# 1 Before You Start

## 1.1 Overview

Edge Security (EdgeSec) is a security service based on the edge nodes of Huawei Cloud Content Delivery Network (CDN). It provides functions such as Edge Anti-DDoS, CC attack protection, Web protection, and bot behavior analysis. If you have purchased CDN or Whole Site Acceleration (WSA), you can enable security protection for acceleration domain names to safeguard content delivery.

This document describes how to use application programming interfaces (APIs) to perform operations on EdgeSec, such as querying and updating.

If you plan to access EdgeSec through an API, ensure that you are familiar with EdgeSec. For more information, see [What Is EdgeSec?](#)

## 1.2 API Calling

EdgeSec provides Representational State Transfer (REST) APIs, allowing you to use HTTPS requests to call them. For details, see [API Calling](#).

## 1.3 Endpoints

An endpoint is the **request address** for calling an API. Endpoints vary depending on services and regions. For the endpoints of all services, see [Regions and Endpoints](#).

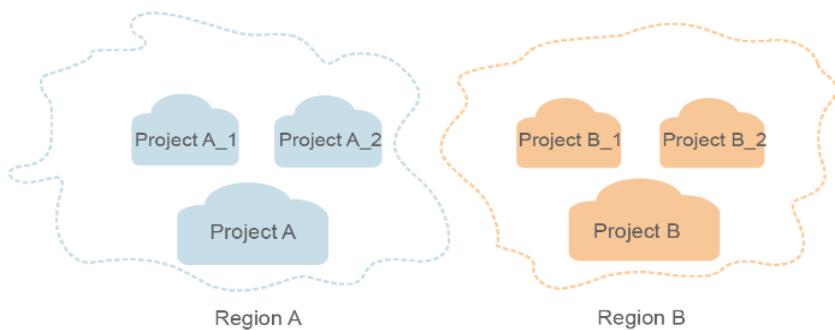

## 1.4 Concepts

- Account

An account is created upon successful registration. The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. The account is a payment entity and should not be used directly to perform routine management. For security purposes, create users and grant them permissions for routine management.

- User  
An IAM user is created by an account in IAM to use cloud services. Each IAM user has its own identity credentials (password and access keys).
- Region  
Regions are divided based on geographical location and network latency. Public services, such as Elastic Cloud Server (ECS), Elastic Volume Service (EVS), Object Storage Service (OBS), Virtual Private Cloud (VPC), Elastic IP (EIP), and Image Management Service (IMS), are shared within the same region. Regions are classified as universal regions and dedicated regions. A universal region provides universal cloud services for common tenants. A dedicated region provides services of the same type only or for specific tenants.
- Availability Zone (AZ)  
An AZ comprises one or multiple physical data centers equipped with independent ventilation, fire, water, and electricity facilities. Compute, network, storage, and other resources in an AZ are logically divided into multiple clusters. AZs within a region are interconnected using high-speed optical fibers to support cross-AZ high-availability systems.
- Project  
A region corresponds to a project. Default projects are defined to group and physically isolate resources (including computing, storage, and network resources) across regions. You can grant users permissions in a default project to access all resources in the region associated with the project. For more refined access control, create subprojects under a project and purchase resources in the subprojects. Users can then be assigned permissions to access only specific resources in the subprojects.

**Figure 1-1** Project isolation model

# 2 API Overview

You can use all functions of EdgeSec via APIs.

| Type                           | Description  |
|--------------------------------|--|
| Anti-DDoS Data Query           | Edge anti-DDoS data query APIs, including APIs for querying tenants' attack event data and tenant traffic data.  |
| WAF Domain Name                | Edge WAF domain name APIs, including APIs for querying the CDN domain name list, querying the edge WAF domain name list, and creating a protected domain name. |
| WAF Protection Policy          | Edge WAF protection policy APIs, including APIs for creating and modifying protection policies, and querying the protection policy list.                       |
| Anti-DDoS Domain Name          | Edge anti-DDoS domain name APIs, including adding, querying, and updating protected domain names.  |
| Tenant Subscription Management | APIs used by tenants to query subscription information, including the API for querying purchased edge security products.                                       |
| WAF Certificate Management     | Edge WAF certificate management APIs, including creating, querying, and deleting certificates.   |

# 3 API Calling

## 3.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM API for [obtaining a user token](#) as an example to demonstrate how to call an API. The obtained token can then be used to authenticate the calling of other APIs.

### Request URI

A request URI is in the following format:

**{URI-scheme} :// {Endpoint} / {resource-path} ? {query-string}**

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

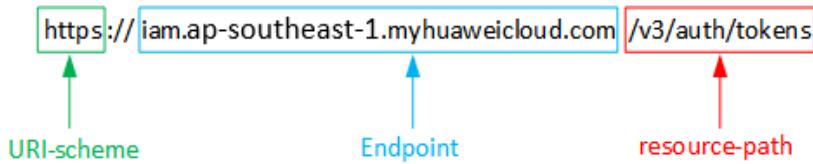

- **URI-scheme:**  
Protocol used to transmit requests. All APIs use HTTPS.
- **Endpoint:**  
Domain name or IP address of the server bearing the REST service. The endpoint varies between services in different regions. It can be obtained from [Regions and Endpoints](#).  
For example, the endpoint of IAM in region **CN-Hong Kong** is **iam.ap-southeast-1.myhuaweicloud.com**.
- **resource-path:**  
Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the **resource-path** of the API used to obtain a user token is **/v3/auth/tokens**.
- **query-string:**  
Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, **?limit=10** indicates that a maximum of 10 data records will be displayed.

For example, to obtain an IAM token in the **CN-Hong Kong** region, obtain the endpoint of IAM ([iam.ap-southeast-1.myhuaweicloud.com](http://iam.ap-southeast-1.myhuaweicloud.com)) for this region and

the **resource-path** (`/v3/auth/tokens`) in the URI of the API used to [obtain a user token](#). Then, construct the URI as follows:

```
https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
```

**Figure 3-1** Example URI

#### NOTE

To simplify the URI display in this document, each API is provided only with a **resource-path** and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

## Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET**: requests the server to return specified resources.
- **PUT**: requests the server to update specified resources.
- **POST**: requests the server to add resources or perform special operations.
- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: same as GET except that the server must return only the response header.
- **PATCH**: requests the server to update partial content of a specified resource. If the resource does not exist, a new resource will be created.

For example, in the case of the API used to [obtain a user token](#), the request method is POST. The request is as follows:

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
```

## Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows:

- **Content-Type**: specifies the request body type or format. This field is mandatory and its default value is **application/json**. Other values of this field will be provided for specific APIs if any.
- **X-Auth-Token**: specifies a user token only for token-based API authentication. The user token is a response to the API used to [obtain a user token](#). This API is the only one that does not require authentication.

### NOTE

In addition to supporting token-based authentication, APIs also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

For more information, see [AK/SK-based Authentication](#).

The API used to [obtain a user token](#) does not require authentication. Therefore, only the **Content-Type** field needs to be added to requests for calling the API. An example of such requests is as follows:

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
Content-Type: application/json
```

## Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to [obtain a user token](#), the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Set **username** to the name of a user, **domainname** to the name of the account that the user belongs to, **\*\*\*\*\*** to the user's login password, and **xxxxxxxxxxxxxx** to the project name. You can learn more information about projects from [Regions and Endpoints](#). Check the value of the **Region** column.

### NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see [Obtaining a User Token](#).

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/tokens
Content-Type: application/json
```

```
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "name": "xxxxxxxxxxxxxx"
      }
    }
  }
}
```

```
    }
```

If all data required for the API request is available, you can send the request to call the API through [curl](#), [Postman](#), or coding. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

## 3.2 Authentication

Requests for calling an API can be authenticated using either of the following methods:

- Token-based authentication: Requests are authenticated using a token.
- AK/SK-based authentication: Requests are authenticated by encrypting the request body using an AK/SK pair. This method is recommended because it provides higher security than token-based authentication.

### Token-based Authentication

#### NOTE

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the IAM API used to obtain a user token.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API.

The token can be obtained by calling the required API. For more information, see [Obtaining a User Token](#). A project-level token is required for calling this API, that is, **auth.scope** must be set to **project** in the request body. Example:

```
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "name": "xxxxxx"
      }
    }
  }
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, **X-Auth-Token: ABCDEFJ....** can be added to a request as follows:

```
POST https://iam.ap-southeast-1.myhuaweicloud.com/v3/auth/projects
Content-Type: application/json
X-Auth-Token: ABCDEFJ....
```

## AK/SK-based Authentication

AK/SK-based authentication supports API requests with a body not larger than 12 MB. For API requests with a larger body, token-based authentication is recommended.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK-based authentication, you can use an AK/SK to sign requests based on the signature algorithm or use the signing SDK to sign requests. For details about how to sign requests and use the signing SDK, see [API Signature Guide](#).

### NOTICE

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

## 3.3 Returned Values

### Status Code

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request. For more information, see [Status Code](#).

For example, if status code **201** is returned for calling the API used to [obtain a user token](#), the request is successful.

### Response Header

A response header corresponds to a request header, for example, **Content-Type**.

[Figure 3-2](#) shows the response header for the API of [obtaining a user token](#), in which **x-subject-token** is the desired user token. Then, you can use the token to authenticate the calling of other APIs.

**Figure 3-2** Header of the response to the request for obtaining a user token

```
connection → keep-alive
content-type → application/json
date → Tue, 12 Feb 2019 06:52:13 GMT
server → Web Server
strict-transport-security → max-age=31536000; includeSubdomains;
transfer-encoding → chunked
via → proxy A
x-content-type-options → nosniff
x-download-options → noopener
x-frame-options → SAMEORIGIN
x-iam-trace-id → 218d45ab-d674-4995-af3a-2d0255ba41b5
x-subject-token
→ MIIXQVJKoZlhvcNAQcCoIYTjCCGEoCAQEExDTALBglghkgBZQMEAgEwgharBgkqhkiG9w0BBwGgg hacBIIWmHsidG9rZW4iOnsiZXhwaXJlc19hdCI6ljlwMTktMDItMTNUMDfj3KUs6YgKnpVNRbW2eZ5eb78SZOkqjACgkIqO1wi4JlGzrpdi8LGXK5bxldfq4lqHCYb8P4NaY0NYejcAgzJVeFIYtLWT1GSO0zxKZmlQHQj82H8qHdgIzO9fuEbL5dMhdavj+33wElxHRC9187o+k9-j+CMZSEB7bUGd5Uj6eRASX1jipPEGA270g1FruloL6jqqlFkNPQuFSOU8+uSttVwRtNfsC+qTp22Rkd5MCqFGQ8LcuUxC3a+9CMBnOintWW7oeRUvHvpxk8pxiX1wTEboXRzT6MUbpvGw-oPNFYxJECKnO3HRozv0vN--n5d6Nbvg=-
x-xss-protection → 1; mode=block;
```

## (Optional) Response Body

A response body is generally returned in a structured format, corresponding to the **Content-Type** in the response header, and is used to transfer content other than the response header.

The following shows part of the response body for the API to [obtain a user token](#). For the sake of space, only part of the content is displayed here.

```
{
  "token": {
    "expires_at": "2019-02-13T06:52:13.855000Z",
    "methods": [
      "password"
    ],
    "catalog": [
      {
        "endpoints": [
          {
            "region_id": "xxxxxxxx",
            ....

```

If an error occurs during API calling, the system returns an error code and a message to you. The following shows the format of an error response body:

```
{
  "error": {
    "message": "The request you have made requires authentication.",
    "title": "Unauthorized"
  }
}
```

In the preceding information, **error\_code** is an error code, and **error\_msg** describes the error.

# 4 API

## 4.1 Anti-DDoS Data Query

### 4.1.1 Querying Attack Event Data of a Tenant

#### Function

This API is used to query attack event data of a tenant.

