| 413         | Request Entity Too Large        | The request is larger than that a server is able to process. The server may close the connection to prevent the client from continuing the request. If the server cannot process the request temporarily, the response will contain a <b>Retry-After</b> header field.                                                                                                                                       |
| 414         | Request-URI Too Large           | The URI provided was too long for the server to process.                                                                                                                                                                                                                                                                                                                                                     |
| 415         | Unsupported Media Type          | The server is unable to process the media format in the request.                                                                                                                                                                                                                                                                                                                                             |
| 416         | Requested range not satisfiable | The requested range is invalid.                                                                                                                                                                                                                                                                                                                                                                              |
| 417         | Expectation Failed              | The server fails to meet the requirements of the <b>Expect</b> request-header field.                                                                                                                                                                                                                                                                                                                         |
| 422         | UnprocessableEntity             | The request is well-formed but is unable to be processed due to semantic errors.                                                                                                                                                                                                                                                                                                                             |
| 429         | TooManyRequests                 | The client has sent excessive number of requests to the server within a given time (exceeding the limit on the access frequency of the client), or the server has received an excessive number of requests within a given time (beyond its processing capability). In this case, the client should resend the request after the time specified in the <b>Retry-After</b> header of the response has elapsed. |

| Status Code | Code                       | Status Code Description                                                                                                                                             |
|-------------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 500         | InternalServerError        | The server is able to receive but unable to understand the request.                                                                                                 |
| 501         | Not Implemented            | The server does not support the requested function.                                                                                                                 |
| 502         | Bad Gateway                | The server acting as a gateway or proxy has received an invalid request from a remote server.                                                                       |
| 503         | ServiceUnavailable         | The requested service is invalid.<br>Do not retry the request before modification.                                                                                  |
| 504         | ServerTimeout              | The request cannot be fulfilled within a given time. This status code is returned to the client only when the <b>Timeout</b> parameter is specified in the request. |
| 505         | HTTP Version not supported | The server does not support the HTTP protocol version used in the request.                                                                                          |

## 24.2 Error Codes

If an error code starting with APIGW is returned after you call an API, rectify the fault by referring to the instructions provided in [API Gateway Error Codes](#).

| Status Code | Error Codes    | Error Message                                                                | Description                                                                  | Solution                                         |
|-------------|----------------|------------------------------------------------------------------------------|------------------------------------------------------------------------------|--------------------------------------------------|
| 100         | ModelArts.0116 | The expected {0} exceeds the quota limit.                                    | The expected {0} exceeds the quota limit.                                    | Contact the administrator to increase the quota. |
| 100         | ModelArts.6768 | SSH configuration is missing, target image {0} only support SSH dev service. | SSH configuration is missing, target image {0} only support SSH dev service. | Select a proper image.                           |
| 200         | ModelArts.4606 | The sample has been reviewed.                                                | The sample has been reviewed.                                                | Proceed with follow-up operations.               |

## 24.3 Obtaining a Project ID and Name

### Scenarios

A project ID or name is required for some requests when an API is called. Therefore, obtain the project ID and name before calling the API. Use either of the following methods:

- [Obtaining a Project ID and Name from the Console](#)
- [Obtaining a Project ID by Calling an API](#)

### Obtaining a Project ID and Name from the Console

To do so, perform the following operations:

1. Sign up and log in to the ModelArts console.
2. In the upper right corner of the page, click the username and choose **My Credentials** from the drop-down list. The **My Credentials** page is displayed.

#### NOTE

If you have logged in to the official HUAWEI CLOUD website but not the console, click your username in the upper right corner and choose **My Account** from the drop-down list. On the **Basic Information** page, click **Manage** following **Security Credentials**. Then, the **My Credentials** page is displayed.

3. On the **API Credentials** page, view the project ID and name in the **Projects** area.

**Figure 24-1** Viewing the project ID

If there are multiple projects, unfold the target region and obtain the project ID from the **Project ID** column.

## Obtaining a Project ID by Calling an API

A project ID can be obtained by calling a specific API. For details, see [Querying Project Information Based on the Specified Criteria](#).

The API for obtaining a project ID is **GET https://{<IAM-endpoint>}/v3/projects**. To obtain {<IAM-endpoint>}, see [Request URI Regions and Endpoints](#).

The following is an example response. For example, if ModelArts is deployed in the **ap-southeast-1** region, the value of **name** in the response body is **ap-southeast-1**. The value of **id** in **projects** is the project ID.

```
{
 "projects": [{
 "domain_id": "65382450e8f64ac0870cd180d14e684b",
 "is_domain": false,
 "parent_id": "65382450e8f64ac0870cd180d14e684b",
 "name": "ap-southeast-1",
 "description": "",
 "links": {
 "next": null,
 "previous": null,
 "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"
 },
 "id": "a4a5d4098fb4474fa22cd05f897d6b99",
 "enabled": true
 }],
 "links": {
 "next": null,
 "previous": null,
 "self": "https://www.example.com/v3/projects"
 }
}
```

## 24.4 Obtaining an Account Name and ID

When you call APIs, certain requests require the account name and ID. To obtain an account name and ID, do as follows:

1. Sign up and log in to the console.
2. Hover the cursor over the username and choose **My Credentials** from the drop-down list.

On the **API Credentials** page, view the account name and ID.

**Figure 24-2** Viewing the account name and ID

## 24.5 Obtaining a Username and ID

When you call APIs, certain requests require the username and ID. To obtain a username and ID, do as follows:

1. Log in to the management console after registration.
2. Hover the cursor on the username and choose **My Credentials** from the drop-down list.

On the **API Credentials** page, view the IAM username and ID.

**Figure 24-3** Viewing the username and ID

# 25 Historical APIs

## 25.1 Data Management (Old Version)

### 25.1.1 Querying the Dataset List

#### Function

This API is used to query the created datasets that meet the search criteria by page.

#### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

#### URI

GET /v2/{project\_id}/datasets

**Table 25-1** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-2** Query Parameters

| Parameter          | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

The options are as follows: <ul style="list-style-type: none"><li>• <b>0</b>: auto labeling</li><li>• <b>1</b>: pre-labeling</li><li>• <b>2</b>: export</li><li>• <b>3</b>: version switch</li><li>• <b>4</b>: manifest file export</li><li>• <b>5</b>: manifest file import</li><li>• <b>6</b>: version publishing</li><li>• <b>7</b>: auto grouping</li></ul>                    |
| search_content    | No        | String  | Fuzzy search keyword. By default, this parameter is left blank.                                                                                                                                                                                                                                                                                                                                                                                               |
| sort_by           | No        | String  | Sorting mode of the query. Options: <ul style="list-style-type: none"><li>• <b>create_time</b>: Sort by creation time. (Default value)</li><li>• <b>dataset_name</b>: Sort by dataset name.</li></ul>                                                                                                                                                                                                                                                         |
| support_export    | No        | Boolean | Whether to filter datasets that can be exported only (including datasets of image classification, object detection, and custom format). If this parameter is left blank or the value is set to <b>false</b> , datasets are not filtered. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Filter out only datasets that can be exported.</li><li>• <b>false</b>: Do not filter out only datasets that can be exported. (Default value)</li></ul> |

| Parameter            | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------|-----------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| train_evaluate_ratio | No        | String  | Version split ratio for dataset filtering. The numbers before and after the comma indicate the minimum and maximum split ratios, and the versions whose split ratios are within the range are filtered out, for example, <b>0.0,1.0</b> . Note: If this parameter is left blank or unavailable, the system does not filter datasets based on the version split ratio by default. |
| version_format       | No        | Integer | Dataset version format for dataset filtering. This parameter is used to filter datasets that meet the filter criteria. Options: <ul style="list-style-type: none"><li>• <b>0</b>: default format</li><li>• <b>1</b>: CarbonData (supported only by table datasets)</li><li>• <b>2</b>: CSV</li></ul>                                                                             |
| with_labels          | No        | Boolean | Whether to return dataset labels. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Return label information.</li><li>• <b>false</b>: Do not return label information. (Default value)</li></ul>                                                                                                                                                                     |
| workspace_id         | No        | String  | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value.                                                                                                                                                                                                                                              |
| dataset_version      | No        | String  | Dataset version, which is used to distinguish a dataset before and after it is decoupled from labeling tasks. Options: <ul style="list-style-type: none"><li>• <b>v1</b>: dataset before it is decoupled from labeling tasks (default value)</li><li>• <b>v2</b>: dataset after it is decoupled from labeling tasks (default value)</li><li>• <b>all</b>: all datasets</li></ul> |

## Request Parameters

## Response Parameters

Status code: 200

**Table 25-3** Response body parameters

| Parameter    | Type                                                   | Description                                            |
|--------------|--------------------------------------------------------|--------------------------------------------------------|
| datasets     | Array of <a href="#">DatasetAndFilePreview</a> objects | Dataset list queried by page.                          |
| total_number | Integer                                                | Total number of datasets. The value cannot exceed 100. |

**Table 25-4** DatasetAndFilePreview

| Parameter                  | Type                                        | Description                                                                                                                                                   |
|----------------------------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_sample_count     | Integer                                     | Number of labeled samples in a dataset.                                                                                                                       |
| annotated_sub_sample_count | Integer                                     | Number of labeled subsamples.                                                                                                                                 |
| content_labeling           | Boolean                                     | Whether to enable content labeling for the speech paragraph labeling dataset. This function is enabled by default.                                            |
| create_time                | Long                                        | Time when a dataset is created.                                                                                                                               |
| current_version_id         | String                                      | Current version ID of a dataset.                                                                                                                              |
| current_version_name       | String                                      | Current version name of a dataset. Version name. The value is a string of 1 to 32 characters consisting of letters, digits, underscores (_), and hyphens (-). |
| data_format                | String                                      | Data format.                                                                                                                                                  |
| data_sources               | Array of <a href="#">DataSource</a> objects | Data source list.                                                                                                                                             |
| data_statistics            | Map<String,Object>                          | Sample statistics on a dataset, including the statistics on sample metadata in JSON format.                                                                   |

| Parameter             | Type                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_update_time      | Long                | Time when a sample and a label are updated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| data_url              | String              | Data path for training.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| dataset_format        | Integer             | Dataset format. Options: <ul style="list-style-type: none"><li>• <b>0</b>: file</li><li>• <b>1</b>: table</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| dataset_id            | String              | Dataset ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| dataset_name          | String              | Dataset name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| labels                | Array of <b>Label</b> objects | Dataset label list.                                                                                                                                                                                                                           |
| loading_sample_count  | Integer                       | Number of loading samples.                                                                                                                                                                                                                    |
| managed               | Boolean                       | Whether a dataset is hosted. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The dataset is hosted.</li><li>• <b>false</b>: The dataset is not hosted.</li></ul>                                                                |
| next_version_num      | Integer                       | Number of next versions of a dataset.                                                                                                                                                                                                         |

| Parameter                | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| running_tasks_id         | Array of strings                                | ID list of running (including initialization) tasks.                                                                                                                                                                                                                                                                                                           |
| samples                  | Array of <a href="#">AnnotationFile</a> objects | Sample list.                                                                                                                                                                                                                                                                                                                                                   |
| schema                   | Array of <a href="#">Field</a> objects          | Schema list.                                                                                                                                                                                                                                                                                                                                                   |
| status                   | Integer                                         | Dataset status. Options: <ul style="list-style-type: none"><li>● 0: creating dataset</li><li>● 1: normal dataset</li><li>● 2: deleting dataset</li><li>● 3: deleted dataset</li><li>● 4: abnormal dataset</li><li>● 5: synchronizing dataset</li><li>● 6: releasing dataset</li><li>● 7: dataset in version switching</li><li>● 8: importing dataset</li></ul> |
| third_path               | String                                          | Third-party path.                                                                                                                                                                                                                                                                                                                                              |
| total_sample_count       | Integer                                         | Total number of dataset samples.                                                                                                                                                                                                                                                                                                                               |
| total_sub_sample_count   | Integer                                         | Total number of subsamples generated from the parent samples. For example, the total number of key frame images extracted from the video labeling dataset is that of subsamples.                                                                                                                                                                               |
| unconfirmed_sample_count | Integer                                         | Number of auto labeling samples to be confirmed.                                                                                                                                                                                                                                                                                                               |
| update_time              | Long                                            | Time when a dataset is updated.                                                                                                                                                                                                                                                                                                                                |
| versions                 | Array of <a href="#">DatasetVersion</a> objects | Dataset version information. Currently, only the current version information of a dataset is recorded.                                                                                                                                                                                                                                                         |
| work_path                | String                                          | Output dataset path, which is used to store output files such as label files. The path is an OBS path in the format of <i>/Bucket name/File path</i> . For example: <b>/obs-bucket</b> .                                                                                                                                                                       |
| work_path_type           | Integer                                         | Type of the dataset output path. The default value is 0, indicating an OBS bucket.                                                                                                                                                                                                                                                                             |

| Parameter            | Type                                       | Description                                                                                                                         |
|----------------------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| workforce_descriptor | <a href="#">WorkforceDescriptor</a> object | Team labeling information.                                                                                                          |
| workforce_task_count | Integer                                    | Number of team labeling tasks of a dataset.                                                                                         |
| workspace_id         | String                                     | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

**Table 25-5** DataSource

| Parameter          | Type                                       | Description                                                                                                                                                                                                                                                                                    |
|--------------------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_path          | String                                     | Data source path.                                                                                                                                                                                                                                                                              |
| data_type          | Integer                                    | Data type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: OBS bucket (default value)</li><li>● <b>1</b>: GaussDB(DWS)</li><li>● <b>2</b>: DLI</li><li>● <b>3</b>: RDS</li><li>● <b>4</b>: MRS</li><li>● <b>5</b>: AI Gallery</li><li>● <b>6</b>: Inference service</li></ul>       |
| schema_maps        | Array of <a href="#">SchemaMap</a> objects | Schema mapping information corresponding to the table data.                                                                                                                                                                                                                                    |
| source_info        | <a href="#">SourceInfo</a> object          | Information required for importing a table data source.                                                                                                                                                                                                                                        |
| with_column_header | Boolean                                    | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>● <b>true</b>: The first row in the file is the column name.</li><li>● <b>false</b>: The first row in the file is not the column name.</li></ul> |

**Table 25-6** SchemaMap

| Parameter | Type   | Description                     |
|-----------|--------|---------------------------------|
| dest_name | String | Name of the destination column. |

| Parameter | Type   | Description                |
|-----------|--------|----------------------------|
| src_name  | String | Name of the source column. |

**Table 25-7** SourceInfo

| Parameter     | Type   | Description                                                                                                                                |
|---------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|
| cluster_id    | String | MRS cluster ID. You can log in to the MRS console to view the information.                                                                 |
| cluster_mode  | String | Running mode of an MRS cluster. Options: <ul style="list-style-type: none"><li>• 0: normal cluster</li><li>• 1: security cluster</li></ul> |
| cluster_name  | String | MRS cluster name You can log in to the MRS console to view the information.                                                                |
| database_name | String | Name of the database to which the table dataset is imported.                                                                               |
| input         | String | HDFS path of the table data set. For example, /datasets/demo.                                                                              |
| ip            | String | IP address of your GaussDB(DWS) cluster.                                                                                                   |
| port          | String | Port number of your GaussDB(DWS) cluster.                                                                                                  |
| queue_name    | String | DLI queue name of a table dataset.                                                                                                         |
| subnet_id     | String | Subnet ID of an MRS cluster.                                                                                                               |
| table_name    | String | Name of the table to which a table dataset is imported.                                                                                    |
| user_name     | String | Username, which is mandatory for GaussDB(DWS) data.                                                                                        |
| user_password | String | User password, which is mandatory for GaussDB(DWS) data.                                                                                   |
| vpc_id        | String | ID of the VPC where an MRS cluster resides.                                                                                                |

**Table 25-8** Label

| Parameter  | Type                                            | Description                                                                                                                      |
|------------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| name       | String                                          | Label name.                                                                                                                      |

| Parameter | Type                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| property  | <a href="#">LabelProperty</a> object | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type      | Integer                              | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-9** AnnotationFile

| Parameter   | Type               | Description                        |
|-------------|--------------------|------------------------------------|
| create_time | Long               | Time when a sample is created.     |
| dataset_id  | String             | Dataset ID.                        |
| depth       | Integer            | Number of image sample channels.   |
| file_Name   | String             | Sample name.                       |
| file_id     | String             | Sample ID.                         |
| file_type   | String             | File type.                         |
| height      | Integer            | Image sample height.               |
| size        | Long               | Image sample size.                 |
| tags        | Map<String,String> | Label information of a sample.     |
| url         | String             | OBS address of the preview sample. |
| width       | Integer            | Image sample width.                |

**Table 25-10** Field

| Parameter   | Type    | Description         |
|-------------|---------|---------------------|
| description | String  | Schema description. |
| name        | String  | Schema name.        |
| schema_id   | Integer | Schema ID.          |
| type        | String  | Schema value type.  |

**Table 25-11** DatasetVersion

| Parameter                  | Type    | Description                                                                                                                                                                                                                                   |
|----------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| add_sample_count           | Integer | Number of added samples.                                                                                                                                                                                                                      |
| analysis_cache_path        | String  | Cache path for feature analysis.                                                                                                                                                                                                              |
| analysis_statuses          | Integer | Status of a feature analysis task. Options: <ul style="list-style-type: none"><li>• <b>0</b>: initialized</li><li>• <b>1</b>: running</li><li>• <b>2</b>: completed</li><li>• <b>3</b>: failed</li></ul>                                      |
| analysis_task_id           | String  | ID of a feature analysis task.                                                                                                                                                                                                                |
| annotated_sample_count     | Integer | Number of samples with labeled versions.                                                                                                                                                                                                      |
| annotated_sub_sample_count | Integer | Number of labeled subsamples.                                                                                                                                                                                                                 |
| clear_hard_property        | Boolean | Whether to clear hard example properties during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear hard example properties. (Default value)</li><li>• <b>false</b>: Do not clear hard example properties.</li></ul> |
| code                       | String  | Status code of a preprocessing task such as rotation and cropping.                                                                                                                                                                            |
| create_time                | Long    | Time when a version is created.                                                                                                                                                                                                               |

| Parameter              | Type                | Description                                                                                                                                                                                                                                                                                   |
|------------------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| crop                   | Boolean             | Whether to crop the image. This field is valid only for the object detection dataset whose labeling box is in the rectangle shape. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Crop the image.</li><li>• <b>false</b>: Do not crop the image. (Default value)</li></ul>     |
| crop_path              | String              | Path for storing cropped files.                                                                                                                                                                                                                                                               |
| crop_rotate_cache_path | String              | Temporary directory for executing the rotation and cropping task.                                                                                                                                                                                                                             |
| data_analysis          | Map<String,Object>  | Feature analysis result in JSON format.                                                                                                                                                                                                                                                       |
| data_path              | String              | Path for storing data.                                                                                                                                                                                                                                                                        |
| data_statistics        | Map<String,Object>  | Sample statistics on a dataset, including the statistics on sample metadata in JSON format.                                                                                                                                                                                                   |
| data_validate          | Boolean             | Whether data is validated by the validation algorithm before release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The data has been validated.</li><li>• <b>false</b>: The data has not been validated.</li></ul>                                                           |
| deleted_sample_count   | Integer             | Number of deleted samples.                                                                                                                                                                                                                                                                    |
| deletion_stats         | Map<String,Integer> | Deletion reason statistics.                                                                                                                                                                                                                                                                   |
| description            | String              | Description of a version.                                                                                                                                                                                                                                                                     |

| processor_task_status | Integer | Status of a preprocessing task such as rotation and cropping. The options are as follows: <ul style="list-style-type: none"><li>• 0: initialized - 1: running</li><li>• 2: completed</li><li>• 3: failed</li><li>• 4: stopped</li><li>• 5: timeout</li><li>• 6: Deletion failed.</li><li>• 7: Failed to stop.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| remove_sample_usage   | Boolean | Whether to clear the existing usage information of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear the existing usage information of a dataset. (Default value)</li><li>• <b>false</b>: Do not clear the existing usage information of a dataset.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| rotate                | Boolean | Whether to rotate the image. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Rotate the image.</li><li>• <b>false</b>: Do not rotate the image. (Default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| rotate_path           | String  | Path for storing the rotated file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| sample_state          | String  | Sample status. The options are as follows: <ul style="list-style-type: none"><li>• <b>__ALL__</b>: labeled</li><li>• <b>__NONE__</b>: not marked</li><li>• <b>__UNCHECK__</b>: to be accepted</li><li>• <b>__ACCEPTED__</b>: The acceptance is passed.</li><li>• <b>__REJECTED__</b>: rejected</li><li>• <b>__UNREVIEWED__</b>: to be reviewed</li><li>• <b>__REVIEWED__</b>: approved</li><li>• <b>__WORKFORCE_SAMPLED__</b>: sampled</li><li>• <b>__WORKFORCE_SAMPLED_UNCHECK__</b>: Sampling is to be accepted.</li><li>• <b>__WORKFORCE_SAMPLED_CHECKED__</b>: Sampling has been accepted.</li><li>• <b>__WORKFORCE_SAMPLED_ACCEPTED__</b>: The sampling is passed.</li><li>• <b>__WORKFORCE_SAMPLED_REJECTED__</b>: The sampling has been rejected.</li><li>• <b>__AUTO_ANNOTATION__</b>: to be confirmed</li></ul> |

| Parameter                   | Type             | Description                                                                                                                                                                                                                                                        |
|-----------------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| start_processor_task        | Boolean          | Whether to start a data analysis task during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Start a data analysis task during release.</li><li>• <b>false</b>: Do not start a data analysis task during release. (Default value)</li></ul> |
| status                      | Integer          | Status of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>0</b>: creating</li><li>• <b>1</b>: running</li><li>• <b>2</b>: deleting</li><li>• <b>3</b>: deleted</li><li>• <b>4</b>: error</li></ul>                                          |
| tags                        | Array of strings | Key identifier list of the dataset. The labeling type is used as the default label when the labeling task releases a version. For example, ["Image", "Object detection"].                                                                                          |
| task_type                   | Integer          | Labeling task type of the released version, which is the same as the dataset type.                                                                                                                                                                                 |
| total_sample_count          | Integer          | Total number of version samples.                                                                                                                                                                                                                                   |
| total_sub_sample_count      | Integer          | Total number of subsamples generated from the parent samples.                                                                                                                                                                                                      |
| train_evaluate_sample_ratio | String           | Split training and verification ratio during version release. The default value is <b>1.00</b> , indicating that all released versions are training sets.                                                                                                          |
| update_time                 | Long             | Time when a version is updated.                                                                                                                                                                                                                                    |
| version_format              | String           | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b>: default format</li><li>• <b>CarbonData</b>: CarbonData (supported only by table datasets)</li><li>• <b>CSV</b>: CSV</li></ul>                                        |
| version_id                  | String           | Dataset version ID.                                                                                                                                                                                                                                                |
| version_name                | String           | Dataset version name.                                                                                                                                                                                                                                              |

| Parameter          | Type    | Description                                                                                                                                                                                                                                                                                                                       |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| with_column_header | Boolean | Whether the first row in the released CSV file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the released CSV file is a column name.</li><li>• <b>false</b>: The first row in the released CSV file is not a column name.</li></ul> |

**Table 25-12** LabelStats

| Parameter    | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| count        | Integer                                         | Number of labels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| name         | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property     | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| sample_count | Integer                                         | Number of samples containing the label.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| type         | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-13** LabelAttribute

| Parameter     | Type   | Description                         |
|---------------|--------|-------------------------------------|
| default_value | String | Default value of a label attribute. |

| Parameter | Type                                                 | Description                                                                                                                                              |
|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name      | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&''.                                            |
| type      | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-14** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-15** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |

| Parameter            | Type   | Description                                                                                                                                                                                                    |
|----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:from_type | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |
| @modelarts:rename_to | String | Default attribute: The new name of the label.                                                                                                                                                                  |
| @modelarts:shortcut  | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                       |
| @modelarts:to_type   | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

**Table 25-16** WorkforceDescriptor

| Parameter                         | Type    | Description                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| current_task_id                   | String  | ID of a team labeling task.                                                                                                                                                                                                                                                                                                                  |
| current_task_name                 | String  | Name of a team labeling task.                                                                                                                                                                                                                                                                                                                |
| reject_num                        | Integer | Number of rejected samples.                                                                                                                                                                                                                                                                                                                  |
| repetition                        | Integer | Number of persons who label each sample. The minimum value is <b>1</b> .                                                                                                                                                                                                                                                                     |
| is_synchronize_auto_labeling_data | Boolean | Whether to synchronously update auto labeling data. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Update auto labeling data synchronously.</li><li>• <b>false</b>: Do not update auto labeling data synchronously.</li></ul>                                                                                                 |
| is_synchronize_data               | Boolean | Whether to synchronize updated data, such as uploading files, synchronizing data sources, and assigning imported unlabeled files to team members. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Synchronize updated data to team members.</li><li>• <b>false</b>: Do not synchronize updated data to team members.</li></ul> |

| Parameter      | Type                                    | Description                    |
|----------------|-----------------------------------------|--------------------------------|
| workers        | Array of <a href="#">Worker</a> objects | List of labeling team members. |
| workforce_id   | String                                  | ID of a labeling team.         |
| workforce_name | String                                  | Name of a labeling team.       |

**Table 25-17** Worker

| Parameter    | Type    | Description                                                                                                                                                                                                                                                                                                                                                    |
|--------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time  | Long    | Creation time.                                                                                                                                                                                                                                                                                                                                                 |
| description  | String  | Labeling team member description. The value contains 0 to 256 characters and does not support the following special characters: ^! <>=&""                                                                                                                                                                                                                      |
| email        | String  | Email address of a labeling team member.                                                                                                                                                                                                                                                                                                                       |
| role         | Integer | Role. Options: <ul style="list-style-type: none"><li>● <b>0</b>: labeling personnel</li><li>● <b>1</b>: reviewer</li><li>● <b>2</b>: team administrator</li><li>● <b>3</b>: dataset owner</li></ul>                                                                                                                                                            |
| status       | Integer | Current login status of a labeling team member. Options: <ul style="list-style-type: none"><li>● <b>0</b>: The invitation email has not been sent.</li><li>● <b>1</b>: The invitation email has been sent but the user has not logged in.</li><li>● <b>2</b>: The user has logged in.</li><li>● <b>3</b>: The labeling team member has been deleted.</li></ul> |
| update_time  | Long    | Update time.                                                                                                                                                                                                                                                                                                                                                   |
| worker_id    | String  | ID of a labeling team member.                                                                                                                                                                                                                                                                                                                                  |
| workforce_id | String  | ID of a labeling team.                                                                                                                                                                                                                                                                                                                                         |

## Example Requests

### Querying the Dataset List

```
GET https://{endpoint}/v2/{project_id}/datasets?
offset=0&limit=10&sort_by=create_time&order=desc&dataset_type=0&file_preview=true
```

## Example Responses

Status code: 200

OK

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.2 Creating a Dataset

### Function

This API is used to create a dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets

**Table 25-18** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-19** Request body parameters

| Parameter    | Mandatory | Type                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------|-----------|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_format  | No        | String                                      | Data format. Options: <ul style="list-style-type: none"><li>• <b>Default:</b> default format</li><li>• <b>CarbonData:</b> CarbonData (supported only by table datasets)</li></ul>                                                                                                                                                                                                                                                                                                                                                                            |
| data_sources | Yes       | Array of <a href="#">DataSource</a> objects | Input dataset path, which is used to synchronize source data (such as images, text files, and audio files) in the directory and its subdirectories to the dataset. For a table dataset, this parameter indicates the import directory. The work directory of a table dataset cannot be an OBS path in a KMS-encrypted bucket. Only one data source can be imported at a time.                                                                                                                                                                                |
| dataset_name | Yes       | String                                      | Dataset name. The value contains 1 to 100 characters. Only letters, digits, underscores (_), and hyphens (-) are allowed, for example, dataset-9f3b.                                                                                                                                                                                                                                                                                                                                                                                                         |
| dataset_type | No        | Integer                                     | Dataset type. Options: <ul style="list-style-type: none"><li>• <b>0:</b> image classification</li><li>• <b>1:</b> object detection</li><li>• <b>3:</b> image segmentation</li><li>• <b>100:</b> text classification</li><li>• <b>101:</b> named entity recognition</li><li>• <b>102:</b> text triplet</li><li>• <b>200:</b> sound classification</li><li>• <b>201:</b> speech content</li><li>• <b>202:</b> speech paragraph labeling</li><li>• <b>400:</b> table dataset</li><li>• <b>600:</b> video labeling</li><li>• <b>900:</b> custom format</li></ul> |

| Parameter          | Mandatory | Type                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------|-----------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| description        | No        | String                        | Dataset description. The value is empty by default. The description contains 0 to 256 characters and does not support the following special characters: ^!<>=&""                                                                                                                                                                                                                                                                          |
| import_annotations | No        | Boolean                       | Indicates whether to automatically import the labeling information in the input directory. Object detection, image classification, and text classification are supported. The options are as follows: <ul style="list-style-type: none"><li>• <b>true</b>: Import the annotation information in the input directory (default value).</li><li>• <b>false</b>: The annotation information in the input directory is not imported.</li></ul> |
| import_data        | No        | Boolean                       | Whether to import data. This parameter is used only for table datasets. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Import data when creating a database.</li><li>• <b>false</b>: Do not import data when creating a database. (Default value)</li></ul>                                                                                                                                                                |
| label_format       | No        | <b>LabelFormat</b> object     | Label format information. This parameter is used only for text datasets.                                                                                                                                                                                                                                                                                                                                                                  |
| labels             | No        | Array of <b>Label</b> objects | Dataset label list.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| managed            | No        | Boolean                       | Whether to host a dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Host a dataset.</li><li>• <b>false</b>: Do not host a dataset. (Default value)</li></ul>                                                                                                                                                                                                                                                         |
| schema             | No        | Array of <b>Field</b> objects | Schema list.                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Parameter             | Mandatory | Type                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|-----------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| work_path             | Yes       | String                                      | Output dataset path, which is used to store output files such as label files. <ul style="list-style-type: none"><li>• The format is <i>/Bucket name/File path</i>, for example, <b>/obs-bucket/flower/rose/</b>. (The directory is used as the path.)</li><li>• A bucket cannot be directly used as a path.</li><li>• The output dataset path is different from the input dataset path or its subdirectory.</li><li>• The value contains 3 to 700 characters.</li></ul> |
| work_path_type        | Yes       | Integer                                     | Type of the dataset output path. The default value is 0, indicating an OBS bucket.                                                                                                                                                                                                                                                                                                                                                                                      |
| workforce_information | No        | <a href="#">WorkforceInformation</a> object | Team labeling information.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| workspace_id          | No        | String                                      | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value.                                                                                                                                                                                                                                                                                                                                     |

**Table 25-20** DataSource

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                                                              |
|-----------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_path | No        | String  | Data source path.                                                                                                                                                                                                                                                                        |
| data_type | No        | Integer | Data type. | Parameter          | Mandatory | Type                                       | Description                                                                                                                                                                                                                                                                                    |
|--------------------|-----------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| schema_maps        | No        | Array of <a href="#">SchemaMap</a> objects | Schema mapping information corresponding to the table data.                                                                                                                                                                                                                                    |
| source_info        | No        | <a href="#">SourceInfo</a> object          | Information required for importing a table data source.                                                                                                                                                                                                                                        |
| with_column_header | No        | Boolean                                    | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the file is the column name.</li><li>• <b>false</b>: The first row in the file is not the column name.</li></ul> |

**Table 25-21** SchemaMap

| Parameter | Mandatory | Type   | Description                     |
|-----------|-----------|--------|---------------------------------|
| dest_name | No        | String | Name of the destination column. |
| src_name  | No        | String | Name of the source column.      |

**Table 25-22** SourceInfo

| Parameter     | Mandatory | Type   | Description                                                                                                                                              |
|---------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| cluster_id    | No        | String | MRS cluster ID. You can log in to the MRS console to view the information.                                                                               |
| cluster_mode  | No        | String | Running mode of an MRS cluster. Options: <ul style="list-style-type: none"><li>• <b>0</b>: normal cluster</li><li>• <b>1</b>: security cluster</li></ul> |
| cluster_name  | No        | String | MRS cluster name You can log in to the MRS console to view the information.                                                                              |
| database_name | No        | String | Name of the database to which the table dataset is imported.                                                                                             |

| Parameter     | Mandatory | Type   | Description                                                   |
|---------------|-----------|--------|---------------------------------------------------------------|
| input         | No        | String | HDFS path of the table data set. For example, /datasets/demo. |
| ip            | No        | String | IP address of your GaussDB(DWS) cluster.                      |
| port          | No        | String | Port number of your GaussDB(DWS) cluster.                     |
| queue_name    | No        | String | DLI queue name of a table dataset.                            |
| subnet_id     | No        | String | Subnet ID of an MRS cluster.                                  |
| table_name    | No        | String | Name of the table to which a table dataset is imported.       |
| user_name     | No        | String | Username, which is mandatory for GaussDB(DWS) data.           |
| user_password | No        | String | User password, which is mandatory for GaussDB(DWS) data.      |
| vpc_id        | No        | String | ID of the VPC where an MRS cluster resides.                   |

**Table 25-23** LabelFormat

| Parameter             | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type            | No        | String | Label type of text classification. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is separated from the text, and they are distinguished by the fixed suffix <b>_result</b>. For example, the text file is <b>abc.txt</b>, and the label file is <b>abc_result.txt</b>.</li><li>• <b>1</b>: Default value. Labels and texts are stored in the same file and separated by separators. You can use <b>text_sample_separator</b> to specify the separator between the text and label and <b>text_label_separator</b> to specify the separator between labels.</li></ul> |
| text_label_separator  | No        | String | Separator between labels. By default, a comma (,) is used as the separator. The separator needs to be escaped. The separator can contain only one character, such as a letter, a digit, or any of the following special characters: !@#\$%^&* _= ?/'.:,;                                                                                                                                                                                                                                                                                                                                   |
| text_sample_separator | No        | String | Separator between the text and label. By default, the <b>Tab</b> key is used as the separator. The separator needs to be escaped. The separator can contain only one character, such as a letter, a digit, or any of the following special characters: !@#\$%^&* _= ?/'.:,;                                                                                                                                                                                                                                                                                                                |

**Table 25-24** Label

| Parameter  | Mandatory | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-----------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes | No        | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| name       | No        | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property   | No        | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type       | No        | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-25** LabelAttribute

| Parameter     | Mandatory | Type   | Description                                                                                                  |
|---------------|-----------|--------|--------------------------------------------------------------------------------------------------------------|
| default_value | No        | String | Default value of a label attribute.                                                                          |
| id            | No        | String | Label attribute ID. You can query the tag by invoking the tag list.                                          |
| name          | No        | String | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&". |

| Parameter | Mandatory | Type                                                 | Description                                                                                                                                              |
|-----------|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | No        | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values    | No        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-26** LabelAttributeValue

| Parameter | Mandatory | Type   | Description               |
|-----------|-----------|--------|---------------------------|
| id        | No        | String | Label attribute value ID. |
| value     | No        | String | Label attribute value.    |

**Table 25-27** LabelProperty

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | No        | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | No        | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |

| Parameter            | Mandatory | Type   | Description                                                                                                                                                                                                    |
|----------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:from_type | No        | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |
| @modelarts:rename_to | No        | String | Default attribute: The new name of the label.                                                                                                                                                                  |
| @modelarts:shortcut  | No        | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                       |
| @modelarts:to_type   | No        | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

**Table 25-28** Field

| Parameter   | Mandatory | Type    | Description         |
|-------------|-----------|---------|---------------------|
| description | No        | String  | Schema description. |
| name        | No        | String  | Schema name.        |
| schema_id   | No        | Integer | Schema ID.          |
| type        | No        | String  | Schema value type.  |

**Table 25-29** WorkforceInformation

| Parameter      | Mandatory | Type    | Description                                                                                                                                                                                                                                                      |
|----------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_sync_type | No        | Integer | Synchronization type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: not to be synchronized</li><li>• <b>1</b>: data to be synchronized</li><li>• <b>2</b>: label to be synchronized</li><li>• <b>3</b>: data and label to be synchronized</li></ul> |

| Parameter                      | Mandatory | Type                                    | Description                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------|-----------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| worker_id    | No        | String | ID of a labeling team member. |
| workforce_id | No        | String | ID of a labeling team.        |

## Response Parameters

Status code: 201

**Table 25-33** Response body parameters

| Parameter      | Type   | Description           |
|----------------|--------|-----------------------|
| dataset_id     | String | Dataset ID.           |
| error_code     | String | Error code.           |
| error_msg      | String | Error message.        |
| import_task_id | String | ID of an import task. |

## 25.1.3 Querying Details About a Dataset

### Function

This API is used to query details about a dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}

**Table 25-34** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-35** Query Parameters

| Parameter          | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| check_running_task | No        | Boolean | Whether to detect tasks (including initialization tasks) that are running in a dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Detect tasks (including initialization tasks) that are running in the dataset.</li><li>• <b>false</b>: Do not detect tasks that are running in the dataset. (Default value)</li></ul>                                                                                                |
| running_task_type  | No        | Integer | Type of the running tasks (including initialization tasks) to be detected. The options are as follows: <ul style="list-style-type: none"><li>• <b>0</b>: auto labeling</li><li>• <b>1</b>: pre-labeling</li><li>• <b>2</b>: export</li><li>• <b>3</b>: version switch</li><li>• <b>4</b>: manifest file export</li><li>• <b>5</b>: manifest file import</li><li>• <b>6</b>: version publishing</li><li>• <b>7</b>: auto grouping</li></ul> |

## Request Parameters

None

## Response Parameters

**Status code: 200**

**Table 25-36** Response body parameters

| Parameter                  | Type    | Description                             |
|----------------------------|---------|-----------------------------------------|
| annotated_sample_count     | Integer | Number of labeled samples in a dataset. |
| annotated_sub_sample_count | Integer | Number of labeled subsamples.           |

| Parameter            | Type                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| content_labeling     | Boolean                                     | Whether to enable content labeling for the speech paragraph labeling dataset. This function is enabled by default.                                                                                                                                                                                                                                                                                                                                                       |
| create_time          | Long                                        | Time when a dataset is created.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| current_version_id   | String                                      | Current version ID of a dataset.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| current_version_name | String                                      | Current version name of a dataset. Version name. The value is a string of 1 to 32 characters consisting of letters, digits, underscores (_), and hyphens (-).                                                                                                                                                                                                                                                                                                            |
| data_format          | String                                      | Data format.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| data_sources         | Array of <a href="#">DataSource</a> objects | Data source list.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| data_statistics      | Map<String, Object>                         | Sample statistics on a dataset, including the statistics on sample metadata.                                                                                                                                                                                                                                                                                                                                                                                             |
| data_update_time     | Long                                        | Time when a sample and a label are updated.                                                                                                                                                                                                                                                                                                                                                                                                                              |

| total_sample_count       | Integer                                | Total number of dataset samples.                                                                                                                                                                                                                                                                                                                                                                                              |
| total_sub_sample_count   | Integer                                | Total number of subsamples generated from the parent samples. For example, the total number of key frame images extracted from the video labeling dataset is that of subsamples.                                                                                                                                                                                                                                              |
| unconfirmed_sample_count | Integer                                | Number of auto labeling samples to be confirmed.                                                                                                                                                                                                                                                                                                                                                                              |
| update_time              | Long                                   | Time when a dataset is updated.                                                                                                                                                                                                                                                                                                                                                                                               |

| Parameter            | Type                                            | Description                                                                                                                                                                              |
|----------------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| versions             | Array of <a href="#">DatasetVersion</a> objects | Dataset version information. Currently, only the current version information of a dataset is recorded.                                                                                   |
| work_path            | String                                          | Output dataset path, which is used to store output files such as label files. The path is an OBS path in the format of <i>/Bucket name/File path</i> . For example: <b>/obs-bucket</b> . |
| work_path_type       | Integer                                         | Type of the dataset output path. The default value is 0, indicating an OBS bucket.                                                                                                       |
| workforce_descriptor | <a href="#">WorkforceDescriptor</a> object      | Team labeling information.                                                                                                                                                               |
| workforce_task_count | Integer                                         | Number of team labeling tasks of a dataset.                                                                                                                                              |
| workspace_id         | String                                          | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value.                                                      |

**Table 25-37** DataSource

| Parameter   | Type                                       | Description                                                                                                                                                                                                                                                                              |
|-------------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_path   | String                                     | Data source path.                                                                                                                                                                                                                                                                        |
| data_type   | Integer                                    | Data type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: OBS bucket (default value)</li><li>● <b>1</b>: GaussDB(DWS)</li><li>● <b>2</b>: DLI</li><li>● <b>3</b>: RDS</li><li>● <b>4</b>: MRS</li><li>● <b>5</b>: AI Gallery</li><li>● <b>6</b>: Inference service</li></ul> |
| schema_maps | Array of <a href="#">SchemaMap</a> objects | Schema mapping information corresponding to the table data.                                                                                                                                                                                                                              |
| source_info | <a href="#">SourceInfo</a> object          | Information required for importing a table data source.                                                                                                                                                                                                                                  |

| Parameter          | Type    | Description                                                                                                                                                                                                                                                                                    |
|--------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| with_column_header | Boolean | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the file is the column name.</li><li>• <b>false</b>: The first row in the file is not the column name.</li></ul> |

**Table 25-38** SchemaMap

| Parameter | Type   | Description                     |
|-----------|--------|---------------------------------|
| dest_name | String | Name of the destination column. |
| src_name  | String | Name of the source column.      |

**Table 25-39** SourceInfo

| Parameter     | Type   | Description                                                                                                                                              |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| cluster_id    | String | MRS cluster ID. You can log in to the MRS console to view the information.                                                                               |
| cluster_mode  | String | Running mode of an MRS cluster. Options: <ul style="list-style-type: none"><li>• <b>0</b>: normal cluster</li><li>• <b>1</b>: security cluster</li></ul> |
| cluster_name  | String | MRS cluster name You can log in to the MRS console to view the information.                                                                              |
| database_name | String | Name of the database to which the table dataset is imported.                                                                                             |
| input         | String | HDFS path of the table data set. For example, / datasets/demo.                                                                                           |
| ip            | String | IP address of your GaussDB(DWS) cluster.                                                                                                                 |
| port          | String | Port number of your GaussDB(DWS) cluster.                                                                                                                |
| queue_name    | String | DLI queue name of a table dataset.                                                                                                                       |
| subnet_id     | String | Subnet ID of an MRS cluster.                                                                                                                             |
| table_name    | String | Name of the table to which a table dataset is imported.                                                                                                  |
| user_name     | String | Username, which is mandatory for GaussDB(DWS) data.                                                                                                      |

| Parameter     | Type   | Description                                              |
|---------------|--------|----------------------------------------------------------|
| user_password | String | User password, which is mandatory for GaussDB(DWS) data. |
| vpc_id        | String | ID of the VPC where an MRS cluster resides.              |

**Table 25-40** Label

| Parameter  | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| name       | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property   | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type       | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image classification</li><li>● <b>1</b>: object detection</li><li>● <b>3</b>: image segmentation</li><li>● <b>100</b>: text classification</li><li>● <b>101</b>: named entity recognition</li><li>● <b>102</b>: text triplet relationship</li><li>● <b>103</b>: text triplet entity</li><li>● <b>200</b>: sound classification</li><li>● <b>201</b>: speech content</li><li>● <b>202</b>: speech paragraph labeling</li><li>● <b>600</b>: video labeling</li></ul> |

**Table 25-41** Field

| Parameter   | Type    | Description         |
|-------------|---------|---------------------|
| description | String  | Schema description. |
| name        | String  | Schema name.        |
| schema_id   | Integer | Schema ID.          |
| type        | String  | Schema value type.  |

**Table 25-42** DatasetVersion

| Parameter                  | Type               | Description                                                                                                                                                                                                                                                                               |
|----------------------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| add_sample_count           | Integer            | Number of added samples.                                                                                                                                                                                                                                                                  |
| analysis_cache_path        | String             | Cache path for feature analysis.                                                                                                                                                                                                                                                          |
| analysis_status            | Integer            | Status of a feature analysis task. Options: <ul style="list-style-type: none"><li>● <b>0</b>: initialized</li><li>● <b>1</b>: running</li><li>● <b>2</b>: completed</li><li>● <b>3</b>: failed</li></ul>                                                                                  |
| analysis_task_id           | String             | ID of a feature analysis task.                                                                                                                                                                                                                                                            |
| annotated_sample_count     | Integer            | Number of samples with labeled versions.                                                                                                                                                                                                                                                  |
| annotated_sub_sample_count | Integer            | Number of labeled subsamples.                                                                                                                                                                                                                                                             |
| clear_hard_property        | Boolean            | Whether to clear hard example properties during release. Options: <ul style="list-style-type: none"><li>● <b>true</b>: Clear hard example properties. (Default value)</li><li>● <b>false</b>: Do not clear hard example properties.</li></ul>                                             |
| code                       | String             | Status code of a preprocessing task such as rotation and cropping.                                                                                                                                                                                                                        |
| create_time                | Long               | Time when a version is created.                                                                                                                                                                                                                                                           |
| crop                       | Boolean            | Whether to crop the image. This field is valid only for the object detection dataset whose labeling box is in the rectangle shape. Options: <ul style="list-style-type: none"><li>● <b>true</b>: Crop the image.</li><li>● <b>false</b>: Do not crop the image. (Default value)</li></ul> |
| crop_path                  | String             | Path for storing cropped files.                                                                                                                                                                                                                                                           |
| crop_rotate_cache_path     | String             | Temporary directory for executing the rotation and cropping task.                                                                                                                                                                                                                         |
| data_analysis              | Map<String,Object> | Feature analysis result in JSON format.                                                                                                                                                                                                                                                   |
| data_path                  | String             | Path for storing data.                                                                                                                                                                                                                                                                    |

| Parameter             | Type                                        | Description                                                                                                                                                                                                                                                                                   |
|-----------------------|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_statistics       | Map<String,Object>                          | Sample statistics on a dataset, including the statistics on sample metadata in JSON format.                                                                                                                                                                                                   |
| data_validate         | Boolean                                     | Whether data is validated by the validation algorithm before release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The data has been validated.</li><li>• <b>false</b>: The data has not been validated.</li></ul>                                                           |
| deleted_sample_count  | Integer                                     | Number of deleted samples.                                                                                                                                                                                                                                                                    |
| deletion_stats        | Map<String,Integer>                         | Deletion reason statistics.                                                                                                                                                                                                                                                                   |
| description           | String                                      | Description of a version.                                                                                                                                                                                                                                                                     |
| export_images         | Boolean                                     | Whether to export images to the version output directory during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Export images to the version output directory.</li><li>• <b>false</b>: Do not export images to the version output directory. (Default value)</li></ul> |
| extract_serial_number | Boolean                                     | Whether to parse the subsample number during release. The field is valid for the healthcare dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Parse the subsample number.</li><li>• <b>false</b>: Do not parse the subsample number. (Default value)</li></ul>           |
| include_dataset_data  | Boolean                                     | Whether to include the source data of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The source data of a dataset is included.</li><li>• <b>false</b>: The source data of a dataset is not included.</li></ul>                                       |
| is_current            | Boolean                                     | Whether the current dataset version is used. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The current dataset version is used.</li><li>• <b>false</b>: The current dataset version is not used.</li></ul>                                                                    |
| label_stats           | Array of <a href="#">LabelStats</a> objects | Label statistics list of a released version.                                                                                                                                                                                                                                                  |
| label_type            | String                                      | Label type of a released version. Options: <ul style="list-style-type: none"><li>• <b>multi</b>: Multi-label samples are included.</li><li>• <b>single</b>: All samples are single-labeled.</li></ul>                                                                                         |

| Parameter                       | Type    | Description                                                                                                                                                                                                                                                                                               |
|---------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| manifest_cache_input_path       | String  | Input path for the <b>manifest</b> file cache during version release.                                                                                                                                                                                                                                     |
| manifest_path                   | String  | Path for storing the <b>manifest</b> file with the released version.                                                                                                                                                                                                                                      |
| message                         | String  | Task information recorded during release (for example, error information).                                                                                                                                                                                                                                |
| modified_sample_count           | Integer | Number of modified samples.                                                                                                                                                                                                                                                                               |
| previous_annotated_sample_count | Integer | Number of labeled samples of parent versions.                                                                                                                                                                                                                                                             |
| previous_total_sample_count     | Integer | Total samples of parent versions.                                                                                                                                                                                                                                                                         |
| previous_version_id             | String  | Parent version ID                                                                                                                                                                                                                                                                                         |
| processor_task_id               | String  | ID of a preprocessing task such as rotation and cropping.                                                                                                                                                                                                                                                 |
| processor_task_status           | Integer | Status of a preprocessing task such as rotation and cropping. The options are as follows: <ul style="list-style-type: none"><li>0: initialized - 1: running</li><li>2: completed</li><li>3: failed</li><li>4: stopped</li><li>5: timeout</li><li>6: Deletion failed.</li><li>7: Failed to stop.</li></ul> |
| remove_sample_usage             | Boolean | Whether to clear the existing usage information of a dataset during release. Options: <ul style="list-style-type: none"><li><b>true</b>: Clear the existing usage information of a dataset. (Default value)</li><li><b>false</b>: Do not clear the existing usage information of a dataset.</li></ul>     |
| rotate                          | Boolean | Whether to rotate the image. Options: <ul style="list-style-type: none"><li><b>true</b>: Rotate the image.</li><li><b>false</b>: Do not rotate the image. (Default value)</li></ul>                                                                                                                       |
| rotate_path                     | String  | Path for storing the rotated file.                                                                                                                                                                                                                                                                        |

| Parameter              | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_state           | String           | Sample status. The options are as follows: <ul style="list-style-type: none"><li>• <code>__ALL__</code>: labeled</li><li>• <code>__NONE__</code>: not marked</li><li>• <code>__UNCHECK__</code>: to be accepted</li><li>• <code>__ACCEPTED__</code>: The acceptance is passed.</li><li>• <code>__REJECTED__</code>: rejected</li><li>• <code>__UNREVIEWED__</code>: to be reviewed</li><li>• <code>__REVIEWED__</code>: approved</li><li>• <code>__WORKFORCE_SAMPLED__</code>: sampled</li><li>• <code>__WORKFORCE_SAMPLED_UNCHECK__</code>: Sampling is to be accepted.</li><li>• <code>__WORKFORCE_SAMPLED_CHECKED__</code>: Sampling has been accepted.</li><li>• <code>__WORKFORCE_SAMPLED_ACCEPTED__</code>: The sampling is passed.</li><li>• <code>__WORKFORCE_SAMPLED_REJECTED__</code>: The sampling has been rejected.</li><li>• <code>__AUTO_ANNOTATION__</code>: to be confirmed</li></ul> |
| start_processor_task   | Boolean          | Whether to start a data analysis task during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Start a data analysis task during release.</li><li>• <b>false</b>: Do not start a data analysis task during release. (Default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| status                 | Integer          | Status of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>0</b>: creating</li><li>• <b>1</b>: running</li><li>• <b>2</b>: deleting</li><li>• <b>3</b>: deleted</li><li>• <b>4</b>: error</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| tags                   | Array of strings | Key identifier list of the dataset. The labeling type is used as the default label when the labeling task releases a version. For example, ["Image", "Object detection"].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| task_type              | Integer          | Labeling task type of the released version, which is the same as the dataset type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| total_sample_count     | Integer          | Total number of version samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| total_sub_sample_count | Integer          | Total number of subsamples generated from the parent samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Parameter                   | Type    | Description                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| train_evaluate_sample_ratio | String  | Split training and verification ratio during version release. The default value is <b>1.00</b> , indicating that all released versions are training sets.                                                                                                                                                                         |
| update_time                 | Long    | Time when a version is updated.                                                                                                                                                                                                                                                                                                   |
| version_format              | String  | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b>: default format</li><li>• <b>CarbonData</b>: CarbonData (supported only by table datasets)</li><li>• <b>CSV</b>: CSV</li></ul>                                                                                                       |
| version_id                  | String  | Dataset version ID.                                                                                                                                                                                                                                                                                                               |
| version_name                | String  | Dataset version name.                                                                                                                                                                                                                                                                                                             |
| with_column_header          | Boolean | Whether the first row in the released CSV file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the released CSV file is a column name.</li><li>• <b>false</b>: The first row in the released CSV file is not a column name.</li></ul> |

**Table 25-43** LabelStats

| Parameter    | Type                                   | Description                                                                                                                      |
|--------------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of <b>LabelAttribute</b> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| count        | Integer                                | Number of labels.                                                                                                                |
| name         | String                                 | Label name.                                                                                                                      |
| property     | <b>LabelProperty</b> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                      |
| sample_count | Integer                                | Number of samples containing the label.                                                                                          |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-44** LabelAttribute

| Parameter     | Type                                                 | Description                                                                                                                                              |
|---------------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | String                                               | Default value of a label attribute.                                                                                                                      |
| id            | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&'".                                            |
| type          | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-45** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-46** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFF0</b> .                                                                                                                                                                                                                                                                                    |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |
| @modelarts:to_type       | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

**Table 25-47** WorkforceDescriptor

| Parameter         | Type    | Description                                                              |
|-------------------|---------|--------------------------------------------------------------------------|
| current_task_id   | String  | ID of a team labeling task.                                              |
| current_task_name | String  | Name of a team labeling task.                                            |
| reject_num        | Integer | Number of rejected samples.                                              |
| repetition        | Integer | Number of persons who label each sample. The minimum value is <b>1</b> . |

| Parameter                         | Type                                    | Description                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_synchronize_auto_labeling_data | Boolean                                 | Whether to synchronously update auto labeling data. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Update auto labeling data synchronously.</li><li>• <b>false</b>: Do not update auto labeling data synchronously.</li></ul>                                                                                                 |
| is_synchronize_data               | Boolean                                 | Whether to synchronize updated data, such as uploading files, synchronizing data sources, and assigning imported unlabeled files to team members. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Synchronize updated data to team members.</li><li>• <b>false</b>: Do not synchronize updated data to team members.</li></ul> |
| workers                           | Array of <a href="#">Worker</a> objects | List of labeling team members.                                                                                                                                                                                                                                                                                                               |
| workforce_id                      | String                                  | ID of a labeling team.                                                                                                                                                                                                                                                                                                                       |
| workforce_name                    | String                                  | Name of a labeling team.                                                                                                                                                                                                                                                                                                                     |

**Table 25-48** Worker

| Parameter   | Type    | Description                                                                                                                                                                                         |
|-------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.4 Modifying a Dataset

### Function

Modify basic information about a dataset, such as name, description, version, and labels.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

PUT /v2/{project\_id}/datasets/{dataset\_id}

**Table 25-49** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-50** Request body parameters

| Parameter          | Mandatory | Type                                   | Description                                                                                                                        |
|--------------------|-----------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| add_labels         | No        | Array of <a href="#">Label</a> objects | List of added labels                                                                                                               |
| current_version_id | No        | String                                 | Current version ID of a dataset                                                                                                    |
| dataset_name       | No        | String                                 | Dataset name, which can contain 1 to 100 characters. Only letters, digits, numbers, underscores (_) and hyphens (-) are supported. |
| delete_labels      | No        | Array of <a href="#">Label</a> objects | List of labels to be deleted                                                                                                       |
| description        | No        | String                                 | Dataset description. The value contains 0 to 256 characters. Special characters (^!<>=&") are not allowed.                         |
| update_labels      | No        | Array of <a href="#">Label</a> objects | List of labels to be updated                                                                                                       |

**Table 25-51** Label

| Parameter  | Mandatory | Type                                            | Description                                                                                                                           |
|------------|-----------|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| attributes | No        | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is <b>music</b> , attributes can be <b>genre</b> or <b>artist</b> . |
| name       | No        | String                                          | Label name                                                                                                                            |

| Parameter | Mandatory | Type                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|-----------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| property  | No        | <a href="#">LabelProperty</a> object | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type      | No        | Integer                              | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-52** LabelAttribute

| Parameter     | Mandatory | Type                                                 | Description                                                                                                                                                                 |
|---------------|-----------|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | No        | String                                               | Default value of a label attribute                                                                                                                                          |
| id            | No        | String                                               | Label attribute ID, which can be obtained in the label list.                                                                                                                |
| name          | No        | String                                               | Label attribute name, which can contain a maximum of 64 characters. Special characters (!<>=&"') cannot be included.                                                        |
| type          | No        | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: Select a text label.</li><li>• <b>select</b>: Select from the drop-down list.</li></ul> |
| values        | No        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values                                                                                                                                              |

**Table 25-53** LabelAttributeValue

| Parameter | Mandatory | Type   | Description              |
|-----------|-----------|--------|--------------------------|
| id        | No        | String | Label attribute value ID |
| value     | No        | String | Label attribute value    |

**Table 25-54** LabelProperty

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | No        | String | Label color, which is a hexadecimal code of the color. The default value is left blank. For example, <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                        |
| @modelarts:default_shape | No        | String | Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | No        | String | Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | No        | String | The new name of the label                                                                                                                                                                                                                                                                                                                                                                                     |
| @modelarts:shortcut      | No        | String | Label shortcut key, for example, <b>D</b> . By default, this parameter is left blank.                                                                                                                                                                                                                                                                                                                         |

| Parameter            | Mandatory | Type   | Description                                                                                                                                                                                 |
|----------------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:tail_type | No        | String | Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

## Response Parameters

**Status code: 200**

**Table 25-55** Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| dataset_id | String | Dataset ID  |

## Request Example

Run the following command to update a dataset:

```
{
 "description": "just a test",
 "add_labels": [{
 "name": "Ants",
 "type": 0,
 "property": {
 "@modelarts:color": "#3399ff"
 }
 }]
}
```

## Response Example

**Status code: 200**

OK

```
{
 "dataset_id": "gfgHHSokody6AJigS5A"
}
```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |

| Status Code | Description |
|-------------|-------------|
| 403         | Forbidden   |
| 404         | Not Found   |

## Error Code

For details, see [Error Codes](#).

