint}/v2/{project_id}/design/customized-fields

```
{
  "type": "TABLE",
  "fields": [ {
    "id": "1211611269321355264",

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	Success
400	BadRequest
401	Unauthorized
403	Forbidden

7.24 Quality Rules

7.24.1 Update the abnormal data output configuration of the table.

Function

Update the abnormal data output configuration of the table, including whether to generate abnormal data, setting the abnormal data database or schema, and setting the prefix or suffix of the abnormal table.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/{table_id}/qualities

Table 7-1543 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
table_id	Yes	String	Table ID, which is a string

Request Parameters

Table 7-1544 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1545 Request body parameters

Parameter	Mandatory	Type	Description
biz_type	No	String	Type of a table. Options: <ul style="list-style-type: none">• TABLE_MODEL: relationship model (logical model/physical model)• AGGREGATION_LOGIC_TABLE: summary table• FACT_LOGIC_TABLE: fact table• DIMENSION: dimension• DIMENSION_LOGIC_TABLE: dimension table
dirty_out_switch	No	Boolean	Indicates whether to output abnormal data.
dirty_out_database	No	String	Abnormal data output library.
dirty_out_prefix	No	String	Prefix of an exception table.
dirty_out_suffix	No	String	Suffix of an exception table.

Response Parameters

Status code: 200

Table 7-1546 Response body parameters

Parameter	Type	Description
data	data object	Returned data for updating the abnormal data output configuration of a table.

Table 7-1547 data

Parameter	Type	Description
value	TableModelVO object	Details about a table.

Table 7-1548 TableModelVO

Parameter	Type	Description
id	String	ID, which is a string
model_id	String	ID of the relational model, which is a string
parent_table_id	String	Parent table ID, which is a string
parent_table_name	String	Parent table name, which is read-only.
parent_table_code	String	Parent table code, which is read-only.
related_logic_table_id	String	ID of the associated logical entity, which is a string
related_logic_table_name	String	Name of an associated logical entity.
related_logic_table_model_id	String	ID of the model associated with a logical entity, which is a string
related_logic_table_model_name	String	Name of the model associated with a logical entity.
model	WorkspaceVO object	Model information
data_format	String	Data Format,
obs_bucket	String	OBS bucket.
obs_location	String	Foreign Table Path
configs	String	Other configurations.
table_type	String	Table type, which is read-only.
owner	String	Person in charge.
tb_name	String	Table name.
dw_id	String	Data connection ID.
db_name	String	Indicates the database name.
queue_name	String	Queue required for executing SQL statements through the DLI data connection. This parameter is mandatory when the data connection type is DLI.
schema	String	Required by the DWS type.
extend_info	String	Indicates the extension information.

Parameter	Type	Description
tb_guid	String	GUID after table materialization. This parameter is read-only.
tb_id	String	Data table ID. This parameter is read-only.
logic_tb_name	String	Name of a logical entity.
logic_tb_guid	String	GUID of a logical entity. This parameter is read-only.
description	String	Description.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
logic_tb_id	String	ID of a logical entity, which is a string
biz_catalog_id	String	ID of the business catalog, which is a string
catalog_path	String	Path of the home service category: {"l1Id":"","l2Id":"","l3Id":""}.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
tags	Array of TagRecordVO objects	Read-only table tags
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
attributes	Array of TableModelAttributeVO objects	Table attribute information.
mappings	Array of TableMappingVO objects	Table mapping information.
relations	Array of RelationVO objects	Relationship.
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
dw_name	String	Data connection name. This parameter is read-only and does not need to be set when you create or update a data connection.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.

Parameter	Type	Description
l1_id	String	Subject area group ID, which is a read-only string
l2_id	String	Subject area ID. This parameter is read-only and does not need to be set during creation and update.
l3_id	String	Business object ID, which is a read-only string
partition_conf	String	Partition expression.
dlf_task_id	String	ID of a DLF job.
use_recently_partition	Boolean	Indicates whether to use the latest partition.
reversed	Boolean	Indicates whether it is reverse.
dirty_out_switch	Boolean	Indicates whether to output abnormal data.
dirty_out_database	String	Abnormal data output library.
dirty_out_prefix	String	Prefix of an exception table.
dirty_out_suffix	String	Suffix of an exception table.
quality_owner	String	Quality owner.
quality_id	String	Quality ID, which is a string
distribute	String	DISTRIBUTE BY [HASH(column) REPLICATION]. Options: <ul style="list-style-type: none">• HASH: Hashes specified columns and distributes data to specified DNs through mapping.• REPLICATION: Each row in the table exists on all DNs, that is, each DN has complete table data.
distribute_column	String	DISTRIBUTE BY HASH column.
is_partition	Boolean	Indicates whether the table is a partition table. This parameter is read-only.

Parameter	Type	Description
physical_table	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_physical_table	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
technical_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline
business_asset	String	Synchronization status. Options: <ul style="list-style-type: none">• NO_NEED: not synchronized• CREATE_SUCCESS: The creation is successful.• CREATE_FAILED: Creation failed• UPDATE_SUCCESS: The update is successful.• UPDATE_FAILED: The update fails.• SUMMARY_SUCCESS: overall success• SUMMARY_FAILED: overall failure• RUNNING: overall running• OFFLINE: offline

Parameter	Type	Description
meta_data_link	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
data_quality	String	<p>Synchronization status.</p> <p>Options:</p> <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline

Parameter	Type	Description
summary_status	String	Synchronization status. Options: <ul style="list-style-type: none"> • NO_NEED: not synchronized • CREATE_SUCCESS: The creation is successful. • CREATE_FAILED: Creation failed • UPDATE_SUCCESS: The update is successful. • UPDATE_FAILED: The update fails. • SUMMARY_SUCCESS: overall success • SUMMARY_FAILED: overall failure • RUNNING: overall running • OFFLINE: offline
dev_version	String	Development environment version, which is a read-only string
prod_version	String	Production environment version, which is a read-only string
dev_version_name	String	Version name of the development environment, which is read-only
prod_version_name	String	Version name of the production environment, which is read-only
env_type	String	Type of the development and production environment. Options: <ul style="list-style-type: none"> • INVALID_TYPE: invalid environment • DEV_TYPE: development environment • PROD_TYPE: production environment • DEV_PROD_TYPE: development and production environment
alias	String	Alias
self_defined_fields	Array of SelfDefinedField-VO objects	User-defined item.
code	String	Message
has_related_physical_table	Boolean	Indicates whether an associated physical table exists.

Parameter	Type	Description
has_related_logic_table	Boolean	Indicates whether an associated logical entity exists.

Table 7-1549 WorkspaceVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name of the workspace.
description	String	Description.
is_physical	Boolean	Indicates whether a table is a physical table.
frequent	Boolean	Indicates whether it is commonly used.
top	Boolean	Hierarchical governance.
level	String	Data governance layers. Options: <ul style="list-style-type: none"> • SDI: source data layer • DWI: data integration layer • DWR: data reporting layer • DM: data mart layer
dw_type	String	Data connection type, which corresponds to the type of the data warehouse where the table is located. The value can be DWS , MRS_HIVE , POSTGRESQL , MRS_SPARK , CLICKHOUSE , MYSQL , ORACLE , or DORIS .
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
type	String	Defines the workspace type enumeration. Options: <ul style="list-style-type: none"> • THIRD_NF: relational modeling • DIMENSION: dimensional modeling
biz_catalog_ids	String	{"l1Ids":[],"l2Ids":[],"l3Ids":[]}: ID list of associated service catalogs.
databases	Array of strings	Array of database names.
table_model_prefix	String	Model verification prefix. The value contains a maximum of 100 characters, including digits, letters, and underscores (_), and starts with a letter.

Table 7-1550 TagRecordVO

Parameter	Type	Description
id	String	ID, which is a string
tag_id	String	Tag ID, which is a string
tag_name	String	Tag name.
biz_id	String	Entity ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1551 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1552 TableModelAttributeVO

Parameter	Type	Description
id	String	ID, which is a string
name_en	String	Field name.
name_ch	String	Service attribute.
description	String	Description.
obs_location	String	OBS path, which is a subpath.
create_by	String	Creator.
update_by	String	Person who updates the information.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_primary_key	Boolean	Indicates whether a key is a primary key.
is_partition_key	Boolean	Indicates whether the key is a partition key.
is_foreign_key	Boolean	Indicates whether a key is a foreign key.
extend_field	Boolean	Indicates whether an attribute is inherited.
not_null	Boolean	Indicates whether the value is empty.

Parameter	Type	Description
ordinal	Integer	Sequence number.
table_model_id	String	ID of the relational model, which is a string
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
tags	Array of TagVO objects	Read-only table tags
secrecy_levels	Array of SecrecyLevelVO objects	Confidentiality
stand_row_id	String	ID of the associated data standard, which is a string
stand_row_name	String	Name of the associated data standard. This parameter is read-only.
quality_infos	Array of QualityInfoVO objects	Quality information, which is read-only.
alias	String	Alias
self_defined_fields	Array of SelfDefinedFieldVO objects	User-defined item.
code	String	Logical Attribute Code
related_logic_attr_id	String	ID of the associated logical attribute, which is a string
related_logic_attr_name	String	Associated Logical Entity Attribute Name (Zh)
related_logic_attr_name_en	String	Associated Logical Entity Attribute Name (En)

Table 7-1553 TagVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Label name
description	String	Description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.

Table 7-1554 SecrecyLevelVO

Parameter	Type	Description
id	String	Security level ID, which is a string
uuid	String	Data security primary key.
name	String	Confidentiality name.
slevel	Integer	Confidentiality level.
description	String	Confidentiality description.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.

Table 7-1555 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none">• INFO_ARCH: information architecture (used for modifying themes in batches)• MODEL: model• QUALITY_RULE: quality rule• SECRECY_LEVEL: security level• STANDARD_ELEMENT: data standard• STANDARD_ELEMENT_TEMPLATE: data standard template• SUBJECT: theme• Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables• SUMMARY_INDEX: summary table indicator attribute• SUMMARY_TIME: time period attribute of the SDR table• TABLE_MODEL: relationship model (logical model/physical model)• TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model)• TABLE_MODEL_LOGIC: logical entity• TABLE_TYPE: table type• TAG: tag• TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1556 QualityInfoVO

Parameter	Type	Description
id	String	ID, which is a string
table_id	String	Table ID, which is a read-only string
attr_id	String	Attribute ID, which is a read-only string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
data_quality_id	String	Quality ID, which is a string
show_control	Integer	Indicates whether to display the regular expression.
data_quality_name	String	Quality name.
alert_conf	String	Configure alarms.
expression	String	Regular expression configuration in regular expression-related validation rules.
extend_info	String	Indicates the extension information.
from_standard	Boolean	Indicates whether the data comes from the data standard quality configuration. This parameter is read-only.

Parameter	Type	Description
result_description	String	Result description.
create_by	String	Creator, which is read-only.
update_by	String	Updater, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1557 TableMappingVO

Parameter	Type	Description
id	String	ID, which is a string
name	String	Name.
description	String	Description.
target_table_id	String	Destination table ID, which is a string
src_model_id	String	ID of the relational model for the source table. The value is a string.
src_model_name	String	Source model name.
view_text	String	Source of the collected view. The dws view is used reversely.
target_table_name	String	Name of the destination table.
details	Array of TableMappingDetailVO objects	Details.
source_tables	Array of MappingSourceTableVO objects	Mapped table information.
source_fields	Array of MappingSourceFieldVO objects	Mapped field information.

Parameter	Type	Description
create_time	String	Creation time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.

Table 7-1558 TableMappingDetailVO

Parameter	Type	Description
id	String	ID, which is a string
mapping_id	String	Name.
target_attr_id	String	ID of the destination attribute, which is a string
target_attr_name	String	Sort by destination field.
src_table_ids	String	Source table ID.
src_table_names	Array of strings	Source table name array, which is read-only.
src_table_db_names	Array of strings	Database name array of the source table. This parameter is read-only.
src_table_model_ids	Array of strings	IDs of the relational models for the source tables. The value is a read-only string.
src_table_id_list	Array of strings	IDs of source tables. The value is a read-only string.
src_attr_ids	String	ID of a field in the source table.
src_attr_names	Array of strings	Array of field names in the source table. This parameter is read-only.
src_attr_id_list	Array of strings	IDs of the source table attributes. The value is a read-only string.
remark	String	Description.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
create_by	String	Creator.
update_by	String	Person who updates the information.
target_attr	Object	Target attribute.

Table 7-1559 MappingSourceTableVO

Parameter	Type	Description
table1_id	String	Table 1 ID, which is a string
table2_id	String	Table 2 ID, which is a string
table1_name	String	Name of table 1.
table2_name	String	Name of table 2.
join_type	String	Association type. Options: <ul style="list-style-type: none">• LEFT: left outer join• RIGHT: right outer join• INNER: inner join• FULL: full connection
join_fields	Array of MappingJoinFieldVO objects	on condition.

Table 7-1560 MappingJoinFieldVO

Parameter	Type	Description
field1_id	String	Attribute 1 ID, which is a string
field2_id	String	Attribute 2 ID, which is a string

Parameter	Type	Description
field1_name	String	Name of attribute 1.
field2_name	String	Name of attribute 2.

Table 7-1561 MappingSourceFieldVO

Parameter	Type	Description
target_field_id	String	ID of the target field, which is a field in the current table. The ID is a string.
target_field_name	String	Target field code.
field_ids	String	Source field ID. Use commas (,) to separate multiple IDs.
transform_expression	String	Conversion expression.
field_names	Array of strings	List of source field names.
changed	Boolean	Indicates whether a field is changed.

Table 7-1562 RelationVO

Parameter	Type	Description
id	String	ID, which is a string
source_table_id	String	Source table ID, which is a string
target_table_id	String	Destination table ID, which is a string
name	String	Relationship name.
source_table_name	String	Name of the source table.
target_table_name	String	Name of the destination table.
role	String	Role.
tenant_id	String	Tenant ID.

Parameter	Type	Description
source_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
target_type	String	Relationship type, which is read-only. Options: <ul style="list-style-type: none"> • ONE: Each child (parent) logical entity has only one record in the parent (child) logical entity. • ZERO_OR_ONE: indicates that each child (parent) logical entity data record corresponds to only one data record in the parent (child) logical entity. • ZERO_OR_N: indicates that each child (parent) logical entity data record may correspond to multiple data records in the parent (child) logical entity. • ONE_OR_N: Each child (parent) logical entity corresponds to at least one data record in the parent (child) logical entity.
create_by	String	Creator.
update_by	String	Person who updates the information.

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
mappings	Array of RelationMappingVO objects	Table attribute information, which is read-only.

Table 7-1563 RelationMappingVO

Parameter	Type	Description
id	String	ID, which is a string
relation_id	String	Relationship ID, which is a string
source_field_id	String	Source field ID, which is a string
target_field_id	String	Destination field ID, which is a string
source_field_name	String	Name of the source table.
target_field_name	String	Name of the destination table.
create_by	String	Creator.
update_by	String	Person who updates the information.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1564 SelfDefinedFieldVO

Parameter	Type	Description
fd_name_ch	String	Chinese name of a user-defined item.
fd_name_en	String	English name of a customized item.
not_null	Boolean	Whether a parameter is mandatory.
fd_value	String	Attribute value

Status code: 400**Table 7-1565** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1566** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1567** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Updates table-level quality rules based on request body parameters.

```
PUT https://{endpoint}/v2/{project_id}/design/1217123755210469376/qualities
```

```
{
  "biz_type": "TABLE_MODEL",
  "dirty_out_switch": true,
  "dirty_out_database": "default",
  "dirty_out_prefix": "err_",
  "dirty_out_suffix": "_2020_02_28"
}
```

Example Responses

Status code: 200

This operation succeeds, and all information about the updated table is returned.

```

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and all information about the updated table is returned.
400	BadRequest
401	Unauthorized
403	Forbidden

7.24.2 Clear Quality Rule

Function

Clears the quality rule of a table.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/{table_id}/qualities

Table 7-1568 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Parameter	Mandatory	Type	Description
table_id	Yes	String	Table ID, which is a string

Table 7-1569 Query Parameters

Parameter	Mandatory	Type	Description
table_type	Yes	String	<p>Table type. The default value is Service table. TABLE_MODEL (service table (logical entity/physical table), AGGREGATION_LOGIC_TABLE (summary table), FACT_LOGIC_TABLE (fact table), and DIMENSION_LOGIC_TABLE (dimension table).</p> <ul style="list-style-type: none"> • TABLE_MODEL • AGGREGATION_LOGIC_TABLE • FACT_LOGIC_TABLE • DIMENSION_LOGIC_TABLE

Request Parameters

Table 7-1570 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	<p>IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header).</p> <p>This field is mandatory for authentication using tokens.</p>
workspace	Yes	String	<p>Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID.</p>

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1571 Response body parameters

Parameter	Type	Description
data	data object	Clear the data returned by the quality rule.

Table 7-1572 data

Parameter	Type	Description
value	Boolean	Indicates whether the alarm is cleared successfully.

Status code: 400

Table 7-1573 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1574 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1575 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

To clear the quality rules of the table whose ID is 1217123755210469378 and table type is TABLE_MODEL, run the following command:

```
DELETE https://{endpoint}/v2/{project_id}/design/1217123755210469378/qualities?
table_type=TABLE_MODEL
```

Example Responses

Status code: 200

Success: A message indicating whether the deletion is successful is returned.

```
{
  "data" : {
    "value" : true
  }
}
```

```
}  
}
```

Status code: 400

BadRequest

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user request is illegal."  
}
```

Status code: 401

Unauthorized

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "User authentication failed."  
}
```

Status code: 403

Forbidden

```
{  
  "error_code" : "DS.60xx",  
  "error_msg" : "The user does not have permission to call this API."  
}
```

Status Codes

Status Code	Description
200	Success: A message indicating whether the deletion is successful is returned.
400	BadRequest
401	Unauthorized
403	Forbidden

7.25 Tag API

7.25.1 Add a tag

Function

Tags an asset (table or attribute) based on its ID.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/{entity_id}/tags

Table 7-1576 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
entity_id	Yes	String	Table ID, which is a string

Table 7-1577 Query Parameters

Parameter	Mandatory	Type	Description
attr_id	No	String	Attribute ID, which is a string
tags	Yes	Array of strings	Indicates the tag name.

Request Parameters

Table 7-1578 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1579 Response body parameters

Parameter	Type	Description
data	data object	Returned data information.

Table 7-1580 data

Parameter	Type	Description
value	String	This parameter is returned by the API for adding a tag to a table or attribute or deleting a tag. If the value of vale is null, the operation is successful.

Status code: 400

Table 7-1581 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1582 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1583 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

- Add tags aaa and bbb to the table whose ID is 1217123755210469378.

```
PUT https://{endpoint}/v2/{project_id}/design/1217123755210469378/tags?tags=bbb&tags=aaa
```
- Add the aaa and bbb tags to the attribute whose ID is 1217123755210469379 in the table whose ID is 1217123755210469378.

```
PUT https://{endpoint}/v2/{project_id}/design/1217123755210469378/tags?attr_id=1217123755210469379&tags=aaa&tags=bbb
```

Example Responses

Status code: 200

Success: indicates whether the data is successfully returned.

```
{
  "data" : {
    "value" : null
  }
}
```

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

403	Forbidden

7.25.2 Delete a tag.

Function

This API is used to delete an asset tag based on the ID of an asset (table or attribute).

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/{entity_id}/tags

Table 7-1584 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
entity_id	Yes	String	Table ID, which is a string

Table 7-1585 Query Parameters

Parameter	Mandatory	Type	Description
attr_id	No	String	Attribute ID, which is a string
tag	Yes	String	Label name

Request Parameters

Table 7-1586 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1587 Response body parameters

Parameter	Type	Description
data	data object	Returned data information.

Table 7-1588 data

Parameter	Type	Description
value	String	This parameter is returned by the API for adding a tag to a table or attribute or deleting a tag. If the value of vale is null, the operation is successful.

Status code: 400

Table 7-1589 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1590** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1591** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

- Remove the tag ddd from the table whose ID is 1217123755210469378.
DELETE https://{endpoint}/v2/{project_id}/design/1217123755210469378/tags?tag=ddd
- Remove the tag ccc from the attribute whose ID is 1217123755214663680 in the table whose ID is 1217123755210469378.
DELETE https://{endpoint}/v2/{project_id}/design/1217123755210469378/tags?attr_id=1217123755214663680&tag=ccc

Example Responses

Status code: 200

Success: indicates whether the data is successfully returned.

```
{
  "data" : {
    "value" : null
  }
}
```

Status code: 400

BadRequest

```
{

7.26 Lookup Table Management

7.26.1 Querying the Lookup List

Function

This API is used to query the lookup table list.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/code-tables

Table 7-1592 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 7-1593 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Fuzzy query by name or code.
create_by	No	String	Query by creator.
approver	No	String	Query by reviewer.
directory_id	No	String	Directory ID, which is a string
status	No	String	Specifies the service status. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be approved• PUBLISHED: released• OFFLINE_DEVELOPING: to be approved• OFFLINE: offline• REJECT: rejected

Parameter	Mandatory	Type	Description
begin_time	No	String	Left boundary of time filtering. This parameter is used together with end_time. Only time range filtering is supported. Unilateral filtering is invalid. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
end_time	No	String	Right boundary for time filtering. This parameter is used together with begin_time to support only time range filtering. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1594 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1595 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1596 data

Parameter	Type	Description
value	value object	value: unified outer data structure of the returned result.

Table 7-1597 value

Parameter	Type	Description
total	Integer	Total number.
records	Array of CodeTableVO objects	Number of queried code table objects (CodeTableVO).

Table 7-1598 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Parameter	Type	Description
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManagementVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-1599 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1600 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1601 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-1602 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Status code: 400**Table 7-1603** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1604** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1605** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 404**Table 7-1606** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to obtain the list of the first 10 lookup tables.

```
GET https://{endpoint}/v2/{project_id}/design/code-tables?offset=1&limit=10
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a CodeTableVO array and the total number of records.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	This operation succeeds, and the returned data is a CodeTableVO array and the total number of records.
400	BadRequest
401	Unauthorized
403	Forbidden
404	Not Found

7.26.2 Creating a Lookup Table

Function

Create a lookup table.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/design/code-tables

Table 7-1607 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1608 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1609 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	Lookup table ID, which is a string
name_en	Yes	String	Table name, in English.
name_ch	Yes	String	Table name, in Chinese.
tb_version	No	Integer	Table version.
directory_id	Yes	String	Directory ID, which is a string
directory_path	No	String	Directory tree.
description	No	String	Description.
create_by	No	String	Creator.
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
approval_info	No	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	No	BizVersionManagementVO object	Service version management. This parameter is read-only.
code_table_fields	Yes	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-1610 ApprovalVO

Parameter	Mandatory	Type	Description
id	No	String	Application ID, which is a string
tenant_id	No	String	Project ID. For details about how to obtain the project ID, see the API path parameter <code>project_id</code> .
name_ch	No	String	Chinese name of a service.
name_en	No	String	English name of a service.
biz_id	No	String	Business ID, which is a string

Parameter	Mandatory	Type	Description

biz_id	No	String	Business ID, which is a string
biz_info	No	String	Business object information.

Parameter	Mandatory	Type	Description
status	No	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected

Table 7-1612 CodeTableFieldVO

Parameter	Mandatory	Type	Description
id	No	String	Lookup table field ID, which is a string
code_table_id	No	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Yes	Integer	Sequence number.
name_en	Yes	String	Field name, in English.
name_ch	Yes	String	Field name, in Chinese.
description	No	String	Description.
data_type	Yes	String	Field type
data_type_ext_end	No	String	Extended field of the data type.
is_unique_key	No	Boolean	Whether the field is unique.
code_table_field_values	No	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	No	Integer	Total number of lookup table attribute values.

Table 7-1613 CodeTableFieldValueVO

Parameter	Mandatory	Type	Description
id	No	String	Lookup table field ID, which is a string
fd_id	No	String	Attribute ID of the lookup table, which is a string
fd_value	No	String	Code list attribute value.
ordinal	No	Integer	Sequence number.
description	No	String	Description.

Response Parameters

Status code: 200

Table 7-1614 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1615 data

Parameter	Type	Description
value	CodeTableVO object	Code table structure.

Table 7-1616 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.

Parameter	Type	Description
create_by	String	Creator.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManag eVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldV O objects	Code list attribute information.

Table 7-1617 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string

Parameter	Type	Description
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

7.26.3 Deleting Lookup Tables

Function

Deletes a lookup table.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v2/{project_id}/design/code-tables

Table 7-1625 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 7-1626 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1627 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	Array of strings	ID list, which is a string
del_types	No	String	Deletion type. Enumerated values: <ul style="list-style-type: none"> • PHYSICAL_TABLE: whether to delete physical database tables. This parameter is valid only for tables that can be materialized. (If this parameter is set, physical database tables are deleted.)

Response Parameters

Status code: 200

Table 7-1628 Response body parameters

Parameter	Type	Description
data	data object	Indicates the final deletion result, that is, the number of objects that are successfully deleted.

Table 7-1629 data

Parameter	Type	Description
value	String	Number of successfully deleted objects

Status code: 400

Table 7-1630 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message

Parameter	Type	Description
data	Object	Returned data information.

Status code: 401**Table 7-1631** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1632** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 404**Table 7-1633** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to delete a lookup table based on the request parameters. The number of lookup tables that are successfully deleted is returned.

```
DELETE https://{endpoint}/v2/{project_id}/design/code-tables
{
  "ids" : [ "1230206616507449344", "1230206580511875072" ]
}
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is the number of deleted data records.

```
{
  "value" : 2
}
```

Status code: 400

BadRequest

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user request is illegal."
}
```

Status code: 401

Unauthorized

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "User authentication failed."
}
```

Status code: 403

Forbidden

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The user does not have permission to call this API."
}
```

Status code: 404

Not Found

```
{
  "error_code" : "DS.60xx",
  "error_msg" : "The User Request API does not exist."
}
```

SDK Sample Code

The SDK sample code is as follows.

Java

This API is used to delete a lookup table based on the request parameters. The number of lookup tables that are successfully deleted is returned.

```

name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1645 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_id	String	Business ID, which is a string
biz_info	String	Business object information.

Parameter	Type	Description
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
biz_version	Integer	Service version, which is read-only.
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Table 7-1646 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-1647 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Status code: 400**Table 7-1648** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1649** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1650** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 404**Table 7-1651** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to modify a lookup table based on the request parameters. The modified lookup table information is returned.

```
PUT https://{endpoint}/v2/{project_id}/design/code-tables/1230204979835502592

7.26.5 Viewing Lookup Table Details

Function

This API is used to view details about a lookup table by ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/code-tables/{id}

Table 7-1652 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Request Parameters

Table 7-1653 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200**Table 7-1654** Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1655 data

Parameter	Type	Description
value	CodeTableVO object	Code table structure.

Table 7-1656 CodeTableVO

Parameter	Type	Description
id	String	Lookup table ID, which is a string
name_en	String	Table name, in English.
name_ch	String	Table name, in Chinese.
tb_version	Integer	Table version.
directory_id	String	Directory ID, which is a string
directory_path	String	Directory tree.
description	String	Description.
create_by	String	Creator.
status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none">• DRAFT: draft• PUBLISH_DEVELOPING: to be reviewed• PUBLISHED: released• OFFLINE_DEVELOPING: to be reviewed• OFFLINE: offline• REJECT: rejected
create_time	String	Creation time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.
update_time	String	Update time, which is read-only. The format complies with RFC3339 and is accurate to seconds. The UTC time zone is yyyy-mm-ddTHH:MM:SSZ, for example, 1970-01-01T00:00:00Z.

Parameter	Type	Description
approval_info	ApprovalVO object	Approval information. This parameter is read-only. Latest review information about a business object, including the business details, reviewer information, and review time.
new_biz	BizVersionManageVO object	Service version management. This parameter is read-only.
code_table_fields	Array of CodeTableFieldVO objects	Code list attribute information.