#### URI

GET /v1/statistics/event

**Table 4-1** Query Parameters

| Parameter  | Mandatory | Type | Description  |
|------------|-----------|------|--|
| start_time | Yes       | Long | Start time (13-digit timestamp). This parameter must be used together with end_time. |
| end_time   | Yes       | Long | End time (13-digit timestamp). This parameter must be used together with start_time. |

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| type                  | Yes       | String | Type:<br><ul style="list-style-type: none"><li>• attack_count (number of attack events of different types)</li><li>• flow_drop_count (number of accesses and attacks)</li><li>• ddos_attack_count (number of DDoS attacks)</li></ul> Enumeration values:<br><ul style="list-style-type: none"><li>• <b>attack_count</b></li><li>• <b>flow_drop_count</b></li><li>• <b>ddos_attack_count</b></li></ul> |
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).   |

## Request Parameters

**Table 4-2** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

## Response Parameters

**Status code: 200**

**Table 4-3** Response body parameters

| Parameter | Type  | Description   |
|-----------|---|---|
| value     | Long  | Number of DDoS attacks. This parameter is returned when type is set to ddos_attack_count. |
| waf       | Array of <a href="#">TimeSeriesData</a> objects | Number of WAF attacks. This parameter is returned when type is set to attack_count.       |

| Parameter | Type   | Description  |
|-----------|--|--|
| bot       | Array of<br><a href="#">TimeSeriesData</a> objects | Number of bot attacks. This parameter is returned when type is set to attack_count.  |
| cc        | Array of<br><a href="#">TimeSeriesData</a> objects | Number of CC attacks. This parameter is returned when type is set to attack_count.   |
| ddos      | Array of<br><a href="#">TimeSeriesData</a> objects | Number of DDoS attacks. This parameter is returned when type is set to attack_count. |
| flow      | Array of<br><a href="#">TimeSeriesData</a> objects | Number of accesses. This parameter is returned when type is set to flow_drop_count.  |
| drop      | Array of<br><a href="#">TimeSeriesData</a> objects | Number of attacks. This parameter is returned when type is set to flow_drop_count.   |

**Table 4-4** TimeSeriesData

| Parameter | Type   | Description  |
|-----------|--------|--|
| time      | Long   | 13-digit timestamp.  |
| value     | Double | Data value. Unit: kbit/s (for traffic query) or number of events (for event query) |

**Status code: 400****Table 4-5** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-6** Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| error_code | String | Error code. |

| Parameter | Type   | Description    |
|-----------|--------|----------------|
| error_msg | String | Error message. |

### Status code: 500

**Table 4-7** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Query DDoS attacks.

```
GET https://{Endpoint}/v1/statistics/event?  
type=ddos_attack_count&end_time=1691916827257&start_time=1691312027000
```

## Example Responses

### Status code: 200

Request succeeded.

```
{  
  "value": 100  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | Request succeeded.  |
| 400         | Invalid request parameter.  |
| 401         | The account corresponding to the token does not have sufficient permission. |
| 500         | Internal server error.  |

## Error Codes

See [Error Codes](#).

## 4.1.2 Querying Tenant Traffic Data

### Function

This API is used to query tenant traffic data.

### URI

GET /v1/statistics/traffic

**Table 4-8** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| start_time            | Yes       | Long   | Start time (13-digit timestamp). This parameter must be used together with end_time.  |
| end_time              | Yes       | Long   | End time (13-digit timestamp). This parameter must be used together with start_time.  |
| type                  | Yes       | String | Type: <ul style="list-style-type: none"><li>• max_flow_bandwidth (peak inbound DDoS traffic bandwidth)</li><li>• max_drop_bandwidth (peak inbound DDoS traffic bandwidth)</li><li>• ddos_flow (inbound DDoS traffic)</li><li>• flow_drop_traffic (inbound traffic and cleaned traffic)</li><li>• attack_traffic (different types of attack traffic)</li></ul> Enumeration values: <ul style="list-style-type: none"><li>• <b>max_flow_bandwidth</b></li><li>• <b>max_drop_bandwidth</b></li><li>• <b>ddos_flow</b></li><li>• <b>flow_drop_traffic</b></li><li>• <b>attack_traffic</b></li></ul> |
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).   |

## Request Parameters

**Table 4-9** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

## Response Parameters

Status code: 200

**Table 4-10** Response body parameters

| Parameter | Type  | Description  |
|-----------|---|--|
| value     | Long  | Traffic data value, which is returned when type is set to max_flow_bandwidth, max_drop_bandwidth, or ddos_flow. Unit: kbit/s |
| flow      | Array of <a href="#">TimeSeriesData</a> objects | Incoming traffic. This parameter is returned when type is set to flow_drop_traffic.  |
| drop      | Array of <a href="#">TimeSeriesData</a> objects | Cleaned traffic. This parameter is returned when type is set to flow_drop_traffic.   |
| waf       | Array of <a href="#">TimeSeriesData</a> objects | WAF attack traffic. This parameter is returned when type is set to attack_traffic.   |
| bot       | Array of <a href="#">TimeSeriesData</a> objects | Bot attack traffic. This parameter is returned when type is set to attack_traffic.   |
| cc        | Array of <a href="#">TimeSeriesData</a> objects | CC attack traffic. This parameter is returned when type is set to attack_traffic.  |
| ddos      | Array of <a href="#">TimeSeriesData</a> objects | DDoS attack traffic. This parameter is returned when type is set to attack_traffic.  |

**Table 4-11** TimeSeriesData

| Parameter | Type   | Description  |
|-----------|--------|--|
| time      | Long   | 13-digit timestamp.  |
| value     | Double | Data value. Unit: kbit/s (for traffic query) or number of events (for event query) |

**Status code: 400****Table 4-12** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-13** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500****Table 4-14** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Query the peak bandwidth of inbound DDoS traffic.

```
GET https://{{Endpoint}}/v1/statistics/traffic?  
type=max_flow_bandwidth&end_time=1691916827257&start_time=1691312027000
```

## Example Responses

**Status code: 200**

Request succeeded.

```
{  
    "value": 100  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | Request succeeded.  |
| 400         | Invalid request parameter.  |
| 401         | The account corresponding to the token does not have sufficient permission. |
| 500         | Internal server error.  |

## Error Codes

See [Error Codes](#).

## 4.2 WAF Domain Name Management

### 4.2.1 Viewing the CDN Domain Name List

#### Function

This API is used to view the CDN domain name list.

#### URI

GET /v1/edgesec/cdn/domains

**Table 4-15** Query Parameters

| Parameter | Mandatory | Type    | Description   |
|-----------|-----------|---------|---|
| offset    | No        | Integer | Offset in query pagination.<br>Minimum: <b>0</b><br>Default: <b>0</b>   |
| limit     | No        | Integer | Maximum number of records displayed on each page.<br>Minimum: <b>1</b><br>Maximum: <b>100</b><br>Default: <b>10</b> |

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| domain_name           | No        | String | Domain name.  |
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

## Request Parameters

**Table 4-16** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

## Response Parameters

**Status code: 200**

**Table 4-17** Response body parameters

| Parameter | Type   | Description                                     |
|-----------|--|---|
| total     | Integer  | Total number of CDN domain names.               |
| count     | Integer  | Number of CDN domain names in the query result. |
| domains   | Array of <a href="#">ShowCdnDomainResponseBody</a> objects | CDN domain name details.                        |

**Table 4-18** ShowCdnDomainResponseBody

| Parameter   | Type   | Description  |
|-------------|--------|--------------|
| domain_name | String | Domain name. |

| Parameter       | Type    | Description   |
|-----------------|---------|---|
| domain_status   | String  | Status of an acceleration domain name.<br>Values: <ul style="list-style-type: none"><li>• <b>online</b>: CDN has been enabled for this domain name.</li><li>• <b>offline</b>: CDN has been disabled for this domain name.</li><li>• <b>configuring</b>: The domain name configuration is in progress.</li><li>• <b>*configure_failed</b>: The configuration fails.</li><li>• <b>checking</b>: The domain is being reviewed.</li><li>• <b>check_failed</b>: The domain name fails the review.</li><li>• <b>deleting</b>: The domain name is being deleted.</li></ul> |
| domain_id       | String  | Domain name ID.   |
| certificate_id  | String  | ID of the certificate used for the domain name.   |
| service_area    | String  | Domain name service area.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>mainland_china</b></li><li>• <b>outside_mainland_china</b></li><li>• <b>global</b></li><li>• <b>europe</b></li></ul>  |
| ipv6_accelerate | Integer | Whether to enable IPv6 acceleration. The value can be 0 (disabled) or 1 (enabled).<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>1</b></li></ul>  |
| business_type   | String  | Service type of the domain name. Possible values: <ul style="list-style-type: none"><li>• <b>web</b>: website acceleration</li><li>• <b>download</b>: file download acceleration</li><li>• <b>video</b>: VOD acceleration</li><li>• <b>wholeSite</b>: whole site acceleration</li></ul>   |
| https_status    | Integer | Whether to enable HTTPS. The value can be 0 (disabled) and 1 (enabled).<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>0</b></li><li>• <b>1</b></li></ul>  |

| Parameter      | Type                 | Description  |
|----------------|----------------------|--|
| force_redirect | Integer              | Forced redirection. 0: disabled; 1: forced redirection to HTTP; 2: forced redirection to HTTPS |
| extended_tags  | CdnDomainTags object | CDN domain name security service constraint.   |
| is_added       | Boolean              | Whether a domain name is protected by WAF.<br>Default: <b>false</b>                            |

**Table 4-19** CdnDomainTags

| Parameter  | Type   | Description |
|------------|--------|-------------|
| notes      | String | Reason      |
| constraint | String | Content     |

**Status code: 400****Table 4-20** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-21** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500**

**Table 4-22** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

View the CDN domain name list.

```
GET https://[Endpoint]/v1/edgesec/cdn/domains?offset=0&limit=10
```

## Example Responses

### Status code: 200

Request succeeded.

```
{  
    "total": 12,  
    "count": 10,  
    "domains": [  
        {  
            "domain_name": "domain_name",  
            "domain_status": "online",  
            "domain_id": "3e9df5da33744bae90bf73291c6e5c6c",  
            "certificate_id": "8da2b3da33744bae90bf73291c6e5c6c",  
            "service_area": "outside_mainland_china",  
            "ipv6_accelerate": 0,  
            "business_type": "web",  
            "https_status": 1,  
            "force_redirect": 0,  
            "extended_tags": [  
                {  
                    "notes": "example",  
                    "constraint": "example"  
                }]  
            "is_added": true  
        }]  
    }]
```

## Status Codes

| Status Code | Description                                   |
|-------------|---|
| 200         | Request succeeded.                            |
| 400         | Request failed.                               |
| 401         | The token does not have required permissions. |
| 500         | Internal server error.                        |

## Error Codes

See [Error Codes](#).

## 4.2.2 Querying the List of Domain Names Protected by WAF

### Function

This API is used to querying the list of domain names protected by WAF.

### URI

GET /v1/edgewaf/domains

**Table 4-23** Query Parameters

| Parameter             | Mandatory | Type    | Description  |
|-----------------------|-----------|---------|--|
| page_num              | No        | Integer | Page number. The value 0 indicates that all pages are queried.<br>Minimum: <b>0</b><br>Default: <b>1</b>   |
| page_size             | No        | Integer | Number of items displayed on each page. A maximum of 100 items can be queried in a batch in WAF.<br>Minimum: <b>1</b><br>Maximum: <b>100</b><br>Default: <b>10</b>                             |
| domain_name           | No        | String  | Domain name.   |
| enterprise_project_id | No        | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).  |
| type                  | No        | Integer | WAF domain name configuration type. 0: basic information; 1: WAF protection configuration<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>0</b></li><li>• <b>1</b></li></ul> |

## Request Parameters

**Table 4-24** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

## Response Parameters

Status code: 200

**Table 4-25** Response body parameters

| Parameter   | Type  | Description   |
|-------------|---|---|
| total       | Long  | Total number of protected domain names.<br>Minimum: <b>0</b><br>Default: <b>0</b> |
| domain_list | Array of<br><a href="#">ShowWafDo<br/>mainRespons<br/>eBody</a> objects | Details about the protected domain name.  |