## 25.1.5 Deleting a Dataset

### Function

This API is used to delete a dataset without deleting the source data of the dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

DELETE /v2/{project\_id}/datasets/{dataset\_id}

**Table 25-56** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

### Request Parameters

None

### Response Parameters

None

### Example Requests

Deleting a Dataset

DELETE https://{endpoint}/v2/{project\_id}/datasets/{dataset\_id}

### Example Responses

Status code: 204

No Content

```
{ }
```

### Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |
| 401         | Unauthorized |
| 403         | Forbidden    |

### Error Codes

See [Error Codes](#).

## 25.1.6 Obtaining Dataset Statistics

### Function

Obtain dataset statistics.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/stats

Table 25-57 URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |

Table 25-58 Query parameters

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| email        | No        | String | Email address of a labeling team member                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| locale       | No        | String | Language . Options: <ul style="list-style-type: none"><li>• <b>zh-cn</b>: Chinese</li><li>• <b>en-us</b>: English (default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| sample_state | No        | String | Statistics on the specified sample state. **Table 25-59** Response body parameters

| Parameter             | Type                               | Description                                                                                                                                                                                                                                                                                                                               |
|-----------------------|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_path             | String                             | Path for storing data of a dataset                                                                                                                                                                                                                                                                                                        |
| data_splitting_enable | Boolean                            | Whether the dataset can be split into training set and validation set based on the sample labeling statistics. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The dataset can be split into training and validation sets.</li><li>• <b>false</b>: The dataset cannot be split into training and validation sets.</li></ul> |
| grouped_label_stats   | Map<String,Array<LabelStats>>      | Label statistics grouped by labeling type                                                                                                                                                                                                                                                                                                 |
| hard_detail_stats     | Map<String,PairOfIntAndHardDetail> | Statistics on hard example reasons. The type is <i>Map&lt;Integer, Pair&lt;Integer, HardDetail&gt;&gt;</i> . The key of <b>Map</b> indicates the ID of the hard example reason, the key of <b>Pair</b> indicates how many times has the hard example reason occurred, and the value of <b>Pair</b> indicates the hard example reason.     |
| key_sample_stats      | Map<String,Integer>                | Statistics on hard examples                                                                                                                                                                                                                                                                                                               |
| label_stats           | Array of LabelStats objects        | List of label statistics                                                                                                                                                                                                                                                                                                                  |
| metadata_stats        | Map<String,Object>                 | Statistics on sample metadata in JSON format.                                                                                                                                                                                                                                                                                             |
| sample_stats          | Map<String,Integer>                | Statistics on sample status                                                                                                                                                                                                                                                                                                               |

**Table 25-60** LabelStats

| Parameter  | Type                            | Description                                                                                                                      |
|------------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes | Array of LabelAttribute objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| count      | Integer                         | Number of labels                                                                                                                 |
| name       | String                          | Label name                                                                                                                       |
| property   | LabelProperty object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                      |

| Parameter    | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_count | Integer | Number of samples containing the label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| type         | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-61** PairOfIntAndHardDetail

| Parameter | Type                              | Description                                       |
|-----------|-----------------------------------|---------------------------------------------------|
| key       | Integer                           | Number of times that a hard example reason occurs |
| value     | <a href="#">HardDetail</a> object | Reason for a hard example                         |

**Table 25-62** HardDetail

| Parameter  | Type    | Description         |
|------------|---------|---------------------|
| alo_name   | String  | Alias               |
| id         | Integer | Reason ID           |
| reason     | String  | Reason description  |
| suggestion | String  | Handling suggestion |

**Table 25-63** LabelAttribute

| Parameter     | Type   | Description                        |
|---------------|--------|------------------------------------|
| default_value | String | Default value of a label attribute |

| Parameter | Type                                                 | Description                                                                                                                                                                 |
|-----------|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | String                                               | Label attribute ID, which can be obtained in the label list.                                                                                                                |
| name      | String                                               | Label attribute name, which can contain a maximum of 64 characters. Special characters (!<>=&"') cannot be included.                                                        |
| type      | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: Select a text label.</li><li>• <b>select</b>: Select from the drop-down list.</li></ul> |
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values                                                                                                                                              |

**Table 25-64** LabelAttributeValue

| Parameter | Type   | Description              |
|-----------|--------|--------------------------|
| id        | String | Label attribute value ID |
| value     | String | Label attribute value    |

**Table 25-65** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Label color, which is a hexadecimal code of a color, for example, <b>#FFFFFF0</b> . The default value is left blank.                                                                                                                                                                                                                                                                                          |
| @modelarts:default_shape | String | Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |

| Parameter            | Type   | Description                                                                                                                                                                                 |
|----------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:from_type | String | Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |
| @modelarts:rename_to | String | The new name of the label                                                                                                                                                                   |
| @modelarts:shortcut  | String | Label shortcut key, for example, <b>D</b> . By default, this parameter is left blank.                                                                                                       |
| @modelarts:to_type   | String | Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

## Request Example

Run the following command to obtain dataset statistics:

```
GET https://{endpoint}/v2/{project_id}/datasets/WxCREuCkBSAlQr9xrde/data-annotations/stats
```

## Response Example

**Status code: 200**

OK

```
{
 "label_stats" : [{
 "name" : "Bees",
 "type" : 1,
 "property" : {
 "@modelarts:color" : "#3399ff"
 },
 "count" : 8,
 "sample_count" : 5
 }],
 "sample_stats" : {
 "un_annotation" : 309,
 "all" : 317,
 "total" : 317,
 "deleted" : 0,
 "manual_annotation" : 8,
 "auto_annotation" : 0,
 "lefted" : 317
 },
 "key_sample_stats" : {
 "total" : 317,
 "non_key_sample" : 315,
 "key_sample" : 2
 },
 "metadata_stats" : { },
 "data_splitting_enable" : false
}
```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Code

For details, see [Error Codes](#).

## 25.1.7 Querying the Monitoring Data of a Dataset

### Function

This API is used to query the monitoring data of a dataset within a specified time range.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/metrics

**Table 25-66** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-67** Query Parameters

| Parameter | Mandatory | Type | Description                             |
|-----------|-----------|------|-----------------------------------------|
| end_time  | Yes       | Long | End time of the monitoring information. |

| Parameter         | Mandatory | Type   | Description                               |
|-------------------|-----------|--------|-------------------------------------------|
| start_time        | Yes       | Long   | Start time of the monitoring information. |
| workforce_task_id | No        | String | ID of a team labeling task.               |

Request Parameters

None

Response Parameters

Status code: 200

Table 25-68 Response body parameters

| Parameter | Type                            | Description                     |
|-----------|---------------------------------|---------------------------------|
| metrics   | Map<String,Map<String,Integer>> | Dataset monitoring information. |

Example Requests

Querying the Monitoring Data of a Dataset

GET https://{endpoint}/v2/{project\_id}/datasets/{dataset\_id}/metrics

Example Responses

Status code: 200

OK

```
{
 "metrics": {
 "un_annotation": {

 }
}
```

```
}
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.8 Querying the Dataset Version List

### Function

This API is used to query the version list of a specific dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/versions

**Table 25-69** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-70** Query Parameters

| Parameter            | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------|-----------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| status               | No        | Integer | Status of a dataset version.<br>Options: <ul style="list-style-type: none"><li>• <b>0</b>: creating</li><li>• <b>1</b>: running</li><li>• <b>2</b>: deleting</li><li>• <b>3</b>: deleted</li><li>• <b>4</b>: error</li></ul>                                                                                                                                                     |
| train_evaluate_ratio | No        | String  | Version split ratio for version filtering. The numbers before and after the comma indicate the minimum and maximum split ratios, and the versions whose split ratios are within the range are filtered out, for example, <b>0.0,1.0</b> . Note: If this parameter is left blank or unavailable, the system does not filter datasets based on the version split ratio by default. |
| version_format       | No        | Integer | Format of a dataset version.<br>Options: <ul style="list-style-type: none"><li>• <b>0</b>: default format</li><li>• <b>1</b>: CarbonData (supported only by table datasets)</li><li>• <b>2</b>: CSV</li></ul>                                                                                                                                                                    |
| offset               | No        | Integer | Start page for pagination display. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                               |
| limit                | No        | Integer | Maximum number of records returned on each page. The value ranges from 1 to 1000. The default value is <b>1000</b> .                                                                                                                                                                                                                                                             |

**Table 25-71** Response body parameters

| Parameter    | Type                                            | Description                       |
|--------------|-------------------------------------------------|-----------------------------------|
| total_number | Integer                                         | Total number of dataset versions. |
| versions     | Array of <a href="#">DatasetVersion</a> objects | Dataset version list.             |

**Table 25-72** DatasetVersion

| Parameter                  | Type    | Description                                                                                                                                                                                                                                   |
|----------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| add_sample_count           | Integer | Number of added samples.                                                                                                                                                                                                                      |
| analysis_cache_path        | String  | Cache path for feature analysis.                                                                                                                                                                                                              |
| analysis_statuses          | Integer | Status of a feature analysis task. Options: <ul style="list-style-type: none"><li>• <b>0</b>: initialized</li><li>• <b>1</b>: running</li><li>• <b>2</b>: completed</li><li>• <b>3</b>: failed</li></ul>                                      |
| analysis_task_id           | String  | ID of a feature analysis task.                                                                                                                                                                                                                |
| annotated_sample_count     | Integer | Number of samples with labeled versions.                                                                                                                                                                                                      |
| annotated_sub_sample_count | Integer | Number of labeled subsamples.                                                                                                                                                                                                                 |
| clear_hard_property        | Boolean | Whether to clear hard example properties during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear hard example properties. (Default value)</li><li>• <b>false</b>: Do not clear hard example properties.</li></ul> |
| code                       | String  | Status code of a preprocessing task such as rotation and cropping.                                                                                                                                                                            |
| create_time                | Long    | Time when a version is created.                                                                                                                                                                                                               |

| Parameter              | Type                | Description                                                                                                                                                                                                                                                                                   |
|------------------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| crop                   | Boolean             | Whether to crop the image. This field is valid only for the object detection dataset whose labeling box is in the rectangle shape. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Crop the image.</li><li>• <b>false</b>: Do not crop the image. (Default value)</li></ul>     |
| crop_path              | String              | Path for storing cropped files.                                                                                                                                                                                                                                                               |
| crop_rotate_cache_path | String              | Temporary directory for executing the rotation and cropping task.                                                                                                                                                                                                                             |
| data_analysis          | Map<String,Object>  | Feature analysis result in JSON format.                                                                                                                                                                                                                                                       |
| data_path              | String              | Path for storing data.                                                                                                                                                                                                                                                                        |
| data_statistics        | Map<String,Object>  | Sample statistics on a dataset, including the statistics on sample metadata in JSON format.                                                                                                                                                                                                   |
| data_validate          | Boolean             | Whether data is validated by the validation algorithm before release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The data has been validated.</li><li>• <b>false</b>: The data has not been validated.</li></ul>                                                           |
| deleted_sample_count   | Integer             | Number of deleted samples.                                                                                                                                                                                                                                                                    |
| deletion_stats         | Map<String,Integer> | Deletion reason statistics.                                                                                                                                                                                                                                                                   |
| description            | String              | Description of a version.                                                                                                                                                                                                                                                                     |
| export_images          | Boolean             | Whether to export images to the version output directory during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Export images to the version output directory.</li><li>• <b>false</b>: Do not export images to the version output directory. (Default value)</li></ul> |
| extract_serial_number  | Boolean             | Whether to parse the subsample number during release. The field is valid for the healthcare dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Parse the subsample number.</li><li>• <b>false</b>: Do not parse the subsample number. (Default value)</li></ul>           |

| Parameter                       | Type                                        | Description                                                                                                                                                                                                                                             |
|---------------------------------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| include_dataset_data            | Boolean                                     | Whether to include the source data of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The source data of a dataset is included.</li><li>• <b>false</b>: The source data of a dataset is not included.</li></ul> |
| is_current                      | Boolean                                     | Whether the current dataset version is used. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The current dataset version is used.</li><li>• <b>false</b>: The current dataset version is not used.</li></ul>                              |
| label_stats                     | Array of <a href="#">LabelStats</a> objects | Label statistics list of a released version.                                                                                                                                                                                                            |
| label_type                      | String                                      | Label type of a released version. Options: <ul style="list-style-type: none"><li>• <b>multi</b>: Multi-label samples are included.</li><li>• <b>single</b>: All samples are single-labeled.</li></ul>                                                   |
| manifest_cache_input_path       | String                                      | Input path for the <b>manifest</b> file cache during version release.                                                                                                                                                                                   |
| manifest_path                   | String                                      | Path for storing the <b>manifest</b> file with the released version.                                                                                                                                                                                    |
| message                         | String                                      | Task information recorded during release (for example, error information).                                                                                                                                                                              |
| modified_sample_count           | Integer                                     | Number of modified samples.                                                                                                                                                                                                                             |
| previous_annotated_sample_count | Integer                                     | Number of labeled samples of parent versions.                                                                                                                                                                                                           |
| previous_total_sample_count     | Integer                                     | Total samples of parent versions.                                                                                                                                                                                                                       |
| previous_version_id             | String                                      | Parent version ID                                                                                                                                                                                                                                       |
| processor_task_id               | String                                      | ID of a preprocessing task such as rotation and cropping.                                                                                                                                                                                               |

| Parameter             | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| processor_task_status | Integer | Status of a preprocessing task such as rotation and cropping. The options are as follows: <ul style="list-style-type: none"><li>• 0: initialized - 1: running</li><li>• 2: completed</li><li>• 3: failed</li><li>• 4: stopped</li><li>• 5: timeout</li><li>• 6: Deletion failed.</li><li>• 7: Failed to stop.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| remove_sample_usage   | Boolean | Whether to clear the existing usage information of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear the existing usage information of a dataset. (Default value)</li><li>• <b>false</b>: Do not clear the existing usage information of a dataset.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| rotate                | Boolean | Whether to rotate the image. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Rotate the image.</li><li>• <b>false</b>: Do not rotate the image. (Default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| rotate_path           | String  | Path for storing the rotated file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| sample_state          | String  | Sample status. The options are as follows: <ul style="list-style-type: none"><li>• <b>__ALL__</b>: labeled</li><li>• <b>__NONE__</b>: not marked</li><li>• <b>__UNCHECK__</b>: to be accepted</li><li>• <b>__ACCEPTED__</b>: The acceptance is passed.</li><li>• <b>__REJECTED__</b>: rejected</li><li>• <b>__UNREVIEWED__</b>: to be reviewed</li><li>• <b>__REVIEWED__</b>: approved</li><li>• <b>__WORKFORCE_SAMPLED__</b>: sampled</li><li>• <b>__WORKFORCE_SAMPLED_UNCHECK__</b>: Sampling is to be accepted.</li><li>• <b>__WORKFORCE_SAMPLED_CHECKED__</b>: Sampling has been accepted.</li><li>• <b>__WORKFORCE_SAMPLED_ACCEPTED__</b>: The sampling is passed.</li><li>• <b>__WORKFORCE_SAMPLED_REJECTED__</b>: The sampling has been rejected.</li><li>• <b>__AUTO_ANNOTATION__</b>: to be confirmed</li></ul> |

| Parameter                   | Type             | Description                                                                                                                                                                                                                                                        |
|-----------------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| start_processor_task        | Boolean          | Whether to start a data analysis task during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Start a data analysis task during release.</li><li>• <b>false</b>: Do not start a data analysis task during release. (Default value)</li></ul> |
| status                      | Integer          | Status of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>0</b>: creating</li><li>• <b>1</b>: running</li><li>• <b>2</b>: deleting</li><li>• <b>3</b>: deleted</li><li>• <b>4</b>: error</li></ul>                                          |
| tags                        | Array of strings | Key identifier list of the dataset. The labeling type is used as the default label when the labeling task releases a version. For example, ["Image", "Object detection"].                                                                                          |
| task_type                   | Integer          | Labeling task type of the released version, which is the same as the dataset type.                                                                                                                                                                                 |
| total_sample_count          | Integer          | Total number of version samples.                                                                                                                                                                                                                                   |
| total_sub_sample_count      | Integer          | Total number of subsamples generated from the parent samples.                                                                                                                                                                                                      |
| train_evaluate_sample_ratio | String           | Split training and verification ratio during version release. The default value is <b>1.00</b> , indicating that all released versions are training sets.                                                                                                          |
| update_time                 | Long             | Time when a version is updated.                                                                                                                                                                                                                                    |
| version_format              | String           | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b>: default format</li><li>• <b>CarbonData</b>: CarbonData (supported only by table datasets)</li><li>• <b>CSV</b>: CSV</li></ul>                                        |
| version_id                  | String           | Dataset version ID.                                                                                                                                                                                                                                                |
| version_name                | String           | Dataset version name.                                                                                                                                                                                                                                              |

| Parameter          | Type    | Description                                                                                                                                                                                                                                                                                                                       |
|--------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| with_column_header | Boolean | Whether the first row in the released CSV file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the released CSV file is a column name.</li><li>• <b>false</b>: The first row in the released CSV file is not a column name.</li></ul> |

**Table 25-73** LabelStats

| Parameter    | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| count        | Integer                                         | Number of labels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| name         | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property     | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| sample_count | Integer                                         | Number of samples containing the label.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| type         | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-74** LabelAttribute

| Parameter     | Type   | Description                         |
|---------------|--------|-------------------------------------|
| default_value | String | Default value of a label attribute. |

| Parameter | Type                                                 | Description                                                                                                                                              |
|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name      | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&".                                             |
| type      | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-75** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-76** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |

| Parameter            | Type   | Description                                                                                                                                                                                                    |
|----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:from_type | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |
| @modelarts:rename_to | String | Default attribute: The new name of the label.                                                                                                                                                                  |
| @modelarts:shortcut  | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                       |
| @modelarts:to_type   | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

## Example Requests

Querying the Version List of a Specific Dataset

GET https://{endpoint}/v2/{project\_id}/datasets/{dataset\_id}/versions

See [Error Codes](#).

## 25.1.9 Creating a Dataset Labeling Version

### Function

This API is used to create a dataset labeling version.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/versions

**Table 25-77** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

### Request Parameters

**Table 25-78** Request body parameters

| Parameter           | Mandatory | Type    | Description                                                                                                                                                                                                                    |
|---------------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| clear_hard_property | No        | Boolean | Whether to clear hard example properties. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear hard example properties. (Default value)</li><li>• <b>false</b>: Do not clear hard example properties.</li></ul> |
| description         | No        | String  | Version description. The value is empty by default. The description contains 0 to 256 characters and does not support the following special characters: !<>=&""                                                                |

| Parameter                   | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| export_images               | No        | Boolean | Whether to export images to the version output directory during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Export images to the version output directory.</li><li>• <b>false</b>: Do not export images to the version output directory. (Default value)</li></ul>                                                                          |
| remove_sample_usage         | No        | Boolean | Whether to clear the existing usage information of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear the existing usage information of a dataset. (Default value)</li><li>• <b>false</b>: Do not clear the existing usage information of a dataset.</li></ul>                                                              |
| train_evaluate_sample_ratio | No        | String  | Split training and verification ratio during version release. The default value is <b>1.00</b> , indicating that all released versions are training sets.                                                                                                                                                                                                              |
| version_format              | No        | String  | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b></li><li>• <b>CarbonData</b> (supported only by table datasets)</li><li>• <b>CSV</b></li></ul>                                                                                                                                                                             |
| version_name                | No        | String  | Version name consisting of 1 to 32 characters. Only letters, digits, underscores (_), and hyphens (-) are allowed.                                                                                                                                                                                                                                                     |
| with_column_header          | No        | Boolean | Whether to write the column name in the first line of the CSV file during release. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Write the column name in the first line of the CSV file. (Default value)</li><li>• <b>false</b>: Do not write the column name in the first line of the CSV file.</li></ul> |

## Response Parameters

Status code: 201

**Table 25-79** Response body parameters

| Parameter  | Type   | Description         |
|------------|--------|---------------------|
| version_id | String | Dataset version ID. |

## Example Requests

The following is an example of how to create a dataset labeling version whose version name is **V004** and the format of the dataset version is **Default**.

```
{
 "version_name" : "V004",
 "version_format" : "Default",
 "description" : "",
 "clear_hard_property" : true
}
```

## Example Responses

Status code: 201

Created

```
{
 "version_id" : "sntOdOuB0D9C6fC4TXs"
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 201         | Created      |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.10 Querying Details About a Dataset Version

### Function

This API is used to query the details about a dataset version.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/versions/{version\_id}

**Table 25-80** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| version_id | Yes       | String | Dataset version ID.                                                                                             |

### Request Parameters

None

### Response Parameters

**Status code: 200**

**Table 25-81** Response body parameters

| Parameter           | Type    | Description                      |
|---------------------|---------|----------------------------------|
| add_sample_count    | Integer | Number of added samples.         |
| analysis_cache_path | String  | Cache path for feature analysis. |

| Parameter                  | Type               | Description                                                                                                                                                                                                                                                                               |
|----------------------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| analysis_status            | Integer            | Status of a feature analysis task. Options: <ul style="list-style-type: none"><li>• <b>0</b>: initialized</li><li>• <b>1</b>: running</li><li>• <b>2</b>: completed</li><li>• <b>3</b>: failed</li></ul>                                                                                  |
| analysis_task_id           | String             | ID of a feature analysis task.                                                                                                                                                                                                                                                            |
| annotated_sample_count     | Integer            | Number of samples with labeled versions.                                                                                                                                                                                                                                                  |
| annotated_sub_sample_count | Integer            | Number of labeled subsamples.                                                                                                                                                                                                                                                             |
| clear_hard_property        | Boolean            | Whether to clear hard example properties during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear hard example properties. (Default value)</li><li>• <b>false</b>: Do not clear hard example properties.</li></ul>                                             |
| code                       | String             | Status code of a preprocessing task such as rotation and cropping.                                                                                                                                                                                                                        |
| create_time                | Long               | Time when a version is created.                                                                                                                                                                                                                                                           |
| crop                       | Boolean            | Whether to crop the image. This field is valid only for the object detection dataset whose labeling box is in the rectangle shape. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Crop the image.</li><li>• <b>false</b>: Do not crop the image. (Default value)</li></ul> |
| crop_path                  | String             | Path for storing cropped files.                                                                                                                                                                                                                                                           |
| crop_rotate_cache_path     | String             | Temporary directory for executing the rotation and cropping task.                                                                                                                                                                                                                         |
| data_analysis              | Map<String,Object> | Feature analysis result in JSON format.                                                                                                                                                                                                                                                   |
| data_path                  | String             | Path for storing data.                                                                                                                                                                                                                                                                    |
| data_statistics            | Map<String,Object> | Sample statistics on a dataset, including the statistics on sample metadata in JSON format.                                                                                                                                                                                               |
| data_validate              | Boolean            | Whether data is validated by the validation algorithm before release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The data has been validated.</li><li>• <b>false</b>: The data has not been validated.</li></ul>                                                       |

| Parameter                 | Type                                        | Description                                                                                                                                                                                                                                                                                   |
|---------------------------|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| deleted_sample_count      | Integer                                     | Number of deleted samples.                                                                                                                                                                                                                                                                    |
| deletion_stats            | Map<String,Integer>                         | Deletion reason statistics.                                                                                                                                                                                                                                                                   |
| description               | String                                      | Description of a version.                                                                                                                                                                                                                                                                     |
| export_images             | Boolean                                     | Whether to export images to the version output directory during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Export images to the version output directory.</li><li>• <b>false</b>: Do not export images to the version output directory. (Default value)</li></ul> |
| extract_serial_number     | Boolean                                     | Whether to parse the subsample number during release. The field is valid for the healthcare dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Parse the subsample number.</li><li>• <b>false</b>: Do not parse the subsample number. (Default value)</li></ul>           |
| include_dataset_data      | Boolean                                     | Whether to include the source data of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The source data of a dataset is included.</li><li>• <b>false</b>: The source data of a dataset is not included.</li></ul>                                       |
| is_current                | Boolean                                     | Whether the current dataset version is used. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The current dataset version is used.</li><li>• <b>false</b>: The current dataset version is not used.</li></ul>                                                                    |
| label_stats               | Array of <a href="#">LabelStats</a> objects | Label statistics list of a released version.                                                                                                                                                                                                                                                  |
| label_type                | String                                      | Label type of a released version. Options: <ul style="list-style-type: none"><li>• <b>multi</b>: Multi-label samples are included.</li><li>• <b>single</b>: All samples are single-labeled.</li></ul>                                                                                         |
| manifest_cache_input_path | String                                      | Input path for the <b>manifest</b> file cache during version release.                                                                                                                                                                                                                         |
| manifest_path             | String                                      | Path for storing the <b>manifest</b> file with the released version.                                                                                                                                                                                                                          |
| message                   | String                                      | Task information recorded during release (for example, error information).                                                                                                                                                                                                                    |

| Parameter                       | Type    | Description                                                                                                                                                                                                                                                                                                             |
|---------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| modified_sample_count           | Integer | Number of modified samples.                                                                                                                                                                                                                                                                                             |
| previous_annotated_sample_count | Integer | Number of labeled samples of parent versions.                                                                                                                                                                                                                                                                           |
| previous_total_sample_count     | Integer | Total samples of parent versions.                                                                                                                                                                                                                                                                                       |
| previous_version_id             | String  | Parent version ID                                                                                                                                                                                                                                                                                                       |
| processor_task_id               | String  | ID of a preprocessing task such as rotation and cropping.                                                                                                                                                                                                                                                               |
| processor_task_status           | Integer | Status of a preprocessing task such as rotation and cropping. The options are as follows: <ul style="list-style-type: none"><li>• 0: initialized - 1: running</li><li>• 2: completed</li><li>• 3: failed</li><li>• 4: stopped</li><li>• 5: timeout</li><li>• 6: Deletion failed.</li><li>• 7: Failed to stop.</li></ul> |
| remove_sample_usage             | Boolean | Whether to clear the existing usage information of a dataset during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear the existing usage information of a dataset. (Default value)</li><li>• <b>false</b>: Do not clear the existing usage information of a dataset.</li></ul>               |
| rotate                          | Boolean | Whether to rotate the image. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Rotate the image.</li><li>• <b>false</b>: Do not rotate the image. (Default value)</li></ul>                                                                                                                                 |
| rotate_path                     | String  | Path for storing the rotated file.                                                                                                                                                                                                                                                                                      |

| Parameter              | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_state           | String           | Sample status. The options are as follows: <ul style="list-style-type: none"><li>• <code>__ALL__</code>: labeled</li><li>• <code>__NONE__</code>: not marked</li><li>• <code>__UNCHECK__</code>: to be accepted</li><li>• <code>__ACCEPTED__</code>: The acceptance is passed.</li><li>• <code>__REJECTED__</code>: rejected</li><li>• <code>__UNREVIEWED__</code>: to be reviewed</li><li>• <code>__REVIEWED__</code>: approved</li><li>• <code>__WORKFORCE_SAMPLED__</code>: sampled</li><li>• <code>__WORKFORCE_SAMPLED_UNCHECK__</code>: Sampling is to be accepted.</li><li>• <code>__WORKFORCE_SAMPLED_CHECKED__</code>: Sampling has been accepted.</li><li>• <code>__WORKFORCE_SAMPLED_ACCEPTED__</code>: The sampling is passed.</li><li>• <code>__WORKFORCE_SAMPLED_REJECTED__</code>: The sampling has been rejected.</li><li>• <code>__AUTO_ANNOTATION__</code>: to be confirmed</li></ul> |
| start_processor_task   | Boolean          | Whether to start a data analysis task during release. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Start a data analysis task during release.</li><li>• <b>false</b>: Do not start a data analysis task during release. (Default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| status                 | Integer          | Status of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>0</b>: creating</li><li>• <b>1</b>: running</li><li>• <b>2</b>: deleting</li><li>• <b>3</b>: deleted</li><li>• <b>4</b>: error</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| tags                   | Array of strings | Key identifier list of the dataset. The labeling type is used as the default label when the labeling task releases a version. For example, ["Image", "Object detection"].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| task_type              | Integer          | Labeling task type of the released version, which is the same as the dataset type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| total_sample_count     | Integer          | Total number of version samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| total_sub_sample_count | Integer          | Total number of subsamples generated from the parent samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Parameter                   | Type    | Description                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| train_evaluate_sample_ratio | String  | Split training and verification ratio during version release. The default value is <b>1.00</b> , indicating that all released versions are training sets.                                                                                                                                                                         |
| update_time                 | Long    | Time when a version is updated.                                                                                                                                                                                                                                                                                                   |
| version_format              | String  | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b>: default format</li><li>• <b>CarbonData</b>: CarbonData (supported only by table datasets)</li><li>• <b>CSV</b>: CSV</li></ul>                                                                                                       |
| version_id                  | String  | Dataset version ID.                                                                                                                                                                                                                                                                                                               |
| version_name                | String  | Dataset version name.                                                                                                                                                                                                                                                                                                             |
| with_column_header          | Boolean | Whether the first row in the released CSV file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the released CSV file is a column name.</li><li>• <b>false</b>: The first row in the released CSV file is not a column name.</li></ul> |

**Table 25-82** LabelStats

| Parameter    | Type                                   | Description                                                                                                                      |
|--------------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of <b>LabelAttribute</b> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| count        | Integer                                | Number of labels.                                                                                                                |
| name         | String                                 | Label name.                                                                                                                      |
| property     | <b>LabelProperty</b> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                      |
| sample_count | Integer                                | Number of samples containing the label.                                                                                          |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-83** LabelAttribute

| Parameter     | Type                                                 | Description                                                                                                                                              |
|---------------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | String                                               | Default value of a label attribute.                                                                                                                      |
| id            | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&''.                                            |
| type          | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-84** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-85** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |
| @modelarts:to_type       | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

## Example Requests

Querying Details About a Dataset Version

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/versions/{version_id}
```

## Example Responses

**Status code: 200**

OK

```
{
 "version_id" : "eSOKEQaXhKzxN00WkoV",
 "version_name" : "V002",
```

```
{
 "version_format" : "Default",
 "previous_version_id" : "vIGvUqOcxxGPIB0ugeE",
 "status" : 1,
 "create_time" : 1605691027084,
 "total_sample_count" : 10,
 "annotated_sample_count" : 10,
 "total_sub_sample_count" : 0,
 "annotated_sub_sample_count" : 0,
 "manifest_path" : "/test-obs/classify/output/dataset-f9e8-gfghHSokody6AJigS5A/annotation/V002/V002.manifest",
 "data_path" : "/test-obs/classify/output/dataset-f9e8-gfghHSokody6AJigS5A/annotation/V002/data/",

}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.11 Deleting a Dataset Labeling Version

### Function

This API is used to delete a dataset labeling version.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

DELETE /v2/{project\_id}/datasets/{dataset\_id}/versions/{version\_id}

**Table 25-86** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| version_id | Yes       | String | Dataset version ID.                                                                                             |

## Request Parameters

None

## Response Parameters

None

## Example Requests

Deleting a Dataset Labeling Version

```
DELETE https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/versions/{version_id}
```

## Example Responses

**Status code: 204**

No Content

```
{}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |
| 401         | Unauthorized |
| 403         | Forbidden    |

## Error Codes

See [Error Codes](#).

## 25.1.12 Obtaining a Sample List

### Function

Obtain a sample list by page.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/samples

**Table 25-87** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-88** Query parameters

| Parameter  | Mandatory | Type   | Description                                                          |
|------------|-----------|--------|----------------------------------------------------------------------|
| email      | No        | String | Email address of a labeling team member                              |
| high_score | No        | String | Upper limit of the confidence score. The default value is <b>1</b> . |
| label_name | No        | String | Label name                                                           |

| Parameter  | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type | No        | Integer | <b>Labeling Type:</b> Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>400</b>: table dataset</li><li>• <b>600</b>: video labeling</li><li>• <b>900</b>: free format</li></ul> |
| limit      | No        | Integer | Maximum number of records returned on each page. The value ranges from <b>1</b> to <b>100</b> . The default value is <b>10</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| locale     | No        | String  | Language Options: <ul style="list-style-type: none"><li>• <b>zh-cn</b>: Chinese</li><li>• <b>en-us</b>: English (default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| low_score  | No        | String  | Lower limit of the confidence score. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| offset     | No        | Integer | Start page for pagination display. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| id        | String                                     | Label ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| name      | String                                     | Label name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| property  | <a href="#">SampleLabelProperty</a> object | Attribute key-value pair of the sample label, such as the object shape and shape feature                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| score     | Float                                      | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| type      | Integer                                    | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-94** SampleLabelProperty

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| @modelarts:end_index | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> . Examples: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", the <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |

| Parameter           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:end_time | String | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| @modelarts:feature  | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. | Parameter                | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:shape         | String  | Object shape, which is a default attribute dedicated to the object detection label and is left empty by default. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

**Table 25-95** SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                          |
|-----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                         |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard sample, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                           |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Parameter       | Type            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of object | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Run the following command to obtain a sample list by page:

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/data-annotations/samples
```

## Response Example

**Status code: 200**

OK

```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Code

For details, see [Error Codes](#).

## 25.1.13 Adding Samples in Batches

### Function

This API is used to add samples in batches.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/samples

**Table 25-96** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-97** Request body parameters

| Parameter        | Mandatory | Type                                    | Description                                                                                                                                                                                                                                                                                                                                                    |
|------------------|-----------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| final_annotation | No        | Boolean                                 | Whether to directly import to the final result. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Import labels to the labeled dataset. (Default value).</li><li>• <b>false</b>: Import labels to the to-be-confirmed dataset. Currently, to-be-confirmed datasets only support categories of image classification and object detection.</li></ul> |
| label_format     | No        | <a href="#">LabelFormat</a> object      | Label format. This parameter is used only for text datasets.                                                                                                                                                                                                                                                                                                   |
| samples          | No        | Array of <a href="#">Sample</a> objects | Sample list.                                                                                                                                                                                                                                                                                                                                                   |

**Table 25-98** LabelFormat

| Parameter  | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type | No        | String | Label type of text classification. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is separated from the text, and they are distinguished by the fixed suffix <b>_result</b>. For example, the text file is <b>abc.txt</b>, and the label file is <b>abc_result.txt</b>.</li><li>• <b>1</b>: Default value. Labels and texts are stored in the same file and separated by separators. You can use <b>text_sample_separator</b> to specify the separator between the text and label and <b>text_label_separator</b> to specify the separator between labels.</li></ul> |

| Parameter             | Mandatory | Type   | Description                                                                                                                                                                                                                                                                    |
|-----------------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| text_label_separator  | No        | String | Separator between labels. By default, a comma (,) is used as the separator. The separator needs to be escaped. The separator can contain only one character, such as a letter, a digit, or any of the following special characters: !@#\$\$%^&* _= ?/'/:.,;                    |
| text_sample_separator | No        | String | Separator between the text and label. By default, the <b>Tab</b> key is used as the separator. The separator needs to be escaped. The separator can contain only one character, such as a letter, a digit, or any of the following special characters: !@#\$\$%^&* _= ?/'/:.,; |

Table 25-99 Sample

| Parameter   | Mandatory | Type                                         | Description                                                                                                                                                                    |
|-------------|-----------|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data        | No        | Object                                       | Byte data of sample files. The type is <b>java.nio.ByteBuffer</b> . When this parameter is called, the string converted from the byte data is uploaded.                        |
| data_source | No        | <a href="#">DataSource</a> object            | Data source.                                                                                                                                                                   |
| encoding    | No        | String                                       | Encoding type of sample files, which is used to upload .txt or .csv files. The value can be <b>UTF-8</b> , <b>GBK</b> , or <b>GB2312</b> . The default value is <b>UTF-8</b> . |
| labels      | No        | Array of <a href="#">SampleLabel</a> objects | Sample label list.                                                                                                                                                             |
| metadata    | No        | <a href="#">SampleMetadata</a> object        | Key-value pair of the sample <b>metadata</b> attribute.                                                                                                                        |
| name        | No        | String                                       | Name of sample files. The value contains 0 to 1,024 characters and cannot contain special characters (!<>=&"').                                                                |

**Table 25-104** SampleLabelProperty

| Parameter            | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | No        | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| @modelarts:end_index | No        | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> .<br>Example: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born August 4, 1961) is an attorney and politician.</b>", <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |
| @modelarts:end_time  | No        | String  | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of <b>hh:mm:ss.SSS</b> . ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                          |

| Parameter          | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:feature | No        | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of the image is used as the coordinate origin [0, 0]. Each coordinate point is represented by [x, y], where x indicates the horizontal coordinate and y indicates the vertical coordinate (both x and y are <math>\geq 0</math>). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b> consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the x-coordinate of the first point must be less than the x-coordinate of the second point, and the y-coordinate of the first point must be less than the y-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li></ul> |

| Parameter                   | Mandatory | Type   | Description                                                                                                                                                                                                                            |
|-----------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             |           |        | <ul style="list-style-type: none"><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from             | No        | String | ID of the head entity in the triplet relationship label, which is a default attribute dedicated to the triplet relationship label.                                                                                                     |
| @modelarts:hard             | No        | String | Sample labeled as a hard sample or not, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0/false</b>: not a hard example</li><li>• <b>1/true</b>: hard example</li></ul>                              |
| @modelarts:hard_coefficient | No        | String | Coefficient of difficulty of each label level, which is a default attribute. The value range is <b>[0,1]</b> .                                                                                                                         |

| Parameter               | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| @modelarts:size | No        | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Response Parameters

## Error Codes

See [Error Codes](#).

## 25.1.14 Deleting Samples in Batches

### Function

This API is used to delete samples in batches.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/samples/delete

**Table 25-108** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |

| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-109** Request body parameters

| Parameter     | Mandatory | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|-----------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| delete_source | No        | Boolean          | Whether to delete the source file. This field is valid for non-text datasets. (A text dataset is the entire text file. Therefore, deleting a piece of data from the text file does not affect the source text.)<br>Options: <ul style="list-style-type: none"><li>● <b>false</b>: Do not delete the source file. (Default value)</li><li>● <b>true</b>: Delete the source file. (Note: This operation may affect the dataset versions or other datasets that have used these files. As a result, the page display, training, or inference is abnormal.)</li></ul> |
| samples       | No        | Array of strings | Sample ID list.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Response Parameters

**Status code: 200****Table 25-110** Response body parameters

| Parameter  | Type                                           | Description                                                                                                                                                                                         |
|------------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String                                         | Error code.                                                                                                                                                                                         |
| error_msg  | String                                         | Error message.                                                                                                                                                                                      |
| results    | Array of <a href="#">BatchResponse</a> objects | Response list for deleting a sample in batches.                                                                                                                                                     |
| success    | Boolean                                        | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>● <b>true</b>: The operation is successful.</li><li>● <b>false</b>: The operation is failed.</li></ul> |

Table 25-111 BatchResponse

| Parameter  | Type    | Description                                                                                                                                                                                         |
|------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String  | Error code.                                                                                                                                                                                         |
| error_msg  | String  | Error message.                                                                                                                                                                                      |
| success    | Boolean | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>● <b>true</b>: The operation is successful.</li><li>● <b>false</b>: The operation is failed.</li></ul> |

Example Requests

Deleting Samples in Batches

```
{
 "samples" : ["9cb9bc9b34bf53b6ec9a84998b1711bf", "9ea63ef78d8c9037c9bcb12b477821bf"]
}
```

Example Responses

Status code: 200

OK

```
{
 "success" : true
}
```

Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

Error Codes

See [Error Codes](#).

25.1.15 Obtaining Details About a Sample

Function

Obtain details about a sample.

## Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

## URI

GET /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/samples/{sample\_id}

Table 25-112 URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |
| sample_id  | Yes       | String | Sample ID                                                                      |

Table 25-113 Query parameters

| Parameter | Mandatory | Type   | Description                                                                                                                               |
|-----------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| locale    | No        | String | Language Options: <ul style="list-style-type: none"><li>• <b>zh-cn</b>: Chinese</li><li>• <b>en-us</b>: English (default value)</li></ul> |

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_state | No        | String | Sample status. Options: <ul style="list-style-type: none"><li>• <b>__ALL__</b>: labeled</li><li>• <b>__NONE__</b>: unlabeled</li><li>• <b>__UNCHECK__</b>: to be accepted</li><li>• <b>__ACCEPTED__</b>: accepted</li><li>• <b>__REJECTED__</b>: rejected</li><li>• <b>__UNREVIEWED__</b>: to be reviewed</li><li>• <b>__REVIEWED__</b>: reviewed</li><li>• <b>__WORKFORCE_SAMPLED__</b>: sampled</li><li>• <b>__WORKFORCE_SAMPLED_UNCHECK__</b>: sampling pending check</li><li>• <b>__WORKFORCE_SAMPLED_CHECKED__</b>: sampling checked</li><li>• <b>__WORKFORCE_SAMPLED_ACCEPTED__</b>: sampling accepted</li><li>• <b>__WORKFORCE_SAMPLED_REJECTED__</b>: sampling rejected</li><li>• <b>__AUTO_ANNOTATION__</b>: to be confirmed</li></ul> |
| worker_id    | No        | String | ID of a labeling team member                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| email        | String  | Email address of a labeling team member                                                                                                                                                                                                                                                                                       |
| role         | Integer | Role. Options: <ul style="list-style-type: none"><li>● <b>0</b>: marker</li><li>● <b>1</b>: reviewer</li><li>● <b>2</b>: team manager</li><li>● <b>3</b>: dataset owner</li></ul>                                                                                                                                             |
| status       | Integer | Current login status of a labeled member. Options: <ul style="list-style-type: none"><li>● <b>0</b>: No invitation email is sent.</li><li>● <b>1</b>: The invitation email is sent but the member has not logged in.</li><li>● <b>2</b>: The member has logged in.</li><li>● <b>3</b>: The member has been deleted.</li></ul> |
| update_time  | Long    | Worker update time                                                                                                                                                                                                                                                                                                            |
| worker_id    | String  | ID of a labeling team member                                                                                                                                                                                                                                                                                                  |
| workforce_id | String  | ID of a labeling team                                                                                                                                                                                                                                                                                                         |

**Table 25-117** SampleLabel

| Parameter    | Type   | Description                                                                                                                                                                                                                           |
|--------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_by | String | Video labeling method, which is used to determine whether a video is labeled manually or automatically. Options: <ul style="list-style-type: none"><li>● <b>human</b>: manual labeling</li><li>● <b>auto</b>: auto labeling</li></ul> |

| Parameter | Type                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | String                                     | Label ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| name      | String                                     | Label name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| property  | <a href="#">SampleLabelProperty</a> object | Attribute key-value pair of the sample label, such as the object shape and shape feature                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| score     | Float                                      | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| type      | Integer                                    | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-118** SampleLabelProperty

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| @modelarts:end_index | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> . Examples: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", the <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |

| Parameter           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| @modelarts:end_time | String | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| @modelarts:feature  | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from     | String | Start entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Parameter                   | Type   | Description                                                                                                                                                                                                                                      |
|-----------------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:hard             | String | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>● <b>0/false</b>: The label is not a hard example.</li><li>● <b>1/true</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | String | Coefficient of difficulty of each label level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                        |

| Parameter               | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Parameter                | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:shape         | String  | Object shape, which is a default attribute dedicated to the object detection label and is left empty by default. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

Table 25-119 SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                           |
|-----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                          |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                            |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|-----------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Run the following command to obtain details about a sample:

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/data-annotations/samples/{sample_id}
```

## Response Example

**Status code: 200**

OK

```
{
 "sample_id" : "012f99f3cf405860130b6ed2350c2228",

```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |

| Status Code | Description |
|-------------|-------------|
| 403         | Forbidden   |
| 404         | Not Found   |

## Error Code

For details, see [Error Codes](#).