Table 7-1657 ApprovalVO

Parameter	Type	Description
id	String	Application ID, which is a string
tenant_id	String	Project ID. For details about how to obtain the project ID, see the API path parameter project_id.
name_ch	String	Chinese name of a service.
name_en	String	English name of a service.
biz_id	String	Business ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Parameter	Type	Description
		<ul style="list-style-type: none"> • INFO_ARCH: information architecture (used for modifying themes in batches) • MODEL: model • QUALITY_RULE: quality rule • SECRECY_LEVEL: security level • STANDARD_ELEMENT: data standard • STANDARD_ELEMENT_TEMPLATE: data standard template • SUBJECT: theme • Dimension attributes of SUMMARY_DIMENSION_ATTRIBUTE: summary tables • SUMMARY_INDEX: summary table indicator attribute • SUMMARY_TIME: time period attribute of the SDR table • TABLE_MODEL: relationship model (logical model/physical model) • TABLE_MODEL_ATTRIBUTE: relationship model attribute (logical model/physical model) • TABLE_MODEL_LOGIC: logical entity • TABLE_TYPE: table type • TAG: tag • TIME_CONDITION: time restriction
biz_info	String	Serialized service details. The type is string.
biz_info_obj	Object	Service details. The type is object.
biz_version	Integer	Service version.

Parameter	Type	Description
biz_status	String	Release status of an entity. This parameter is read-only and does not need to be set during creation and update. Options: <ul style="list-style-type: none"> • DRAFT: draft • PUBLISH_DEVELOPING: to be reviewed • PUBLISHED: released • OFFLINE_DEVELOPING: to be reviewed • OFFLINE: offline • REJECT: rejected
approval_status	String	Service approval status. This parameter is read-only. Options: <ul style="list-style-type: none"> • DEVELOPING: being reviewed • APPROVED: approved • REJECT: rejected • WITHDREW: approval cancellation
approval_type	String	Service review type. Options: <ul style="list-style-type: none"> • PUBLISH: released • OFFLINE: offline
submit_time	String	Submitted At
create_by	String	Creator.
l1	String	Chinese name of the subject area group. This parameter is read-only and does not need to be set when you create or update a subject area group.
l2	String	Chinese name of the subject area. This parameter is read-only and does not need to be set during creation and update.
l3	String	Chinese name of the business object. This parameter is read-only and does not need to be set during creation and update.
approval_time	String	Review time.

Parameter	Type	Description
approver	String	Reviewer.
email	String	Email address of the reviewer.
msg	String	Review information.
directory_path	String	Directory tree.

Table 7-1658 BizVersionManageVO

Parameter	Type	Description
id	String	Field ID, which is a string

Parameter	Type	Description
biz_type	String	<p>Business entity type.</p> <p>Options:</p> <ul style="list-style-type: none"> • AGGREGATION_LOGIC_TABLE: summary table • ATOMIC_INDEX: atomic metric • ATOMIC_METRIC: atomic metric (new) • BIZ_CATALOG: process architecture directory • BIZ_METRIC: service indicator • CODE_TABLE: code table • COMMON_CONDITION: general filter • COMPOSITE_METRIC: Compound Metric (new) • COMPOUND_METRIC: compound metric • CONDITION_GROUP: restriction group • DEGENERATE_DIMENSION: degenerate dimension • DERIVATIVE_INDEX: derivative indicator • DERIVED_METRIC: derivative indicator (new) • DIMENSION: dimension • DIMENSION_ATTRIBUTE: dimension attribute • DIMENSION_HIERARCHIES: dimension level • DIMENSION_LOGIC_TABLE: dimension table • DIMENSION_TABLE_ATTRIBUTE: dimension attribute • DIRECTORY: directory • FACT_ATTRIBUTE: fact table attribute • FACT_DIMENSION: fact table dimension • FACT_LOGIC_TABLE: fact table • FACT_MEASURE: fact table measurement • FUNCTION: function

Table 7-1659 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type

Parameter	Type	Description
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none"> • NUMBER: number • STRING: character type • DATETIME: date type • BLOB: large object (BLOB) • OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-1660 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Status code: 400

Table 7-1661 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1662** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403**Table 7-1663** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 404**Table 7-1664** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

This API is used to query lookup table information based on the lookup table ID.

```
GET https://{endpoint}/v2/{project_id}/design/code-tables/1230204979835502592
```

Example Responses

Status code: 200

This operation is successful, and the returned data is CodeTableVO details.

7.26.6 Viewing Field Values in the Code Table

Function

Check the values of the fields in the code table.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/design/code-tables/{id}/values

Table 7-1665 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Table 7-1666 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records to be queried on each page, that is, Y records to be queried. The default value is 50, and the value range is [1,100].
offset	No	Integer	Start coordinate of the query, that is, the number of skipped data records. The value can only be 0 or an integer multiple of limit. If the value does not meet the requirement, the value is rounded down. The default value is 0.

Request Parameters

Table 7-1667 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Response Parameters

Status code: 200

Table 7-1668 Response body parameters

Parameter	Type	Description
data	Object	Returned data information.

Status code: 400

Table 7-1669 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401

Table 7-1670 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1671 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 404

Table 7-1672 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Edit the field values of the lookup table based on the request parameters, including adding fields to the lookup table.

```
GET https://{endpoint}/v2/{project_id}/design/code-tables/1230204979835502592/values
```

Example Responses

Status code: 200

This operation succeeds, and the returned data is a CodeTableFieldInfoVO array and the total number of records.

404	Not Found

7.26.7 Edit Code Table Field Value

Function

Edit the values of the fields in the lookup table.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/design/code-tables/{id}/values

Table 7-1673 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
id	Yes	String	Entity ID, which is a string

Request Parameters

Table 7-1674 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token, which is obtained by calling the IAM API for obtaining a user token (value of X-Subject-Token in the response header). This field is mandatory for authentication using tokens.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Project-Id	No	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID . This parameter is mandatory for API requests that use AK/SK authentication in multi-project scenarios.
Content-Type	No	String	Default value: application/json;charset=UTF-8 This parameter is optional. If the body is available, this parameter is mandatory. If the body is unavailable, you do not need to set this parameter or verify it.

Table 7-1675 Request body parameters

Parameter	Mandatory	Type	Description
to_add	No	Array of CodeTableFieldVO objects	The code table attribute and attribute value list are added.
to_modify	No	Array of CodeTableFieldVO objects	Edit the lookup table attribute value list.
to_remove	No	Array of CodeTableFieldVO objects	List of lookup table attribute IDs to be deleted.

Table 7-1676 CodeTableFieldVO

Parameter	Mandatory	Type	Description
id	No	String	Lookup table field ID, which is a string

Parameter	Mandatory	Type	Description
code_table_id	No	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Yes	Integer	Sequence number.
name_en	Yes	String	Field name, in English.
name_ch	Yes	String	Field name, in Chinese.
description	No	String	Description.
data_type	Yes	String	Field type
data_type_ext_end	No	String	Extended field of the data type.
is_unique_key	No	Boolean	Whether the field is unique.
code_table_field_values	No	Array of CodeTableFieldValueVO objects	Code list attribute value.
count_field_values	No	Integer	Total number of lookup table attribute values.

Table 7-1677 CodeTableFieldValueVO

Parameter	Mandatory	Type	Description
id	No	String	Lookup table field ID, which is a string
fd_id	No	String	Attribute ID of the lookup table, which is a string
fd_value	No	String	Code list attribute value.
ordinal	No	Integer	Sequence number.
description	No	String	Description.

Response Parameters

Status code: 200

Table 7-1678 Response body parameters

Parameter	Type	Description
data	data object	data: unified outermost data structure of the returned result.

Table 7-1679 data

Parameter	Type	Description
value	Array of CodeTableFieldVO objects	Code table field list information.

Table 7-1680 CodeTableFieldVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
code_table_id	String	ID of the lookup table (mandatory for update), which is a string
ordinal	Integer	Sequence number.
name_en	String	Field name, in English.
name_ch	String	Field name, in Chinese.
description	String	Description.
data_type	String	Field type
domain_type	String	Domain to which a field type belongs. Options: <ul style="list-style-type: none">• NUMBER: number• STRING: character type• DATETIME: date type• BLOB: large object (BLOB)• OTHER: other types
data_type_extend	String	Extended field of the data type.
is_unique_key	Boolean	Whether the field is unique.
code_table_field_values	Array of CodeTableFieldVO objects	Code list attribute value.

Parameter	Type	Description
count_field_values	Integer	Total number of lookup table attribute values.

Table 7-1681 CodeTableFieldValueVO

Parameter	Type	Description
id	String	Lookup table field ID, which is a string
fd_id	String	Attribute ID of the lookup table, which is a string
fd_value	String	Code list attribute value.
ordinal	Integer	Sequence number.
description	String	Description.

Status code: 400**Table 7-1682** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 401**Table 7-1683** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 403

Table 7-1684 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Status code: 404

Table 7-1685 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DS.6000, indicating that the request fails to be processed.
error_msg	String	Error message
data	Object	Returned data information.

Example Requests

Edit the field values of the lookup table based on the request parameters, including adding fields to the lookup table.

400	BadRequest

Status Code	Description
401	Unauthorized
403	Forbidden
404	Not Found

8 DataArts Quality APIs

8.1 Catalogs

8.1.1 Obtaining Job Catalogs

Function

This API is used to obtain job directories.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/categories

Table 8-1 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Table 8-2 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records on each page. The maximum value is 100 .

Parameter	Mandatory	Type	Description
offset	No	Integer	Paging offset

Request Parameters

Table 8-3 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
accept	Yes	String	application/json
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-4 Response body parameters

Parameter	Type	Description
[items]	Array of CategoryDetailVO objects	List of custom items

Table 8-5 CategoryDetailVO

Parameter	Type	Description
id	Long	Directory ID. The ID of the root directory is 0.
name	String	Name
type	String	Type. The value can be built_in or user-defined .
pid	String	Parent directory ID

Parameter	Type	Description
sub_categories	Array of SubCategoryDetailVO objects	Subdirectories

Table 8-6 SubCategoryDetailVO

Parameter	Type	Description
id	Long	Directory ID. The ID of the root directory is 0 .
name	String	Name
type	String	Type. The value can be built_in or user-defined .
pid	String	Parent directory ID
sub_categories	Object	Subdirectory

Status code: 400**Table 8-7** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500**Table 8-8** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

Success

8.2 Rule Templates

8.2.1 Obtaining the Rule Template List

Function

This API is used to obtain the list of rule templates.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/rule-templates

Table 8-9 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Table 8-10 Query Parameters

Parameter	Mandatory	Type	Description
category_id	No	Long	Directory ID
name	No	String	Rule template name
system_template	No	Boolean	Whether to query only system templates
creator	No	String	Creator
limit	No	Integer	Number of records on each page. The maximum value is 100 .
offset	No	Integer	Paging offset

Request Parameters

Table 8-11 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-12 Response body parameters

Parameter	Type	Description
count	Long	Total number of records
resources	Array of RuleTemplateDetailVO objects	Pagination data

Table 8-13 RuleTemplateDetailVO

Parameter	Type	Description
id	Long	Rule template ID
name	String	Rule template name
category_id	Long	Catalog ID
dimension	String	Dimension, which can be Completeness, Uniqueness, Timeliness, Validity, Accuracy, or Consistency
type	String	Rule type. Field indicates a field rule, Table indicates a table rule, Database indicates a database rule, Cross-field indicates a cross-field rule, and Customize indicates a custom rule.
system_template	Boolean	Whether the template is a system template
sql_info	String	SQL information
abnormal_table_template	String	Abnormal table template
result_description	String	Result description
create_time	Long	Creation time. The value is a 13-digit timestamp accurate to millisecond.
creator	String	Creator. Value System indicates that the creator is provided by the system.

Status code: 400

Table 8-14 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-15 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

8.2.2 Creating a Rule Template

Function

This API is used to create a rule template.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/quality/rule-templates

Table 8-16 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Request Parameters

Table 8-17 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-18 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	Rule template ID
name	No	String	Rule template name
directory_id	No	Long	Directory ID
dimension_id	No	Integer	Dimension ID. Value 1 indicates completeness, 2 indicates uniqueness, 3 indicates timeliness, 4 indicates validity, 5 indicates accuracy, and 6 indicates consistency.
description	No	String	Description
sql_info	No	String	SQL content in the template
result_description	No	String	Result description
publish	No	Boolean	Whether the operation is a publish operation. Value true indicates publishing a new version, and false indicates saving the current version.
origin_name	No	String	Original template name
abnormal_table_template	No	String	Abnormal table template
user_define_version_name	No	String	User-defined version name
version_num	No	Long	Version number in the template information
status	No	Integer	Rule template status. Value 0 indicates offline, and 1 indicates published.

Response Parameters

Status code: 200

Table 8-19 Response body parameters

Parameter	Type	Description
id	Long	Rule template ID
name	String	Rule template name
category_id	Long	Catalog ID
dimension	String	Dimension, which can be Completeness, Uniqueness, Timeliness, Validity, Accuracy, or Consistency
type	String	Rule type. Field indicates a field rule, Table indicates a table rule, Database indicates a database rule, Cross-field indicates a cross-field rule, and Customize indicates a custom rule.
system_template	Boolean	Whether the template is a system template
sql_info	String	SQL information
abnormal_table_template	String	Abnormal table template
result_description	String	Result description
create_time	Long	Creation time. The value is a 13-digit timestamp accurate to millisecond.
creator	String	Creator. Value System indicates that the creator is provided by the system.

Status code: 400

Table 8-20 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-21 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

Create a rule template named **test**. The template ID is **0**, directory ID is **0**, dimension ID is **1**, SQL content in the template is **select count(*) from \$ {Schema_Table1}**, release operation is **false** by default, result description is the total number of records, and description is **test**.

```
POST /v2/0833a5737480d53b2f25c010dc1a7b88/quality/rule-templates
```

```
{
  "id": "0",
  "name": "test",
  "directory_id": "0",
  "dimension_id": 1,
  "description": "test",
  "sql_info": "select count(*) from ${Schema_Table1}",
  "result_description": "Total number of records",
  "publish": false,
  "origin_name": null,
  "abnormal_table_template": "select count(*) from ${Schema_Table1}",
  "user_define_version_name": null,
  "version_num": null,

8.2.3 Obtaining Rule Template Details

Function

This API is used to obtain the details of a rule template.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/rule-templates/{id}

Table 8-22 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
id	Yes	Long	Rule template ID

Request Parameters

Table 8-23 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-24 Response body parameters

Parameter	Type	Description
id	Integer	Rule template ID
name	String	Rule template name
category_id	Long	Directory ID
dimension	String	Dimension, which can be Completeness, Uniqueness, Timeliness, Validity, Accuracy, or Consistency
type	String	Rule type. Field indicates a field rule, Table indicates a table rule, Database indicates a database rule, Cross-field indicates a cross-field rule, and Customize indicates a custom rule.
system_template	Boolean	Whether the template is a system template
sql_info	String	SQL information
result_description	String	Result description
create_time	Long	Creation time. The value is a 13-digit timestamp accurate to millisecond.
creator	String	Creator. Value System indicates that the creator is provided by the system.

Status code: 400

Table 8-25 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-26 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

8.2.4 Updating a Rule Template

Function

This API is used to update a rule template.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/quality/rule-templates/{id}

Table 8-27 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
id	Yes	Long	Rule template ID

Request Parameters

Table 8-28 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-29 Request body parameters

Parameter	Mandatory	Type	Description
id	No	String	Rule template ID
name	No	String	Rule template name
directory_id	No	Long	Directory ID
dimension_id	No	Integer	Dimension ID. Value 1 indicates completeness, 2 indicates uniqueness, 3 indicates timeliness, 4 indicates validity, 5 indicates accuracy, and 6 indicates consistency.
description	No	String	Description
sql_info	No	String	SQL content in the template
result_description	No	String	Result description
publish	No	Boolean	Whether the operation is a publish operation. Value true indicates publishing a new version, and false indicates saving the current version.
origin_name	No	String	Original template name
abnormal_table_template	No	String	Abnormal table template
user_define_version_name	No	String	User-defined version name
version_num	No	Long	Version number in the template information
status	No	Integer	Rule template status. Value 0 indicates offline, and 1 indicates published.

Response Parameters

Status code: 200

Table 8-30 Response body parameters

Parameter	Type	Description
id	Long	Rule template ID
name	String	Rule template name
category_id	Long	Catalog ID
dimension	String	Dimension, which can be Completeness, Uniqueness, Timeliness, Validity, Accuracy, or Consistency
type	String	Rule type. Field indicates a field rule, Table indicates a table rule, Database indicates a database rule, Cross-field indicates a cross-field rule, and Customize indicates a custom rule.
system_template	Boolean	Whether the template is a system template
sql_info	String	SQL information
abnormal_table_template	String	Abnormal table template
result_description	String	Result description
create_time	Long	Creation time. The value is a 13-digit timestamp accurate to millisecond.
creator	String	Creator. Value System indicates that the creator is provided by the system.

Status code: 400

Table 8-31 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-32 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

Update a rule template named **test**. The template ID is **0**, directory ID is **0**, dimension ID is **1**, SQL content in the template is **select count(*) from \$ {Schema_Table1}**, release operation is **false** by default, result description is the total number of records, and description is **test**.

```

8.2.5 Deleting Rule Templates

Function

This API is used to delete rule templates.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/quality/rule-templates/batch-delete

Table 8-33 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Request Parameters

Table 8-34 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-35 Request body parameters

Parameter	Mandatory	Type	Description
ids	No	Array of longs	IDs of templates

Response Parameters

Status code: 400

Table 8-36 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-37 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

Delete rule templates whose IDs are **1045431715138617345** and **1035847774756868096**.

```
POST /v2/0833a5737480d53b2f25c010dc1a7b88/quality/rule-templates/batch-delete
{
  "ids" : [ 1045431715138617345, 1035847774756868096 ]
}
```

Status Codes

Status Code	Description
200	Success

Status Code	Description
400	BadRequest
500	INTERNAL SERVER ERROR

8.3 Quality Jobs

8.3.1 Obtaining the Quality Job List

Function

This API is used to obtain the list of quality jobs.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/quality/rules

Table 8-38 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Table 8-39 Query Parameters

Parameter	Mandatory	Type	Description
start	No	Long	Start page number, which is used to calculate the pagination query offset. If neither offset nor limit is empty, the value of offset is used.
page_size	No	Long	Number of records displayed on each page. If neither offset nor limit is empty, the value of limit is used.
offset	No	Integer	Pagination query offset

Parameter	Mandatory	Type	Description
limit	No	Integer	Number of records displayed on each page
category_id	No	Long	Directory ID
rule_name	No	String	Quality job name
schedule_status	No	Integer	Scheduling status. Value 1 indicates that the scheduling has not started, 2 indicates that the scheduling is in progress, 3 indicates that the scheduling is completed properly, 4 indicates that the scheduling is manually stopped, and 5 indicates that the scheduling is abnormal.
schedule_period	No	Integer	Scheduling period. Value 1 indicates minute, 2 indicates hour, 3 indicates day, 4 indicates week, and 5 indicates month.
start_time	No	String	Start time (search), in <i>yyyy-MM-dd HH:mm:ss</i> format
end_time	No	String	End time (search), in <i>yyyy-MM-dd HH:mm:ss</i> format
result_status	No	Integer	Last execution result. The value can be 0 (running), 1 (abnormal), 2 (alarming), or 3 (normal).
sort	No	String	Sorting field
order	No	String	Sorting order

Request Parameters

None

Response Parameters

Status code: 200

Table 8-40 Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Status code: 400**Table 8-41** Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Status code: 401**Table 8-42** Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Status code: 403**Table 8-43** Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.

Parameter	Type	Description
error_msg	String	Error message
data	Object	Returned data

Example Requests

None

Example Responses

Status code: 200

The operation succeeds. Data is returned.

8.3.2 Obtaining the Quality Job List

Function

This API is used to obtain the list of quality jobs.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/quality-tasks

Table 8-44 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Table 8-45 Query Parameters

Parameter	Mandatory	Type	Description
category_id	No	Long	Directory ID
name	No	String	Quality job name
schedule_status	No	String	Scheduling status, which can be UNKNOWN (the scheduling status is unknown), NOT_START (scheduling has not started), SCHEDULING (the scheduling is in progress), FINISH_SUCCESS (the scheduling is completed properly), KILL (the scheduling is manually stopped), or RUNNING_EXCEPTION (the scheduling fails).
start_time	No	Long	Start time of the last query period. The value is a 13-digit timestamp accurate to millisecond.

Parameter	Mandatory	Type	Description
end_time	No	Long	End time of the last query period. The value is a 13-digit timestamp accurate to millisecond.
creator	No	String	Creator
limit	No	Long	Number of records displayed on each page. The maximum value is 100 .
offset	No	Long	Pagination offset. The minimum value is 0 .

Request Parameters

Table 8-46 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-47 Response body parameters

Parameter	Type	Description
count	Long	Total number of records
resources	Array of QualityTaskOverviewVO objects	Pagination data

Table 8-48 QualityTaskOverviewVO

Parameter	Type	Description
id	Long	Quality job ID
name	String	Quality job name
category_id	Long	Directory ID
schedule_status	String	Scheduling status, which can be UNKNOWN (the scheduling status is unknown), NOT_START (scheduling has not started), SCHEDULING (the scheduling is in progress), FINISH_SUCCESS (the scheduling is completed properly), KILL (the scheduling is manually stopped), or RUNNING_EXCEPTION (the scheduling fails).
schedule_period	String	Scheduling period. The value can be MINUTE , HOUR , DAY , or WEEK .
schedule_interval	String	Scheduling interval. When the scheduling period is minute, hour, or day, the scheduling interval is a number. When the scheduling period is week, the scheduling interval is days in a week, for example, MONDAY,TUESDAY .
create_time	Long	Creation time. The value is a 13-digit timestamp accurate to millisecond.
last_run_time	Long	Last execution time. The value is a 13-digit timestamp accurate to millisecond.
creator	String	Creator

Status code: 400**Table 8-49** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-50 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

The API call is successful. **InstanceVO** is returned.

Status Codes

Status Code	Description
200	The API call is successful. InstanceVO is returned.
400	BadRequest
500	INTERNAL SERVER ERROR

8.3.3 Obtaining Quality Job Details

Function

This API is used to obtain the details of a quality job.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/quality-tasks/{id}

Table 8-51 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
id	Yes	String	Quality job ID

Request Parameters

Table 8-52 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-53 Response body parameters

Parameter	Type	Description
id	Long	Job ID

Parameter	Type	Description
name	String	Job name
description	String	Job description
category_id	Long	Directory ID
level	String	Alarm severity. SUGGEST indicates warning, MINOR indicates minor, MAJOR indicates major, and FATAL indicates fatal.
alarm_condition	String	Unified alarm condition
alarm_notify	Boolean	Whether to enable alarm notifications
alarm_notify_type	String	Alarm notification type. TRIGGER_ALARM indicates that an alarm is triggered. RUN_SUCCESS indicates that the execution is successful. TRIGGER_ALARM_AND_RUNNING_SUCCESS indicates that an alarm is triggered and that the execution is successful.
alarm_notify_topic	String	Notification topic name
schedule_type	String	Scheduling type. The value can be ONCE (one-off scheduling) or PERIODIC (periodic scheduling).
schedule_start_date	String	Scheduling start date
schedule_end_date	String	Scheduling end date
schedule_period	String	Scheduling period. The value can be MINUTE, HOUR, DAY, or WEEK .
schedule_interval	String	Scheduling interval. When the scheduling period is minute, hour, or day, the scheduling interval is a number. When the scheduling period is week, the scheduling interval is days in a week, for example, MONDAY,TUESDAY .
schedule_start_time	String	Scheduling start time
schedule_end_time	String	Scheduling end time

Parameter	Type	Description
create_time	Long	Last execution time. The value is a 13-digit timestamp accurate to millisecond.
last_run_time	Long	Last execution time. The value is a 13-digit timestamp accurate to millisecond.
sub_rules	Array of QualityTaskRuleDetailForOpenApi objects	Sub-rules
schedule_cron	String	Scheduling cron expression

Table 8-54 QualityTaskRuleDetailForOpenApi

Parameter	Type	Description
id	Long	Sub-rule ID
sub_rule_name	String	Sub-rule name
type	String	Rule type. SingleDatabase indicates a database rule, SingleTable indicates a table rule, SingleColumn indicates a field rule, CrossColumn indicates a cross-field rule, and Customize indicates a custom rule.
template_id	Long	Rule template ID
connection	String	Data connection ID
connection_type	String	Data connection type
databases	String	Database names. Use commas (,) to separate multiple values.
sql	String	SQL script in a custom rule, which is returned for a system rule
tables	String	Table names. Use commas (,) to separate multiple values.
reference_tables	String	Reference table names in a cross-field rule. Use commas (,) to separate multiple values.
columns	String	Field names. Use commas (,) to separate multiple values.

Parameter	Type	Description
reference_columns	String	Reference field names in a cross-field rule. Use commas (,) to separate multiple values.
ignore_error	Boolean	Whether to ignore rule errors
dimension	String	Dimension, which can be Completeness, Uniqueness, Timeliness, Validity, Accuracy, or Consistency
queue	String	DLI queue
regular_expression	String	Regular expression as the rule template
template_arguments	String	Template parameters
weight	Integer	Rule weight
calculation_range	String	Calculation range
calculation_range_sql	String	Calculation range SQL
alarm_condition	String	Alarm expression
export_abnormal_table	Boolean	Whether to export abnormal data
abnormal_table_database	String	Database where the abnormal table is located
abnormal_table_schema	String	Abnormal table schema
abnormal_table	String	Table where abnormal fields are located
abnormal_table_prefix	String	Abnormal table prefix
abnormal_table_suffix	String	Abnormal table suffix
abnormal_table_columns	String	Names of abnormal fields. Use commas (,) to separate multiple values.
abnormal_table_sql	String	Abnormal table SQL
abnormal_table_output_config	Boolean	Whether the abnormal table outputs rule configuration

Parameter	Type	Description
abnormal_table_include_null_value	Boolean	Whether the abnormal table contains null values
abnormal_table_output_data_number	Integer	Number of rows output from the abnormal table. Value 0 indicates that all rows are output.
score_switch	Boolean	Whether to enable quality scoring
score_schema	String	Schema where the quality scoring table is located
score_table	String	Name of the quality scoring table
score_expression	String	Quality scoring expression

Status code: 400

Table 8-55 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-56 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

8.4 Comparison Jobs

8.4.1 Obtaining the Comparison Job List

Function

This API is used to obtain the list of comparison jobs.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/consistency-tasks

Table 8-63 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Table 8-64 Query Parameters

Parameter	Mandatory	Type	Description
category_id	No	Long	Directory ID
name	No	String	Name
schedule_status	No	String	Scheduling status, which can be UNKNOWN (the scheduling status is unknown), NOT_START (scheduling has not started), SCHEDULING (the scheduling is in progress), FINISH_SUCCESS (the scheduling is completed properly), KILL (the scheduling is manually stopped), or RUNNING_EXCEPTION (the scheduling fails).
start_time	No	Long	Start time of the last query period. The value is a 13-digit timestamp accurate to millisecond.
end_time	No	Long	End time of the last query period. The value is a 13-digit timestamp accurate to millisecond.
creator	No	String	Creator
limit	No	Long	Number of records displayed on each page. The maximum value is 100 .
offset	No	Long	Pagination offset. The minimum value is 0 .

Request Parameters

Table 8-65 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-66 Response body parameters

Parameter	Type	Description
count	Long	Total number of records
resources	Array of QualityTaskOverviewVO_2 objects	Pagination data

Table 8-67 QualityTaskOverviewVO_2

Parameter	Type	Description
id	Long	Comparison job ID
name	String	Comparison job name
category_id	Long	Directory ID
schedule_status	String	Scheduling status, which can be UNKNOWN (the scheduling status is unknown), NOT_START (scheduling has not started), SCHEDULING (the scheduling is in progress), FINISH_SUCCESS (the scheduling is completed properly), KILL (the scheduling is manually stopped), or RUNNING_EXCEPTION (the scheduling fails).