**Table 4-26** ShowWafDomainResponseBody

| Parameter             | Type    | Description   |
|-----------------------|---------|---|
| id                    | String  | Domain name ID.   |
| domain_name           | String  | Domain name.  |
| enterprise_project_id | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |
| tenant_id             | String  | Tenant ID.  |
| open_time             | Long    | Last time when protection was last enabled.   |
| close_time            | Long    | Last time when protection was last disabled.  |
| dispatch_status       | Integer | CDN domain name scheduling status (0: not protected; 1: configuring; 2: protected; 3: deleting)                           |
| service_area          | String  | Region that the domain name belongs to.   |

| Parameter        | Type   | Description  |
|------------------|--------|--|
| web_tag          | String | Domain name.   |
| description      | String | Domain name description.   |
| policy_id        | String | Policy ID.   |
| protocol         | String | Protocol.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>http</b></li><li>• <b>https</b></li></ul>  |
| certificate_id   | String | Certificate ID.  |
| certificate_name | String | Certificate name.  |
| tls              | String | Minimum TLS version (TLS v1.0, TLS v1.1, or TLS v1.2). The default value is TLS v1.0. The TLS parameter is configured only if the client protocol is HTTPS.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>TLS v1.0</b></li><li>• <b>TLS v1.1</b></li><li>• <b>TLS v1.2</b></li></ul> |

| Parameter      | Type    | Description  |
|----------------|---------|--|
| cipher         | String  | <p>The cipher parameter is available only if the client protocol is HTTPS. Its values are as follows, each representing a cryptographic algorithm:</p> <ul style="list-style-type: none"><li>• cipher_1: ECDHE-ECDSA-AES256-GCM-SHA384:HIGH:!MEDIUM:!LOW!:aNULL!:eNULL!:DES:!MD5!:PSK:!RC4:!kRSA:!SRP!:3DES:!DSS:!EXP:!CAMELLIA:@STRENGTH</li><li>• cipher_2: ECDH+AESGCM:EDH+AESGCM</li><li>• cipher_3: ECDHE-RSA-AES128-GCM-SHA256:ECDHE-RSA-AES256-GCM-SHA384:ECDHE-RSA-AES256-SHA384:RC4:HIGH:!MD5!:aNULL!:eNULL!:NULL!:DH!:EDH</li><li>• cipher_4: ECDHE-RSA-AES256-GCM-SHA384:ECDHE-RSA-AES128-GCM-SHA256:ECDHE-RSA-AES256-SHA384:AES256-SHA256:RC4:HIGH:!MD5!:aNULL!:eNULL!:NULL!:DH!:EDH</li><li>• cipher_default: ECDHE-RSA-AES256-SHA384:AES256-SHA256:RC4:HIGH:!MD5!:aNULL!:eNULL!:NULL!:DH!:EDH!:AESGCM</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>cipher_1</b></li><li>• <b>cipher_2</b></li><li>• <b>cipher_3</b></li><li>• <b>cipher_4</b></li><li>• <b>cipher_default</b></li></ul> |
| protect_status | Integer | <p>Protection status:</p> <ul style="list-style-type: none"><li>• 0: disabled</li><li>• 1: enabled</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>0</b></li><li>• <b>1</b></li></ul>  |
| access_status  | Integer | <p>Access status:</p> <ul style="list-style-type: none"><li>• 0: not connected</li><li>• 1: connected</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>0</b></li><li>• <b>1</b></li></ul>   |
| create_time    | Long    | Time when a domain name was created. The value is a 13-digit timestamp.  |

| Parameter    | Type                                  | Description   |
|--------------|---------------------------------------|---|
| block_page   | <a href="#">WafBlockPage object</a>   | Alarm page configuration.   |
| traffic_mark | <a href="#">WafTrafficMark object</a> | Traffic identifier.   |
| flag         | <a href="#">Flag object</a>           | Special domain name tag.  |
| extend       | Map<String, String>                   | Extensible attribute of the domain name.                                    |
| is_added     | Boolean                               | Whether a domain name is an anti-DDoS domain name.<br>Default: <b>false</b> |

**Table 4-27** WafBlockPage

| Parameter    | Type                                 | Description                |
|--------------|--------------------------------------|----------------------------|
| template     | String                               | Blocking template name     |
| custom_page  | <a href="#">WafCustomPage object</a> | User-defined blocking page |
| redirect_url | String                               | Redirection URL            |

**Table 4-28** WafCustomPage

| Parameter    | Type   | Description   |
|--------------|--------|---|
| status_code  | String | Status code   |
| content_type | String | Content type of alarm page                                |
| content      | String | Page content<br>Minimum: <b>1</b><br>Maximum: <b>4096</b> |

**Table 4-29** WafTrafficMark

| Parameter | Type             | Description                                |
|-----------|------------------|--|
| sip       | Array of strings | IP address in the known attack source rule |

| Parameter | Type   | Description  |

## Example Requests

Query the list of domain names protected by WAF.

```
GET https://{Endpoint}/v1/edgewaf/domains?page_num=1&page_size=10
```

## Example Responses

### Status code: 200

Request succeeded.

```
{  
    "total": 12,  
    "domain_list": [  
        {  
            "id": "095b60b21ac248579426f97379b3fbec",  
            "domain_name": "domain_name",  
            "enterprise_project_id": 0,

| 401         | The token does not have required permissions. |
| 500         | Internal server error.                        |

## Error Codes

See [Error Codes](#).

### 4.2.3 Adding a Domain Name to WAF

#### Function

This API is used to add a domain name to WAF.

#### URI

POST /v1/edgewaf/domains

## Request Parameters

**Table 4-34** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

**Table 4-35** Request body parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| domain_name           | Yes       | String | Protected domain name, which can be obtained by calling the CDN domain name query API. The domain name can contain a port number.   |
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).   |
| policy_id             | No        | String | ID of the policy associated with the protected domain name. It can be obtained by calling the API for querying WAF protection policies.   |
| certificate_id        | No        | String | Certificate ID, which is obtained through the ListCertificates API. <ul style="list-style-type: none"><li>● This parameter is not required if the client protocol is HTTP.</li><li>● This parameter is mandatory if the client protocol is HTTPS.</li><li>● If the API for querying the certificate list is unavailable, log in to the EdgeSec console, and obtain the certificate ID from the certificate management page of Edge WAF.</li></ul> |

| Parameter   | Mandatory | Type   | Description  |
|-------------|-----------|--------|--|
| web_tag     | No        | String | Domain name.   |
| description | No        | String | Domain name description.   |
| area_type   | Yes       | String | Region that the domain name belongs to. Obtain the value by calling the API for querying the CDN domain name.<br>Enumeration values: <ul style="list-style-type: none"><li>• mainland_china</li><li>• outside_mainland_china</li><li>• global</li><li>• europe</li></ul> |

## Response Parameters

**Status code: 400**

**Table 4-36** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401**

**Table 4-37** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500**

**Table 4-38** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Add domain\_name to be protected by WAF.

```
POST https://{{Endpoint}}/v1/edgewaf/domains
{
    "domain_name": "domain_name",
    "enterprise_project_id": 0,
    "policy_id": "1771a426afcc4e16b8636cb72c2d53e4",
    "web_tag": "domain_name",
    "description": "demo",
    "area_type": "outside_mainland_china"
}
```

## Example Responses

None

## Status Codes

| Status Code | Description                                   |
|-------------|---|
| 200         | Request succeeded.                            |
| 400         | Request failed.                               |
| 401         | The token does not have required permissions. |
| 500         | Internal server error.                        |

## Error Codes

See [Error Codes](#).

### 4.2.4 Updating a Protected Domain Name

#### Function

This API is used to update a protected domain name.

#### URI

```
PUT /v1/edgewaf/domains/{domainid}
```

**Table 4-39** Path Parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--------------|
| domainid  | Yes       | String | Domain name. |

## Request Parameters

**Table 4-40** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

**Table 4-41** Request body parameters

| Parameter             | Mandatory | Type    | Description   |
|-----------------------|-----------|---------|---|
| protect_status        | No        | Integer | Protection status<br>Minimum: <b>0</b><br>Maximum: <b>1</b>   |
| access_status         | No        | Integer | Access status<br>Minimum: <b>0</b><br>Maximum: <b>1</b>   |
| web_tag               | No        | String  | Domain name   |
| description           | No        | String  | Domain name description   |
| certificate_id        | No        | String  | Certificate ID, which is obtained through the ListCertificates API. <ul style="list-style-type: none"><li>• This parameter is not required if the client protocol is HTTP.</li><li>• This parameter is mandatory if the client protocol is HTTPS.</li><li>• If the API for querying the certificate list is unavailable, log in to the EdgeSec console, and obtain the certificate ID from the certificate management page of Edge WAF.</li></ul> |
| enterprise_project_id | No        | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).   |

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| tls       | No        | String | <p>Minimum TLS version (TLS v1.0, TLS v1.1, or TLS v1.2). The default value is TLS v1.0. The TLS parameter is configured only if the client protocol is HTTPS.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>TLS v1.0</b></li><li>• <b>TLS v1.1</b></li><li>• <b>TLS v1.2</b></li></ul> |

### 4.2.6 Querying a Protected Domain Name

#### Function

This API is used to query a protected domain name.

#### URI

GET /v1/edgewaf/domains/{domainid}

**Table 4-55** Path Parameters

| Parameter | Mandatory | Type   | Description               |
|-----------|-----------|--------|---------------------------|
| domainid  | Yes       | String | Protected domain name ID. |

**Table 4-56** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

## Request Parameters

**Table 4-57** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

## Response Parameters

**Status code: 200**

**Table 4-58** Response body parameters

| Parameter             | Type    | Description   |
|-----------------------|---------|---|
| id                    | String  | Domain name ID.   |
| domain_name           | String  | Domain name.  |
| enterprise_project_id | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |
| tenant_id             | String  | Tenant ID.  |
| open_time             | Long    | Last time when protection was last enabled.   |
| close_time            | Long    | Last time when protection was last disabled.  |
| dispatch_status       | Integer | CDN domain name scheduling status (0: not protected; 1: configuring; 2: protected; 3: deleting)                           |
| service_area          | String  | Region that the domain name belongs to.   |
| web_tag               | String  | Domain name.  |
| description           | String  | Domain name description.  |
| policy_id             | String  | Policy ID.  |
| protocol              | String  | Protocol.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>http</b></li><li>• <b>https</b></li></ul>     |
| certificate_id        | String  | Certificate ID.   |
| certificate_name      | String  | Certificate name.   |

| Parameter      | Type    | Description   |
|----------------|---------|---|
| tls            | String  | <p>Minimum TLS version (TLS v1.0, TLS v1.1, or TLS v1.2). The default value is TLS v1.0. The TLS parameter is configured only if the client protocol is HTTPS.</p> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>TLS v1.0</b></li><li>• <b>TLS v1.1</b></li><li>• <b>TLS v1.2</b></li></ul>   |
| cipher         | String  | <p>The cipher parameter is available only if the client protocol is HTTPS. Its values are as follows, each representing a cryptographic algorithm:</p> <ul style="list-style-type: none"><li>• cipher_1: ECDHE-ECDSA-AES256-GCM-SHA384:HIGH:!MEDIUM::!LOW:!aNULL:!eNULL:!DES:!MD5:!PSK:!RC4:!kRSA:!SRP:!3DES:!DSS:!EXP:!CAMELLIA:@STRENGTH</li><li>• cipher_2: ECDH+AESGCM:EDH+AESGCM</li><li>• cipher_3: ECDHE-RSA-AES128-GCM-SHA256:ECDHE-RSA-AES256-GCM-SHA384:ECDHE-RSA-AES256-SHA384:RC4:HIGH:!MD5!:aNULL!:eNULL!:NULL!:DH!:EDH</li><li>• cipher_4: ECDHE-RSA-AES256-GCM-SHA384:ECDHE-RSA-AES128-GCM-SHA256:ECDHE-RSA-AES256-SHA384:AES256-SHA256:RC4:HIGH:!MD5!:aNULL!:eNULL!:NULL!:DH!:EDH</li><li>• cipher_default: ECDHE-RSA-AES256-SHA384:AES256-SHA256:RC4:HIGH:!MD5!:aNULL!:eNULL!:NULL!:DH!:EDH!:AESGCM</li></ul> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• <b>cipher_1</b></li><li>• <b>cipher_2</b></li><li>• <b>cipher_3</b></li><li>• <b>cipher_4</b></li><li>• <b>cipher_default</b></li></ul> |

### 4.2.7 Updating Domain Names in a Protection Policy

#### Function

This API is used to update domain names a policy applies to.

#### URI