## 25.1.16 Obtaining Sample Search Condition

### Function

This API is used to obtain sample search condition.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/search-condition

**Table 25-120** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

### Request Parameters

None

### Response Parameters

Status code: 200

**Table 25-121** Response body parameters

| Parameter | Type                                   | Description                            |
|-----------|----------------------------------------|----------------------------------------|
| labelers  | Array of strings                       | List of labeling team members.         |
| labels    | Array of <a href="#">Label</a> objects | Label list.                            |
| metadata  | Map<String,Array<String>>              | Attribute key-value pair of a dataset. |

**Table 25-122** Label

| Parameter  | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| name       | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property   | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type       | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image classification</li><li>● <b>1</b>: object detection</li><li>● <b>3</b>: image segmentation</li><li>● <b>100</b>: text classification</li><li>● <b>101</b>: named entity recognition</li><li>● <b>102</b>: text triplet relationship</li><li>● <b>103</b>: text triplet entity</li><li>● <b>200</b>: sound classification</li><li>● <b>201</b>: speech content</li><li>● <b>202</b>: speech paragraph labeling</li><li>● <b>600</b>: video labeling</li></ul> |

**Table 25-123** LabelAttribute

| Parameter     | Type   | Description                                                         |
|---------------|--------|---------------------------------------------------------------------|
| default_value | String | Default value of a label attribute.                                 |
| id            | String | Label attribute ID. You can query the tag by invoking the tag list. |

| Parameter | Type                                                 | Description                                                                                                                                              |
|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| name      | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&''.                                            |
| type      | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-124** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-125** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

| Parameter            | Type   | Description                                                                                                                                                                                                    |
|----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:rename_to | String | Default attribute: The new name of the label.                                                                                                                                                                  |
| @modelarts:shortcut  | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                       |
| @modelarts:tail_type | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

## Example Requests

Obtaining Sample Search Condition

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/data-annotations/search-condition
```

## Example Responses

**Status code: 200**

OK

```
{
 "labels" : [{
 "name" : "Rabbits",
 "type" : 0,
 "property" : {
 "@modelarts:color" : "#3399ff"
 }
 }, {
 "name" : "Bees",
 "type" : 0,
 "property" : {
 "@modelarts:color" : "#3399ff"
 }
 }],
 "metadata" : { },
 "labelers" : ["human/test_123/test_123", "human/xxx@xxx.com", "human/xxx@xxx.com"]
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.17 Obtaining a Sample List of a Team Labeling Task by Page

### Function

Obtain a sample list of a team labeling task by page.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/data-annotations/samples

**Table 25-126** URI parameters

| Parameter         | Mandatory | Type   | Description                                                                    |
|-------------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID                                                                     |
| project_id        | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                    |

**Table 25-127** Query parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| label_name | No        | String | Label name  |

| Parameter         | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type        | No        | Integer | <b>Labeling Type:</b> Options: <ul style="list-style-type: none"><li>• <b>0:</b> image classification</li><li>• <b>1:</b> object detection</li><li>• <b>3:</b> image segmentation</li><li>• <b>100:</b> text classification</li><li>• <b>101:</b> named entity recognition</li><li>• <b>102:</b> text triplet</li><li>• <b>200:</b> sound classification</li><li>• <b>201:</b> speech content</li><li>• <b>202:</b> speech paragraph labeling</li><li>• <b>400:</b> table dataset</li><li>• <b>600:</b> video labeling</li><li>• <b>900:</b> free format</li></ul> |
| limit             | No        | Integer | Maximum number of records returned on each page. The value ranges from <b>1</b> to <b>100</b> . The default value is <b>10</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| locale            | No        | String  | Language Options: <ul style="list-style-type: none"><li>• <b>zh-cn:</b> Chinese</li><li>• <b>en-us:</b> English (default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| offset            | No        | Integer | Start page for pagination display. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| process_parameter | No        | String  | Image resize configuration, which is the same as OBS settings. For details, see <a href="#">Resizing Images</a> . For example, <b>image/resize,m_lfit,h_200</b> indicates that the target image is resized proportionally and the height is set to 200 pixels.                                                                                                                                                                                                                                                                                                     |

| Parameter         | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| property     | <a href="#">SampleLabelProperty</a> object | Attribute key-value pair of the sample label, such as the object shape and shape feature                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| score        | Float                                      | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| type         | Integer                                    | Label type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image classification</li><li>● <b>1</b>: object detection</li><li>● <b>3</b>: image segmentation</li><li>● <b>100</b>: text classification</li><li>● <b>101</b>: named entity recognition</li><li>● <b>102</b>: text triplet relationship</li><li>● <b>103</b>: text triplet entity</li><li>● <b>200</b>: sound classification</li><li>● <b>201</b>: speech content</li><li>● <b>202</b>: speech paragraph labeling</li><li>● <b>600</b>: video labeling</li></ul> |

**Table 25-133** SampleLabelProperty

| Parameter          | Type   | Description                                                                                                                                    |
|--------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content | String | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points) |

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:end_index | Integer | <p>End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b>. Examples:</p> <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", the <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |
| @modelarts:end_time  | String  | <p>Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. (<b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)</p>                                                                                                                                                                                                                                                                                                                                                                                                       |

| Parameter                   | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| @modelarts:feature          | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |

| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

**Table 25-134** SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                           |
|-----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                          |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                            |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Parameter       | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Querying the Sample List of a Team Labeling Task by Page

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/workforce-tasks/{workforce_task_id}/data-annotations/samples
```

## Response Example

Status code: 200

OK

```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Code

For details, see [Error Codes](#).

## 25.1.18 Obtaining Details About a Team Labeling Sample

### Function

Obtain samples labeled by a team. The API can be called only after an acceptance task is initiated.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/data-annotations/samples/{sample\_id}

**Table 25-135** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |

| Parameter         | Mandatory | Type   | Description      |
|-------------------|-----------|--------|------------------|
| sample_id         | Yes       | String | Sample ID        |
| workforce_task_id | Yes       | String | Labeling task ID |

**Table 25-136** Query parameters

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| @modelarts:feature          | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from             | String | Start entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Parameter                | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:shape         | String  | Object shape, which is a default attribute dedicated to the object detection label and is left empty by default. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

Table 25-142 SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                          |
|-----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                         |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard sample, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                           |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Parameter       | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | Default attribute: image size, including width, height, and depth. The type is List[/topic/body/section/table/tgroup/tbody/row/entry/p/br. {""}] (br]. In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is 3). For example, [100,200,3] and [100,200] are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Run the following command to obtain details about a team labeling sample:

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/workforce-tasks/{workforce_task_id}/data-annotations/samples/{sample_id}
```

## Response Example

**Status code: 200**

OK

```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |

| Status Code | Description |
|-------------|-------------|
| 403         | Forbidden   |
| 404         | Not Found   |

## Error Code

For details, see [Error Codes](#).

## 25.1.19 Querying the Dataset Label List

### Function

This API is used to query all labels of a dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/labels

**Table 25-143** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-144** Query Parameters

| Parameter  | Mandatory | Type    | Description                                                        |
|------------|-----------|---------|--------------------------------------------------------------------|
| version_id | No        | String  | Dataset version ID.                                                |
| offset     | No        | Integer | Start page for pagination display. The default value is <b>0</b> . |

| Parameter | Mandatory | Type    | Description                                                                                                              |
|-----------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------|
| limit     | No        | Integer | Maximum number of records returned on each page. The value ranges from 1 to 100000. The default value is <b>100000</b> . |

## Request Parameters

None

## Response Parameters

Status code: 200

**Table 25-145** Response body parameters

| Parameter    | Type                                   | Description      |
|--------------|----------------------------------------|------------------|
| labels       | Array of <a href="#">Label</a> objects | Label list.      |
| total_number | Integer                                | Number of labels |

**Table 25-146** Label

| Parameter  | Type                                            | Description                                                                                                                      |
|------------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| name       | String                                          | Label name.                                                                                                                      |
| property   | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                      |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-147** LabelAttribute

| Parameter     | Type                                                 | Description                                                                                                                                              |
|---------------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | String                                               | Default value of a label attribute.                                                                                                                      |
| id            | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&'".                                            |
| type          | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-148** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-149** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |
| @modelarts:to_type       | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

## Example Requests

Querying All Labels of a Dataset

```
GET https://{endpoint}/v2/{project_id}/datasets/WxCREuCkBSAlQr9xrde/data-annotations/labels
```

## Example Responses

**Status code: 200**

OK

```
{
 "total_number" : 2,
 "labels" : [{
```

```
{
 "name" : "Rabbits",
 "type" : 1,
 "property" : {
 "@modelarts:color" : "#3399ff"
 }
}, {
 "name" : "Bees",
 "type" : 1,
 "property" : {
 "@modelarts:color" : "#3399ff"
 }
}]
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.20 Creating a Dataset Label

### Function

This API is used to create a dataset label.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/labels

**Table 25-150** Path Parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| dataset_id | Yes       | String | Dataset ID. |

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-151** Request body parameters

| Parameter | Mandatory | Type                                   | Description                   |
|-----------|-----------|----------------------------------------|-------------------------------|
| labels    | No        | Array of <a href="#">Label</a> objects | List of labels to be created. |

**Table 25-152** Label

| Parameter  | Mandatory | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-----------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes | No        | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| name       | No        | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property   | No        | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type       | No        | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-153** LabelAttribute

| Parameter     | Mandatory | Type                                                 | Description                                                                                                                                              |
|---------------|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | No        | String                                               | Default value of a label attribute.                                                                                                                      |
| id            | No        | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | No        | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&".                                             |
| type          | No        | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values        | No        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-154** LabelAttributeValue

| Parameter | Mandatory | Type   | Description               |
|-----------|-----------|--------|---------------------------|
| id        | No        | String | Label attribute value ID. |
| value     | No        | String | Label attribute value.    |

**Table 25-155** LabelProperty

| Parameter        | Mandatory | Type   | Description                                                                                                                                    |
|------------------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color | No        | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> . |

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:default_shape | No        | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | No        | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | No        | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | No        | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |
| @modelarts:tail_type     | No        | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

## Response Parameters

Status code: 200

Table 25-156 Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| error_code | String | Error code. |

| Parameter | Type                                           | Description                                                                                                                                                                                         |
|-----------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_msg | String                                         | Error message.                                                                                                                                                                                      |
| results   | Array of <a href="#">BatchResponse</a> objects | Response body for creating a label.                                                                                                                                                                 |
| success   | Boolean                                        | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>• <b>true</b>: The operation is successful.</li><li>• <b>false</b>: The operation is failed.</li></ul> |

**Table 25-157** BatchResponse

| Parameter  | Type    | Description                                                                                                                                                                                         |
|------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String  | Error code.                                                                                                                                                                                         |
| error_msg  | String  | Error message.                                                                                                                                                                                      |
| success    | Boolean | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>• <b>true</b>: The operation is successful.</li><li>• <b>false</b>: The operation is failed.</li></ul> |

## Example Requests

The following is an example of how to create a dataset label whose name is **Cat** and shape is **bndbox** for object detection by default.

```
{
 "labels": [{
 "name": "Cat",
 "property": {
 "@modelarts:color": "#3399ff",
 "@modelarts:default_shape": "bndbox"
 }
 }]
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "success": true
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.21 Modifying Labels in Batches

### Function

This API is used to modify labels in batches.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

PUT /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/labels

**Table 25-158** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-159** Request body parameters

| Parameter | Mandatory | Type                                   | Description                   |
|-----------|-----------|----------------------------------------|-------------------------------|
| labels    | No        | Array of <a href="#">Label</a> objects | List of labels to be updated. |

**Table 25-160** Label

| Parameter  | Mandatory | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-----------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes | No        | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| name       | No        | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property   | No        | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type       | No        | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-161** LabelAttribute

| Parameter     | Mandatory | Type   | Description                         |
|---------------|-----------|--------|-------------------------------------|
| default_value | No        | String | Default value of a label attribute. |

| Parameter | Mandatory | Type                                                 | Description                                                                                                                                              |
|-----------|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | No        | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name      | No        | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&".                                             |
| type      | No        | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values    | No        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-162** LabelAttributeValue

| Parameter | Mandatory | Type   | Description               |
|-----------|-----------|--------|---------------------------|
| id        | No        | String | Label attribute value ID. |
| value     | No        | String | Label attribute value.    |

**Table 25-163** LabelProperty

| Parameter        | Mandatory | Type   | Description                                                                                                                                    |
|------------------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color | No        | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> . |

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:default_shape | No        | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | No        | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | No        | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | No        | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |
| @modelarts:to_type       | No        | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

## Response Parameters

Status code: 200

Table 25-164 Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| error_code | String | Error code. |

| Parameter | Type                                           | Description                                                                                                                                            |
|-----------|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_msg | String                                         | Error message.                                                                                                                                         |
| results   | Array of <a href="#">BatchResponse</a> objects | Response body for updating labels.                                                                                                                     |
| success   | Boolean                                        | Whether the operation is successful. Options: <ul style="list-style-type: none"><li>• <b>true</b>: successful</li><li>• <b>false</b>: failed</li></ul> |

**Table 25-165** BatchResponse

| Parameter  | Type    | Description                                                                                                                                                                                      |
|------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String  | Error code.                                                                                                                                                                                      |
| error_msg  | String  | Error message.                                                                                                                                                                                   |
| success    | Boolean | Check whether the operation is successful. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The operation is successful.</li><li>• <b>false</b>: The operation is failed.</li></ul> |

## Example Requests

### Modifying Labels in Batches

```
{
 "labels": [{
 "name": "Cat",
 "property": {
 "@modelarts:color": "#8a1524",
 "@modelarts:rename_to": "pussycat"
 }
 }]
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "success": true
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.22 Deleting Labels in Batches

### Function

This API is used to delete labels in batches.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/labels/delete

**Table 25-166** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-167** Query Parameters

| Parameter     | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                              |
|---------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| delete_policy | No        | Integer | Whether to delete a label and samples containing the label.<br>Options: <ul style="list-style-type: none"><li>• <b>0</b>: Delete the label.</li><li>• <b>1</b>: Delete the label and the samples that only contain this label, but do not delete source files.</li><li>• <b>2</b>: Delete the label and the samples that only contain this label and also delete source files.</li></ul> |

## Request Parameters

**Table 25-168** Request body parameters

| Parameter | Mandatory | Type                                   | Description                   |
|-----------|-----------|----------------------------------------|-------------------------------|
| labels    | No        | Array of <a href="#">Label</a> objects | List of labels to be deleted. |

**Table 25-169** Label

| Parameter  | Mandatory | Type                                            | Description                                                                                                                      |
|------------|-----------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes | No        | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| name       | No        | String                                          | Label name.                                                                                                                      |
| property   | No        | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                      |

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | No        | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-170** LabelAttribute

| Parameter     | Mandatory | Type                                                 | Description                                                                                                                                              |
|---------------|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | No        | String                                               | Default value of a label attribute.                                                                                                                      |
| id            | No        | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | No        | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&".                                             |
| type          | No        | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values        | No        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-171** LabelAttributeValue

| Parameter | Mandatory | Type   | Description               |
|-----------|-----------|--------|---------------------------|
| id        | No        | String | Label attribute value ID. |
| value     | No        | String | Label attribute value.    |

**Table 25-172** LabelProperty

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | No        | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | No        | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | No        | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | No        | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | No        | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |

| Parameter                 | Mandatory | Type   | Description                                                                                                                                                                                                    |
|---------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:tail<br>o_type | No        | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

## Response Parameters

Status code: 200

Table 25-173 Response body parameters

| Parameter  | Type                                           | Description                                                                                                                                                                                         |
|------------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String                                         | Error code.                                                                                                                                                                                         |
| error_msg  | String                                         | Error message.                                                                                                                                                                                      |
| results    | Array of <a href="#">BatchResponse</a> objects | Response body for deleting a label.                                                                                                                                                                 |
| success    | Boolean                                        | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>• <b>true</b>: The operation is successful.</li><li>• <b>false</b>: The operation is failed.</li></ul> |

Table 25-174 BatchResponse

| Parameter  | Type    | Description                                                                                                                                                                                         |
|------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String  | Error code.                                                                                                                                                                                         |
| error_msg  | String  | Error message.                                                                                                                                                                                      |
| success    | Boolean | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>• <b>true</b>: The operation is successful.</li><li>• <b>false</b>: The operation is failed.</li></ul> |

## Example Requests

The following is an example of how to delete the tag named **strawberry**.

```
{
 "labels": [{
 "name": "strawberry"
 }]
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "success": true
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.23 Updating a Label by Label Names

### Function

This API is used to update a label by label names.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

PUT /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/labels/{label\_name}

**Table 25-175** Path Parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| dataset_id | Yes       | String | Dataset ID. |

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| label_name | Yes       | String | Label name.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-176** Query Parameters

| Parameter  | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type | No        | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship label</li><li>• <b>103</b>: text triplet entity label</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

## Request Parameters

**Table 25-177** Request body parameters

| Parameter        | Mandatory | Type   | Description                                                                                                                                    |
|------------------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color | No        | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> . |

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:default_shape | No        | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | No        | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | No        | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | No        | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |
| @modelarts:tail_type     | No        | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

## Response Parameters

Status code: 204

Table 25-178 Response body parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| error_code | String | Error code. |

| Parameter | Type    | Description                                                                                                                                            |
|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_msg | String  | Error message.                                                                                                                                         |
| success   | Boolean | Whether the operation is successful. Options: <ul style="list-style-type: none"><li>• <b>true</b>: successful</li><li>• <b>false</b>: failed</li></ul> |

## Example Requests

Updating a Label by Label Names

```
{
 "@modelarts:color" : "#93c47d"
}
```

## Example Responses

Status code: 204

No Content

```
{}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |

## Response Parameters

Status code: 204

**Table 25-181** Response body parameters

| Parameter  | Type    | Description                                                                                                                                                                                      |
|------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String  | Error code.                                                                                                                                                                                      |
| error_msg  | String  | Error message.                                                                                                                                                                                   |
| success    | Boolean | Check whether the operation is successful. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The operation is successful.</li><li>• <b>false</b>: The operation is failed.</li></ul> |

## Example Requests

Deleting a Label and the Files that Only Contain the Label

```
DELETE https://{endpoint}/v2/{project_id}/datasets/WxCREuCkBSAlQr9xrde/data-annotations/labels/
%E8%8D%89%E8%8E%93
```

## Example Responses

Status code: 204

No Content

```
{
 "success" : true
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |
| 401         | Unauthorized |
| 403         | Forbidden    |

## Error Codes

See [Error Codes](#).

## 25.1.25 Updating Sample Labels in Batches

### Function

This API is used to update sample labels in batches, including adding, modifying, and deleting sample labels. If the parameter **Labels** of a sample in the request body is not specified, the label of the sample is deleted.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

PUT /v2/{project\_id}/datasets/{dataset\_id}/data-annotations/samples

**Table 25-182** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-183** Request body parameters

| Parameter | Mandatory | Type                                          | Description                              |
|-----------|-----------|-----------------------------------------------|------------------------------------------|
| email     | No        | String                                        | Email address of a labeling team member. |
| samples   | No        | Array of <a href="#">SampleLabels</a> objects | Updated sample list.                     |

**Table 25-184** SampleLabels

| Parameter    | Mandatory | Type                                          | Description                                                                                                                                                                                                                       |
|--------------|-----------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels       | No        | Array of <a href="#">SampleLabels</a> objects | Sample label list. If this parameter is left blank, all sample labels are deleted.                                                                                                                                                |

**Table 25-186** SampleLabelProperty

| Parameter          | Mandatory | Type   | Description                                                                                                                                     |
|--------------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content | No        | String | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points). |

| Parameter            | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:end_index | No        | Integer | <p>End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b>.</p> <p>Example:</p> <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born August 4, 1961) is an attorney and politician.</b>", <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |
| @modelarts:end_time  | No        | String  | <p>Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of <b>hh:mm:ss.SSS</b>. (<b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)</p>                                                                                                                                                                                                                                                                                                                                                                                               |

| Parameter          | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:feature | No        | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of the image is used as the coordinate origin [0, 0]. Each coordinate point is represented by [x, y], where x indicates the horizontal coordinate and y indicates the vertical coordinate (both x and y are <math>\geq 0</math>). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b> consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the x-coordinate of the first point must be less than the x-coordinate of the second point, and the y-coordinate of the first point must be less than the y-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li></ul> |

| Parameter                   | Mandatory | Type   | Description                                                                                                                                                                                                                            |
|-----------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             |           |        | <ul style="list-style-type: none"><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from             | No        | String | ID of the head entity in the triplet relationship label, which is a default attribute dedicated to the triplet relationship label.                                                                                                     |
| @modelarts:hard             | No        | String | Sample labeled as a hard sample or not, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0/false</b>: not a hard example</li><li>• <b>1/true</b>: hard example</li></ul>                              |
| @modelarts:hard_coefficient | No        | String | Coefficient of difficulty of each label level, which is a default attribute. The value range is <b>[0,1]</b> .                                                                                                                         |

| Parameter               | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| @modelarts:size | No        | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Response Parameters

Status code: 200

**Table 25-188** Response body parameters

| Parameter  | Type                                  | Description                                                                                                                                            |
|------------|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| error_code | String                                | Error code.                                                                                                                                            |
| error_msg  | String                                | Error message.                                                                                                                                         |
| results    | Array of <b>BatchResponse</b> objects | Response list for updating sample labels in batches.                                                                                                   |
| success    | Boolean                               | Whether the operation is successful. Options: <ul style="list-style-type: none"><li>• <b>true</b>: successful</li><li>• <b>false</b>: failed</li></ul> |

**Table 25-189** BatchResponse

| Parameter  | Type   | Description    |
|------------|--------|----------------|
| error_code | String | Error code.    |
| error_msg  | String | Error message. |

| Parameter | Type    | Description                                                                                                                                                                                         |
|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| success   | Boolean | Check whether the operation is successful.<br>Options: <ul style="list-style-type: none"><li>● <b>true</b>: The operation is successful.</li><li>● <b>false</b>: The operation is failed.</li></ul> |

### Example Requests

Updating Sample Labels in Batches

```
{
 "samples": [{
 "sample_id": "8b583c44bf249f8ba43ea42c92920221",
 "labels": [{
 "name": "yunbao"
 }]
 }, {
 "sample_id": "b5fe3039879660a2e6bf18166e247f68",
 "labels": [{
 "name": "yunbao"
 }]
 }]
}
```

### Example Responses

Status code: 200

OK

```
{
 "success": true
}
```

### Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

### Error Codes

See [Error Codes](#).

## 25.1.26 Querying the Team Labeling Task List of a Dataset

### Function

This API is used to query the team labeling task list of a dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks

**Table 25-190** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-191** Query Parameters

| Parameter | Mandatory | Type    | Description                                                                                                          |
|-----------|-----------|---------|----------------------------------------------------------------------------------------------------------------------|
| offset    | No        | Integer | Start page for pagination display. The default value is <b>0</b> .                                                   |
| limit     | No        | Integer | Maximum number of records returned on each page. The value ranges from 1 to 1000. The default value is <b>1000</b> . |

### Request Parameters

None

### Response Parameters

Status code: 200

**Table 25-192** Response body parameters

| Parameter | Type                                           | Description                              |
|-----------|------------------------------------------------|------------------------------------------|
| count     | Integer                                        | Total number of team labeling tasks.     |
| tasks     | Array of <a href="#">WorkforceTask</a> objects | Team labeling task list queried by page. |

**Table 25-193** WorkforceTask

| Parameter                | Type                                             | Description                                                                                                                                                                                                                                                                                                                                              |
|--------------------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| auto_sync_dataset        | Boolean                                          | Whether to automatically synchronize the result of a team labeling task to the dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Automatically synchronize the result of a team labeling task to the dataset.</li><li>• <b>false</b>: Do not automatically synchronize the result of a team labeling task to the dataset.</li></ul> |

|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| status    | Integer | <p>Status of a team labeling task. Options:</p> <ul style="list-style-type: none"><li>● <b>0</b>: Starting. The owner or manager is starting the task, and files to be labeled are still being allocated. The owner, manager, annotator, and reviewer can view the task list. Since the task allocation has not been completed, no other task can be started.</li><li>● <b>1</b>: Running. The annotator or reviewer performs labeling or reviews the task, and the owner performs acceptance. For example, new files need to be allocated again if auto labeling files are added or synchronized, or unlabeled files are imported.</li><li>● <b>2</b>: Accepting. The owner initiates an acceptance task, but the acceptance has not been completed. In this state, a new acceptance task can be started only after the current one is completed.</li><li>● <b>3</b>: Accepted. The team labeling task has been completed.</li><li>● <b>**4</b>: Rejected. The manager starts the task again. In this state, samples need to be labeled and the task must be reviewed again.</li><li>● <b>5</b>: Synchronizing acceptance result. This status is added when an acceptance task changes to be asynchronous. In this state, no new acceptance task can be initiated and the current acceptance task cannot be continued. In the task name area, the system displays a message indicating that the acceptance result is being synchronized.</li><li>● <b>6</b>: Created. The task has been created by the owner but has not been started. Only the owner and manager can view the task list.</li><li>● <b>7</b>: Acceptance sampling. This status is added when an acceptance task changes to be asynchronous. In this state, no new acceptance task can be initiated and the current acceptance task cannot be continued. In the task name area, the system displays a message indicating that acceptance sampling is in progress.</li></ul> |

| task_id                        | String                         | ID of a labeling task.                                                                                                                                                                                                                                                                                                          |
| task_name                      | String                         | Name of a labeling task.                                                                                                                                                                                                                                                                                                        |
| update_time                    | Long                           | Time when a labeling task is updated.                                                                                                                                                                                                                                                                                           |
| version_id                     | String                         | Version ID of the dataset associated with a labeling task.                                                                                                                                                                                                                                                                      |
| workforce_stats                | <b>WorkforceStats</b> object   | Statistics on team labeling task members.                                                                                                                                                                                                                                                                                       |
| workforces_config              | <b>WorkforcesConfig</b> object | Team labeling task information: Tasks can be assigned by the team administrator or a specified team.                                                                                                                                                                                                                            |

**Table 25-194** WorkforceSamplingTaskDesc

| Parameter        | Type                         | Description                                                                                                                                                                                                                                                                                               |
|------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| action           | Integer                      | Acceptance operations. Options: <ul style="list-style-type: none"><li>• <b>0</b>: Pass all samples.</li><li>• <b>1</b>: Reject all samples.</li><li>• <b>4</b>: Pass single-accepted samples and unaccepted samples.</li><li>• <b>5</b>: Reject single-rejected samples and unaccepted samples.</li></ul> |
| checking_stats   | <b>CheckTaskStats</b> object | Real-time report of acceptance tasks.                                                                                                                                                                                                                                                                     |
| checking_task_id | String                       | ID of the current acceptance task.                                                                                                                                                                                                                                                                        |

| Parameter             | Type                         | Description                                                                                                                                                                                                                                                                                             |
|-----------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| overwrite_last_result | Boolean                      | Whether to use the acceptance result to overwrite the labeled result if a sample has been labeled during acceptance. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Overwrite the labeled result.</li><li>• <b>false</b>: Do not overwrite the labeled result. (Default value)</li></ul> |
| total_stats           | <b>CheckTaskStats</b> object | Overall report of historical acceptance tasks.                                                                                                                                                                                                                                                          |

**Table 25-195** CheckTaskStats

| Parameter              | Type    | Description                          |
|------------------------|---------|--------------------------------------|
| accepted_sample_count  | Integer | Accepted samples.                    |
| checked_sample_count   | Integer | Checked samples.                     |
| pass_rate              | Double  | Pass rate of samples.                |
| rejected_sample_count  | Integer | Rejected samples.                    |
| sampled_sample_count   | Integer | Number of sampled samples.           |
| sampling_num           | Integer | Samples of an acceptance task.       |
| sampling_rate          | Double  | Sampling rate of an acceptance task. |
| score                  | String  | Acceptance score.                    |
| task_id                | String  | ID of an acceptance task.            |
| total_sample_count     | Integer | Total samples.                       |
| total_score            | Long    | Total acceptance score.              |
| unchecked_sample_count | Integer | Unchecked samples.                   |

**Table 25-196** LabelStats

| Parameter    | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| count        | Integer                                         | Number of labels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| name         | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property     | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| sample_count | Integer                                         | Number of samples containing the label.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| type         | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image classification</li><li>● <b>1</b>: object detection</li><li>● <b>3</b>: image segmentation</li><li>● <b>100</b>: text classification</li><li>● <b>101</b>: named entity recognition</li><li>● <b>102</b>: text triplet relationship</li><li>● <b>103</b>: text triplet entity</li><li>● <b>200</b>: sound classification</li><li>● <b>201</b>: speech content</li><li>● <b>202</b>: speech paragraph labeling</li><li>● <b>600</b>: video labeling</li></ul> |

**Table 25-197** LabelAttribute

| Parameter     | Type   | Description                                                                                                                                              |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | String | Default value of a label attribute.                                                                                                                      |
| id            | String | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | String | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&"".                                            |
| type          | String | Label attribute type. Options: <ul style="list-style-type: none"><li>● <b>text</b>: text</li><li>● <b>select</b>: single-choice drop-down list</li></ul> |

| Parameter | Type                                                 | Description                     |
|-----------|------------------------------------------------------|---------------------------------|
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values. |

**Table 25-198** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-199** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |

| Parameter            | Type   | Description                                                                                                                                                                                                    |
|----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:tail_type | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

**Table 25-200** SearchCondition

| Parameter        | Type                                | Description                                                                                                                                                                                    |
|------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| coefficient      | String                              | Filter by coefficient of difficulty.                                                                                                                                                           |
| frame_in_video   | Integer                             | A frame in the video.                                                                                                                                                                          |
| hard             | String                              | Whether a sample is a hard sample. Options: <ul style="list-style-type: none"><li>• 0: non-hard sample</li><li>• 1: hard sample</li></ul>                                                      |
| import_origin    | String                              | Filter by data source.                                                                                                                                                                         |
| kvp              | String                              | CT dosage, filtered by dosage.                                                                                                                                                                 |
| label_list       | <a href="#">SearchLabels</a> object | Label search criteria.                                                                                                                                                                         |
| labeler          | String                              | Labeler.                                                                                                                                                                                       |
| metadata         | <a href="#">SearchProp</a> object   | Search by sample attribute.                                                                                                                                                                    |
| parent_sample_id | String                              | Parent sample ID.                                                                                                                                                                              |
| sample_dir       | String                              | Directory where data samples are stored (the directory must end with a slash (/)). Only samples in the specified directory are searched for. Recursive search of directories is not supported. |
| sample_name      | String                              | Search by sample name, including the file name extension.                                                                                                                                      |

| Parameter       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_time     | String | When a sample is added to the dataset, an index is created based on the last modification time (accurate to day) of the sample on OBS. You can search for the sample based on the time. Options: <ul style="list-style-type: none"><li>• <b>month</b>: Search for samples added from 30 days ago to the current day.</li><li>• <b>day</b>: Search for samples added from yesterday (one day ago) to the current day.</li><li>• <b>yyyyMMdd-yyyyMMdd</b>: Search for samples added in a specified period (at most 30 days), in the format of <b>Start date-End date</b>. For example, <b>20190901-2019091501</b> indicates that samples generated from September 1 to September 15, 2019 are searched.</li></ul> |
| score           | String | Search by confidence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| slice_thickness | String | DICOM layer thickness. Samples are filtered by layer thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| study_date      | String | DICOM scanning time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| time_in_video   | String | A time point in the video.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**Table 25-201** SearchLabels

| Parameter | Type                                         | Description                                                                                                                                                                                                                                                   |
|-----------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SearchLabel</a> objects | List of label search criteria.                                                                                                                                                                                                                                |
| op        | String                                       | If you want to search for multiple labels, <b>op</b> must be specified. If you search for only one label, <b>op</b> can be left blank. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul> |

**Table 25-202** SearchLabel

| Parameter | Type   | Description |
|-----------|--------|-------------|
| name      | String | Label name. |

| Parameter | Type                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Operation type between multiple attributes. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul>                                                                                                                                                                                                                                                                                                                                                                        |
| property  | Map<String,Array<String>> | Label attribute, which is in the Object format and stores any key-value pairs. <b>key</b> indicates the attribute name, and <b>value</b> indicates the value list. If <b>value</b> is <b>null</b> , the search is not performed by value. Otherwise, the search value can be any value in the list.                                                                                                                                                                                                                                       |
| type      | Integer                   | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-203** SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>• <b>AND</b>: AND relationship</li><li>• <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

**Table 25-204** SampleStats

| Parameter             | Type    | Description                              |
|-----------------------|---------|------------------------------------------|
| accepted_sample_count | Integer | Number of samples accepted by the owner. |

| Parameter                    | Type    | Description                                                                                         |
|------------------------------|---------|-----------------------------------------------------------------------------------------------------|
| auto_annotation_sample_count | Integer | Number of samples to be confirmed after intelligent labeling.                                       |
| deleted_sample_count         | Integer | Number of deleted samples.                                                                          |
| rejected_sample_count        | Integer | Number of samples that failed to pass the owner acceptance.                                         |
| sampled_sample_count         | Integer | Number of samples that are to be accepted by the owner and sampled.                                 |
| total_sample_count           | Integer | Total number of samples.                                                                            |
| unannotated_sample_count     | Integer | Number of unlabeled samples.                                                                        |
| uncheck_sample_count         | Integer | Number of samples that have been approved by the reviewer and are to be accepted by the owner.      |
| unreviewed_sample_count      | Integer | Number of samples that have been labeled by the labeler but have not been reviewed by the reviewer. |

**Table 25-205** WorkforceStats

| Parameter       | Type    | Description                                        |
|-----------------|---------|----------------------------------------------------|
| labeler_count   | Integer | Number of annotators. The value cannot exceed 100. |
| reviewer_count  | Integer | Number of reviewers. The value cannot exceed 100.  |
| workforce_count | Integer | Number of teams.                                   |

**Table 25-206** WorkforcesConfig

| Parameter  | Type                                             | Description                                |
|------------|--------------------------------------------------|--------------------------------------------|
| agency     | String                                           | Administrator                              |
| workforces | Array of <a href="#">WorkforceConfig</a> objects | List of teams that execute labeling tasks. |

**Table 25-207** WorkforceConfig

| Parameter      | Type                                    | Description                                                                                                                     |
|----------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| workers        | Array of <a href="#">Worker</a> objects | List of labeling team members.                                                                                                  |
| workforce_id   | String                                  | ID of a labeling team.                                                                                                          |
| workforce_name | String                                  | Name of a labeling team. The value contains 0 to 1024 characters and does not support the following special characters: !<>=&"" |

**Table 25-208** Worker

| Parameter    | Type    | Description                                                                                                                                                                                                                                                                                                                        |
|--------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time  | Long    | Creation time.                                                                                                                                                                                                                                                                                                                     |
| description  | String  | Labeling team member description. The value contains 0 to 256 characters and does not support the following special characters: ^!<>=&""                                                                                                                                                                                           |
| email        | String  | Email address of a labeling team member.                                                                                                                                                                                                                                                                                           |
| role         | Integer | Role. Options: <ul style="list-style-type: none"><li>● 0: labeling personnel</li><li>● 1: reviewer</li><li>● 2: team administrator</li><li>● 3: dataset owner</li></ul>                                                                                                                                                            |
| status       | Integer | Current login status of a labeling team member. Options: <ul style="list-style-type: none"><li>● 0: The invitation email has not been sent.</li><li>● 1: The invitation email has been sent but the user has not logged in.</li><li>● 2: The user has logged in.</li><li>● 3: The labeling team member has been deleted.</li></ul> |
| update_time  | Long    | Update time.                                                                                                                                                                                                                                                                                                                       |
| worker_id    | String  | ID of a labeling team member.                                                                                                                                                                                                                                                                                                      |
| workforce_id | String  | ID of a labeling team.                                                                                                                                                                                                                                                                                                             |

## Example Requests

Querying the Team Labeling Task List of a Dataset

GET https://{endpoint}/v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks

## Example Responses

|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

Error Codes

See [Error Codes](#).

25.1.27 Creating a Team Labeling Task

Function

This API is used to create a team labeling task.

Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

URI

POST /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks

**Table 25-209** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-210** Request body parameters

| Parameter         | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| auto_sync_dataset | No        | Boolean | Whether to automatically synchronize the result of a team labeling task to the dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Automatically synchronize the result of a team labeling task to the dataset. (Default value)</li><li>• <b>false</b>: Do not automatically synchronize the result of a team labeling task to the dataset.</li></ul> |
| data_sync_type    | No        | Integer | Synchronization type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: unsynchronization</li><li>• <b>1</b>: data synchronization</li><li>• <b>2</b>: label synchronization</li><li>• <b>3</b>: data and label synchronization</li></ul>                                                                                                                       |
| repetition        | No        | Integer | Number of persons who label each sample in a team labeling task. The minimum value is <b>1</b> .                                                                                                                                                                                                                                                                         |
| sample_conditions | No        | String  | Search conditions of dataset samples. Samples that meet the conditions are filtered for team labeling.                                                                                                                                                                                                                                                                   |

| Parameter                      | Mandatory | Type                           | Description                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|-----------|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| synchronize_auto_labeling_data | No        | Boolean                        | Whether to synchronize the auto labeling result of a team labeling task. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Synchronize the results to be confirmed to team members after auto labeling is complete.</li><li>• <b>false</b>: Do not synchronize the auto labeling results. (Default value)</li></ul> |
| workforces_config              | No        | <b>WorkforcesConfig</b> object | Team labeling task information: Tasks can be assigned by the team administrator or a specified team.                                                                                                                                                                                                                            |
| task_name                      | No        | String                         | Name of a team labeling task.                                                                                                                                                                                                                                                                                                   |
| synchronize_data               | No        | Boolean                        | Whether to synchronously update new data.                                                                                                                                                                                                                                                                                       |

**Table 25-211** WorkforcesConfig

| Parameter  | Mandatory | Type                                    | Description                                |
|------------|-----------|-----------------------------------------|--------------------------------------------|
| agency     | No        | String                                  | Administrator                              |
| workforces | No        | Array of <b>WorkforceConfig</b> objects | List of teams that execute labeling tasks. |

**Table 25-212** WorkforceConfig

| Parameter      | Mandatory | Type                           | Description                                                                                                                     |
|----------------|-----------|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| workers        | No        | Array of <b>Worker</b> objects | List of labeling team members.                                                                                                  |
| workforce_id   | No        | String                         | ID of a labeling team.                                                                                                          |
| workforce_name | No        | String                         | Name of a labeling team. The value contains 0 to 1024 characters and does not support the following special characters: !<>=&"" |

**Table 25-213** Worker

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                    |

| workforce_id | No        | String  | ID of a labeling team.                                                                                                                                                                                                                                                                                                                                         |

## Response Parameters

**Status code: 200**

**Table 25-214** Response body parameters

| Parameter | Type   | Description                 |
|-----------|--------|-----------------------------|
| task_id   | String | ID of a team labeling task. |

### Example Requests

The following is an example of how to create a team labeling task. The task name has been set to **task-eb17**, **synchronize\_data** has been set to **false**, and **synchronize\_auto\_labeling\_data** has been set to **false**.

```
{
 "task_name" : "task-eb17",
 "synchronize_data" : false,
 "synchronize_auto_labeling_data" : false,
 "workforces_config" : {
 "workforces" : [{
 "workforce_id" : "feSUo5NUIUnQAQNNTiS",
 "workers" : [{
 "email" : "xxx@xxx.com"
 }, {
 "email" : "xxx@xxx.com"
 }, {
 "email" : "xxx@xxx.com"
 }]
 }]
 },
 "auto_sync_dataset" : false
}
```

### Example Responses

Status code: 200

OK

```
{
 "task_id" : "6phXEto29utpaMwbQkg"
}
```

### Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

### Error Codes

See [Error Codes](#).

## 25.1.28 Querying Details About a Team Labeling Task

### Function

This API is used to query the details about a team labeling task.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

GET /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}

**Table 25-215** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                                                     |

**Table 25-216** Query Parameters

| Parameter       | Mandatory | Type    | Description                                                                                                                                                                                                              |
|-----------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_stats     | No        | Boolean | Whether to return label statistics. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Return label statistics.</li><li>• <b>false</b>: Do not return label statistics. (Default value)</li></ul>             |
| sample_stats    | No        | Boolean | Whether to return sample statistics. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Return sample statistics.</li><li>• <b>false</b>: Do not return sample statistics. (Default value)</li></ul>          |
| workforce_stats | No        | Boolean | Whether to return personnel statistics. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Return personnel statistics.</li><li>• <b>false</b>: Do not return personnel statistics. (Default value)</li></ul> |

|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| status    | Integer | <p>Status of a team labeling task. Options:</p> <ul style="list-style-type: none"><li>● <b>0</b>: Starting. The owner or manager is starting the task, and files to be labeled are still being allocated. The owner, manager, annotator, and reviewer can view the task list. Since the task allocation has not been completed, no other task can be started.</li><li>● <b>1</b>: Running. The annotator or reviewer performs labeling or reviews the task, and the owner performs acceptance. For example, new files need to be allocated again if auto labeling files are added or synchronized, or unlabeled files are imported.</li><li>● <b>2</b>: Accepting. The owner initiates an acceptance task, but the acceptance has not been completed. In this state, a new acceptance task can be started only after the current one is completed.</li><li>● <b>3</b>: Accepted. The team labeling task has been completed.</li><li>● <b>**4</b>: Rejected. The manager starts the task again. In this state, samples need to be labeled and the task must be reviewed again.</li><li>● <b>5</b>: Synchronizing acceptance result. This status is added when an acceptance task changes to be asynchronous. In this state, no new acceptance task can be initiated and the current acceptance task cannot be continued. In the task name area, the system displays a message indicating that the acceptance result is being synchronized.</li><li>● <b>6</b>: Created. The task has been created by the owner but has not been started. Only the owner and manager can view the task list.</li><li>● <b>7</b>: Acceptance sampling. This status is added when an acceptance task changes to be asynchronous. In this state, no new acceptance task can be initiated and the current acceptance task cannot be continued. In the task name area, the system displays a message indicating that acceptance sampling is in progress.</li></ul> |

| Parameter                      | Type                                        | Description                                                                                                                                                                                                                                                                                                                     |

|------------------------|---------|--------------------------------------|
| accepted_sample_count  | Integer | Accepted samples.                    |
| checked_sample_count   | Integer | Checked samples.                     |
| pass_rate              | Double  | Pass rate of samples.                |
| rejected_sample_count  | Integer | Rejected samples.                    |
| sampled_sample_count   | Integer | Number of sampled samples.           |
| sampling_num           | Integer | Samples of an acceptance task.       |
| sampling_rate          | Double  | Sampling rate of an acceptance task. |
| score                  | String  | Acceptance score.                    |
| task_id                | String  | ID of an acceptance task.            |
| total_sample_count     | Integer | Total samples.                       |
| total_score            | Long    | Total acceptance score.              |
| unchecked_sample_count | Integer | Unchecked samples.                   |

**Table 25-220** LabelStats

| Parameter    | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included.                                                                                                                                                                                                                                                                                                                                                                                                          |
| count        | Integer                                         | Number of labels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| name         | String                                          | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property     | <a href="#">LabelProperty</a> object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| sample_count | Integer                                         | Number of samples containing the label.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| type         | Integer                                         | Label type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image classification</li><li>● <b>1</b>: object detection</li><li>● <b>3</b>: image segmentation</li><li>● <b>100</b>: text classification</li><li>● <b>101</b>: named entity recognition</li><li>● <b>102</b>: text triplet relationship</li><li>● <b>103</b>: text triplet entity</li><li>● <b>200</b>: sound classification</li><li>● <b>201</b>: speech content</li><li>● <b>202</b>: speech paragraph labeling</li><li>● <b>600</b>: video labeling</li></ul> |

**Table 25-221** LabelAttribute

| Parameter     | Type   | Description                                                                                                                                              |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | String | Default value of a label attribute.                                                                                                                      |
| id            | String | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | String | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&"".                                            |
| type          | String | Label attribute type. Options: <ul style="list-style-type: none"><li>● <b>text</b>: text</li><li>● <b>select</b>: single-choice drop-down list</li></ul> |

| Parameter | Type                                                 | Description                     |
|-----------|------------------------------------------------------|---------------------------------|
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values. |

**Table 25-222** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-223** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |

| Parameter              | Type   | Description                                                                                                                                                                                                    |
|------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:tail_o_type | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

**Table 25-224** SearchCondition

| Parameter        | Type                                | Description                                                                                                                                                                                    |
|------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| coefficient      | String                              | Filter by coefficient of difficulty.                                                                                                                                                           |
| frame_in_video   | Integer                             | A frame in the video.                                                                                                                                                                          |
| hard             | String                              | Whether a sample is a hard sample. Options: <ul style="list-style-type: none"><li>• 0: non-hard sample</li><li>• 1: hard sample</li></ul>                                                      |
| import_origin    | String                              | Filter by data source.                                                                                                                                                                         |
| kvp              | String                              | CT dosage, filtered by dosage.                                                                                                                                                                 |
| label_list       | <a href="#">SearchLabels</a> object | Label search criteria.                                                                                                                                                                         |
| labeler          | String                              | Labeler.                                                                                                                                                                                       |
| metadata         | <a href="#">SearchProp</a> object   | Search by sample attribute.                                                                                                                                                                    |
| parent_sample_id | String                              | Parent sample ID.                                                                                                                                                                              |
| sample_dir       | String                              | Directory where data samples are stored (the directory must end with a slash (/)). Only samples in the specified directory are searched for. Recursive search of directories is not supported. |
| sample_name      | String                              | Search by sample name, including the file name extension.                                                                                                                                      |

| Parameter       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_time     | String | When a sample is added to the dataset, an index is created based on the last modification time (accurate to day) of the sample on OBS. You can search for the sample based on the time. Options: <ul style="list-style-type: none"><li>• <b>month</b>: Search for samples added from 30 days ago to the current day.</li><li>• <b>day</b>: Search for samples added from yesterday (one day ago) to the current day.</li><li>• <b>yyyyMMdd-yyyyMMdd</b>: Search for samples added in a specified period (at most 30 days), in the format of <b>Start date-End date</b>. For example, <b>20190901-2019091501</b> indicates that samples generated from September 1 to September 15, 2019 are searched.</li></ul> |
| score           | String | Search by confidence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| slice_thickness | String | DICOM layer thickness. Samples are filtered by layer thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| study_date      | String | DICOM scanning time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| time_in_video   | String | A time point in the video.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Table 25-225 SearchLabels

| Parameter | Type                                         | Description                                                                                                                                                                                                                                                   |
|-----------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SearchLabel</a> objects | List of label search criteria.                                                                                                                                                                                                                                |
| op        | String                                       | If you want to search for multiple labels, <b>op</b> must be specified. If you search for only one label, <b>op</b> can be left blank. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul> |

Table 25-226 SearchLabel

| Parameter | Type   | Description |
|-----------|--------|-------------|
| name      | String | Label name. |

| Parameter | Type                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Operation type between multiple attributes. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul>                                                                                                                                                                                                                                                                                                                                                                        |
| property  | Map<String,Array<String>> | Label attribute, which is in the Object format and stores any key-value pairs. <b>key</b> indicates the attribute name, and <b>value</b> indicates the value list. If <b>value</b> is <b>null</b> , the search is not performed by value. Otherwise, the search value can be any value in the list.                                                                                                                                                                                                                                       |
| type      | Integer                   | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

Table 25-227 SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>• <b>AND</b>: AND relationship</li><li>• <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

Table 25-228 WorkerTask

| Parameter   | Type | Description                                         |
|-------------|------|-----------------------------------------------------|
| create_time | Long | Time when a labeling team member's task is created. |

| Parameter           | Type                               | Description                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id          | String                             | ID of a dataset associated with a labeling team member's task.                                                                                                                                                                                                                                                                                                                              |
| dataset_type        | Integer                            | Labeling type of a team member's task.                                                                                                                                                                                                                                                                                                                                                      |
| email               | String                             | Email address of a labeling team member.                                                                                                                                                                                                                                                                                                                                                    |
| email_status        | Integer                            | Email notification status of a labeling team member's labeling task. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The email has not been sent.</li><li>• <b>1</b>: The email format is incorrect.</li><li>• <b>2</b>: The email address is unreachable.</li><li>• <b>3</b>: The email has been sent.</li></ul>                                                                |
| last_notify_time    | Long                               | Timestamp of the latest notification email sent to a labeling team member.                                                                                                                                                                                                                                                                                                                  |
| pass_rate           | Double                             | Pass rate of task acceptance review for a labeling team member.                                                                                                                                                                                                                                                                                                                             |
| role                | Integer                            | Role of a labeling team member.                                                                                                                                                                                                                                                                                                                                                             |
| sample_stats        | <a href="#">SampleStats</a> object | Sample statistics of a labeling team member's task.                                                                                                                                                                                                                                                                                                                                         |
| score               | Double                             | Average acceptance score of labeling team members' task samples.                                                                                                                                                                                                                                                                                                                            |
| task_id             | String                             | Team labeling task ID associated with a member's task.                                                                                                                                                                                                                                                                                                                                      |
| task_status         | Integer                            | Task status of a labeling team member. Options: <ul style="list-style-type: none"><li>• <b>6</b>: created</li><li>• <b>0</b>: starting</li><li>• <b>1</b>: running</li><li>• <b>2</b>: under acceptance</li><li>• <b>3</b>: approved, indicating the team labeling task is complete</li><li>• <b>4</b>: rejected, indicating that the task needs to be labeled and reviewed again</li></ul> |
| update_time         | Long                               | Time when a labeling team member's task is updated.                                                                                                                                                                                                                                                                                                                                         |
| worker_id           | String                             | ID of a labeling team member.                                                                                                                                                                                                                                                                                                                                                               |
| workforce_task_name | String                             | Team labeling task name associated with a member's task.                                                                                                                                                                                                                                                                                                                                    |

**Table 25-229** SampleStats

| Parameter                    | Type    | Description                                                                                         |
|------------------------------|---------|-----------------------------------------------------------------------------------------------------|
| accepted_sample_count        | Integer | Number of samples accepted by the owner.                                                            |
| auto_annotation_sample_count | Integer | Number of samples to be confirmed after intelligent labeling.                                       |
| deleted_sample_count         | Integer | Number of deleted samples.                                                                          |
| rejected_sample_count        | Integer | Number of samples that failed to pass the owner acceptance.                                         |
| sampled_sample_count         | Integer | Number of samples that are to be accepted by the owner and sampled.                                 |
| total_sample_count           | Integer | Total number of samples.                                                                            |
| unannotated_sample_count     | Integer | Number of unlabeled samples.                                                                        |
| uncheck_sample_count         | Integer | Number of samples that have been approved by the reviewer and are to be accepted by the owner.      |
| unreviewed_sample_count      | Integer | Number of samples that have been labeled by the labeler but have not been reviewed by the reviewer. |

**Table 25-230** WorkforceStats

| Parameter       | Type    | Description                                        |
|-----------------|---------|----------------------------------------------------|
| labeler_count   | Integer | Number of annotators. The value cannot exceed 100. |
| reviewer_count  | Integer | Number of reviewers. The value cannot exceed 100.  |
| workforce_count | Integer | Number of teams.                                   |

**Table 25-231** WorkforcesConfig

| Parameter | Type   | Description   |
|-----------|--------|---------------|
| agency    | String | Administrator |

| Parameter  | Type                                             | Description                                |
|------------|--------------------------------------------------|--------------------------------------------|
| workforces | Array of <a href="#">WorkforceConfig</a> objects | List of teams that execute labeling tasks. |

**Table 25-232** WorkforceConfig

| Parameter      | Type                                    | Description                                                                                                                     |
|----------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| workers        | Array of <a href="#">Worker</a> objects | List of labeling team members.                                                                                                  |
| workforce_id   | String                                  | ID of a labeling team.                                                                                                          |
| workforce_name | String                                  | Name of a labeling team. The value contains 0 to 1024 characters and does not support the following special characters: !<>=&'" |

**Table 25-233** Worker

| Parameter   | Type    | Description                                                                                                                                                                                                                                                                                                                                                    |
|-------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time | Long    | Creation time.                                                                                                                                                                                                                                                                                                                                                 |
| description | String  | Labeling team member description. The value contains 0 to 256 characters and does not support the following special characters: ^!<>=&'"                                                                                                                                                                                                                       |
| email       | String  | Email address of a labeling team member.                                                                                                                                                                                                                                                                                                                       |
| role        | Integer | Role. Options: <ul style="list-style-type: none"><li>● <b>0</b>: labeling personnel</li><li>● <b>1</b>: reviewer</li><li>● <b>2</b>: team administrator</li><li>● <b>3</b>: dataset owner</li></ul>                                                                                                                                                            |
| status      | Integer | Current login status of a labeling team member. Options: <ul style="list-style-type: none"><li>● <b>0</b>: The invitation email has not been sent.</li><li>● <b>1</b>: The invitation email has been sent but the user has not logged in.</li><li>● <b>2</b>: The user has logged in.</li><li>● <b>3</b>: The labeling team member has been deleted.</li></ul> |
| update_time | Long    | Update time.                                                                                                                                                                                                                                                                                                                                                   |

| Parameter    | Type   | Description                   |
|--------------|--------|-------------------------------|
| worker_id    | String | ID of a labeling team member. |
| workforce_id | String | ID of a labeling team.        |