Parameter	Type	Description
schedule_period	String	Scheduling period. The value can be MINUTE, HOUR, DAY, or WEEK.
schedule_interval	String	Scheduling interval. When the scheduling period is minute, hour, or day, the scheduling interval is a number. When the scheduling period is week, the scheduling interval is days in a week, for example, MONDAY,TUESDAY.
create_time	Long	Creation time. The value is a 13-digit timestamp accurate to millisecond.
last_run_time	Long	Last running time. The value is a 13-digit timestamp accurate to millisecond.
creator	String	Creator

Status code: 400

Table 8-68 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-69 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

Response. If the operation is successful, **InstanceVO** is returned.

8.4.2 Obtaining Comparison Job Details

Function

This API is used to obtain the details of a comparison job.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/consistency-tasks/{id}

Table 8-70 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
id	Yes	String	Comparison job ID

Request Parameters

Table 8-71 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-72 Response body parameters

Parameter	Type	Description
id	Long	Job ID
name	String	Job name
description	String	Job description
category_id	Long	Catalog ID
level	String	Alarm severity. SUGGEST indicates warning, MINOR indicates minor, MAJOR indicates major, and FATAL indicates fatal.
alarm_condition	String	Unified alarm condition
alarm_notify	Boolean	Whether to enable alarm notifications

Parameter	Type	Description
alarm_notify_type	String	Alarm notification type. TRIGGER_ALARM indicates that an alarm is triggered. RUN_SUCCESS indicates that the execution is successful. TRIGGER_ALARM_AND_RUNNING_SUCCESS indicates that an alarm is triggered and that the execution is successful.
alarm_notify_topic	String	Notification topic name
schedule_type	String	Scheduling type. The value can be ONCE (one-off scheduling) or PERIODIC (periodic scheduling).
schedule_period	String	Scheduling period. The value can be MINUTE, HOUR, DAY, or WEEK .
schedule_interval	String	Scheduling interval. When the scheduling period is minute, hour, or day, the scheduling interval is a number. When the scheduling period is week, the scheduling interval is days in a week, for example, MONDAY,TUESDAY .
schedule_start_time	String	Scheduling start time
schedule_end_time	String	Scheduling end time
create_time	Long	Last execution time. The value is a 13-digit timestamp accurate to millisecond.
last_run_time	Long	Last execution time. The value is a 13-digit timestamp accurate to millisecond.
sub_rules	Array of ConsistencyRuleDetailForOpenApi objects	Sub-rules

Table 8-73 ConsistencyRuleDetailForOpenApi

Parameter	Type	Description
id	Long	Sub-rule ID

Parameter	Type	Description
sub_rule_name	String	Sub-rule name
type	String	Rule type. SingleDatabase indicates a database rule, SingleTable indicates a table rule, SingleColumn indicates a field rule, CrossColumn indicates a cross-field rule, and Customize indicates a custom rule.
template_id	Long	Rule template ID
connection	String	Data connection ID
connection_type	String	Data connection type
databases	String	Database names. Use commas (,) to separate multiple values.
sql	String	SQL script in the custom rule
tables	String	Table names. Use commas (,) to separate multiple values.
reference_tables	String	Reference table names. Use commas (,) to separate multiple values.
columns	String	Field names. Use commas (,) to separate multiple values.
reference_columns	String	Reference column names. Use commas (,) to separate multiple values.
dimension	String	Dimension
queue	String	DLI queue
regular_expression	String	Regular expression as the rule template
template_arguments	String	Template parameters
weight	Integer	Rule weight
calculation_range	String	Calculation range
calculation_range_sql	String	Calculation range SQL
alarm_condition	String	Alarm expression

Status code: 400

Table 8-74 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-75 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

8.5 O&M

8.5.1 Obtaining the Task Execution Result List

Function

This API is used to obtain the list of task execution results.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/instances

Table 8-82 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Table 8-83 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Rule name
task_type	No	String	Task instance type. Value QUALITY_TASK indicates a quality job and value CONSISTENCY_TASK indicates a comparison job.

Parameter	Mandatory	Type	Description
run_status	No	String	Status. The value can be RUNNING , FAILED , ALARMING , SUCCESS , SUSPENDING , or UNKNOWN .
notify_status	No	String	Notification status. The value can be NOT_TRIGGERED , SUCCESS , or FAILED .
start_time	No	Long	Start time of the last query period. The value is a 13-digit timestamp accurate to millisecond.
end_time	No	Long	End time of the last query period. The value is a 13-digit timestamp accurate to millisecond.
limit	No	Integer	Number of records displayed on each page. The maximum value is 100 .
offset	No	Integer	Paging offset

Request Parameters

Table 8-84 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-85 Response body parameters

Parameter	Type	Description
count	Integer	Quantity
resources	Array of InstanceOverviewVo objects	Resources

Table 8-86 InstanceOverviewVo

Parameter	Type	Description
id	Long	Job instance ID
name	String	Job instance name
task_id	Long	task id
task_type	String	Job type. Value QUALITY_TASK indicates a quality job and value CONSISTENCY_TASK indicates a comparison job.
run_status	String	Job running status. The value can be RUNNING, FAILED, ALARMING, or SUCCESS.
notify_status	String	Notification status. The value can be NOT_TRIGGERED, SUCCESS, or FAILED.
start_time	Long	Start time
end_time	Long	End time

Status code: 400**Table 8-87** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed

8.5.2 Obtaining the Instance Result

Function

This API is used to obtain the instance result.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/instances/{instance_id}/result

Table 8-89 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
instance_id	Yes	String	Project ID

Request Parameters

Table 8-90 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-91 Response body parameters

Parameter	Type	Description
count	Integer	Total number of records
resources	Array of SubInstanceResult objects	Resource configuration ID for a subjob instance

Table 8-92 SubInstanceResult

Parameter	Type	Description
sub_rule_id	String	Sub-rule ID
sub_instance_instance_id	String	Sub-rule instance ID
abnormal_table_status	String	Abnormal table task status. Value UNSUPPORTED indicates that abnormal tables are not supported, READY indicates that the abnormal table is being prepared, RUNNING indicates that the abnormal table task is running, FAILED indicates that the abnormal table task fails, and SUCCESS indicates that the abnormal table task is successfully executed.
results	Array of objects	Result set

Status code: 500**Table 8-93** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

Status code: 200

Success

```

8.5.3 Data quality O&M management operation processing and recording

Function

This API is used to handle problems of data quality monitoring instances. On the console, you can choose More > Handling & Record to go to the problem handling page.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v2/{project_id}/quality/instances/{instance_id}

Table 8-94 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
instance_id	Yes	String	Instance ID. For details about how to obtain the instance ID, see Instance ID and Workspace ID .

Request Parameters

Table 8-95 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-96 Request body parameters

Parameter	Mandatory	Type	Description
detail	No	String	This field is used only when you enter handling comments or close an issue. Enter related comments or closure description.

Parameter	Mandatory	Type	Description
operator	No	String	This field is used only when the problem is handed over to others. Select the handover owner.
open	No	Boolean	Issue handling method. false indicates closing the issue. true indicates the issue handling suggestion or handling the issue to others.
cancel_run	No	Boolean	Whether to cancel the task. If the task is canceled, it will be stopped immediately. Value false means to cancel the task, and value true means not to cancel the task.

Response Parameters

Status code: 200

Table 8-97 Response body parameters

Parameter	Type	Description
data	String	Returned information

Status code: 500

Table 8-98 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

8.6 Quality Reports

8.6.1 Obtaining a Quality Report Scoring System

Function

This API is used to obtain the scoring system for quality reports.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/report/scoring

Table 8-99 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 8-100 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-101 Response body parameters

Parameter	Type	Description
full_score	Integer	Full score

Status code: 400

Table 8-102 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-103 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

```
GET /v2/0833a5737480d53b2f25c010dc1a7b88/quality/report/scoring
```

Example Responses

Status code: 200

Success

```
{  
  "full_score" : 100  
}
```

Status Codes

Status Code	Description

8.6.2 Obtaining the Quality Report Overview

Function

This API is used to obtain the quality report overview.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/report/overview

Table 8-104 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-105 Query Parameters

Parameter	Mandatory	Type	Description
quality_score_dimension	Yes	String	Quality scoring dimension.
l1	No	String	Subject area group (valid for business reports).

Parameter	Mandatory	Type	Description
l2	No	String	Subject area (valid for business reports).
l3	No	String	Business object (valid for business reports).
data_connection_id	No	String	Data connection ID (valid for technical reports).
database_name	No	String	Database name (valid for technical reports).
table_name	No	String	Data table name (valid for technical reports).
start_timestamp	No	Long	Start timestamp.
end_timestamp	No	Long	End timestamp.

Request Parameters

Table 8-106 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-107 Response body parameters

Parameter	Type	Description
score	Double	Total score

Parameter	Type	Description
ranges	Array of ScoreRangeVO objects	List and number of ranges

Table 8-108 ScoreRangeVO

Parameter	Type	Description
count	Integer	Quantity
name	String	Range name

Status code: 400

Table 8-109 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-110 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed

8.6.3 Obtaining the Quality Report Trend

Function

This API is used to obtain the quality report trend.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/report/trend

Table 8-111 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-112 Query Parameters

Parameter	Mandatory	Type	Description
quality_score_dimension	Yes	String	Quality scoring dimension.
l1	No	String	Subject area group (valid for business reports).
l2	No	String	Subject area (valid for business reports).
l3	No	String	Business object (valid for business reports).
data_connection_id	No	String	Data connection ID (valid for technical reports).
database_name	No	String	Database name (valid for technical reports).
table_name	No	String	Data table name (valid for technical reports).
start_timestamp	No	Long	Start timestamp.
end_timestamp	No	Long	End timestamp.

Request Parameters

Table 8-113 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-114 Response body parameters

Parameter	Type	Description
trends	Array of ScoreTrendVO objects	ScoreTrendVO , which is the array of score change trends

Table 8-115 ScoreTrendVO

Parameter	Type	Description
score	Double	Score
timestamp	String	Timestamp

Status code: 400

Table 8-116 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

8.6.4 Obtaining the Quality Report Rules

Function

This API is used to obtain quality report rules.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/report/rules

Table 8-118 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-119 Query Parameters

Parameter	Mandatory	Type	Description
data_connection_id	No	String	Data connection ID. If you want to obtain the technical report rule score, set data_connection_id, database_name and table_name.
database_name	No	String	Name of the database. If you want to obtain the score of the technical report rule, you must set data_connection_id, database_name and table_name.
table_name	No	String	Table name. If you want to obtain the score of the technical report rule, you must set data_connection_id, database_name and table_name.
table_object_name	No	String	Data table object name (data connection.database.schema table/table). If the service report rule score is obtained, you do not need to set data_connection_id, database_name and table_name. You only need to set table_object_name.
start_timestamp	No	Long	Start timestamp.
end_timestamp	No	Long	End timestamp.
limit	No	Long	Number of records on each page. The value range is [0,100].

Parameter	Mandatory	Type	Description
offset	No	Long	Pagination offset. The minimum value is 0.

Request Parameters

Table 8-120 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-121 Response body parameters

Parameter	Type	Description
count	Integer	Number of data records
rules	Array of BusinessScoreRuleVO objects	Number of business score rules

Table 8-122 BusinessScoreRuleVO

Parameter	Type	Description
rule_name	String	Rule name
type	Integer	Rule type. The value can be 0 (custom) or 1 (system).
score	Double	Rule score
rule_id	String	Rule ID, which is used to switch to the rule details page

Parameter	Type	Description
instance_id	String	Rule instance ID, which is used to switch to the result page
scoring_weight	Integer	Rule weight
rule_type_name	String	Rule type name
dimension_name	String	Rule dimension
sub_rule_instance_id	String	Sub-rule instance ID

Status code: 400

Table 8-123 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-124 Response body parameters

Parameter	Type	Description

8.6.5 Obtaining Sub-rule Fields of a Quality Report

Function

This API is used to obtain the score of a sub-rule field in a quality report.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/report/sub-rule/results

Table 8-125 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-126 Query Parameters

Parameter	Mandatory	Type	Description
data_connection_id	No	String	Data connection ID. If you want to obtain the technical report rule score, set data_connection_id, database_name and table_name.
database_name	No	String	Name of the database. If you want to obtain the score of the technical report rule, you must set data_connection_id, database_name and table_name.
table_name	No	String	Table name. If you want to obtain the score of the technical report rule, you must set data_connection_id, database_name and table_name.
table_object_name	No	String	Data table object name (data connection.database.schema table/table). If the service report rule score is obtained, you do not need to set data_connection_id, database_name and table_name. You only need to set table_object_name.
sub_rule_instance_id	Yes	String	Sub-rule instance ID
start_timestamp	No	Long	Start timestamp.
end_timestamp	No	Long	End timestamp.
limit	No	Long	Number of records on each page. The value range is [0,100].
offset	No	Long	Pagination offset. The minimum value is 0.

Request Parameters

Table 8-127 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-128 Response body parameters

Parameter	Type	Description
header	Array of strings	Table header
rows	Array<Array<String>>	Table rows
count	Integer	Number of data rows, which is used for pagination

Status code: 400

Table 8-129 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-130 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

8.6.6 Obtaining the Technical Report Data

Function

This API is used to obtain a technical report.

Calling Method

For details, see [Calling APIs](#).

URI

```
GET /v2/{project_id}/quality/report/technology/scores
```

Table 8-131 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-132 Query Parameters

Parameter	Mandatory	Type	Description
data_connection_id	No	String	Data connection ID, which is obtained from the management center.
database_name	No	String	Specifies the database name.
table_name	No	String	Specifies the name of the table.
data_connection_score_order	No	String	Sorting order for data connections. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
database_score_order	No	String	Sorting order for database scores. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
table_score_order	No	String	Sorting order for data table scores. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
start_timestamp	No	Long	Start timestamp.
end_timestamp	No	Long	End timestamp.

Parameter	Mandatory	Type	Description
limit	No	Long	Number of records on each page. The value range is [0,100].
offset	No	Long	Pagination offset. The minimum value is 0.

Request Parameters

Table 8-133 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-134 Response body parameters

Parameter	Type	Description
count	Integer	Number of data records
scores	Array of TechScoreVo objects	Returned score list

Table 8-135 TechScoreVo

Parameter	Type	Description
data_connection_id	String	Data connection ID
data_connection_name	String	Data connection name

Parameter	Type	Description
database_name	String	Database name
table_name	String	Table name
data_connection_score	Double	Data connection score
database_score	Double	Database score
table_score	Double	Table score

Status code: 400**Table 8-136** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500**Table 8-137** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

```
GET /v2/0833a5737480d53b2f25c010dc1a7b88/quality/report/technology/scores
```

Example Responses

Status code: 200

Success

```
{  
  "count": 1,  
  "scores": [{  
    "data_connection_id": "2d9dcb2076b34bbab1c675f070d6af9d",

8.6.7 Obtaining the Business Report Data

Function

This API is used to obtain a business report.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/report/business/scores

Table 8-138 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-139 Query Parameters

Parameter	Mandatory	Type	Description
table_name	No	String	Specifies the name of the table.
l1	No	String	Subject area group.

Parameter	Mandatory	Type	Description
l2	No	String	Subject area.
l3	No	String	Business object.
l1_score_order	No	String	Sorting order for subject area groups. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
l2_score_order	No	String	Sorting order for subject areas. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
l3_score_order	No	String	Sorting order for business objects. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
table_score_order	No	String	Sorting order for data table scores. Value 0 indicates the ascending order, and value 1 indicates the descending order. This order is mutually exclusive with other sorting conditions.
start_timestamp	No	Long	Start timestamp.
end_timestamp	No	Long	End timestamp.
limit	No	Long	Number of records on each page. The value range is [0,100].
offset	No	Long	Pagination offset. The minimum value is 0 .

Request Parameters

Table 8-140 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-141 Response body parameters

Parameter	Type	Description
count	Integer	Number of data records
scores	Array of BusinessScoreVO objects	Returned BusinessScoreVO

Table 8-142 BusinessScoreVO

Parameter	Type	Description
id	String	Score ID
l1	String	Subject area group
l2	String	Subject area
l3	String	Business object
table_name	String	Table object name in the format of <i>Data connection.Database.Schema table/Table</i> .
l1_score	Double	Subject area group score
l2_score	Double	Subject area score
l3_score	Double	Business object score

Parameter	Type	Description
table_score	Double	Table score

Status code: 400

Table 8-143 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Status code: 500

Table 8-144 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

```
GET /v2/0833a5737480d53b2f25c010dc1a7b88/quality/report/business/scores
```

Example Responses

Status code: 200

Success

```

8.7 Import/Export

8.7.1 Export Resources

Function

This API is used to export resources from DataArts Quality, such as quality jobs and comparison jobs.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/quality/resource/export

Table 8-145 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 8-146 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-147 Request body parameters

Parameter	Mandatory	Type	Description
type	Yes	String	Type of the resources to be exported in batches. rule-template indicates quality rule templates, quality-task indicates quality jobs, consistency-task indicates comparison jobs, and report indicates quality reports.
is_select_all	No	Boolean	Whether to export all jobs in the current workspace. Value true indicates that all jobs are to be exported, and value false indicates that not all jobs are to be exported. The default value is false .
resources	No	Array of longs	Resource ID array
export_mode	No	String	Export mode. null indicates that data is to be exported to a local file system, and obs indicates that data is to be exported to OBS. This parameter is available only for exporting quality reports.
obs_service_type	No	String	Service type. Value technology indicates a technical report, and value business indicates a business report. This parameter is available only for exporting quality reports.

Response Parameters

Status code: 200

Table 8-148 Response body parameters

Parameter	Type	Description
resource_id	String	Returned export task ID

Status code: 500**Table 8-149** Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

None

Status Codes

Status Code	Description
200	Success
500	INTERNAL SERVER ERROR

8.7.2 Obtaining the Status of an Import/Export Task

Function

This API is used to obtain the progress of an export or import task.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/resource/status/{resource_id}

Table 8-150 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
resource_id	Yes	String	ID of the resource export/import task. It can be obtained from the return of the API for exporting resources or importing resources .

Request Parameters

Table 8-151 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-152 Response body parameters

Parameter	Type	Description
id	String	Record ID
resource_id	String	ID of the resource export or import task
resource_type	String	Resource type
action	String	Operation type. EXPORT indicates export, and REPORT indicates import.
file_name	String	Resource file name

Parameter	Type	Description
start_time	String	Start time
end_time	String	End time
status	String	Task status. WAITING indicates that the task is waiting to be executed, RUNNING indicates that the task is being executed, TIMEOUT indicates that the task times out, FAILED indicates that the task fails, and SUCCESS indicates that the task is executed successfully.
error_msg	String	Error message
project_id	String	Project ID
domain_id	String	User ID
user_name	String	Username
export_resources	String	Resources to be exported. This parameter is left blank by default.
import_body	String	Import body. This parameter is left blank by default.
file_status	String	File status. PREPARING indicates that the file is being prepared. GENERATED indicates that the file is ready. DELETED indicates that the file has been deleted. FAILED indicates that the file fails to be uploaded or generated.

Status code: 500

Table 8-153 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

None

8.7.3 Downloading a Resource File

Function

This API is used to download a resource file.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v2/{project_id}/quality/resource/download

Table 8-154 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 8-155 Query Parameters

Parameter	Mandatory	Type	Description
resource_id	Yes	String	ID of the resource export/import task. It can be obtained from the return of the API for exporting resources or importing resources .

Parameter	Mandatory	Type	Description
obs_type	No	String	Export type. The options are technology (technical report) and business (business report). When a quality report is exported, this field is mandatory.

Request Parameters

Table 8-156 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Response Parameters

Status code: 200

Table 8-157 Response body parameters

Parameter	Type	Description
-	File	Downloaded resource file

Status code: 500

Table 8-158 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

None

Status Codes

Status Code	Description
200	Downloaded resource file

8.7.4 Uploading a Resource File

Function

This API is used to import a file to DataArts Quality.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/quality/resource/upload

Table 8-159 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 8-160 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-161 FormData parameters

Parameter	Mandatory	Type	Description
type	Yes	String	Type of the resource to be uploaded. The value can be rule-template, quality-task, or consistency-task.
file	Yes	File	Resource file to be uploaded.

Response Parameters

Status code: 200

Table 8-162 Response body parameters

Parameter	Type	Description
resource_id	String	Resource ID
topics	Array of strings	SMN topic
matched_topics	Array of MatchedTopicMs objects	Matched topics
directories	Array of strings	Directories in DataArts Quality
queues	Array of strings	Queue name
connections	Array of NameType objects	Data connection information

Table 8-163 MatchedTopicMsg

Parameter	Type	Description
id	String	Topic ID
name	String	Topic name

Table 8-164 NameType

Parameter	Type	Description
name	String	Name
type	String	Type

Status code: 500

Table 8-165 Response body parameters

8.7.5 Importing Resources

Function

This API is used to import resources to DataArts Quality.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/quality/resource/import

Table 8-166 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 8-167 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain the token, see Authentication .

Table 8-168 Request body parameters

Parameter	Mandatory	Type	Description
resource_id	Yes	String	Resource ID

Parameter	Mandatory	Type	Description
type	Yes	String	Type of the resources to be imported. rule-template indicates quality rule templates, quality-task indicates quality jobs, and consistency-task indicates comparison jobs.
strategy	No	String	Policy for handling duplicate resource names during import. The value can be SKIP , OVERRIDE , or TERMINATION .
directories	No	Array of ValueMappingVO objects	Directories
topics	No	Array of ValueMappingVO objects	Alarm notification topics
connections	No	Array of ValueMappingVO objects	Connections. This parameter is available only for DLI.
queues	No	Array of ValueMappingVO objects	Queues. This parameter is available only for DLI.

Table 8-169 ValueMappingVO

Parameter	Mandatory	Type	Description
old_value	No	String	Data before mapping
new_value	No	String	Data after mapping
mapping_value	No	String	Data after mapping. The value can be empty. If the value is empty, new_value is used.

Response Parameters

Status code: 500

Table 8-170 Response body parameters

Parameter	Type	Description
error_code	String	Error code, for example, DQC.0000 which indicates that the request was successfully processed
error_msg	String	Error message

Example Requests

None

Example Responses

None

Status Codes

8.8 Job Instances

8.8.1 Stopping Instances

Function

This API is used to stop instances.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v2/{project_id}/quality/instances/batch-stop

Table 8-171 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .

Request Parameters

Table 8-172 Request header parameters

Parameter	Mandatory	Type	Description
workspace	Yes	String	DataArts Studio workspace ID. For details about how to obtain it, see Instance ID and Workspace ID .
X-Auth-Token	Yes	String	IAM token. For details about how to obtain it, see Authentication .

Table 8-173 Request body parameters

Parameter	Mandatory	Type	Description
[items]	Yes	Array of integers	IDs of the instances to be stopped

Response Parameters

Status code: 200

Table 8-174 Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Status code: 400

Table 8-175 Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Status code: 406**Table 8-176** Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Status code: 500**Table 8-177** Response body parameters

Parameter	Type	Description
error_code	String	Error code. For example, DQC.0000 indicates that the request was successfully processed.
error_msg	String	Error message
data	Object	Returned data

Example Requests

Stop instances whose IDs are 1317151269261262848 and 1317151258234322945.

```
POST https://{endpoint}/v2/{project_id}/quality/instances/batch-stop
```

```
[ 1317151269261262848, 1317151258234322945 ]
```

Example Responses

Status code: 200

The API call is successful. **InstanceVO** is returned.