```
POST /v1/edgewaf/policies/{policy_id}/hosts
```

**Table 4-66** Path Parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| policy_id | Yes       | String | Protection policy ID, which can be obtained by querying the policy list (ListPolicy). |

## Request Parameters

**Table 4-67** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

**Table 4-68** Request body parameters

| Parameter             | Mandatory | Type             | Description   |
|-----------------------|-----------|------------------|---|
| enterprise_project_id | No        | String           | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |
| hosts                 | Yes       | Array of strings | ID of the domain name to be associated.   |

## Response Parameters

Status code: 200

**Table 4-69** Response body parameters

| Parameter | Type                                   | Description  |
|-----------|--|--|
| id        | String                                 | Policy ID.   |
| name      | String                                 | Policy name.   |
| action    | <a href="#">WafPolicyAction</a> object | Protection action  |
| options   | <a href="#">WafPolicyOption</a> object | Whether a protection item is enabled in a protection policy. |

| Parameter      | Type   | Description  |
|----------------|--|--|
| level          | Integer  | Protection level.  |
| full_detection | Boolean  | Detection mode in the precise protection rule.                   |
| robot_action   | <a href="#">WafPolicyAction</a> object             | Information about anti-crawler protection with feature libraries |
| bind_host      | Array of <a href="#">WafPolicyBindHost</a> objects | Basic information about the protected domain.                    |
| timestamp      | Long   | Time a policy was created.                                       |
| extend         | Map<String, String>                                | Extended field.  |

**Table 4-70 WafPolicyOption**

| Parameter      | Type    | Description  |
|----------------|---------|--|
| webattack      | Boolean | Whether basic web protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                           |
| common         | Boolean | Whether general check is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                                  |
| bot_enable     | Boolean | Whether full anti-crawler protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                   |
| crawler        | Boolean | Whether anti-crawler protection with feature libraries is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |
| crawler_engine | Boolean | Whether the search engine is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                              |

| Parameter       | Type    | Description  |
|-----------------|---------|--|
| crawler_scanner | Boolean | Whether the scanner is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                        |
| crawler_script  | Boolean | Whether the JavaScript anti-crawler is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>        |
| crawler_other   | Boolean | Whether other crawler check is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                |
| webshell        | Boolean | Whether web shell detection is enabled<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                 |
| cc              | Boolean | Whether the CC attack protection rules are enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>    |
| custom          | Boolean | Whether precise protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                 |
| followed_action | Boolean | Whether known attack source detection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>      |
| whiteblackip    | Boolean | Whether blacklist and whitelist protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |

| Parameter   | Type    | Description  |
|-------------|---------|--|
| geoip       | Boolean | Whether the geolocation rule is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>               |
| ignore      | Boolean | Whether false alarm masking is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                |
| privacy     | Boolean | Whether data masking is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                       |
| antitamper  | Boolean | Whether the web tamper protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>          |
| antileakage | Boolean | Whether the information leakage prevention is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |
| anticrawler | Boolean | Whether the JavaScript anti-crawler rule is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>   |

**Table 4-71 WafPolicyAction**

| Parameter          | Type   | Description   |
|--------------------|--------|---|
| category           | String | Basic web protection action (log: record only; block: block)<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>block</b></li><li>• <b>log</b></li></ul> |
| followed_action_id | String | Known attack source rule ID   |

**Table 4-72** WafPolicyBindHost

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| id        | String | Domain name ID. |
| hostname  | String | Domain name.    |

**Status code: 400****Table 4-73** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-74** Response body parameters

## 4.3 WAF Policy Management

### 4.3.1 Querying a Policy List

#### Function

This API is used to query the policy list.

#### URI

GET /v1/{project\_id}/waf/policy

**Table 4-76** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID. To obtain its value, log in to the Huawei Cloud console, click the username, choose <b>My Credentials</b> , and find the project ID in the <b>Projects</b> list. |

**Table 4-77** Query Parameters

| Parameter             | Mandatory | Type    | Description   |
|-----------------------|-----------|---------|---|
| enterprise_project_id | No        | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).   |
| page                  | No        | Integer | Page number of the data to be returned in a query. The default value is 1, indicating that data on the first page is returned.<br><br>Default: 1                            |
| pagesize              | No        | Integer | Number of results on each page in query pagination. The value range is 1 to 100. The default value is 10, indicating that each page contains 10 results.<br><br>Default: 10 |

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--------------|
| name      | No        | String | Policy name. |

## Request Parameters

**Table 4-78** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b>  |

## Response Parameters

Status code: 200

**Table 4-79** Response body parameters

| Parameter | Type                                      | Description              |
|-----------|---|--------------------------|
| total     | Integer                                   | Total number of policies |
| items     | Array of<br><b>PolicyResponse</b> objects | Content of the policy    |

**Table 4-80** PolicyResponse

| Parameter | Type   | Description |
|-----------|--------|-------------|
| id        | String | Policy ID   |
| name      | String | Policy name |

| Parameter       | Type                                | Description   |
|-----------------|-------------------------------------|---|
| level           | Integer                             | <p>Basic web protection level:</p> <ul style="list-style-type: none"><li>• 1: Loose. The protection granularity is coarse. Only requests with obvious attack characteristics are blocked. If a large number of false alarms are reported, Low is recommended.</li><li>• 2: Medium. This is the default level, which meets web protection requirements in most scenarios.</li><li>• 3: Strict. See [Error Codes](#).

## 4.3.2 Creating a Protection Policy

### Function

A protection policy you create contains default configuration items. To modify these configuration items, you need to call this API to update the protection policy.

### URI

POST /v1/{project\_id}/waf/policy

**Table 4-88** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID. To obtain its value, log in to the Huawei Cloud console, click the username, choose <b>My Credentials</b> , and find the project ID in the <b>Projects</b> list. |

**Table 4-89** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

### Request Parameters

**Table 4-90** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b>  |

**Table 4-91** Request body parameters

| Parameter | Mandatory | Type   | Description  |
|-----------|-----------|--------|--|
| name      | Yes       | String | Policy name (The policy name can contain only digits, letters, and underscores (_) and cannot exceed 64 characters.) |

## Response Parameters

Status code: 200

**Table 4-92** Response body parameters

| Parameter | Type    | Description   |
|-----------|---------|---|
| id        | String  | Policy ID   |
| name      | String  | Policy name   |
| level     | Integer | <p>Basic web protection level:</p> <ul style="list-style-type: none"><li>• 1: Loose. The protection granularity is coarse. Only requests with obvious attack characteristics are blocked. If a large number of false alarms are reported, Low is recommended.</li><li>• 2: Medium. This is the default level, which meets web protection requirements in most scenarios.</li><li>• 3: Strict. At this level, WAF provides the finest granular protection and can intercept attacks with complex bypass features, such as Jolokia cyber attacks, common gateway interface (CGI) vulnerability detection, and Druid SQL injection attacks.</li></ul> <p>Default: 2</p> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• 1</li><li>• 2</li><li>• 3</li></ul> |

| Parameter       | Type                      | Description   |
|-----------------|---------------------------|---|
| full_detection  | Boolean                   | <p>Detection mode in the precise protection rule.</p> <ul style="list-style-type: none"><li>• false: Instant detection. If a request matches a configured precise protection rule, WAF immediately ends threat detection and blocks the request.</li><li>• true: Full detection. If a request matches a configured precise protection rule, WAF finishes its scan first and then blocks all requests that match the configured precise protection rule.</li></ul> |
| robot_action    | Action object             | Action taken for anti-crawler protection with feature libraries   |
| action          | PolicyAction object       | Action  |
| options         | PolicyOption object       | Whether to enable the protection policy detection module, for example, whether to enable basic web protection.  |
| modulex_options | Map<String, Object>       | Configurations of intelligent access control protection items. Currently, this feature is still in the open beta test (OBT) phase and available only in certain sites.  |
| hosts           | Array of strings          | ID array of protected domain names bound to a protection policy.  |
| bind_host       | Array of BindHost objects | Array of protected domain names bound to a protection policy. It contains more detailed domain name information than the hosts field.   |
| extend          | Map<String, String>       | Extended field, which is used to store the switch configuration of basic web protection.  |
| timestamp       | Long                      | Time a policy was created.  |

**Table 4-93 Action**

| Parameter | Type   | Description  |
|-----------|--------|--|
| category  | String | <p>Action to be taken in anti-crawler protection with feature libraries:</p> <ul style="list-style-type: none"><li>• log: record only</li><li>• block: block</li></ul> |

**Table 4-94** PolicyAction

| Parameter | Type   | Description   |
|-----------|--------|---|
| category  | String | Basic web protection action (log: record only; block: block)<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>block</b></li><li>• <b>log</b></li></ul> |

**Table 4-95** PolicyOption

| Parameter       | Type    | Description   |
|-----------------|---------|---|
| webattack       | Boolean | Whether basic web protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>  |
| common          | Boolean | Whether general check is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>   |

## Example Requests

Create a protection policy named **demo** in the project whose ID is `project_id`.

```
POST https://{{Endpoint}}/v1/{{project_id}}/waf/policy?enterprise_project_id=0
{
  "name" : "demo"
}
```

## Example Responses

**Status code: 200**

OK

```
{
  "id" : "38ff0cb9a10e4d5293c642bc0350fa6d",
  "name" : "demo",
  "level" : 2,
  "action" : {
    "category" : "log"
  },
  "options" : {
    "webattack" : true,
    "common" : true,
```

```
"crawler" : true,  
"crawler_engine" : false,  
"crawler_scanner" : true,  
"crawler_script" : false,  
"crawler_other" : false,  
"webshell" : false,  
"cc" : true,  
"custom" : true,  
"whiteblackip" : true,  
"geoip" : true,  
"ignore" : true,  
"privacy" : true,  
"antitamper" : true,  
"antileakage" : false,  
"bot_enable" : true,  
"modulex_enabled" : false  
},  
"hosts" : [ ],  
"extend" : { },  
"timestamp" : 1650529538732,  
"full_detection" : false,  
"bind_host" : [ ]  
}
```

## Status Codes

| Status Code | Description                                   |

See [Error Codes](#).

### 4.3.3 Deleting a Protection Policy

#### Function

This API is used to delete a protection policy. If the policy is in use, you need to unbind domain names from the policy first.

#### URI

DELETE /v1/{project\_id}/waf/policy/{policy\_id}

**Table 4-101** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID. To obtain its value, log in to the Huawei Cloud console, click the username, choose <b>My Credentials</b> , and find the project ID in the <b>Projects</b> list. |
| policy_id  | Yes       | String | Protection policy ID. You can call the ListPolicy API to obtain the policy ID.   |

**Table 4-102** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

## Request Parameters

**Table 4-103** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b>  |

## Response Parameters

**Status code:** 200

**Table 4-104** Response body parameters

| Parameter      | Type                   | Description   |
|----------------|------------------------|---|
| id             | String                 | Policy ID.  |
| name           | String                 | Policy name.  |
| level          | Integer                | <p>Basic web protection level:</p> <ul style="list-style-type: none"><li>• 1: Loose. The protection granularity is coarse. Only requests with obvious attack characteristics are blocked. If a large number of false alarms are reported, Low is recommended.</li><li>• 2: Medium. This is the default level, which meets web protection requirements in most scenarios.</li><li>• 3: Strict. At this level, WAF provides the finest granular protection and can intercept attacks with complex bypass features, such as Jolokia cyber attacks, common gateway interface (CGI) vulnerability detection, and Druid SQL injection attacks.</li></ul> <p>Default: 2</p> <p>Enumeration values:</p> <ul style="list-style-type: none"><li>• 1</li><li>• 2</li><li>• 3</li></ul> |
| full_detection | Boolean                | <p>Detection mode in the precise protection rule.</p> <ul style="list-style-type: none"><li>• false: Instant detection. If a request matches a configured precise protection rule, WAF immediately ends threat detection and blocks the request.</li><li>• true: Full detection. If a request matches a configured precise protection rule, WAF finishes its scan first and then blocks all requests that match the configured precise protection rule.</li></ul>   |
| robot_action   | Action object          | Action used for anti-crawler protection with feature libraries.   |
| action         | WafPolicyAction object | Protection action.  |
| options        | PolicyOption object    | Whether a protection item is enabled in a protection policy.  |

| Parameter       | Type                                      | Description  |
|-----------------|---|--|
| modulex_options | Map<String, Object>                       | Configurations of intelligent access control protection items. Currently, this feature is still in the open beta test (OBT) phase and available only in certain sites. |
| hosts           | Array of strings                          | ID array of protected domain names bound to a protection policy.   |
| bind_host       | Array of <a href="#">BindHost</a> objects | Array of protected domain names bound to a protection policy. It contains more detailed domain name information than the hosts field.                                  |
| extend          | Map<String, String>                       | Extended field, which is used to store the switch configuration of basic web protection.   |
| timestamp       | Long                                      | Time a policy was created.   |

**Table 4-105 Action**

| Parameter | Type   | Description   |
|-----------|--------|---|
| category  | String | Action to be taken in anti-crawler protection with feature libraries: <ul style="list-style-type: none"><li>• log: record only</li><li>• block: block</li></ul> |

**Table 4-106 WafPolicyAction**

| Parameter          | Type   | Description   |
|--------------------|--------|---|
| category           | String | Basic web protection action (log: record only; block: block)<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>block</b></li><li>• <b>log</b></li></ul> |
| followed_action_id | String | Known attack source rule ID   |

**Table 4-107 PolicyOption**

| Parameter       | Type    | Description   |
|-----------------|---------|---|
| webattack       | Boolean | Whether basic web protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>  |
| common          | Boolean | Whether general check is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>   |
| crawler         | Boolean | Reserved parameter. Its value is always true.<br>You can ignore this parameter.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |
| crawler_engine  | Boolean | Whether the search engine is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>   |
| crawler_scanner | Boolean | Whether the anti-crawler detection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                                  |
| crawler_script  | Boolean | Whether the JavaScript anti-crawler is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                                 |
| crawler_other   | Boolean | Whether other crawler check is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>   |
| webshell        | Boolean | Whether webshell detection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>  |

| Parameter    | Type    | Description  |
|--------------|---------|--|
| cc           | Boolean | Whether the CC attack protection rules are enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>    |
| custom       | Boolean | Whether precise protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                 |
| whiteblackip | Boolean | Whether blacklist and whitelist protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |
| geoip        | Boolean | Whether geolocation access control is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>         |
| ignore       | Boolean | Whether false alarm masking is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                |
| privacy      | Boolean | Whether data masking is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>                       |
| antitamper   | Boolean | Whether the web tamper protection is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>          |
| antileakage  | Boolean | Whether the information leakage prevention is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |

| Parameter       | Type    | Description  |
|-----------------|---------|--|
| bot_enable      | Boolean | Whether the website anti-crawler function is enabled.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>  |
| modulex_enabled | Boolean | Whether CC attack protection for moduleX is enabled. This feature is in the open beta test (OBT). During the OBT, only the log only mode is supported.<br>Enumeration values: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> |

**Table 4-108** BindHost

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| id        | String | Domain name ID. |
| hostname  | String | Domain name.    |

**Status code: 400****Table 4-109** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-110** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500**

**Table 4-111** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Delete the protection policy whose ID is policy\_id from the project whose ID is project\_id.