## Example Requests

### Querying Details About a Team Labeling Task

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/workforce-tasks/{workforce_task_id}
```

## Example Responses

25.1.29 Starting a Team Labeling Task

Function

This API is used to start a team labeling task.

Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

URI

POST /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}

Table 25-234 Path Parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| dataset_id | Yes       | String | Dataset ID. |

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                                                     |

## Request Parameters

**Table 25-235** Request body parameters

| Parameter         | Mandatory | Type                                    | Description                                                                                          |
|-------------------|-----------|-----------------------------------------|------------------------------------------------------------------------------------------------------|
| dataset_id        | No        | String                                  | Dataset ID.                                                                                          |
| task_id           | No        | String                                  | ID of a team labeling task.                                                                          |
| workforces_config | No        | <a href="#">WorkforcesConfig</a> object | Team labeling task information: Tasks can be assigned by the team administrator or a specified team. |

**Table 25-236** WorkforcesConfig

| Parameter  | Mandatory | Type                                             | Description                                |
|------------|-----------|--------------------------------------------------|--------------------------------------------|
| agency     | No        | String                                           | Administrator                              |
| workforces | No        | Array of <a href="#">WorkforceConfig</a> objects | List of teams that execute labeling tasks. |

**Table 25-237** WorkforceConfig

| Parameter    | Mandatory | Type                                    | Description                    |
|--------------|-----------|-----------------------------------------|--------------------------------|
| workers      | No        | Array of <a href="#">Worker</a> objects | List of labeling team members. |
| workforce_id | No        | String                                  | ID of a labeling team.         |

| Parameter      | Mandatory | Type   | Description                                                                                                                    |
|----------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------|
| workforce_name | No        | String | Name of a labeling team. The value contains 0 to 1024 characters and does not support the following special characters: !<>=&" |

**Table 25-238** Worker

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                    |

## Request Parameters

**Table 25-240** Request body parameters

| Parameter         | Mandatory | Type                                    | Description                                                                                                                            |
|-------------------|-----------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id        | No        | String                                  | Dataset ID.                                                                                                                            |
| description       | No        | String                                  | Team labeling task description. The value contains 0 to 256 characters and does not support the following special characters: ^!<>=&"" |
| task_id           | No        | String                                  | ID of a team labeling task.                                                                                                            |
| task_name         | No        | String                                  | Team labeling task name. The value contains 1 to 64 characters and only letters, digits, underscores (_), and hyphens (-) are allowed. |
| workforces_config | No        | <a href="#">WorkforcesConfig</a> object | Team labeling task information: Tasks can be assigned by the team administrator or a specified team.                                   |

**Table 25-241** WorkforcesConfig

| Parameter  | Mandatory | Type                                             | Description                                |
|------------|-----------|--------------------------------------------------|--------------------------------------------|
| agency     | No        | String                                           | Administrator                              |
| workforces | No        | Array of <a href="#">WorkforceConfig</a> objects | List of teams that execute labeling tasks. |

**Table 25-242** WorkforceConfig

| Parameter      | Mandatory | Type                                    | Description                                                                                                                     |
|----------------|-----------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| workers        | No        | Array of <a href="#">Worker</a> objects | List of labeling team members.                                                                                                  |
| workforce_id   | No        | String                                  | ID of a labeling team.                                                                                                          |
| workforce_name | No        | String                                  | Name of a labeling team. The value contains 0 to 1024 characters and does not support the following special characters: !<>=&"" |

**Table 25-243** Worker

| Parameter   | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                    |
|-------------|-----------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time | No        | Long    | Creation time.                                                                                                                                                                                                                                                                                                                                                 |
| description | No        | String  | Labeling team member description. The value contains 0 to 256 characters and does not support the following special characters: ^!<>=&""                                                                                                                                                                                                                       |
| email       | No        | String  | Email address of a labeling team member.                                                                                                                                                                                                                                                                                                                       |
| role        | No        | Integer | Role. Options: <ul style="list-style-type: none"><li>● <b>0</b>: labeling personnel</li><li>● <b>1</b>: reviewer</li><li>● <b>2</b>: team administrator</li><li>● <b>3</b>: dataset owner</li></ul>                                                                                                                                                            |
| status      | No        | Integer | Current login status of a labeling team member. Options: <ul style="list-style-type: none"><li>● <b>0</b>: The invitation email has not been sent.</li><li>● <b>1</b>: The invitation email has been sent but the user has not logged in.</li><li>● <b>2</b>: The user has logged in.</li><li>● <b>3</b>: The labeling team member has been deleted.</li></ul> |
| update_time | No        | Long    | Update time.                                                                                                                                                                                                                                                                                                                                                   |

| Parameter    | Mandatory | Type   | Description                   |
|--------------|-----------|--------|-------------------------------|
| worker_id    | No        | String | ID of a labeling team member. |
| workforce_id | No        | String | ID of a labeling team.        |

## Response Parameters

None

## Example Requests

Updating a Team Labeling Task

```
{
 "workforces_config": {
 "workforces": [{
 "workforce_id": "3frbQ90hb8ZKksAhyR8",
 "workers": [{
 "email": "xxx@xxx.com"
 }, {
 "email": "xxx@xxx.com"
 }]
 }]
 }
}
```

## Example Responses

**Status code: 200**

OK

```
{ }
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.31 Deleting a Team Labeling Task

### Function

This API is used to delete a team labeling task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

DELETE /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}

**Table 25-244** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                                                     |

### Request Parameters

None

### Response Parameters

None

### Example Requests

Deleting a Team Labeling Task

```
DELETE https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/workforce-tasks/{workforce_task_id}
```

### Example Responses

**Status code: 204**

No Content

```
{ }
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |
| 401         | Unauthorized |
| 403         | Forbidden    |

## Error Codes

See [Error Codes](#).

## 25.1.32 Creating a Team Labeling Acceptance Task

### Function

This API is used to create a team labeling acceptance task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/acceptance

**Table 25-245** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                                                     |

## Request Parameters

**Table 25-246** Request body parameters

| Parameter     | Mandatory | Type    | Description                                                                                                                   |
|---------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------|
| sampling_num  | No        | Integer | Number of samples for the acceptance task. Either this parameter or the sampling ratio is delivered.                          |
| sampling_rate | No        | Double  | Sampling ratio of the acceptance task. The value range is (0,1]. Either this parameter or the number of samples is delivered. |

## Response Parameters

**Status code: 200****Table 25-247** Response body parameters

| Parameter | Type   | Description                            |
|-----------|--------|----------------------------------------|
| task_id   | String | ID of an asynchronous acceptance task. |

## Example Requests

Creating a Team Labeling Acceptance Task and Setting the Sampling Percentage to 20%

```
{
 "sampling_rate" : 0.2
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "task_id" : "nv6BbozxCJmZcHAE9hV"
}
```

## Status Codes

| Status Code | Description |
|-------------|-------------|
| 200         | OK          |

| Status Code | Description  |
|-------------|--------------|
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.33 Querying the Report of a Team Labeling Acceptance Task

### Function

This API is used to query the report of a team labeling acceptance task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/acceptance/report

**Table 25-248** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                                                     |

**Table 25-249** Query Parameters

| Parameter        | Mandatory | Type   | Description                           |
|------------------|-----------|--------|---------------------------------------|
| checking_task_id | Yes       | String | ID of the task that is being checked. |

## Request Parameters

None

## Response Parameters

Status code: 200

**Table 25-250** Response body parameters

| Parameter      | Type                                  | Description                      |
|----------------|---------------------------------------|----------------------------------|
| checking_stats | <a href="#">CheckTaskStats</a> object | Real-time acceptance statistics. |
| total_stats    | <a href="#">CheckTaskStats</a> object | Historical statistics.           |

**Table 25-251** CheckTaskStats

| Parameter             | Type    | Description                          |
|-----------------------|---------|--------------------------------------|
| accepted_sample_count | Integer | Accepted samples.                    |
| checked_sample_count  | Integer | Checked samples.                     |
| pass_rate             | Double  | Pass rate of samples.                |
| rejected_sample_count | Integer | Rejected samples.                    |
| sampled_sample_count  | Integer | Number of sampled samples.           |
| sampling_num          | Integer | Samples of an acceptance task.       |
| sampling_rate         | Double  | Sampling rate of an acceptance task. |
| score                 | String  | Acceptance score.                    |
| task_id               | String  | ID of an acceptance task.            |

| Parameter              | Type    | Description             |
|------------------------|---------|-------------------------|
| total_sample_count     | Integer | Total samples.          |
| total_score            | Long    | Total acceptance score. |
| unchecked_sample_count | Integer | Unchecked samples.      |

## Example Requests

Querying the Report of a Team Labeling Acceptance Task

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/workforce-tasks/{workforce_task_id}/acceptance/report
```

## Example Responses

**Status code: 200**

OK

```
{
 "total_stats" : {
 "sampling_rate" : 1.0,
 "sampling_num" : 3,
 "pass_rate" : 0.0,
 "score" : "E",
 "total_score" : 0,
 "total_sample_count" : 3,
 "sampled_sample_count" : 3,
 "unchecked_sample_count" : 3,
 "checked_sample_count" : 0,
 "accepted_sample_count" : 0,
 "rejected_sample_count" : 0
 }
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.34 Updating Status of a Team Labeling Acceptance Task

### Function

Determine the acceptance scope for a team labeling task, including all labeled data, and update the sample data accordingly.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

PUT /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/acceptance/status

**Table 25-252** URI parameters

| Parameter         | Mandatory | Type   | Description                                                                    |
|-------------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID                                                                     |
| project_id        | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                    |

**Table 25-253** Query parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                 |
|-----------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------|

| id        | String                                     | Label ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| name      | String                                     | Label name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| property  | <a href="#">SampleLabelProperty</a> object | Attribute key-value pair of the sample label, such as the object shape and shape feature                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| score     | Float                                      | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| type      | Integer                                    | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-260** SampleLabelProperty

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| @modelarts:end_index | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> . Examples: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", the <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |

| Parameter           | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:end_time | String | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| @modelarts:feature  | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the x-coordinate of the first point must be less than the x-coordinate of the second point, and the y-coordinate of the first point must be less than the y-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from     | String | Start entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Parameter                   | Type   | Description                                                                                                                                                                                                                                      |

| Parameter              | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:shape       | String  | Object shape, which is a default attribute dedicated to the object detection label and is left empty by default. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:source      | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time  | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id  | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

Table 25-261 SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                           |
|-----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                          |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                            |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Parameter       | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | image size, including width, height, and depth. The type is List[/topic/body/section/table/tgroup/tbody/row/entry/p/br. {""}] (br]. In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is 3). For example, [100,200,3] and [100,200] are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

### Request Example

The following shows an example indicating that all tasks are accepted.

```
{
 "action" : 0
}
```

### Response Example

Status code: 200

OK

```
{ }
```

### Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

### Error Code

For details, see [Error Codes](#).

## 25.1.35 Querying Details About Team Labeling Task Statistics

### Function

This API is used to query details about team labeling task statistics.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

GET /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/data-annotations/stats

**Table 25-262** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a team labeling task.                                                                                     |

Table 25-263 Query Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_state | No        | String | Statistics on the specified sample state. The options are as follows: <ul style="list-style-type: none"><li>• __ALL__: labeled</li><li>• __NONE__: not marked</li><li>• __UNCHECK__: to be accepted</li><li>• __ACCEPTED__: The acceptance is passed.</li><li>• __REJECTED__: rejected</li><li>• __UNREVIEWED__: to be reviewed</li><li>• __REVIEWED__: approved</li><li>• __WORKFORCE_SAMPLED__: sampled</li><li>• __WORKFORCE_SAMPLED_UNCHECK__: Sampling is to be accepted.</li><li>• __WORKFORCE_SAMPLED_CHECKED__: Sampling has been accepted.</li><li>• __WORKFORCE_SAMPLED_ACCEPTED__: The sampling is passed.</li><li>• __WORKFORCE_SAMPLED_REJECTED__: The sampling has been rejected.</li><li>• __AUTO_ANNOTATION__: to be confirmed</li></ul> |

Response Parameters

Status code: 200

Table 25-264 Response body parameters

| Parameter | Type   | Description                         |
|-----------|--------|-------------------------------------|
| data_path | String | Path for storing data of a dataset. |

| Parameter             | Type                               | Description                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_splitting_enable | Boolean                            | Whether the dataset can be split into training set and validation set based on the sample labeling statistics. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The dataset can be split into training set and validation set.</li><li>• <b>false</b>: The dataset cannot be split into training set and validation set.</li></ul> |
| grouped_label_stats   | Map<String,Array<LabelStats>>      | Label statistics grouped by labeling type.                                                                                                                                                                                                                                                                                                      |
| hard_detail_stats     | Map<String,PairOfIntAndHardDetail> | Statistics on hard example reasons. The type is <b>Map&lt;Integer, Pair&lt;Integer, HardDetail&gt;&gt;</b> . The <b>key</b> of Map indicates the ID of the hard example reason, the <b>key</b> of Pair indicates the number of times that the hard example reason occurs, and the <b>value</b> of Pair indicates the hard example reason.       |
| key_sample_stats      | Map<String,Integer>                | Statistics on hard examples.                                                                                                                                                                                                                                                                                                                    |
| label_stats           | Array of LabelStats objects        | List of label statistics.                                                                                                                                                                                                                                                                                                                       |
| metadata_stats        | Map<String,Object>                 | Statistics on sample metadata, in JSON format.                                                                                                                                                                                                                                                                                                  |
| sample_stats          | Map<String,Integer>                | Statistics on sample status.                                                                                                                                                                                                                                                                                                                    |

**Table 25-265** LabelStats

| Parameter    | Type                            | Description                                                                                                                      |
|--------------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes   | Array of LabelAttribute objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |
| count        | Integer                         | Number of labels.                                                                                                                |
| name         | String                          | Label name.                                                                                                                      |
| property     | LabelProperty object            | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                      |
| sample_count | Integer                         | Number of samples containing the label.                                                                                          |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-266** PairOfIntAndHardDetail

| Parameter | Type                              | Description                                        |
|-----------|-----------------------------------|----------------------------------------------------|
| key       | Integer                           | Number of times that a hard example reason occurs. |
| value     | <a href="#">HardDetail</a> object | Reason for a hard example.                         |

**Table 25-267** HardDetail

| Parameter  | Type    | Description          |
|------------|---------|----------------------|
| alo_name   | String  | Alias.               |
| id         | Integer | Reason ID.           |
| reason     | String  | Reason description.  |
| suggestion | String  | Handling suggestion. |

**Table 25-268** LabelAttribute

| Parameter     | Type   | Description                                                         |
|---------------|--------|---------------------------------------------------------------------|
| default_value | String | Default value of a label attribute.                                 |
| id            | String | Label attribute ID. You can query the tag by invoking the tag list. |

| Parameter | Type                                                 | Description                                                                                                                                              |
|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| name      | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&''.                                            |
| type      | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>● <b>text</b>: text</li><li>● <b>select</b>: single-choice drop-down list</li></ul> |
| values    | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-269** LabelAttributeValue

| Parameter | Type   | Description               |
|-----------|--------|---------------------------|
| id        | String | Label attribute value ID. |
| value     | String | Label attribute value.    |

**Table 25-270** LabelProperty

| Parameter                | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>● <b>bndbox</b>: rectangle</li><li>● <b>polygon</b>: polygon</li><li>● <b>circle</b>: circle</li><li>● <b>line</b>: straight line</li><li>● <b>dashed</b>: dotted line</li><li>● <b>point</b>: point</li><li>● <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |

| Parameter            | Type   | Description                                                                                                                                                                                                    |
|----------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:rename_to | String | Default attribute: The new name of the label.                                                                                                                                                                  |
| @modelarts:shortcut  | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                       |
| @modelarts:tail_type | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

## Example Requests

### Querying Statistics on Unapproved Samples of a Team Labeling Task

```
GET https://{endpoint}/v2/{project_id}/datasets/WxCREuCkBSAlQr9xrde/workforce-tasks/tY330MHxV9dqlPVaTRM/data-annotations/stats?sample_state=__unreviewed__
```

## Example Responses

**Status code: 200**

OK

```
{

Table 25-275 Response body parameters

| Parameter    | Type                                        | Description                              |
|--------------|---------------------------------------------|------------------------------------------|
| count        | Integer                                     | Total number of team labeling tasks.     |
| worker_tasks | Array of <a href="#">WorkerTask</a> objects | Team labeling task list queried by page. |

Table 25-276 WorkerTask

| Parameter    | Type    | Description                                                                                                                                                                                                                                                                                                                  |
|--------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time  | Long    | Time when a labeling team member's task is created.                                                                                                                                                                                                                                                                          |
| dataset_id   | String  | ID of a dataset associated with a labeling team member's task.                                                                                                                                                                                                                                                               |
| dataset_type | Integer | Labeling type of a team member's task.                                                                                                                                                                                                                                                                                       |
| email        | String  | Email address of a labeling team member.                                                                                                                                                                                                                                                                                     |
| email_status | Integer | Email notification status of a labeling team member's labeling task. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The email has not been sent.</li><li>• <b>1</b>: The email format is incorrect.</li><li>• <b>2</b>: The email address is unreachable.</li><li>• <b>3</b>: The email has been sent.</li></ul> |

| Parameter           | Type                               | Description                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| last_notify_time    | Long                               | Timestamp of the latest notification email sent to a labeling team member.                                                                                                                                                                                                                                                                                                                     |
| pass_rate           | Double                             | Pass rate of task acceptance review for a labeling team member.                                                                                                                                                                                                                                                                                                                                |
| role                | Integer                            | Role of a labeling team member.                                                                                                                                                                                                                                                                                                                                                                |
| sample_stats        | <a href="#">SampleStats</a> object | Sample statistics of a labeling team member's task.                                                                                                                                                                                                                                                                                                                                            |
| score               | Double                             | Average acceptance score of labeling team members' task samples.                                                                                                                                                                                                                                                                                                                               |
| task_id             | String                             | Team labeling task ID associated with a member's task.                                                                                                                                                                                                                                                                                                                                         |
| task_status         | Integer                            | Task status of a labeling team member.<br>Options: <ul style="list-style-type: none"><li>• <b>6</b>: created</li><li>• <b>0</b>: starting</li><li>• <b>1</b>: running</li><li>• <b>2</b>: under acceptance</li><li>• <b>3</b>: approved, indicating the team labeling task is complete</li><li>• <b>4</b>: rejected, indicating that the task needs to be labeled and reviewed again</li></ul> |
| update_time         | Long                               | Time when a labeling team member's task is updated.                                                                                                                                                                                                                                                                                                                                            |
| worker_id           | String                             | ID of a labeling team member.                                                                                                                                                                                                                                                                                                                                                                  |
| workforce_task_name | String                             | Team labeling task name associated with a member's task.                                                                                                                                                                                                                                                                                                                                       |

**Table 25-277** SampleStats

| Parameter                    | Type    | Description                                                   |
|------------------------------|---------|---------------------------------------------------------------|
| accepted_sample_count        | Integer | Number of samples accepted by the owner.                      |
| auto_annotation_sample_count | Integer | Number of samples to be confirmed after intelligent labeling. |
| deleted_sample_count         | Integer | Number of deleted samples.                                    |

| Parameter                | Type    | Description                                                                                         |
|--------------------------|---------|-----------------------------------------------------------------------------------------------------|
| rejected_sample_count    | Integer | Number of samples that failed to pass the owner acceptance.                                         |
| sampled_sample_count     | Integer | Number of samples that are to be accepted by the owner and sampled.                                 |
| total_sample_count       | Integer | Total number of samples.                                                                            |
| unannotated_sample_count | Integer | Number of unlabeled samples.                                                                        |
| uncheck_sample_count     | Integer | Number of samples that have been approved by the reviewer and are to be accepted by the owner.      |
| unreviewed_sample_count  | Integer | Number of samples that have been labeled by the labeler but have not been reviewed by the reviewer. |

## Example Requests

Querying the Team Labeling Task List by a Team Member

```
GET https://{endpoint}/v2/{project_id}/workforces/worker-tasks?
offset=0&limit=10&sort_by=create_time&order=desc&filePreview=false
```

## Example Responses

**Status code: 200**

OK

```
{

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.38 Submitting Sample Review Comments of an Acceptance Task

### Function

This API is used to submit sample review comments of an acceptance task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

POST /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/acceptance/batch-comment

**Table 25-278** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a labeling task.                                                                                          |

## Request Parameters

**Table 25-279** Request body parameters

| Parameter | Mandatory | Type                                           | Description          |
|-----------|-----------|------------------------------------------------|----------------------|
| comments  | Yes       | Array of <a href="#">SampleComment</a> objects | Review comment list. |

**Table 25-280** SampleComment

| Parameter | Mandatory | Type    | Description                                                                                                                                                                |
|-----------|-----------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| accept    | Yes       | Boolean | Whether the submitted sample review comments are passed. Options: <ul style="list-style-type: none"><li>• <b>true</b>: passed</li><li>• <b>false</b>: not passed</li></ul> |
| comment   | No        | String  | Review comment, which contains 0 to 256 characters, excluding special characters (!<>=&'").                                                                                |
| sample_id | No        | String  | Sample ID, which can be obtained by invoking the API for querying the sample list.                                                                                         |

| Parameter | Mandatory | Type   | Description                                                                                          |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------|
| score     | No        | String | Review score, whose value can be <b>A</b> , <b>B</b> , <b>C</b> , or <b>D</b> , in descending order. |
| worker_id | No        | String | Annotation member ID, which can be obtained by invoking the annotation member list interface.        |

## Response Parameters

None

## Example Requests

The following is an example of how to submit sample review comments of an acceptance task. **accept** has been set to **true** and **score** has been set to **A**.

```
{
 "comments": [{
 "worker_id": "8c15ad080d3eabad14037b4eb00d6a6f",
 "sample_id": "09ac49d5b06385849c8769fdcf0f6d60",
 "accept": true,
 "comment": "",
 "score": "A"
 }]
}
```

## Example Responses

**Status code: 200**

OK

```
{}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.39 Reviewing Team Labeling Results

### Function

This API is used to review team labeling results.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/data-annotations/review

**Table 25-281** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a labeling task.                                                                                          |

| accept    | Yes       | Boolean | Whether the submitted sample review comments are passed. Options: <ul style="list-style-type: none"><li>• <b>true</b>: passed</li><li>• <b>false</b>: not passed</li></ul> |
| comment   | No        | String  | Review comment, which contains 0 to 256 characters, excluding special characters (!<>=&""').                                                                               |
| sample_id | No        | String  | Sample ID, which can be obtained by invoking the API for querying the sample list.                                                                                         |
| score     | No        | String  | Review score, whose value can be <b>A</b> , <b>B</b> , <b>C</b> , or <b>D</b> , in descending order.                                                                       |
| worker_id | No        | String  | Annotation member ID, which can be obtained by invoking the annotation member list interface.                                                                              |

Response Parameters

None

Example Requests

The following is an example of how to review team labeling results. **accept** has been set to **true** and **score** has been set to **A**.

```
{
 "comments" : [{
 "worker_id" : "8c15ad080d3eabad14037b4eb00d6a6f",
 "sample_id" : "0d43f9811d3808a3146c673257d4a1dbhh",
 "accept" : true,
 "comment" : "",
 "score" : "A"
 }]
}
```

Example Responses

Status code: 200

OK

```
{}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.40 Updating Labels of Team Labeling Samples in Batches

### Function

This API is used to update labels of team labeling samples in batches.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

PUT /v2/{project\_id}/datasets/{dataset\_id}/workforce-tasks/{workforce\_task\_id}/data-annotations/samples

**Table 25-284** Path Parameters

| Parameter         | Mandatory | Type   | Description                                                                                                     |
|-------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id        | Yes       | String | Dataset ID.                                                                                                     |
| project_id        | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_task_id | Yes       | String | ID of a labeling task.                                                                                          |

## Request Parameters

**Table 25-285** Request body parameters

| Parameter | Mandatory | Type                                          | Description                              |
|-----------|-----------|-----------------------------------------------|------------------------------------------|
| email     | No        | String                                        | Email address of a labeling team member. |
| samples   | No        | Array of <a href="#">SampleLabels</a> objects | Updated sample list.                     |

**Table 25-286** SampleLabels

| Parameter    | Mandatory | Type                                          | Description                                                                                                                                                                                                                       |
|--------------|-----------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels       | No        | Array of <a href="#">SampleLabels</a> objects | Sample label list. If this parameter is left blank, all sample labels are deleted.                                                                                                                                                |
| metadata     | No        | <a href="#">SampleMetadata</a> object         | Key-value pair of the sample <b>metadata</b> attribute.                                                                                                                                                                           |
| sample_id    | No        | String                                        | Sample ID.                                                                                                                                                                                                                        |
| sample_type  | No        | Integer                                       | Sample type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image</li><li>• <b>1</b>: text</li><li>• <b>2</b>: speech</li><li>• <b>4</b>: table</li><li>• <b>6</b>: video</li><li>• <b>9</b>: custom format</li></ul> |
| sample_usage | No        | String                                        | Sample usage. | @modelarts:size | No        | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Example Responses

Status code: 200

OK

```
{
 "success": true
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.41 Querying the Labeling Team List

### Function

This API is used to query the labeling team list.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/workforces

**Table 25-292** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-293** Query Parameters

| Parameter      | Mandatory | Type    | Description                                                                                                                                                                   |
|----------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| limit          | No        | Integer | Maximum number of records returned on each page. The value ranges from 1 to 100. The default value is <b>10</b> .                                                             |
| offset         | No        | Integer | Start page of the paging list. The default value is <b>0</b> .                                                                                                                |

Table 25-294 Response body parameters

| Parameter    | Type                                       | Description                         |
|--------------|--------------------------------------------|-------------------------------------|
| total_number | Integer                                    | Total number of labeling teams.     |
| workforces   | Array of <a href="#">Workforce</a> objects | Labeling team list queried by page. |

Table 25-295 Workforce

| Parameter      | Type    | Description                                                                                                                         |
|----------------|---------|-------------------------------------------------------------------------------------------------------------------------------------|
| create_time    | Long    | Time when a labeling team is created.                                                                                               |
| description    | String  | Description of a labeling team.                                                                                                     |
| update_time    | Long    | Time when a labeling team is updated.                                                                                               |
| worker_count   | Integer | Total number of labeling team members.                                                                                              |
| workforce_id   | String  | ID of a labeling team.                                                                                                              |
| workforce_name | String  | Name of a labeling team.                                                                                                            |
| workspace_id   | String  | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

## Example Requests

Querying the Labeling Team List

```
GET https://{endpoint}/v2/{project_id}/workforces
```

## Example Responses

**Status code: 200**

OK

```
{
 "total_number" : 2,
 "workforces" : [{
 "workforce_id" : "ZUH8gqkjuaib8pxkDdz",
 "workforce_name" : "team-123",
 "description" : "my team",
 "worker_count" : 0,
 "create_time" : 1606354772548,
 "update_time" : 1606354772548
 }, {
 "workforce_id" : "3Ry04NsqvEybuWYLDvC",
 "workforce_name" : "team-170a",
 "description" : "",
 "worker_count" : 1,
 "create_time" : 1604644946891,
 "update_time" : 1606238678626
 }]
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.42 Creating a Labeling Team

### Function

This API is used to create a labeling team.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

POST /v2/{project\_id}/workforces

**Table 25-296** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-297** Request body parameters

| Parameter      | Mandatory | Type   | Description                                                                                                                       |
|----------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------|
| description    | No        | String | Labeling team description. The value contains 0 to 256 characters and does not support the following special characters: ^!<>=&'" |
| workforce_name | Yes       | String | Labeling team name. The value contains 1 to 64 characters, including only letters, digits, underscores (_), and hyphens (-).      |

## Response Parameters

**Status code: 201**

**Table 25-298** Response body parameters

| Parameter    | Type   | Description            |
|--------------|--------|------------------------|
| workforce_id | String | ID of a labeling team. |

## Example Requests

The following is an example of how to create a labeling team. The labeling team name has been set to **team-123**.

```
{
 "workforce_name" : "team-123",
 "description" : "my team"
}
```

## Example Responses

**Status code: 201**

Created

```
{
 "workforce_id" : "ZUH8gqkjaib8pxkDdz"
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 201         | Created      |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.43 Querying Details About a Labeling Team

### Function

This API is used to query the details about a labeling team.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/workforces/{workforce\_id}

**Table 25-299** Path Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                     |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id   | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_id | Yes       | String | ID of a labeling team.                                                                                          |

## Request Parameters

None

## Response Parameters

## Example Requests

Sending an Email to a Labeling Team Member

```
{
 "emails" : ["xxx@xxx.com", "xxx@xxx.com"]
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "success" : true
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |

| Status Code | Description |
|-------------|-------------|
| 403         | Forbidden   |
| 404         | Not Found   |

## Error Codes

See [Error Codes](#).

## 25.1.47 Querying the List of All Labeling Team Members

### Function

This API is used to query the list of all labeling team members.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/workforces/workers

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.49 Creating a Labeling Team Member

### Function

This API is used to create a labeling team member.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/workforces/{workforce\_id}/workers

**Table 25-318** Path Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                     |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id   | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_id | Yes       | String | ID of a labeling team.                                                                                          |

## Request Parameters

**Table 25-319** Request body parameters

| Parameter   | Mandatory | Type    | Description                                                                                                                                                              |
|-------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| description | No        | String  | Member description. The description contains 0 to 256 characters and does not support the following special characters: ^!<>=&""                                         |
| emails      | Yes       | String  | Email address of a labeling team member.                                                                                                                                 |
| role        | Yes       | Integer | Member role. Options: <ul style="list-style-type: none"><li>• <b>0</b>: labeling personnel</li><li>• <b>1</b>: reviewer</li><li>• <b>2</b>: team administrator</li></ul> |

## Response Parameters

None

## Example Requests

The following is an example of how to create a labeling team member. The member role has been set to **2**, which is the team administrator.

```
{
 "emails": "xxx@xxx.com",
 "description": "",
 "role": "2"
}
```

## Example Responses

**Status code: 201**

Created

```
{}
```

Status Codes

| Status Code | Description  |
|-------------|--------------|
| 201         | Created      |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

Error Codes

See [Error Codes](#).

25.1.50 Deleting Labeling Team Members in Batches

Function

This API is used to delete labeling team members in batches.

Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

URI

POST /v2/{project\_id}/workforces/{workforce\_id}/workers/batch-delete

Table 25-320 Path Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                     |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id   | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| workforce_id | Yes       | String | ID of a labeling team.                                                                                          |

## Request Parameters

**Table 25-321** Request body parameters

| Parameter | Mandatory | Type             | Description          |
|-----------|-----------|------------------|----------------------|
| workers   | Yes       | Array of strings | Team member ID list. |

## Response Parameters

**Status code: 200**

**Table 25-322** Response body parameters

| Parameter  | Type                                           | Description                                                                                                                                                                                         |

## 25.1.52 Updating a Labeling Team Member

### Function

This API is used to update a labeling team member.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

PUT /v2/{project\_id}/workforces/{workforce\_id}/workers/{worker\_id}

**Table 25-326** Path Parameters

| Parameter    | Mandatory | Type   | Description                                                                                                     |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id   | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| worker_id    | Yes       | String | ID of a labeling team member.                                                                                   |
| workforce_id | Yes       | String | ID of a labeling team.                                                                                          |

## Request Parameters

**Table 25-327** Request body parameters

| Parameter   | Mandatory | Type    | Description                                                                                                                                                             |
|-------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| description | No        | String  | Labeling team member description. The value contains 0 to 256 characters and does not support the following special characters: ^!<>=&""                                |
| role        | No        | Integer | Role. Options: <ul style="list-style-type: none"><li>• 0: labeling personnel</li><li>• 1: reviewer</li><li>• 2: team administrator</li><li>• 3: dataset owner</li></ul> |

## Response Parameters

None

## Example Requests

Updating a Labeling Team Member

```
{
 "description" : "My name is Tom",
}
```

```
"role" : 2
}
```

## Example Responses

Status code: 200

OK

```
{}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.53 Deleting a Labeling Team Member

### Function

This API is used to delete a labeling team member.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

DELETE /v2/{project\_id}/workforces/{workforce\_id}/workers/{worker\_id}

**Table 25-328** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| worker_id  | Yes       | String | ID of a labeling team member.                                                                                   |

| Parameter    | Mandatory | Type   | Description            |
|--------------|-----------|--------|------------------------|
| workforce_id | Yes       | String | ID of a labeling team. |

## Request Parameters

None

## Response Parameters

None

## Example Requests

Deleting a Labeling Team Member

```
DELETE https://{endpoint}/v2/{project_id}/workforces/{workforce_id}/workers/{worker_id}
```

## Example Responses

**Status code: 204**

No Content

```
{}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |

| data_path   | String                                     | Data source path.                                                                                                                                                                                                                                                                        |
| data_type   | Integer                                    | Data type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: OBS bucket (default value)</li><li>• <b>1</b>: GaussDB(DWS)</li><li>• <b>2</b>: DLI</li><li>• <b>3</b>: RDS</li><li>• <b>4</b>: MRS</li><li>• <b>5</b>: AI Gallery</li><li>• <b>6</b>: Inference service</li></ul> |
| schema_maps | Array of <a href="#">SchemaMap</a> objects | Schema mapping information corresponding to the table data.                                                                                                                                                                                                                              |
| source_info | <a href="#">SourceInfo</a> object          | Information required for importing a table data source.                                                                                                                                                                                                                                  |

| Parameter          | Type    | Description                                                                                                                                                                                                                                                                                    |
|--------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| with_column_header | Boolean | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the file is the column name.</li><li>• <b>false</b>: The first row in the file is not the column name.</li></ul> |

**Table 25-334** SchemaMap

| Parameter | Type   | Description                     |
|-----------|--------|---------------------------------|
| dest_name | String | Name of the destination column. |
| src_name  | String | Name of the source column.      |

**Table 25-335** SourceInfo

| Parameter     | Type   | Description                                                                                                                                              |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| cluster_id    | String | MRS cluster ID. You can log in to the MRS console to view the information.                                                                               |
| cluster_mode  | String | Running mode of an MRS cluster. Options: <ul style="list-style-type: none"><li>• <b>0</b>: normal cluster</li><li>• <b>1</b>: security cluster</li></ul> |
| cluster_name  | String | MRS cluster name You can log in to the MRS console to view the information.                                                                              |
| database_name | String | Name of the database to which the table dataset is imported.                                                                                             |
| input         | String | HDFS path of the table data set. For example, / datasets/demo.                                                                                           |
| ip            | String | IP address of your GaussDB(DWS) cluster.                                                                                                                 |
| port          | String | Port number of your GaussDB(DWS) cluster.                                                                                                                |
| queue_name    | String | DLI queue name of a table dataset.                                                                                                                       |
| subnet_id     | String | Subnet ID of an MRS cluster.                                                                                                                             |
| table_name    | String | Name of the table to which a table dataset is imported.                                                                                                  |
| user_name     | String | Username, which is mandatory for GaussDB(DWS) data.                                                                                                      |

| Parameter     | Type   | Description                                              |
|---------------|--------|----------------------------------------------------------|
| user_password | String | User password, which is mandatory for GaussDB(DWS) data. |
| vpc_id        | String | ID of the VPC where an MRS cluster resides.              |

**Table 25-336** FileCopyProgress

| Parameter          | Type | Description                                           |
|--------------------|------|-------------------------------------------------------|
| file_num_finished  | Long | Number of files that have been transferred.           |
| file_num_total     | Long | Total number of files.                                |
| file_size_finished | Long | Size of the file that has been transferred, in bytes. |
| file_size_total    | Long | Total file size, in bytes.                            |

## Example Requests

Obtaining the Dataset Import Task List

GET https://{endpoint}/v2/{project\_id}/datasets/{dataset\_id}/import-tasks

## Example Responses

**Status code: 200**

OK

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.55 Creating an Import Task

### Function

This API is used to create a dataset import task to import samples and labels from the storage system to the dataset.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/import-tasks

**Table 25-337** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-338** Request body parameters

| Parameter          | Mandatory | Type                                   | Description                                                                                                                                                                                                                                                                   |
|--------------------|-----------|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_source        | No        | <a href="#">DataSource</a> object      | Data source.                                                                                                                                                                                                                                                                  |
| difficult_only     | No        | Boolean                                | Whether to import only hard examples. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Only difficult samples are imported.</li><li>• <b>false</b>: All samples are imported. (Default value)</li></ul>                                                          |
| excluded_labels    | No        | Array of <a href="#">Label</a> objects | Do not import samples containing the specified label.                                                                                                                                                                                                                         |
| final_annotation   | No        | Boolean                                | Whether to import data to the final state. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Import data to the final state. (Default value)</li><li>• <b>false</b>: Do not import data to the final state.</li></ul>                                             |
| import_annotations | No        | Boolean                                | Whether to import labels. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Import labels. (Default value)</li><li>• <b>false</b>: Do not import labels.</li></ul>                                                                                                |
| import_folder      | No        | String                                 | Name of the subdirectory in the dataset storage directory after import. You can specify the same subdirectory for multiple import tasks to avoid repeated import of the same samples. This field is invalid for table datasets.                                               |
| import_origin      | No        | String                                 | Data source. Options: <ul style="list-style-type: none"><li>• <b>obs</b>: OBS bucket (default value)</li><li>• <b>dws</b>: GaussDB(DWS)</li><li>• <b>dli</b>: DLI</li><li>• <b>rds</b>: RDS</li><li>• <b>mrs</b>: MRS</li><li>• <b>inference</b>: Inference service</li></ul> |

| Parameter          | Mandatory | Type                                   | Description                                                                                                                                                                                                                                                                                                                                                         |
|--------------------|-----------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| import_path        | Yes       | String                                 | OBS path or <b>manifest</b> path to be imported. <ul style="list-style-type: none"><li>• When importing a manifest file, ensure that the path is accurate to the manifest file.</li><li>• When a path is imported as a directory, the dataset type can only support image classification, object detection, text classification, or sound classification.</li></ul> |
| import_samples     | No        | Boolean                                | Whether to import samples. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Import samples. (Default value)</li><li>• <b>false</b>: Do not import samples.</li></ul>                                                                                                                                                                                   |
| import_type        | No        | String                                 | Import mode. Options: <ul style="list-style-type: none"><li>• <b>dir</b>: Import datasets through an OBS path.</li><li>• <b>manifest</b>: Import datasets through a manifest file.</li></ul>                                                                                                                                                                        |
| included_labels    | No        | Array of <a href="#">Label</a> objects | Import samples containing the specified label.                                                                                                                                                                                                                                                                                                                      |
| label_format       | No        | <a href="#">LabelFormat</a> object     | Label format. This parameter is used only for text datasets.                                                                                                                                                                                                                                                                                                        |
| with_column_header | No        | Boolean                                | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the file is the column name.</li><li>• <b>false</b>: The first row in the file is not the column name. (Default value)</li></ul>                                                      |

Table 25-339 DataSource

| Parameter | Mandatory | Type   | Description       |
|-----------|-----------|--------|-------------------|
| data_path | No        | String | Data source path. |

| Parameter          | Mandatory | Type                                       | Description                                                                                                                                                                                                                                                                                    |

| data_type          | No        | Integer                                    | Data type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: OBS bucket (default value)</li><li>• <b>1</b>: GaussDB(DWS)</li><li>• <b>2</b>: DLI</li><li>• <b>3</b>: RDS</li><li>• <b>4</b>: MRS</li><li>• <b>5</b>: AI Gallery</li><li>• <b>6</b>: Inference service</li></ul>       |
| schema_maps        | No        | Array of <a href="#">SchemaMap</a> objects | Schema mapping information corresponding to the table data.                                                                                                                                                                                                                                    |
| source_info        | No        | <a href="#">SourceInfo</a> object          | Information required for importing a table data source.                                                                                                                                                                                                                                        |
| with_column_header | No        | Boolean                                    | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the file is the column name.</li><li>• <b>false</b>: The first row in the file is not the column name.</li></ul> |

**Table 25-340** SchemaMap

| Parameter | Mandatory | Type   | Description                     |
|-----------|-----------|--------|---------------------------------|
| dest_name | No        | String | Name of the destination column. |
| src_name  | No        | String | Name of the source column.      |

**Table 25-341** SourceInfo

| Parameter  | Mandatory | Type   | Description                                                                |
|------------|-----------|--------|----------------------------------------------------------------------------|
| cluster_id | No        | String | MRS cluster ID. You can log in to the MRS console to view the information. |

| Parameter     | Mandatory | Type   | Description                                                                                                                                              |
|---------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| cluster_mode  | No        | String | Running mode of an MRS cluster. Options: <ul style="list-style-type: none"><li>• <b>0</b>: normal cluster</li><li>• <b>1</b>: security cluster</li></ul> |
| cluster_name  | No        | String | MRS cluster name You can log in to the MRS console to view the information.                                                                              |
| database_name | No        | String | Name of the database to which the table dataset is imported.                                                                                             |
| input         | No        | String | HDFS path of the table data set. For example, /datasets/demo.                                                                                            |
| ip            | No        | String | IP address of your GaussDB(DWS) cluster.                                                                                                                 |
| port          | No        | String | Port number of your GaussDB(DWS) cluster.                                                                                                                |
| queue_name    | No        | String | DLI queue name of a table dataset.                                                                                                                       |
| subnet_id     | No        | String | Subnet ID of an MRS cluster.                                                                                                                             |
| table_name    | No        | String | Name of the table to which a table dataset is imported.                                                                                                  |
| user_name     | No        | String | Username, which is mandatory for GaussDB(DWS) data.                                                                                                      |
| user_password | No        | String | User password, which is mandatory for GaussDB(DWS) data.                                                                                                 |
| vpc_id        | No        | String | ID of the VPC where an MRS cluster resides.                                                                                                              |

**Table 25-342** Label

| Parameter  | Mandatory | Type                                            | Description                                                                                                                      |
|------------|-----------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| attributes | No        | Array of <a href="#">LabelAttribute</a> objects | Multi-dimensional attribute of a label. For example, if the label is music, attributes such as style and artist may be included. |

| Parameter | Mandatory | Type                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|-----------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name      | No        | String                               | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| property  | No        | <a href="#">LabelProperty</a> object | Basic attribute key-value pair of a label, such as color and shortcut keys.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| type      | No        | Integer                              | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-343** LabelAttribute

| Parameter     | Mandatory | Type                                                 | Description                                                                                                                                              |
|---------------|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| default_value | No        | String                                               | Default value of a label attribute.                                                                                                                      |
| id            | No        | String                                               | Label attribute ID. You can query the tag by invoking the tag list.                                                                                      |
| name          | No        | String                                               | Label attribute name. The value contains a maximum of 64 characters and cannot contain the character. <>=&"".                                            |
| type          | No        | String                                               | Label attribute type. Options: <ul style="list-style-type: none"><li>• <b>text</b>: text</li><li>• <b>select</b>: single-choice drop-down list</li></ul> |
| values        | No        | Array of <a href="#">LabelAttributeValue</a> objects | List of label attribute values.                                                                                                                          |

**Table 25-344** LabelAttributeValue

| Parameter | Mandatory | Type   | Description               |
|-----------|-----------|--------|---------------------------|
| id        | No        | String | Label attribute value ID. |
| value     | No        | String | Label attribute value.    |

**Table 25-345** LabelProperty

| Parameter                | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:color         | No        | String | Default attribute: Label color, which is a hexadecimal code of the color. By default, this parameter is left blank. Example: <b>#FFFFFF0</b> .                                                                                                                                                                                                                                                                                   |
| @modelarts:default_shape | No        | String | Default attribute: Default shape of an object detection label (dedicated attribute). By default, this parameter is left blank. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:from_type     | No        | String | Default attribute: Type of the head entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset.                                                                                                                                                                                                                   |
| @modelarts:rename_to     | No        | String | Default attribute: The new name of the label.                                                                                                                                                                                                                                                                                                                                                                                    |
| @modelarts:shortcut      | No        | String | Default attribute: Label shortcut key. By default, this parameter is left blank. For example: <b>D</b> .                                                                                                                                                                                                                                                                                                                         |

| Parameter              | Mandatory | Type   | Description                                                                                                                                                                                                    |
|------------------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:tail_o_type | No        | String | Default attribute: Type of the tail entity in the triplet relationship label. This attribute must be specified when a relationship label is created. This parameter is used only for the text triplet dataset. |

**Table 25-346** LabelFormat

| Parameter            | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type           | No        | String | Label type of text classification. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is separated from the text, and they are distinguished by the fixed suffix <b>_result</b>. For example, the text file is <b>abc.txt</b>, and the label file is <b>abc_result.txt</b>.</li><li>• <b>1</b>: Default value. Labels and texts are stored in the same file and separated by separators. You can use <b>text_sample_separator</b> to specify the separator between the text and label and <b>text_label_separator</b> to specify the separator between labels.</li></ul> |
| text_label_separator | No        | String | Separator between labels. By default, a comma (,) is used as the separator. The separator needs to be escaped. The separator can contain only one character, such as a letter, a digit, or any of the following special characters: ! @#\$%^&* _= ?/'.:;,,                                                                                                                                                                                                                                                                                                                                 |

| Parameter             | Mandatory | Type   | Description                                                                                                                                                                                                                                                                 |
|-----------------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| text_sample_separator | No        | String | Separator between the text and label. By default, the <b>Tab</b> key is used as the separator. The separator needs to be escaped. The separator can contain only one character, such as a letter, a digit, or any of the following special characters: !@#\$%^&* _= ?/'.:,; |

## Response Parameters

Status code: 200

Table 25-347 Response body parameters

| Parameter | Type   | Description           |
|-----------|--------|-----------------------|
| task_id   | String | ID of an import task. |

## Example Requests

- Creating an Import Task (Importing Data from OBS)

```
{
 "import_type": "dir",
 "import_path": "s3://test-obs/daoLu_images/animals/",
 "included_labels": [],
 "import_annotations": false,
 "difficult_only": false
}
```

- Creating an Import Task (Importing Data from Manifest)

```
{
 "import_type": "manifest",
 "import_path": "s3://test-obs/classify/output/dataset-f9e8-gfghHSokody6AJigS5A/annotation/V002/V002.manifest",
 "included_labels": ["rabbits", "bees", "Rabbits", "Bees"],
 "import_annotations": true,
 "difficult_only": false
}
```

## Example Responses

Status code: 200

OK

```
{
 "task_id": "gfghHSokody6AJigS5A_m1dYqOw8vWCAznw1V28"
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.56 Querying Details About a Dataset Import Task

### Function

This API is used to query details about a dataset import task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/import-tasks/{task\_id}

**Table 25-348** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| task_id    | Yes       | String | Task ID.                                                                                                        |

### Request Parameters

**Table 25-349** Response body parameters

| Parameter                 | Type                                    | Description                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_sample_count    | Long                                    | Number of labeled samples.                                                                                                                                                                                                                                                                                                                                      |
| create_time               | Long                                    | Time when a task is created.                                                                                                                                                                                                                                                                                                                                    |
| data_source               | <a href="#">DataSource</a> object       | Data source.                                                                                                                                                                                                                                                                                                                                                    |
| dataset_id                | String                                  | Dataset ID.                                                                                                                                                                                                                                                                                                                                                     |
| elapsed_time              | Long                                    | Task running time, in seconds.                                                                                                                                                                                                                                                                                                                                  |
| error_code                | String                                  | Error code.                                                                                                                                                                                                                                                                                                                                                     |
| error_msg                 | String                                  | Error message.                                                                                                                                                                                                                                                                                                                                                  |
| file_statistics           | <a href="#">FileCopyProgress</a> object | File replication progress                                                                                                                                                                                                                                                                                                                                       |
| finished_file_count       | Long                                    | Number of files that have been transferred.                                                                                                                                                                                                                                                                                                                     |
| finished_file_size        | Long                                    | Size of the file that has been transferred, in bytes.                                                                                                                                                                                                                                                                                                           |
| import_path               | String                                  | OBS path or <b>manifest</b> path to be imported. <ul style="list-style-type: none"><li>When importing a manifest file, ensure that the path is accurate to the manifest file.</li><li>When a path is imported as a directory, the dataset type can only support image classification, object detection, text classification, or sound classification.</li></ul> |
| import_type               | Integer                                 | Import mode. Options: <ul style="list-style-type: none"><li><b>0</b>: Import by directory.</li><li><b>1</b>: Import by manifest file.</li></ul>                                                                                                                                                                                                                 |
| imported_sample_count     | Long                                    | Number of imported samples.                                                                                                                                                                                                                                                                                                                                     |
| imported_sub_sample_count | Long                                    | Number of imported subsamples.                                                                                                                                                                                                                                                                                                                                  |
| processor_task_id         | String                                  | ID of a preprocessing task.                                                                                                                                                                                                                                                                                                                                     |

| Parameter                | Type    | Description                                                                                                                                                                                                                                                                                             |
|--------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| processor_task_status    | Integer | Status of a preprocessing task.                                                                                                                                                                                                                                                                         |
| status                   | String  | Status of an import task. Options: <ul style="list-style-type: none"><li>• <b>QUEUING</b>: queuing</li><li>• <b>STARTING</b>: execution started</li><li>• <b>RUNNING</b>: running</li><li>• <b>COMPLETED</b>: completed</li><li>• <b>FAILED</b>: failed</li><li>• <b>NOT_EXIST</b>: not found</li></ul> |
| task_id                  | String  | Task ID.                                                                                                                                                                                                                                                                                                |

| total_sample_count       | Long    | Total number of samples.                                                                                                                                                                                                                                                                                |
| total_sub_sample_count   | Long    | Total number of subsamples generated from the parent samples.                                                                                                                                                                                                                                           |
| unconfirmed_sample_count | Long    | Number of samples to be confirmed.                                                                                                                                                                                                                                                                      |
| update_ms                | Long    | Time when a task is updated.                                                                                                                                                                                                                                                                            |

**Table 25-350** DataSource

| Parameter   | Type                                       | Description                                                                                                                                                                                                                                                                              |
|-------------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_path   | String                                     | Data source path.                                                                                                                                                                                                                                                                        |
| data_type   | Integer                                    | Data type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: OBS bucket (default value)</li><li>• <b>1</b>: GaussDB(DWS)</li><li>• <b>2</b>: DLI</li><li>• <b>3</b>: RDS</li><li>• <b>4</b>: MRS</li><li>• <b>5</b>: AI Gallery</li><li>• <b>6</b>: Inference service</li></ul> |
| schema_maps | Array of <a href="#">SchemaMap</a> objects | Schema mapping information corresponding to the table data.                                                                                                                                                                                                                              |

| Parameter          | Type                              | Description                                                                                                                                                                                                                                                                                    |
|--------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| source_info        | <a href="#">SourceInfo</a> object | Information required for importing a table data source.                                                                                                                                                                                                                                        |
| with_column_header | Boolean                           | Whether the first row in the file is a column name. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The first row in the file is the column name.</li><li>• <b>false</b>: The first row in the file is not the column name.</li></ul> |

**Table 25-351** SchemaMap

| Parameter | Type   | Description                     |
|-----------|--------|---------------------------------|
| dest_name | String | Name of the destination column. |
| src_name  | String | Name of the source column.      |

**Table 25-352** SourceInfo

| Parameter     | Type   | Description                                                                                                                                              |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| cluster_id    | String | MRS cluster ID. You can log in to the MRS console to view the information.                                                                               |
| cluster_mode  | String | Running mode of an MRS cluster. Options: <ul style="list-style-type: none"><li>• <b>0</b>: normal cluster</li><li>• <b>1</b>: security cluster</li></ul> |
| cluster_name  | String | MRS cluster name You can log in to the MRS console to view the information.                                                                              |
| database_name | String | Name of the database to which the table dataset is imported.                                                                                             |
| input         | String | HDFS path of the table data set. For example, /datasets/demo.                                                                                            |
| ip            | String | IP address of your GaussDB(DWS) cluster.                                                                                                                 |
| port          | String | Port number of your GaussDB(DWS) cluster.                                                                                                                |
| queue_name    | String | DLI queue name of a table dataset.                                                                                                                       |
| subnet_id     | String | Subnet ID of an MRS cluster.                                                                                                                             |
| table_name    | String | Name of the table to which a table dataset is imported.                                                                                                  |

| Parameter     | Type   | Description                                              |
|---------------|--------|----------------------------------------------------------|
| user_name     | String | Username, which is mandatory for GaussDB(DWS) data.      |
| user_password | String | User password, which is mandatory for GaussDB(DWS) data. |
| vpc_id        | String | ID of the VPC where an MRS cluster resides.              |

**Table 25-353** FileCopyProgress

| Parameter          | Type | Description                                           |
|--------------------|------|-------------------------------------------------------|
| file_num_finished  | Long | Number of files that have been transferred.           |
| file_num_total     | Long | Total number of files.                                |
| file_size_finished | Long | Size of the file that has been transferred, in bytes. |
| file_size_total    | Long | Total file size, in bytes.                            |