```
{  
  "error_code" : "DLG.2700",  
  "error_msg" : "Successful"  
}
```

Status Codes

Status Code	Description
200	The API call is successful. InstanceVO is returned.
400	BadRequest
406	NOT ACCEPTABLE
500	INTERNAL SERVER ERROR

9 DataArts DataService APIs

9.1 API Management

9.1.1 Create an API

Function

Create an API.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis

Table 9-1 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-2 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-3 Request body parameters

Parameter	Mandatory	Type	Description
catalog_id	No	String	Catalog ID.
name	No	String	API name
description	No	String	API description
log_flag	No	Boolean	Indicates whether to enable the access log function.

Parameter	Mandatory	Type	Description
api_type	No	String	API type Enumerated values: <ul style="list-style-type: none"> • API_SPECIFIC_TYPE_CONFIGURATION: configuration API • API_SPECIFIC_TYPE_SCRIPT: script API • API_SPECIFIC_TYPE_MYBATIS: MyBatis API • API_SPECIFIC_TYPE_GROOVY: Groovy API • API_SPECIFIC_TYPE_REGISTER: registered API • API_SPECIFIC_TYPE_ORCHESTRATE: orchestrated API • API_TYPE_CREATE: created API (obsolete) • API_TYPE_REGISTER: registered API (obsolete)
auth_type	No	String	Authentication mode Enumerated values: <ul style="list-style-type: none"> • APP: app secret • IAM: IAM token • NONE: authentication disabled
retention_period	No	Integer	Minimum retention period in hours
manager	No	String	API reviewer
path	No	String	API path
protocol	No	String	API request protocol type. Enumerated values: <ul style="list-style-type: none"> • PROTOCOL_TYPE_HTTP: HTTP • PROTOCOL_TYPE_HTTPS: HTTPS
request_type	No	String	Request type Enumerated values: <ul style="list-style-type: none"> • REQUEST_TYPE_POST: POST • REQUEST_TYPE_GET: GET

Parameter	Mandatory	Type	Description
tags	No	Array of strings	Tag
visibility	No	String	API visibility Enumerated values: <ul style="list-style-type: none"> ● WORKSPACE: visible to a workspace ● PROJECT: visible to a project ● DOMAIN: visible to a tenant
publish_type	No	String	Publishing type (obsolete) Enumerated values: <ul style="list-style-type: none"> ● PUBLISH_TYPE_PUBLIC: public ● PUBLISH_TYPE_PRIVATE: private
data_mask_switch	No	Boolean	Whether to enable data masking
data_mask_params	No	Array of DataMaskParams objects	Data masking parameters
body	No	String	Request body description. It is available for registration APIs only.
datasource_config_list	No	Array of DatasourceConfig objects	Configuration of multiple data sources. It is available for Groovy APIs only.
groovy_content	No	String	Groovy text. It is available for Groovy APIs only.
request_params	No	Array of RequestParam objects	List of API request parameters.
datasource_config	No	DatasourceConfig object	API data source configuration.
backend_config	No	BackendConfig object	API backend configuration. It is available for registration APIs only.

Table 9-4 DataMaskParas

Parameter	Mandatory	Type	Description
column_name	No	String	Sensitive field
algorithm_name	No	String	Algorithm name
algorithm_type	No	String	Algorithm type
en_name	No	String	Algorithm name
algorithm_parameters	No	String	Parameter
failure_policy	No	String	Failure policy Enumerated values: <ul style="list-style-type: none"> • SKIP • INTERRUPT_AND_EXCEPTION • SET_NULL • DEFAULT_VALUE

Table 9-5 DatasourceConfig

Parameter	Mandatory	Type	Description
type	No	String	Data source type. Enumerated values: <ul style="list-style-type: none"> • MYSQL • DLI • DWS • HIVE • HBASE
connection_name	No	String	Name of a data connection.
connection_id	No	String	Data connection ID.
database	No	String	Indicates the database name.
datatable	No	String	Name of a data table.
table_id	No	String	Data table ID.
queue	No	String	Queue name of DLI.

Parameter	Mandatory	Type	Description
access_mode	No	String	Mode for obtaining data Enumerated values: <ul style="list-style-type: none"> • SQL: SQL • ROW_KEY: ROW_KEY, available only for HBase • PREFIX_FILTER: PREFIX_FILTER, available only for HBase
access_type	No	String	Mode for obtaining data (obsolete) Enumerated values: <ul style="list-style-type: none"> • SCRIPT: script • CONFIGURAITON: configuration
pagination	No	String	Pagination mode Enumerated values: <ul style="list-style-type: none"> • DEFAULT: default • CUSTOM: custom
sql	No	String	SQL statement in script mode
backend_parameters	No	Array of ApiRequestPara objects	API backend parameter.
response_parameters	No	Array of ApiResponsePara objects	Return parameters of configuration APIs.
order_paras	No	Array of DatasourceOrderPara objects	Sorting parameter.
total_size_sql	No	String	SQL script for calculating the total number of records

Table 9-6 RequestPara

Parameter	Mandatory	Type	Description
name	No	String	Parameter name

Parameter	Mandatory	Type	Description
position	No	String	Parameter position Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_POSITION_PATH: request path • REQUEST_PARAMETER_POSITION_HEADER: request header • REQUEST_PARAMETER_POSITION_QUERY: request query
type	No	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_TYPE_NUMBER: number • REQUEST_PARAMETER_TYPE_STRING: string
description	No	String	Parameter description.
necessary	No	Boolean	Indicates whether a parameter is mandatory.
example_value	No	String	Example value
default_value	No	String	Default value.
support_null	No	Boolean	Null supported

Table 9-7 ApiRequestPara

Parameter	Mandatory	Type	Description
name	No	String	Parameter name
mapping	No	String	Mapping field.

Parameter	Mandatory	Type	Description
condition	No	String	Operator Enumerated values: <ul style="list-style-type: none"> ● CONDITION_TYPE_EQ: equal to ● CONDITION_TYPE_NE: not equal to ● CONDITION_TYPE_GT: greater than ● CONDITION_TYPE_GE: greater than or equal to ● CONDITION_TYPE_LT: less than ● CONDITION_TYPE_LE: less than or equal to ● CONDITION_TYPE_LIKE: fuzzy search, such as %like % ● CONDITION_TYPE_LIKE_L: fuzzy search, such as %like ● CONDITION_TYPE_LIKE_R: fuzzy search, such as like%

Table 9-8 ApiResponsePara

Parameter	Mandatory	Type	Description
name	No	String	Parameter name
field	No	String	Bound table field.
type	No	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> ● REQUEST_PARAMETER_TYPE_NUMBER: number ● REQUEST_PARAMETER_TYPE_STRING: string
description	No	String	Parameter description.
example_value	No	String	Example value of a parameter.

Table 9-9 DatasourceOrderPara

Parameter	Mandatory	Type	Description
name	No	String	Name of a sorting parameter.
field	No	String	Indicates the corresponding parameter field.
optional	No	Boolean	Indicates whether the parameter is optional.
sort	No	String	Sorting method Enumerated values: <ul style="list-style-type: none"> • ASC: ascending order • DESC: descending order • CUSTOM: custom order
order	No	Integer	Sequence of sorting parameters.
description	No	String	Sorting parameter description

Table 9-10 BackendConfig

Parameter	Mandatory	Type	Description
type	No	String	Request type <ul style="list-style-type: none"> • REQUEST_TYPE_POST: POST request • REQUEST_TYPE_GET: GET request
protocol	No	String	API request protocol type <ul style="list-style-type: none"> • PROTOCOL_TYPE_HTTP: HTTP • PROTOCOL_TYPE_HTTPS: HTTPS
host	No	String	Backend host
timeout	No	Integer	Backend timeout interval.
path	No	String	Backend request path
backend_parameters	No	Array of BackendRequestPara objects	API backend parameters.

Parameter	Mandatory	Type	Description
constant_parameters	No	Array of BackendConstant objects	Backend constant parameter.

Table 9-11 BackendRequestPara

Parameter	Mandatory	Type	Description
name	No	String	API request parameter name
position	No	String	Parameter position Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_POSITION_PATH: request path • REQUEST_PARAMETER_POSITION_HEADER: request header • REQUEST_PARAMETER_POSITION_QUERY: request query
backend_parameter_name	No	String	Backend parameter.

Table 9-12 BackendConstant

Parameter	Mandatory	Type	Description
name	No	String	Name of a constant parameter.
type	No	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_TYPE_NUMBER: number • REQUEST_PARAMETER_TYPE_STRING: string

Parameter	Mandatory	Type	Description
position	No	String	Parameter position Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_POSITION_PATH: request path • REQUEST_PARAMETER_POSITION_HEADER: request header • REQUEST_PARAMETER_POSITION_QUERY: request query
description	No	String	Constant parameter description.
value	No	String	Constant parameter value.

Response Parameters

Status code: 200

Table 9-13 Response body parameters

Parameter	Type	Description
id	String	ID of the API that is successfully created.

Status code: 400

Table 9-14 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

- Create a configuration API.

Status Codes

Status Code	Description
200	Success
400	Bad request

9.1.2 Querying an API List

Function

This API is used to query the API list.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apis

Table 9-15 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-16 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query start coordinate, that is, skipping the first X records. The value can only be 0 or an integer multiple of limit. If the requirement is not met, the value is rounded down.
limit	No	Integer	Maximum number of records that can be queried
name	No	String	Fuzzy query based on the API name.
description	No	String	Fuzzy query based on the API description.
create_user	No	String	Create a user fuzzy query based on the API.
start_time	No	String	Start time, which is accurate to second, complies with RFC3339, and uses the UTC time zone, for example, 2024-02-24T16:00:00.000Z

Parameter	Mandatory	Type	Description
end_time	No	String	End time, which is accurate to second, complies with RFC3339, and uses the UTC time zone, for example, 2024-04-05T15:59:59.998Z
tags	No	Array of strings	Tag
api_type	No	String	API type Enumerated values include: <ul style="list-style-type: none"> • API_SPECIFIC_TYPE_CONFIGURATION: configuration API • API_SPECIFIC_TYPE_SCRIPT: script API • API_SPECIFIC_TYPE_MYBATIS: MyBatis API • API_SPECIFIC_TYPE_GROOVY: Groovy API • API_SPECIFIC_TYPE_REGISTER: registered API • API_SPECIFIC_TYPE_ORCHESTRATE: orchestrated API
publish_status	No	String	API publishing status Enumerated values include: <ul style="list-style-type: none"> • PUBLISHED: published • NOT_PUBLISHED: unpublished
table_name	No	String	Fuzzy query based on the database table name used by the API.
authorization_status	No	String	Authorization status. Enumerated values: <ul style="list-style-type: none"> • NO_AUTHORIZATION_REQUIRED: no authorization required • UNAUTHORIZED: unauthorized • AUTHORIZED: authorized

Request Parameters

Table 9-17 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.
x-return-publish-messages	No	String	Specifies whether to return the publishing information of the exclusive API.

Response Parameters

Status code: 200**Table 9-18** Response body parameters

Parameter	Type	Description
total	Integer	Total number of APIs.

Parameter	Type	Description
records	Array of ApiOverview objects	API list.

Table 9-19 ApiOverview

Parameter	Type	Description
id	String	API ID.
name	String	API name
group_id	String	API group ID (shared version).
description	String	API description,
status	String	<p>API status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension

Parameter	Type	Description
debug_status	String	API debugging status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none">• API_DEBUG_WAITING: waiting to be debugged• API_DEBUG_FAILED: debugging failed• API_DEBUG_SUCCESS: debugging successful
publish_messages	Array of ApiPublishDTO objects	Release information list (exclusive edition).
type	String	API type.
manager	String	API reviewer.
create_user	String	API creator.
create_time	Long	API creation time
authorization_status	String	Authorization status. Enumerated values: <ul style="list-style-type: none">• NO_AUTHORIZATION_REQUIRED: no authorization required• UNAUTHORIZED: unauthorized• AUTHORIZED: authorized

Table 9-20 ApiPublishDTO

Parameter	Type	Description
id	String	Release ID.
api_id	String	API ID
instance_id	String	Cluster ID
instance_name	String	Cluster Name

Parameter	Type	Description
api_status	String	<p>API status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension
api_debug	String	<p>API debugging status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_DEBUG_WAITING: waiting to be debugged • API_DEBUG_FAILED: debugging failed • API_DEBUG_SUCCESS: debugging successful

Status code: 400

Table 9-21 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the information about a script API created and published by the administrator.

```

Status Codes

Status Code	Description
200	Success
400	Bad request

9.1.3 Updating an API

Function

Update the API.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v1/{project_id}/service/apis/{api_id}

Table 9-22 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID.

Request Parameters

Table 9-23 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-24 Request body parameters

Parameter	Mandatory	Type	Description
catalog_id	No	String	Catalog ID.
name	No	String	API name
description	No	String	API description
log_flag	No	Boolean	Indicates whether to enable the access log function.
api_type	No	String	API type Enumerated values: <ul style="list-style-type: none"> • API_SPECIFIC_TYPE_CONFIGURATION: configuration API • API_SPECIFIC_TYPE_SCRIPT: script API • API_SPECIFIC_TYPE_MYBATIS: MyBatis API • API_SPECIFIC_TYPE_GROOVY: Groovy API • API_SPECIFIC_TYPE_REGISTER: registered API • API_SPECIFIC_TYPE_ORCHESTRATE: orchestrated API • API_TYPE_CREATE: created API (obsolete) • API_TYPE_REGISTER: registered API (obsolete)

Parameter	Mandatory	Type	Description
auth_type	No	String	Authentication mode Enumerated values: <ul style="list-style-type: none"> • APP: app secret • IAM: IAM token • NONE: authentication disabled
retention_period	No	Integer	Minimum retention period in hours
manager	No	String	API reviewer
path	No	String	API path
protocol	No	String	API request protocol type. Enumerated values: <ul style="list-style-type: none"> • PROTOCOL_TYPE_HTTP: HTTP • PROTOCOL_TYPE_HTTPS: HTTPS
request_type	No	String	Request type Enumerated values: <ul style="list-style-type: none"> • REQUEST_TYPE_POST: POST • REQUEST_TYPE_GET: GET
tags	No	Array of strings	Tag
visibility	No	String	API visibility Enumerated values: <ul style="list-style-type: none"> • WORKSPACE: visible to a workspace • PROJECT: visible to a project • DOMAIN: visible to a tenant
publish_type	No	String	Publishing type (obsolete) Enumerated values: <ul style="list-style-type: none"> • PUBLISH_TYPE_PUBLIC: public • PUBLISH_TYPE_PRIVATE: private
data_mask_switch	No	Boolean	Whether to enable data masking

Parameter	Mandatory	Type	Description
data_mask_params	No	Array of DataMaskParams objects	Data masking parameters
body	No	String	Request body description. It is available for registration APIs only.
datasource_config_list	No	Array of DatasourceConfig objects	Configuration of multiple data sources. It is available for Groovy APIs only.
groovy_content	No	String	Groovy text. It is available for Groovy APIs only.
request_params	No	Array of RequestParam objects	List of API request parameters.
datasource_config	No	DatasourceConfig object	API data source configuration.
backend_config	No	BackendConfig object	API backend configuration. It is available for registration APIs only.

Table 9-25 DataMaskParams

Parameter	Mandatory	Type	Description
column_name	No	String	Sensitive field
algorithm_name	No	String	Algorithm name
algorithm_type	No	String	Algorithm type
en_name	No	String	Algorithm name
algorithm_parameters	No	String	Parameter
failure_policy	No	String	Failure policy Enumerated values: <ul style="list-style-type: none"> • SKIP • INTERRUPT_AND_EXCEPTION • SET_NULL • DEFAULT_VALUE

Table 9-26 DatasourceConfig

Parameter	Mandatory	Type	Description
type	No	String	Data source type. Enumerated values: <ul style="list-style-type: none">• MYSQL• DLI• DWS• HIVE• HBASE
connection_name	No	String	Name of a data connection.
connection_id	No	String	Data connection ID.
database	No	String	Indicates the database name.
datatable	No	String	Name of a data table.
table_id	No	String	Data table ID.
queue	No	String	Queue name of DLI.
access_mode	No	String	Mode for obtaining data Enumerated values: <ul style="list-style-type: none">• SQL: SQL• ROW_KEY: ROW_KEY, available only for HBase• PREFIX_FILTER: PREFIX_FILTER, available only for HBase
access_type	No	String	Mode for obtaining data (obsolete) Enumerated values: <ul style="list-style-type: none">• SCRIPT: script• CONFIGURAITON: configuration
pagination	No	String	Pagination mode Enumerated values: <ul style="list-style-type: none">• DEFAULT: default• CUSTOM: custom
sql	No	String	SQL statement in script mode
backend_parameters	No	Array of ApiRequestPara objects	API backend parameter.

Parameter	Mandatory	Type	Description
response_params	No	Array of ApiResponsePara objects	Return parameters of configuration APIs.
order_params	No	Array of DatasourceOrderPara objects	Sorting parameter.
total_size_sql	No	String	SQL script for calculating the total number of records

Table 9-27 RequestPara

Parameter	Mandatory	Type	Description
name	No	String	Parameter name
position	No	String	Parameter position Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_POSITION_PATH: request path • REQUEST_PARAMETER_POSITION_HEADER: request header • REQUEST_PARAMETER_POSITION_QUERY: request query
type	No	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_TYPE_NUMBER: number • REQUEST_PARAMETER_TYPE_STRING: string
description	No	String	Parameter description.
necessary	No	Boolean	Indicates whether a parameter is mandatory.
example_value	No	String	Example value
default_value	No	String	Default value.
support_null	No	Boolean	Null supported

Table 9-28 ApiRequestPara

Parameter	Mandatory	Type	Description
name	No	String	Parameter name
mapping	No	String	Mapping field.
condition	No	String	Operator Enumerated values: <ul style="list-style-type: none"> ● CONDITION_TYPE_EQ: equal to ● CONDITION_TYPE_NE: not equal to ● CONDITION_TYPE_GT: greater than ● CONDITION_TYPE_GE: greater than or equal to ● CONDITION_TYPE_LT: less than ● CONDITION_TYPE_LE: less than or equal to ● CONDITION_TYPE_LIKE: fuzzy search, such as %like % ● CONDITION_TYPE_LIKE_L: fuzzy search, such as %like ● CONDITION_TYPE_LIKE_R: fuzzy search, such as like%

Table 9-29 ApiResponsePara

Parameter	Mandatory	Type	Description
name	No	String	Parameter name
field	No	String	Bound table field.
type	No	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> ● REQUEST_PARAMETER_TYPE_NUMBER: number ● REQUEST_PARAMETER_TYPE_STRING: string
description	No	String	Parameter description.
example_value	No	String	Example value of a parameter.

Table 9-30 DatasourceOrderPara

Parameter	Mandatory	Type	Description
name	No	String	Name of a sorting parameter.
field	No	String	Indicates the corresponding parameter field.
optional	No	Boolean	Indicates whether the parameter is optional.
sort	No	String	Sorting method Enumerated values: <ul style="list-style-type: none">• ASC: ascending order• DESC: descending order• CUSTOM: custom order
order	No	Integer	Sequence of sorting parameters.
description	No	String	Sorting parameter description

Table 9-31 BackendConfig

Parameter	Mandatory	Type	Description
type	No	String	Request type <ul style="list-style-type: none">• REQUEST_TYPE_POST: POST request• REQUEST_TYPE_GET: GET request
protocol	No	String	API request protocol type <ul style="list-style-type: none">• PROTOCOL_TYPE_HTTP: HTTP• PROTOCOL_TYPE_HTTPS: HTTPS
host	No	String	Backend host
timeout	No	Integer	Backend timeout interval.
path	No	String	Backend request path
backend_parameters	No	Array of BackendRequestPara objects	API backend parameter.

Parameter	Mandatory	Type	Description
constant_parameters	No	Array of BackendConstant objects	Backend constant parameter.

Table 9-32 BackendRequestPara

Parameter	Mandatory	Type	Description
name	No	String	API request parameter name
position	No	String	Parameter position Enumerated values: <ul style="list-style-type: none">• REQUEST_PARAMETER_POSITION_PATH: request path• REQUEST_PARAMETER_POSITION_HEADER: request header• REQUEST_PARAMETER_POSITION_QUERY: request query
backend_parameter_name	No	String	Backend parameter.

Table 9-33 BackendConstant

Parameter	Mandatory	Type	Description
name	No	String	Name of a constant parameter.
type	No	String	Constant parameter type Enumerated values: <ul style="list-style-type: none">• REQUEST_PARAMETER_TYPE_NUMBER: number• REQUEST_PARAMETER_TYPE_STRING: string

Parameter	Mandatory	Type	Description
position	No	String	Parameter position Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_POSITION_PATH: request path • REQUEST_PARAMETER_POSITION_HEADER: request header • REQUEST_PARAMETER_POSITION_QUERY: request query
description	No	String	Constant parameter description.
value	No	String	Constant parameter value.

Response Parameters

Status code: 400

Table 9-34 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

400	Bad request

9.1.4 Querying API Information

Function

This API is used to query API information.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apis/{api_id}

Table 9-35 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID.

Request Parameters

Table 9-36 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-37 Response body parameters

Parameter	Type	Description
id	String	API ID
name	String	API name
group_id	String	ID of the group to which the API belongs (shared edition).
description	String	API description
protocol	String	API request protocol type. Enumerated values: <ul style="list-style-type: none">● PROTOCOL_TYPE_HTTP: HTTP● PROTOCOL_TYPE_HTTPS: HTTPS
publish_type	String	Publishing type (obsolete) Enumerated values: <ul style="list-style-type: none">● PUBLISH_TYPE_PUBLIC: public● PUBLISH_TYPE_PRIVATE: private
log_flag	Boolean	Indicates whether to enable the log recording function.
path	String	API URL.
host	String	Specifies the domain name of the shared edition.
hosts	InstanceHostDTO object	Exclusive domain name.
request_type	String	Request type Enumerated values: <ul style="list-style-type: none">● REQUEST_TYPE_POST: POST● REQUEST_TYPE_GET: GET
create_user	String	API creator.
create_time	Long	Creation time.
update_time	Long	Update time.
manager	String	Name of the API reviewer

Parameter	Type	Description
status	String	<p>API status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension
type	String	<p>API type</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_SPECIFIC_TYPE_CONFIGURATION: configuration API • API_SPECIFIC_TYPE_SCRIPT: script API • API_SPECIFIC_TYPE_REGISTER: registered API
debug_status	String	<p>API debugging status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_DEBUG_WAITING: waiting to be debugged • API_DEBUG_FAILED: debugging failed • API_DEBUG_SUCCESS: debugging successful
publish_messages	Array of ApiPublishDTO objects	Release information list (exclusive edition).

Parameter	Type	Description
request_paras	Array of RequestPara objects	API request parameter.
datasource_config	DatasourceConfig object	Configure the data source.
backend_config	BackendConfig object	Backend settings:

Table 9-38 InstanceHostDTO

Parameter	Type	Description
instance_id	String	Cluster ID
instance_name	String	Cluster name.
intranet_host	String	Internal IP address.
external_host	String	External IP address.
domains	Array of strings	Domain name of the gateway.

Table 9-39 ApiPublishDTO

Parameter	Type	Description
id	String	Release ID.
api_id	String	API ID
instance_id	String	Cluster ID
instance_name	String	Cluster Name

Parameter	Type	Description
api_status	String	<p>API status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension
api_debug	String	<p>API debugging status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_DEBUG_WAITING: waiting to be debugged • API_DEBUG_FAILED: debugging failed • API_DEBUG_SUCCESS: debugging successful

Table 9-40 RequestPara

Parameter	Type	Description
name	String	Parameter name

Parameter	Type	Description
position	String	Parameter position Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_POSITION_PATH: request path • REQUEST_PARAMETER_POSITION_HEADER: request header • REQUEST_PARAMETER_POSITION_QUERY: request query
type	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_TYPE_NUMBER: number • REQUEST_PARAMETER_TYPE_STRING: string
description	String	Parameter description.
necessary	Boolean	Indicates whether a parameter is mandatory.
example_value	String	Example value
default_value	String	Default value.
support_null	Boolean	Null supported

Table 9-41 DatasourceConfig

Parameter	Type	Description
type	String	Data source type. Enumerated values: <ul style="list-style-type: none"> • MYSQL • DLI • DWS • HIVE • HBASE
connection_name	String	Name of a data connection.
connection_id	String	Data connection ID.
database	String	Indicates the database name.
datatable	String	Name of a data table.
table_id	String	Data table ID.

Parameter	Type	Description
queue	String	Queue name of DLI.
access_mode	String	Mode for obtaining data Enumerated values: <ul style="list-style-type: none">• SQL: SQL• ROW_KEY: ROW_KEY, available only for HBase• PREFIX_FILTER: PREFIX_FILTER, available only for HBase
access_type	String	Mode for obtaining data (obsolete) Enumerated values: <ul style="list-style-type: none">• SCRIPT: script• CONFIGURAITON: configuration
pagination	String	Pagination mode Enumerated values: <ul style="list-style-type: none">• DEFAULT: default• CUSTOM: custom
sql	String	SQL statement in script mode
backend_paras	Array of ApiRequestPara objects	API backend parameter.
response_paras	Array of ApiResponsePara objects	Return parameters of configuration APIs.
order_paras	Array of DatasourceOrderPara objects	Sorting parameter.
total_size_sql	String	SQL script for calculating the total number of records

Table 9-42 ApiRequestPara

Parameter	Type	Description
name	String	Parameter name
mapping	String	Mapping field.

Parameter	Type	Description
condition	String	Operator Enumerated values: <ul style="list-style-type: none"> • CONDITION_TYPE_EQ: equal to • CONDITION_TYPE_NE: not equal to • CONDITION_TYPE_GT: greater than • CONDITION_TYPE_GE: greater than or equal to • CONDITION_TYPE_LT: less than • CONDITION_TYPE_LE: less than or equal to • CONDITION_TYPE_LIKE: fuzzy search, such as %like% • CONDITION_TYPE_LIKE_L: fuzzy search, such as %like • CONDITION_TYPE_LIKE_R: fuzzy search, such as like%

Table 9-43 ApiResponsePara

Parameter	Type	Description
name	String	Parameter name
field	String	Bound table field.
type	String	Constant parameter type Enumerated values: <ul style="list-style-type: none"> • REQUEST_PARAMETER_TYPE_NUMBER: number • REQUEST_PARAMETER_TYPE_STRING: string
description	String	Parameter description.
example_value	String	Example value of a parameter.

Table 9-44 DatasourceOrderPara

Parameter	Type	Description
name	String	Name of a sorting parameter.

Parameter	Type	Description
field	String	Indicates the corresponding parameter field.
optional	Boolean	Indicates whether the parameter is optional.
sort	String	Sorting method Enumerated values: <ul style="list-style-type: none"> • ASC: ascending order • DESC: descending order • CUSTOM: custom order
order	Integer	Sequence of sorting parameters.
description	String	Sorting parameter description

Table 9-45 BackendConfig

Parameter	Type	Description
type	String	Request type <ul style="list-style-type: none"> • REQUEST_TYPE_POST: POST request • REQUEST_TYPE_GET: GET request
protocol	String	API request protocol type <ul style="list-style-type: none"> • PROTOCOL_TYPE_HTTP: HTTP • PROTOCOL_TYPE_HTTPS: HTTPS
host	String	Backend host
timeout	Integer	Backend timeout interval.
path	String	Backend request path
backend_paras	Array of BackendRequestPara objects	API backend parameter.
constant_paras	Array of BackendConstant objects	Backend constant parameter.

Table 9-46 BackendRequestPara

Parameter	Type	Description
name	String	API request parameter name

Parameter	Type	Description
position	String	Parameter position Enumerated values: <ul style="list-style-type: none">• REQUEST_PARAMETER_POSITION_PATH: request path• REQUEST_PARAMETER_POSITION_HEADER: request header• REQUEST_PARAMETER_POSITION_QUERY: request query
backend_para_name	String	Backend parameter.

Table 9-47 BackendConstant

Parameter	Type	Description
name	String	Name of a constant parameter.
type	String	Constant parameter type Enumerated values: <ul style="list-style-type: none">• REQUEST_PARAMETER_TYPE_NUMBER: number• REQUEST_PARAMETER_TYPE_STRING: string
position	String	Parameter position Enumerated values: <ul style="list-style-type: none">• REQUEST_PARAMETER_POSITION_PATH: request path• REQUEST_PARAMETER_POSITION_HEADER: request header• REQUEST_PARAMETER_POSITION_QUERY: request query
description	String	Constant parameter description.
value	String	Constant parameter value.

Status code: 400**Table 9-48** Response body parameters

Parameter	Type	Description
error_code	String	Error code.

Parameter	Type	Description
error_msg	String	Error message.

Example Requests

Query the API whose ID is 10e3a4b67f59a9efe64e6bb31859221f.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/apis/10e3a4b67f59a9efe64e6bb31859221f
```

Status Codes

Status Code	Description
200	Success
400	Bad request

9.1.5 Deleting APIs

Function

This API is used to delete APIs in batches.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis/batch-delete

Table 9-49 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-50 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-51 Request body parameters

Parameter	Mandatory	Type	Description
[items]	Yes	Array of strings	API deletion ID list.

Response Parameters

Status code: 400

Table 9-52 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Delete APIs.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/apis/batch-delete  
[ "62a02822ae8d06f38f4950bd680e2735" ]
```

Example Responses

9.1.6 Publishing an API

Function

Publish the API Only published APIs can be called. You can choose to publish an API to a specified gateway.

- Shared version, which must be sent to the shared version of API Gateway.
- Exclusive: You can choose to send APIs to API Gateway Exclusive, ROMA-APIC, or not to publish the gateway as required.

If the initiator of the release request is not the reviewer, the API reviewer needs to review the application.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis/{api_id}/instances/{instance_id}/publish

Table 9-53 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID
instance_id	Yes	String	Cluster ID

Request Parameters

Table 9-54 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-55 Request body parameters

Parameter	Mandatory	Type	Description
apig_type	No	String	Gateway type Enumerated values: <ul style="list-style-type: none">• APIG• APIGW• ROMA_APIC
apig_instance_id	No	String	Specifies the gateway instance ID.
group_id_in_apig	No	String	Gateway group ID.
roma_app_id	No	String	ID of the ROMA gateway integration application.

Response Parameters

Status code: 400

Table 9-56 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
204	The API operation is successful.
400	Bad request

9.1.7 API operations (offline/suspension/resumption)

Function

- Bring the API offline. Take a published API offline. After the API is unpublished, its authorization will be canceled and the API cannot be called.
- Disable an API. Temporarily take a published API offline. After the API is suspended, its authorization will be retained. The API cannot be called during the suspension.
- Restore the API. This API is used to resume a disabled API. After the API is restored, it can be called again.

 NOTE

- If the initiator of the resumption request is not the reviewer, the API reviewer needs to review the application.
- Initiator of the request for bringing an API offline or disabling an API. The initiator must be the API reviewer.
- The offline/disable function requires sufficient preparation time for authorized applications. A request must be initiated at least two days in advance. If you need to unpublish or suspend an API immediately, your requested action will be taken only after all apps finish processing messages.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis/{api_id}/instances/{instance_id}/action

Table 9-57 Path Parameters

Parameter	Mandatory	Type	Description

Status Codes

Status Code	Description
204	The API operation is successful.
400	Bad request

9.1.8 Batch Authorization API (Exclusive Edition)

Function

An app cannot access any APIs after being created. To enable an app to access an API, authorize the API to the app. After the authorization is successful, the app can access the API within the validity period.

API authorization includes authorization and renewal.

- Authorization: Apps are granted the right to access APIs within the validity period.
- Renewal: The validity period of the authorization is updated during renewal. The validity period can be extended but cannot be reduced.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis/{api_id}/instances/{instance_id}/authorize

Table 9-61 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID
instance_id	Yes	String	Cluster ID

Request Parameters

Table 9-62 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-63 Request body parameters

Parameter	Mandatory	Type	Description
time	No	String	End time.
app_ids	No	Array of strings	App IDs

Response Parameters

Status code: 400

Table 9-64 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Status Codes

Status Code	Description
204	The API operation is successful.
400	Bad request

9.1.9 Debugging an API

Function

Debug the API.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis/{api_id}/instances/{instance_id}/test

Table 9-65 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID
instance_id	Yes	String	Cluster ID

Request Parameters

Table 9-66 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-67 Request body parameters

Parameter	Mandatory	Type	Description
body	No	String	Request body
paras	No	ApiTestParas object	Indicates the parameter.