```
DELETE https://{Endpoint}/v1/{project_id}/waf/policy/{policy_id}?enterprise_project_id=0
```

## Example Responses

**Status code: 200**

Request succeeded.

```

## 4.4 Anti-DDoS Domain Name Management

### 4.4.1 Adding a Domain Name to WAF for Anti-DDoS Protection

#### Function

This API is used to add a domain name for DDoS protection.

#### URI

POST /v1/edgeddos/domains

#### Request Parameters

**Table 4-112** Request header parameters

| Parameter    | Mandatory | Type   | Description |
|--------------|-----------|--------|-------------|
| X-Auth-Token | Yes       | String | auth token  |

**Table 4-113** Request body parameters

| Parameter | Mandatory | Type   | Description                   |
|-----------|-----------|--------|-------------------------------|
| domain_id | Yes       | String | WAF protection domain name ID |

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

## Response Parameters

**Status code: 400**

**Table 4-114** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401**

**Table 4-115** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500**

**Table 4-116** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Add the domain name whose ID is 095b60b21ac248579426f97379b3fbec as an anti-DDoS domain name.

```
POST https://{{Endpoint}}/v1/edgeddos/domains
```

```
{
```

```
"domain_id" : "095b60b21ac248579426f97379b3fbec",
"enterprise_project_id" : 0
}
```

## Example Responses

None

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | Request succeeded.  |
| 400         | Invalid request parameter.  |
| 401         | The account corresponding to the token does not have sufficient permission. |
| 500         | Internal server error.  |

## Error Codes

See [Error Codes](#).

### 4.4.2 Querying an Anti-DDoS Domain Name

#### Function

This API is used to query a tenant's Anti-DDoS domain name.

#### URI

GET /v1/edgeddos/domains

**Table 4-117** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| domain_name           | No        | String | Domain name.  |
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

| Parameter | Mandatory | Type    | Description   |
|-----------|-----------|---------|---|
| offset    | No        | Integer | Offset, which is the position where the query starts. The value must be greater than or equal to 0.<br>Minimum: <b>0</b><br>Default: <b>0</b> |
| limit     | No        | Integer | Number of records displayed on each page<br>Minimum: <b>1</b><br>Maximum: <b>1000</b><br>Default: <b>10</b>                                   |

## Request Parameters

**Table 4-118** Request header parameters

| Parameter    | Mandatory | Type   | Description |
|--------------|-----------|--------|-------------|
| X-Auth-Token | Yes       | String | auth token  |

## Response Parameters

**Status code: 200**

**Table 4-119** Response body parameters

| Parameter   | Type   | Description  |
|-------------|--|--|
| domain_list | Array of<br><a href="#">EdgeDDoSDo mainVo</a><br>objects | Domain name.   |
| total       | Long   | Total number of domain names<br>Minimum: <b>0</b><br>Default: <b>0</b> |

**Table 4-120** EdgeDDoSDomainVo

| Parameter | Type   | Description    |
|-----------|--------|----------------|
| id        | String | Domain name ID |

| Parameter             | Type    | Description  |
|-----------------------|---------|--|
| domain_name           | String  | Domain name.   |
| tenant_id             | String  | Tenant ID.   |
| area_type             | String  | Region that the domain name belongs to.<br>Enumeration values: <ul style="list-style-type: none"><li>• mainland_china</li><li>• outside_mainland_china</li><li>• europe</li><li>• global</li></ul> |
| dispatch_status       | Integer | CDN domain name scheduling status (0: not protected; 1: configuring; 2: protected; 3: deleting)  |
| protected_switch      | Integer | Protection switch (0: off; 1: on)  |
| open_date             | Long    | Start time   |
| close_date            | Long    | Closing time   |
| enterprise_project_id | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).  |

**Status code: 400****Table 4-121** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-122** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500**

**Table 4-123** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

View the list of anti-DDoS domain names.

```
GET https://[Endpoint]/v1/edgeddos/domains?limit=10
```

## Example Responses

**Status code: 200**

Request succeeded.

```
{  
    "total" : 1,  
    "domain_list" : [ {  
        "id" : "095b60b21ac248579426f97379b3fbec",  
        "domain_name" : "domain_name",  
        "tenant_id" : "e5865897eb404d2e88e104f3fe3abff1",  
        "area_type" : "outside_mainland_china",  
        "dispatch_status" : 2,  
        "protected_switch" : 1,

        "enterprise_project_id" : 0  
    } ]  
}
```

## Status Codes

| Status Code | Description   |
|-------------|---|
| 200         | Request succeeded.  |
| 400         | Invalid request parameter.  |
| 401         | The account corresponding to the token does not have sufficient permission. |
| 500         | Internal server error.  |

## Error Codes

See [Error Codes](#).

## 4.4.3 Updating an Anti-DDoS Domain Name

### Function

This API is used to update an anti-DDoS domain name.

### URI

PUT /v1/edgeddos/domains/{domainid}

**Table 4-124** Path Parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| domainid  | Yes       | String | Domain name ID. |

### Request Parameters

**Table 4-125** Request header parameters

| Parameter    | Mandatory | Type   | Description |
|--------------|-----------|--------|-------------|
| X-Auth-Token | Yes       | String | auth token  |

**Table 4-126** Request body parameters

| Parameter             | Mandatory | Type    | Description  |
|-----------------------|-----------|---------|--|
| enterprise_project_id | No        | String  | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS).              |
| protected_switch      | Yes       | Integer | Protection switch (0: off; 1: on)<br>Default: 0<br>Enumeration values: <ul style="list-style-type: none"><li>• 0</li><li>• 1</li></ul> |

### Response Parameters

**Status code: 400**

**Table 4-127** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-128** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500****Table 4-129** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Enable protection for the domain name whose ID is 095b60b21ac248579426f97379b3fbec.

```
PUT https://{Endpoint}/v1/edgeddos/domains/095b60b21ac248579426f97379b3fbec
{
    "protected_switch" : 1
}
```

## Example Responses

None

## Status Codes

| Status Code | Description        |
|-------------|--------------------|
| 200         | Request succeeded. |

| Status Code | Description   |
|-------------|---|
| 400         | Invalid request parameter.  |
| 401         | The account corresponding to the token does not have sufficient permission. |
| 500         | Internal server error.  |

## Error Codes

See [Error Codes](#).

### 4.4.4 Deleting an Anti-DDoS Domain Name

#### Function

This API is used to delete an anti-DDoS domain name.

#### URI

DELETE /v1/edgeddos/domains/{domainid}

**Table 4-130** Path Parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| domainid  | Yes       | String | Domain name ID. |

**Table 4-131** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

#### Request Parameters

**Table 4-132** Request header parameters

| Parameter    | Mandatory | Type   | Description |
|--------------|-----------|--------|-------------|
| X-Auth-Token | Yes       | String | auth token  |

## Response Parameters

**Status code: 400**

**Table 4-133** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401**

**Table 4-134** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500**

**Table 4-135** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

Delete the anti-DDoS domain name whose ID is 095b60b21ac248579426f97379b3fbec.

```
DELETE https://{{Endpoint}}/v1/edgeddos/domains/095b60b21ac248579426f97379b3fbec
```

## Example Responses

None

## Status Codes

| Status Code | Description        |
|-------------|--------------------|
| 200         | Request succeeded. |

| Status Code | Description   |
|-------------|---|
| 400         | Invalid request parameter.  |
| 401         | The account corresponding to the token does not have sufficient permission. |
| 500         | Internal server error.  |

## Error Codes

See [Error Codes](#).

## 4.5 Tenant Subscription Management

### 4.5.1 Querying Purchased EdgeSec Products

#### Function

This API is used to query purchased EdgeSec products.

#### URI

GET /v1/edgesec/subscription

**Table 4-136** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | Obtain the enterprise project ID by calling the ListEnterpriseProject API of Enterprise Project Management Service (EPS). |

#### Request Parameters

**Table 4-137** Request header parameters

| Parameter    | Mandatory | Type   | Description  |
|--------------|-----------|--------|--|
| X-Auth-Token | No        | String | User token. It can be obtained by calling the IAM API (value of X-Subject-Token in the response header). |

## Response Parameters

Status code: 200

**Table 4-138** Response body parameters

| Parameter       | Type  | Description  |
|-----------------|---|--|
| waf_domain_num  | Integer   | Number of WAF domain names that have been added              |
| waf_rule_num    | Integer   | Number of added WAF IP address blacklist and whitelist rules |
| ddos_domain_num | Integer   | Number of added anti-DDoS domain names                       |
| product_infos   | Array of<br><a href="#">EdgeSecProductResource</a><br>objects | Product details  |

**Table 4-139** EdgeSecProductResource

| Parameter             | Type    | Description   |
|-----------------------|---------|---|
| order_id              | String  | ID of the order for purchasing the resource.  |
| cloud_service_type    | String  | Cloud service type. The value for EdgeSec is hws.service.type.edgesec.  |
| product_id            | String  | Product ID  |
| resource_id           | String  | Resource ID   |
| enterprise_project_id | String  | Enterprise project ID   |

## 4.6 WAF Certificate Management

## 4.6.1 Querying the Certificate List

### Function

This API is used to query the list of certificates.