## Example Requests

Querying Details About an Import Task

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/import-tasks/{task_id}
```

## Example Responses

**Status code: 200**

OK

```
{
 "status": "COMPLETED",
 "task_id": "gfghHSokody6AJigS5A_RHJ1zOkIol3Nzwxj8nh",
 "dataset_id": "gfghHSokody6AJigS5A",
 "import_path": "obs://test-obs/daoLu_images/animals/",
 "import_type": 0,
 "total_sample_count": 20,
 "imported_sample_count": 20,
 "annotated_sample_count": 20,
 "total_sub_sample_count": 0,
 "imported_sub_sample_count": 0,
 "total_file_size": 0,
 "finished_file_count": 0,
 "finished_file_size": 0,
 "total_file_count": 0,
 "update_ms": 1606114833955,
 "create_time": 1606114833874,
 "elapsed_time": 2
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.57 Querying the Dataset Export Task List

### Function

This API is used to query the dataset export task list by page.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/export-tasks

**Table 25-354** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-355** Query Parameters

| Parameter   | Mandatory | Type    | Description                                                                                                                                                                                                                                                                  |
|-------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| export_type | No        | Integer | Export type. If this parameter is not specified, all types of export tasks are queried by default. Options: <ul style="list-style-type: none"><li>• <b>0</b>: labeled</li><li>• <b>1</b>: unlabeled</li><li>• <b>2</b>: all</li><li>• <b>3</b>: conditional search</li></ul> |
| limit       | No        | Integer | Maximum number of records returned on each page. The value ranges from 1 to 100. The default value is <b>10</b> .                                                                                                                                                            |
| offset      | No        | Integer | Start page of the paging list. The default value is <b>0</b> .                                                                                                                                                                                                               |

## Request Parameters

None

## Response Parameters

**Status code: 200**

**Table 25-356** Response body parameters

| Parameter     | Type                                                  | Description                                                                                                                                                                                                                              |
|---------------|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time   | Long                                                  | Time when a task is created.                                                                                                                                                                                                             |
| error_code    | String                                                | Error code.                                                                                                                                                                                                                              |
| error_msg     | String                                                | Error message.                                                                                                                                                                                                                           |
| export_format | Integer                                               | Format of the exported directory. Options: <ul style="list-style-type: none"><li>• <b>1</b>: tree structure. Example: <b>rabbits/1.jpg,bees/2.jpg</b>.</li><li>• <b>2</b>: tile structure. Example: 1.jpg, 1.txt; 2.jpg,2.txt.</li></ul> |

| export_dataset_version_format | String  | Format of the dataset version to which data is exported.                                                                                                                                                                       |
| export_dataset_version_name   | String  | Name of the dataset version to which data is exported.                                                                                                                                                                         |

| Parameter                    | Type                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| export_dest                  | String                                  | Dataset export type. The options are as follows: <ul style="list-style-type: none"><li>• DIR: Data is exported to OBS (default value).</li><li>• NEW_DATASET: Export data to a new dataset.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| export_new_dataset_name      | String                                  | Name of the new dataset to which data is exported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| export_new_dataset_work_path | String                                  | Working directory of the new dataset to which data is exported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ratio_sample_usage           | Boolean                                 | Whether to randomly allocate the training set and validation set based on the specified ratio. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Allocate the training set and validation set.</li><li>• <b>false</b>: Do not allocate the training set and validation set. (Default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| sample_state                 | String                                  | Sample status. The options are as follows: <ul style="list-style-type: none"><li>• <b>__ALL__</b>: labeled</li><li>• <b>__NONE__</b>: not marked</li><li>• <b>__UNCHECK__</b>: to be accepted</li><li>• <b>__ACCEPTED__</b>: The acceptance is passed.</li><li>• <b>__REJECTED__</b>: rejected</li><li>• <b>__UNREVIEWED__</b>: to be reviewed</li><li>• <b>__REVIEWED__</b>: approved</li><li>• <b>__WORKFORCE_SAMPLED__</b>: sampled</li><li>• <b>__WORKFORCE_SAMPLED_UNCHECK__</b>: Sampling is to be accepted.</li><li>• <b>__WORKFORCE_SAMPLED_CHECKED__</b>: Sampling has been accepted.</li><li>• <b>__WORKFORCE_SAMPLED_ACCEPTED__</b>: The sampling is passed.</li><li>• <b>__WORKFORCE_SAMPLED_REJECTED__</b>: The sampling has been rejected.</li><li>• <b>__AUTO_ANNOTATION__</b>: to be confirmed</li></ul> |
| samples                      | Array of strings                        | ID list of exported samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| search_conditions            | Array of <b>SearchCondition</b> objects | Exported search conditions. The relationship between multiple search conditions is OR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Parameter          | Type   | Description                                                                                                                                                                    |
|--------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| train_sample_ratio | String | Split ratio of training set and verification set during specified version release. The default value is <b>1.00</b> , indicating that all released versions are training sets. |

**Table 25-359** SearchCondition

| Parameter        | Type                                | Description                                                                                                                                                                                    |
|------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| coefficient      | String                              | Filter by coefficient of difficulty.                                                                                                                                                           |

| label_list       | <a href="#">SearchLabels</a> object | Label search criteria.                                                                                                                                                                         |
| labeler          | String                              | Labeler.                                                                                                                                                                                       |
| metadata         | <a href="#">SearchProp</a> object   | Search by sample attribute.                                                                                                                                                                    |
| parent_sample_id | String                              | Parent sample ID.                                                                                                                                                                              |
| sample_dir       | String                              | Directory where data samples are stored (the directory must end with a slash (/)). Only samples in the specified directory are searched for. Recursive search of directories is not supported. |
| sample_name      | String                              | Search by sample name, including the file name extension.                                                                                                                                      |

| Parameter       | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_time     | String | When a sample is added to the dataset, an index is created based on the last modification time (accurate to day) of the sample on OBS. You can search for the sample based on the time. Options: <ul style="list-style-type: none"><li>• <b>month</b>: Search for samples added from 30 days ago to the current day.</li><li>• <b>day</b>: Search for samples added from yesterday (one day ago) to the current day.</li><li>• <b>yyyyMMdd-yyyyMMdd</b>: Search for samples added in a specified period (at most 30 days), in the format of <b>Start date-End date</b>. For example, <b>20190901-2019091501</b> indicates that samples generated from September 1 to September 15, 2019 are searched.</li></ul> |
| score           | String | Search by confidence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| slice_thickness | String | DICOM layer thickness. Samples are filtered by layer thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| study_date      | String | DICOM scanning time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| time_in_video   | String | A time point in the video.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**Table 25-360** SearchLabels

| Parameter | Type                                         | Description                                                                                                                                                                                                                                                   |
|-----------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SearchLabel</a> objects | List of label search criteria.                                                                                                                                                                                                                                |
| op        | String                                       | If you want to search for multiple labels, <b>op</b> must be specified. If you search for only one label, <b>op</b> can be left blank. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul> |

**Table 25-361** SearchLabel

| Parameter | Type   | Description |
|-----------|--------|-------------|
| name      | String | Label name. |

| Parameter | Type                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Operation type between multiple attributes.<br>Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul>                                                                                                                                                                                                                                                                                                                                                                     |
| property  | Map<String,Array<String>> | Label attribute, which is in the Object format and stores any key-value pairs. <b>key</b> indicates the attribute name, and <b>value</b> indicates the value list. If <b>value</b> is <b>null</b> , the search is not performed by value. Otherwise, the search value can be any value in the list.                                                                                                                                                                                                                                       |
| type      | Integer                   | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

Table 25-362 SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>• <b>AND</b>: AND relationship</li><li>• <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

## 25.1.58 Creating a Dataset Export Task

### Function

This API is used to create a dataset export task to export a dataset to OBS or new datasets.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/export-tasks

**Table 25-363** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

### Request Parameters

**Table 25-364** Request body parameters

| Parameter         | Mandatory | Type                                | Description                                                                                                                                                                                                                              |
|-------------------|-----------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotation_format | No        | String                              | Labeling format. Options: <ul style="list-style-type: none"><li>• <b>VOC</b>: VOC</li><li>• <b>COCO</b>: COCO</li></ul>                                                                                                                  |
| export_format     | No        | Integer                             | Format of the exported directory. Options: <ul style="list-style-type: none"><li>• <b>1</b>: tree structure. Example: <b>rabbits/1.jpg,bees/2.jpg</b>.</li><li>• <b>2</b>: tile structure. Example: 1.jpg, 1.txt; 2.jpg,2.txt.</li></ul> |
| export_params     | No        | <a href="#">ExportParams</a> object | Parameters of a dataset export task.                                                                                                                                                                                                     |

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| export_type  | No        | Integer | Export type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: labeled</li><li>• <b>1</b>: unlabeled</li><li>• <b>2</b>: all</li><li>• <b>3</b>: conditional search</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| path         | No        | String  | Output path for exporting data to OBS. This parameter is mandatory when data is exported to OBS or a new dataset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| sample_state | No        | String  | Sample status. The options are as follows: <ul style="list-style-type: none"><li>• <b>__ALL__</b>: labeled</li><li>• <b>__NONE__</b>: not marked</li><li>• <b>__UNCHECK__</b>: to be accepted</li><li>• <b>__ACCEPTED__</b>: The acceptance is passed.</li><li>• <b>__REJECTED__</b>: rejected</li><li>• <b>__UNREVIEWED__</b>: to be reviewed</li><li>• <b>__REVIEWED__</b>: approved</li><li>• <b>__WORKFORCE_SAMPLED__</b>: sampled</li><li>• <b>__WORKFORCE_SAMPLED_UNCHECK__</b>: Sampling is to be accepted.</li><li>• <b>__WORKFORCE_SAMPLED_CHECKED__</b>: Sampling has been accepted.</li><li>• <b>__WORKFORCE_SAMPLED_ACCEPTED__</b>: The sampling is passed.</li><li>• <b>__WORKFORCE_SAMPLED_REJECTED__</b>: The sampling has been rejected.</li><li>• <b>__AUTO_ANNOTATION__</b>: to be confirmed</li></ul> |

| Parameter          | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                           |
|--------------------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| source_type_header | No        | String  | Prefix of the OBS path in the exported labeling file. The default value is <b>obs://</b> . You can set it to <b>s3://</b> . The image path starting with <b>obs</b> cannot be parsed during training. Set the path prefix in the exported <b>manifest</b> file to <b>s3://</b> .                                                                                      |
| status             | No        | Integer | Task status.                                                                                                                                                                                                                                                                                                                                                          |
| task_id            | No        | String  | Task ID.                                                                                                                                                                                                                                                                                                                                                              |
| version_format     | No        | String  | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b>: default format</li><li>• <b>CarbonData</b>: CarbonData (supported only by table datasets)</li><li>• <b>CSV</b>: CSV</li></ul>                                                                                                                                           |
| version_id         | No        | String  | Dataset version ID, which must be specified when data of a dataset version is exported.                                                                                                                                                                                                                                                                               |
| with_column_header | No        | Boolean | Whether to write the column name in the first line of the CSV file during export. This field is valid for the table dataset. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Write the column name in the first line of the CSV file. (Default value)</li><li>• <b>false</b>: Do not write the column name in the first line of the CSV file.</li></ul> |

Table 25-365 ExportParams

| Parameter           | Mandatory | Type    | Description                                                                                                                                                                                                                    |
|---------------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| clear_hard_property | No        | Boolean | Whether to clear hard example attributes. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Clear hard example attributes. (Default value)</li><li>• <b>false</b>: Do not clear hard example attributes.</li></ul> |

| Parameter                     | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                       |
|-------------------------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| export_dataset_version_format | No        | String  | Format of the dataset version to which data is exported.                                                                                                                                                                                                                                                          |
| export_dataset_version_name   | No        | String  | Name of the dataset version to which data is exported.                                                                                                                                                                                                                                                            |
| export_dest                   | No        | String  | Dataset export type. The options are as follows: <ul style="list-style-type: none"><li>• DIR: Data is exported to OBS (default value).</li><li>• NEW_DATASET: Export data to a new dataset.</li></ul>                                                                                                             |
| export_new_dataset_name       | No        | String  | Name of the new dataset to which data is exported.                                                                                                                                                                                                                                                                |
| export_new_dataset_work_path  | No        | String  | Working directory of the new dataset to which data is exported.                                                                                                                                                                                                                                                   |
| ratio_sample_usage            | No        | Boolean | Whether to randomly allocate the training set and validation set based on the specified ratio. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Allocate the training set and validation set.</li><li>• <b>false</b>: Do not allocate the training set and validation set. (Default value)</li></ul> |

| parent_sample_id | String                              | Parent sample ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| sample_dir       | String                              | Directory where data samples are stored (the directory must end with a slash (/)). Only samples in the specified directory are searched for. Recursive search of directories is not supported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| sample_name      | String                              | Search by sample name, including the file name extension.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| sample_time      | String                              | When a sample is added to the dataset, an index is created based on the last modification time (accurate to day) of the sample on OBS. You can search for the sample based on the time. Options: <ul style="list-style-type: none"><li>• <b>month</b>: Search for samples added from 30 days ago to the current day.</li><li>• <b>day</b>: Search for samples added from yesterday (one day ago) to the current day.</li><li>• <b>yyyyMMdd-yyyyMMdd</b>: Search for samples added in a specified period (at most 30 days), in the format of <b>Start date-End date</b>. For example, <b>20190901-2019091501</b> indicates that samples generated from September 1 to September 15, 2019 are searched.</li></ul> |
| score            | String                              | Search by confidence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Parameter       | Type   | Description                                                     |
|-----------------|--------|-----------------------------------------------------------------|
| slice_thickness | String | DICOM layer thickness. Samples are filtered by layer thickness. |
| study_date      | String | DICOM scanning time.                                            |
| time_in_video   | String | A time point in the video.                                      |

**Table 25-373** SearchLabels

| Parameter | Type                                         | Description                                                                                                                                                                                                                                                   |
|-----------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SearchLabel</a> objects | List of label search criteria.                                                                                                                                                                                                                                |
| op        | String                                       | If you want to search for multiple labels, <b>op</b> must be specified. If you search for only one label, <b>op</b> can be left blank. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul> |

**Table 25-374** SearchLabel

| Parameter | Type                      | Description                                                                                                                                                                                                                                                                                         |
|-----------|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name      | String                    | Label name.                                                                                                                                                                                                                                                                                         |
| op        | String                    | Operation type between multiple attributes. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul>                                                                                                                                  |
| property  | Map<String,Array<String>> | Label attribute, which is in the Object format and stores any key-value pairs. <b>key</b> indicates the attribute name, and <b>value</b> indicates the value list. If <b>value</b> is <b>null</b> , the search is not performed by value. Otherwise, the search value can be any value in the list. |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image classification</li><li>● <b>1</b>: object detection</li><li>● <b>3</b>: image segmentation</li><li>● <b>100</b>: text classification</li><li>● <b>101</b>: named entity recognition</li><li>● <b>102</b>: text triplet relationship</li><li>● <b>103</b>: text triplet entity</li><li>● <b>200</b>: sound classification</li><li>● <b>201</b>: speech content</li><li>● <b>202</b>: speech paragraph labeling</li><li>● <b>600</b>: video labeling</li></ul> |

**Table 25-375** SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>● <b>AND</b>: AND relationship</li><li>● <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

## Example Requests

- Creating an Export Task (Exporting Data to OBS)

```
{
 "path" : "/test-obs/daoChu/",
 "export_type" : 3,
 "export_params" : {
 "sample_state" : "",
 "export_dest" : "DIR"
 }
}
```

- Creating an Export Task (Exporting Data to a New Dataset)

```
{
 "path" : "/test-obs/classify/input/",
 "export_type" : 3,
 "export_params" : {
 "sample_state" : "",
 "export_dest" : "NEW_DATASET",
 "export_new_dataset_name" : "dataset-export-test",
 "export_new_dataset_work_path" : "/test-obs/classify/output/"
 }
}
```

### Example Responses

Status code: 200

OK

```
{
 "task_id" : "rF9NNb56k5rtYKg2Y7"
}
```

### Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

### Error Codes

See [Error Codes](#).

## 25.1.59 Querying the Status of a Dataset Export Task

### Function

This API is used to query the status of a dataset export task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{resource\_id}/export-tasks/{task\_id}

**Table 25-376** Path Parameters

| Parameter   | Mandatory | Type   | Description                                                                                                     |
|-------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id  | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| resource_id | Yes       | String | Resource ID. Currently, the dataset ID can be specified.                                                        |

| Parameter | Mandatory | Type   | Description           |
|-----------|-----------|--------|-----------------------|
| task_id   | Yes       | String | ID of an export task. |

## Request Parameters

None

## Response Parameters

Status code: 200

Table 25-377 Response body parameters

| Parameter             | Type                                | Description                                                                                                                                                                                                                              |
|-----------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time           | Long                                | Time when a task is created.                                                                                                                                                                                                             |
| error_code            | String                              | Error code.                                                                                                                                                                                                                              |
| error_msg             | String                              | Error message.                                                                                                                                                                                                                           |
| export_format         | Integer                             | Format of the exported directory. Options: <ul style="list-style-type: none"><li>• <b>1</b>: tree structure. Example: <b>rabbits/1.jpg,bees/2.jpg</b>.</li><li>• <b>2</b>: tile structure. Example: 1.jpg, 1.txt; 2.jpg,2.txt.</li></ul> |

| name      | String                    | Label name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| op        | String                    | Operation type between multiple attributes. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul>                                                                                                                                                                                                                                                                                                                                                                        |
| property  | Map<String,Array<String>> | Label attribute, which is in the Object format and stores any key-value pairs. <b>key</b> indicates the attribute name, and <b>value</b> indicates the value list. If <b>value</b> is <b>null</b> , the search is not performed by value. Otherwise, the search value can be any value in the list.                                                                                                                                                                                                                                       |
| type      | Integer                   | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

Table 25-382 SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>• <b>AND</b>: AND relationship</li><li>• <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

Example Requests

Querying the Status of an Export Task (Exporting Data to OBS)

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/export-tasks/{task_id}
```

Example Responses

Status code: 200

OK

```
{
 "task_id" : "TzMuy7OKbClkGCAC3gb",
 "path" : "/test-obs/daoChu/",
 "export_type" : 3,
 "version_format" : "Default",
 "export_format" : 2,
 "export_params" : {
 "sample_state" : "",
 "export_dest" : "DIR",
 "clear_hard_property" : true,
 "train_sample_ratio" : 1.0,
 "ratio_sample_usage" : false
 },
 "status" : "RUNNING",
 "progress" : 0.0,
 "create_time" : 1606103424662,
 "update_time" : 1606103494124
}
```

Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.60 Synchronizing a Dataset

### Function

Synchronize samples and labeling information from the input dataset path to the dataset. Text datasets do not support this operation.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/sync-data

**Table 25-383** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

### Request Parameters

None

### Response Parameters

None

### Example Requests

Synchronizing a Dataset

```
POST https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/sync-data
```

### Example Responses

None

## Status Codes

| Parameter            | Type   | Description                                                                                                                                                                                                                                                                                     |
|----------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| add_sample_count     | Long   | Number of added samples.                                                                                                                                                                                                                                                                        |
| create_time          | Long   | Task creation time.                                                                                                                                                                                                                                                                             |
| dataset_id           | String | Dataset ID.                                                                                                                                                                                                                                                                                     |
| deleted_sample_count | Long   | Number of deleted samples.                                                                                                                                                                                                                                                                      |
| duration_time        | Long   | Task running time.                                                                                                                                                                                                                                                                              |
| error_code           | String | Error code.                                                                                                                                                                                                                                                                                     |
| error_msg            | String | Error message.                                                                                                                                                                                                                                                                                  |
| status               | String | Status of a task. Options: <ul style="list-style-type: none"><li>● <b>QUEUING</b>: queuing</li><li>● <b>STARTING</b>: execution started</li><li>● <b>RUNNING</b>: running</li><li>● <b>COMPLETED</b>: completed</li><li>● <b>FAILED</b>: failed</li><li>● <b>NOT_EXIST</b>: not found</li></ul> |
| task_id              | String | Synchronization task ID.                                                                                                                                                                                                                                                                        |
| total_sample_count   | Long   | Total number of samples.                                                                                                                                                                                                                                                                        |

## Example Requests

Obtaining the Dataset Synchronization Status

GET https://{endpoint}/v2/{project\_id}/datasets/{dataset\_id}/sync-data/status

## Example Responses

**Status code: 200**

OK

```
{
 "status": "COMPLETED",
 "dataset_id": "gfgHHSokody6AJigS5A"
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.62 Obtaining an Auto Labeling Sample List

### Function

Obtain a list of auto labeling samples in a dataset.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/auto-annotations/samples

**Table 25-386** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-387** Query parameters

| Parameter  | Mandatory | Type   | Description                                                          |
|------------|-----------|--------|----------------------------------------------------------------------|
| high_score | No        | String | Upper limit of the confidence score. The default value is <b>1</b> . |
| label_name | No        | String | Label name                                                           |

| Parameter         | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label_type        | No        | Integer | Labeling type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>400</b>: table dataset</li><li>• <b>600</b>: video labeling</li><li>• <b>900</b>: free format</li></ul> |
| limit             | No        | Integer | Maximum number of records returned on each page. The value ranges from <b>1</b> to <b>100</b> . The default value is <b>10</b> .                                                                                                                                                                                                                                                                                                                                                                                                                            |
| low_score         | No        | String  | Lower limit of the confidence score. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| offset            | No        | Integer | Start page for pagination display. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| order             | No        | String  | Sorting sequence of the query. Options: <ul style="list-style-type: none"><li>• <b>asc</b>: ascending order</li><li>• <b>desc</b>: descending order (default value)</li></ul>                                                                                                                                                                                                                                                                                                                                                                               |
| process_parameter | No        | String  | Image resize configuration, which is the same as OBS settings. For details, see <a href="#">Resizing Images</a> . For example, <b>image/resize,m_lfit,h_200</b> indicates that the target image is resized proportionally and the height is set to 200 pixels.                                                                                                                                                                                                                                                                                              |
| search_conditions | No        | String  | Multi-dimensional search criteria after URL encoding. The relationship between multiple search conditions is AND.                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Request Parameters

None

## Response Parameters

Status code: 200

**Table 25-388** Response body parameters

| Parameter    | Type                                                | Description       |
|--------------|-----------------------------------------------------|-------------------|
| sample_count | Integer                                             | Number of samples |
| samples      | Array of <a href="#">DescribeSampleResp</a> objects | List of samples   |

**Table 25-389** DescribeSampleResp

| Parameter        | Type                                         | Description                                                                                                                                                                                                                |

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| @modelarts:end_index | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> . Examples: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", the <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |
| @modelarts:end_time  | String  | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                                       |

| Parameter                   | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:feature          | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from             | String | Start entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| @modelarts:hard             | String | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0/false</b>: The label is not a hard example.</li><li>• <b>1/true</b>: The label is a hard example.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| @modelarts:hard_coefficient | String | Coefficient of difficulty of each label level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Parameter                | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:shape         | String  | Object shape, which is a default attribute dedicated to the object detection label and is left empty by default. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dashed line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

Table 25-394 SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                           |
|-----------------------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                          |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                            |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Parameter       | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | image size, including width, height, and depth. The type is List[/topic/body/section/table/tgroup/tbody/row/entry/p/br. {}] (br]. In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is 3). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Run the following command to obtain an auto labeling sample list:

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/auto-annotations/samples
```

## Response Example

**Status code: 200**

OK

```
{
 "sample_count" : 1,
 "samples" : [{
 "sample_id" : "10de574cbf0f09d4798b87ba0eb34e37",
 "sample_type" : 0,
 "labels" : [{
 "name" : "sunflowers",

}
```

## Status Code

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Code

For details, see [Error Codes](#).

## 25.1.63 Querying Details About an Auto Labeling Sample

### Function

This API is used to query details about an auto labeling sample.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/auto-annotations/samples/{sample\_id}

**Table 25-395** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| sample_id  | Yes       | String | Sample ID.                                                                                                      |

### Request Parameters

None

## Response Parameters

Status code: 200

| @modelarts:shape         | String  | Object shape, which is a default attribute dedicated to the object detection label and is left empty by default. Options: <ul style="list-style-type: none"><li>• <b>bndbox</b>: rectangle</li><li>• <b>polygon</b>: polygon</li><li>• <b>circle</b>: circle</li><li>• <b>line</b>: straight line</li><li>• <b>dashed</b>: dotted line</li><li>• <b>point</b>: point</li><li>• <b>polyline</b>: polyline</li></ul> |
| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator.                                                                                                                                                                                                                                                                                 |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of <b>hh:mm:ss.SSS</b> . ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                   |
| @modelarts:tail_id       | String  | ID of the tail entity in the triplet relationship label, which is a default attribute dedicated to the triplet relationship label.                                                                                                                                                                                                                                                                                 |

**Table 25-401** SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                        |
|-----------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a built-in attribute.                                                                                                                                                      |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard sample, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: non-hard sample</li><li>• <b>1</b>: hard sample</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value range is <b>[0,1]</b> .                                                                                    |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Parameter       | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Example Requests

Querying Details About an Auto Labeling Sample

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/auto-annotations/samples/{sample_id}
```

## Example Responses

## 25.1.64 Obtaining an Auto Labeling Task List by Page

### Function

Obtain auto labeling tasks by page, including auto labeling and auto grouping tasks. You can specify **type** to obtain the list of a specific type of tasks.

- Auto labeling means learning and training are performed based on the selected labels and images and an existing model is selected to quickly label the remaining images. Auto labeling includes active learning and pre-labeling.
  - Active learning: The system uses semi-supervised learning and hard example filtering to perform auto labeling, reducing manual labeling workload and helping you find hard examples.
  - Pre-labeling: You select a model on the Model Management page for auto labeling.
- In auto grouping, unlabeled images are clustered using a clustering algorithm and then processed based on the clustering result. Images can be labeled by group or cleaned.

### Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

### URI

GET /v2/{project\_id}/datasets/{dataset\_id}/tasks

**Table 25-402** URI parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| dataset_id | Yes       | String | Dataset ID  |

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-403** Query parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                               |
|-----------|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| limit     | No        | Integer | Maximum number of records returned on each page. The value ranges from <b>1</b> to <b>100</b> . The default value is <b>10</b> .                                                                                                                                                                                          |
| offset    | No        | Integer | Start page for pagination display. The default value is <b>0</b> .                                                                                                                                                                                                                                                        |
| task_name | No        | String  | Task name filtering.                                                                                                                                                                                                                                                                                                      |
| type      | No        | String  | Task type. If this parameter is not delivered, the auto labeling (active learning or pre-labeling) task list is returned by default. Options: <ul style="list-style-type: none"><li>• <b>auto-label</b>: active learning</li><li>• <b>pre-label</b>: pre-labeling</li><li>• <b>auto-grouping</b>: auto grouping</li></ul> |

## Request Parameters

None

## Response Parameters

Status code: 200

**Table 25-404** Response body parameters

| Parameter                 | Type                                         | Description                                                                                                                                                                                                                                                                                                           |
|---------------------------|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| exist_running_deploy_task | Boolean                                      | Whether the dataset contains running (including initialization) one-click model deployment. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The dataset contains running one-click model deployment.</li><li>• <b>false</b>: The dataset does not contain running one-click model deployment.</li></ul> |
| tasks                     | Array of <a href="#">RunningTask</a> objects | Specifies the task list.                                                                                                                                                                                                                                                                                              |
| total_count               | Integer                                      | Total number of tasks.                                                                                                                                                                                                                                                                                                |

**Table 25-405** RunningTask

| Parameter              | Type                                   | Description               |
|------------------------|----------------------------------------|---------------------------|
| annotated_sample_count | Integer                                | Number of labeled samples |
| code                   | String                                 | Error code                |
| config                 | <a href="#">SmartTaskConfig</a> object | Task configuration        |
| create_time            | String                                 | Task creation time        |
| dataset_id             | String                                 | Dataset ID                |
| elapsed_time           | Long                                   | Task execution time       |
| error_code             | String                                 | Error code                |
| error_detail           | String                                 | Error details             |
| error_msg              | String                                 | Error message             |
| message                | String                                 | Error message             |
| model_id               | String                                 | Model ID                  |
| model_name             | String                                 | Model name                |
| model_version          | String                                 | Model version             |
| progress               | Float                                  | Current task progress     |
| result                 | <a href="#">Result</a> object          | Task result               |
| status                 | Integer                                | Task status               |

| Parameter                | Type    | Description                       |
|--------------------------|---------|-----------------------------------|
| task_id                  | String  | Task ID                           |
| task_name                | String  | Task name                         |
| total_sample_count       | Integer | Total number of samples           |
| type                     | Integer | Task type                         |
| unconfirmed_sample_count | Integer | Number of samples to be confirmed |

**Table 25-406** SmartTaskConfig

| Parameter         | Type                                | Description                                                                                                                                                                                                                                              |
|-------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| algorithm_type    | String                              | Algorithm type for auto labeling. Options: <ul style="list-style-type: none"><li>• <b>fast</b>: Only labeled samples are used for training.</li><li>• <b>accurate</b>: Unlabeled samples are also used for semi-supervised training.</li></ul>           |
| ambiguity         | Boolean                             | Whether to perform clustering based on the image blurring degree.                                                                                                                                                                                        |
| annotation_output | String                              | Output path of the active learning labeling result                                                                                                                                                                                                       |
| collect_rule      | String                              | Sample collection rule. The default value is <b>all</b> , indicating full collection. Only <b>all</b> is available.                                                                                                                                      |
| collect_sample    | Boolean                             | Whether to enable sample collection. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Sample collection is enabled. (Default)</li><li>• <b>false</b>: Sample collection is disabled.</li></ul>                                              |
| confidence_scope  | String                              | Confidence range of key samples. The minimum and maximum values are separated by hyphens (-), for example, <b>0.10-0.90</b> .                                                                                                                            |
| description       | String                              | Job description                                                                                                                                                                                                                                          |
| engine_name       | String                              | Engine name                                                                                                                                                                                                                                              |
| export_format     | Integer                             | Format of the exported directory. Options: <ul style="list-style-type: none"><li>• <b>1</b>: tree structure, for example, <b>rabbits/1.jpg, bees/2.jpg</b>.</li><li>• <b>2</b>: tile structure, for example, <b>1.jpg, 1.txt; 2.jpg, 2.txt</b></li></ul> |
| export_params     | <a href="#">ExportParams</a> object | Parameters of a dataset export task                                                                                                                                                                                                                      |

| Parameter               | Type                              | Description                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| flavor                  | <b>Flavor</b> object              | Training resource flavor                                                                                                                                                                                                                                                                                                                               |
| image_brightness        | Boolean                           | Whether to perform clustering based on the image brightness                                                                                                                                                                                                                                                                                            |
| image_colorfulness      | Boolean                           | Whether to perform clustering based on the image color                                                                                                                                                                                                                                                                                                 |
| inf_cluster_id          | String                            | ID of a dedicated cluster. This parameter is left blank by default, indicating that a dedicated cluster is not used. When using a dedicated cluster to deploy services, ensure that the cluster status is normal. After this parameter is set, the network configuration of the cluster is used, and the <b>vpc_id</b> parameter does not take effect. |
| inf_config_list         | Array of <b>InfConfig</b> objects | Configuration list required for running an inference job, which is optional and left blank by default                                                                                                                                                                                                                                                  |
| inf_output              | String                            | Output path of inference in active learning                                                                                                                                                                                                                                                                                                            |
| infer_result_output_dir | String                            | OBS directory for storing sample prediction results. This parameter is optional. The <b>{service_id}-infer-result</b> subdirectory in the <b>output_dir</b> directory is used by default.                                                                                                                                                              |
| key_sample_output       | String                            | Output path of hard examples in active learning                                                                                                                                                                                                                                                                                                        |
| log_url                 | String                            | OBS URL of the logs of a training job. By default, this parameter is left blank.                                                                                                                                                                                                                                                                       |
| manifest_path           | String                            | Path of the manifest file, which is used as the input for training and inference                                                                                                                                                                                                                                                                       |
| model_id                | String                            | Model ID                                                                                                                                                                                                                                                                                                                                               |
| model_name              | String                            | Model name                                                                                                                                                                                                                                                                                                                                             |
| model_parameter         | String                            | Model parameters                                                                                                                                                                                                                                                                                                                                       |
| model_version           | String                            | Model version                                                                                                                                                                                                                                                                                                                                          |
| n_clusters              | Integer                           | Number of clusters                                                                                                                                                                                                                                                                                                                                     |
| name                    | String                            | Task name                                                                                                                                                                                                                                                                                                                                              |

| Parameter         | Type                                               | Description                                                                                                                                                                                                                  |
|-------------------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| output_dir        | String                                             | Sample output path. The format is as follows: <i>Dataset output path/Dataset name-Dataset ID/annotation/auto-deploy/</i> . Example: <b>/test/work_1608083108676/dataset123-g6lO9qSu6hoxwCAirfm/annotation/auto-deploy/</b> . |
| parameters        | Array of <a href="#">TrainingParameter</a> objects | Running parameters of a training job                                                                                                                                                                                         |
| pool_id           | String                                             | Resource pool ID                                                                                                                                                                                                             |
| property          | String                                             | Attribute name                                                                                                                                                                                                               |
| req_uri           | String                                             | Inference path of a batch job                                                                                                                                                                                                |
| result_type       | Integer                                            | Processing mode of auto grouping results. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The results are saved to OBS.</li><li>• <b>1</b>: The results are saved to samples.</li></ul>                           |
| samples           | Array of <a href="#">SampleLabels</a> objects      | Labeling information for samples to be auto labeled                                                                                                                                                                          |
| stop_time         | Integer                                            | Timeout interval, in minutes. The default value is 15 minutes. This parameter is used only in the scenario of auto labeling for videos.                                                                                      |
| time              | String                                             | Timestamp in active learning                                                                                                                                                                                                 |
| train_data_path   | String                                             | Path for storing existing training datasets                                                                                                                                                                                  |
| train_url         | String                                             | OBS URL of the output file of a training job. By default, this parameter is left blank.                                                                                                                                      |
| version_format    | String                                             | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b></li><li>• <b>CarbonData</b> (supported only by table datasets)</li><li>• <b>CSV</b></li></ul>                                   |
| worker_server_num | Integer                                            | Number of workers in a training job                                                                                                                                                                                          |

**Table 25-407** ExportParams

| Parameter                     | Type    | Description                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Parameter | Type                                         | Description                                                                                                                                                                                                                                                   |
|-----------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SearchLabel</a> objects | Label search criteria                                                                                                                                                                                                                                         |
| op        | String                                       | If you want to search for multiple labels, <b>op</b> must be specified. If you search for only one label, <b>op</b> can be left blank. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul> |

**Table 25-410** SearchLabel

| Parameter | Type                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name      | String                    | Label name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| op        | String                    | Operation type between multiple attributes. Options: <ul style="list-style-type: none"><li>• <b>OR</b>: OR operation</li><li>• <b>AND</b>: AND operation</li></ul>                                                                                                                                                                                                                                                                                                                                                                        |
| property  | Map<String,Array<String>> | Label attribute, which is in the Object format and stores any key-value pairs. <b>key</b> indicates the attribute name, and <b>value</b> indicates the value list. If <b>value</b> is <b>null</b> , the search is not performed by value. Otherwise, the search value can be any value in the list.                                                                                                                                                                                                                                       |
| type      | Integer                   | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-411** SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>• <b>AND</b>: AND relationship</li><li>• <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

**Table 25-412** Flavor

| Parameter | Type   | Description                                                                 |
|-----------|--------|-----------------------------------------------------------------------------|
| code      | String | Attribute code of a resource specification, which is used for task creating |

**Table 25-413** InfConfig

| Parameter      | Type               | Description                                                                                                                                                                                                       |
|----------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| envs           | Map<String,String> | Environment variable key-value pair required for running a model. This parameter is optional. By default, it is left blank. To ensure data security, do not enter sensitive information in environment variables. |
| instance_count | Integer            | Number of instances (compute nodes) for deploying a model                                                                                                                                                         |
| model_id       | String             | Model ID                                                                                                                                                                                                          |
| specification  | String             | Resource specifications of real-time services. For details, see <a href="#">Deploying a Service</a> .                                                                                                             |
| weight         | Integer            | Traffic weight allocated to a model. This parameter is mandatory only when <b>infer_type</b> is set to <b>real-time</b> . The sum of the weights must be 100.                                                     |

**Table 25-414** TrainingParameter

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| label     | String | Parameter name  |
| value     | String | Parameter value |

Table 25-415 Result

| Parameter              | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_sample_count | Integer                                         | Number of labeled samples                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| confidence_scope       | String                                          | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| dataset_name           | String                                          | Dataset name, which can contain 1 to 100 characters. Only letters, digits, underscores (_), and hyphens (-) are allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| dataset_type           | String                                          | Dataset type. | ordinal     | Integer                                | Sequence number                                                                                                                                                                                                                                                        |
| parent_name | String                                 | Parent event name                                                                                                                                                                                                                                                      |
| status      | String                                 | Status. Options: <ul style="list-style-type: none"><li>• <b>waiting</b>: The event is waiting.</li><li>• <b>running</b>: The event is running.</li><li>• <b>failed</b>: The event is failed.</li><li>• <b>success</b>: The subtask is successfully executed.</li></ul> |

**Table 25-417** HardSelectTask

| Parameter           | Type   | Description                      |
|---------------------|--------|----------------------------------|
| create_at           | Long   | Task creation time               |
| dataset_id          | String | Dataset ID                       |
| dataset_name        | String | Dataset name                     |
| hard_select_task_id | String | ID of selected hard example task |
| task_status         | String | Task status                      |
| time                | Long   | Task execution time              |
| update_at           | Long   | Task update time                 |

**Table 25-418** SampleLabels

| Parameter | Type                                         | Description                                                                            |
|-----------|----------------------------------------------|----------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SampleLabel</a> objects | List of sample labels. If this parameter is left blank, all sample labels are deleted. |
| metadata  | <a href="#">SampleMetadata</a> object        | Attribute key-value pair of the sample metadata                                        |
| sample_id | String                                       | Sample ID                                                                              |

| Parameter    | Type    | Description                                                                                                                                                                                                                    |
|--------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_type  | Integer | Sample type. Options: <ul style="list-style-type: none"><li>● <b>0</b>: image</li><li>● <b>1</b>: text</li><li>● <b>2</b>: audio</li><li>● <b>4</b>: table</li><li>● <b>6</b>: video</li><li>● <b>9</b>: free format</li></ul> |
| sample_usage | String  | Sample usage. Options: <ul style="list-style-type: none"><li>● <b>TRAIN</b>: training</li><li>● <b>EVAL</b>: validation</li><li>● <b>TEST</b>: test</li><li>● <b>INFERENCE</b>: inference</li></ul>                            |
| source       | String  | Source address of sample data, which can be obtained by calling the sample list API.                                                                                                                                           |
| worker_id    | String  | ID of a labeling team member                                                                                                                                                                                                   |

**Table 25-419** SampleLabel

| Parameter    | Type                                        | Description                                                                                                                                                                                                                           |
|--------------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_by | String                                      | Video labeling method, which is used to determine whether a video is labeled manually or automatically. Options: <ul style="list-style-type: none"><li>● <b>human</b>: manual labeling</li><li>● <b>auto</b>: auto labeling</li></ul> |
| id           | String                                      | Label ID                                                                                                                                                                                                                              |
| name         | String                                      | Label name                                                                                                                                                                                                                            |
| property     | <a href="#">SampleLabel Property</a> object | Attribute key-value pair of the sample label, such as the object shape and shape feature                                                                                                                                              |
| score        | Float                                       | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                              |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. **Table 25-420** SampleLabelProperty

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| @modelarts:end_index | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> . Examples: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |
| @modelarts:end_time  | String  | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                                   |

| Parameter                   | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| @modelarts:feature          | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from             | String | Start entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| @modelarts:hard             | String | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0/false</b>: The label is not a hard example.</li><li>• <b>1/true</b>: The label is a hard example.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| @modelarts:hard_coefficient | String | Coefficient of difficulty of each label level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

Table 25-421 SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                          |
|-----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                         |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard sample, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                           |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| @modelarts:size | Array of objects | image size, including width, height, and depth. The type is List[/topic/body/section/table/tgroup/tbody/row/entry/p/br. {""}] (br]. In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is 3). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Run the following command to obtain auto labeling or auto grouping tasks by page:

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/tasks?offset=0&limit=10
```

## Response Example

**Status code: 200**

OK

```

| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Code

For details, see [Error Codes](#).

## 25.1.65 Starting Intelligent Tasks

### Function

This interface is used to start an intelligent task. Two types of intelligent tasks are supported: intelligent labeling and automatic grouping. You can specify the **task\_type** parameter in the request body to start a type of tasks. For datasets whose data path or working path is in the KMS encryption bucket, active learning and automatic grouping tasks cannot be started, but pre-labeling tasks are supported.

- Intelligent Labeling allows you to select an existing model in the system for intelligent labeling based on the labeling and image learning training in the current labeling phase to quickly label the remaining images. Auto labeling includes active learning and pre-labeling. \* Active learning: The system uses semi-supervised learning and hard example filtering to perform auto labeling, reducing manual labeling workload and helping you find hard examples. \* Pre-labeling: You select a model on the Model Management page for auto labeling. - Auto grouping: Unlabeled images are clustered using the clustering algorithm and then processed based on the clustering result. Images can be labeled by group or cleaned.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/tasks

**Table 25-422** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-423** Request body parameters

| Parameter          | Mandatory | Type                   | Description                                                                                                                                                                                      |
|--------------------|-----------|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| collect_key_sample | No        | Boolean                | Whether to collect key samples. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Collect key samples.</li><li>• <b>false</b>: Do not collect key samples. (Default value)</li></ul> |
| config             | No        | SmartTaskConfig object | Task configuration.                                                                                                                                                                              |
| model_id           | No        | String                 | Model ID.                                                                                                                                                                                        |
| task_type          | No        | String                 | Task type. The options are as follows: - <b>auto-label</b> : active learning - <b>pre-label</b> : pre-labeling - <b>auto-grouping</b> : auto grouping                                            |

**Table 25-424** SmartTaskConfig

| Parameter         | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| algorithm_type    | No        | String  | Algorithm type for auto labeling. Options: <ul style="list-style-type: none"><li>• <b>fast</b>: Only labeled samples are used for training. This type of algorithm achieves faster labeling.</li><li>• <b>accurate</b>: In addition to labeled samples, unlabeled samples are used for semi-supervised training. This type of algorithm achieves more accurate labeling.</li></ul> |
| ambiguity         | No        | Boolean | Whether to perform clustering based on the image blurring degree.                                                                                                                                                                                                                                                                                                                  |
| annotation_output | No        | String  | Output path of the active learning labeling result.                                                                                                                                                                                                                                                                                                                                |
| collect_rule      | No        | String  | Sample collection rule. The default value is <b>all</b> , indicating full collection. Currently, only value <b>all</b> is available.                                                                                                                                                                                                                                               |

| Parameter          | Mandatory | Type                                | Description                                                                                                                                                                                                                                                                                                                                              |
|--------------------|-----------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| collect_sample     | No        | Boolean                             | Whether to enable sample collection. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Enable sample collection. (Default value)</li><li>• <b>false</b>: Do not enable sample collection.</li></ul>                                                                                                                                          |
| confidence_scope   | No        | String                              | Confidence range of key samples. The minimum and maximum values are separated by hyphens (-). Example: 0.10-0.90.                                                                                                                                                                                                                                        |
| description        | No        | String                              | Task description.                                                                                                                                                                                                                                                                                                                                        |

| @modelarts:feature | No        | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of the image is used as the coordinate origin [0, 0]. Each coordinate point is represented by [x, y], where x indicates the horizontal coordinate and y indicates the vertical coordinate (both x and y are <math>\geq 0</math>). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b> consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the x-coordinate of the first point must be less than the x-coordinate of the second point, and the y-coordinate of the first point must be less than the y-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li></ul> |

| Parameter                   | Mandatory | Type   | Description                                                                                                                                                                                                                            |

| @modelarts:size | No        | Array of objects | Image size (width, height, and depth of the image), which is a default attribute, with type of <b>List&lt;Integer&gt;</b> . In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is <b>3</b> ). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Response Parameters

Status code: 200

Table 25-437 Response body parameters

| Parameter | Type   | Description |
|-----------|--------|-------------|
| task_id   | String | Task ID.    |

## Example Requests

- The following is an example of how to start an auto labeling (active learning) task. The task type has been set to **auto-label**.

```
{
 "task_type": "auto-label",
 "collect_key_sample": true,
 "config": {
 "algorithm_type": "fast"
 }
}
```

- The following is an example of how to start an auto labeling (pre-labeling) task. The task type has been set to **pre-label**.

```
{
 "task_type": "pre-label",
 "model_id": "c4989033-7584-44ee-a180-1c476b810e46",
 "collect_key_sample": true,
 "config": {
 "inf_config_list": [{
 "specification": "modelarts.vm.cpu.2u",