Table 9-68 ApiTestParas

Parameter	Mandatory	Type	Description
page_size	No	String	page size.

Parameter	Mandatory	Type	Description
page_num	No	String	page num.

Response Parameters

Status code: 200

Table 9-69 Response body parameters

Parameter	Type	Description
request_id	String	Request ID.
url	String	Request URL.
result	String	Indicates the debugging result.
timeout	Long	Indicates the debugging duration.
success	Boolean	Indicates whether the debugging is successful.
request_header	ApiTestRequestHeader object	Request header
response_header	ApiTestResponseHeader object	Response header.

Table 9-70 ApiTestRequestHeader

Parameter	Type	Description
path	String	Request path
user_agent	String	Proxy (fixed value).
x_apig_mode	String	Request mode (fixed value).
x_app_identity	Integer	Identification number (fixed value).

Table 9-71 ApiTestResponseHeader

Parameter	Type	Description
result_status	String	Whether the request is successful.
content_length	Integer	Content size.
connection	String	Connection status.

Parameter	Type	Description
cache_control	String	Cache control (fixed value).
content_type	String	Content type (fixed value).
date	String	Date.
x_request_id	String	Request ID.

Status code: 400

Table 9-72 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	Success
400	Bad request

9.1.10 API authorization operations (authorization/authorization cancellation/application/renewal)

Function

- Proactive API authorization: An API reviewer can initiate an API authorization request. After the API authorization is successful, the app can access the API within the validity period. API authorization includes authorization and renewal.
- Authorization: Apps are granted the right to access APIs within the validity period.
- Renewal: The validity period of the authorization is updated during renewal. The validity period can be extended but cannot be reduced.
- API authorization cancellation: An API reviewer can cancel the authorization relationship between an API and an app. After the API authorization is canceled, the app can no longer call the API. Before performing this operation, reserve at least two days for the app to make preparations.
- App authorization cancellation: The app owner can initiate a request to cancel the authorization relationship between an API and an app. After the API authorization is canceled, the app can no longer call the API. This operation requires no preparation time.
- App authorization application: An app owner can initiate an application for an API. After the application is approved by the API reviewer, the app can access the API. The authorization grants the app the right to access the API within the validity period. The API review is required.
- App renewal: The app owner can initiate a renewal request. The renewal will update the authorization validity period. The validity period can be extended but cannot be reduced. The renewal needs to be reviewed by the API.

NOTE

- It is recommended that you apply for your own API authorization or renewal without approval.
- It is recommended that the app be used to cancel the authorization. No preparation time needs to be reserved.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/apis/authorize/action

Table 9-73 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-74 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-75 Request body parameters

Parameter	Mandatory	Type	Description
api_id	No	String	API ID
instance_id	No	String	Cluster ID
app_id	No	String	App ID
apply_type	No	String	Application type Enumerated values: <ul style="list-style-type: none"> ● APPLY_TYPE_AUTHORIZE: authorizing an API to an app ● APPLY_TYPE_API_CANCEL_AUTHORIZE: canceling API authorization ● APPLY_TYPE_APP_CANCEL_AUTHORIZE: canceling app authorization ● APPLY_TYPE_APPLY: reviewing an API ● APPLY_TYPE_RENEW: renewing an API
time	No	String	End time.

Response Parameters

Status code: 400

9.1.11 Querying API Publishing Messages in DLM Exclusive

Function

This API is used to query the API publishing messages in different clusters.

After an API operation (such as debugging and registration) is performed in a cluster, API publishing messages are generated.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apis/{api_id}/publish-info

Table 9-77 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-78 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-79 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-80 Response body parameters

Parameter	Type	Description
total	Integer	Total number.
publish_messages	Array of ApiPublishDTO objects	Release information list.

Table 9-81 ApiPublishDTO

Parameter	Type	Description
id	String	Release ID.
api_id	String	API ID
instance_id	String	Cluster ID
instance_name	String	Cluster Name
api_status	String	API status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension

Parameter	Type	Description
api_debug	String	API debugging status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none">• API_DEBUG_WAITING: waiting to be debugged• API_DEBUG_FAILED: debugging failed• API_DEBUG_SUCCESS: debugging successful

Status code: 400

Table 9-82 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the API publishing information in different clusters.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/apis/760715eb1bfce0c575abab3be3bd41e6/publish-info
```

Example Responses

Status code: 200

Success

```
{
  "total": 1,
  "publish_messages": [ {
    "id": "343a6d4c0ad108376ebd060c9c33cc33",
    "api_id": "47046fe7830c1be77cb0dc23bd86afa5",
    "instance_id": "c2e27497562ed193583378e052248003",
    "instance_name": "cluster_test_001",
    "api_status": "API_STATUS_CREATED",
    "api_debug": "API_DEBUG_WAITING"
  } ]
}
```

SDK Sample Code

The SDK sample code is as follows.

Java

```

9.1.12 Querying Instances for API Operations in DLM Exclusive

Function

This API is used to query instances for API operations (Exclusive Edition).

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apis/{api_id}/instances

Table 9-83 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-84 Query Parameters

Parameter	Mandatory	Type	Description
action	Yes	String	API operation Enumerated values include: <ul style="list-style-type: none">● PUBLISH: publishing an API● UNPUBLISH: unpublishing an API● STOP: stopping an API● RECOVER: recovering an API● WHITELIST: whitelist-related operations● **AUTHORIZE: authorization
show_all	No	Boolean	All instances (including instances on which the current operation cannot be performed) are displayed.
check_status	No	Boolean	Verify the API status.
check_debug	No	Boolean	API debugging status check
app_id	No	String	App ID, which is used to determine the optional instance of the authorized app
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-85 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-86 Response body parameters

Parameter	Type	Description
instances	Array of InstanceForApiActionDTO objects	Indicates the instance list corresponding to the API operation.

Table 9-87 InstanceForApiActionDTO

Parameter	Type	Description
instance_id	String	Cluster ID
instance_type	String	Cluster type Enumerated values: <ul style="list-style-type: none">● DLM: DataArts DataService cluster● APIG: APIG cluster● APIGW: APIGW cluster● ROMA_APIC: ROMA cluster
name	String	Cluster name
action	String	API operation Enumerated values: <ul style="list-style-type: none">● PUBLISH: publishing an API● UNPUBLISH: unpublishing an API● STOP: stopping an API● RECOVER: recovering an API● WHITELIST: whitelist-related operations● **AUTHORIZE: authorization
result	Boolean	Indicates the verification result.
cause	String	Cause of the verification failure Enumerated values: <ul style="list-style-type: none">● API_STATUS_ERROR: API status error● API_DEBUG_ERROR: API debugging status error● TYPE_MISMATCH: The app type and instance type do not match.

Parameter	Type	Description
api_status	String	API status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended
api_debug	String	API debugging status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none"> • API_DEBUG_WAITING: waiting to be debugged • API_DEBUG_FAILED: debugging failed • API_DEBUG_SUCCESS: debugging successful

Status code: 400

Table 9-88 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query instances for API operations in DataArts DataService Exclusive.

`/v1/0833a5737480d53b2f250010d01a7b88/service/apis/760715eb1bfce0c575abab3be3bd41e6/instances`

9.1.13 Querying API Debugging Messages in DLM Exclusive

Function

This API is used to query the API debugging information in different clusters.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apis/{api_id}/debug-info

Table 9-89 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-90 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-91 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-92 Response body parameters

Parameter	Type	Description
total	Integer	Total number.
publish_messages	Array of ApiPublishDTO objects	Release information list.

Table 9-93 ApiPublishDTO

Parameter	Type	Description
id	String	Release ID.
api_id	String	API ID
instance_id	String	Cluster ID
instance_name	String	Cluster Name

Parameter	Type	Description
api_status	String	<p>API status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension

Status Codes

Status Code	Description
200	Success
400	Bad request

9.1.14 Importing an Excel File Containing APIs

Function

This API is used to import an Excel file that contains APIs.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/import/excel

Table 9-95 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-96 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. Here, the file is imported. The value is multipart/form-data.

Table 9-97 FormData parameters

Parameter	Mandatory	Type	Description
file	Yes	File	Import an Excel file that contains APIs. The file must be smaller than 4 MB.

Response Parameters

Status code: 200

Table 9-98 Response body parameters

Parameter	Type	Description
job_id	String	Returned data information.

Status code: 400

Table 9-99 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Import an Excel file that contains APIs.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/import/excel
```

Example Responses

Status code: 200

The Excel file is imported successfully.

```
{  
  "job_id" : "252041f9838e8e5ea2e0e7317d5bcaf3"  
}
```

9.1.16 Exporting a .zip File Containing All APIs

Function

This API is used to export a .zip file that contains all APIs.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/export/zip

Table 9-105 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-106 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-107 Request body parameters

Parameter	Mandatory	Type	Description
name	No	String	API name. This parameter supports fuzzy match.
create_user	No	String	Name of the API creator.
description	No	String	API description,
tags	No	Array of strings	API tag list
table_name	No	String	Name of the database table used by the API.

Parameter	Mandatory	Type	Description
publish_status_type	No	String	API publishing status Enumerated values include: <ul style="list-style-type: none"> ● PUBLISHED: published ● NOT_PUBLISHED: unpublished
api_specific_type_str	No	String	API data obtaining mode Enumerated values: <ul style="list-style-type: none"> ● API_SPECIFIC_TYPE_CONFIGURATION: configuration ● API_SPECIFIC_TYPE_SCRIPT: script ● API_SPECIFIC_TYPE_MYBATIS: MyBatis ● API_SPECIFIC_TYPE_GROOVY: Groovy
start_time	No	String	Time when the API starts to be created.
end_time	No	String	Time when the API creation ends.
authorization_status_type	No	String	Authorization status. Enumerated values: <ul style="list-style-type: none"> ● NO_AUTHORIZATION_REQUIRED: no authorization required ● UNAUTHORIZED: unauthorized ● AUTHORIZED: authorized

Response Parameters

Status code: 200

Table 9-108 Response body parameters

Parameter	Type	Description
-	File	A .zip file that contains multiple Excel files is exported. Each Excel file contains a maximum of 200 APIs.

Status code: 400

Table 9-109 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Export a .zip file that contains all APIs.

Status Codes

Status Code	Description
200	The .zip file that contains all APIs is exported.
400	Bad request

9.1.17 Downloading an Excel Template

Function

This API is used to download an Excel template.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/export/excel-template

Table 9-110 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-111 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Response Parameters

Status code: 200

Table 9-112 Response body parameters

Parameter	Type	Description
-	File	The Excel template is downloaded.

Status code: 400

Table 9-113 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Download an Excel template.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/export/excel-template
```

Example Responses

Status code: 200

The Excel template is downloaded.

```
"xxx.xlsx"
```

Status Codes

Status Code	Description
200	The Excel template is downloaded.
400	Bad request

9.2 Application Management

9.2.1 Querying the Application List

Function

This API is used to query the application list.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/applys

Table 9-114 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-115 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query start coordinate, that is, skipping the first X records. The value can only be 0 or an integer multiple of limit. If the requirement is not met, the value is rounded down.
limit	No	Integer	Mximum number of records that can be queried
api_name	No	String	API name. This parameter supports fuzzy match.
query_type	No	Integer	Query type. The options are as follows: 0: received application (to be reviewed); 1: received application (reviewed); 2: sent application (development); 3: sent application (invoking).

Request Parameters

Table 9-116 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-117 Response body parameters

Parameter	Type	Description
total	Integer	Total number of applications that meet the search criteria.
records	Array of RecordForApplyDetail objects	Indicates the returned application list.

Table 9-118 RecordForApplyDetail

Parameter	Type	Description
id	String	Application ID.
api_apply_status	String	Application status Enumerated values: <ul style="list-style-type: none"> • STATUS_TYPE_PENDING_APPROVAL: pending review • STATUS_TYPE_REJECTED: rejected • STATUS_TYPE_PENDING_CHECK: pending check • STATUS_TYPE_PENDING_EXECUTE: pending execution • STATUS_TYPE_SYNCHRONOUS_EXECUTE: synchronously executed • STATUS_TYPE_FORCED_CANCEL: canceled forcibly • STATUS_TYPE_PASSED: passed
api_apply_type	String	Application type Enumerated values: <ul style="list-style-type: none"> • APPLY_TYPE_PUBLISH: publishing an API • APPLY_TYPE_AUTHORIZE: authorizing an API to an app • APPLY_TYPE_APPLY: reviewing an API • APPLY_TYPE_RENEW: renewing an API • APPLY_TYPE_STOP: stopping an API • APPLY_TYPE_RECOVER: recovering an API • APPLY_TYPE_API_CANCEL_AUTHORIZE: canceling API authorization • APPLY_TYPE_APP_CANCEL_AUTHORIZE: canceling app authorization • **APPLY_TYPE_OFFLINE: suspending an API
api_id	String	API ID
api_name	String	API name
api_using_time	Long	Expiry time of using the API,
app_id	String	App ID
app_name	String	App name

Parameter	Type	Description
apply_time	Long	Application time,
approval_time	Long	Authorization time,
approver_name	String	Reviewer name.
comment	String	Review comments.
user_name	String	Applicant name.

Status code: 400

Table 9-119 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query applications.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/applys
```

Example Responses

Status code: 200

The query is successful, and the total number of applications that meet the query conditions is displayed.

```

Status Codes

Status Code	Description
204	The applications are reviewed successfully.
400	Bad request

9.2.3 Obtaining Application Details

Function

This API is used to obtain application details.

This function is only used for displaying application details and not for processing. Therefore, background parameters such as the ID are not displayed.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/applys/{apply_id}

Table 9-124 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
apply_id	Yes	String	Review information ID

Request Parameters

Table 9-125 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-126 Response body parameters

Parameter	Type	Description
id	String	Application ID.
api_apply_status	String	Application status Enumerated values: <ul style="list-style-type: none"> • STATUS_TYPE_PENDING_APPROVAL: pending review • STATUS_TYPE_REJECTED: rejected • STATUS_TYPE_PENDING_CHECK: pending check • STATUS_TYPE_PENDING_EXECUTE: pending execution • STATUS_TYPE_SYNCHRONOUS_EXECUTE: synchronously executed • STATUS_TYPE_FORCED_CANCEL: canceled forcibly • STATUS_TYPE_PASSED: passed

Parameter	Type	Description
api_apply_type	String	Application type Enumerated values: <ul style="list-style-type: none"> ● APPLY_TYPE_PUBLISH: publishing an API ● APPLY_TYPE_AUTHORIZE: authorizing an API to an app ● APPLY_TYPE_APPLY: reviewing an API ● APPLY_TYPE_RENEW: renewing an API ● APPLY_TYPE_STOP: stopping an API ● APPLY_TYPE_RECOVER: recovering an API ● APPLY_TYPE_API_CANCEL_AUTHORIZE: canceling API authorization ● APPLY_TYPE_APP_CANCEL_AUTHORIZE: canceling app authorization ● **APPLY_TYPE_OFFLINE: suspending an API
api_id	String	API ID
api_name	String	API name
api_using_time	Long	Expiry time of using the API,
app_id	String	App ID
app_name	String	App name
apply_time	Long	Application time,
approval_time	Long	Authorization time,
approver_name	String	Reviewer name.
comment	String	Review comments.
user_name	String	Applicant name.

Status code: 400

Table 9-127 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Obtain the review record of the application whose ID is 89374656efeb5e5e8f2cb08ec94cb78a.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/applys/89374656efeb5e5e8f2cb08ec94cb78a

9.3 Message Management

9.3.1 Querying the Message List

Function

This API is used to query the notification message list of the review center. Different from applications, notification messages cannot be rejected and can be processed only within a specified time period.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/messages

Table 9-128 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-129 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query start coordinate, that is, skipping the first X records. The value can only be 0 or an integer multiple of limit. If the requirement is not met, the value is rounded down.
limit	No	Integer	Maximum number of records that can be queried
api_name	No	String	API name

Request Parameters

Table 9-130 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-131 Response body parameters

Parameter	Type	Description
total	Integer	Total number of applications that meet the search criteria.
records	Array of RecordForApplyDetail objects	Indicates the returned application list.

Table 9-132 RecordForApplyDetail

Parameter	Type	Description
id	String	Application ID.
api_apply_status	String	Application status Enumerated values: <ul style="list-style-type: none"> • STATUS_TYPE_PENDING_APPROVAL: pending review • STATUS_TYPE_REJECTED: rejected • STATUS_TYPE_PENDING_CHECK: pending check • STATUS_TYPE_PENDING_EXECUTE: pending execution • STATUS_TYPE_SYNCHRONOUS_EXECUTE: synchronously executed • STATUS_TYPE_FORCED_CANCEL: canceled forcibly • STATUS_TYPE_PASSED: passed
api_apply_type	String	Application type Enumerated values: <ul style="list-style-type: none"> • APPLY_TYPE_PUBLISH: publishing an API • APPLY_TYPE_AUTHORIZE: authorizing an API to an app • APPLY_TYPE_APPLY: reviewing an API • APPLY_TYPE_RENEW: renewing an API • APPLY_TYPE_STOP: stopping an API • APPLY_TYPE_RECOVER: recovering an API • APPLY_TYPE_API_CANCEL_AUTHORIZE: canceling API authorization • APPLY_TYPE_APP_CANCEL_AUTHORIZE: canceling app authorization • **APPLY_TYPE_OFFLINE: suspending an API
api_id	String	API ID
api_name	String	API name
api_using_time	Long	Expiry time of using the API,
app_id	String	App ID
app_name	String	App name

Parameter	Type	Description
apply_time	Long	Application time,
approval_time	Long	Authorization time,
approver_name	String	Reviewer name.
comment	String	Review comments.
user_name	String	Applicant name.

Status code: 400

Table 9-133 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query notifications in the review center.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/messages
```

Example Responses

Status code: 200

The query is successful, and the total number of messages that meet the query conditions is displayed.

```

Status Codes

Status Code	Description
200	The query is successful, and the total number of messages that meet the query conditions is displayed.
400	Bad request

9.3.2 Processing Messages

Function

Confirms received notification messages and selects when to process the messages within a specified time range.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/messages

Table 9-134 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-135 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-136 Request body parameters

Parameter	Mandatory	Type	Description
message_id	No	String	Message ID.
action	No	Integer	Policy action. 0: immediately; 1: periodically.
time	No	String	Expiry time of using the API, This parameter is required only for periodic execution. By default, the current time of the server is three days later.

Response Parameters

Status code: 400

Table 9-137 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

9.4 Authorization Management

9.4.1 Querying Apps Bound to an API

Function

This API is used to query the apps that have been authorized to an API.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/authorize/apis/{api_id}

Table 9-142 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-143 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried

Request Parameters

Table 9-144 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-145 Response body parameters

Parameter	Type	Description
total	Integer	Total number of apps that meet the search criteria.
records	Array of RecordForGetAuthApp objects	App list returned this time.

Table 9-146 RecordForGetAuthApp

Parameter	Type	Description
app_id	String	App ID
app_name	String	Application name.
instance_id	String	Cluster instance ID.
instance_name	String	Name of a cluster instance.
api_using_time	Long	Expiry time of using the API,
approval_time	Long	Authorization time,
relationship_type	String	Binding relationship Enumerated values: <ul style="list-style-type: none">● LINK_WAITING_CHECK: waiting to be reviewed● LINKED: bound● **OFFLINE_WAITING_CHECK: waiting to be suspended● RENEW_WAITING_CHECK: waiting to be renewed
static_params	Array of StaticParam objects	List of static parameters.

Table 9-147 StaticParam

Parameter	Type	Description
para_name	String	Name of a static parameter.
para_value	String	Static parameter value.

Status code: 400

Table 9-148 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the apps that have been authorized to an API.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/authorize/apis/
```

Example Responses

Status code: 200

The query is successful, and the list of apps authorized to the API is displayed.

```
{

More

For SDK sample code of more programming languages, see the Sample Code tab in [API Explorer](#). SDK sample code can be automatically generated.

Status Codes

Status Code	Description
200	The query is successful, and the list of apps authorized to the API is displayed.
400	Bad request

9.4.2 Querying Authorized APIs of an App

Function

This API is used to query authorized APIs of an app.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/authorize/apps/{app_id}

Table 9-149 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
app_id	Yes	String	App ID

Table 9-150 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.
limit	No	Integer	Maximum number of records that can be queried

Request Parameters

Table 9-151 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-152 Response body parameters

Parameter	Type	Description
total	Integer	Total number of APIs bound to the app
records	Array of AppBindApiInfo objects	List of APIs bound to the app

Table 9-153 AppBindApiInfo

Parameter	Type	Description
id	String	API ID.
name	String	API name.
description	String	API description,
approval_time	Long	Review time.
manager	String	Name of the API reviewer.
deadline	Long	Expiry time of using the API,

Parameter	Type	Description
relationship_type	String	Binding relationship Enumerated values: <ul style="list-style-type: none"> • LINK_WAITING_CHECK: waiting to be reviewed • LINKED: bound • **OFFLINE_WAITING_CHECK: waiting to be suspended • RENEW_WAITING_CHECK: waiting to be renewed
static_params	Array of StaticParam objects	List of static parameters.

Table 9-154 StaticParam

Parameter	Type	Description
para_name	String	Name of a static parameter.
para_value	String	Static parameter value.

Status code: 400

Table 9-155 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query authorized APIs of an app.

```

9.5 Service Catalog Management

9.5.1 Obtaining the List of APIs and Catalogs in a Catalog

Function

This API is used to obtain the list of APIs and catalogs in the current catalog. The list is displayed in the data format of the catalog.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/{catalog_id}/detail

Table 9-156 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Parameter	Mandatory	Type	Description
catalog_id	Yes	String	Catalog ID

Table 9-157 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query start coordinate, that is, skipping the first X records.
limit	No	Integer	Maximum number of records that can be queried

Request Parameters

Table 9-158 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-159 Response body parameters

Parameter	Type	Description
total	Integer	Total number of data records that meet the search criteria.
api_catalogs	Array of RecordForGetAll-Catalog objects	App list returned this time.

Table 9-160 RecordForGetAllCatalog

Parameter	Type	Description
catalog_id	String	Catalog ID
pid	String	Parent category ID.
name	String	Name.
description	String	Catalog description.
api_catalog_type	String	Catalog type Enumerated values: <ul style="list-style-type: none">• CATALOG• API
create_time	Long	Creation time.
create_user	String	Creator.
update_time	Long	Update time.
update_user	String	Updater.

Status code: 400

Table 9-161 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Obtain the list of APIs and catalogs in the catalog whose ID is **51159105c7838353d2834181d978af50**.

```

9.5.2 Obtaining the List of APIs in a Catalog

Function

This API is used to obtain the list of APIs in a catalog.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/{catalog_id}/apis

Table 9-162 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
catalog_id	Yes	String	Catalog ID

Table 9-163 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	Integer	Query start coordinate, that is, skipping the first X records.
limit	No	Integer	Maximum number of records that can be queried

Request Parameters

Table 9-164 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-165 Response body parameters

Parameter	Type	Description
total	Integer	Total number of APIs.
apis	Array of ApiOverview objects	API list.

Table 9-166 ApiOverview

Parameter	Type	Description
id	String	API ID.
name	String	API name
group_id	String	API group ID (shared version).
description	String	API description,

Parameter	Type	Description
status	String	<p>API status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension
debug_status	String	<p>API debugging status (DataArts DataService Shared)</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • API_DEBUG_WAITING: waiting to be debugged • API_DEBUG_FAILED: debugging failed • API_DEBUG_SUCCESS: debugging successful
publish_messages	Array of ApiPublishDTO objects	Release information list (exclusive edition).
type	String	API type.
manager	String	API reviewer.
create_user	String	API creator.
create_time	Long	API creation time

Parameter	Type	Description
authorization_status	String	Authorization status. Enumerated values: <ul style="list-style-type: none"> • NO_AUTHORIZATION_REQUIRED: no authorization required • UNAUTHORIZED: unauthorized • AUTHORIZED: authorized

Table 9-167 ApiPublishDTO

Parameter	Type	Description
id	String	Release ID.
api_id	String	API ID
instance_id	String	Cluster ID
instance_name	String	Cluster Name
api_status	String	API status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none"> • API_STATUS_CREATED: created • API_STATUS_PUBLISH_WAIT_REVIEW: waiting for review • API_STATUS_PUBLISH_REJECT: rejected • API_STATUS_PUBLISHED: published • API_STATUS_WAITING_STOP: waiting to be stopped • API_STATUS_STOPPED: stopped • API_STATUS_RECOVER_WAIT_REVIEW: waiting to be recovered • API_STATUS_WAITING_OFFLINE: waiting to be suspended • API_STATUS_OFFLINE: suspended • API_STATUS_OFFLINE_WAIT_REVIEW: waiting to be reviewed for suspension

Parameter	Type	Description
api_debug	String	API debugging status (DataArts DataService Shared) Enumerated values: <ul style="list-style-type: none"> • API_DEBUG_WAITING: waiting to be debugged • API_DEBUG_FAILED: debugging failed • API_DEBUG_SUCCESS: debugging successful

Status code: 400

Table 9-168 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Obtain the list of APIs in the catalog whose ID is 51159105c7838353d2834181d978af50.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/servicecatalogs/51159105c7838353d2834181d978af50/apis
```

Example Responses

Status code: 200

Success

```
{
  "total" : 1,
  "apis" : [ {
    "id" : "fd0beac79418d65e3b3ed24a6e33b24b",
    "name" : "testApi",
    "create_time" : 1579162215000,
    "status" : "API_STATUS_CREATED",
    "manager" : "admin",
    "type" : null,
    "debug_status" : "API_DEBUG_WAITING"
  } ]
}
```

9.5.3 Obtaining the List of Sub-Catalogs in a Catalog

Function

This API is used to obtain the directory list in the current directory. (Full data is not displayed on multiple pages. It is recommended that this API be used only in scenarios where pagination cannot be performed, such as directory tree generation.)

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/{catalog_id}/catalogs

Table 9-169 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
catalog_id	Yes	String	Catalog ID

Table 9-170 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried

Parameter	Mandatory	Type	Description
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-171 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-172 Response body parameters

Parameter	Type	Description
total	Integer	Total number of data records that meet the search criteria.
catalogs	Array of RecordForGetAll-Catalog objects	App list returned this time.

Table 9-173 RecordForGetAllCatalog

Parameter	Type	Description
catalog_id	String	Catalog ID
pid	String	Parent category ID.
name	String	Name.
description	String	Catalog description.
api_catalog_type	String	Catalog type Enumerated values: <ul style="list-style-type: none">• CATALOG• API
create_time	Long	Creation time.
create_user	String	Creator.
update_time	Long	Update time.
update_user	String	Updater.

9.5.5 Query the service catalog

Function

This API is used to query a service catalog.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/{catalog_id}

Table 9-180 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
catalog_id	Yes	String	Catalog ID

Request Parameters

Table 9-181 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-182 Response body parameters

Parameter	Type	Description
catalog_id	String	Catalog ID
name	String	Name.
path	String	Path.
catalog_total	Integer	Number of subdirectories.
api_total	Integer	Number of APIs
description	String	Description.
create_time	Long	Time when the bandwidth was specified.
create_user	String	Creator.
update_time	Long	Update time.
update_user	String	Updater.

Status code: 400

Table 9-183 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query a catalog whose ID is 51159105c7838353d2834181d978af50.

9.5.8 Moving a Catalog to Another Catalog

Function

Move the current directory to a new directory.

When the catalog is moved, all its sub-catalogs are also moved.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/servicecatalogs/{catalog_id}/move

Table 9-193 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
catalog_id	Yes	String	Catalog ID

Request Parameters

Table 9-194 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-195 Request body parameters

Parameter	Mandatory	Type	Description
target_pid	No	String	Parent catalog ID

Response Parameters

Status code: 400

Table 9-196 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Move a catalog to another catalog.