### URI

GET /v1/{project\_id}/waf/certificate

**Table 4-143** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID. To obtain it, go to the Huawei Cloud management console and hover the cursor over your username. On the displayed window, choose <b>My Credentials</b> . Then, in the <b>Projects</b> area, view <b>Project ID</b> of the corresponding project. |

**Table 4-144** Query Parameters

| Parameter             | Mandatory | Type    | Description  |
|-----------------------|-----------|---------|--|
| enterprise_project_id | No        | String  | You can obtain the ID by calling the <b>ListEnterpriseProject</b> API of EPS.  |
| page                  | No        | Integer | Page number of the data to be returned during pagination query. The default value is <b>1</b> , indicating that the data on the first page is returned.<br><br>Default: <b>1</b>           |
| pagesize              | No        | Integer | Number of results on each page in query pagination. The value range is 1 to 100. The default value is <b>10</b> , indicating that each page contains 10 results.<br><br>Default: <b>10</b> |
| name                  | No        | String  | Certificate name.  |

| Parameter  | Mandatory | Type    | Description   |
|------------|-----------|---------|---|
| host       | No        | Boolean | <p>Whether to obtain the domain name for which the certificate is used. The default value is <b>false</b>.</p> <ul style="list-style-type: none"><li>• <b>true</b>: Obtain the certificates that have been used for domain names.</li><li>• <b>false</b>: Obtain the certificates that have not been used for any domain name.</li></ul> <p>Default: <b>false</b></p> |
| exp_status | No        | Integer | Certificate status. The options are as follows: 0: not expired; 1: expired; 2: about to expire (The certificate will expire within one month.)  |

## Request Parameters

**Table 4-145** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of <b>X-Subject-Token</b> in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json;charset=utf8</b>  |

## Response Parameters

**Status code: 200**

**Table 4-146** Response body parameters

| Parameter | Type                                       | Description       |
|-----------|--|-------------------|
| items     | Array of<br><b>CertificateBody</b> objects | Certificate list. |

| Parameter | Type    | Description                  |
|-----------|---------|------------------------------|
| total     | Integer | Total number of certificates |

**Table 4-147** CertificateBody

| Parameter   | Type  | Description   |
|-------------|---|---|
| id          | String  | Certificate ID.   |
| name        | String  | Certificate name.   |
| expire_time | Long  | Certificate expiration time, in timestamp format.   |
| exp_status  | Integer   | Certificate status. The value can be: <b>0</b> : The certificate is valid. <b>1</b> : The certificate has expired. <b>2</b> : The certificate will expire within one month. |
| timestamp   | Long  | Time the certificate was uploaded, in timestamp format.   |
| bind_host   | Array of<br><a href="#">BindHost</a><br>objects | Domain name associated with the certificate   |

**Table 4-148** BindHost

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| id        | String | Domain name ID. |
| hostname  | String | Domain name.    |

**Status code: 400****Table 4-149** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401**

**Table 4-150** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500****Table 4-151** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

The following example shows how to query the certificate list in a project. The project ID is specified by project\_id.

```
GET https://{Endpoint}/v1/{project_id}/waf/certificate?enterprise_project_id=0
```

## Example Responses

**Status code: 200**

OK

```
{  
  "total": 1,  
  "items": [  
    {  
      "id": "dc443ca4f29c4f7e8d4adaf485be317b",  
      "name": "demo",  
      "timestamp": 1643181401751,  
      "expire_time": 1650794100000,  
      "bind_host": [],  
      "exp_status": 2  
    }  
  ]  
}
```

## Status Codes

| Status Code | Description                                   |
|-------------|---|
| 200         | OK  |
| 400         | Request failed.                               |
| 401         | The token does not have required permissions. |
| 500         | Internal server error.                        |

## Error Codes

See [Error Codes](#).

### 4.6.2 Creating a Certificate

#### Function

This API is used to create a certificate.

#### URI

POST /v1/{project\_id}/waf/certificate

**Table 4-152** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID. To obtain it, go to the Huawei Cloud management console and hover the cursor over your username. On the displayed window, choose <b>My Credentials</b> . Then, in the <b>Projects</b> area, view <b>Project ID</b> of the corresponding project. |

**Table 4-153** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | You can obtain the ID by calling the <b>ListEnterpriseProject</b> API of EPS. |

#### Request Parameters

**Table 4-154** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of <b>X-Subject-Token</b> in the response header). |

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b> |

**Table 4-155** Request body parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| name      | Yes       | String | Certificate name. The value can contain a maximum of 64 characters. Only digits, letters, hyphens (-), underscores (_), and periods (.) are allowed.  |
| content   | Yes       | String | Certificate file. Only certificates and private key files in PEM format are supported, and the newline characters in the file must be replaced with \n. The following is an example:        |
| key       | Yes       | String | Certificate private key. Only certificates and private key files in PEM format are supported, and the newline characters in the file must be replaced with \n. The following is an example: |

## Response Parameters

**Status code: 200**

**Table 4-156** Response body parameters

| Parameter   | Type   | Description   |
|-------------|--------|---|
| id          | String | Certificate ID.   |
| name        | String | Certificate name.                                       |
| content     | String | Certificate file in PEM format                          |
| key         | String | Private key of the certificate, which is in PEM format. |
| expire_time | Long   | Certificate expiration timestamp                        |

| Parameter  | Type  | Description   |
|------------|---|---|
| exp_status | Integer   | Certificate status. The options can be: <b>0</b> : The certificate has not expire. <b>1</b> : The certificate expired. <b>2</b> : The certificate is about to expire. |
| timestamp  | Long  | Certificate upload timestamp  |
| bind_host  | Array of<br><a href="#">BindHost</a><br>objects | Domain name associated with the certificate   |

**Table 4-157** BindHost

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| id        | String | Domain name ID. |
| hostname  | String | Domain name.    |

**Status code: 400****Table 4-158** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 401****Table 4-159** Response body parameters

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

**Status code: 500****Table 4-160** Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| error_code | String | Error code. |

| Parameter | Type   | Description    |
|-----------|--------|----------------|
| error_msg | String | Error message. |

## Example Requests

The following example shows how to create a certificate in the project whose project ID is project\_id. The certificate name is demo, the certificate content is -----BEGIN CERTIFICATIONATE-----..., and the certificate key is -----BEGIN Private KEY-----.

```

### 4.6.3 Querying a Certificate

#### Function

This API is used to query a certificate.

#### URI

GET /v1/{project\_id}/waf/certificate/{certificate\_id}

**Table 4-161** Path Parameters

| Parameter  | Mandatory | Type   | Description  |
|------------|-----------|--------|--|
| project_id | Yes       | String | Project ID. To obtain it, go to the Huawei Cloud management console and hover the cursor over your username. On the displayed window, choose <b>My Credentials</b> . Then, in the <b>Projects</b> area, view <b>Project ID</b> of the corresponding project. |

| Parameter      | Mandatory | Type   | Description  |
|----------------|-----------|--------|--|
| certificate_id | Yes       | String | HTTPS certificate ID. It can be obtained by calling the <b>ListCertificates</b> API. |

**Table 4-162** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | You can obtain the ID by calling the <b>ListEnterpriseProject</b> API of EPS. |

## Request Parameters

**Table 4-163** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of <b>X-Subject-Token</b> in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b>   |

## Response Parameters

**Status code:** 200

**Table 4-164** Response body parameters

| Parameter   | Type   | Description   |
|-------------|--------|---|
| id          | String | Certificate ID.   |
| name        | String | Certificate name.                                       |
| content     | String | Certificate file, PEM encoding                          |
| key         | String | Private key of the certificate, which is in PEM format. |
| expire_time | Long   | Certificate expiration timestamp                        |

| Parameter  | Type  | Description   |
|------------|---|---|
| exp_status | Integer   | Certificate status. The options can be: <b>0</b> : The certificate has not expire. <b>1</b> : The certificate expired. <b>2</b> : The certificate is about to expire. |
| timestamp  | Long  | Certificate upload timestamp  |
| bind_host  | Array of<br><a href="#">BindHost</a><br>objects | Domain name associated with the certificate   |

**Table 4-165** BindHost

| Parameter | Type   | Description     |
|-----------|--------|-----------------|

## Example Requests

The following example shows how to query a certificate in a project. The project ID is specified by project\_id, and the certificate ID is specified by certificate\_id.

```
GET https://{Endpoint}/v1/{project_id}/waf/certificate/{certificate_id}?enterprise_project_id=0
```

## Example Responses

**Status code: 200**

OK

### 4.6.4 Deleting a Certificate

#### Function

This API is used to delete a certificate.

#### URI

DELETE /v1/{project\_id}/waf/certificate/{certificate\_id}

**Table 4-169** Path Parameters

| Parameter      | Mandatory | Type   | Description  |
|----------------|-----------|--------|--|
| project_id     | Yes       | String | Project ID. To obtain it, go to the Huawei Cloud management console and hover the cursor over your username. On the displayed window, choose <b>My Credentials</b> . Then, in the <b>Projects</b> area, view <b>Project ID</b> of the corresponding project. |
| certificate_id | Yes       | String | HTTPS certificate ID. It can be obtained by calling the <b>ListCertificates</b> API.   |

**Table 4-170** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | You can obtain the ID by calling the <b>ListEnterpriseProject</b> API of EPS. |

## Request Parameters

**Table 4-171** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of <b>X-Subject-Token</b> in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b>   |

## Response Parameters

Status code: 200

**Table 4-172** Response body parameters

| Parameter   | Type                                   | Description   |
|-------------|--|---|
| id          | String                                 | Certificate ID.   |
| name        | String                                 | Certificate name.   |
| content     | String                                 | Certificate file, in PEM format.  |
| key         | String                                 | Certificate private key, in PEM format.   |
| expire_time | Long                                   | Certificate expiration timestamp  |
| exp_status  | Integer                                | Certificate status. The options can be: <b>0</b> : The certificate has not expire. <b>1</b> : The certificate expired. <b>2</b> : The certificate is about to expire. |
| timestamp   | Long                                   | Timestamp when the certificate is uploaded  |
| bind_host   | Array of<br><b>BindHost</b><br>objects | Domain name associated with the certificate   |

**Table 4-173** BindHost

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| id        | String | Domain name ID. |
| hostname  | String | Domain name.    |

**Status code: 400****Table 4-174** Response body parameters

| 200         | OK  |
| 400         | Request failed.                               |
| 401         | The token does not have required permissions. |
| 500         | Internal server error.                        |

## Error Codes

See [Error Codes](#).

### 4.6.5 Modifying a Certificate

#### Function

This API is used to modify a certificate.

#### URI

PUT /v1/{project\_id}/waf/certificate/{certificate\_id}

**Table 4-177** Path Parameters

| Parameter      | Mandatory | Type   | Description  |
|----------------|-----------|--------|--|
| project_id     | Yes       | String | Project ID. To obtain it, go to the Huawei Cloud management console and hover the cursor over your username. On the displayed window, choose <b>My Credentials</b> . Then, in the <b>Projects</b> area, view <b>Project ID</b> of the corresponding project. |
| certificate_id | Yes       | String | HTTPS certificate ID. It can be obtained by calling the <b>ListCertificates</b> API.   |

**Table 4-178** Query Parameters

| Parameter             | Mandatory | Type   | Description   |
|-----------------------|-----------|--------|---|
| enterprise_project_id | No        | String | You can obtain the ID by calling the <b>ListEnterpriseProject</b> API of EPS. |

## Request Parameters

**Table 4-179** Request header parameters

| Parameter    | Mandatory | Type   | Description   |
|--------------|-----------|--------|---|
| X-Auth-Token | Yes       | String | User token. It can be obtained by calling the IAM API (value of <b>X-Subject-Token</b> in the response header). |
| Content-Type | Yes       | String | Content type.<br>Default: <b>application/json; charset=utf8</b>   |

**Table 4-180** Request body parameters

| Parameter | Mandatory | Type   | Description   |
|-----------|-----------|--------|---|
| name      | Yes       | String | Certificate name. The value can contain a maximum of 64 characters. Only digits, letters, hyphens (-), underscores (_), and periods (.) are allowed.            |
| content   | No        | String | Certificate file. Only certificates and private key files in PEM format are supported, and the newline characters in the file must be replaced with \n.         |
| key       | No        | String | Certificate private key. Only certificates and private key files in PEM format are supported, and the newline characters in the files must be replaced with \n. |

## Response Parameters

**Status code: 200**

**Table 4-181** Response body parameters

| Parameter   | Type   | Description  |
|-------------|--------|--|
| id          | String | Certificate ID.                                    |
| name        | String | Certificate name.                                  |
| expire_time | Long   | Time the certificate expires, in timestamp format. |
| timestamp   | Long   | Timestamp  |

**Status code: 400**

**Table 4-182** Response body parameters

| error_code | String | Error code.    |
| error_msg  | String | Error message. |

## Example Requests

The following example shows how to update a certificate name in a project. The project ID is specified by `project_id`, and the certificate ID is specified by `certificate_id`. The certificate name is updated to `demo`.