```

```
 "instance_count" : 1
 }]
}
```

- The following is an example of how to start an auto grouping task. The task type has been set to **auto-grouping**.

```
{
 "task_type" : "auto-grouping",
 "config" : {
 "n_clusters" : "2",
 "ambiguity" : false,
 "image_brightness" : false,
 "image_colorfulness" : false,
 "property" : "size",
 "result_type" : 1
 }
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "task_id" : "r0jT2zwxBDKf8KEnSuZ"
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.66 Obtaining Details About an Auto Labeling Task

### Function

Obtain details about an auto labeling task, including auto labeling and auto grouping tasks. You can specify the **task\_id** parameter to obtain the details about a specific task.

## Debugging

You can debug this API in [API Explorer](#) which supports automatic authentication. API Explorer can automatically generate SDK code examples and provide the SDK code example debugging.

## URI

GET /v2/{project\_id}/datasets/{dataset\_id}/tasks/{task\_id}

**Table 25-438** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                    |
|------------|-----------|--------|--------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID                                                                     |
| project_id | Yes       | String | Project ID. For details, see <a href="#">Obtaining a Project ID and Name</a> . |
| task_id    | Yes       | String | Task ID                                                                        |

## Request Parameters

None

## Response Parameters

**Status code: 200**

**Table 25-439** Response body parameters

| Parameter    | Type                                   | Description                          |
|--------------|----------------------------------------|--------------------------------------|
| code         | String                                 | Task running status code             |
| config       | <a href="#">SmartTaskConfig</a> object | Task configuration                   |
| create_time  | String                                 | Task creation time                   |
| elapsed_time | Long                                   | Execution time                       |
| error_code   | String                                 | Error code                           |
| error_detail | String                                 | Error details                        |
| error_msg    | String                                 | Error message                        |
| message      | String                                 | Task running information.            |
| progress     | Float                                  | Percentage of current task progress. |
| resource_id  | String                                 | Resource ID.                         |

| Parameter   | Type                          | Description                                                                                                                                                                                                                                                               |
|-------------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| result      | <a href="#">Result</a> object | Task result.                                                                                                                                                                                                                                                              |
| status      | Integer                       | Task status. Options: <ul style="list-style-type: none"><li>• <b>-1</b>: queuing</li><li>• <b>0</b>: initializing</li><li>• <b>1</b>: running</li><li>• <b>2</b>: failed</li><li>• <b>3</b>: succeeded</li><li>• <b>4</b>: stopping</li><li>• <b>5</b>: stopped</li></ul> |
| task_id     | String                        | Task ID                                                                                                                                                                                                                                                                   |
| task_name   | String                        | Task name                                                                                                                                                                                                                                                                 |
| export_type | Integer                       | Export type. Options: Options: <ul style="list-style-type: none"><li>• <b>0</b>: Export to OBS.</li><li>• <b>1</b>: Export to sample attributes.</li></ul>                                                                                                                |

**Table 25-440** SmartTaskConfig

| Parameter         | Type    | Description                                                                                                                                                                                                                                    |
|-------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| algorithm_type    | String  | Algorithm type for auto labeling. Options: <ul style="list-style-type: none"><li>• <b>fast</b>: Only labeled samples are used for training.</li><li>• <b>accurate</b>: Unlabeled samples are also used for semi-supervised training.</li></ul> |
| ambiguity         | Boolean | Whether to perform clustering based on the image blurring degree.                                                                                                                                                                              |
| annotation_output | String  | Output path of the active learning labeling result                                                                                                                                                                                             |
| collect_rule      | String  | Sample collection rule. The default value is <b>all</b> , indicating full collection. Only <b>all</b> is available.                                                                                                                            |
| collect_sample    | Boolean | Whether to enable sample collection. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Sample collection is enabled. (Default)</li><li>• <b>false</b>: Sample collection is disabled.</li></ul>                                    |
| confidence_scope  | String  | Confidence range of key samples. The minimum and maximum values are separated by hyphens (-). Example: 0.10-0.90.                                                                                                                              |
| description       | String  | Job description                                                                                                                                                                                                                                |

| Parameter               | Type                              | Description                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| engine_name             | String                            | Engine name                                                                                                                                                                                                                                                                                                                                            |
| export_format           | Integer                           | Format of the exported directory. Options: <ul style="list-style-type: none"><li>• 1: tree structure, for example, <b>rabbits/1.jpg,bees/2.jpg</b>.</li><li>• 2: tile structure, for example, <b>1.jpg, 1.txt; 2.jpg, 2.txt</b></li></ul>                                                                                                              |
| export_params           | <b>ExportParams</b> object        | Parameters of a dataset export task                                                                                                                                                                                                                                                                                                                    |
| flavor                  | <b>Flavor</b> object              | Training resource flavor                                                                                                                                                                                                                                                                                                                               |
| image_brightness        | Boolean                           | Whether to perform clustering based on the image brightness                                                                                                                                                                                                                                                                                            |
| image_colorfulness      | Boolean                           | Whether to perform clustering based on the image color                                                                                                                                                                                                                                                                                                 |
| inf_cluster_id          | String                            | ID of a dedicated cluster. This parameter is left blank by default, indicating that a dedicated cluster is not used. When using a dedicated cluster to deploy services, ensure that the cluster status is normal. After this parameter is set, the network configuration of the cluster is used, and the <b>vpc_id</b> parameter does not take effect. |
| inf_config_list         | Array of <b>InfConfig</b> objects | Configuration list required for running an inference job, which is optional and left blank by default                                                                                                                                                                                                                                                  |
| inf_output              | String                            | Output path of inference in active learning                                                                                                                                                                                                                                                                                                            |
| infer_result_output_dir | String                            | OBS directory for storing sample prediction results. This parameter is optional. The <b>{service_id}-infer-result</b> subdirectory in the <b>output_dir</b> directory is used by default.                                                                                                                                                              |
| key_sample_output       | String                            | Output path of hard examples in active learning                                                                                                                                                                                                                                                                                                        |
| log_url                 | String                            | OBS URL of the logs of a training job. By default, this parameter is left blank.                                                                                                                                                                                                                                                                       |
| manifest_path           | String                            | Path of the manifest file, which is used as the input for training and inference                                                                                                                                                                                                                                                                       |
| model_id                | String                            | Model ID                                                                                                                                                                                                                                                                                                                                               |
| model_name              | String                            | Model name                                                                                                                                                                                                                                                                                                                                             |
| model_parameter         | String                            | Model parameters                                                                                                                                                                                                                                                                                                                                       |

| Parameter         | Type                                               | Description                                                                                                                                                                                                                 |
|-------------------|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| model_version     | String                                             | Model version                                                                                                                                                                                                               |
| n_clusters        | Integer                                            | Number of clusters                                                                                                                                                                                                          |
| name              | String                                             | Task name                                                                                                                                                                                                                   |
| output_dir        | String                                             | Sample output path. The format is as follows: <i>Dataset output path/Dataset name-Dataset ID/annotation/auto-deploy/</i> . Example: <b>/test/work_1608083108676/dataset123-g6IO9qSu6hoxwCAirm/annotation/auto-deploy/</b> . |
| parameters        | Array of <a href="#">TrainingParameter</a> objects | Running parameters of a training job                                                                                                                                                                                        |
| pool_id           | String                                             | Resource pool ID                                                                                                                                                                                                            |
| property          | String                                             | Attribute name                                                                                                                                                                                                              |
| req_uri           | String                                             | Inference path of a batch job                                                                                                                                                                                               |
| result_type       | Integer                                            | Processing mode of auto grouping results. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The results are saved to OBS.</li><li>• <b>1</b>: The results are saved to samples.</li></ul>                          |
| samples           | Array of <a href="#">SampleLabels</a> objects      | Labeling information for samples to be auto labeled                                                                                                                                                                         |
| stop_time         | Integer                                            | Timeout interval, in minutes. The default value is 15 minutes. This parameter is used only in the scenario of auto labeling for videos.                                                                                     |
| time              | String                                             | Timestamp in active learning                                                                                                                                                                                                |
| train_data_path   | String                                             | Path for storing existing training datasets                                                                                                                                                                                 |
| train_url         | String                                             | OBS URL of the output file of a training job. By default, this parameter is left blank.                                                                                                                                     |
| version_format    | String                                             | Format of a dataset version. Options: <ul style="list-style-type: none"><li>• <b>Default</b></li><li>• <b>CarbonData</b> (supported only by table datasets)</li><li>• <b>CSV</b></li></ul>                                  |
| worker_server_num | Integer                                            | Number of workers in a training job                                                                                                                                                                                         |

**Table 25-441** ExportParams

| Parameter                     | Type    | Description                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| clear_hard_property           | Boolean | Whether to clear hard example attributes. Options: <ul style="list-style-type: none"><li>• <b>true</b>: Hard example attributes are cleared. (Default)</li><li>• <b>false</b>: Hard example attributes are not cleared.</li></ul>                                                                                                                                     |
| export_dataset_version_format | String  | Format of the dataset version to be exported                                                                                                                                                                                                                                                                                                                          |
| export_dataset_version_name   | String  | Name of the dataset version to be exported                                                                                                                                                                                                                                                                                                                            |
| export_dest                   | String  | Dataset export type. Options: <ul style="list-style-type: none"><li>• <b>DIR</b>: Export to OBS. (default)</li><li>• <b>NEW_DATASET</b>: Export to a new dataset.</li></ul>                                                                                                                                                                                           |
| export_new_dataset_name       | String  | Name of the new dataset to which data is exported                                                                                                                                                                                                                                                                                                                     |
| export_new_dataset_work_path  | String  | Working directory of the new dataset to which data is exported                                                                                                                                                                                                                                                                                                        |
| ratio_sample_usage            | Boolean | Whether to randomly allocate data to the training and validation datasets based on the specified ratio. Options: <ul style="list-style-type: none"><li>• <b>true</b>: The data is randomly allocated to the training and validation datasets.</li><li>• <b>false</b>: The data is not randomly allocated to the training and validation datasets. (Default)</li></ul> |

| Parameter          | Type                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-445** SearchProp

| Parameter | Type                      | Description                                                                                                                                                         |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| op        | String                    | Relationship between attribute values. Options: <ul style="list-style-type: none"><li>• <b>AND</b>: AND relationship</li><li>• <b>OR</b>: OR relationship</li></ul> |
| props     | Map<String,Array<String>> | Search criteria of an attribute. Multiple search criteria can be set.                                                                                               |

**Table 25-446** Flavor

| Parameter | Type   | Description                                                                 |
|-----------|--------|-----------------------------------------------------------------------------|
| code      | String | Attribute code of a resource specification, which is used for task creating |

**Table 25-447** InfConfig

| Parameter      | Type               | Description                                                                                                                                                                                                       |
|----------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| envs           | Map<String,String> | Environment variable key-value pair required for running a model. This parameter is optional. By default, it is left blank. To ensure data security, do not enter sensitive information in environment variables. |
| instance_count | Integer            | Number of instances (compute nodes) for deploying a model                                                                                                                                                         |
| model_id       | String             | Model ID                                                                                                                                                                                                          |
| specification  | String             | Resource specifications of real-time services. For details, see <a href="#">Deploying a Service</a> .                                                                                                             |
| weight         | Integer            | Traffic weight allocated to a model. This parameter is mandatory only when <b>infer_type</b> is set to <b>real-time</b> . The sum of the weights must be 100.                                                     |

**Table 25-448** TrainingParameter

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| label     | String | Parameter name  |
| value     | String | Parameter value |

**Table 25-449** Result

| Parameter              | Type                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_sample_count | Integer                                         | Number of labeled samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| confidence_scope       | String                                          | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| dataset_name           | String                                          | Dataset name, which can contain 1 to 100 characters. Only letters, digits, underscores (_), and hyphens (-) are allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| dataset_type           | String                                          | Dataset type. | workspace_id             | String                                        | Workspace ID. If no workspace is created, the default value is 0. If a workspace is created and used, use the actual value. |

**Table 25-450** Event

| Parameter     | Type   | Description                    |
|---------------|--------|--------------------------------|
| create_time   | Long   | Event creation time            |
| description   | String | Event description              |
| elapsed_time  | Long   | Time when an event is executed |
| error_code    | String | Error code                     |
| error_message | String | Error message                  |

| Parameter   | Type                                   | Description                                                                                                                                                                                                                                                                                   |

| events      | Array of <a href="#">Event</a> objects | List of sub-events                                                                                                                                                                                                                                                                            |
| level       | Integer                                | Event severity.                                                                                                                                                                                                                                                                               |
| name        | String                                 | Event name                                                                                                                                                                                                                                                                                    |
| ordinal     | Integer                                | Sequence number.                                                                                                                                                                                                                                                                              |
| parent_name | String                                 | Parent event name.                                                                                                                                                                                                                                                                            |
| status      | String                                 | Event status. Options: <ul style="list-style-type: none"><li>• <b>waiting</b>: DCS instance restoration is waiting to begin.</li><li>• running</li><li>• <b>failed</b>: indicates that a job fails to be processed.</li><li>• <b>success</b>: The subtask is successfully executed.</li></ul> |

**Table 25-451** HardSelectTask

| Parameter           | Type   | Description                      |
|---------------------|--------|----------------------------------|
| create_at           | Long   | Task creation time               |
| dataset_id          | String | Dataset ID                       |
| dataset_name        | String | Dataset name                     |
| hard_select_task_id | String | ID of selected hard example task |
| task_status         | String | Task status                      |
| time                | Long   | Execution time                   |
| update_at           | Long   | Task update time                 |

**Table 25-452** SampleLabels

| Parameter | Type                                         | Description                                                                            |
|-----------|----------------------------------------------|----------------------------------------------------------------------------------------|
| labels    | Array of <a href="#">SampleLabel</a> objects | List of sample labels. If this parameter is left blank, all sample labels are deleted. |
| metadata  | <a href="#">SampleMetadata</a> object        | Attribute key-value pair of the sample metadata                                        |

| Parameter    | Type    | Description                                                                                                                                                                                                                    |
|--------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sample_id    | String  | Sample ID                                                                                                                                                                                                                      |
| sample_type  | Integer | Sample type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image</li><li>• <b>1</b>: text</li><li>• <b>2</b>: audio</li><li>• <b>4</b>: table</li><li>• <b>6</b>: video</li><li>• <b>9</b>: free format</li></ul> |
| sample_usage | String  | Sample usage. Options: <ul style="list-style-type: none"><li>• <b>TRAIN</b>: training</li><li>• <b>EVAL</b>: validation</li><li>• <b>TEST</b>: test</li><li>• <b>INFERENCE</b>: inference</li></ul>                            |
| source       | String  | Source address of sample data, which can be obtained by calling the sample list API.                                                                                                                                           |
| worker_id    | String  | ID of a labeling team member                                                                                                                                                                                                   |

**Table 25-453** SampleLabel

| Parameter    | Type                                        | Description                                                                                                                                                                                                                           |
|--------------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| annotated_by | String                                      | Video labeling method, which is used to determine whether a video is labeled manually or automatically. Options: <ul style="list-style-type: none"><li>• <b>human</b>: manual labeling</li><li>• <b>auto</b>: auto labeling</li></ul> |
| id           | String                                      | Label ID                                                                                                                                                                                                                              |
| name         | String                                      | Label name                                                                                                                                                                                                                            |
| property     | <a href="#">SampleLabel Property</a> object | Attribute key-value pair of the sample label, such as the object shape and shape feature                                                                                                                                              |
| score        | Float                                       | Confidence. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                              |

| Parameter | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Integer | Label type. Options: <ul style="list-style-type: none"><li>• <b>0</b>: image classification</li><li>• <b>1</b>: object detection</li><li>• <b>3</b>: image segmentation</li><li>• <b>100</b>: text classification</li><li>• <b>101</b>: named entity recognition</li><li>• <b>102</b>: text triplet relationship</li><li>• <b>103</b>: text triplet entity</li><li>• <b>200</b>: sound classification</li><li>• <b>201</b>: speech content</li><li>• <b>202</b>: speech paragraph labeling</li><li>• <b>600</b>: video labeling</li></ul> |

**Table 25-454** SampleLabelProperty

| Parameter            | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:content   | String  | Speech text content, which is a default attribute dedicated to the speech label (including the speech content and speech start and end points)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| @modelarts:end_index | Integer | End position of the text, which is a default attribute dedicated to the named entity label. The end position does not include the character corresponding to the value of <b>end_index</b> . Examples: <ul style="list-style-type: none"><li>• If the text is "<b>Barack Hussein Obama II (born on August 4, 1961) is an attorney and politician.</b>", the <b>start_index</b> and <b>end_index</b> of <b>Barack Hussein Obama II</b> are <b>0</b> and <b>23</b>, respectively.</li><li>• If the text is "<b>Hope is the thing with feathers</b>", <b>start_index</b> and <b>end_index</b> of <b>Hope</b> are <b>0</b> and <b>4</b>, respectively.</li></ul> |
| @modelarts:end_time  | String  | Speech end time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                                                                                                                                                                                                                                                                       |

| Parameter                   | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| @modelarts:feature          | Object | <p>Shape feature, which is a default attribute dedicated to the object detection label, with type of <b>List</b>. The upper left corner of an image is used as the coordinate origin <b>[0, 0]</b>. Each coordinate point is represented by <b>[x, y]</b>. <i>x</i> indicates the horizontal coordinate, and <i>y</i> indicates the vertical coordinate (both <i>x</i> and <i>y</i> are greater than or equal to 0). The format of each shape is as follows:</p> <ul style="list-style-type: none"><li>• <b>bndbox</b>: consists of two points, for example, <b>[[0,10],[50,95]]</b>. The upper left vertex of the rectangle is the first point, and the lower right vertex is the second point. That is, the <i>x</i>-coordinate of the first point must be less than the <i>x</i>-coordinate of the second point, and the <i>y</i>-coordinate of the first point must be less than the <i>y</i>-coordinate of the second point.</li><li>• <b>polygon</b>: consists of multiple points that are connected in sequence to form a polygon, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li><li>• <b>circle</b>: consists of the center and radius, for example, <b>[[100,100],[50]]</b>.</li><li>• <b>line</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>dashed</b>: consists of two points, for example, <b>[[0,100],[50,95]]</b>. The first point is the start point, and the second point is the end point.</li><li>• <b>point</b>: consists of one point, for example, <b>[[0,100]]</b>.</li><li>• <b>polyline</b>: consists of multiple points, for example, <b>[[0,100],[50,95],[10,60],[500,400]]</b>.</li></ul> |
| @modelarts:from             | String | Start entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| @modelarts:hard             | String | Whether the sample is labeled as a hard example, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0/false</b>: The label is not a hard example.</li><li>• <b>1/true</b>: The label is a hard example.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| @modelarts:hard_coefficient | String | Coefficient of difficulty of each label level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| @modelarts:speech_source | String  | Speech source, which is a default attribute dedicated to the speech start/end point label and can be set to a speaker or narrator                                                                                                                                                                                                                                                                                  |
| @modelarts:start_index   | Integer | Start position of the text, which is a default attribute dedicated to the named entity label. The start value begins from 0, including the character corresponding to the value of <b>start_index</b> .                                                                                                                                                                                                            |
| @modelarts:start_time    | String  | Speech start time, which is a default attribute dedicated to the speech start/end point label, in the format of hh:mm:ss.SSS. ( <b>hh</b> indicates hour; <b>mm</b> indicates minute; <b>ss</b> indicates second; and <b>SSS</b> indicates millisecond.)                                                                                                                                                           |
| @modelarts:triplet_id    | String  | Direction entity ID of the triplet relationship label, which is a default attribute dedicated to the triplet relationship label                                                                                                                                                                                                                                                                                    |

Table 25-455 SampleMetadata

| Parameter                   | Type    | Description                                                                                                                                                                                                                          |
|-----------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:import_origin    | Integer | Sample source, which is a default attribute.                                                                                                                                                                                         |
| @modelarts:hard             | Double  | Whether the sample is labeled as a hard sample, which is a default attribute. Options: <ul style="list-style-type: none"><li>• <b>0</b>: The label is not a hard example.</li><li>• <b>1</b>: The label is a hard example.</li></ul> |
| @modelarts:hard_coefficient | Double  | Coefficient of difficulty of each sample level, which is a default attribute. The value ranges from <b>0</b> to <b>1</b> .                                                                                                           |

| Parameter               | Type              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Parameter       | Type             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| @modelarts:size | Array of objects | image size, including width, height, and depth. The type is List[/topic/body/section/table/tgroup/tbody/row/entry/p/br. {""}] (br]. In the list, the first number indicates the width (pixels), the second number indicates the height (pixels), and the third number indicates the depth (the depth can be left blank and the default value is 3). For example, <b>[100,200,3]</b> and <b>[100,200]</b> are both valid. Note: This parameter is mandatory only when the sample label list contains the object detection label. |

## Request Example

Run the following command to obtain details about an auto labeling task:

```
GET https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/tasks/{task_id}
```

## Response Example

**Status code: 200**

OK

```

## Error Code

For details, see [Error Codes](#).

## 25.1.67 Stopping an Intelligent Task

### Function

This interface is used to stop an intelligent task. Intelligent labeling and automatic grouping tasks can be stopped. You can specify the **task\_id** parameter to stop a specific task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

POST /v2/{project\_id}/datasets/{dataset\_id}/tasks/{task\_id}/stop

**Table 25-456** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| dataset_id | Yes       | String | Dataset ID.                                                                                                     |
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| task_id    | Yes       | String | Task ID.                                                                                                        |

### Request Parameters

None

### Response Parameters

None

## Example Requests

Stopping an Intelligent Labeling or Automatic Grouping Task

```
POST https://{endpoint}/v2/{project_id}/datasets/{dataset_id}/tasks/{task_id}/stop
```

## Example Responses

Status code: 204

No Content

```
{ }
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 204         | No Content   |
| 401         | Unauthorized |
| 403         | Forbidden    |
| 404         | Not Found    |

## Error Codes

See [Error Codes](#).

## 25.1.68 Querying the List of a Processing Task

### Function

This API is used to obtain processing tasks, including feature analysis tasks and data processing tasks. You can specify the **task\_type** parameter to obtain a specific type of tasks.

- During data feature analysis, images or target bounding boxes are analyzed based on image features, such as blurs and brightness to draw visualized curves to assist in dataset processing.
- Data processing is used to extract valuable data from a large amount of disordered, difficult-to-understand data. Data processing includes data validation, data cleansing, data selection, and data augmentation.
- Data validation indicates that the dataset is verified to ensure data accuracy.
- Data cleansing refers to the process of denoising, correcting, or supplementing data.
- Data selection indicates the process of selecting data subsets from full data.
- Data augmentation indicates that data volume is increased through simple data amplification operations such as scaling, cropping, transformation, and composition.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

GET /v2/{project\_id}/processor-tasks

**Table 25-457** Path Parameters

Table 25-459 Response body parameters

| Parameter | Type    | Description                            |
|-----------|---------|----------------------------------------|
| count     | Integer | Total number of data processing tasks. |

| Parameter | Type                                                       | Description                                |
|-----------|------------------------------------------------------------|--------------------------------------------|
| tasks     | Array of <a href="#">DescribeProcessorTaskResp</a> objects | Data processing task list queried by page. |

**Table 25-460** DescribeProcessorTaskResp

| Parameter        | Type                                                 | Description                                                                                                                                                                                                                         |
|------------------|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time      | Long                                                 | Time when a data processing task is created.                                                                                                                                                                                        |
| data_source      | <a href="#">ProcessorDataSource</a> object           | Input of a data processing task. Either this parameter or <b>inputs</b> is delivered.                                                                                                                                               |
| description      | String                                               | Description of a data processing task.                                                                                                                                                                                              |
| duration_seconds | Integer                                              | Running time of data processing, in seconds.                                                                                                                                                                                        |
| error_msg        | String                                               | Error message. This field is displayed when the value of status is <b>3</b> .                                                                                                                                                       |
| inputs           | Array of <a href="#">ProcessorDataSource</a> objects | Input channel list of a data processing task. Either this parameter or <b>data_source</b> is delivered.                                                                                                                             |
| is_current       | Boolean                                              | Whether the current task is the latest of the same type of this version.                                                                                                                                                            |
| name             | String                                               | Name of a data processing task.                                                                                                                                                                                                     |
| result           | Object                                               | Output result of a data processing task. This field is displayed when status is set to <b>2</b> and is valid for a feature analysis task.                                                                                           |
| status           | Integer                                              | Status of a data processing task. Options: <ul style="list-style-type: none"><li>● <b>0</b>: initialized</li><li>● <b>1</b>: running</li><li>● <b>2</b>: completed</li><li>● <b>3</b>: failed</li><li>● <b>4</b>: stopped</li></ul> |
| task_id          | String                                               | ID of a data processing task.                                                                                                                                                                                                       |
| template         | <a href="#">TemplateParam</a> object                 | Data processing template, such as the algorithm ID and parameters.                                                                                                                                                                  |
| version_count    | Integer                                              | Version number of a data processing task.                                                                                                                                                                                           |

| Parameter    | Type                            | Description                                                                                                                                                   |
|--------------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| version_id   | String                          | Dataset version ID corresponding to a data processing task.                                                                                                   |
| version_name | String                          | Dataset version name corresponding to a data processing task.                                                                                                 |
| work_path    | <a href="#">WorkPath</a> object | Working directory of a data processing task.                                                                                                                  |
| workspace_id | String                          | Workspace ID of a data processing task. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

**Table 25-461** ProcessorDataSource

| Parameter    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name         | String | Dataset name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| source       | String | Data source path. Options: <ul style="list-style-type: none"><li>• If <b>type</b> is set to <b>OBS</b>, <b>source</b> is an OBS path.</li><li>• If <b>type</b> is set to <b>TASK</b>, <b>source</b> is a task ID.</li><li>• If <b>type</b> is set to <b>DATASET</b>, <b>source</b> is a dataset ID.</li><li>• If <b>type</b> is set to <b>CUSTOM</b> and the API is called by resource tenants, set <b>source</b> to the <b>project_id</b> of the actual user. Otherwise, this field is left blank.</li></ul> |
| type         | String | Data source type. Options: <ul style="list-style-type: none"><li>• <b>OBS</b>: Data obtained from OBS</li><li>• <b>TASK</b>: Data processing task</li><li>• <b>DATASET</b>: Dataset</li><li>• <b>CUSTOM</b>: Data called by resource tenants</li></ul>                                                                                                                                                                                                                                                        |
| version_id   | String | Version of a dataset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| version_name | String | Dataset version name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

**Table 25-462** TemplateParam

| Parameter       | Type                                           | Description                                                                                                                                                                                                                                                                                                                                                                           |

| id              | String                                         | Task type, which is the ID of a data processing template. Options: <ul style="list-style-type: none"><li>• <b>sys_data_analyse</b>: feature analysis</li><li>• <b>sys_data_cleaning</b>: data cleansing</li><li>• <b>sys_data_augmentation</b>: data augmentation</li><li>• <b>sys_data_validation</b>: data validation</li><li>• <b>sys_data_selection</b>: data filtering</li></ul> |
| name            | String                                         | Template name.                                                                                                                                                                                                                                                                                                                                                                        |
| operator_params | Array of <a href="#">OperatorParam</a> objects | Operator parameter list.                                                                                                                                                                                                                                                                                                                                                              |

**Table 25-463** OperatorParam

| Parameter              | Type    | Description                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| advanced_params_switch | Boolean | Advanced parameter switch.                                                                                                                                                                                                                                                                                                                                             |
| id                     | String  | ID of an operator.                                                                                                                                                                                                                                                                                                                                                     |
| name                   | String  | Name of an operator.                                                                                                                                                                                                                                                                                                                                                   |
| params                 | Object  | Operator parameter. The parameter type is map<string,object>. Currently, object only supports the types of Boolean, Integer, Long, String, List and Map<String,String>. For two special scenarios of object detection and image classification in a data preprocessing task, the value of <b>task_type</b> is <b>object_detection</b> or <b>image_classification</b> . |

**Table 25-464** WorkPath

| Parameter   | Type   | Description                               |
|-------------|--------|-------------------------------------------|
| name        | String | Dataset name.                             |
| output_path | String | Output path, for example, /datasets/demo. |

| Parameter    | Type   | Description                                                                                                                                                                                                                   |
|--------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| path         | String | Working path. Options: <ul style="list-style-type: none"><li>• If <b>type</b> is set to <b>OBS</b>, <b>source</b> is an OBS path.</li><li>• If <b>type</b> is set to <b>DATASET</b>, <b>source</b> is a dataset ID.</li></ul> |
| type         | String | Type of a working path. Options: <ul style="list-style-type: none"><li>• <b>OBS</b>: OBS path</li><li>• <b>DATASET</b>: dataset</li></ul>                                                                                     |
| version_id   | String | Version of a dataset.                                                                                                                                                                                                         |
| version_name | String | Name of a dataset version. The value can contain 0 to 32 characters. Only digits, letters, underscores (_), and hyphens (-) are allowed.                                                                                      |

## Example Requests

- Querying the Historical List of Feature Analysis Tasks of a Dataset

```
GET https://{endpoint}/v2/{project_id}/processor-tasks?
offset=0&limit=10&sort_by=create_time&order=desc&source_type=DATASET&source=X6c3N3eztX7cr3A
rvqu&task_type=sys_data_analyse&return_result=false&query_current=false
```

- Querying the Latest Feature Analysis Task Result for the Specified Version List of a Dataset

```
GET https://{endpoint}/v2/{project_id}/processor-tasks?
offset=0&limit=100&source_type=DATASET&source=X6c3N3eztX7cr3Arvqu&version_id=XwTuRqI9En7xu
ZskW70%2CJ4Eh2FDEWH1qnDID3hQ&task_type=sys_data_analyse&return_result=true&query_current
=true
```

## Example Responses

**Status code: 200**

OK

## Error Codes

See [Error Codes](#).

## 25.1.69 Creating a Processing Task

### Function

This API is used to create a processing task, including feature analysis tasks and data processing tasks. You can specify the **id** field of **template** composite parameter in the request body to create a task.

- During data feature analysis, images or target bounding boxes are analyzed based on image features, such as blurs and brightness to draw visualized curves to assist in dataset processing.
- Data processing is used to extract valuable data from a large amount of disordered, difficult-to-understand data. Data processing includes data validation, data cleansing, data selection, and data augmentation.
- Data validation indicates that the dataset is verified to ensure data accuracy.
- Data cleansing refers to the process of denoising, correcting, or supplementing data.
- Data selection indicates the process of selecting data subsets from full data.
- Data augmentation indicates that data volume is increased through simple data amplification operations such as scaling, cropping, transformation, and composition.

## Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

## URI

POST /v2/{project\_id}/processor-tasks

**Table 25-465** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Parameters

**Table 25-466** Request body parameters

| Parameter      | Mandatory | Type                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------|-----------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_version | No        | Boolean                                     | Whether to synchronously create a task version when creating a task. Set this parameter to <b>true</b> only when creating a data processing task. For other types of tasks, this parameter is set to <b>false</b> or left blank. Options: <ul style="list-style-type: none"><li><b>true</b>: Create a task version when creating a task.</li><li><b>false</b>: Do not create a task version when creating a task. (Default value)</li></ul> |
| data_source    | No        | <a href="#">ProcessorData Source</a> object | Data source. Either this parameter or <b>inputs</b> is used. A data source path cannot be an OBS path in a KMS-encrypted bucket.                                                                                                                                                                                                                                                                                                            |
| description    | No        | String                                      | Description of a data processing task. The description contains 0 to 256 characters and does not support the following special characters: ^!<>=&"'                                                                                                                                                                                                                                                                                         |

| Parameter    | Mandatory | Type                                                 | Description                                                                                                                            |
|--------------|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| inputs       | No        | Array of <a href="#">ProcessorDataSource</a> objects | Data sources. Either this parameter or <b>data_source</b> is used. A data source path cannot be an OBS path in a KMS-encrypted bucket. |
| name         | Yes       | String                                               | Name of a data processing task.                                                                                                        |
| template     | Yes       | <a href="#">TemplateParameter</a> object             | Data processing template, such as the algorithm ID and parameters.                                                                     |

| operator_params | No        | Array of <a href="#">OperatorParam</a> objects | Operator parameter list.                                                                                                                                                                                                                                                                                                                                                              |

**Table 25-469** OperatorParam

| Parameter              | Mandatory | Type    | Description                |
|------------------------|-----------|---------|----------------------------|
| advanced_params_switch | No        | Boolean | Advanced parameter switch. |
| id                     | No        | String  | ID of an operator.         |
| name                   | No        | String  | Name of an operator.       |

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| params    | No        | Object | Operator parameter. The parameter type is map<string,object>. Currently, object only supports the types of Boolean, Integer, Long, String, List[/topic/body/section/table/tgroup/tbody/row/entry/p/br {""}] (br] and Map<String,String>. For two special scenarios of object detection and image classification in a data preprocessing task, the value of <b>task_type</b> is <b>object_detection</b> or <b>image_classification</b> . |

Table 25-470 WorkPath

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                   |
|--------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name         | No        | String | Dataset name.                                                                                                                                                                                                                 |
| output_path  | No        | String | Output path, for example, / datasets/demo.                                                                                                                                                                                    |
| path         | No        | String | Working path. Options: <ul style="list-style-type: none"><li>• If <b>type</b> is set to <b>OBS</b>, <b>source</b> is an OBS path.</li><li>• If <b>type</b> is set to <b>DATASET</b>, <b>source</b> is a dataset ID.</li></ul> |
| type         | No        | String | Type of a working path. Options: <ul style="list-style-type: none"><li>• <b>OBS</b>: OBS path</li><li>• <b>DATASET</b>: dataset</li></ul>                                                                                     |
| version_id   | No        | String | Version of a dataset.                                                                                                                                                                                                         |
| version_name | No        | String | Name of a dataset version. The value can contain 0 to 32 characters. Only digits, letters, underscores (_), and hyphens (-) are allowed.                                                                                      |

## Response Parameters

Status code: 200

**Table 25-471** Response body parameters

| Parameter | Type   | Description                   |
|-----------|--------|-------------------------------|
| task_id   | String | ID of a data processing task. |

## Example Requests

- The following is an example of how to create a feature analysis task. The task type has been set to **sys\_data\_analyse**.

```
{
 "name": "V001",
 "description": "",
 "data_source": {
 "type": "DATASET",
 "source": "X6c3N3eztX7cr3Arvqu"
 },
 "template": {
 "id": "sys_data_analyse",
 "operator_params": [{
 "id": "sys_data_analyse",
 "params": {
 "op_list": []
 }
 }
],
 "version_id": "J4Eh2FDEWH1qnDID3hQ"
}
```

- The following is an example of how to create a data processing (data validation) task. The task type has been set to **sys\_data\_validation**.

```
{
 "name": "PRE-e77c",
 "inputs": [{
 "type": "DATASET",
 "source": "PYc9H2HGv5BJNwBGXyK",
 "version_id": "yoJ5ssClpNIOrsjjFDa"
 }],
 "work_path": {
 "type": "DATASET",
 "path": "PYc9H2HGv5BJNwBGXyK",
 "version_name": "V0010"
 },
 "description": "",
 "create_version": true,
 "template": {
 "id": "sys_data_validation",
 "operator_params": [{
 "name": "MetaValidation",
 "advanced_params_switch": false,
 "params": {
 "task_type": "image_classification",
 "dataset_type": "manifest",
 "source_service": "select",
 "filter_func": "data_validation_select",
 "image_max_width": "1920",
 "image_max_height": "1920",
 "total_status": "[0,1,2]"
 }
 }
],
 "workspace_id": "0"
}
```

- The following is an example of how to create a data processing (data cleansing) task. The task type has been set to **sys\_data\_cleaning**.

```
{
 "name": "PRE-330f",
 "inputs": [{
 "type": "DATASET",
 "source": "gfgHHSokody6AJigS5A",
 "version_id": "54IXbeJhfttGpL46lbv"
 }],
 "work_path": {
 "type": "DATASET",
 "path": "gfgHHSokody6AJigS5A",
 "version_name": "V004"
 },
 "description": "",
 "create_version": true,
 "template": {
 "id": "sys_data_cleaning",
 "operator_params": [{
 "name": "PCC",
 "advanced_params_switch": false,
 "params": {
 "task_type": "image_classification",
 "dataset_type": "manifest",
 "source_service": "select",
 "filter_func": "data_cleaning_select",
 "prototype_sample_path": "obs://test-obs/classify/data/animals/",
 "criticism_sample_path": "",
 "n_clusters": "auto",
 "similarity_threshold": "0.9",
 "embedding_distance": "0.2",
 "checkpoint_path": "/home/work/user-job-dir/test-lxm/resnet_v1_50",
 "total_status": "[0,2]",
 "do_validation": "True"
 }
 }]
 },
 "workspace_id": "0"
}
```

- The following is an example of how to create a data processing (data filtering) task. The task type has been set to **sys\_data\_selection**.

```
{
 "name": "PRE-aae5",
 "inputs": [{
 "type": "DATASET",
 "source": "gLNSdlQ1iAAmPgl0Won",
 "version_id": "WAVPSYpKE3FggbgRxiK"
 }],
 "work_path": {
 "type": "DATASET",
 "path": "gLNSdlQ1iAAmPgl0Won",
 "version_name": "V003"
 },
 "description": "",
 "create_version": true,
 "template": {
 "id": "sys_data_selection",
 "operator_params": [{
 "name": "SimDeduplication",
 "advanced_params_switch": false,
 "params": {
 "task_type": "image_classification",
 "dataset_type": "manifest",
 "source_service": "select",
 "filter_func": "data_deduplication_select",
 "similarity_threshold": "0.9",
 "total_status": "[0,2]",
 }
 }]
 }
}
```

```
 "do_validation" : "True"
 }
 }
],
"workspace_id" : "0"
}
```

- The following is an example of how to create a data processing (data augmentation) task. The task type has been set to **sys\_data\_augmentation**.

```
{
 "name": "PRE-637c",
 "inputs": [{
 "type": "DATASET",
 "source": "XGrRZuCV1qmMxnsmd5u",
 "version_id": "kjPDTOSi6BQqhtXZIFv"
 }],
 "work_path": {
 "type": "DATASET",
 "path": "XGrRZuCV1qmMxnsmd5u",
 "version_name": "V002"
 },
 "description": "",
 "create_version": true,
 "template": {
 "id": "sys_data_augmentation",
 "operator_params": [{
 "name": "AddNoise",
 "advanced_params_switch": false,
 "params": {
 "task_type": "image_classification",
 "dataset_type": "manifest",
 "noise_type": "Gauss",
 "loc": "0",
 "scale": "1",
 "lam": "2",
 "p": "0.01",
 "total_status": "[3]",
 "filter_func": "data_augmentation",
 "do_validation": "True"
 }
 }
]
},
"workspace_id" : "0"
}
```

## Example Responses

**Status code: 200**

OK

```
{
 "task_id": "SNEJua7qdZZN8GvkEr"
}
```

## Status Codes

| Status Code | Description  |
|-------------|--------------|
| 200         | OK           |
| 401         | Unauthorized |
| 403         | Forbidden    |

| Status Code | Description |
|-------------|-------------|
| 404         | Not Found   |

## Error Codes

See [Error Codes](#).

## 25.1.70 Querying Details About a Processing Task

### Function

This API is used to obtain details about processing tasks, including feature analysis tasks and data processing tasks. You can specify the **task\_id** parameter to obtain the details about a specific task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

GET /v2/{project\_id}/processor-tasks/{task\_id}

**Table 25-472** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| task_id    | Yes       | String | ID of a data processing task.                                                                                   |

### Request Parameters

None

### Response Parameters

**Status code: 200**

**Table 25-473** Response body parameters

| Parameter        | Type                                                  | Description                                                                                                                                                                                                                         |
|------------------|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time      | Long                                                  | Time when a data processing task is created.                                                                                                                                                                                        |
| data_source      | <a href="#">ProcessorDataSource</a> object            | Input of a data processing task. Either this parameter or <b>inputs</b> is delivered.                                                                                                                                               |
| description      | String                                                | Description of a data processing task.                                                                                                                                                                                              |
| duration_seconds | Integer                                               | Running time of data processing, in seconds.                                                                                                                                                                                        |
| error_msg        | String                                                | Error message. This field is displayed when the value of status is <b>3</b> .                                                                                                                                                       |
| inputs           | Array of <a href="#">ProcessorDataSources</a> objects | Input channel list of a data processing task. Either this parameter or <b>data_source</b> is delivered.                                                                                                                             |
| is_current       | Boolean                                               | Whether the current task is the latest of the same type of this version.                                                                                                                                                            |
| name             | String                                                | Name of a data processing task.                                                                                                                                                                                                     |
| result           | Object                                                | Output result of a data processing task. This field is displayed when status is set to <b>2</b> and is valid for a feature analysis task.                                                                                           |
| status           | Integer                                               | Status of a data processing task. Options: <ul style="list-style-type: none"><li>● <b>0</b>: initialized</li><li>● <b>1</b>: running</li><li>● <b>2</b>: completed</li><li>● <b>3</b>: failed</li><li>● <b>4</b>: stopped</li></ul> |
| task_id          | String                                                | ID of a data processing task.                                                                                                                                                                                                       |
| template         | <a href="#">TemplateParameter</a> object              | Data processing template, such as the algorithm ID and parameters.                                                                                                                                                                  |
| version_count    | Integer                                               | Version number of a data processing task.                                                                                                                                                                                           |
| version_id       | String                                                | Dataset version ID corresponding to a data processing task.                                                                                                                                                                         |
| version_name     | String                                                | Dataset version name corresponding to a data processing task.                                                                                                                                                                       |
| work_path        | <a href="#">WorkPath</a> object                       | Working directory of a data processing task.                                                                                                                                                                                        |

| Parameter    | Type   | Description                                                                                                                                                   |
|--------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| workspace_id | String | Workspace ID of a data processing task. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

**Table 25-474** ProcessorDataSource

| Parameter    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|-----------------|------------------------------------------------|--------------------------|
| operator_params | Array of <a href="#">OperatorParam</a> objects | Operator parameter list. |

**Table 25-476** OperatorParam

| Parameter              | Type    | Description                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| advanced_params_switch | Boolean | Advanced parameter switch.                                                                                                                                                                                                                                                                                                                                             |
| id                     | String  | ID of an operator.                                                                                                                                                                                                                                                                                                                                                     |
| name                   | String  | Name of an operator.                                                                                                                                                                                                                                                                                                                                                   |
| params                 | Object  | Operator parameter. The parameter type is map<string,object>. Currently, object only supports the types of Boolean, Integer, Long, String, List and Map<String,String>. For two special scenarios of object detection and image classification in a data preprocessing task, the value of <b>task_type</b> is <b>object_detection</b> or <b>image_classification</b> . |

**Table 25-477** WorkPath

| Parameter    | Type   | Description                                                                                                                                                                                                                   |
|--------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name         | String | Dataset name.                                                                                                                                                                                                                 |
| output_path  | String | Output path, for example, /datasets/demo.                                                                                                                                                                                     |

## Error Codes

See [Error Codes](#).

## 25.1.71 Updating a Processing Task

### Function

This API is used to update a processing task, including feature analysis tasks and data processing tasks. Only the description of tasks can be updated. You can specify the **task\_id** parameter to update a specific task.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

PUT /v2/{project\_id}/processor-tasks/{task\_id}

**Table 25-478** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| task_id    | Yes       | String | ID of a data processing task.                                                                                   |

### Request Parameters

**Table 25-479** Request body parameters

| Parameter   | Mandatory | Type   | Description                                                                                                                                         |
|-------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| description | No        | String | Description of a data processing task. The description contains 0 to 256 characters and does not support the following special characters: ^!<>=&"" |

### Response Parameters

None

## Example Requests

Updating a Data Processing Task

```
{
 "description" : "test"
}
```

## Example Responses

Status code: 200

OK

```
{ }
```

## Status Codes

## 25.1.72 Deleting a Processing Task

### Function

This API is used to delete a processing task, including feature analysis tasks and data processing tasks. A specific task can be deleted by specifying the **task\_id** parameter.

### Debugging

You can debug this API through automatic authentication in [API Explorer](#) or use the SDK sample code generated by API Explorer.

### URI

DELETE /v2/{project\_id}/processor-tasks/{task\_id}

**Table 25-480** Path Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| task_id    | Yes       | String | ID of a data processing task.                                                                                   |

# 25.2 DevEnviron (Old Version)

## 25.2.1 Creating a Development Environment Instance

### Function

This API is used to create a development environment instance for code development.

Calling this API is an asynchronous operation. The job status can be obtained by calling the API described in [Obtaining Details About a Development Environment Instance](#).

### URI

POST /v1/{project\_id}/demanager/instances

[Table 25-481](#) describes the required parameters.

**Table 25-481** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

### Request Body

[Table 25-482](#) describes the request parameters.

**Table 25-482** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                |
|------------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name       | Yes       | String | Instance name, which contains a maximum of 64 characters.<br>The value can contain letters, digits, hyphens (-), and underscores (_).                                                                                                                                                                      |
| profile_id | Yes       | String | Configuration ID. Options: <ul style="list-style-type: none"><li>Ascend-Power-Engine 1.0(python3)</li><li>Multi-Engine 1.0 (python2)-cpu</li><li>Multi-Engine 1.0 (python2)-gpu</li><li>Multi-Engine 1.0 (python3)-cpu</li><li>Multi-Engine 1.0 (python3)-gpu</li><li>Multi-Engine 2.0 (python3)</li></ul> |

| Parameter   | Mandatory | Type   | Description                                                                                                                                                                |
|-------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| description | No        | String | Instance description. The value contains a maximum of 512 characters and cannot contain the following special characters: &<>"/. By default, this parameter is left blank. |
| flavor      | Yes       | String | Instance flavor. The actual flavors depend on the region. To use other flavors, submit a service ticket to change the flavors.                                             |
| spec        | Yes       | Object | Instance definition. Only <b>Notebook</b> is supported. For example, see <a href="#">Table 25-483</a> .                                                                    |
| workspace   | No        | Object | Workspace. The default workspace ID is <b>0</b> . For details, see <a href="#">Table 25-487</a> .                                                                          |
| pool        | No        | Object | Resource pool. For details, see <a href="#">Table 25-488</a> .                                                                                                             |
| ai_project  | No        | Object | AI project. For details, see <a href="#">Table 25-490</a> .                                                                                                                |

**Table 25-483 notebook** parameters

| Parameter      | Mandatory | Type               | Description                                                                                                                                                                    |
|----------------|-----------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| storage        | Yes       | Object             | Storage path. For details, see <a href="#">Table 25-484</a> .                                                                                                                  |
| extend_storage | No        | Array<Storage>     | Extended storage list. For details, see <a href="#">Table 25-484</a> . Extended storage supports only <b>obsfs</b> and is available only for certain dedicated resource pools. |
| auto_stop      | No        | Object             | Auto stop parameter. For details, see <a href="#">Table 25-486</a> .                                                                                                           |
| annotations    | No        | Map<String,String> | Label information, which can be extended. By default, this parameter is left blank.                                                                                            |

Table 25-484 storage parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                     |
|-----------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Yes       | String | Storage type.<br>Only <b>obs</b> , <b>obsfs</b> , and <b>evs</b> are supported. Additionally, <b>obsfs</b> can only be used in certain dedicated resource pools. To mount an OBS parallel file system, submit a service ticket. |
| location  | No        | Object | Storage location. If <b>type</b> is set to <b>obs</b> , this parameter is mandatory. See <a href="#">Table 25-485</a> . By default, this parameter is left blank.                                                               |

Table 25-485 location parameters

| Parameter   | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| path        | No        | String  | Storage path <ul style="list-style-type: none"><li>If <b>type</b> is set to <b>obs</b>, this parameter is mandatory. The value must be a valid OBS bucket path and end with a slash (/). The value must be a specific directory in an OBS bucket rather than the root directory of an OBS bucket.</li><li>If <b>type</b> is set to <b>obsfs</b>, the parameter value must be a valid bucket name of the OBS parallel file system. (CCE does not support subdirectory mounting.)</li><li>If <b>type</b> is set to <b>evs</b>, this parameter does not need to be set.</li></ul> |
| volume_size | No        | Integer | EVS disk size. The minimum size is 5 GB and the maximum size is 4,096 GB. The default value is 5 GB. If <b>type</b> is set to <b>obs</b> , this parameter does not need to be set.                                                                                                                                                                                                                                                                                                                                                                                             |

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mount_path   | No        | String | <p>Mount path in a notebook instance. This parameter is valid only when <b>type</b> is set to <b>obsfs</b>.</p> <p>The default value is <b>/home/ma-user/work</b>.</p> <p>If you want to mount the file system to a specified path, set the value to the subdirectory of <b>/home/ma-user/work</b>. Otherwise, the mounting may fail or read/write exceptions may occur due to permission issues.</p> |
| access_modes | No        | String | <p>Access permission for the mounted file or folder. The permission can be read/write or read-only. This parameter is valid only when <b>type</b> is set to <b>obsfs</b>.</p> <p>Options:</p> <ul style="list-style-type: none"><li>• <b>ReadOnlyMany</b>: read-only mode</li><li>• <b>ReadWriteMany</b>: read/write mode (default value)</li></ul>                                                   |

Table 25-486 auto\_stop parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                     |
|-----------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| enable    | No        | Boolean | <p>Whether to enable the auto stop function. The value <b>true</b> indicates that the function is enabled and the instance will automatically stop when the running duration is reached. The value <b>false</b> indicates that the function is disabled. The default value is <b>false</b>.</p> |
| duration  | No        | Integer | <p>Running duration, in seconds. The value ranges from 3,600 to 86,400. After this parameter is set, it is valid for each startup. This parameter is mandatory when <b>enable</b> is set to <b>true</b>.</p>                                                                                    |
| prompt    | No        | Boolean | <p>Whether to display a prompt again. This parameter is provided for the console to determine whether to display a prompt again. The default value is <b>true</b>.</p>                                                                                                                          |

**Table 25-487 workspace** parameters

| Parameter | Mandatory | Type   | Description                                                                                                                         |
|-----------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------|
| id        | No        | String | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

**Table 25-488 poolSpec** parameters

| Parameter | Mandatory | Type   | Description                                                                 |
|-----------|-----------|--------|-----------------------------------------------------------------------------|
| id        | Yes       | String | Resource pool ID.                                                           |
| type      | No        | String | Resource pool type.                                                         |
| name      | No        | String | Resource pool name.                                                         |
| owner     | No        | Object | Owner of the resource pool. For details, see <a href="#">Table 25-489</a> . |

**Table 25-489 userSpec** parameters

| Parameter  | Mandatory | Type   | Description                                      |
|------------|-----------|--------|--------------------------------------------------|
| project_id | No        | String | ID of the project to which the resource belongs. |

**Table 25-490 AIProject** parameters

| Parameter | Mandatory | Type   | Description                                |
|-----------|-----------|--------|--------------------------------------------|
| id        | No        | String | AI project ID. This parameter is reserved. |

## Response Body

[Table 25-491](#) describes the response parameters.

**Table 25-491** Parameters

| Parameter | Type   | Description   |
|-----------|--------|---------------|
| id        | String | Instance ID   |
| name      | String | Instance name |

| Parameter               | Type   | Description                                                                                                                                                     |
|-------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| description             | String | Instance description                                                                                                                                            |
| status                  | String | Instance status                                                                                                                                                 |
| creation_timestamp      | String | Time when an instance is created                                                                                                                                |
| latest_update_timestamp | String | Time when an instance is modified                                                                                                                               |
| profile                 | Object | Configuration information. For details, see <a href="#">Table 25-492</a> .                                                                                      |
| flavor                  | String | Instance flavor                                                                                                                                                 |
| flavor_details          | Object | For details about the flavor, see <a href="#">Table 25-496</a> .                                                                                                |
| pool                    | Object | For details about the dedicated resource pool, see <a href="#">Table 25-497</a> .                                                                               |
| spec                    | Object | Instance definition For details about parameters of a notebook instance, see <a href="#">Table 25-499</a> .                                                     |
| workspace               | Object | Workspace. For details, see <a href="#">Table 25-504</a> .                                                                                                      |
| ai_project              | Object | AI project. For details, see <a href="#">Table 25-505</a> .                                                                                                     |
| error_code              | String | Error code. For details, see <a href="#">Error Codes</a> .                                                                                                      |
| queuing_info            | Object | Queuing information. For details, see <a href="#">Table 25-506</a> .                                                                                            |
| user                    | Object | User information. For details, see <a href="#">Table 25-507</a> .                                                                                               |
| repository              | Object | Git repository information. For details, see <a href="#">Table 25-508</a> . This parameter cannot be used. It is automatically returned when the API is called. |

**Table 25-492** profile parameters

| Parameter   | Type   | Description                                                      |
|-------------|--------|------------------------------------------------------------------|
| id          | String | Configuration ID                                                 |
| name        | String | Configuration name                                               |
| description | String | Configuration description                                        |
| de_type     | String | Development environment type. Only <b>Notebook</b> is supported. |

| Parameter   | Type               | Description                                                             |
|-------------|--------------------|-------------------------------------------------------------------------|
| flavor_type | String             | Hardware, which can be <b>CPU</b> , <b>GPU</b> , or <b>Ascend</b> .     |
| provision   | Object             | Deployment information. For details, see <a href="#">Table 25-493</a> . |
| labels      | Map<String,String> | Label                                                                   |

**Table 25-493** provision parameters

| Parameter | Type   | Description                                                         |
|-----------|--------|---------------------------------------------------------------------|
| type      | String | Deployment type. Only <b>Docker</b> is supported.                   |
| spec      | Object | Deployment details. For details, see <a href="#">Table 25-494</a> . |

**Table 25-494** spec parameters

| Parameter | Type   | Description                                                                                             |
|-----------|--------|---------------------------------------------------------------------------------------------------------|
| engine    | String | Deployment engine. Only <b>CCE</b> is supported.                                                        |
| params    | Object | Deployment parameters. Only <b>Docker</b> is supported. For details, see <a href="#">Table 25-495</a> . |

**Table 25-495** Docker deployment parameters

| Parameter   | Type               | Description                                                                         |
|-------------|--------------------|-------------------------------------------------------------------------------------|
| namespace   | String             | SWR organization name, which is globally unique                                     |
| image_name  | String             | Image name                                                                          |
| image_tag   | String             | Image tag                                                                           |
| annotations | Map<String,String> | Label information, which can be extended. By default, this parameter is left blank. |

Table 25-496 flavor\_details parameters

| Parameter       | Type                | Description                                                                                                                                                                          |
|-----------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| name            | String              | Flavor name                                                                                                                                                                          |
| status          | String              | Flavor sales status. Options: <ul style="list-style-type: none"><li>• <b>onSale</b></li><li>• <b>soldOut</b></li></ul>                                                               |
| queuing_num     | Integer             | This parameter is mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b> .                                                                |
| queue_left_time | Integer             | Left queuing time, in seconds<br>This parameter is mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b> .                               |
| storage_list    | Array<Storage type> | Supported storage type. Options: <ul style="list-style-type: none"><li>• <b>obs</b></li><li>• <b>evs</b></li><li>• <b>efs</b></li></ul>                                              |
| is_permitted    | Boolean             | Whether the current user has the permission to use this flavor                                                                                                                       |
| type            | String              | Flavor type. Options: <ul style="list-style-type: none"><li>• <b>GPU</b></li><li>• <b>CPU</b></li><li>• <b>ASCEND</b></li></ul>                                                      |
| params          | Dict                | Parameters that describing flavor                                                                                                                                                    |
| promo_type      | String              | Promotion type. Options: <ul style="list-style-type: none"><li>• <b>Free</b></li><li>• <b>NoDiscount</b></li></ul>                                                                   |
| instance_num    | Integer             | Number of instances of this flavor the current created                                                                                                                               |
| duration        | Integer             | Auto stop time after startup, in seconds                                                                                                                                             |
| store_time      | Integer             | Maximum retention period of an inactive instance of this flavor in the database, in hours<br>The default value is <b>-1</b> , indicating that the instance can be permanently saved. |
| billing_flavor  | String              | Billing specifications. If this field is left blank, the specifications name is used for billing.                                                                                    |

| Parameter      | Type    | Description                                                                        |
|----------------|---------|------------------------------------------------------------------------------------|
| billing_params | Integer | Billing ratio This parameter is mandatory when <b>billing_flavor</b> is specified. |

**Table 25-497 pool** parameters

| Parameter | Type   | Description                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------|
| id        | String | ID of a resource pool                                                                                                        |
| name      | String | Name of a resource pool                                                                                                      |
| type      | String | Type of a resource pool. <b>USER_DEFINED</b> indicates a dedicated resource pool.                                            |
| owner     | Object | This parameter is mandatory when <b>type</b> is set to <b>USER_DEFINED</b> . For details, see <a href="#">Table 25-498</a> . |

**Table 25-498 owner** parameters

| Parameter  | Type   | Description |
|------------|--------|-------------|
| project_id | String | Project ID  |

**Table 25-499 notebook** parameters

| Parameter          | Type           | Description                                                                                                                                                                    |
|--------------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| log_path           | String         | Path for storing custom image logs                                                                                                                                             |
| custom_script_path | String         | Path for storing custom initialization scripts used when a notebook instance is started                                                                                        |
| extend_storage     | Array<Storage> | Extended storage list. For details, see <a href="#">Table 25-500</a> . Extended storage supports only <b>obsfs</b> and is available only for certain dedicated resource pools. |
| storage            | Object         | Storage path. For details, see <a href="#">Table 25-500</a> .                                                                                                                  |
| credential         | Object         | AK and SK for accessing OBS. For details, see <a href="#">Table 25-510</a> .                                                                                                   |

| Parameter                    | Type               | Description                                                                                                                                                     |
|------------------------------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| repository                   | Object             | Git repository information. For details, see <a href="#">Table 25-508</a> . This parameter cannot be used. It is automatically returned when the API is called. |
| resource_reserved_time stamp | Integer            | Time when the resource is reserved                                                                                                                              |
| auto_stop                    | Object             | Auto stop parameter. For details, see <a href="#">Table 25-503</a> .                                                                                            |
| failed_reasons               | Object             | Cause for a creation or startup failure. For details, see <a href="#">Table 25-502</a> .                                                                        |
| annotations                  | Map<String,String> | Annotations<br>The generated URL cannot be directly accessed.                                                                                                   |
| extend_params                | Map<String,String> | Extended parameter                                                                                                                                              |

**Table 25-500 storage** parameters

| Parameter | Type   | Description                                                                                                                                                                                                                     |
|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | String | Storage type.<br>Only <b>obs</b> , <b>obsfs</b> , and <b>evs</b> are supported. Additionally, <b>obsfs</b> can only be used in certain dedicated resource pools. To mount an OBS parallel file system, submit a service ticket. |
| location  | Object | Storage location. If <b>type</b> is set to <b>obs</b> , this parameter is mandatory. See <a href="#">Table 25-501</a> . By default, this parameter is left blank.                                                               |

Table 25-501 location parameters

| Parameter    | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| path         | String  | Storage path <ul style="list-style-type: none"><li>If <b>type</b> is set to <b>obs</b>, this parameter is mandatory. The value must be a valid OBS bucket path and end with a slash (/). The value must be a specific directory in an OBS bucket rather than the root directory of an OBS bucket.</li><li>If <b>type</b> is set to <b>obsfs</b>, the parameter value must be a valid bucket name of the OBS parallel file system. (CCE does not support subdirectory mounting.)</li><li>If <b>type</b> is set to <b>evs</b>, this parameter does not need to be set.</li></ul> |
| volume_size  | Integer | EVS disk size. The minimum size is 5 GB and the maximum size is 4,096 GB. The default value is 5 GB. If <b>type</b> is set to <b>obs</b> , this parameter does not need to be set.                                                                                                                                                                                                                                                                                                                                                                                             |
| mount_path   | String  | Mount path in a notebook instance. This parameter is valid only when <b>type</b> is set to <b>obsfs</b> .<br>The default value is <b>/home/ma-user/work</b> .<br>If you want to mount the file system to a specified path, set the value to the subdirectory of <b>/home/ma-user/work</b> . Otherwise, the mounting may fail or read/write exceptions may occur due to permission issues.                                                                                                                                                                                      |
| access_modes | String  | Access permission for the mounted file or folder. The permission can be read/write or read-only. This parameter is valid only when <b>type</b> is set to <b>obsfs</b> . Options: <ul style="list-style-type: none"><li><b>ReadOnlyMany</b>: read-only mode</li><li><b>ReadWriteMany</b>: read/write mode (default value)</li></ul>                                                                                                                                                                                                                                             |

Table 25-502 failed\_reasons parameters

| Parameter | Type               | Description   |
|-----------|--------------------|---------------|
| code      | String             | Error code.   |
| message   | String             | Error message |
| detail    | Map<String,String> | Error details |

**Table 25-503 auto\_stop** parameters

| Parameter      | Type    | Description                                                                           |
|----------------|---------|---------------------------------------------------------------------------------------|
| enable         | Boolean | Whether to enable the auto stop function                                              |
| duration       | Integer | Running duration, in seconds                                                          |
| prompt         | Boolean | Whether to display a prompt again. This parameter is provided for the console to use. |
| stop_timestamp | Integer | Time when the instance stops. The value is a 13-digit timestamp.                      |
| remain_time    | Integer | Remaining time before actual stop, in seconds                                         |

**Table 25-504 workspace** parameters

| Parameter | Type   | Description  |
|-----------|--------|--------------|
| id        | String | Workspace ID |

**Table 25-505 AIProject** parameters

| Parameter | Type   | Description   |
|-----------|--------|---------------|
| id        | String | AI project ID |

**Table 25-506 queuing\_info** parameters

| Parameter | Type   | Description                                                                                             |
|-----------|--------|---------------------------------------------------------------------------------------------------------|
| id        | String | Instance ID                                                                                             |
| name      | String | Instance name                                                                                           |
| de_type   | String | Development environment type. By default, all types are returned.<br>Only <b>Notebook</b> is supported. |

| Parameter       | Type    | Description                                                                                                                                                               |
|-----------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| flavor          | String  | Instance flavor. By default, all types are returned. Options: <ul style="list-style-type: none"><li>• modelarts.vm.cpu.free</li><li>• modelarts.vm.gpu.free</li></ul>     |
| flavor_details  | Object  | Flavor details, which display the flavor information and whether the flavor is sold out For details, see <a href="#">Table 25-496</a> .                                   |
| status          | String  | Instance status. By default, all statuses are returned, including: <ul style="list-style-type: none"><li>• <b>CREATE_QUEUING</b></li><li>• <b>START_QUEUING</b></li></ul> |
| begin_timestamp | Integer | Time when an instance starts queuing. The value is a 13-digit timestamp.                                                                                                  |
| remain_time     | Integer | Left queuing time, in seconds                                                                                                                                             |
| end_timestamp   | Integer | Time when an instance completes queuing. The value is a 13-digit timestamp.                                                                                               |
| rank            | Integer | Ranking of an instance in a queue                                                                                                                                         |

**Table 25-507** user parameters

| Parameter | Type   | Description |
|-----------|--------|-------------|
| id        | String | User ID     |
| name      | String | Username    |

**Table 25-508** repository parameters

| Parameter       | Type   | Description                                                                  |
|-----------------|--------|------------------------------------------------------------------------------|
| id              | String | Repository ID                                                                |
| branch          | String | Repository branch                                                            |
| user_name       | String | Repository username                                                          |
| user_email      | String | Repository user mailbox                                                      |
| type            | String | Repository type. The options are <b>CodeClub</b> and <b>GitHub</b> .         |
| connection_info | Object | Repository link information. For details, see <a href="#">Table 25-509</a> . |

**Table 25-509 connection\_info** parameters

| Parameter  | Type   | Description                                                              |
|------------|--------|--------------------------------------------------------------------------|
| protocol   | String | Repository link protocol. The options are <b>ssh</b> and <b>https</b> .  |
| url        | String | Repository link address                                                  |
| credential | Object | Certificate information. For details, see <a href="#">Table 25-510</a> . |

**Table 25-510 credential** parameters

| Parameter       | Type   | Description             |
|-----------------|--------|-------------------------|
| ssh_private_key | String | SSH private certificate |
| access_token    | String | OAuth token of GitHub   |

## Sample Request

The following shows how to create the **notebook-instance** instance with ID **Python3-gpu**.

- Sample request