```

9.5.10 Obtaining the ID of a Catalog Through Its Path

Function

This API is used to obtain the ID of catalog through its path.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/ids

Table 9-201 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-202 Query Parameters

Parameter	Mandatory	Type	Description
path	Yes	String	Path
limit	No	Integer	Maximum number of records that can be queried

Parameter	Mandatory	Type	Description
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-203 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

9.5.11 Obtaining the Path of a Catalog Through Its ID

Function

This API is used to obtain the path of a catalog through its ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/{catalog_id}/paths

Table 9-206 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
catalog_id	Yes	String	Catalog ID

Table 9-207 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-208 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200**Table 9-209** Response body parameters

Parameter	Type	Description
path	String	Path.

Status code: 400

Table 9-210 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Obtain the path of a catalog through its ID.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/servicecatalogs/51159105c7838353d2834181d978af50/paths
```

Example Responses

Status code: 200

Success

```
{  
  "path" : "/demo1/demo2/demo"  
}
```

9.5.12 Obtaining the Paths to a Catalog Through Its ID

Function

Obtains a path object based on the directory ID.

Obtains the path information of each layer from the root directory to the current directory based on the directory ID.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/servicecatalogs/{catalog_id}/layerpaths

Table 9-211 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
catalog_id	Yes	String	Catalog ID

Table 9-212 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-213 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-214 Response body parameters

Parameter	Type	Description
paths	Array of LayerPath objects	Path object.

Table 9-215 LayerPath

Parameter	Type	Description
catalog_id	String	Catalog ID
name	String	Path name.
order	Integer	Path level.

Status code: 400

Table 9-216 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Obtain the paths to a catalog through its ID.

```

9.5.13 Querying the Service Catalog API List

Function

This API is used to query the service catalog API list.

Calling Method

For details, see [Calling APIs](#).

URI

POST /v1/{project_id}/service/market

Table 9-217 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Request Parameters

Table 9-218 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-219 Request body parameters

Parameter	Mandatory	Type	Description
auth_type	No	String	Authentication mode Enumerated values: <ul style="list-style-type: none"> ● APP: app secret ● IAM: IAM token ● NONE: authentication disabled
visibility	No	String	API visibility Enumerated values: <ul style="list-style-type: none"> ● WORKSPACE: visible to a workspace ● PROJECT: visible to a project ● DOMAIN: visible to a tenant ● SPECIFIC_PROJECT: visible to a specified project
market_sort_type	No	String	Sorting type Enumerated values: <ul style="list-style-type: none"> ● updateTime: update time ● createTime: creation time
asc_or_desc	No	String	Sorting order Enumerated values: <ul style="list-style-type: none"> ● asc: ascending order ● desc: descending order
offset	No	Integer	Start coordinate of the query.

Parameter	Mandatory	Type	Description
limit	No	Integer	Indicates the number of queried records.
is_owner	No	Boolean	Indicates whether to display the owner.
is_authorized	No	Boolean	Indicates whether to display authorized users.
is_update_recently	No	Boolean	Indicates whether to display the latest updates.
is_release_recently	No	Boolean	Indicates whether to display the latest release.
is_hot_recently	No	Boolean	Indicates whether to display the hot-selling status.
success_and_failure_rate	No	Boolean	Indicates whether to display the success rate and failure rate in the last seven days.

Response Parameters

Status code: 200

Table 9-220 Response body parameters

Parameter	Type	Description
total	Integer	Total number of APIs.
apis	Array of AdvancedMallApiDTO objects	API list.

Table 9-221 AdvancedMallApiDTO

Parameter	Type	Description
id	String	API ID.
name	String	API name
auth_type	String	Authentication mode Enumerated values: <ul style="list-style-type: none"> • APP: app secret • IAM: IAM token • NONE: authentication disabled

Parameter	Type	Description
application_num	Integer	Number of authorized applications.
call_num	Integer	Number of invoked requests.
user_name	String	Creator.
create_time	Long	Time when the bandwidth was specified.
update_time	Long	Update time.
is_owner	Boolean	Indicates whether the API is in the current space.
is_authorized	Boolean	Indicates whether the user is authorized.
is_update_recently	Boolean	Indicates whether the API has been updated in the last three days.
is_release_recently	Boolean	Indicates whether a new product is launched (APIs released within three days).
is_hot_recently	Boolean	Indicates whether the product is a hot-selling product. (Users in other space have applied for the API within three days.)
success_rate	String	Success rate of API calls within seven days.
failure_rate	String	Invoking failure rate within seven days.

Status code: 400

Table 9-222 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the service catalog API list.

Status Codes

Status Code	Description
200	Success
400	Bad request

9.6 Gateway Management

9.6.1 Obtaining a Gateway Instance (Exclusive Edition)

Function

This API is used to obtain a gateway instance (exclusive edition).

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apigw/instances

Table 9-223 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-224 Query Parameters

Parameter	Mandatory	Type	Description
apig_type	Yes	String	Gateway type Enumerated values include: <ul style="list-style-type: none">• APIGW: APIGW gateway• ROMA_APIC: ROMA gateway
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-225 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-226 Response body parameters

Parameter	Type	Description
gateway_instances	Array of ApigInstanceDTO objects	Gateway instance.

Table 9-227 ApigInstanceDTO

Parameter	Type	Description
instance_id	String	Gateway instance ID.
instance_name	String	Name of a gateway instance.

Status code: 400

Table 9-228 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Obtain a gateway instance in DataArts DataService Exclusive.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/apigw/instances
```

Example Responses

Status code: 200

Success

```
{
  "gateway_instances" : [ {
    "instance_id" : "0ca3311f5dc941b7b3d1950d1682b646",
    "instance_name" : "apigw_test_001"
  } ]
}
```

Table 9-236 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .

Parameter	Mandatory	Type	Description
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Table 9-237 Request body parameters

Parameter	Mandatory	Type	Description
app_type	No	String	App type The following values are available: <ul style="list-style-type: none"> • APP • IAM • APIG (discarded) • APIGW (discarded) • DLM (discarded) • ROMA_APIC (discarded)
name	No	String	Application name.
description	No	String	Application description.
apig_type	No	String	Gateway type Enumerated values: <ul style="list-style-type: none"> • APIG: APIG gateway • APIGW: APIGW gateway • ROMA_APIC: ROMA gateway
apig_instance_id	No	String	Gateway instance ID.

Response Parameters

Status code: 200

Table 9-238 Response body parameters

Parameter	Type	Description
id	String	App ID
name	String	Application name.
description	String	Application description.
app_key	String	Application key.
app_secret	String	Application secret.
register_time	Long	Creation time.
update_time	Long	Update time.
create_user	String	Creator.
update_user	String	Updater.
app_type	String	App type. Enumerated values: <ul style="list-style-type: none">• APP: app• IAM: IAM• APIG: APIG (discarded)• APIGW: APIGW (deprecated)• DLM: DataArts DataService (deprecated)• ROMA_APIC: ROMA (deprecated)

Status code: 400

Table 9-239 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Create an app.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/apps
```

```
{
  "app_type" : "APP",
  "name" : "app_test_001",
  "description" : "This is the app's description."
}
```

Example Responses

Status code: 200

Success

```
{
  "id" : "908489209a320df61607355c57c82882",
  "name" : "app_test_001",
  "description" : "This is the app's description.",
  "app_key" : "fbbf9462bb434cb4a13ee7d2bb70c418",
  "app_secret" : "c1245f01937442e098ffa6ff134cb3dc",
  "register_time" : 1578284788000,
  "update_time" : 1578284788000,
  "create_user" : "create_user",
  "update_user" : "update_user",
  "app_type" : "APP"
}
```

SDK Sample Code

The SDK sample code is as follows.

Java

Create an app.

```
package com.huaweicloud.sdk.test;

import com.huaweicloud.sdk.core.auth.ICredential;
import com.huaweicloud.sdk.core.auth.BasicCredentials;
import com.huaweicloud.sdk.core.exception.ConnectionException;
import com.huaweicloud.sdk.core.exception.RequestTimeoutException;
import com.huaweicloud.sdk.core.exception.ServiceResponseException;
import com.huaweicloud.sdk.dataartsstudio.v1.region.DataArtsStudioRegion;
import com.huaweicloud.sdk.dataartsstudio.v1.*;
import com.huaweicloud.sdk.dataartsstudio.v1.model.*;

public class CreateAppSolution {

    public static void main(String[] args) {
        // The AK and SK used for authentication are hard-coded or stored in plaintext, which has great
        // security risks. It is recommended that the AK and SK be stored in ciphertext in configuration files or
        // environment variables and decrypted during use to ensure security.
        // In this example, AK and SK are stored in environment variables for authentication. Before running
        // this example, set environment variables CLOUD_SDK_AK and CLOUD_SDK_SK in the local environment
        String ak = System.getenv("CLOUD_SDK_AK");

200	Success

Status Code	Description
400	Bad request

9.7.2 Querying the App List

Function

Query an application list.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/apps

Table 9-240 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-241 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.
name	No	String	App name. This parameter supports fuzzy match.

Parameter	Mandatory	Type	Description
app_type	No	String	App type The following values are available: <ul style="list-style-type: none"> • APP • IAM • APIG (discarded) • APIGW (discarded) • DLM (discarded) • ROMA_APIC (discarded)

Request Parameters

Table 9-242 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-243 Response body parameters

Parameter	Type	Description
total	Integer	Total number.
apps	Array of AppReturnDTO objects	Application list

Table 9-244 AppReturnDTO

Parameter	Type	Description
id	String	App ID
name	String	Application name.
description	String	Application description.
app_key	String	Application key.
app_secret	String	Application secret.
register_time	Long	Creation time.
update_time	Long	Update time.
create_user	String	Creator.
update_user	String	Updater.
app_type	String	App type. Enumerated values: <ul style="list-style-type: none"> • APP: app • IAM: IAM • APIG: APIG (discarded) • APIGW: APIGW (deprecated) • DLM: DataArts DataService (deprecated) • ROMA_APIC: ROMA (deprecated)

Status code: 400

Table 9-245 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

9.7.4 Deleting an Ap

Function

Delete an app.

Calling Method

For details, see [Calling APIs](#).

URI

DELETE /v1/{project_id}/service/apps/{app_id}

Table 9-251 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
app_id	Yes	String	Application ID

Request Parameters

Table 9-252 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 400

Table 9-253 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

9.8 Overview

9.8.1 Querying and Collecting Statistics on User-related Overview Development Indicators

Function

This API is used to query and collect statistics on user-related overview development metrics.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apis-overview

Table 9-258 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-259 Query Parameters

Parameter	Mandatory	Type	Description
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOURLY: hour• DAILY: day

Request Parameters

Table 9-260 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-261 Response body parameters

Parameter	Type	Description
publish_num	Integer	Number of released APIs.
developing_num	Integer	Number of APIs being developed.
apply_num	Integer	Number of applications.
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).

Status code: 400

Table 9-262 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query and collect statistics on user-related overview development metrics.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/statistic/apis-overview
```

Example Responses

Status code: 200

The user-related overview development indicators are successfully queried.

```
{
  "publish_num" : 54,
  "developing_num" : 117,
  "apply_num" : 4,
  "call_num" : 10,
  "success_num" : 9,
  "fail_num" : 1,

Status Codes

Status Code	Description
200	The user-related overview development indicators are successfully queried.
400	Bad request

9.8.2 This API is used to query and collect statistics on user-related overview invoking metrics.

Function

This API is used to query and collect statistics on user-related overview invoking metrics.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apps-overview

Table 9-263 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-264 Query Parameters

Parameter	Mandatory	Type	Description
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOURLY: hour• DAILY: day

Request Parameters

Table 9-265 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-266 Response body parameters

Parameter	Type	Description
apply_num	Integer	Number of applications.
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).

Status code: 400

Table 9-267 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query and collect statistics on user-related overview invoking metrics.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/statistic/apps-overview
```

Example Responses

Status code: 200

The user-related overview invoking metrics are successfully queried.

```

400	Bad request

9.8.3 Querying Top N API Services Invoked

Function

This API is used to query the top N API services invoked.

Calling Method

For details, see [Calling APIs](#).

URI

```
GET /v1/{project_id}/service/statistic/apis-top-n
```

Table 9-268 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-269 Query Parameters

Parameter	Mandatory	Type	Description
instance_id	No	String	Cluster ID
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOUR: hour• DAY: day
top_num	Yes	Integer	The first few.
order_by	Yes	String	Sorting criteria Enumerated values: <ul style="list-style-type: none">• CALL_NUM: total number of calls• SUCCESS_NUM: number of successful calls• FAIL_NUM: number of failed calls• LEGAL_NUM: number of legal calls• ILLEGAL_NUM: number of illegal calls• COST_TIME_AVG: average time• SUCCESS_COST_TIME_AVG: average time for a successful call• FAIL_COST_TIME_AVG: average time for a failed call• SUCCESS_RATE: rate of successful calls• FAIL_RATE: rate of failed calls• LEGAL_RATE: rate of legal calls• ILLEGAL_RATE: rate of illegal calls

Request Parameters

Table 9-270 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200**Table 9-271** Response body parameters

Parameter	Type	Description
statistics	Array of StatisticForDetail objects	Statistics details list.

Table 9-272 StatisticForDetail

Parameter	Type	Description
id	String	ID of a statistical object.
name	String	Name of the statistics object.
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).
cost_time_avg	Number	Average request duration.
success_cost_time_avg	Number	Average duration of successful requests.
fail_cost_time_avg	Number	Average duration of failed requests.
success_rate	Number	Success rate.
fail_rate	Number	Indicates the failure rate.
legal_rate	Number	Legality rate.
illegal_rate	Number	Illegal rate.

Status code: 400**Table 9-273** Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the top N API services invoked.

```

9.8.5 Querying API Statistics Details

Function

This API is used to query API statistics details.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apis-detail/{api_id}

Table 9-280 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-281 Query Parameters

Parameter	Mandatory	Type	Description
instance_id	No	String	Cluster ID
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOUR: hour• DAY: day

Request Parameters

Table 9-282 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-283 Response body parameters

Parameter	Type	Description
id	String	ID of a statistical object.
name	String	Name of the statistics object.
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).
cost_time_avg	Number	Average request duration.
success_cost_time_avg	Number	Average duration of successful requests.
fail_cost_time_avg	Number	Average duration of failed requests.
success_rate	Number	Success rate.
fail_rate	Number	Indicates the failure rate.
legal_rate	Number	Legality rate.
illegal_rate	Number	Illegal rate.

Status code: 400

Table 9-284 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

9.8.7 Querying API Dashboard Data Details

Function

This API is used to query API dashboard data details.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apis-dashboards

Table 9-290 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-291 Query Parameters

Parameter	Mandatory	Type	Description
instance_id	No	String	Cluster ID
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOURLY: hour• DAILY: day
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-292 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.

Parameter	Mandatory	Type	Description
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-293 Response body parameters

Parameter	Type	Description
dashboards	Array of StatisticForDashboard objects	Statistics dashboard.

Table 9-294 StatisticForDashboard

Parameter	Type	Description
log_time	Integer	Statistical time point (13-bit timestamp).
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).
cost_time_avg	Number	Average request duration.
success_cost_time_avg	Number	Average duration of successful requests.

Parameter	Type	Description
fail_cost_time_avg	Number	Average duration of failed requests.
success_rate	Number	Success rate.
fail_rate	Number	Indicates the failure rate.
legal_rate	Number	Legality rate.
illegal_rate	Number	Illegal rate.

Status code: 400

Table 9-295 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Status Codes

Status Code	Description
200	API dashboard data details are queried successfully.
400	Bad request

9.8.8 Querying Data Details of a Specified API Dashboard

Function

This API is used to query details about a specified API dashboard.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apis-dashboards/{api_id}

Table 9-296 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-297 Query Parameters

Parameter	Mandatory	Type	Description
instance_id	No	String	Cluster ID
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).

Parameter	Mandatory	Type	Description
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none"> • HOUR: hour • DAY: day

Request Parameters

Table 9-298 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-299 Response body parameters

Parameter	Type	Description
dashboards	Array of StatisticForDashboard objects	Statistics dashboard.

Table 9-300 StatisticForDashboard

Parameter	Type	Description
log_time	Integer	Statistical time point (13-bit timestamp).
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).
cost_time_avg	Number	Average request duration.
success_cost_time_avg	Number	Average duration of successful requests.
fail_cost_time_avg	Number	Average duration of failed requests.
success_rate	Number	Success rate.
fail_rate	Number	Indicates the failure rate.
legal_rate	Number	Legality rate.
illegal_rate	Number	Illegal rate.

Status code: 400**Table 9-301** Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query details about a specified API dashboard.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/statistic/apis-dashboards/  
760715eb1bfce0c575abab3be3bd41e6
```

Example Responses

Status code: 200

The data details of the specified API dashboard are queried successfully.

```

9.8.9 Querying App Dashboard Data Details

Function

This API is used to query app dashboard data details.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apps-dashboards

Table 9-302 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-303 Query Parameters

Parameter	Mandatory	Type	Description
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOURLY: hour• DAILY: day
limit	No	Integer	Maximum number of records that can be queried
offset	No	Integer	Query offset, that is, X data records are skipped. The value must be 0 or an integer multiple of limit . If the value does not meet the requirements, it will be rounded down.

Request Parameters

Table 9-304 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200**Table 9-305** Response body parameters

Parameter	Type	Description
dashboards	Array of StatisticForDashboard objects	Statistics dashboard.

Table 9-306 StatisticForDashboard

Parameter	Type	Description
log_time	Integer	Statistical time point (13-bit timestamp).
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).
cost_time_avg	Number	Average request duration.
success_cost_time_avg	Number	Average duration of successful requests.
fail_cost_time_avg	Number	Average duration of failed requests.
success_rate	Number	Success rate.
fail_rate	Number	Indicates the failure rate.
legal_rate	Number	Legality rate.
illegal_rate	Number	Illegal rate.

Status code: 400**Table 9-307** Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query app dashboard data details.

400	Bad request

9.8.10 Querying Top N APIs Called by a Specified API Application

Function

This API is used to query top N APIs called by a specified application.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/statistic/apis-top-n/{api_id}

Table 9-308 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
api_id	Yes	String	API ID

Table 9-309 Query Parameters

Parameter	Mandatory	Type	Description
instance_id	No	String	Cluster ID
start_time	Yes	Long	Start time (13-digit timestamp).
end_time	Yes	Long	End time (13-digit timestamp).
time_unit	Yes	String	Time unit Enumerated values: <ul style="list-style-type: none">• HOURLY: hour• DAILY: day
top_num	Yes	Integer	The first few.

Parameter	Mandatory	Type	Description
order_by	Yes	String	<p>Sorting criteria</p> <p>Enumerated values:</p> <ul style="list-style-type: none"> • CALL_NUM: total number of calls • SUCCESS_NUM: number of successful calls • FAIL_NUM: number of failed calls • LEGAL_NUM: number of legal calls • ILLEGAL_NUM: number of illegal calls • COST_TIME_AVG: average time • SUCCESS_COST_TIME_AVG: average time for a successful call • FAIL_COST_TIME_AVG: average time for a failed call • SUCCESS_RATE: rate of successful calls • FAIL_RATE: rate of failed calls • LEGAL_RATE: rate of legal calls • ILLEGAL_RATE: rate of illegal calls

Request Parameters

Table 9-310 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	<p>User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.</p>

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	Yes	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-311 Response body parameters

Parameter	Type	Description
statistics	Array of StatisticForCallDetail objects	Indicates the invoking information list.

Table 9-312 StatisticForCallDetail

Parameter	Type	Description
id	String	ID of a statistical object.
name	String	Name of the statistics object.
call_num	Integer	Total number of invoking times.
success_num	Integer	Number of successful invoking times (data obtaining success).
fail_num	Integer	Number of failed invoking times (data obtaining failure).

Parameter	Type	Description
legal_num	Integer	Number of valid invoking times (pass the verification).
illegal_num	Integer	Invalid invoking volume (failed to pass the verification).

Status code: 400

Table 9-313 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query top N APIs called by a specified application.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/statistic/apis-top-n/  
760715eb1bfce0c575abab3be3bd41e6
```

Example Responses

Status code: 200

The top N APIs called by a specified application are queried successfully.

```
{  
  "statistics": [ {  
    "id": "3423634676234236674",  
    "name": "Statistical Object Name",  
    "call_num": 0,  
    "success_num": 0,  
    "fail_num": 0,  
    "legal_num": 0,  
    "illegal_num": 0  
  } ]  
}
```

Status Codes

Status Code	Description
200	The top N APIs called by a specified application are queried successfully.
400	Bad request

9.9 Cluster Management

9.9.1 Querying the List of Cluster Overview Information

Function

This API is used to query the cluster overview information list.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/instances/overview

Table 9-314 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-315 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried.
offset	No	Integer	Start coordinate of the query.
name	No	String	Cluster name. This parameter supports fuzzy match.
create_user	No	String	Creator name.

Request Parameters

Table 9-316 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	No	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200**Table 9-317** Response body parameters

Parameter	Type	Description
total	Integer	Number of clusters
scale_down	Boolean	Specifies whether scale-in is supported.
scale_out	Boolean	Specifies whether capacity expansion is supported.

Parameter	Type	Description
instances	Array of InstanceOverviewDTO objects	Cluster overview information.

Table 9-318 InstanceOverviewDTO

Parameter	Type	Description
id	String	Cluster ID
name	String	Cluster name
description	String	Provides supplementary information about the cluster.
external_address	String	External IP address.
intranet_address	String	Internal IPv4 address.
intranet_address_ipv6	String	Internal IPv6 address.
public_zone_id	String	Public zone ID.
public_zone_name	String	Specifies the public zone name.
private_zone_id	String	Specifies the private zone ID.
private_zone_name	String	Specifies the private zone name.
enterprise_project_id	String	Enterprise project ID
create_time	Long	Time when the bandwidth was specified.
create_user	String	Creator.
current_namespace_published_api_num	Integer	Number of APIs that have been published in the current workspace.
all_namespace_published_api_num	Integer	Number of APIs that have been published in all workspaces.
api_publishable_num	Integer	Specifies the total API quota of a cluster.
deletable	Boolean	Specifies whether a cluster can be deleted.

Parameter	Type	Description
charge_status	String	Charging status of a cluster. The options are as follows: NO_CHARGE: not charged; CHARGED: charged; GRACE: grace period; RETENTION: retention period.
order_id	String	Order ID

Status code: 400

Table 9-319 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the list of cluster overview information.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/instances/overview
```

Example Responses

9.9.2 Querying the List of Cluster Details

Function

This API is used to query the list of cluster details.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/instances

Table 9-320 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .

Table 9-321 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	Integer	Maximum number of records that can be queried.
offset	No	Integer	Start coordinate of the query.
name	No	String	Cluster name. This parameter supports fuzzy match.
create_user	No	String	Creator name.

Request Parameters

Table 9-322 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	No	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200**Table 9-323** Response body parameters

Parameter	Type	Description
total	Integer	Number of clusters

Parameter	Type	Description
instances	Array of InstanceDetailDTO objects	Cluster overview information.

Table 9-324 InstanceDetailDTO

Parameter	Type	Description
id	String	Cluster ID
name	String	Cluster name
description	String	Provides supplementary information about the cluster.
external_address	String	External IP address.
intranet_address	String	Internal IPv4 address.
intranet_address_ipv6	String	Internal IPv6 address.
public_zone_id	String	Public zone ID.
public_zone_name	String	Specifies the public zone name.
private_zone_id	String	Specifies the private zone ID.
private_zone_name	String	Specifies the private zone name.
enterprise_project_id	String	Enterprise project ID
create_time	Long	Creation time.
create_user	String	Creator.
current_namespace_publish_api_num	Integer	Number of APIs that have been published in the current workspace.
all_namespace_publish_api_num	Integer	Number of APIs that have been published in all workspaces.
api_publishable_num	Integer	Specifies the total API quota of a cluster.
deletable	Boolean	Specifies whether a cluster can be deleted.

Parameter	Type	Description
charge_status	String	Charging status of a cluster. The options are as follows: NO_CHARGE: not charged; CHARGED: charged; GRACE: grace period; RETENTION: retention period.
order_id	String	Order ID
order_type	String	Order type. The options are as follows: PERIOD: yearly/monthly; ON_DEMAND: pay-per-use.
period_type	String	Cluster subscription period type.
instance_status	String	Cluster status.
node_num	Integer	Number of nodes.
flavor	FlavorDTO object	Cluster node specifications.
gateway_version	String	Cluster version.
availability_zone	String	Code of the AZ where the cluster is located.
availability_zone_name	String	Name of the AZ where the cluster is located.
vpc_id	String	ID of the VPC to which the cluster belongs.
subnet_id	String	ID of the subnet where the cluster is located.
security_group_id	String	ID of the security group to which the cluster belongs.
nodes	Array of InstanceNodeDTO objects	Cluster node list.

Table 9-325 FlavorDTO

Parameter	Type	Description
id	String	Specifies the flavor ID.
name	String	Flavor name
disk	Integer	Disk size.
cpu	Integer	Number of vCPUs.
mem	Integer	Memory size.

Table 9-326 InstanceNodeDTO

Parameter	Type	Description
id	String	Node ID.
name	String	Node name.
private_ip	String	IP addresses of the nodes
status	String	Indicates the node status.
create_user	String	Node creator.
create_time	String	Time when a node is created
gateway_version	String	Node version number.

Status code: 400**Table 9-327** Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the list of cluster details.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/instances
```

Example Responses

Status code: 200

The request is successful.

9.9.3 Querying Cluster Details

Function

This API is used to query cluster details.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/instances/{instance_id}

Table 9-328 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain the project ID, see Project ID and Account ID .
instance_id	Yes	String	Cluster ID.

Request Parameters

Table 9-329 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain the workspace ID, see Instance ID and Workspace ID .
Dlm-Type	No	String	Specifies the version type of the data service. The value can be SHARED or EXCLUSIVE.
Content-Type	No	String	Type (format) of the message body. This parameter is mandatory if the message body exists. If the message body does not exist, leave this parameter blank. If the request body contains Chinese characters, use charset=utf8 to specify the Chinese character set, for example, application/json;charset=utf8.

Response Parameters

Status code: 200

Table 9-330 Response body parameters

Parameter	Type	Description
id	String	Cluster ID
name	String	Cluster name
description	String	Provides supplementary information about the cluster.
external_address	String	External IP address.
intranet_address	String	Internal IPv4 address.
intranet_address_ipv6	String	Internal IPv6 address.
public_zone_id	String	Public zone ID.
public_zone_name	String	Specifies the public zone name.
private_zone_id	String	Specifies the private zone ID.
private_zone_name	String	Specifies the private zone name.
enterprise_project_id	String	Enterprise project ID
create_time	Long	Creation time.
create_user	String	Creator.
current_namespace_publish_api_num	Integer	Number of APIs that have been published in the current workspace.
all_namespace_publish_api_num	Integer	Number of APIs that have been published in all workspaces.
api_publishable_num	Integer	Specifies the total API quota of a cluster.
deletable	Boolean	Specifies whether a cluster can be deleted.
charge_status	String	Charging status of a cluster. The options are as follows: NO_CHARGE: not charged; CHARGED: charged; GRACE: grace period; RETENTION: retention period.
order_id	String	Order ID

Parameter	Type	Description
order_type	String	Order type. The options are as follows: PERIOD: yearly/monthly; ON_DEMAND: pay-per-use.
period_type	String	Cluster subscription period type.
instance_status	String	Cluster status.
node_num	Integer	Number of nodes.
flavor	FlavorDTO object	Cluster node specifications.
gateway_version	String	Cluster version.
availability_zone	String	Code of the AZ where the cluster is located.
availability_zone_name	String	Name of the AZ where the cluster is located.
vpc_id	String	ID of the VPC to which the cluster belongs.
subnet_id	String	ID of the subnet where the cluster is located.
security_group_id	String	ID of the security group to which the cluster belongs.
nodes	Array of InstanceNodeDTO objects	Cluster node list.

Table 9-331 FlavorDTO

Parameter	Type	Description
id	String	Specifies the flavor ID.
name	String	Flavor name
disk	Integer	Disk size.
cpu	Integer	Number of vCPUs.
mem	Integer	Memory size.

Table 9-332 InstanceNodeDTO

Parameter	Type	Description
id	String	Node ID.

Parameter	Type	Description
name	String	Node name.
private_ip	String	IP addresses of the nodes
status	String	Indicates the node status.
create_user	String	Node creator.
create_time	String	Time when a node is created
gateway_version	String	Node version number.

Status code: 400

Table 9-333 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the details of a cluster whose ID is 51159105c7838353d2834181d978af50.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/instances/51159105c7838353d2834181d978af50

9.9.4 Querying Access Logs of a DataArts DataService Cluster

Function

This API is used to query the access logs of a DataArts DataService cluster.

Calling Method

For details, see [Calling APIs](#).

URI

GET /v1/{project_id}/service/instances/{instance_id}/accesslog

Table 9-334 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
instance_id	Yes	String	Cluster ID

Table 9-335 Query Parameters

Parameter	Mandatory	Type	Description
is_api	No	Boolean	Whether to query API access logs. Value true means to query API access logs, and value false means to query app access logs.

Request Parameters

Table 9-336 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain it, see Instance ID and Workspace ID .
Content-Type	No	String	Type (format) of the message body. This parameter is mandatory when there is a body. If the request body contains Chinese characters, use <code>charset=utf8</code> to specify the Chinese character set, for example, application/json; charset=utf8 .

Response Parameters

Status code: 200

Table 9-337 Response body parameters

Parameter	Type	Description
number	Integer	Number of access logs
records	Array of InstanceAccesslog objects	Access logs

Table 9-338 InstanceAccesslog

Parameter	Type	Description
id	String	Cluster ID
request_id	String	Request ID
api_id	String	API ID
api_name	String	API name
app_id	String	App ID
app_name	String	App name
access_time	Long	Access time
duration	Long	Access duration
status_code	String	Status code
error_code	String	Error code
error_message	String	Error message
detail	String	Log details
in_flow_size	Long	Input traffic volume
out_flow_size	Long	Output traffic volume
out_total_size	Long	Number of output data records

Status code: 400

Table 9-339 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Query the access logs of the cluster whose ID is **4f9366ce3e87860934c36d0ac027ad6a**.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/instances/4f9366ce3e87860934c36d0ac027ad6a/accesslog
```

Example Responses

Status code: 200

The query is successful.