```
PUT https://{{Endpoint}}/v1/{{project_id}}/waf/certificate/{{certificate_id}}?enterprise_project_id=0
{
  "name" : "demo"
}
```

## Example Responses

**Status code: 200**

OK

```
{
  "id" : "360f992501a64de0a65c50a64d1ca7b3",
  "name" : "demo",
  "timestamp" : 1650593797892,
  "expire_time" : 1596865564000
}
```

## Status Codes

| Status Code | Description                                   |
|-------------|---|
| 200         | OK  |
| 400         | Request failed.                               |
| 401         | The token does not have required permissions. |
| 500         | Internal server error.                        |

## Error Codes

See [Error Codes](#).

# A Appendix

## A.1 Status Code

- Normal

| Status Code | Description | Description                            |
|-------------|-------------|--|
| 200         | OK          | The request is successfully processed. |

- Abnormal

| Status Code | Description           | Description   |
|-------------|-----------------------|---|
| 400         | Bad Request           | It is a bad request.                                |
| 401         | Unauthorized          | You do not have permissions to perform this action. |
| 403         | Forbidden             | Access is denied.                                   |
| 404         | Not Found             | The page is not found.                              |
| 500         | Internal Server Error | There is an internal server error.                  |

## A.2 Error Codes

If an error code starting with APIGW is returned after you call an API, rectify the fault by referring to the instructions provided in [API Gateway Error Codes](#).

| Status Code | Error Codes      | Error Message  | Description   | Solution  |
|-------------|------------------|--|---|---|
| 400         | EdgeSec.00000007 | Invalid Domain dispatch status.                          | Invalid domain name scheduling status.  | Contact technical support.  |
| 400         | EdgeSec.00000009 | Invalid domain.  | Invalid domain name.  | Check the domain name.  |
| 400         | EdgeSec.00000012 | Invalid area type.                                       | Invalid service region.   | Check the domain name and the service region of the purchased product.              |
| 400         | EdgeSec.00000014 | Not support operation in this enterprise project.        | Operation not supported for the current enterprise project.                                 | Check the permissions for the current enterprise project.                           |
| 400         | EdgeSec.00000015 | All enterprise projects do not support write operations. | Write operation not supported for "All project".  | Check the permissions for "All project".  |
| 400         | EdgeSec.00000016 | Tms Illegal Request.                                     | Invalid request for the tag management system.  | Check the request input parameters or contact Huawei technical support.             |
| 400         | EdgeSec.00000017 | Duplicate resource id.                                   | Duplicate resource IDs.   | Check the resource ID in the request input parameters or contact technical support. |
| 400         | EdgeSec.00000018 | This version only supports default enterprise project.   | The current version only supports resource management using the default enterprise project. | Use the default enterprise project to manage resources.                             |

| Status Code | Error Codes      | Error Message   | Description  | Solution   |
|-------------|------------------|---|--|--|
| 400         | EdgeSec.00000019 | Frozen can not create eps tag.  | EdgeSec resources are frozen and tags cannot be managed.   | Unfreeze EdgeSec resources.  |
| 400         | EdgeSec.00010003 | Domain name ineligible for this feature.                              | The domain name does not support this function.            | Check the domain name.   |
| 400         | EdgeSec.00010004 | Domain Already Exists.  | The domain name already exists.                            | Check the domain name.   |
| 400         | EdgeSec.00010006 | Blacklist and whitelist rules of an edge WAF policy exceed the quota. | Blacklist and Whitelist Rules of Edge WAF Exceed the Quota | 1.Delete unnecessary blacklist and whitelist rules so that the number of blacklist and whitelist rules in each policy does not exceed the current quota;Blacklist and whitelist rule quota = Edition quota + Number of rule expansion packages x 10. For example, if you use the professional edition of edge WAF and have two rule expansion packages, you can create 120 blacklist and whitelist rules (100 + 2 x 10 = 120). |

| Status Code | Error Codes       | Error Message   | Description   | Solution  |
|-------------|-------------------|---|---|---|
| 400         | EdgeSec.0001 0007 | The IP address group quota of edge WAF is insufficient. | Insufficient IP Address Group Quota of Edge WAF                     | For details about how to view the IP address group quota, see <a href="https://support.huaweicloud.com/en-us/usermanual-edgesec/edgesec_01_0058.html#section1">https://support.huaweicloud.com/en-us/usermanual-edgesec/edgesec_01_0058.html#section1</a> . If the IP address group quota is insufficient, contact technical support. |
| 400         | EdgeSec.0001 0008 | The edge WAF certificate quota is insufficient.         | Insufficient Edge WAF Certificate Quota                             | The certificate quota is the same as the domain name quota. Purchase the domain name expansion package of the edge WAF.   |
| 400         | EdgeSec.0002 0001 | Must enable waf protection first.                       | To enable anti-DDoS protection for a domain name, enable WAF first. | Enable WAF for the domain name.   |
| 400         | EdgeSec.0002 0002 | Domain Already Exists.                                  | The anti-DDoS domain name already exists.                           | Check the domain name.  |
| 400         | EdgeSec.0003 0001 | Illegal ElasticSearch Request.                          | An error occurred when querying protection data.                    | Check the query parameters.   |
| 400         | EdgeSec.0003 0002 | Search Error.   | An error occurred when querying protection data.                    | Check the query parameters.   |

| Status Code | Error Codes       | Error Message   | Description   | Solution   |
|-------------|-------------------|---|---|--|
| 400         | EdgeSec.0003 0003 | Statistic Type Error.                                   | An error occurred when querying the protected data type.  | Check the protected data type.   |
| 400         | EdgeSec.0004 0004 | The customer has purchased this product.                | You have purchased the product.   | Cancel purchase or contact technical support.                                  |
| 400         | EdgeSec.0004 0007 | No Permission To Operate.                               | EdgeSec has been unsubscribed from or frozen. You do not have the permission to perform this operation. | Purchase EdgeSec or contact technical support.                                 |
| 400         | EdgeSec.0004 0008 | The customer has not purchased this main resource.      | You have not purchased EdgeSec.   | Purchase EdgeSec or contact technical support.                                 |
| 400         | EdgeSec.0004 0009 | The domain name scope does not match the service scope. | The domain name is not in the region you purchased EdgeSec.   | Check the region of the domain name or purchase EdgeSec in the correct region. |
| 400         | EdgeSec.0004 0010 | The remaining resources are insufficient.               | Insufficient resources.   | Expand resources or delete unnecessary resources.                              |
| 400         | EdgeSec.0004 0011 | Please wait until the release is complete.              | Resources are being released.   | Please wait.   |

| Status Code | Error Codes      | Error Message  | Description  | Solution                  |
|-------------|------------------|--|--|---------------------------|
| 400         | EdgeSec.00040012 | Due to security reasons, your account has been restricted from purchasing certain pay-per-use cloud service resources according to the HUAWEI CLOUD Customer Agreement. If you have any questions, contact customer service. | Account restricted. The current product cannot be purchased.           | Contact customer service. |
| 400         | EdgeSec.00050001 | Domain is in processing, please wait it.   | The domain name is being scheduled.                                    | Please wait.              |

| 500         | WAF.00020002 | system.busy    | System busy                          | It is recommended to try again in five minutes |

## A.3 Troubleshooting

### A.3.1 EdgeSec.00000005 Invalid Parameter

#### Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

#### Troubleshooting Methods

- The page is not refreshed for a long time.
- Invalid input

#### Solution

**Step 1** Refresh the page. Then, select a proper time range and try again.

**Step 2** Enter information about the edge WAF policy or rule as prompted.

----End

### A.3.2 EdgeSec.00000013 Concurrent Modification Exception

#### Root Cause

This error code is triggered when too many concurrent access requests are performed on APIs.

## Troubleshooting and Solution

| Event Scenario                     | Cause  | Check Items  | Solution  |
|------------------------------------|--|--|---|
| Creating an edge WAF policy rule   | Adding a CC attack protection rule               | This error code is triggered when there are a large number of concurrent requests performed on APIs. | Whether concurrent requests are performed on the console. |
|                                    | Adding a precise protection rule                 |  |   |
|                                    | Creating a geolocation access control rule       |  |   |
|                                    | Creating a global whitelist rule                 |  |   |
|                                    | Adding a data masking rule                       |  |   |
|                                    | Adding an IP address blacklist or whitelist rule |  |   |
|                                    | Creating a reference table rule                  |  |   |
| Creating an edge WAF certificate   |  | Check whether users concurrently invoke related APIs.  | Reduce the concurrency of invoking related APIs.          |
| Creating an edge WAF address group |  |  |   |

### A.3.3 EdgeSec.00000014 Only Default Enterprise Project Supported (Not support operation in this enterprise project)

#### Root Cause

Currently, EdgeSec can be purchased only in the default enterprise project. If you add a domain name to edge WAF or edge DDoS in other enterprise projects, this error will be reported.

#### Solution

- Console: Switch to the default enterprise project and add a domain name again.

- API: When calling the API for adding a domain name to WAF, change the value of `enterprise_project_id` to **0** (default enterprise project).

### A.3.4 EdgeSec.00000015 Write Operation Not Supported When All Enterprise Projects Are Selected (All enterprise projects do not support the write operation)

#### Root Cause

This error is reported when a user selected **All projects** for **Enterprise Project** and attempted to add a domain name to edge WAF or edge Anti-DDoS. When **All projects** is selected for **Enterprise Project**, only query is supported.

#### Solution

- Console: Switch to the default enterprise project and add a domain name again.
- API: When calling the API for adding a domain name to WAF, change the value of `enterprise_project_id` to **0** (default enterprise project).

### A.3.5 EdgeSec.00000018 Migration of Resources to Non-Default Enterprise Project Not Supported (This version only supports default enterprise project)

#### Root Cause

Currently, EdgeSec can be purchased only in the default enterprise project. Resources cannot be migrated to a non-default enterprise project.

#### Troubleshooting and Solution

| Event Scenario   | Cause  | Solution   |
|--|--|--|
| An error was reported when a user attempted to migrate resources to a non-default enterprise project on the EPS console. | The current edition of EdgeSec does not support non-default enterprise projects. | The current edition does not support this operation. You can upgrade your edition and try again. |

## A.3.6 EdgeSec.00000019 Frozen Resources Cannot Be Migrated to or from an Enterprise Project (frozen cannot create eps tag)

### Root Cause

Frozen resources cannot be added to or removed from an enterprise project.

### Troubleshooting Methods

Check whether the resource is frozen.

Procedure

**Step 1** [Log in to the management console](#).

**Step 2** In the upper right corner of the page, choose **Billing & Costs > Renewal**. The **Renewals** page is displayed.

**Step 3** Check the status of the resource.

**Figure A-1** Resource status

----End

### Solution

The current version supports only default enterprise project. Migrations to or from other enterprise projects are not supported.

#### NOTE

Note: The later version will support custom enterprise projects. You can migrate renewed resources between enterprise projects then.

## A.3.7 EdgeSec.00000023 Operation Not Supported by the Current Specifications (Current specification does not support this option)

### Root Cause

This error is reported when the specifications in-use do not support some operations.