```
{
 "name": "notebook-instance",
 "description": "",
 "profile_id": "Multi-Engine 1.0 (python3)-gpu",
 "flavor": "modelarts.bm.gpu.v100NV32",
 "spec": {
 "storage": {
 "location": {
 "volume_size": 5
 },
 "type": "evs"
 },
 "auto_stop": {
 "enable": true,
 "duration": 3600
 }
 },
 "workspace": {
 "id": "0"
 }
}
```

## Sample Response

- Successful response

```
{
 "ai_project": {
 "id": "default-ai-project"
 },
 "creation_timestamp": "1594887749962",
 "description": "",
 "flavor": "modelarts.bm.gpu.v100NV32",
 "flavor_details": {
```

```
{
 "name": "modelarts.bm.gpu.v100NV32",
 "params": {
 "CPU": 8,
 "GPU": 1,
 "gpu_type": "v100NV32",
 "memory": "64GiB"
 },
 "status": "onSale",
 "type": "GPU"
},
{
 "id": "DE-7d558ef8-c73d-11ea-964c-0255ac100033",
 "latest_update_timestamp": "1594887749962",
 "name": "notebook-c6fd",
 "profile": {

 }
}
```

- Failed response

```
{
 "error_message": "The param path needs to end with /.",
 "error_code": "ModelArts.6318"
}
```

## Status Code

For details about the status code, see [Status Code](#).

## 25.2.2 Obtaining Development Environment Instances

### Function

This API is used to obtain the development environment instances that meet the search criteria.

### URI

GET /v1/{project\_id}/demanager/instances?  
de\_type={de\_type}&provision\_type={provision\_type}&status={status}&sortby={sort  
by}&order={order}&offset={offset}&limit={limit}

[Table 25-511](#) describes the required parameters.

**Table 25-511** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-512** query parameters

| Parameter      | Mandatory | Type   | Description                                                                                            |
|----------------|-----------|--------|--------------------------------------------------------------------------------------------------------|
| de_type        | Yes       | String | Development environment type. Only <b>Notebook</b> is supported. The first letter must be capitalized. |
| provision_type | No        | String | Deployment type. Only <b>Docker</b> is supported.                                                      |

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| status       | No        | String  | Instance status. By default, all statuses are returned. Options: <ul style="list-style-type: none"><li>• <b>CREATE_QUEUEING</b>: The instance is queuing for creating free resources.</li><li>• <b>CREATING</b>: The instance is being created.</li><li>• <b>CREATE_FAILED</b>: The instance fails to be created.</li><li>• <b>START_QUEUEING</b>: The instance is queuing for starting free resources.</li><li>• <b>READY_TO_START</b>: The free resources are waiting to be started.</li><li>• <b>STARTING</b>: The instance is being started.</li><li>• <b>RESTARTING</b>: The instance is being restarted.</li><li>• <b>START_FAILED</b>: The instance fails to be started.</li><li>• <b>RUNNING</b>: The instance is running.</li><li>• <b>STOPPING</b>: The instance is being stopped.</li><li>• <b>STOPPED</b>: The instance has been stopped.</li><li>• <b>UNAVAILABLE</b>: The instance is unavailable.</li><li>• <b>DELETED</b>: The instance has been deleted.</li><li>• <b>RESIZING</b>: The instance specifications are being changed.</li><li>• <b>RESIZE_FAILED</b>: The instance specifications fail to be changed.</li></ul> |
| sortby       | No        | String  | Classification standard. The value can be <b>name</b> or <b>creation_timestamp</b> . The default value is <b>name</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| order        | No        | String  | Sorting mode. The value can be <b>asc</b> or <b>desc</b> . The default value is <b>asc</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| offset       | No        | Integer | Start index. The default value is <b>0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| limit        | No        | Integer | Number of returned result records. The value range is (0, ∞). The default value is <b>0</b> , which indicates that all results are returned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| workspace_id | No        | String  | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Parameter  | Mandatory | Type   | Description                                                                                                       |
|------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------|
| show_self  | No        | String | Only the user is displayed. The default value is <b>true</b> .                                                    |
| ai_project | No        | String | AI project ID                                                                                                     |
| pool_id    | No        | String | ID of a dedicated resource pool. This parameter can be used to obtain all instances in a dedicated resource pool. |

## Request Body

None

## Response Body

[Table 25-513](#) describes the response parameters.

**Table 25-513** Parameters

| Parameter   | Type    | Description                                                         |
|-------------|---------|---------------------------------------------------------------------|
| total_count | Integer | Total number of development environments.                           |
| instances   | Array   | Configuration list. For details, see <a href="#">Table 25-514</a> . |

**Table 25-514** instances parameters

| Parameter          | Type   | Description                                                                                                  |
|--------------------|--------|--------------------------------------------------------------------------------------------------------------|
| id                 | String | Instance ID                                                                                                  |
| name               | String | Instance name                                                                                                |
| description        | String | Instance description                                                                                         |
| status             | String | Instance status                                                                                              |
| creation_timestamp | String | Time when an instance is created                                                                             |
| profile            | Object | Configuration information. For details, see <a href="#">Table 25-515</a> .                                   |
| flavor             | String | Instance flavor                                                                                              |
| spec               | Object | Instance definition. For details about parameters of a notebook instance, see <a href="#">Table 25-523</a> . |
| workspace          | Object | Workspace. For details, see <a href="#">Table 25-528</a> .                                                   |

| Parameter               | Type   | Description                                                                                                                                                     |
|-------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| latest_update_timestamp | String | Time when an instance is modified                                                                                                                               |
| flavor_details          | Object | Flavor details. For details, see <a href="#">Table 25-519</a> .                                                                                                 |
| pool                    | Object | Dedicated resource pool. For details, see <a href="#">Table 25-520</a> .                                                                                        |
| ai_project              | Object | AI project. For details, see <a href="#">Table 25-521</a> .                                                                                                     |
| error_code              | String | Error code. For details, see <a href="#">Error Codes</a> .                                                                                                      |
| queuing_info            | Object | Queuing information. For details, see <a href="#">Table 25-529</a> .                                                                                            |
| user                    | Object | User information. For details, see <a href="#">Table 25-530</a> .                                                                                               |
| repository              | Object | Git repository information. For details, see <a href="#">Table 25-531</a> . This parameter cannot be used. It is automatically returned when the API is called. |

**Table 25-515** profile parameters

| Parameter   | Type               | Description                                                             |
|-------------|--------------------|-------------------------------------------------------------------------|
| id          | String             | Configuration ID                                                        |
| name        | String             | Configuration name                                                      |
| description | String             | Configuration description                                               |
| de_type     | String             | Development environment type. Only <b>Notebook</b> is supported.        |
| provision   | Object             | Deployment information. For details, see <a href="#">Table 25-516</a> . |
| labels      | Map<String,String> | Label information, which can be extended                                |
| flavor_type | String             | Hardware, which can be <b>CPU</b> , <b>GPU</b> , or <b>Ascend</b> .     |

**Table 25-516** provision parameters

| Parameter   | Type               | Description                                                                         |
|-------------|--------------------|-------------------------------------------------------------------------------------|
| type        | String             | Deployment type. Only <b>Docker</b> is supported.                                   |
| spec        | Object             | Deployment details. For details, see <a href="#">Table 25-517</a> .                 |
| annotations | Map<String,String> | Label information, which can be extended. By default, this parameter is left blank. |

**Table 25-517** spec parameters

| Parameter | Type   | Description                                                                                             |
|-----------|--------|---------------------------------------------------------------------------------------------------------|
| engine    | String | Deployment engine. Only <b>CCE</b> is supported.                                                        |
| params    | Object | Deployment parameters. Only <b>Docker</b> is supported. For details, see <a href="#">Table 25-518</a> . |

**Table 25-518** Docker deployment parameters

| Parameter   | Type               | Description                                                                         |
|-------------|--------------------|-------------------------------------------------------------------------------------|
| namespace   | String             | SWR organization name, which is globally unique                                     |
| image_name  | String             | Image name                                                                          |
| image_tag   | String             | Image tag                                                                           |
| annotations | Map<String,String> | Label information, which can be extended. By default, this parameter is left blank. |

**Table 25-519** flavor\_details parameters

| Parameter   | Type    | Description                                                                                                            |
|-------------|---------|------------------------------------------------------------------------------------------------------------------------|
| name        | String  | Flavor name                                                                                                            |
| status      | String  | Flavor sales status. Options: <ul style="list-style-type: none"><li>• <b>onSale</b></li><li>• <b>soldOut</b></li></ul> |
| queuing_num | Integer | This parameter is mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b> .  |

| Parameter       | Type                | Description                                                                                                                                                                          |
|-----------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| queue_left_time | Integer             | Left queuing time, in seconds<br>This parameter is mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b> .                               |
| storage_list    | Array<Storage type> | Supported storage type. The options are <b>obs</b> , <b>evs</b> , and <b>efs</b> .                                                                                                   |
| is_permitted    | Boolean             | Whether the current user has the permission to use this flavor                                                                                                                       |
| type            | String              | Flavor type. Options: <ul style="list-style-type: none"><li>• <b>GPU</b></li><li>• <b>CPU</b></li><li>• <b>ASCEND</b></li></ul>                                                      |
| params          | Dict                | Parameters that describing flavor                                                                                                                                                    |
| promo_type      | String              | Promotion type. Options: <ul style="list-style-type: none"><li>• <b>Free</b></li><li>• <b>NoDiscount</b></li></ul>                                                                   |
| instance_num    | Integer             | Number of instances of this flavor the current created                                                                                                                               |
| duration        | Integer             | Auto stop time after startup, in seconds                                                                                                                                             |
| store_time      | Integer             | Maximum retention period of an inactive instance of this flavor in the database, in hours<br>The default value is <b>-1</b> , indicating that the instance can be permanently saved. |
| billing_flavor  | String              | Billing specifications. If this field is left blank, the specifications name is used for billing.                                                                                    |
| billing_params  | Integer             | Billing ratio This parameter is mandatory when <b>billing_flavor</b> is specified.                                                                                                   |

**Table 25-520** pool parameters

| Parameter | Type   | Description                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------|
| id        | String | ID of a resource pool                                                                                                        |
| name      | String | Name of a resource pool                                                                                                      |
| type      | String | Type of a resource pool. <b>USER_DEFINED</b> indicates a dedicated resource pool.                                            |
| owner     | Object | This parameter is mandatory when <b>type</b> is set to <b>USER_DEFINED</b> . For details, see <a href="#">Table 25-522</a> . |

**Table 25-521 AIProject parameters**

| Parameter | Type   | Description   |
|-----------|--------|---------------|
| id        | String | AI project ID |

**Table 25-522 owner parameters**

| Parameter  | Type   | Description |
|------------|--------|-------------|
| project_id | String | Project ID  |

**Table 25-523 notebook parameters**

| Parameter      | Type               | Description                                                                                                                                                                    |
|----------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| extend_storage | Array<Storage>     | Extended storage list. For details, see <a href="#">Table 25-524</a> . Extended storage supports only <b>obsfs</b> and is available only for certain dedicated resource pools. |
| storage        | Object             | Storage path. For details, see <a href="#">Table 25-524</a> .                                                                                                                  |
| auto_stop      | Object             | Auto stop parameter. For details, see <a href="#">Table 25-527</a> .                                                                                                           |
| annotations    | Map<String,String> | Annotations<br>The generated URL cannot be directly accessed.                                                                                                                  |
| failed_reasons | Object             | Cause for a creation or startup failure. See <a href="#">Table 25-526</a> .                                                                                                    |
| extend_params  | Map<String,String> | Extended parameter                                                                                                                                                             |

**Table 25-524 storage parameters**

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                  |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | Yes       | String | Storage type. Only <b>obs</b> , <b>obsfs</b> , and <b>evs</b> are supported. Additionally, <b>obsfs</b> can only be used in certain dedicated resource pools. To mount an OBS parallel file system, submit a service ticket. |
| location  | No        | Object | Storage location. If <b>type</b> is set to <b>obs</b> , this parameter is mandatory. See <a href="#">Table 25-525</a> . By default, this parameter is left blank.                                                            |

Table 25-525 location parameters

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------|-----------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| path         | No        | String  | Storage path. <ul style="list-style-type: none"><li>If <b>type</b> is set to <b>obs</b>, this parameter is mandatory. The value must be a valid OBS bucket path and end with a slash (/). The value must be a specific directory in an OBS bucket rather than the root directory of an OBS bucket.</li><li>If <b>type</b> is set to <b>obsfs</b>, the parameter value must be a valid bucket name of the OBS parallel file system. (CCE does not support subdirectory mounting.)</li><li>If <b>type</b> is set to <b>evs</b>, this parameter does not need to be set.</li></ul> |
| volume_size  | No        | Integer | EVS disk size. The minimum size is 5 GB and the maximum size is 4,096 GB. The default value is 5 GB. If <b>type</b> is set to <b>obs</b> , this parameter does not need to be set.                                                                                                                                                                                                                                                                                                                                                                                              |
| mount_path   | No        | String  | Mount path in a notebook instance. This parameter is valid only when <b>type</b> is set to <b>obsfs</b> .<br>The default value is <b>/home/ma-user/work</b> .<br>To mount the file system to a specified path, set the value to the subdirectory of <b>/home/ma-user/work</b> . Otherwise, the mounting may fail or read/write exceptions may occur due to permission issues.                                                                                                                                                                                                   |
| access_modes | No        | String  | Access permission for the mounted file or folder. The permission can be read/write or read-only. This parameter is valid only when <b>type</b> is set to <b>obsfs</b> . Options: <ul style="list-style-type: none"><li><b>ReadOnlyMany</b>: read-only mode</li><li><b>ReadWriteMany</b>: read/write mode (default value)</li></ul>                                                                                                                                                                                                                                              |

Table 25-526 failed\_reasons parameters

| Parameter | Type   | Description   |
|-----------|--------|---------------|
| code      | String | Error code    |
| message   | String | Error message |

| Parameter | Type               | Description   |
|-----------|--------------------|---------------|
| detail    | Map<String,String> | Error details |

**Table 25-527 auto\_stop** parameters

| Parameter       | Type    | Description                                                                           |
|-----------------|---------|---------------------------------------------------------------------------------------|
| enable          | Boolean | Whether to enable the auto stop function                                              |
| duration        | Integer | Running duration, in seconds                                                          |
| prompt          | Boolean | Whether to display a prompt again. This parameter is provided for the console to use. |
| stop_time_stamp | Integer | Time when the instance stops. The value is a 13-digit timestamp.                      |
| remain_time     | Integer | Remaining time before actual stop, in seconds                                         |

**Table 25-528 workspace** parameters

| Parameter | Type   | Description  |
|-----------|--------|--------------|
| id        | String | Workspace ID |

**Table 25-529 queuing\_info** parameters

| Parameter | Type   | Description                                                                                                                                                          |
|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | String | Instance ID                                                                                                                                                          |
| name      | String | Instance name                                                                                                                                                        |
| de_type   | String | Development environment type. By default, all types are returned.<br>Only <b>Notebook</b> is supported.                                                              |
| flavor    | String | Instance flavor. By default, all types are returned.<br>Options: <ul style="list-style-type: none"><li>modelarts.vm.cpu.free</li><li>modelarts.vm.gpu.free</li></ul> |

| Parameter       | Type    | Description                                                                                                                                                               |
|-----------------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| flavor_details  | Object  | Flavor details, which display the flavor information and whether the flavor is sold out For details, see <a href="#">Table 25-519</a> .                                   |
| status          | String  | Instance status. By default, all statuses are returned, including: <ul style="list-style-type: none"><li>• <b>CREATE_QUEUING</b></li><li>• <b>START_QUEUING</b></li></ul> |
| begin_timestamp | Integer | Time when an instance starts queuing. The value is a 13-digit timestamp.                                                                                                  |
| remaining_time  | Integer | Left queuing time, in seconds                                                                                                                                             |
| end_timestamp   | Integer | Time when an instance completes queuing. The value is a 13-digit timestamp.                                                                                               |
| rank            | Integer | Ranking of an instance in a queue                                                                                                                                         |

**Table 25-530** user parameters

| Parameter | Type   | Description |
|-----------|--------|-------------|
| id        | String | User ID     |
| name      | String | Username    |

**Table 25-531** repository parameters

| Parameter       | Type   | Description                                                                  |
|-----------------|--------|------------------------------------------------------------------------------|
| id              | String | Repository ID                                                                |
| branch          | String | Repository branch                                                            |
| user_name       | String | Repository username                                                          |
| user_email      | String | Repository user mailbox                                                      |
| type            | String | Repository type. The options are <b>CodeClub</b> and <b>GitHub</b> .         |
| connection_info | Object | Repository link information. For details, see <a href="#">Table 25-532</a> . |

**Table 25-532 connection\_info** parameters

| Parameter  | Type   | Description                                                              |
|------------|--------|--------------------------------------------------------------------------|
| protocol   | String | Repository link protocol. The options are <b>ssh</b> and <b>https</b> .  |
| url        | String | Repository link address                                                  |
| credential | Object | Certificate information. For details, see <a href="#">Table 25-533</a> . |

**Table 25-533 credential** parameters

| Parameter       | Type   | Description             |
|-----------------|--------|-------------------------|
| ssh_private_key | String | SSH private certificate |
| access_token    | String | OAuth token of GitHub   |

## Sample Request

The following shows how to obtain the list of Notebook development environments.

GET https://endpoint/v1/{project\_id}/demanager/instances?de\_type=Notebook

## Sample Response

- Successful response

## Status Code

For details about the status code, see [Status Code](#).

## 25.2.3 Obtaining Details About a Development Environment Instance

### Function

This API is used to obtain details about a development environment instance.

## URI

GET /v1/{project\_id}/demanager/instances/{instance\_id}

[Table 25-534](#) describes the required parameters.

**Table 25-534** Parameters

| Parameter   | Mandatory | Type   | Description                                                                                                     |
|-------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id  | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| instance_id | Yes       | String | Instance ID                                                                                                     |

## Request Body

None

## Response Body

[Table 25-535](#) describes the response parameters.

**Table 25-535** Parameters

| Parameter               | Type   | Description                                                                                   |
|-------------------------|--------|-----------------------------------------------------------------------------------------------|
| id                      | String | Instance ID                                                                                   |
| name                    | String | Instance name                                                                                 |
| description             | String | Instance description                                                                          |
| status                  | String | Instance status                                                                               |
| creation_timestamp      | String | Time when an instance is created                                                              |
| profile                 | Object | Configuration information. For details, see <a href="#">Table 25-536</a> .                    |
| flavor                  | String | Instance flavor                                                                               |
| spec                    | Object | Instance specifications of the notebook type. For details, see <a href="#">Table 25-544</a> . |
| workspace               | Object | Workspace. For details, see <a href="#">Table 25-549</a> .                                    |
| latest_update_timestamp | String | Time when an instance is modified                                                             |
| flavor_details          | Object | Flavor details. See <a href="#">Table 25-540</a> .                                            |

| Parameter    | Type   | Description                                                                                                                                                     |
|--------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pool         | Object | Dedicated resource pool. See <a href="#">Table 25-541</a> .                                                                                                     |
| ai_project   | Object | AI project. For details, see <a href="#">Table 25-542</a> .                                                                                                     |
| error_code   | String | Error code. For details, see <a href="#">Error Codes</a> .                                                                                                      |
| queuing_info | Object | Queuing information. For details, see <a href="#">Table 25-550</a> .                                                                                            |
| user         | Object | User information. For details, see <a href="#">Table 25-551</a> .                                                                                               |
| repository   | Object | Git repository information. For details, see <a href="#">Table 25-552</a> . This parameter cannot be used. It is automatically returned when the API is called. |

**Table 25-536** profile parameters

| Parameter   | Type               | Description                                                             |
|-------------|--------------------|-------------------------------------------------------------------------|
| id          | String             | Configuration ID                                                        |
| name        | String             | Configuration name                                                      |
| description | String             | Configuration description                                               |
| de_type     | String             | Development environment type. Only <b>Notebook</b> is supported.        |
| provision   | Object             | Deployment information. For details, see <a href="#">Table 25-537</a> . |
| labels      | Map<String,String> | Label information                                                       |
| flavor_type | String             | Hardware, which can be <b>CPU</b> , <b>Ascend</b> , or <b>GPU</b>       |

**Table 25-537** provision parameters

| Parameter | Type   | Description                                       |
|-----------|--------|---------------------------------------------------|
| type      | String | Deployment type. Only <b>Docker</b> is supported. |

| Parameter | Type   | Description                                                         |
|-----------|--------|---------------------------------------------------------------------|
| spec      | Object | Deployment details. For details, see <a href="#">Table 25-538</a> . |

**Table 25-538 spec parameters**

| Parameter | Type   | Description                                                                                             |
|-----------|--------|---------------------------------------------------------------------------------------------------------|
| engine    | String | Deployment engine. Only <b>CCE</b> is supported.                                                        |
| params    | Object | Deployment parameters. Only <b>Docker</b> is supported. For details, see <a href="#">Table 25-539</a> . |

**Table 25-539 Docker deployment parameters**

| Parameter   | Type                | Description                                                                         |
|-------------|---------------------|-------------------------------------------------------------------------------------|
| namespace   | String              | SWR organization name, which is globally unique                                     |
| image_name  | String              | Image name                                                                          |
| image_tag   | String              | Image tag                                                                           |
| annotations | Map<String, String> | Label information, which can be extended. By default, this parameter is left blank. |

**Table 25-540 flavor\_details parameters**

| Parameter       | Type    | Description                                                                                                                                      |
|-----------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| name            | String  | Flavor name                                                                                                                                      |
| status          | String  | Flavor sales status. Options: <ul style="list-style-type: none"><li>• <b>onSale</b></li><li>• <b>soldOut</b></li></ul>                           |
| queuing_num     | Integer | Mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b>                                                |
| queue_left_time | Integer | Remaining time for being queued, in seconds<br>Mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b> |

| Parameter      | Type                | Description                                                                                                                                                                      |
|----------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| storage_list   | Array<storageType > | Supported storage types, which default to all                                                                                                                                    |
| is_permitted   | Boolean             | Whether the current user has the permission to use this flavor                                                                                                                   |
| type           | String              | Flavor type. Options: <ul style="list-style-type: none"><li>• GPU</li><li>• CPU</li><li>• ASCEND</li></ul>                                                                       |
| params         | Dict                | Parameters that describe flavors                                                                                                                                                 |
| promo_type     | String              | Promotion type. Options: <ul style="list-style-type: none"><li>• Free</li><li>• NoDiscount</li></ul>                                                                             |
| instance_num   | Integer             | Number of instances of this flavor created by the current user                                                                                                                   |
| duration       | Integer             | Auto stop time after startup, in seconds                                                                                                                                         |
| store_time     | Integer             | Maximum retention period of an inactive instance of this flavor in the database, in hours<br><br>The default value is -1, indicating that the instance can be permanently saved. |
| billing_flavor | String              | Billing specifications. If this field is left blank, the specification name is used for billing.                                                                                 |
| billing_params | Integer             | Billing ratio. This parameter is mandatory if <b>billing_flavor</b> is specified.                                                                                                |

Table 25-541 pool parameters

| Parameter | Type   | Description                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------|
| id        | String | ID of a resource pool                                                                                                        |
| name      | String | Name of a resource pool                                                                                                      |
| type      | String | Type of a resource pool. <b>USER_DEFINED</b> indicates a dedicated resource pool.                                            |
| owner     | Object | This parameter is mandatory when <b>type</b> is set to <b>USER_DEFINED</b> . For details, see <a href="#">Table 25-543</a> . |

**Table 25-542 AIProject parameters**

| Parameter | Type   | Description   |
|-----------|--------|---------------|
| id        | String | AI project ID |

**Table 25-543 owner parameters**

| Parameter  | Type   | Description |
|------------|--------|-------------|
| project_id | String | Project ID  |

**Table 25-544 notebook parameters**

| Parameter                    | Type           | Description                                                                                                                                                                    |
|------------------------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| log_path                     | String         | Path for storing custom image logs                                                                                                                                             |
| custom_script_path           | String         | Path for storing custom initialization scripts used when a notebook instance is started                                                                                        |
| extend_storage               | Array<Storage> | Extended storage list. For details, see <a href="#">Table 25-484</a> . Extended storage supports only <b>obsfs</b> and is available only for certain dedicated resource pools. |
| storage                      | Object         | Storage path. For details, see <a href="#">Table 25-484</a> .                                                                                                                  |
| credential                   | Object         | AK and SK for accessing OBS. For details, see <a href="#">Table 25-510</a> .                                                                                                   |
| repository                   | Object         | Git repository information. For details, see <a href="#">Table 25-508</a> . This parameter cannot be used. It is automatically returned when the API is called.                |
| resource_reserved_time_stamp | Integer        | Time when the resource is reserved                                                                                                                                             |
| auto_stop                    | Object         | Auto stop parameter. For details, see <a href="#">Table 25-503</a> .                                                                                                           |
| failed_reasons               | Object         | Cause for a creation or startup failure. For details, see <a href="#">Table 25-502</a> .                                                                                       |

| Parameter     | Type               | Description                                                   |
|---------------|--------------------|---------------------------------------------------------------|
| annotations   | Map<String,String> | Annotations<br>The generated URL cannot be directly accessed. |
| extend_params | Map<String,String> | Extended parameters                                           |

**Table 25-545 storage parameters**

| Parameter | Type   | Description                                                                                                                                                                                                                    |
|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | String | Storage type<br>Only <b>obs</b> , <b>obsfs</b> , and <b>evs</b> are supported. Additionally, <b>obsfs</b> can only be used in certain dedicated resource pools. To mount an OBS parallel file system, submit a service ticket. |
| location  | Object | Storage location. If <b>type</b> is set to <b>obs</b> , this parameter is mandatory. See <a href="#">Table 25-485</a> . By default, this parameter is left blank.                                                              |

**Table 25-546 location parameters**

| Parameter   | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| path        | String  | Storage path <ul style="list-style-type: none"><li>If <b>type</b> is set to <b>obs</b>, this parameter is mandatory. The value must be a valid OBS bucket path and end with a slash (/). The value must be a specific directory in an OBS bucket rather than the root directory of an OBS bucket.</li><li>If <b>type</b> is set to <b>obsfs</b>, the parameter value must be a valid bucket name of the OBS parallel file system. (CCE does not support subdirectory mounting.)</li><li>If <b>type</b> is set to <b>evs</b>, this parameter does not need to be set.</li></ul> |
| volume_size | Integer | EVS disk size. The minimum size is 5 GB and the maximum size is 4096 GB. The default value is 5 GB. If <b>type</b> is set to <b>obs</b> , this parameter does not need to be set.                                                                                                                                                                                                                                                                                                                                                                                              |

| Parameter    | Type   | Description                                                                                                                                                                                                                                                                                                                                                                   |
|--------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mount_path   | String | Mount path in a notebook instance. This parameter is valid only when <b>type</b> is set to <b>obsfs</b> .<br>The default value is <b>/home/ma-user/work</b> .<br>To mount the file system to a specified path, set the value to the subdirectory of <b>/home/ma-user/work</b> . Otherwise, the mounting may fail or read/write exceptions may occur due to permission issues. |
| access_modes | String | Access permission for the mounted file or folder. The permission can be read/write or read-only. This parameter is valid only when <b>type</b> is set to <b>obsfs</b> . Options: <ul style="list-style-type: none"><li>• <b>ReadOnlyMany</b>: read-only mode</li><li>• <b>ReadWriteMany</b>: read/write mode (default value)</li></ul>                                        |

**Table 25-547 auto\_stop** parameters

| Parameter      | Type    | Description                                                                           |
|----------------|---------|---------------------------------------------------------------------------------------|
| enable         | Boolean | Whether to enable the auto stop function                                              |
| duration       | Integer | Running duration, in seconds                                                          |
| prompt         | Boolean | Whether to display a prompt again. This parameter is provided for the console to use. |
| stop_timestamp | Integer | Time when the instance stops. The value is a 13-digit timestamp.                      |
| remain_time    | Integer | Remaining time before actual stop, in seconds                                         |

**Table 25-548 failed\_reasons** parameters

| Parameter | Type               | Description   |
|-----------|--------------------|---------------|
| code      | String             | Error code    |
| message   | String             | Error message |
| detail    | Map<String,String> | Error details |

**Table 25-549 workspace** parameters

| Parameter | Type   | Description                                                                                                                         |
|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------|
| id        | String | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

**Table 25-550 queuing\_info** parameters

| Parameter       | Type    | Description                                                                                                                                                                         |
|-----------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id              | String  | Instance ID                                                                                                                                                                         |
| name            | String  | Instance name                                                                                                                                                                       |
| de_type         | String  | Development environment type. By default, all types are returned.<br>Only <b>Notebook</b> is supported.                                                                             |
| flavor          | String  | Instance flavor. By default, all types are returned. Options: <ul style="list-style-type: none"><li>• <b>modelarts.vm.cpu.free</b></li><li>• <b>modelarts.vm.gpu.free</b></li></ul> |
| flavor_details  | Object  | Flavor details, which display the flavor information and whether the flavor is sold out. For details, see <a href="#">Table 25-496</a> .                                            |
| status          | String  | Instance status. By default, all statuses are returned. Options: <ul style="list-style-type: none"><li>• <b>CREATE_QUEUING</b></li><li>• <b>START_QUEUING</b></li></ul>             |
| begin_timestamp | Integer | Time when an instance starts queuing, which is a 13-digit timestamp                                                                                                                 |
| remain_time     | Integer | Remaining time for being queued, in seconds                                                                                                                                         |
| end_timestamp   | Integer | Time when an instance completes queuing, which is a 13-digit timestamp                                                                                                              |
| rank            | Integer | Ranking of an instance in a queue                                                                                                                                                   |

**Table 25-551 user** parameters

| Parameter | Type   | Description |
|-----------|--------|-------------|
| id        | String | User ID     |

| Parameter | Type   | Description |
|-----------|--------|-------------|
| name      | String | Username    |

**Table 25-552 repository** parameters

| Parameter       | Type   | Description                                                            |
|-----------------|--------|------------------------------------------------------------------------|
| id              | String | Repository ID                                                          |
| branch          | String | Repository branch                                                      |
| user_name       | String | Repository username                                                    |
| user_email      | String | Repository user mailbox                                                |
| type            | String | Repository type, which can be <b>CodeClub</b> or <b>GitHub</b>         |
| connection_info | Object | Repository connection. For details, see <a href="#">Table 25-509</a> . |

**Table 25-553 connection\_info** parameters

| Parameter  | Type   | Description                                                              |
|------------|--------|--------------------------------------------------------------------------|
| protocol   | String | Repository link protocol, which can be <b>ssh</b> or <b>https</b>        |
| url        | String | Repository link address                                                  |
| credential | Object | Certificate information. For details, see <a href="#">Table 25-510</a> . |

**Table 25-554 credential** parameters

| Parameter       | Type   | Description             |
|-----------------|--------|-------------------------|
| ssh_private_key | String | SSH private certificate |
| access_token    | String | OAuth token of GitHub   |

## Sample Request

The following shows how to obtain the details about instance **6fa459ea-ee8a-3ca4-894e-db77e160355e**.

```
GET https://endpoint/v1/{project_id}/demanager/instances/6fa459ea-ee8a-3ca4-894e-db77e160355e
```

## Sample Response

- Successful response

For details about the status code, see [Status Code](#).

## 25.2.4 Modifying the Description of a Development Environment Instance

### Function

This API is used to modify the description of a development environment instance or information about the auto stop function.

### URI

PUT /v1/{project\_id}/demanager/instances/{instance\_id}

[Table 25-555](#) describes the required parameters.

**Table 25-555** Parameters

| Parameter   | Mandatory | Type   | Description                                                                                                     |
|-------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id  | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| instance_id | Yes       | String | Instance ID                                                                                                     |

### Request Body

[Table 25-556](#) describes the request parameters.

Table 25-556 Parameters

| Parameter   | Mandatory | Type   | Description                                                                                                                           |
|-------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------|
| description | No        | String | Configuration description. The value contains a maximum of 512 characters and cannot contain the following special characters: &<>"/. |
| spec        | No        | Object | Instance definition. For details, see <a href="#">Table 25-557</a> .                                                                  |

Table 25-557 spec parameters

| Parameter | Mandatory | Type   | Description                                                          |
|-----------|-----------|--------|----------------------------------------------------------------------|
| auto_stop | No        | Object | Auto stop parameter. For details, see <a href="#">Table 25-558</a> . |

Table 25-558 auto\_stop parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                            |
|-----------|-----------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| enable    | No        | Boolean | Whether to enable the auto stop function. The value <b>true</b> indicates that the function is enabled and the instance will automatically stop when the running duration is reached. The value <b>false</b> indicates that the function is disabled. The default value is <b>false</b> .                                              |
| duration  | No        | Integer | Running duration, in seconds. The value ranges from 3,600 to 86,400. After this parameter is set, it is valid for each startup. This parameter is mandatory when <b>enable</b> is set to <b>true</b> . If the current instance status is <b>Running</b> , the modifications of this parameter take effect only after the next startup. |
| prompt    | No        | Boolean | Whether to display a prompt again. This parameter is provided for the console to determine whether to display a prompt again. The default value is <b>true</b> .                                                                                                                                                                       |

## Response Body

[Table 25-559](#) describes the response parameters.

**Table 25-559** Response parameters

| Parameter               | Type   | Description                                                                                                                                         |
|-------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| id                      | String | Instance ID                                                                                                                                         |
| name                    | String | Instance name                                                                                                                                       |
| description             | String | Instance description                                                                                                                                |
| status                  | String | Instance status                                                                                                                                     |
| creation_timestamp      | String | Time when an instance is created                                                                                                                    |
| latest_update_timestamp | String | Time when an instance is modified                                                                                                                   |
| profile                 | Object | Configurations. For details, see <a href="#">Table 25-492</a> .                                                                                     |
| flavor                  | String | Instance flavor                                                                                                                                     |
| flavor_details          | Object | Flavor details. For details, see <a href="#">Table 25-496</a> .                                                                                     |
| pool                    | Object | Dedicated resource pool. For details, see <a href="#">Table 25-497</a> .                                                                            |
| spec                    | Object | Instance specifications. For details about notebook, see <a href="#">Table 25-494</a> .                                                             |
| workspace               | Object | Workspace. For details, see <a href="#">Table 25-487</a> .                                                                                          |
| ai_project              | Object | AI project. For details, see <a href="#">Table 25-566</a> .                                                                                         |
| error_code              | String | Error code. For details, see <a href="#">Error Codes</a> .                                                                                          |
| queuing_info            | Object | Queuing information. For details, see <a href="#">Table 25-506</a> .                                                                                |
| user                    | Object | User information. For details, see <a href="#">Table 25-507</a> .                                                                                   |
| repository              | Object | Git repository. For details, see <a href="#">Table 25-508</a> . This parameter cannot be used. It is automatically returned when the API is called. |

**Table 25-560** profile parameters

| Parameter   | Type               | Description                                                             |
|-------------|--------------------|-------------------------------------------------------------------------|
| id          | String             | Configuration ID                                                        |
| name        | String             | Configuration name                                                      |
| description | String             | Configuration description                                               |
| de_type     | String             | Development environment type. Only <b>Notebook</b> is supported.        |
| provision   | Object             | Deployment information. For details, see <a href="#">Table 25-537</a> . |
| labels      | Map<String,String> | Labels                                                                  |
| flavor_type | String             | Hardware, which can be <b>CPU</b> , Ascend, or <b>GPU</b>               |

**Table 25-561** provision parameters

| Parameter | Type   | Description                                                         |
|-----------|--------|---------------------------------------------------------------------|
| type      | String | Deployment type. Only <b>Docker</b> is supported.                   |
| spec      | Object | Deployment details. For details, see <a href="#">Table 25-562</a> . |

**Table 25-562** spec parameters

| Parameter | Type   | Description                                                                                             |
|-----------|--------|---------------------------------------------------------------------------------------------------------|
| engine    | String | Deployment engine. Only <b>CCE</b> is supported.                                                        |
| params    | Object | Deployment parameters. Only <b>Docker</b> is supported. For details, see <a href="#">Table 25-563</a> . |

**Table 25-563** Docker deployment parameters

| Parameter  | Type   | Description                                     |
|------------|--------|-------------------------------------------------|
| namespace  | String | SWR organization name, which is globally unique |
| image_name | String | Image name                                      |

| Parameter   | Type               | Description                                                                         |
|-------------|--------------------|-------------------------------------------------------------------------------------|
| image_tag   | String             | Image tag                                                                           |
| annotations | Map<String,String> | Label information, which can be extended. By default, this parameter is left blank. |

**Table 25-564** flavor\_details parameters

| Parameter       | Type                | Description                                                                                                                                      |
|-----------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| name            | String              | Flavor name                                                                                                                                      |
| status          | String              | Flavor sales status. Options: <ul style="list-style-type: none"><li>• <b>onSale</b></li><li>• <b>soldOut</b></li></ul>                           |
| queuing_num     | Integer             | Mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b>                                                |
| queue_left_time | Integer             | Remaining time for being queued, in seconds<br>Mandatory when <b>promo_type</b> is set to <b>Free</b> and <b>status</b> is set to <b>soldOut</b> |
| storage_list    | Array<storageType > | Supported storage types, which default to all <ul style="list-style-type: none"><li>• obs</li><li>• evs</li><li>• efs</li></ul>                  |
| is_permitted    | Boolean             | Whether the current user has the permission to use this flavor                                                                                   |
| type            | String              | Flavor type. Options: <ul style="list-style-type: none"><li>• <b>GPU</b></li><li>• <b>CPU</b></li><li>• <b>ASCEND</b></li></ul>                  |
| params          | Dict                | Parameters that describe flavors                                                                                                                 |
| promo_type      | String              | Promotion type. Options: <ul style="list-style-type: none"><li>• <b>Free</b></li><li>• <b>NoDiscount</b></li></ul>                               |
| instance_num    | Integer             | Number of instances of this flavor created by the current user                                                                                   |
| duration        | Integer             | Auto stop time after startup, in seconds                                                                                                         |

| Parameter      | Type    | Description                                                                                                                                                                          |
|----------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| store_time     | Integer | Maximum retention period of an inactive instance of this flavor in the database, in hours<br>The default value is <b>-1</b> , indicating that the instance can be permanently saved. |
| billing_flavor | String  | Billing specifications. If this field is left blank, the specification name is used for billing.                                                                                     |
| billing_params | Integer | Billing ratio. This parameter is mandatory if <b>billing_flavor</b> is specified.                                                                                                    |

**Table 25-565 pool** parameters

| Parameter | Type   | Description                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------|
| id        | String | ID of a resource pool                                                                                                        |
| name      | String | Name of a resource pool                                                                                                      |
| type      | String | Type of a resource pool. <b>USER_DEFINED</b> indicates a dedicated resource pool.                                            |
| owner     | Object | This parameter is mandatory when <b>type</b> is set to <b>USER_DEFINED</b> . For details, see <a href="#">Table 25-567</a> . |

**Table 25-566 AIProject** parameters

| Parameter | Type   | Description    |
|-----------|--------|----------------|
| id        | String | AI project ID. |

**Table 25-567 owner** parameters

| Parameter  | Mandatory | Type   | Description |
|------------|-----------|--------|-------------|
| project_id | Yes       | String | Project ID  |

**Table 25-568 notebook** parameters

| Parameter                    | Type               | Description                                                                                                                                                                    |
|------------------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| log_path                     | String             | Path for storing custom image logs                                                                                                                                             |
| custom_script_path           | String             | Path for storing custom initialization scripts used when a notebook instance is started                                                                                        |
| extend_storage               | Array<Storage>     | Extended storage list. For details, see <a href="#">Table 25-484</a> . Extended storage supports only <b>obsfs</b> and is available only for certain dedicated resource pools. |
| storage                      | Object             | Storage path. For details, see <a href="#">Table 25-484</a> .                                                                                                                  |
| credential                   | Object             | AK and SK for accessing OBS. For details, see <a href="#">Table 25-510</a> .                                                                                                   |
| repository                   | Object             | Git repository information. For details, see <a href="#">Table 25-508</a> . This parameter cannot be used. It is automatically returned when the API is called.                |
| resource_reserved_time_stamp | Integer            | Time when the resource is reserved                                                                                                                                             |
| auto_stop                    | Object             | Auto stop parameter. For details, see <a href="#">Table 25-486</a> .                                                                                                           |
| failed_reasons               | Object             | Cause for a creation or startup failure. For details, see <a href="#">Table 25-502</a> .                                                                                       |
| annotations                  | Map<String,String> | Annotations<br>The generated URL cannot be directly accessed.                                                                                                                  |
| extend_params                | Map<String,String> | Extended parameters                                                                                                                                                            |

Table 25-569 storage parameters

| Parameter | Type   | Description                                                                                                                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| type      | String | Storage type. Only <b>obs</b> , <b>obsfs</b> , and <b>evs</b> are supported. Additionally, <b>obsfs</b> can only be used in certain dedicated resource pools. To mount an OBS parallel file system, submit a service ticket. |
| location  | Object | Storage location. If <b>type</b> is set to <b>obs</b> , this parameter is mandatory. See <a href="#">Table 25-570</a> . By default, this parameter is left blank.                                                            |

Table 25-570 location parameters

| Parameter   | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------|-----------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| path        | No        | String  | Storage path <ul style="list-style-type: none"><li>If <b>type</b> is set to <b>obs</b>, this parameter is mandatory. The value must be a valid OBS bucket path and end with a slash (/). The value must be a specific directory in an OBS bucket rather than the root directory of an OBS bucket.</li><li>If <b>type</b> is set to <b>obsfs</b>, the parameter value must be a valid bucket name of the OBS parallel file system. (CCE does not support subdirectory mounting.)</li><li>If <b>type</b> is set to <b>evs</b>, this parameter does not need to be set.</li></ul> |
| volume_size | No        | Integer | EVS disk size. The minimum size is 5 GB and the maximum size is 4096 GB. The default value is 5 GB. If <b>type</b> is set to <b>obs</b> , this parameter does not need to be set.                                                                                                                                                                                                                                                                                                                                                                                              |

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| mount_path   | No        | String | <p>Mount path in a notebook instance. This parameter is valid only when <b>type</b> is set to <b>obsfs</b>.</p> <p>The default value is <b>/home/ma-user/work</b>.</p> <p>To mount the file system to a specified path, set the value to the subdirectory of <b>/home/ma-user/work</b>. Otherwise, the mounting may fail or read/write exceptions may occur due to permission issues.</p> |
| access_modes | No        | String | <p>Access permission for the mounted file or folder. The permission can be read/write or read-only. This parameter is valid only when <b>type</b> is set to <b>obsfs</b>.</p> <p>Options:</p> <ul style="list-style-type: none"><li>• <b>ReadOnlyMany</b>: read-only mode</li><li>• <b>ReadWriteMany</b>: read/write mode (default value)</li></ul>                                       |

Table 25-571 auto\_stop parameters

| Parameter      | Type    | Description                                                                           |
|----------------|---------|---------------------------------------------------------------------------------------|
| enable         | Boolean | Whether to enable the auto stop function                                              |
| duration       | Integer | Running duration, in seconds                                                          |
| prompt         | Boolean | Whether to display a prompt again. This parameter is provided for the console to use. |
| stop_timestamp | Integer | Time when the instance stops. The value is a 13-digit timestamp.                      |
| remain_time    | Integer | Remaining time before actual stop, in seconds                                         |

Table 25-572 failed\_reasons parameters

| Parameter | Type   | Description |
|-----------|--------|-------------|
| code      | String | Error code  |

| Parameter | Type               | Description   |
|-----------|--------------------|---------------|
| message   | String             | Error message |
| detail    | Map<String,String> | Error details |

**Table 25-573 workspace** parameters

| Parameter | Type   | Description                                                                                                                         |
|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------|
| id        | String | Workspace ID. If no workspace is created, the default value is <b>0</b> . If a workspace is created and used, use the actual value. |

**Table 25-574 queuing\_info** parameters

| Parameter       | Type    | Description                                                                                                                                                                         |
|-----------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id              | String  | Instance ID                                                                                                                                                                         |
| name            | String  | Instance name                                                                                                                                                                       |
| de_type         | String  | Development environment type. By default, all types are returned.<br>Only <b>Notebook</b> is supported.                                                                             |
| flavor          | String  | Instance flavor. By default, all types are returned. Options: <ul style="list-style-type: none"><li>• <b>modelarts.vm.cpu.free</b></li><li>• <b>modelarts.vm.gpu.free</b></li></ul> |
| flavor_details  | Object  | Flavor details, which display the flavor information and whether the flavor is sold out. For details, see <a href="#">Table 25-496</a> .                                            |
| status          | String  | Instance status. By default, all statuses are returned. Options: <ul style="list-style-type: none"><li>• <b>CREATE_QUEUING</b></li><li>• <b>START_QUEUING</b></li></ul>             |
| begin_timestamp | Integer | Time when an instance starts queuing, which is a 13-digit timestamp                                                                                                                 |
| remain_time     | Integer | Remaining time for being queued, in seconds                                                                                                                                         |
| end_timestamp   | Integer | Time when an instance completes queuing, which is a 13-digit timestamp                                                                                                              |

| Parameter | Type    | Description                       |
|-----------|---------|-----------------------------------|
| rank      | Integer | Ranking of an instance in a queue |

**Table 25-575 user** parameters

| Parameter | Type   | Description |
|-----------|--------|-------------|
| id        | String | User ID     |
| name      | String | Username    |

**Table 25-576 repository** parameters

| Parameter       | Type   | Description                                                            |
|-----------------|--------|------------------------------------------------------------------------|
| id              | String | Repository ID                                                          |
| branch          | String | Repository branch                                                      |
| user_name       | String | Repository username                                                    |
| user_email      | String | Repository user mailbox                                                |
| type            | String | Repository type, which can be <b>CodeClub</b> or <b>GitHub</b>         |
| connection_info | Object | Repository connection. For details, see <a href="#">Table 25-509</a> . |

**Table 25-577 connection\_info** parameters

| Parameter  | Type   | Description                                                              |
|------------|--------|--------------------------------------------------------------------------|
| protocol   | String | Repository link protocol, which can be <b>ssh</b> or <b>https</b>        |
| url        | String | Repository link address                                                  |
| credential | Object | Certificate information. For details, see <a href="#">Table 25-510</a> . |

**Table 25-578 credential** parameters

| Parameter       | Type   | Description             |
|-----------------|--------|-------------------------|
| ssh_private_key | String | SSH private certificate |
| access_token    | String | OAuth token of GitHub   |

## Sample Request

The following shows how to modify the details about instance **6fa459ea-ee8a-3ca4-894e-db77e160355e**.