9.9.5 Enabling Log Dump to OBS for a DataArts DataService Cluster

Function

This API is used to enable the logs of a DataArts DataService cluster to be dumped to OBS.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v1/{project_id}/service/instances/{instance_id}/obs-log-dump

Table 9-340 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
instance_id	Yes	String	Cluster ID

Request Parameters

Table 9-341 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.

Parameter	Mandatory	Type	Description
workspace	Yes	String	Workspace ID. For details about how to obtain it, see Instance ID and Workspace ID .
Dlm-Type	No	String	Edition of the DataArts DataService. The value can be SHARED or EXCLUSIVE .
Content-Type	No	String	Type (format) of the message body. This parameter is mandatory when there is a body. If the request body contains Chinese characters, use <code>charset=utf8</code> to specify the Chinese character set, for example, application/json; charset=utf8 .

Table 9-342 Request body parameters

Parameter	Mandatory	Type	Description
log_dump	No	Boolean	Whether to enable log dump to OBS. Value true indicates that it is enabled, and value false indicates that it is disabled.

Response Parameters

Status code: 400

Table 9-343 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Enable the logs of the cluster whose ID is **4f9366ce3e87860934c36d0ac027ad6a** to be dumped to OBS.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/instances/4f9366ce3e87860934c36d0ac027ad6a/obs-log-dump
```

```
{  
  "log_dump" : true  
}
```

Example Responses

None

Status Codes

204	Success
400	Bad request.

9.9.6 Enabling Log Dump to LTS for a DataArts DataService Cluster

Function

This API is used to enable the logs of a DataArts DataService cluster to be dumped to LTS.

Calling Method

For details, see [Calling APIs](#).

URI

PUT /v1/{project_id}/service/instances/{instance_id}/lts-log-dump

Table 9-344 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. For details about how to obtain it, see Project ID and Account ID .
instance_id	Yes	String	Cluster ID

Request Parameters

Table 9-345 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. This parameter is mandatory when token authentication is used. You can obtain it from the value of X-Subject-Token in the response message header returned by the "Obtaining a User Token" API of the IAM service.
workspace	Yes	String	Workspace ID. For details about how to obtain it, see Instance ID and Workspace ID .
Dlm-Type	No	String	Edition of the DataArts DataService. The value can be SHARED or EXCLUSIVE .
Content-Type	No	String	Type (format) of the message body. This parameter is mandatory when there is a body. If the request body contains Chinese characters, use <code>charset=utf8</code> to specify the Chinese character set, for example, application/json; charset=utf8 .

Table 9-346 Request body parameters

Parameter	Mandatory	Type	Description
log_dump	No	Boolean	Whether to enable log dump to LTS. Value true indicates that it is enabled, and value false indicates that it is disabled.
log_group_id	No	String	Log group ID
log_group_name	No	String	Log group name
log_stream_id	No	String	Log stream ID

Parameter	Mandatory	Type	Description
log_stream_name	No	String	Log stream name

Response Parameters

Status code: 400

Table 9-347 Response body parameters

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error message.

Example Requests

Enable the logs of the cluster whose ID is **4f9366ce3e87860934c36d0ac027ad6a** to be dumped to LTS.

```
/v1/0833a5737480d53b2f250010d01a7b88/service/instances/4f9366ce3e87860934c36d0ac027ad6a/lts-log-dump

204	Success
400	Bad request.

10 Application Cases

10.1 Example of Using DataArts Migration APIs

This section describes how to use cURL to call CDM APIs to migrate data from a local MySQL database to DWS in the cloud.

1. **Obtaining a Token**

Call the API to obtain the user token, which will be put into the request header for authentication in a subsequent request.

2. **Creating a CDM Cluster**

- If you have created a CDM cluster, skip this step and directly use the ID of the created cluster.
- If you want to use a new cluster for migration, call the API in **Creating a Cluster** to create a CDM cluster.

3. **Creating Links**

Call the API in **Creating a Link** to create the MySQL and DWS links.

4. **Creating a Migration Job**

Call the API in **Creating a Job in a Specified Cluster** to create a job for migrating data from MySQL to DWS.

5. **Viewing Job Result**

Call the API in **Starting a Job** to execute the job.

Preparing Data

Before calling an API, prepare the following data.

Table 10-1 Preparing data

Item	Name	Description	Example
Account information	Project name	Name of the project where CDM resides	Project Name

Item	Name	Description	Example
	Project ID	ID of the project where CDM resides	1551c7f6c808414d8e9f3c514a170f2e
	Account name	Name of an enterprise account to which a user belongs	Account Name
	Username	Username for using a cloud service. The user must have operation permissions on CDM.	Username
	Password	User password	password
VPC information	VPC ID	The VPC where CDM resides must be the same as that of DWS.	6b47302a-bf79-4b20-bf7a-80987408e196
	Subnet ID	The subnet where CDM resides must be the same as that of DWS.	63bdc3cb-a4e7-486f-82ee-d9bf208c8f8c
	Security group ID	The security group where CDM resides must be the same as that of DWS.	005af77a-cce5-45ac-99c7-2ea50ea8addf
Endpoint	IAM endpoint	An endpoint is the request address for calling an API. Endpoints vary depending on services and regions. You can obtain endpoints from Regions and Endpoints .	iam_endpoint
	CDM endpoint	An endpoint is the request address for calling an API. Endpoints vary depending on services and regions. You can obtain endpoints of the service from Endpoints .	cdm_endpoint

Item	Name	Description	Example
MySQL database	IP address	IP address of the local MySQL database, which allows CDM to access the MySQL database using a public IP address	1xx.120.85.24
	Port	MySQL database port	3306
	Database name	Name of the MySQL database from which data is to be exported	DB_name
	Username	Username for accessing the MySQL database. The user must have the read, write, and delete permissions on the MySQL database.	username
	Password	Password for accessing the MySQL database	DB_password
DWS database	IP address	IP address of the DWS database. CDM can access the IP address through the internal network.	10.120.85.24
	Port	DWS database port	3306
	Database name	Name of the DWS database to which data is written	DWS
	Username	Username for accessing the DWS database. The user must have the read, write, and delete permissions on the DWS database.	user_dws
	Password	Password for accessing the DWS database	dws_password

Obtaining a Token

1. Before calling other APIs, obtain the token and set it as an environment variable.

```
curl -H "Content-Type:application/json" https://{iam_endpoint}/v3/auth/tokens -X POST -d '{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "Username",
          "password": "password",
          "domain": {
            "name": "Account Name"
          }
        }
      }
    },
    "scope": {
      "project": {
        "id": "1551c7f6c808414d8e9f3c514a170f2e"
      }
    }
  }
}' -v -k
```

The value of **X-Subject-Token** in the response header is the token.

```
X-Subject-Token:MIIDkgYJKoZIhvcNAQcCoIIDgzCCA38CAQExDTALBglghkgBZQMEAgEwgXXXXX...
```

2. Run the following command to set the token as an environment variable for future use:

```
export Token = MIIDkgYJKoZIhvcNAQcCoIIDgzCCA38CAQExDTALBglghkgBZQMEAgEwgXXXXX...
```

Creating a CDM Cluster

1. Call the API in [Creating a Cluster](#) to create a cluster. The following values are examples:
 - Cluster name: **cdm-ab82**
 - Cluster flavor: **cdm.medium**
 - The VPC, subnet, and security group are the same as those of DWS, and the EIP is automatically bound.

If status code **200** is returned, the cluster is successfully created.

```
curl -X POST -H 'Content-Type:application/json;charset=utf-8' -H "X-Auth-Token:$Token" -d '{
  "cluster": {
    "name": "cdm-ab82",
    "vpclid": "6b47302a-bf79-4b20-bf7a-80987408e196",
    "instances": [{
      "flavorRef": "fb8fe666-6734-4b11-bc6c-43d11db3c745",
      "nics": [{
        "net-id": "63bdc3cb-a4e7-486f-82ee-d9bf208c8f8c",
        "securityGroupid": "005af77a-cce5-45ac-99c7-2ea50ea8addf"
      }],
      "availability_zone": "Project Name",
      "type": "cdm"
    }],
    "datastore": {
      "version": "1.8.5",
      "type": "cdm"
    },
    "isScheduleBootOff": false,
    "scheduleBootTime": "null",
    "scheduleOffTime": "null",
    "isAutoOff": false,
    "sys_tags": [{
```

```
    "key": "_sys_enterprise_project_id",
    "value": "1ce45885-4033-40d2-bdde-d4dbaceb387d"
  }
},
"autoRemind": false,
"phoneNum": "null",
"email": "null"
}
https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters -v -k
```

2. Call the API in [Querying the Cluster List](#) to query cluster information, obtain the cluster ID, and set the cluster ID to a global variable.

```
curl -X GET -H 'Content-Type:application/json;charset=utf-8' -H "X-Auth-Token:$Token" https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters -k -v
```

The response is as follows:

```
{
  "clusters": [{
    "version": "x.x.x",
    "updated": "2018-09-05T08:38:25",
    "name": "cdm-ab82",
    "created": "2018-09-05T08:38:25",
    "id": "bae65496-643e-47ca-84af-948672de7eeb",
    "status": "200",
    "isFrozen": "0",
    "statusDetail": "Normal",
    "actionProgress": {},
    "config_status": "In-Sync"
  }
]}
```

If the value of **status** is **200**, the cluster is successfully created. The cluster ID is **bae65496-643e-47ca-84af-948672de7eeb**.

3. Run the following command to set the cluster ID to a global variable for future use:

```
export ID = bae65496-643e-47ca-84af-948672de7eeb
```

Creating Links

1. Call the API in [Creating a Link](#) to create the MySQL link **mysql_link**. The following values are examples:

- IP address: **1xx.120.85.24**
- Port number: **3306**
- Database name: **DB_name**
- Login username: *username*
- Password: **DB_password**

If status code **200** is returned, the link is successfully created.

```
curl -X POST -H "Content-Type:application/json" -H "X-Auth-Token:$Token" -d '{
  "links": [{
    "enabled": true,
    "update-user": null,
    "name": "mysql_link",
    "link-config-values": {
      "configs": [
        {
          "name": "linkConfig",
          "inputs": [
            {
              "name": "linkConfig.databaseType",
              "value": "MYSQL"
            }
          ]
        }
      ]
    }
  }
}
```

```
        "name": "linkConfig.host",
        "value": "1xx.120.85.24"
    },
    {
        "name": "linkConfig.port",
        "value": "3306"
    },
    {
        "name": "linkConfig.database",
        "value": "DB_name"
    },
    {
        "name": "linkConfig.username",
        "value": "username"
    },
    {
        "name": "linkConfig.password",
        "value": "DB_password"
    },
    {
        "name": "linkConfig.fetchSize",
        "value": "100000"
    },
    {
        "name": "linkConfig.usingNative",
        "value": "true"
    }
    ]
}
},
"connector-name": "generic-jdbc-connector",
"creation-date": 1536654788622,
"update-date": 1536654788622,
"creation-user": null
}]
}'
https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters/
bae65496-643e-47ca-84af-948672de7eeb/cdm/link -k -v
```

2. Call the API in [Creating a Link](#) to create the DWS link **dws_link**. The following values are examples:

- IP address of the database: **10.120.85.24**
- Port number: **3306**
- Database name: **DWS**
- Login username: **user_dws**
- Password: **dws_password**

```
curl -X POST -H "Content-Type:application/json" -H "X-Auth-Token:$Token" -d '{
  "links": [{
    "enabled": true,
    "update-user": null,
    "name": "dws_link",
    "link-config-values": {
      "configs": [
        {
          "name": "linkConfig",
          "inputs": [
            {
              "name": "linkConfig.databaseType",
              "value": "DWS"
            },
            {
              "name": "linkConfig.host",
              "value": "10.120.85.24"
            }
          ]
        }
      ]
    }
  ]
}
```

```
        "name": "linkConfig.port",
        "value": "3306"
      },
      {
        "name": "linkConfig.database",
        "value": "DWS"
      },
      {
        "name": "linkConfig.username",
        "value": "user_dws"
      },
      {
        "name": "linkConfig.password",
        "value": "dws_password"
      },
      {
        "name": "linkConfig.fetchSize",
        "value": "100000"
      },
      {
        "name": "linkConfig.usingNative",
        "value": "true"
      }
    ]
  },
  "connector-name": "generic-jdbc-connector",
  "creation-date": 1536654788622,
  "update-date": 1536654788622,
  "creation-user": null
}]
}
```

`https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters/bae65496-643e-47ca-84af-948672de7eeb/cdm/link -k -v`

Creating a Migration Job

1. After the links are created, call the API in [Creating a Job in a Specified Cluster](#) to create a migration job. The following is a sample job:
 - The job name is **mysql2dws**.
 - The name of the MySQL database from which data is exported is **default**, and the name of the exported table is **mysql_tbl**. The job is split into multiple tasks by **id** and the tasks are executed concurrently.
 - The name of the database on DWS to which the data is imported is **public**, and the table name is **cdm_all_type**. Do not clear the data in the table before import.
 - If no table in the local MySQL database exists in the database on DWS, CDM automatically creates the table on DWS.
 - The field list loaded to DWS is **id&gid&name**.
 - When the job extracts data, three extractors are concurrently executed.

If status code **200** is returned, the job is successfully created.

```
curl -X POST -H "Content-Type:application/json" -H "X-Cluster-ID:$ID" -H "X-Auth-Token:$Token" -d '{
  "jobs": [{
    "job_type": "NORMAL_JOB",
    "name": "mysql2dws",
    "from-link-name": "mysql_link",
    "from-connector-name": "generic-jdbc-connector",
    "to-link-name": "dws_link",
    "to-connector-name": "generic-jdbc-connector",
    "from-config-values": {
```

```
"configs": [{
  "name": "fromJobConfig",
  "inputs": [{
    "name": "fromJobConfig.schemaName",
    "value": "default"
  }],
  {
    "name": "fromJobConfig.tableName",
    "value": "mysql_tbl"
  },
  {
    "name": "fromJobConfig.partitionColumn",
    "value": "id"
  }
}]
},
"to-config-values": {
  "configs": [
    {
      "inputs": [
        {
          "name": "toJobConfig.schemaName",
          "value": "public"
        },
        {
          "name": "toJobConfig.tablePreparation",
          "value": "CREATE_WHEN_NOT_EXIST"
        },
        {
          "name": "toJobConfig.tableName",
          "value": "cdm_all_type"
        },
        {
          "name": "toJobConfig.columnList",
          "value": "id&gid&name"
        },
        {
          "name": "toJobConfig.shouldClearTable",
          "value": "false"
        }
      ]
    },
    {
      "name": "toJobConfig"
    }
  ]
},
"driver-config-values": {
  "configs": [{
    "name": "throttlingConfig",
    "inputs": [{
      "name": "throttlingConfig.numExtractors",
      "value": "3"
    }]
  }]
}
}
}
}
} https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters/
bae65496-643e-47ca-84af-948672de7eeb/cdm/job -k -v
```

2. Call the API in [Starting a Job](#) to execute the job.

```
curl -X GET -H 'Content-Type:application/json;charset=utf-8' -H "X-Cluster-ID:$ID" -H "X-Auth-Token:$Token" https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters/
bae65496-643e-47ca-84af-948672de7eeb/cdm/job/mysql2dws/start -k -v
```

The response is as follows:

```
{
  "submissions": [{
    "progress": 1,
    "job-name": "mysql2dws",
    "status": "BOOTING",
    "creation-date": 1536654788622,
```

```
"creation-user": "cdm"  
  }  
}
```

Viewing Job Result

1. Call the API in [Querying Job Status](#) to query the job status.
`curl -X GET -H 'Content-Type:application/json;charset=utf-8' -H "X-Cluster-ID:$ID" -H "X-Auth-Token:$Token" https://{cdm_endpoint}/v1.1/1551c7f6c808414d8e9f3c514a170f2e/clusters/6ec9a0a4-76be-4262-8697-e7af1fac7920/cdm/job/mysql2dws/status -k -v`
2. View the job execution result. The response to successful job execution is as follows:

```
{  
  "submissions": [{  
    "progress": 0,  
    "job-name": "mysql2dws",  
    "status": "SUCCEEDED",  
    "creation-date": 1536654788622,  
    "creation-user": "cdm",  
    "isStoppingIncrement": "",  
    "last-update-date": 1536654888622,  
    "is-execute-auto": false,  
    "last-update-user": "cdm",  
    "isDeleteJob": false,  
    "isIncrementing": false,  
    "external-id": "job_local1127970451_0009",  
    "counters": {  
      "org.apache.sqoop.submission.counter.SqoopCounters": {

        "FILES_READ": -1,  
        "ROWS_WRITTEN": 80,  
        "ROWS_READ": 80  
      }  
    }  
  }  
}]  
}
```

NOTE

- **BYTES_WRITTEN**: number of written bytes
- **BYTES_READ**: number of read bytes
- **TOTAL_FILES**: total number of files
- **FILES_WRITTEN**: number of written files
- **FILES_READ**: number of read files
- **ROWS_WRITTEN**: number of rows that are successfully written
- **ROWS_READ**: number of rows that are successfully read

10.2 Example of Using DataArts Factory APIs

Scenarios

DataArts Studio helps enterprises quickly build an end-to-end intelligent data system that covers the entire process from data ingestion to data analytics. The system can eliminate data silos, unify data standards, accelerate data monetization, and promote digital transformation.

The following describes how to create a script by calling the [Creating a Script](#) API. For details, see [Calling APIs](#).

Prerequisites

You have planned the region where Data Development is located and determined the endpoint for calling an API based on the region.

An endpoint is the **request address** for calling an API. Endpoints vary depending on services and regions. You can obtain endpoints of the service from [Endpoints](#).

Creating a Shell Script

The following is an example of creating a shell script:

```
{
  "name": "echoTimeShell",
  "type": "Shell",
  "content": "echo a",
  "connectionName": "con"
}
```

- **name** indicates a custom script name, for example, **echoTimeShell**.
- **type** indicates the type of the script.
- **content** indicates the script content.
- **connectionName** indicates the name of the data connection associated with the script.

Creating a DLI SQL Script

You can also create a DLI SQL script. The following is an example:

```
{
  "name": "dliSql1",
  "type": "DLISQL",
  "content": "show tables",
  "connectionName": "dliCon1",
  "database": "testDatabase1",
  "queueName": "queue1"
}
```

- **name** indicates a custom script name, for example, **dliSql1**.
- **type** indicates the type of the script.
- **content** indicates the script content.
- **connectionName** indicates the name of the data connection associated with the script.
- **database** indicates the name of the associated database when the script is executed.
- **queueName** indicates the name of the queue running on DLI when the SQL statement is executed.

11 Appendix

11.1 Common Message Headers

Common request header fields

[Table 11-1](#) describes common request headers.

Table 11-1 Common request header fields

Field	Description	Mandatory	Example
Content-Type	Request body type or format. Its default value is application/json .	Yes	application/json
Content-Length	Specifies the length of the request body. The unit is byte.	No	3495
X-Language	Request language	No	en_us
X-Auth-Token	Specifies a user token. The user token is the value returned by the API used to obtain a user token . This API is the only API that does not require authentication. The token is the value of X-Subject-Token in the response header.	This field is mandatory for token authentication.	The following is part of an example token: MIIPAgYJKoZlhvc-NAQcCo...ggg1BBI INPXsidG9rZ

Field	Description	Mandatory	Example
Authorization	Authentication information. When AK/SK authentication is enabled, this field is automatically specified when SDK is used to sign the request.	This field is mandatory for AK/SK-based authentication.	None
X-Sdk-Date	Time when the request is sent. The format is YYYYMMDD'T'HHMMSS'Z'. The value is the current GMT time of the system. When AK/SK authentication is enabled, this field is automatically specified when SDK is used to sign the request.	This field is mandatory for AK/SK-based authentication.	20150907T101459Z
Host	Specifies the server domain name and port number of the resources being requested. The value can be obtained from the URL of the service API. The value is in the format of <i>hostname[:port]</i> . If the port number is not specified, the default port is used. The default port number for HTTPS is 443.	This field is mandatory for AK/SK-based authentication.	code.test.com or code.test.com:443
X-Project-Id	Subproject ID. Obtain the project ID by following the instructions in Project ID and Account ID .	This field is mandatory for calling service APIs that use AK/SK authentication in subprojects.	e9993fc787d94b6c886cbaa340f9c0f4
X-Domain-ID	Domain ID. Obtain the domain ID by following the instructions in Project ID and Account ID .	This field is mandatory for calling global APIs that use AK/SK authentication.	0a2f5e28af00f3850f31c00f31e884e0

Field	Description	Mandatory	Example
workspace	Workspace ID. For details about how to obtain it, see Instance ID and Workspace ID .	<ul style="list-style-type: none"> You do not need to set this field when calling a CDM or DIS API. This field is mandatory when there are multiple DataArts Studio instances during a call to a DataArts Factory API. This field is optional when there is only one DataArts instance. This field is optional when there is only one DataArts Studio instance. If this field is not specified, data in the default workspace is queried by default. To query data in other workspaces, include this field in the request header. This header is mandatory for calling the APIs of other modules. Otherwise, API calls will fail. 	d1cd7861478748a6925bc02f47c69279
X-Dlm-Type	DataArts DataService edition, which is Exclusive	This parameter is mandatory for calling DataArts DataService APIs.	EXCLUSIVE: exclusive edition

Common response headers

[Table 11-2](#) describes common response headers.

Table 11-2 Common response headers

Parameter	Description
Content-Length	Length of the response body. The unit is byte.
Date	Time when a response is returned
Content-type	Request body MIME type

11.2 Parsing a Stream in a Response Message

The response messages of the job export API and connection export API are streams that need to be converted to files.

For details, see the following sample code:

```
String EXPORT_JOB_URL = "https://{endpoint}/v1/{project_id}/jobs/{job_name}/export";

try (CloseableHttpClient httpClient = HttpClients.createDefault()) {
    HttpPost httpPost = new HttpPost(EXPORT_JOB_URL);
    httpPost.setHeader("Content-Type", "application/json; charset=UTF-8");
    httpPost.setHeader("Accept", "application/octet-stream");
    httpPost.setHeader("X-Auth-Token", token);

    HttpResponse response = httpClient.execute(httpPost);
    int statusCode = response.getStatusLine().getStatusCode();
    if (statusCode == 200) {
        String filePath = "d:";
        String fileName = "job.zip";
        FileOutputStream fileOutputStream = new FileOutputStream(filePath + fileName);
        response.getEntity().writeTo(fileOutputStream);
    } else {
        System.out.println(statusCode);
    }
}
```

11.3 Status Codes

A status code consists of three digits. The first digit defines the class of a response. There are five values for the first digit:

- 1xx: indication information, indicating that the request has been received and can be further processed.
- 2xx: success, indicating that the request has been received, understood, and accepted.
- 3xx: redirection, indicating that the request requires further operations before it can be completed.
- 4xx: client error, indicating that there is a syntax error in the request or the request cannot be implemented.

- 5xx: server error, indicating that the server has failed to implement a valid request.

Table 11-3 describes status codes.

Table 11-3 Status codes

Status Code	Message	Description
100	Continue	The client should continue with its request. This interim response is used to inform the client that part of the request has been received and has not yet been rejected by the server.
101	Switching Protocols	The protocol should be switched. The protocol can only be switched to a newer protocol. For example, the current HTTP protocol is switched to a later version of HTTP.
200	OK	The request has been fulfilled.
201	Created	The request has been fulfilled and a new resource has been created.
202	Accepted	The request has been accepted, but the processing has not been completed.
203	Non-Authoritative Information	The server has successfully processed the request, but is returning information that may be from another source.
204	NoContent	The request has been fulfilled, but the HTTP response does not contain a response body. The status code is returned in response to an HTTPS OPTIONS request.
205	Reset Content	The server has fulfilled the request, but the requester is required to reset the content.
206	Partial Content	The server has successfully processed the partial GET request.
300	Multiple Choices	There are multiple options for the location of the requested resource. The response contains a list of resource characteristics and addresses from which the user or user agent (such as a browser) can choose the most appropriate one.
301	Moved Permanently	The requested resource has been assigned a new permanent URI, and the new URI is contained in the response.

Status Code	Message	Description
302	Found	The requested resource resides temporarily under a different URI.
303	See Other	The response to the request can be found under a different URI, and should be retrieved using a GET or POST method.
304	Not Modified	The requested resource has not been modified. When the server returns this status code, it does not return any resources.
305	Use Proxy	The requested resource is available only through a proxy.
306	Unused	The HTTP status code is no longer used.
400	BadRequest	The request is invalid. The client should not repeat the request without modifications.
401	Unauthorized	This status code is returned after the client provides the authentication information, indicating that the authentication information is incorrect or invalid.
402	Payment Required	This status code is reserved for future use.
403	Forbidden	The server understood the request, but is refusing to fulfill it. The client should not repeat the request without modifications.
404	NotFound	The requested resource cannot be found. The client should not repeat the request without modifications.
405	MethodNotAllowed	The method specified in the request is not supported for the requested resource. The client should not repeat the request without modifications.
406	Not Acceptable	The server cannot fulfill the request according to the content characteristics of the request.
407	Proxy Authentication Required	This status code is similar to 401, but indicates that the client must first authenticate itself with the proxy.