### Troubleshooting Methods

For details, see [Service Edition Differences](#).

## Solution

Upgrade the service to the edition that supports the operation.

### A.3.8 EdgeSec.00000025 Invalid Block Time (Invalid block time)

#### Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

#### Troubleshooting Methods

When adding or modifying a protection rule for an edge WAF, enter the block time as instructed.

#### Solution

Refresh the page and enter a valid block time for the edge WAF protection rule.

### A.3.9 EdgeSec.00000026 Invalid Whitelist Rule Type (Invalid rule type)

#### Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

#### Troubleshooting Methods

Check the condition length.

#### Solution

Refresh the page and enter the whitelist rule type as instructed.

### A.3.10 EdgeSec.00000027 Invalid CC Rule Condition Length (Invalid cc condition length value)

#### Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

#### Troubleshooting Methods

Check the condition length.

## Solution

Refresh the page and enter the length as prompted.

### A.3.11 EdgeSec.00010001 Invalid IAM Service Project (Failed to get IAM projects)

#### Root Cause

This error was reported when an IAM project is abnormal.

#### Troubleshooting Methods

Check the IAM projects.

#### Solution

##### Step 1 Log in to the management console.

Step 2 Hover your mouse over  in the upper left corner of the page and choose **Management & Governance > Identity Access and Management**.

Step 3 In the navigation pane on the left, choose **Projects** and view the region to which the project belongs.

- If you have registered with the Huawei Cloud International website, there should be a project in the **AP-Singapore** region.
- If you have registered with the Huawei Cloud Chinese Mainland website, there should be a project in the **CN North-Beijing4** region.

##### NOTE

If there is no such a project, [Submit a Service Ticket](#) enables the project in the region.

----End

### A.3.12 EdgeSec.00010005 Insufficient WAF Policy Rule Quota (WAF policy rule quota is not enough)

#### Root Cause

The edge WAF policy rule quota is insufficient.

#### Troubleshooting Methods

For details about how to view the policy rule quota of each edition, see [Edition Description](#).

## Solution

| Scenario   | Solution   |
|--|--|
| The edition with the largest quota can meet the requirements.            | Upgrade the service edition to the required edition.<br><br>If the quota of IP address blacklist and whitelist rules is insufficient, you can upgrade the service edition, or purchase the rule expansion package of edge WAF. |
| The edition with the largest quota still fails to meet the requirements. | <b>Submit a service ticket.</b>  |

## A.3.13 EdgeSec.00010006 Blacklist and Whitelist Rules of Edge WAF Exceed the Quota

### Root Cause

Blacklist and whitelist rules of an edge WAF policy exceed the quota.

### Troubleshooting Methods

**Step 1** [Viewing Blacklist and Whitelist Rule Quotas](#)

**Step 2** Check whether there are protection policies in which the number of blacklist and whitelist rules exceeds the current quota.

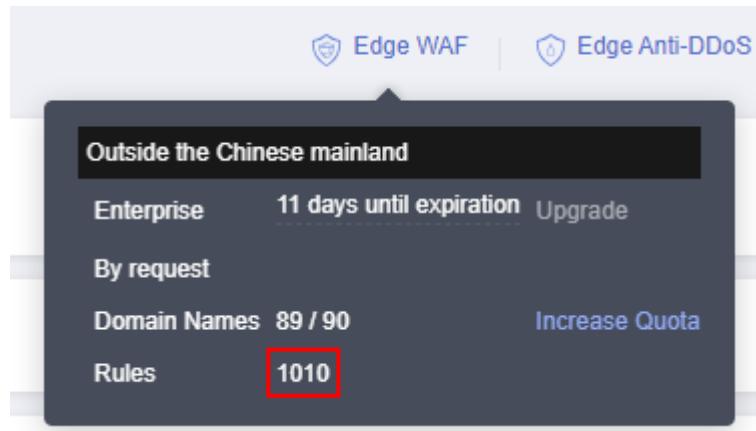

----End

### Viewing Blacklist and Whitelist Rule Quotas

**Step 1** [Log in to the management console.](#)

**Step 2** Click  in the upper left corner of the page and choose **Security & Compliance** > **Edge Security**.

**Step 3** Click **Edge WAF** in the upper right corner of the page to view the current rule quota.

**Figure A-2 Rule Quota****NOTE**

**Rule quota** shows an example. If the rule quota is 1010, the blacklist and whitelist rule quota for a single protection policy is 1010.

----End

## Solution

| Scenario  | Solution  |
|---|---|
| Some blacklist and whitelist rules can be deleted.        | Delete unnecessary blacklist and whitelist rules so that the number of blacklist and whitelist rules in each policy does not exceed the current quota.  |
| Existing blacklist and whitelist rules cannot be deleted. | Upgrade the edition or purchase a rule expansion package to ensure that the number of blacklist and whitelist rules in each policy does not exceed the new quota.<br><br>Blacklist and whitelist rule quota = Edition quota + Number of rule expansion packages x 10. For example, if you use the professional edition of edge WAF and have two rule expansion packages, you can create 120 blacklist and whitelist rules ( $100 + 2 \times 10 = 120$ ).<br><b>NOTE</b> <ul style="list-style-type: none"><li>For details about the blacklist and whitelist rule quotas of each edition, see <a href="#">Edition Description</a>.</li><li>A rule expansion package allows you to configure up to 10 IP address blacklist and whitelist rules.</li></ul> |

## A.3.14 EdgeSec.00010007 Insufficient IP Address Group Quota of Edge WAF

### Root Cause

The IP address group quota of edge WAF is insufficient.

### Troubleshooting Methods

For details about how to view the IP address group quota, see [Specifications Restrictions](#)

### Solution

If the IP address group quota is insufficient, contact technical support.

## A.3.15 EdgeSec.00010008 Insufficient Edge WAF Certificate Quota

### Root Cause

The edge WAF certificate quota is insufficient.

### Troubleshooting Methods

View the domain name quota of edge WAF.

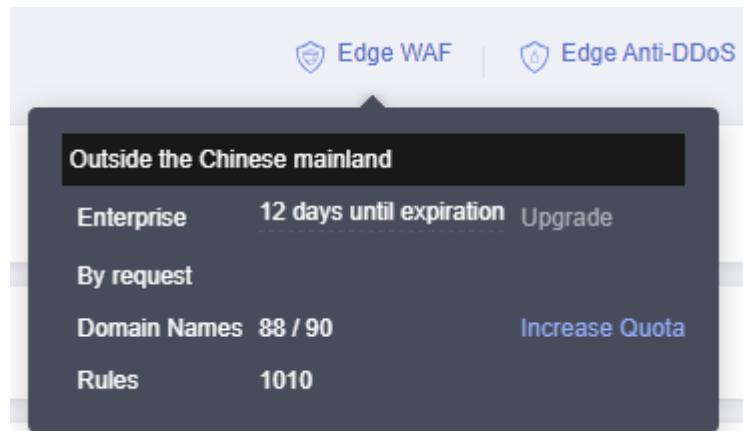

The certificate quota is the same as the domain name quota.

### Viewing Domain Quotas

**Step 1** [Log in to the management console.](#)

**Step 2** Click in the upper left corner of the page and choose **Security & Compliance** > **Edge Security**.

**Step 3** Click **Edge WAF** in the upper right corner of the page to view the current domain name quota.

**Figure A-3** Domain name quota**NOTE**

Certificate quota = Domain name quota. For example, if the domain name quota is 90, the certificate quota is 90, as shown in [Domain name quota](#).

----End

## Solution

Purchase the domain name expansion package of the edge WAF.

## A.3.16 EdgeSec.00030001 Invalid DDoS Overview Parameters (Illegal Elasticsearch Request)

### Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

### Troubleshooting Methods

Check the parameters on the query page.

## Solution

Refresh the page. Then, select a proper time range, specify other parameters, and try again.

## A.3.17 EdgeSec.00030003 DDoS Overview Query Type Exception (Statistic Type Error)

### Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

## Troubleshooting Methods

Check the parameters on the query page.

## Solution

Refresh the page. Then, select a proper time range, specify other parameters, and try again.

# A.3.18 EdgeSec.00030002 DDoS Overview Query Type Exception (Search Error)

## Root Cause

This error was reported when a user entered an invalid parameter for using some functions on the console.

## Troubleshooting Methods

Check the parameters on the query page.

## Solution

Refresh the page. Then, select a proper time range, specify other parameters, and try again.

# A.3.19 EdgeSec.00040007 No Permission To Operate

## Root Cause

This error was reported when the operation permission is insufficient.

## Troubleshooting and Solution

| Event Scenario                             | Sub-Scenario   | Cause   | Solution                               |
|--|----------------|---|--|
| Adding, modifying, and deleting operations | Edge WAF       | Edge WAF resources are frozen.  | Renew the affected resources.          |
|  | Edge Anti-DDoS | <ul style="list-style-type: none"><li>No edge Anti-DDoS resources are purchased.</li><li>Edge Anti-DDoS resources are frozen.</li></ul> | Buy or renew edge Anti-DDoS resources. |
| Viewing operation                          | Edge Anti-DDoS | No edge Anti-DDoS resources are purchased.  | Buy edge Anti-DDoS.                    |

## A.3.20 EdgeSec.00040013 Insufficient Top-Level Domain Name Quota (The remaining first level domain resources are insufficient)

### Root Cause

This error was reported when the top-level domain name quota in edge WAF was insufficient.

### Troubleshooting Methods

1. Learn the top-level domain name quota specified in each EdgeSec edition. For details, see [Specification Limitations](#).
2. [Viewing Top-Level Domain Name Quotas](#)

### Viewing Top-Level Domain Name Quotas

**Step 1** [Log in to the management console](#).

**Step 2** Click  in the upper left corner of the page and choose **Security & Compliance** > **Edge Security**.

**Step 3** Click **Edge WAF** in the upper right corner of the page to view the current domain name quota.

**Figure A-4** Domain name quota

#### NOTE

First-level domain name quota = Domain name quota/10. For example, if the domain name quota is 90, as shown in [Figure A-4](#), the top-level domain name quota is 9.

----End

## Solution

| Scenario  | Method   |
|---|--|
| The enterprise edition edge WAF is in use.            | <p>Buy a domain name expansion package.</p> <p><b>NOTE</b><br/>Each domain name expansion package contains a top-level domain name.</p>  |
| The basic or professional edition edge WAF is in use. | <p>Upgrade the edition or buy a domain name expansion package.</p> <p><b>NOTE</b></p> <ul style="list-style-type: none"><li>For details about the top-level domain name quota, see <a href="#">Edition Description</a>.</li><li>Each domain name expansion package contains a top-level domain name.</li></ul> |

## A.3.21 EdgeSec.00040014 Expansion Resource Quota Has Been Used (The extended quota has been used)

### Root Cause

This error was generated when expansion resource quotas were in use while the user attempt to unsubscribe from expansion packages they have.

### Troubleshooting and Solution

| Event Scenario   | Cause  | Solution  |
|--|--|---|
| A user attempts to unsubscribe from an edge WAF domain name expansion package. | The number of domain names or rules used by the user has exceeded the quota provided by the edition. | <p>Check the used edge WAF domain names or rules, delete the ones not in use, and keep their quantity within the specifications supported by the service edition in use.</p> <p><b>NOTE</b><br/>For details about how to view the policy rule quota of each edition, see <a href="#">Edition Description</a>.</p> |
| A user attempts to unsubscribe from an edge WAF rule expansion package.        |  |   |

## A.3.22 WAF.00022002 Resource Already Exists (Domain Already Exists)

### Root Cause

This error was reported when there are edge WAF resources in the system while a user attempted to create the same ones.

## Troubleshooting Methods

| Scenario   | Cause   |
|--|---|
| Adding or modifying an edge WAF blacklist/<br>whitelist rule | There is a blacklist or whitelist rule with the same name.                |
|  | There is a blacklist or whitelist rule with the same IP addresses listed. |
| Adding or modifying an edge WAF data masking rule            | Duplicate combination of the path, masked fields, and masked field name.  |

## Solution

A rule cannot be added repeatedly. Modify the rule parameters.

## A.3.23 WAF.00014002 Resource Already Exists

### Root Cause

This error was reported when there are edge WAF resources in the system while a user attempted to create the same ones.

## Troubleshooting Methods

| Scenario                | Cause   |
|-------------------------|---|
| Adding an address group | There is already an address group with the same name. |

## Solution

Do not use an existing address group name when adding an address group.

## A.3.24 common.01010003 No Purchase Permission

### Root Cause

The current account does not have the purchase permission.

## Solution

| Event Scenario  | Solution   |
|---|--|
| <ul style="list-style-type: none"><li>An IAM user attempts to purchase resources.</li><li>An IAM user attempts to change resources.</li></ul> | <ul style="list-style-type: none"><li>Add the IAM user to the admin user group.</li><li>Add the IAM user to the group having the EdgeSec_FullAccess Permission.</li><li>Use the account that is used to create the IAM user.</li></ul> |

## A.4 Obtaining a Project ID

### Obtaining a Project ID by Calling an API

You can obtain the project ID by calling the API used to [query project information based on the specified criteria](#).

The API used to obtain a project ID is GET <https://{{Endpoint}}/v3/projects>. **{{Endpoint}}** is the IAM endpoint and can be obtained from [Regions and Endpoints](#). For details about API authentication, see [Authentication](#).

In the following example, **id** indicates the project ID.

```
{  
  "projects": [  
    {  
      "domain_id": "65382450e8f64ac0870cd180d14e684b",  
      "is_domain": false,  
      "parent_id": "65382450e8f64ac0870cd180d14e684b",  
      "name": "xxxxxxxx",  
      "description": "",  
      "links": {  
        "next": null,  
        "previous": null,  
        "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"  
      },  
      "id": "a4a5d4098fb4474fa22cd05f897d6b99",  
      "enabled": true  
    }  
  ],  
  "links": {  
    "next": null,  
    "previous": null,  
    "self": "https://www.example.com/v3/projects"  
  }  
}
```

### Obtaining a Project ID from the Console

A project ID is required for some URLs when an API is called. To obtain a project ID, perform the following operations:

1. Log in to the management console.
2. Click the username and choose **My Credentials** from the drop-down list.

3. On the page, view the project ID in the project list.

**Figure A-5 Viewing project IDs**

# B Change History