Status Code	Message	Description
408	Request Time-out	The server has timed out waiting for the request. The client may repeat the request without modifications at a later time.
409	Conflict	The request could not be processed due to a conflict with the current state of the resource. This status code indicates that the resource that the client is attempting to create already exists, or that the request has failed to be processed because of the update of the conflict request.
410	Gone	The requested resource has been deleted permanently and is no longer available.
411	Length Required	The server is refusing to process the request without a defined Content-Length .
412	Precondition Failed	The server did not meet one of the preconditions that the requester put on the request.
413	Request Entity Too Large	The server is refusing to process a request because the request entity is too large for the server to process. The server may close the connection to prevent the client from continuing the request. If the server is only temporarily unable to process the request, the response will contain a Retry-After header field.
414	Request-URI Too Large	The Request-URI is too long for the server to process.
415	Unsupported Media Type	The server is unable to process the media format in the request.
416	Requested range not satisfiable	The requested range is invalid.
417	Expectation Failed	The server has failed to meet the requirements of the Expect request-header field.
422	UnprocessableEntity	The request is well-formed but cannot be processed due to semantic errors.

Status Code	Message	Description
429	TooManyRequests	The client has sent excessive number of requests to the server within a given time (exceeding the limit on the access frequency of the client), or the server has received an excessive number of requests within a given time (beyond its processing capability). In this case, the client should resend the request after the time specified in the Retry-After header of the response has elapsed.
500	InternalServerError	The server is able to receive the request but unable to understand it.
501	Not Implemented	The server does not support the function required to fulfill the request.
502	Bad Gateway	The server was acting as a gateway or proxy and received an invalid request from the remote server.
503	ServiceUnavailable	The requested service is invalid. The client should not repeat the request without modifications.
504	ServerTimeout	The request cannot be fulfilled within a given time. This status code is returned to the client only if the Timeout parameter is specified in the request.
505	HTTP Version not supported	The server does not support the HTTP protocol version used in the request.

11.4 Error Codes

11.4.1 DataArts Migration Error Codes

If an error occurs in API calling, no result is returned. Identify the error cause based on the error codes of each API. If an error occurs in API calling, HTTP status code 4xx or 5xx is returned. The response body contains the specific error code and information. If you are unable to identify the cause of an error, contact customer service and provide the error code so that we can help you solve the problem as soon as possible.

- Sample exception response

```
{
  "errCode": "Cdm.0100",
  "externalMessage": "Job[jdbc2hive] doesn't exist."
}
```
- Parameter description

Parameter	Mandatory	Type	Description
errCode	No	String	Error code
externalMessage	No	String	Error message

- Error code

In the following error message, *%s* is a variable. In the actual situation, the parameter name, table name, job name, and link name are replaced with the actual values.

If an error code starting with **APIGW** is returned after you call an API, rectify the fault by referring to the instructions provided in [Error Codes](#).

Error Code	Status Code	Error	Description	Solution
Cdm.0000	400	System error.	A system error occurs.	Contact customer service or technical support.
Cdm.0001	400	The resource does not exist or is invalid.	The requested resource does not exist or you have no permission to access the resource.	Contact customer service or technical support.
Cdm.0004	400	Invalid parameter type.	The input parameter does not match the parameter type.	Change the parameter value based on the error message and try again.
Cdm.0009	400	<i>%s</i> is not an integer or is beyond the value range [0, 2147483647].	The input parameter is not an integer or is beyond the value range.	Change the parameter value based on the error message and try again.
Cdm.0010	400	The integer must be within the range of [<i>%s</i>].	The parameter is missing or its length is 0 .	Change the parameter value based on the error message and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.0011	400	The parameter value exceeds the value range.	The parameter format is incorrect or the parameter value exceeds the value range. As a result, the parsing failed.	Check whether the parameter value is valid based on the error message. If it is not, correct it and try again.
Cdm.0012	400	JDBC driver is not found.	JDBC driver is not found.	Contact customer service or technical support.
Cdm.0014	400	Invalid parameter.	The parameter is invalid.	Change the parameter value and try again.
Cdm.0015	400	Failed to parse the file.	The file fails to be parsed.	Check whether the content or format of the uploaded file is correct. If it is not, correct it and try again.
Cdm.0016	400	The file to be uploaded cannot be empty.	The uploaded file is empty.	Ensure that the file you uploaded is not empty and try again.
Cdm.0017	400	Failed to save the input value.	The input value cannot be saved.	Contact customer service or technical support.
Cdm.0018	400	The content of jobs or links is invalid.	The content of jobs or links is invalid.	Contact customer service or technical support.
Cdm.0019	400	Failed to delete the link from the database.	The link in the database fails to be deleted.	Try again later or contact customer service or technical support.
Cdm.0020	400	The string must contain the following substring: %s.	The verified parameter is empty or does not contain the specified substring.	Change the parameter value based on the error message and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.0021	400	Failed to connect to server %s.	The server fails to be connected.	Contact customer service or technical support.
Cdm.0024	400	[%s] must be within the range of [%s].	The verified parameter is not in the specified value range.	Change the parameter value based on the error message and try again.
Cdm.0031	400	Failed to create data to be submitted.	Failed to create data to be submitted.	Contact customer service or technical support.
Cdm.0032	400	You do not have required permissions. Check your permissions on IAM.	Insufficient permissions	CDM console: Obtain required permissions by referring to Permissions Management . DataArts Studio console: Obtain required permissions by referring to Permission Management .
Cdm.0036	400	Internal error.	An internal error occurred. The displayed error message may vary. Contact the customer service or technical support based on the error message (for example, "Internal error: null pointer exception").	Contact customer service or technical support.
Cdm.0037	400	Failed to submit the job.	The job fails to be submitted.	Contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0051	400	Invalid submission engine: %s.	Invalid job engine name.	Specify a correct job engine and try again.
Cdm.0052	400	Job %s is running.	The job is running.	The operation cannot be performed because the job is running. Try again after the job completes.
Cdm.0053	400	Job %s is not running.	The job is not running.	Run the job and try again.
Cdm.0054	400	Job %s does not exist.	The job does not exist.	Check whether the job exists.
Cdm.0055	400	Unsupported job type.	Unsupported job type.	Configure a supported job type.
Cdm.0056	400	Failed to submit the job. Cause: %s.	The job fails to be submitted.	Locate the cause based on the error message, rectify the fault, and try again.
Cdm.0057	400	Invalid job execution engine: %s.	The job engine is invalid.	Specify a correct job engine and try again.
Cdm.0058	400	Invalid combination of submission and execution engines.	The combination of submission and execution engines is invalid.	Specify a correct job engine and try again.
Cdm.0059	400	Job %s has been disabled and cannot be submitted.	The job has been disabled and cannot be submitted.	Create a job and try again. Alternatively, contact customer service or technical support.
Cdm.0060	400	Link %s for this job has been disabled. The job cannot be submitted.	The link for this job has been disabled.	Change the link and submit the job again.

Error Code	Status Code	Error	Description	Solution
Cdm.0061	400	Connector <i>%s</i> does not support the specified direction. The job cannot be submitted.	The connector cannot be used as the source or destination of a job.	The connector cannot be used as the source or destination of a job. Change the connector and submit the job again.
Cdm.0062	400	The binary file is applicable only to the SFTP, FTP, HDFS, or OBS connector.	The connector is invalid.	Specify a correct connector and try again.
Cdm.0063	400	An error occurred when creating the table. Cause: <i>%s</i> .	The table fails to be created.	Locate the cause based on the error message, rectify the fault, and try again.
Cdm.0064	400	Incorrect data format.	The data format is incorrect.	Check whether the data format is correct based on the error message. If it is not, correct it and try again.
Cdm.0065	400	Failed to start the timer. Cause: <i>%s</i> .	The timer fails to be started.	Contact customer service or technical support.
Cdm.0066	400	Failed to obtain the sample value. Cause: <i>%s</i> .	The sample value fails to be obtained.	Contact customer service or technical support.
Cdm.0067	400	Failed to obtain the schema. Cause: <i>%s</i> .	The schema field fails to be obtained.	Contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0085	400	<i>%s</i> exceeds the maximum value <i>%s</i> .	The parameter value exceeds the maximum value.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0089	400	The configuration item [<i>%s</i>] does not exist.	The configuration item does not exist.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0100	400	Job [<i>%s</i>] does not exist.	The job does not exist.	Specify a correct job and try again.
Cdm.0101	400	Link [<i>%s</i>] does not exist.	The link does not exist.	Specify a correct link and try again.
Cdm.0102	400	Connector [<i>%s</i>] does not exist.	The connector does not exist.	Specify a correct connector and try again.
Cdm.0104	400	The job name already exists.	The job name already exists.	Rename the job and try again.
Cdm.0201	400	Failed to obtain the instance.	The instance fails to be obtained.	Contact customer service or technical support.
Cdm.0202	400	Unknown status.	The job status is unknown.	Try again later or contact customer service or technical support.
Cdm.0204	400	No MRS link available.	No MRS link is created.	Go to the Links page to create an MRS link and try again.
Cdm.0230	400	Failed to load the specified class: <i>%s</i> .	The class fails to be loaded.	Contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0231	400	Failed to initialize the specified class: %s.	The class fails to be initialized.	Contact customer service or technical support.
Cdm.0232	400	Failed to write data. Cause: %s.	Data fails to be written.	Contact customer service or technical support.
Cdm.0233	400	Data extraction exception. Cause: %s.	An exception occurs during data extraction.	Contact customer service or technical support.
Cdm.0234	400	Data loading exception. Cause: %s.	An exception occurs during data loading.	Contact customer service or technical support.
Cdm.0235	400	All data has been used up. Cause: %s.	All data has been used up.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0236	400	Invalid partitions have been retrieved from Partitioner.	Invalid partitions have been retrieved from Partitioner.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0238	400	%s cannot be left blank.	The parameter is invalid.	Change the parameter value based on the error message and try again.
Cdm.0240	400	Failed to obtain the status of file %s.	The file status fails to be obtained.	Contact customer service or technical support.
Cdm.0241	400	Failed to obtain the type of file %s.	The file type fails to be obtained.	Contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0242	400	File check exception: %s.	An exception occurs during file check.	Contact customer service or technical support.
Cdm.0243	400	Failed to rename %s to %s.	Rename failed.	Rename the job and try again.
Cdm.0244	400	Failed to create file %s.	The file fails to be created.	Check whether you have the permissions or try again later. If the fault persists, contact customer service or technical support.
Cdm.0245	400	Failed to delete file %s.	The file fails to be deleted.	Check whether you have the permissions or try again later. If the fault persists, contact customer service or technical support.
Cdm.0246	400	Failed to create directory %s.	The directory fails to be created.	Check whether you have the permissions or try again later. If the fault persists, contact customer service or technical support.
Cdm.0247	400	HBase operation failed. Cause: %s.	HBase operation failed.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0248	400	Failed to clear data %s. Cause: %s.	Data fails to be cleared.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0249	400	Invalid file name %s.	The file name is invalid.	Change the file name and try again.
Cdm.0250	400	Failed to perform operations on path %s.	Operations on path %s are not allowed.	Check whether you have the permissions or try again later. If the fault persists, contact customer service or technical support.
Cdm.0251	400	Failed to load data to HBase. Cause: %s.	Data fails to be uploaded to HBase.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0307	400	Failed to obtain the connection lease of the requested transaction. Cause: %s.	The connection lease for the requested transaction fails to be obtained.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0315	400	Link name %s already exists.	The link already exists.	Specify another link name and try again.
Cdm.0316	400	Failed to update the link that does not exist.	The link that does not exist cannot be updated.	Specify a correct link and try again.
Cdm.0317	400	Invalid link %s.	The link is invalid.	Specify a correct link and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.0318	400	The job already exists and cannot be created repeatedly.	The job already exists.	Specify another job name and try again.
Cdm.0319	400	Failed to update the job that does not exist.	The job that does not exist cannot be updated.	Check whether the job to be updated exists. If it does, change the job name and try again.
Cdm.0320	400	Invalid job %s.	The job is invalid.	Contact customer service or technical support.
Cdm.0321	400	Link %s has been used.	The link has been used.	Release the link and try again.
Cdm.0322	400	Job %s has been used.	The job has been used.	Contact customer service or technical support.
Cdm.0323	400	The submission already exists and cannot be created repeatedly.	The submission already exists.	Try again later.
Cdm.0327	400	Invalid link or job %s.	Link or job %s is invalid.	Specify a correct link or job and try again.
Cdm.0411	400	Failed to connect to the file server.	An error occurs when connecting to the file server.	Contact customer service or technical support.
Cdm.0413	400	Failed to transfer data to the file server.	An error occurs in data transfer to the file server.	Contact customer service or technical support.
Cdm.0415	400	Failed to download files from the server.	An error occurs when downloading files from the file server.	Contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0416	400	Data extraction failure.	An error occurs when extracting data.	Contact customer service or technical support.
Cdm.0420	400	Source file or source directory unavailable.	The source file or source directory does not exist.	Check whether the source file or source directory exists. If it does not, specify a correct source file or directory and try again.
Cdm.0423	400	Duplicate files exist in the destination path.	Duplicate files exist in the destination path.	Delete duplicate files from the destination path and try again.
Cdm.0467	400	The connection timed out.	The connection timed out.	Check whether the IP address, host name, and port number are correct, and whether the security group and firewall are correctly configured.
Cdm.0501	400	Invalid URI [%s].	The URI is invalid.	Specify a correct URI and try again.
Cdm.0518	400	Failed to connect to HDFS. Cause: %s.	HDFS fails to be connected.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0600	400	Failed to connect to the FTP server.	The FTP server fails to be connected.	It is possible that the network is disconnected, no security group or firewall rule is configured to allow access, the FTP host name cannot be parsed, or the FTP username or password is incorrect. If the fault persists, contact customer service or technical support.
Cdm.0700	400	Failed to connect to the SFTP server.	The SFTP server fails to be connected.	It is possible that the network is disconnected, no security group or firewall rule is configured to allow access, the SFTP host name cannot be parsed, or the SFTP username or password is incorrect. If the fault persists, contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0800	400	Failed to connect to the OBS server.	The OBS server fails to be connected.	It is possible that the OBS endpoint is inconsistent with the current region, the AK/SK pair is incorrect, the AK/SK pair is not the one of the current user, or no security group or firewall rule is configured to allow access. If the fault persists, contact customer service or technical support.
Cdm.0801	400	OBS bucket [%s] unavailable.	The OBS bucket does not exist.	The OBS bucket may not exist or is not in the current region. Specify a correct OBS bucket and try again.
Cdm.0831	400	Failed to connect to the KODO server. Cause: %s.	The KODO server fails to be connected.	Contact customer service or technical support.
Cdm.0900	400	Table [%s] unavailable.	The table does not exist.	Specify a correct table name and try again.
Cdm.0901	400	Failed to connect to the database server. Cause: %s.	The database server fails to be connected.	Contact customer service or technical support.
Cdm.0902	400	Failed to execute the SQL statement. Cause: %s.	The SQL statement fails to be executed.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.0903	400	Failed to obtain metadata. Cause: %s.	Metadata fails to be obtained.	Check whether the quote character is correct or whether the database table exists when you create the link. If the fault persists, contact customer service or technical support.
Cdm.0904	400	Failed to retrieve data from the result. Cause: %s.	An error occurs when retrieving data from the result.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0913	400	Schema and SQL cannot be left blank at the same time.	Either Schema or SQL must be specified.	Specify one of them and try again.
Cdm.0916	400	In incremental reading mode, the previous value must be specified.	The previous value is not specified in incremental reading.	Specify the previous value and try again.
Cdm.0917	400	Previous value cannot be obtained without field check.	The field is missing.	Contact customer service or technical support.
Cdm.0921	400	Unsupported type %s.	The type is invalid.	Specify a correct type and try again.
Cdm.0925	400	The partition field contains unsupported values.	The partition field contains unsupported values.	Correct the values and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.0926	400	Failed to obtain the schema field. Cause: %s.	The schema field fails to be obtained.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0927	400	The relay table cannot be empty.	The relay table cannot be empty.	Specify an empty relay table and try again.
Cdm.0928	400	Failed to transfer data from the relay table to the destination table.	An error occurs when transferring data from the relay table to the destination table.	Contact customer service or technical support.
Cdm.0931	400	The value of the schema field [%s] does not match that of the field [%s] in the result set.	The value of the schema field [%s] does not match that of the field [%s] in the result set.	Change the schema value to be the same as that in the result set and try again.
Cdm.0932	400	Failed to find the maximum value of the field.	The maximum value of the field cannot be found.	Contact customer service or technical support.
Cdm.0934	400	Tables with the same name exist in different schemas/catalogs.	Tables with the same name exist in different schemas/catalogs.	Contact customer service or technical support.
Cdm.0936	400	The number of dirty data records reaches the upper limit.	The number of dirty data records reaches the upper limit.	Edit the job and increase the number of dirty data records.
Cdm.0940	400	Precise match of the table name failed.	Precise match of the table name failed.	Specify a correct table name and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.0941	400	Failed to connect to the server. Cause: [%s].	The server fails to be connected.	Check whether the IP address, host name, and port number are correct, and whether the network security group and firewall are correctly configured. Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.0950	400	Failed to connect the authentication information to the database.	The authentication information cannot be connected to the database.	Correct the authentication information and try again.
Cdm.0962	400	The host IP address must be specified.	No host IP address is specified.	Specify the host IP address and try again.
Cdm.0963	400	The host port must be specified.	No host port is specified.	Specify the host port and try again.
Cdm.0964	400	The database must be specified.	No database is specified.	Specify a database and try again.
Cdm.1000	400	Hive table [%s] does not exist.	The Hive table does not exist.	Specify a correct Hive table name and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.1010	400	Invalid URI %s. URI must be null or valid.	The URI is invalid.	Specify a correct URI and try again. Correct URI examples: <ul style="list-style-type: none"> • hdfs://example.com:8020/ • hdfs://example.com/ • file:/// • file:///tmp • file://localhost/tmp
Cdm.1011	400	Failed to connect to Hive. Cause: %s.	Hive fails to be connected.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1100	400	Table [%s] unavailable.	The table does not exist.	Enter a correct table name and try again.
Cdm.1101	400	Failed to obtain the link. Cause: %s.	The link fails to be obtained.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1102	400	Failed to create the table. Cause: %s.	The table fails to be created.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1103	400	No rowkey is set.	No rowkey is set.	Set the rowkey and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.1104	400	Failed to open the table. Cause: %s.	The table fails to be opened.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1105	400	Failed to initialize the job. Cause: %s.	The job fails to be initialized.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1111	400	The table name cannot be empty.	The table name is not specified.	Specify a correct table name and try again.
Cdm.1114	400	Rowkey is empty. Set it in field mapping.	Rowkey is empty.	Fix the error based on the error message.
Cdm.1115	400	Columns is empty. Set it in field mapping.	Columns is empty.	Fix the error based on the error message.
Cdm.1116	400	Duplicate column name. Reset it in the field mapping step.	The column name already exists.	Fix the error based on the error message.
Cdm.1117	400	Failed to check whether the table exists. Cause: %s.	An error occurs when checking whether the table exists.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1118	400	Table %s does not contain the column family %s.	The table does not contain the specified column family.	Specify a column family and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.1120	400	The table contains data. Clear the data or reset the parameter to determine whether to clear the table data before importing the table.	The table contains data. Clear the data or reset the parameter to determine whether to clear the table data before importing the table.	Fix the error based on the error message.
Cdm.1121	400	Failed to close the link. Cause: %s.	The link fails to be closed.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1201	400	Failed to connect to the Redis server. Cause: %s.	The Redis server fails to be connected.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1203	400	Failed to extract data from the Redis server. Cause: %s.	Data fails to be extracted from the Redis server.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1205	400	The prefix of the Redis value cannot be empty.	The prefix of the Redis value cannot be empty.	Delete the whitespace before the Redis prefix and try again.
Cdm.1206	400	The storage type of the Redis value must be string or hash .	The storage type of the Redis value must be string or hash .	Fix the error based on the error message.

Error Code	Status Code	Error	Description	Solution
Cdm.1207	400	When the value storage type is string , Value Delimiter must be specified.	The value storage type is string , but Value Delimiter is not specified.	Specify a value delimiter and try again.
Cdm.1208	400	columnList of Redis must be specified.	columnList of Redis must be specified.	Specify columnList and try again.
Cdm.1209	400	Redis Key Delimiter cannot be empty.	Redis Key Delimiter cannot be empty.	Specify a correct delimiter and try again.
Cdm.1210	400	primaryKeyList of Redis must be specified.	primaryKeyList of Redis is not specified.	Specify primaryKeyList and try again.
Cdm.1211	400	primaryKeyList of Redis must exist in columnList .	primaryKeyList of Redis does not exist in columnList .	Specify primaryKeyList and try again.
Cdm.1213	400	Redis Server Address must be specified.	Redis Server Address is not specified.	Specify Redis Server Address and try again.
Cdm.1301	400	Failed to connect to the MongoDB server. Cause: <i>%s</i> .	The MongoDB server fails to be connected.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1302	400	Failed to extract data from the MongoDB server. Cause: <i>%s</i> .	Data fails to be extracted from the MongoDB server.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.1304	400	The MongoDB server set must be specified.	The MongoDB server set is not specified.	Specify the MongoDB server set and try again.
Cdm.1305	400	Server Address of MongoDB must be specified.	Server Address of MongoDB is not specified.	Specify Server Address and try again.
Cdm.1306	400	The database name of the MongoDB service must be specified.	The database name of the MongoDB service is not specified.	Specify a database and try again.
Cdm.1307	400	serverlist of MongoDB must be specified.	serverlist of MongoDB is not specified.	Specify serverlist and try again.
Cdm.1501	400	Failed to connect to the Elasticsearch server. Cause: %s.	The Elasticsearch server fails to be connected.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1502	400	Failed to write data to the Elasticsearch server. Cause: %s.	Data fails to be written to the Elasticsearch server.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1503	400	Failed to close the Elasticsearch link. Cause: %s.	The Elasticsearch link fails to be closed.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.

Error Code	Status Code	Error	Description	Solution
Cdm.1504	400	Failed to obtain the Elasticsearch index. Cause: %s	An error occurs when obtaining the Elasticsearch index.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1505	400	Failed to obtain the Elasticsearch type. Cause: %s	An error occurs when obtaining the Elasticsearch type.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1506	400	Failed to obtain the Elasticsearch field. Cause: %s	An error occurs when obtaining the Elasticsearch file field.	Locate the cause based on the error message. If the fault persists, contact customer service or technical support.
Cdm.1508	400	The host name or IP address of the Elasticsearch server must be specified.	The host name or IP address of the Elasticsearch server is not specified.	Specify the host name or IP address and try again.
Cdm.1510	400	The Elasticsearch index must be specified.	The Elasticsearch index is not specified.	Specify an index and try again.
Cdm.1511	400	The Elasticsearch type must be specified.	The Elasticsearch type is not specified.	Specify a type and try again.
Cdm.1513	400	columnList must contain the field type definition.	columnList does not contain the field type definition.	Include the field type definition and try again.
Cdm.1514	400	columnList must contain primaryKey .	columnList does not contain primaryKey .	Specify primaryKey and try again.

Error Code	Status Code	Error	Description	Solution
Cdm.1516	400	Invalid column name %s.	The column name is invalid.	Enter a correct column name and try again.
Cdm.1517	400	Failed to obtain the number of documents.	An error occurs when obtaining the number of documents.	Contact customer service or technical support.
Cdm.1519	400	Data extraction exception.	An error occurs when extracting data.	Contact customer service or technical support.
Cdm.1601	400	Failed to connect to the server.	The server fails to be connected.	Contact customer service or technical support.
Cdm.1603	400	Failed to obtain the sample value of topic %s.	The sample value of topic %s fails to be obtained.	Contact customer service or technical support.
Cdm.1604	400	No data contained in topic %s.	No data exists in the topic.	Locate the cause. Alternatively, change the topic and try again.

11.4.2 Data Development Error Codes

The error response is in the following format:

```
{
  "error_code": "DLF.0100",
  "error_msg": "The job not found"
}
```

[Table 11-4](#) describes the error codes.

Table 11-4 Error codes

Status Code	Error Code	Error Message	Description	Solution
400	DLF.0100	The job does not exist.	The Job does not exist.	Ensure that the job exists.

Stat us Code	Error Code	Error Message	Description	Solution
400	DLF.0101	The job quota has reached the upper limit.	The job quota has reached the upper limit.	Apply for a higher quota.
400	DLF.0102	The job name has been used by another job.	The job name has been used by another job.	Try another name.
400	DLF.0136	This API can be called only for batch jobs.	This API can be called only for batch jobs.	Check the job.
400	DLF.0137	The job instance does not exist.	The job instance does not exist.	Ensure that the job instance exists.
400	DLF.0201	The script fails to be created.	The script fails to be created.	Check the script.
400	DLF.0202	The script name has been used by another script.	The script name has been used by another script.	Try another name.
400	DLF.0203	The script fails to be modified.	The script fails to be modified.	Check the script.
400	DLF.0802	The specified parameter is not configured.	The specified parameter is not configured.	Check the parameter.
400	DLF.0803	The OBS path is invalid.	The OBS path is invalid.	Check the OBS path.
400	DLF.0810	The queried task does not exist.	The queried task does not exist.	Check that the task exists.
400	DLF.0815	The OBS file fails to be accessed.	The OBS file fails to be accessed.	Check the OBS file.
400	DLF.1006	The job node is empty.	The job node is empty.	Check the node.
400	DLF.1242	The OBS bucket does not exist.	The OBS bucket does not exist.	Ensure that the OBS bucket exists.
400	DLF.2014	The job object type is invalid.	The job type is invalid.	Check the job type.
400	DLF.3004	The job name cannot be left blank.	The job name cannot be left blank.	Check the job name.

Stat us Code	Error Code	Error Message	Description	Solution
400	DLF.3018	The job name is invalid.	The job name is invalid.	Check the job name.
400	DLF.3025	The job scheduling parameter is invalid.	The job scheduling parameter is invalid.	Check the job scheduling parameter.
400	DLF.3050	The job description is invalid.	The job description is invalid.	Check the job description.
400	DLF.6201	The script does not exist.	The script does not exist.	Ensure that the script exists.
400	DLF.6205	The script execution instance does not exist.	The script execution instance does not exist.	Check that the script execution instance exists.
400	DLF.6241	The resource to be queried does not exist.	The resource to be queried does not exist.	Ensure that the resource exists.
400	DLF.6247	The script type is not specified.	The script type is not specified.	Check the script.
400	DLF.6253	The script quota has reached the upper limit.	The script quota has reached the upper limit.	Apply for a higher quota.
400	DLF.6258	The directory contains data that cannot be deleted.	The directory contains data that cannot be deleted.	Delete the data in the directory first.
400	DLF.6259	A resource with the same name already exists in the directory.	A resource with the same name already exists in the directory.	Try another name.
400	DLF.6263	The resource type is invalid.	The resource type is invalid.	Check the resource type.
400	DLF.6264	The OBS path of the resource file is invalid.	The OBS path of the resource file is invalid.	Check the OBS path.
400	DLF.6265	The resource description is invalid.	The resource description is invalid.	Check the resource description.

Stat us Code	Error Code	Error Message	Description	Solution
400	DLF.6271	Each user can create only one DLI connection.	Each user can create only one DLI connection.	Check the DLI data connection.
400	DLF.6309	The connection name has been used by another connection.	The connection name has been used by another connection.	Try another connection name.
400	DLF.6322	The data connection does not exist.	The data connection does not exist.	Check that the data connection exists.
400	DLF.6323	The connection type cannot be modified.	The connection type cannot be modified.	Check the parameter type.
400	DLF.6416	The cluster has been occupied by another connection.	The cluster has been occupied by another connection.	Check the cluster.
400	DLF.6418	Either the DWS cluster name or the access address and port number of the cluster must be configured.	Either the DWS cluster name or the access address and port number of the cluster must be configured.	Check the DWS cluster name or the access address and port of the cluster.
400	DLF.6423	An exception occurs when the agent is creating a job.	An exception occurred during the agent job creation.	Try again later or check whether the agent status is normal.
400	DLF.6888	Invalid account permissions.	Invalid account permissions.	Check the account permissions.
400	DLF.21123	The single node job type cannot be empty.	The single-node job type cannot be empty.	Select the single-node job type.