```
{
 "description": "machine learning python2.7 notebook"
}
```

## Sample Response

- Successful response

```
{
 "ai_project": {
 "id": "default-ai-project"
 },
 "creation_timestamp": "1594887749962",
 "description": "update notebook",

```

## Status Code

For details about the status code, see [Status Code](#).

## 25.2.5 Deleting a Development Environment Instance

### Function

This API is used to delete a development environment instance.

### URI

DELETE /v1/{project\_id}/demanager/instances/{instance\_id}

[Table 25-579](#) describes the required parameters.

**Table 25-579** Parameter description

| Parameter   | Mandatory | Type   | Description                                                                                                     |
|-------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id  | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| instance_id | Yes       | String | Instance ID                                                                                                     |

### Request Body

None

### Response Body

[Table 25-580](#) describes the response parameters.

**Table 25-580** Parameter description

| Parameter   | Type   | Description |
|-------------|--------|-------------|
| instance_id | String | Instance ID |

### Sample Request

The following shows how to delete instance **6fa459ea-ee8a-3ca4-894e-db77e160355e**.

```
DELETE https://endpoint/v1/{project_id}/demanager/instances/6fa459ea-ee8a-3ca4-894e-db77e160355e
```

## Sample Response

- Successful response

```
{
 "instance_id": "6fa459ea-ee8a-3ca4-894e-db77e160355e"
}
```
- Failed response

```
{
 "error_message": "The instance does not exist.",
 "error_code": "ModelArts.6309"
}
```

## Status Code

For details about the status code, see [Status Code](#).

## 25.2.6 Managing a Development Environment Instance

### Function

This API is used to start, restart, queue, cancel queuing of, or stop a notebook instance.

### URI

POST /v1/{project\_id}/demanager/instances/{instance\_id}/action

[Table 25-581](#) describes the required parameters.

**Table 25-581** Parameters

| Parameter   | Mandator<br>y | Type   | Description                                                                                                     |
|-------------|---------------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id  | Yes           | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| instance_id | Yes           | String | Instance ID                                                                                                     |

### Request Body

[Table 25-582](#) describes the request parameters.

**Table 25-582** Parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                    |
|-----------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| action    | Yes       | String | Operation on a development environment instance. The options are as follows: <ul style="list-style-type: none"><li>• <b>start</b></li><li>• <b>stop</b></li><li>• <b>restart</b></li><li>• <b>queue</b></li><li>• <b>dequeue</b></li></ul> <b>queue</b> and <b>dequeue</b> operations can be performed only on free resources. |

## Response Body

[Table 25-583](#) describes the response parameters.

**Table 25-583** Parameters

| Parameter      | Type   | Description                    |
|----------------|--------|--------------------------------|
| current_status | String | Current status of an instance  |
| previous_state | String | Previous status of an instance |

## Sample Request

The following shows how to start instance **6fa459ea-ee8a-3ca4-894e-db77e160355e**.

```
{
 "action": "start"
}
```

## Sample Response

- Successful response

```
{
 "current_status": "STARTING",
 "previous_state": "STOPPED"
}
```

- Failed response

```

# 25.3 Training Management (Old Version)

## 25.3.1 Training Jobs

### 25.3.1.1 Creating a Training Job

#### Function

This API is used to create a training job.

Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Training Job List](#) and [Querying the Details About a Training Job Version](#).

#### URI

POST /v1/{project\_id}/training-jobs

[Table 25-584](#) describes the required parameters.

**Table 25-584** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

#### Request Body

[Table 25-585](#) describes the request parameters.

**Table 25-585** Parameters

| Parameter | Mandatory | Type   | Description                                                                                                                        |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------|
| job_name  | Yes       | String | Training job name. The value must contain 1 to 64 characters consisting of only digits, letters, underscores (_), and hyphens (-). |
| job_desc  | No        | String | Description of a training job. The value must contain 0 to 256 characters. By default, this parameter is left blank.               |

| Parameter    | Mandatory | Type   | Description                                                                             |
|--------------|-----------|--------|-----------------------------------------------------------------------------------------|
| config       | Yes       | Object | Parameters for creating a training job. For details, see <a href="#">Table 25-586</a> . |
| workspace_id | No        | String | Workspace where a job resides. Default value: <b>0</b>                                  |

**Table 25-586** config parameters

| Parameter         | Mandatory | Type          | Description                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|-----------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| worker_server_num | Yes       | Integer       | Number of workers in a training job. Obtain the maximum value from the <b>max_num</b> value returned by the API in <a href="#">Querying Job Resource Specifications</a> .                                                                                                                                                                                           |
| app_url           | Yes       | String        | Code directory of a training job, for example, <b>/usr/app/</b> . This parameter must be used together with <b>boot_file_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                                                                                           |
| boot_file_url     | Yes       | String        | Boot file of a training job, which needs to be stored in the code directory. Example value: <b>/usr/app/boot.py</b> . This parameter must be used together with <b>app_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                                             |
| parameter         | No        | Array<Object> | Running parameters of a training job. It is a collection of label-value pairs. Values can be customized. <b>label</b> is a parameter name and <b>value</b> is the parameter value. For details, see the sample request. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-591</a> . |
| data_url          | No        | String        | OBS URL of the dataset required by a training job. By default, this parameter is left blank. For example, <b>/usr/data/</b> . This parameter cannot be used together with <b>data_source</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . However, one of the parameters must exist.                                                                        |

| Parameter          | Mandatory | Type          | Description                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------|-----------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id         | No        | String        | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                                                                                                                                                     |
| dataset_version_id | No        | String        | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                                                                                                                                                     |
| data_source        | No        | Array<Object> | Dataset of a training job. This parameter cannot be used together with <b>data_url</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . For details, see <a href="#">Table 25-587</a> .                                                                                                                                                                                      |
| spec_id            | Yes       | Long          | ID of the resource specifications selected for a training job. Obtain the ID by calling the API described in <a href="#">Querying Job Resource Specifications</a> . When creating a public pool job, ensure that <b>spec_id</b> is mandatory and cannot be used with <b>pool_id</b> .                                                                                            |
| pool_id            | Yes       | String        | ID of a dedicated resource pool. To obtain the ID, do as follows: Log in to the ModelArts management console, choose <b>Dedicated Resource Pools</b> in the navigation pane on the left, and view the resource pool ID in the dedicated resource pool list. When creating a dedicated pool job, ensure that <b>pool_id</b> is mandatory and cannot be used with <b>spec_id</b> . |
| engine_id          | Yes       | Long          | ID of the engine selected for a training job. The default value is <b>1</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> . Obtain the ID by calling the API described in <a href="#">Querying Job Engine Specifications</a> .                                                                          |
| model_id           | Yes       | Long          | ID of the built-in model of a training job. Obtain <b>model_id</b> by calling the API described in <a href="#">Querying a Built-in Algorithm</a> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                                                                                        |
| train_url          | No        | String        | OBS URL of the output file of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                                                                                                                                                                                                        |

| Parameter      | Mandatory | Type       | Description                                                                                                                                                                                                                                                                     |
|----------------|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| log_url        | No        | String     | OBS URL of the logs of a training job. By default, this parameter is left blank.<br>Example value: <b>/usr/log/</b>                                                                                                                                                             |
| user_image_url | No        | String     | SWR URL of a custom image used by a training job. Example value:<br><b>100.125.5.235:20202/jobmng/custom-cpu-base:1.0</b>                                                                                                                                                       |
| user_command   | No        | String     | Boot command used to start the container of a custom image of a training job. The format is <b>bash /home/work/run_train.sh python /home/work/user-job-dir/app/train.py {python_file_parameter}</b> .                                                                           |
| create_version | No        | Boolean    | Whether a version is created when a training job is created <ul style="list-style-type: none"><li>• <b>true</b>: Default value. A version is created when a training job is created.</li><li>• <b>false</b>: A version is not created when a training job is created.</li></ul> |
| volumes        | No        | JSON Array | Storage volume that can be used by a training job. For details, see <a href="#">Table 25-588</a> .                                                                                                                                                                              |

**Table 25-587** data\_source parameters

| Parameter       | Mandatory | Type   | Description                                                                                                                                            |
|-----------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id      | No        | String | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> . |
| dataset_version | No        | String | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> . |
| type            | No        | String | Dataset type. The value can be <b>obs</b> or <b>dataset</b> . <b>obs</b> and <b>dataset</b> cannot be used at the same time.                           |

| Parameter | Mandatory | Type   | Description                                                                                                |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------|
| data_url  | No        | String | OBS bucket path. This parameter cannot be used together with <b>dataset_id</b> or <b>dataset_version</b> . |

Table 25-588 volumes parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                  |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| nfs       | No        | Object | Storage volume of the shared file system type. Only the training jobs running in a resource pool with the shared file system network connected support such storage volumes. For details, see <a href="#">Table 25-589</a> . |
| host_path | No        | Object | Storage volume of the host file system type. Only training jobs running in a dedicated resource pool support such storage volumes. For details, see <a href="#">Table 25-590</a> .                                           |

Table 25-589 nfs parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                              |
|-----------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | Yes       | String  | ID of an SFS Turbo file system                                                                                                                                                                                                           |
| src_path  | Yes       | String  | Address of an SFS Turbo file system                                                                                                                                                                                                      |
| dest_path | Yes       | String  | Local path to a training job                                                                                                                                                                                                             |
| read_only | No        | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

Table 25-590 host\_path parameters

| Parameter | Mandatory | Type   | Description          |
|-----------|-----------|--------|----------------------|
| src_path  | Yes       | String | Local path to a host |

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                              |
|-----------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dest_path | Yes       | String  | Local path to a training job                                                                                                                                                                                                             |
| read_only | No        | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

**Table 25-591** parameter parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| label     | No        | String | Parameter name  |
| value     | No        | String | Parameter value |

## Response Body

[Table 25-592](#) describes the response parameters.

**Table 25-592** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| job_id        | Long    | ID of a training job                                                                                                                          |
| job_name      | String  | Name of a training job                                                                                                                        |
| status        | Int     | Status of a training job. For details about the job statuses, see <a href="#">Job Statuses</a> .                                              |
| create_time   | Long    | Timestamp when a training job is created                                                                                                      |
| version_id    | Long    | Version ID of a training job                                                                                                                  |
| resource_id   | String  | Charged resource ID of a training job                                                                                                         |

| Parameter    | Type   | Description                    |
|--------------|--------|--------------------------------|
| version_name | String | Version name of a training job |

## Sample Request

- The following shows how to create training job **TestModelArtsJob** with **This is a ModelArts job** as its description.

```
POST https://endpoint/v1/{project_id}/training-jobs
{
 "job_name": "TestModelArtsJob",
 "job_desc": "This is a ModelArts job",
 "workspace_id": "af261af2218841ec960b01ab3cf1a5fa",
 "config": {
 "worker_server_num": 1,
 "app_url": "/usr/app/",
 "boot_file_url": "/usr/app/boot.py",
 "parameter": [
 {
 "label": "learning_rate",
 "value": "0.01"
 },
 {
 "label": "batch_size",
 "value": "32"
 }
]
 },
 "dataset_id": "38277e62-9e59-48f4-8d89-c8cf41622c24",
 "dataset_version_id": "2ff0d6ba-c480-45ae-be41-09a8369bfc90",
 "spec_id": 1,
 "engine_id": 1,
 "train_url": "/usr/train/",
 "log_url": "/usr/log/",
 "model_id": 1,
 "pool_id": "testpool"
}
```

- The following shows how to create training job **TestModelArtsJob2** using a custom image.

```
POST https://endpoint/v1/{project_id}/training-jobs
{
 "job_name": "TestModelArtsJob2",
 "job_desc": "This is a ModelArts job",
 "workspace_id": "af261af2218841ec960b01ab3cf1a5fa",
 "config": {
 "worker_server_num": 1,
 "data_url": "/usr/data/",
 "app_url": "/usr/app/",
 "boot_file_url": "/usr/app/boot.py",
 "parameter": [
 {
 "label": "CUSTOM_PARAM1",
 "value": "1"
 }
]
 },
 "spec_id": 1,
 "user_command": "bash -x /home/work/run_train.sh python /home/work/user-job-dir/app/mnist/mnist_softmax.py --data_url /home/work/user-job-dir/app/mnist_data",
 "user_image_url": "100.125.5.235:2020/jobmng/custom-cpu-base:1.0",
 "train_url": "/usr/train/",
 "log_url": "/usr/log/",
 "model_id": 1,
 "pool_id": "testpool",
}
```

```
 "engine_id": 1
 }
}
```

- The following shows how to create training job **TestModelArtsJob3** using disk storage.

```
POST https://endpoint/v1/{project_id}/training-jobs
{
 "job_name": "TestModelArtsJob3",
 "job_desc": "This is a ModelArts job",
 "workspace_id": "af261af2218841ec960b01ab3cf1a5fa",

 "src_path": "/root/work",
 "dest_path": "/home/mind",
 "read_only": false
 }
 }
]
}
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "job_id": "10",
 "job_name": "TestModelArtsJob",
 "status": "1",
 "create_time": "1524189990635",
 "version_id": "10",
 "version_name": "V0001",
 "resource_id": "jobafd08896"
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Job name:TestModelArtsJob is existed",
 "error_code": "ModelArts.0103"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.2 Querying a Training Job List

## Function

This API is used to obtain the created training jobs that meet the search criteria.

## URI

GET /v1/{project\_id}/training-jobs

[Table 25-593](#) describes the required parameters.

**Table 25-593** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-594** Query parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                         |
|-----------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| status    | No        | String  | Job status. By default, all job statuses are returned. For example, to obtain failed jobs, set the value of <b>status</b> to <b>3</b> , <b>5</b> , <b>6</b> , or <b>13</b> . For details about the job statuses, see <a href="#">Job Statuses</a> . |
| per_page  | No        | Integer | Number of jobs displayed on each page. The value range is [1, 1000]. Default value: <b>10</b>                                                                                                                                                       |
| page      | No        | Integer | Index of the page to be queried. Default value: <b>1</b> The value range is [1, 65535].                                                                                                                                                             |

| Parameter      | Mandatory | Type   | Description                                                                                                                                                                                     |
|----------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sortBy         | No        | String | Sorting mode of the query. The value can be <b>job_name</b> , <b>job_desc</b> , <b>status</b> , <b>duration</b> , <b>version_count</b> , or <b>create_time</b> . Default value: <b>job_name</b> |
| order          | No        | String | Sorting order. Options: <ul style="list-style-type: none"><li>• <b>asc</b>: ascending order. It is the default value.</li><li>• <b>desc</b>: descending order</li></ul>                         |
| search_content | No        | String | Search content, for example, a training job name. The value must contain 0 to 64 characters. By default, this parameter is left blank.                                                          |
| workspace_id   | No        | String | Workspace where a job resides. Default value: <b>0</b>                                                                                                                                          |

## Request Body

None

## Response Body

[Table 25-595](#) describes the response parameters.

**Table 25-595** Parameters

| Parameter       | Type              | Description                                                                                                                                   |
|-----------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success      | Boolean           | Whether the request is successful                                                                                                             |
| error_message   | String            | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code      | String            | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| job_total_count | Integer           | Total number of created jobs                                                                                                                  |
| job_count_limit | Integer           | Number of training jobs that can be created                                                                                                   |
| jobs            | <b>jobs</b> array | Attributes of a training job. For details, see <a href="#">Table 25-596</a> .                                                                 |

| Parameter | Type    | Description                     |
|-----------|---------|---------------------------------|
| quotas    | Integer | Maximum number of training jobs |

**Table 25-596 jobs** parameters

| Parameter     | Type   | Description                                                                                      |
|---------------|--------|--------------------------------------------------------------------------------------------------|
| job_id        | Long   | ID of a training job                                                                             |
| job_name      | String | Name of a training job                                                                           |
| version_id    | Long   | Version ID of a training job                                                                     |
| status        | Int    | Status of a training job. For details about the job statuses, see <a href="#">Job Statuses</a> . |
| create_time   | Long   | Timestamp when a training job is created                                                         |
| duration      | Long   | Training job running duration, in milliseconds                                                   |
| job_desc      | String | Description of a training job                                                                    |
| version_count | Long   | Number of versions of a training job                                                             |

## Sample Request

The following shows how to obtain training jobs in the **7** state and with name containing **job** on the first page. Each page displays 10 records sorted by **job\_name** in ascending order.

```
GET https://endpoint/v1/{project_id}/training-jobs?
status=7&per_page=10&page=1&sortBy=job_name&order=asc&search_content=job
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "quotas": 5,
 "job_total_count": 1,
 "job_count_limit": 3,
 "jobs": [
 {
 "job_id": 10,
 "job_name": "testModelArtsJob",
 "version_id": 10,
 "status": 10,
 "create_time": 1524189990635,
 "duration": 532003,
 "job_desc": "This is ModelArts job",
 "version_count": 5
 }
]
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.3 Querying the Details About a Training Job Version

## Function

This API is used to obtain the details about a specified training job based on the job ID.

## URI

GET /v1/{project\_id}/training-jobs/{job\_id}/versions/{version\_id}

[Table 25-597](#) describes the required parameters.

**Table 25-597** Parameters

| Parameter  | Mandator<br>y | Type   | Description                                                                                                     |
|------------|---------------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes           | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes           | Long   | ID of a training job                                                                                            |
| version_id | Yes           | Long   | Version ID of a training job                                                                                    |

| job_name       | String  | Name of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| job_desc       | String  | Description of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| version_id     | Long    | Version ID of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| version_name   | String  | Version name of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| pre_version_id | Long    | Name of the previous version of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| engine_type    | Integer | Engine type of a training job. The mapping between <b>engine_type</b> and <b>engine_name</b> is as follows: <ul style="list-style-type: none"><li>• <b>engine_type: 1, engine_name: TensorFlow</b></li><li>• <b>engine_type: 2, engine_name: MXNet</b></li><li>• <b>engine_type: 3, engine_name: Ray</b></li><li>• <b>engine_type: 4, engine_name: Caffe</b></li><li>• <b>engine_type: 5, engine_name: Spark_MLLib</b></li><li>• <b>engine_type: 9, engine_name: XGBoost-Sklearn</b></li><li>• <b>engine_type: 10, engine_name: PyTorch</b></li><li>• <b>engine_type: 12, engine_name: Horovod</b></li></ul> |
| engine_name    | String  | Name of the engine selected for a training job. Currently, the following engines are supported: <ul style="list-style-type: none"><li>• Ascend-Powered-Engine</li><li>• Caffe</li><li>• Horovod</li><li>• MXNet</li><li>• PyTorch</li><li>• Ray</li><li>• Spark_MLLib</li><li>• TensorFlow</li><li>• XGBoost-Sklearn</li><li>• MindSpore-GPU</li></ul>                                                                                                                                                                                                                                                       |
| engine_id      | Long    | ID of the engine selected for a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| engine_version | String  | Version of the engine selected for a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| status         | Integer | Status of a training job. For details about the job statuses, see <a href="#">Job Statuses</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| app_url        | String  | Code directory of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| boot_file_url  | String  | Boot file of a training job                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Parameter          | Type          | Description                                                                                                                                                                       |
|--------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create_time        | Long          | Time when a training job is created                                                                                                                                               |
| parameter          | Array<Object> | Running parameters of a training job. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-599</a> . |
| duration           | Long          | Training job running duration, in milliseconds                                                                                                                                    |
| spec_id            | Long          | ID of the resource specifications selected for a training job                                                                                                                     |
| core               | String        | Number of cores of the resource specifications                                                                                                                                    |
| cpu                | String        | CPU memory of the resource specifications                                                                                                                                         |
| gpu_num            | Integer       | Number of GPUs of the resource specifications                                                                                                                                     |
| gpu_type           | String        | GPU type of the resource specifications                                                                                                                                           |
| worker_server_num  | Integer       | Number of workers in a training job                                                                                                                                               |
| data_url           | String        | Dataset of a training job                                                                                                                                                         |
| train_url          | String        | OBS path of the training job output file                                                                                                                                          |
| log_url            | String        | OBS URL of the logs of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                |
| dataset_version_id | String        | Dataset version ID of a training job                                                                                                                                              |
| dataset_id         | String        | Dataset ID of a training job                                                                                                                                                      |
| data_source        | Array<Object> | Dataset of a training job. For details, see <a href="#">Table 25-600</a> .                                                                                                        |
| model_id           | Long          | Model ID of a training job                                                                                                                                                        |
| model_metric_list  | String        | Model metrics of a training job. For details, see <a href="#">Table 25-601</a> .                                                                                                  |
| system_metric_list | Object        | System monitoring metrics of a training job. For details, see <a href="#">Table 25-602</a> .                                                                                      |
| user_image_url     | String        | SWR URL of a custom image used by a training job                                                                                                                                  |
| user_command       | String        | Boot command used to start the container of a custom image of a training job                                                                                                      |
| resource_id        | String        | Charged resource ID of a training job                                                                                                                                             |
| dataset_name       | String        | Dataset of a training job                                                                                                                                                         |

| Parameter            | Type          | Description                                                                                        |
|----------------------|---------------|----------------------------------------------------------------------------------------------------|
| spec_code            | String        | Resource specifications selected for a training job                                                |
| start_time           | Long          | Training start time                                                                                |
| volumes              | Array<Object> | Storage volume that can be used by a training job. For details, see <a href="#">Table 25-607</a> . |
| dataset_version_name | String        | Dataset of a training job                                                                          |
| pool_name            | String        | Name of a resource pool                                                                            |
| pool_id              | String        | ID of a resource pool                                                                              |
| nas_mount_path       | String        | Local mount path of SFS Turbo (NAS). Example value: <b>/home/work/nas</b>                          |
| nas_share_addr       | String        | Shared path of SFS Turbo (NAS). Example value: <b>192.168.8.150:/</b>                              |
| nas_type             | String        | Only NFS is supported. Example value: <b>nfs</b>                                                   |

**Table 25-599 parameter** parameters

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| label     | String | Parameter name  |
| value     | String | Parameter value |

**Table 25-600 data\_source** parameters

| Parameter       | Type   | Description                                                                                                                                                        |
|-----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id      | String | Dataset ID of a training job                                                                                                                                       |
| dataset_version | String | Dataset version ID of a training job                                                                                                                               |
| type            | String | Dataset type <ul style="list-style-type: none"><li>• <b>obs</b>: Data from OBS is used.</li><li>• <b>dataset</b>: Data from a specified dataset is used.</li></ul> |
| data_url        | String | OBS bucket path                                                                                                                                                    |

**Table 25-601 model\_metric\_list** parameters

| Parameter    | Type       | Description                                                                                               |
|--------------|------------|-----------------------------------------------------------------------------------------------------------|
| metric       | JSON Array | Validation metrics of a classification of a training job. For details, see <a href="#">Table 25-603</a> . |
| total_metric | JSON       | Overall validation parameters of a training job. For details, see <a href="#">Table 25-605</a> .          |

**Table 25-602 system\_metric\_list** parameters

| Parameter | Type  | Description                    |
|-----------|-------|--------------------------------|
| cpuUsage  | Array | CPU usage of a training job    |
| memUsage  | Array | Memory usage of a training job |
| gpuUtil   | Array | GPU usage of a training job    |

**Table 25-603 metric** parameters

| Parameter       | Type | Description                                                                                               |
|-----------------|------|-----------------------------------------------------------------------------------------------------------|
| metric_values   | JSON | Validation metrics of a classification of a training job. For details, see <a href="#">Table 25-604</a> . |
| reserved_data   | JSON | Reserved parameter                                                                                        |
| metric_metadata | JSON | Classification of a training job, including the classification ID and name                                |

**Table 25-604 metric\_values** parameters

| Parameter | Type  | Description                                     |
|-----------|-------|-------------------------------------------------|
| recall    | Float | Recall of a classification of a training job    |
| precision | Float | Precision of a classification of a training job |
| accuracy  | Float | Accuracy of a classification of a training job  |

**Table 25-605 total\_metric** parameters

| Parameter             | Type | Description        |
|-----------------------|------|--------------------|
| total_metric_metadata | JSON | Reserved parameter |

| Parameter           | Type | Description                                                                                   |
|---------------------|------|-----------------------------------------------------------------------------------------------|
| total_reserved_data | JSON | Reserved parameter                                                                            |
| total_metric_values | JSON | Overall validation metrics of a training job. For details, see <a href="#">Table 25-606</a> . |

**Table 25-606 total\_metric\_values** parameters

| Parameter | Type  | Description                       |
|-----------|-------|-----------------------------------|
| f1_score  | Float | F1 score of a training job        |
| recall    | Float | Total recall of a training job    |
| precision | Float | Total precision of a training job |
| accuracy  | Float | Total accuracy of a training job  |

**Table 25-607 volumes** parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                                                                                                  |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| nfs       | No        | Object | Storage volume of the shared file system type. Only the training jobs running in the resource pool with a shared file system network connected support such storage volumes. For details, see <a href="#">Table 25-589</a> . |
| host_path | No        | Object | Storage volume of the host file system type. Only training jobs running in a dedicated resource pool support such storage volumes. For details, see <a href="#">Table 25-590</a> .                                           |

**Table 25-608 nfs** parameters

| Parameter | Mandatory | Type   | Description                      |
|-----------|-----------|--------|----------------------------------|
| id        | Yes       | String | ID of an SFS Turbo file system   |
| src_path  | Yes       | String | Path to an SFS Turbo file system |
| dest_path | Yes       | String | Local path to a training job     |

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                              |
|-----------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| read_only | No        | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

Table 25-609 host\_path parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                              |
|-----------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| src_path  | Yes       | String  | Local path to a host                                                                                                                                                                                                                     |
| dest_path | Yes       | String  | Local path to a training job                                                                                                                                                                                                             |
| read_only | No        | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

## Sample Request

The following shows how to obtain the details about the job whose **job\_id** is **10** and **version\_id** is **10**.

```
GET https://endpoint/v1/{project_id}/training-jobs/10/versions/10
```

## Sample Response

- Successful response

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.4 Deleting a Version of a Training Job

#### Function

This API is used to delete a version of a training job.

Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Training Job List](#) and [Querying the Details About a Training Job Version](#).

#### URI

DELETE /v1/{project\_id}/training-jobs/{job\_id}/versions/{version\_id}

[Table 25-610](#) describes the required parameters.

**Table 25-610** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |
| version_id | Yes       | Long   | Version ID of a training job                                                                                    |

#### Request Body

None

## Response Body

[Table 25-611](#) describes the response parameters.

**Table 25-611** Parameters

| Parameter     | Type    | Description                                                                                                                                |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                          |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |

## Sample Request

```
DELETE https://endpoint/v1/{project_id}/training-jobs/10/versions/10
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.5 Obtaining Training Job Versions

## Function

This API is used to obtain the version of a specified training job based on the job ID.

## URI

GET /v1/{project\_id}/training-jobs/{job\_id}/versions

[Table 25-612](#) describes the required parameters.

**Table 25-612** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |

**Table 25-613** Query parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                        |
|-----------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| per_page  | No        | Integer | Number of job parameters displayed on each page. The value range is [1, 1000]. Default value: <b>10</b>                                                                                                                            |
| page      | No        | Integer | Index of the page to be queried <ul style="list-style-type: none"><li>If paging is required, set <b>page</b> to <b>1</b>.</li><li>The default value of <b>page</b> is <b>0</b>, indicating that paging is not supported.</li></ul> |

## Request Body

None

## Response Body

[Table 25-614](#) describes the response parameters.

**Table 25-614** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| job_id        | Long    | ID of a training job                                                                                                                          |

| Parameter     | Type       | Description                                                                                                                                      |
|---------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| job_name      | String     | Name of a training job                                                                                                                           |
| job_desc      | String     | Description of a training job                                                                                                                    |
| version_count | Long       | Number of versions of a training job                                                                                                             |
| versions      | JSON Array | Version parameters of a training job. For details, see the sample response. For details about the attributes, see <a href="#">Table 25-615</a> . |

**Table 25-615** versions parameters

| Parameter      | Type       | Description                                                                                                                                                                       |
|----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| version_id     | Long       | Version ID of a training job                                                                                                                                                      |
| version_name   | String     | Version name of a training job                                                                                                                                                    |
| pre_version_id | Long       | ID of the previous version of a training job                                                                                                                                      |
| engine_type    | Long       | Engine type of a training job                                                                                                                                                     |
| engine_name    | String     | Name of the engine selected for a training job                                                                                                                                    |
| engine_id      | Long       | ID of the engine selected for a training job                                                                                                                                      |
| engine_version | String     | Version of the engine selected for a training job                                                                                                                                 |
| status         | Int        | Status of a training job                                                                                                                                                          |
| app_url        | String     | Code directory of a training job                                                                                                                                                  |
| boot_file_url  | String     | Boot file of a training job                                                                                                                                                       |
| create_time    | Long       | Time when a training job is created                                                                                                                                               |
| parameter      | JSON Array | Running parameters of a training job. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-616</a> . |
| duration       | Long       | Training job running duration, in milliseconds                                                                                                                                    |
| spec_id        | Long       | ID of the resource specifications selected for a training job                                                                                                                     |
| core           | String     | Number of cores of the resource specifications                                                                                                                                    |
| cpu            | String     | CPU memory of the resource specifications                                                                                                                                         |

| Parameter            | Type       | Description                                                                                                      |
|----------------------|------------|------------------------------------------------------------------------------------------------------------------|
| gpu                  | Boolean    | Whether to use GPUs                                                                                              |
| gpu_num              | Integer    | Number of GPUs of the resource specifications                                                                    |
| gpu_type             | String     | GPU type of the resource specifications                                                                          |
| worker_server_num    | Integer    | Number of workers in a training job                                                                              |
| data_url             | String     | Dataset of a training job                                                                                        |
| train_url            | String     | OBS path of the training job output file                                                                         |
| log_url              | String     | OBS URL of the logs of a training job. By default, this parameter is left blank. Example value: <b>/usr/log/</b> |
| dataset_version_id   | String     | Dataset version ID of a training job                                                                             |
| dataset_id           | String     | Dataset ID of a training job                                                                                     |
| data_source          | JSON Array | Dataset of a training job. For details, see <a href="#">Table 25-617</a> .                                       |
| model_id             | Long       | Model ID of a training job                                                                                       |
| model_metric_list    | String     | Model metrics of a training job. For details, see <a href="#">Table 25-618</a> .                                 |
| system_metric_list   | String     | System monitoring metrics of a training job. For details, see <a href="#">Table 25-619</a> .                     |
| user_image_url       | String     | SWR URL of a custom image used by a training job                                                                 |
| user_command         | String     | Boot command used to start the container of a custom image of a training job                                     |
| resource_id          | String     | Charged resource ID of a training job                                                                            |
| dataset_name         | String     | Dataset of a training job                                                                                        |
| start_time           | Long       | Training start time                                                                                              |
| volumes              | JSON Array | Storage volume that can be used by a training job. For details, see <a href="#">Table 25-624</a> .               |
| dataset_version_name | String     | Dataset of a training job                                                                                        |
| pool_name            | String     | Name of a resource pool                                                                                          |
| pool_id              | String     | ID of a resource pool                                                                                            |
| nas_mount_path       | String     | Local mount path of SFS Turbo (NAS). Example value: <b>/home/work/nas</b>                                        |

| Parameter         | Type   | Description                                                           |
|-------------------|--------|-----------------------------------------------------------------------|
| nas_share_address | String | Shared path of SFS Turbo (NAS). Example value: <b>192.168.8.150:/</b> |
| nas_type          | String | Only NFS is supported. Example value: <b>nfs</b>                      |

**Table 25-616 parameter** parameters

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| label     | String | Parameter name  |
| value     | String | Parameter value |

**Table 25-617 data\_source** parameters

| Parameter       | Type   | Description                                                                                                                                                        |
|-----------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id      | String | Dataset ID of a training job                                                                                                                                       |
| dataset_version | String | Dataset version ID of a training job                                                                                                                               |
| type            | String | Dataset type <ul style="list-style-type: none"><li>• <b>obs</b>: Data from OBS is used.</li><li>• <b>dataset</b>: Data from a specified dataset is used.</li></ul> |
| data_url        | String | OBS bucket path                                                                                                                                                    |

**Table 25-618 model\_metric\_list** parameters

| Parameter    | Type       | Description                                                                                      |
|--------------|------------|--------------------------------------------------------------------------------------------------|
| metric       | JSON Array | Validation metrics of a classification of a training job.                                        |
| total_metric | JSON       | Overall validation parameters of a training job. For details, see <a href="#">Table 25-622</a> . |

**Table 25-619 system\_metric\_list** parameters

| Parameter | Type  | Description                    |
|-----------|-------|--------------------------------|
| cpuUsage  | Array | CPU usage of a training job    |
| memUsage  | Array | Memory usage of a training job |

| Parameter | Type  | Description                 |
|-----------|-------|-----------------------------|
| gpuUtil   | Array | GPU usage of a training job |

**Table 25-620** metric parameters

| Parameter       | Type | Description                                                                                               |
|-----------------|------|-----------------------------------------------------------------------------------------------------------|
| metric_values   | JSON | Validation metrics of a classification of a training job. For details, see <a href="#">Table 25-621</a> . |
| reserved_data   | JSON | Reserved parameter                                                                                        |
| metric_metadata | JSON | Classification of a training job, including the classification ID and name                                |

**Table 25-621** metric\_values parameters

| Parameter | Type  | Description                                     |
|-----------|-------|-------------------------------------------------|
| recall    | Float | Recall of a classification of a training job    |
| precision | Float | Precision of a classification of a training job |
| accuracy  | Float | Accuracy of a classification of a training job  |

**Table 25-622** total\_metric parameters

| Parameter             | Type       | Description                                                                                   |
|-----------------------|------------|-----------------------------------------------------------------------------------------------|
| total_metric_metadata | JSON Array | Reserved parameter                                                                            |
| total_reserved_data   | JSON Array | Reserved parameter                                                                            |
| total_metric_values   | JSON Array | Overall validation metrics of a training job. For details, see <a href="#">Table 25-623</a> . |

**Table 25-623** total\_metric\_values parameters

| Parameter | Type  | Description                                                                                                                                 |
|-----------|-------|---------------------------------------------------------------------------------------------------------------------------------------------|
| f1_score  | Float | F1 score of a training job. This parameter is used only by some preset algorithms and is automatically generated. It is for reference only. |

| Parameter | Type  | Description                       |
|-----------|-------|-----------------------------------|
| recall    | Float | Total recall of a training job    |
| precision | Float | Total precision of a training job |
| accuracy  | Float | Total accuracy of a training job  |

**Table 25-624 volumes** parameters

| Parameter | Type   | Description                                                                                                                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| nfs       | object | Storage volume of the shared file system type. Only the training jobs running in a resource pool with the shared file system network connected support such storage volumes. For details, see <a href="#">Table 25-625</a> . |
| host_path | object | Storage volume of the host file system type. Only training jobs running in a dedicated resource pool support such storage volumes. For details, see <a href="#">Table 25-626</a> .                                           |

**Table 25-625 nfs** parameters

| Parameter | Type    | Description                                                                                                                                                                                                                              |
|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id        | String  | ID of an SFS Turbo file system                                                                                                                                                                                                           |
| src_path  | String  | Address of an SFS Turbo file system                                                                                                                                                                                                      |
| dest_path | String  | Local path to a training job                                                                                                                                                                                                             |
| read_only | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

**Table 25-626 host\_path** parameters

| Parameter | Type   | Description                  |
|-----------|--------|------------------------------|
| src_path  | String | Local path to a host         |
| dest_path | String | Local path to a training job |

| Parameter | Type    | Description                                                                                                                                                                                                                              |
|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| read_only | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

## Sample Request

The following shows how to obtain the job version details on the first page when **job\_id** is set to **10** and five records are displayed on each page.

```
GET https://endpoint/v1/{project_id}/training-jobs/10/versions?per_page=5&page=1
```

## Sample Response

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.6 Creating a Version of a Training Job

#### Function

This API is used to create a version of a training job.

Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Training Job List](#) and [Querying the Details About a Training Job Version](#).

## URI

POST /v1/{project\_id}/training-jobs/{job\_id}/versions

[Table 25-627](#) describes the required parameters.

**Table 25-627** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |

## Request Body

[Table 25-628](#) describes the request parameters.

**Table 25-628** Request parameters

| Parameter | Mandatory | Type   | Description                                                                                                          |
|-----------|-----------|--------|----------------------------------------------------------------------------------------------------------------------|
| job_desc  | No        | String | Description of a training job. The value must contain 0 to 256 characters. By default, this parameter is left blank. |
| config    | Yes       | Object | Parameters for creating a training job For details, see <a href="#">Table 25-629</a> .                               |

**Table 25-629** config parameters

| Parameter         | Mandatory | Type    | Description                                                                                                               |
|-------------------|-----------|---------|---------------------------------------------------------------------------------------------------------------------------|
| worker_server_num | Yes       | Integer | Number of workers in a training job. Obtain the maximum value from <a href="#">Querying Job Resource Specifications</a> . |

| Parameter          | Mandatory | Type          | Description                                                                                                                                                                                                                                                                                             |
|--------------------|-----------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| app_url            | Yes       | String        | Code directory of a training job, for example, <b>/usr/app/</b> . This parameter must be used together with <b>boot_file_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                               |
| boot_file_url      | Yes       | String        | Boot file of a training job, which needs to be stored in the code directory. Example value: <b>/usr/app/boot.py</b> . This parameter must be used together with <b>app_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> . |
| parameter          | No        | Array<Object> | Running parameters of a training job. It is a collection of label-value pairs. For details, see the sample request. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-631</a> .                                         |
| data_url           | No        | String        | OBS URL of the dataset required by a training job. By default, this parameter is left blank. For example, <b>/usr/data/</b> . This parameter cannot be used together with <b>data_source</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . However, one of the parameters must exist.            |
| dataset_id         | No        | String        | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                                                                            |
| dataset_version_id | No        | String        | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                                                                            |
| data_source        | No        | JSON Array    | Dataset of a training job. This parameter cannot be used with <b>data_url</b> , <b>dataset_id</b> , or <b>dataset_version_id</b> . For details, see <a href="#">Table 25-630</a> .                                                                                                                      |

| Parameter      | Mandatory | Type   | Description                                                                                                                                                                                                                                                                                                                                                                      |
|----------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spec_id        | Yes       | Long   | ID of the resource specifications selected for a training job. Obtain the ID by calling the API described in <a href="#">Querying Job Resource Specifications</a> . When creating a public pool job, ensure that <b>spec_id</b> is mandatory and cannot be used with <b>pool_id</b> .                                                                                            |
| pool_id        | Yes       | String | ID of a dedicated resource pool. To obtain the ID, do as follows: Log in to the ModelArts management console, choose <b>Dedicated Resource Pools</b> in the navigation pane on the left, and view the resource pool ID in the dedicated resource pool list. When creating a dedicated pool job, ensure that <b>pool_id</b> is mandatory and cannot be used with <b>spec_id</b> . |
| engine_id      | Yes       | Long   | ID of the engine selected for a training job. The default value is <b>1</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> . Obtain the ID by calling the API described in <a href="#">Querying Job Engine Specifications</a> .                                                                          |
| model_id       | Yes       | Long   | ID of the built-in model of a training job. Obtain <b>model_id</b> by calling the API described in <a href="#">Querying a Built-in Algorithm</a> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                                                                                        |
| train_url      | Yes       | String | OBS URL of the output file of a training job. By default, this parameter is left blank. Example value: <b>/bucket/trainUrl/</b>                                                                                                                                                                                                                                                  |
| log_url        | No        | String | OBS URL of the logs of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                                                                                                                                                                                                               |
| pre_version_id | Yes       | Long   | ID of the previous version of a training job. You can obtain the value of <b>version_id</b> by calling the API described in <a href="#">Obtaining Training Job Versions</a> .                                                                                                                                                                                                    |
| user_image_url | No        | String | SWR URL of a custom image used by a training job. Example value: <b>100.125.5.235:20202/jobmng/custom-cpu-base:1.0</b>                                                                                                                                                                                                                                                           |

| Parameter    | Mandatory | Type   | Description                                                                                                                                                                                           |
|--------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| user_command | No        | String | Boot command used to start the container of a custom image of a training job. The format is <b>bash /home/work/run_train.sh python /home/work/user-job-dir/app/train.py {python_file_parameter}</b> . |

**Table 25-630 data\_source** parameters

| Parameter       | Mandatory | Type   | Description                                                                                                                                            |
|-----------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id      | No        | String | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> . |
| dataset_version | No        | String | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> . |
| type            | No        | String | Dataset type. The value can be <b>obs</b> or <b>dataset</b> . <b>obs</b> and <b>dataset</b> cannot be used at the same time.                           |
| data_url        | No        | String | OBS bucket path. This parameter cannot be used together with <b>dataset_id</b> or <b>dataset_version</b> .                                             |

**Table 25-631 parameter** parameters

| Parameter | Mandatory | Type   | Description     |
|-----------|-----------|--------|-----------------|
| label     | No        | String | Parameter name  |
| value     | No        | String | Parameter value |

## Response Body

[Table 25-632](#) describes the response parameters.

**Table 25-632** Parameters

| Parameter     | Type    | Description                                                                                                                                |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                          |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |
| job_id        | Long    | ID of a training job                                                                                                                       |
| job_name      | String  | Name of a training job                                                                                                                     |
| status        | Int     | Status of a training job. For details about the job statuses, see <a href="#">Job Statuses</a> .                                           |
| create_time   | Long    | Timestamp when a training job is created                                                                                                   |
| version_id    | Long    | Version ID of a training job                                                                                                               |
| version_name  | String  | Version name of a training job                                                                                                             |

## Sample Request

The following shows how to create a job whose **job\_id** is **10** and **pre\_version\_id** is **20**.

```
POST https://endpoint/v1/{project_id}/training-jobs/10/versions/
{
 "job_desc": "This is a ModelArts job",
 "config": {
 "worker_server_num": 1,
 "app_url": "/usr/app/",
 "boot_file_url": "/usr/app/boot.py",
 "parameter": [
 {
 "label": "learning_rate",
 "value": "0.01"
 },
 {
 "label": "batch_size",
 "value": "32"
 }
],
 "dataset_id": "38277e62-9e59-48f4-8d89-c8cf41622c24",
 "dataset_version_id": "2ff0d6ba-c480-45ae-be41-09a8369bfc90",
 "spec_id": 1,
 "engine_id": 1,
 "train_url": "/usr/train/",
 "log_url": "/usr/log/",
 "pre_version_id": 20,
 "model_id": 1,
 "pool_id": "test-pool"
 }
}
```

```
}
}
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "job_id": 10,
 "job_name": "TestModelArtsJob",
 "status": 1,
 "create_time": 1524189990635,
 "version_id": 10,
 "version_name": "V0001"
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.7 Stopping a Training Job

#### Function

This API is used to stop a training job.

Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Training Job List](#) and [Querying the Details About a Training Job Version](#).

#### URI

POST /v1/{project\_id}/training-jobs/{job\_id}/versions/{version\_id}/stop

[Table 25-633](#) describes the required parameters.

**Table 25-633** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |
| version_id | Yes       | Long   | Version ID of a training job                                                                                    |

### Request Body

None

### Response Body

[Table 25-634](#) describes the response parameters.

**Table 25-634** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |

### Sample Request

The following shows how to stop a version of the job whose **job\_id** is **10** and **version\_id** is **10**.

```
POST https://endpoint/v1/{project_id}/training-jobs/10/versions/10/stop
```

### Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

### Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.8 Modifying the Description of a Training Job

#### Function

This API is used to modify the description of a training job.

## URI

PUT /v1/{project\_id}/training-jobs/{job\_id}

[Table 25-635](#) describes the required parameters.

**Table 25-635** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |

## Request Body

[Table 25-636](#) describes the request parameters.

**Table 25-636** Parameters

| Parameter | Mandatory | Type   | Description                                                                |
|-----------|-----------|--------|----------------------------------------------------------------------------|
| job_desc  | Yes       | String | Description of a training job. The value must contain 0 to 256 characters. |

## Response Body

[Table 25-637](#) describes the response parameters.

**Table 25-637** Parameters

| Parameter     | Type    | Description                                                                                                                                |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful.                                                                                                         |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |

## Sample Request

The following shows how to modify the description of the job whose **job\_id** is **10**.

```
PUT https://endpoint/v1/{project_id}/training-jobs/10
{
 "job_desc": "This is a ModelArts job"
}
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.9 Deleting a Training Job

## Function

This API is used to delete a training job.

Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Training Job List](#) and [Querying the Details About a Training Job Version](#).

## URI

DELETE /v1/{project\_id}/training-jobs/{job\_id}

[Table 25-638](#) describes the required parameters.

**Table 25-638** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |

## Request Body

None

## Response Body

[Table 25-639](#) describes the response parameters.

**Table 25-639** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |

## Sample Request

The following shows how to delete the job whose **job\_id** is **10**.

```
DELETE https://endpoint/v1/{project_id}/training-jobs/10
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.10 Obtaining the Name of a Training Job Log File

#### Function

This API is used to obtain the name of a training job log file.

#### URI

GET /v1/{project\_id}/training-jobs/{job\_id}/versions/{version\_id}/log/file-names

[Table 25-640](#) describes the required parameters.

**Table 25-640** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |
| version_id | Yes       | Long   | Version ID of a training job                                                                                    |

## Request Body

None

## Response Body

[Table 25-641](#) describes the response parameters.

**Table 25-641** Parameters

| Parameter     | Type    | Description                                                                                                                                |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                          |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |
| log_file_list | String  | Log file name of a training job. A single-node job has only one log file, and a distributed job has multiple log files.                    |

## Sample Request

The following shows how to obtain the log files of the job whose **job\_id** is **10** and **version\_id** is **10**.

```
GET https://endpoint/v1/{project_id}/training-jobs/10/versions/10/log/file-names
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "log_file_list": [
```

```
 "teseJob.0"
]
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.1.11 Querying a Built-in Algorithm

## Function

This API is used to obtain the details about a built-in model.

## URI

GET /v1/{project\_id}/built-in-algorithms

[Table 25-642](#) describes the required parameters.

**Table 25-642** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Body

[Table 25-643](#) describes the request parameters.

**Table 25-643** Query parameters

| Parameter | Mandatory | Type    | Description                                                                                            |
|-----------|-----------|---------|--------------------------------------------------------------------------------------------------------|
| per_page  | No        | Integer | Number of job parameters displayed on each page. The value range is [1, 100]. Default value: <b>10</b> |
| page      | No        | Integer | Index of the page to be queried. Default value: <b>1</b>                                               |

| Parameter      | Mandatory | Type   | Description                                                                                                                                                                                                                                        |
|----------------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sortBy         | No        | String | Sorting mode of the query. The value can be <b>engine</b> , <b>model_name</b> , <b>model_precision</b> , <b>model_usage</b> , <b>model_precision</b> , <b>model_size</b> , <b>create_time</b> , or <b>parameter</b> . Default value: <b>engine</b> |
| order          | No        | String | Sorting order. Options: <ul style="list-style-type: none"><li>• <b>asc</b>: ascending order</li><li>• <b>desc</b>: descending order. The default value is <b>desc</b>.</li></ul>                                                                   |
| search_content | No        | String | Search content, for example, a parameter name. By default, this parameter is left blank.                                                                                                                                                           |

## Response Body

[Table 25-644](#) describes the response parameters.

**Table 25-644** Parameters

| Parameter         | Type          | Description                                                                                                                                |
|-------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success        | Boolean       | Whether the request is successful                                                                                                          |
| error_message     | String        | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code        | String        | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |
| model_total_count | Integer       | Number of models                                                                                                                           |
| models            | Array<Object> | Model parameter list. For details, see <a href="#">Table 25-645</a> .                                                                      |

**Table 25-645** models structure data

| Parameter  | Type    | Description |
|------------|---------|-------------|
| model_id   | Integer | Model ID    |
| model_name | String  | Model name  |

| Parameter              | Type    | Description                                                                                                                                                                                                                                           |
|------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| model_usage            | Integer | Model usage. Options: <ul style="list-style-type: none"><li>• 1: image classification</li><li>• 2: object class and location</li><li>• 3: image semantic segmentation</li><li>• 4: natural language processing</li><li>• 5: image embedding</li></ul> |
| model_precision        | String  | Model precision                                                                                                                                                                                                                                       |
| model_size             | Long    | Model size, in bytes                                                                                                                                                                                                                                  |
| model_training_dataset | String  | Model training dataset                                                                                                                                                                                                                                |
| model_dataset_format   | String  | Dataset format required by a model                                                                                                                                                                                                                    |
| model_description_url  | String  | URL of the model description                                                                                                                                                                                                                          |
| parameter              | String  | Running parameters of a model. This parameter is a container environment variable when a training job uses a custom image. For details, see the sample request.                                                                                       |
| create_time            | Long    | Time when a model is created                                                                                                                                                                                                                          |
| engine_id              | Long    | Engine ID of a model                                                                                                                                                                                                                                  |
| engine_name            | String  | Engine name of a model                                                                                                                                                                                                                                |
| engine_version         | String  | Engine version of a model                                                                                                                                                                                                                             |

**Table 25-646 parameter** parameters

| Parameter | Type    | Description                      |
|-----------|---------|----------------------------------|
| label     | String  | Parameter name                   |
| value     | String  | Parameter value                  |
| required  | Boolean | Whether a parameter is mandatory |

## Sample Request

The following shows how to obtain the algorithm whose name contains **configname**.

```
GET https://endpoint/v1/{project_id}/built-in-algorithms?
per_page=10&page=1&sortBy=engine&order=asc&search_content=model
```

## Sample Response

- Successful response

```

For details about the status code, see [Status Code](#).

### 25.3.1.12 Querying Training Job Logs

## Function

This API is used to obtain detailed information about training job logs by row.

## URI

GET /v1/{project\_id}/training-jobs/{job\_id}/versions/{version\_id}/aom-log

[Table 25-647](#) describes the required parameters.

**Table 25-647** URI parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | Long   | ID of a training job                                                                                            |
| version_id | Yes       | Long   | Version ID of a training job                                                                                    |

**Table 25-648** Query parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                               |
|-----------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| base_line | No        | String  | Base line of the log, which is obtained from an API response. If the value is empty, the latest log is obtained.                                          |
| lines     | No        | Integer | Length of the obtained log. The default value is 50 lines. The value range is [0, 500].                                                                   |
| log_file  | Yes       | String  | Name of the log file to be viewed. For details about how to obtain the log file name, see <a href="#">Obtaining the Name of a Training Job Log File</a> . |
| order     | No        | String  | Log query direction <ul style="list-style-type: none"><li><b>desc</b>: Query next records.</li><li><b>asc</b>: Query previous records.</li></ul>          |

## Request Body

None

## Response Body

[Table 25-649](#) describes the response parameters.

**Table 25-649** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| content       | String  | Content of the requested log                                                                                                                  |
| lines         | Integer | Lines of the obtained logs                                                                                                                    |
| start_line    | String  | Start position of the obtained log                                                                                                            |
| end_line      | String  | End position of the obtained log                                                                                                              |
| is_success    | Boolean | Whether the request is successful                                                                                                             |

## Sample Request

The following shows how to obtain the logs contained in **log1.log** of the job whose **job\_id** is **10** and **version\_id** is **10**.

```
GET https://endpoint/v1/{project_id}/training-jobs/10/versions/10/aom-log?log_file=log1.log&base_line=1551252759254000002&lines=50&order=desc
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "start_line": 1551252759254000002,
 "content": "Log string",
 "end_line": "1551252759254000003",
 "lines": "1"
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

## 25.3.2 Training Job Parameter Configuration

### 25.3.2.1 Creating a Training Job Configuration

#### Function

This API is used to create a training job configuration.

#### URI

POST /v1/{project\_id}/training-job-configs

[Table 25-650](#) describes the required parameters.

**Table 25-650** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

#### Request Body

[Table 25-651](#) describes the request parameters.

**Table 25-651** Parameters

| Parameter         | Mandatory | Type    | Description                                                                                                                                           |
|-------------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| config_name       | Yes       | String  | Name of a training job configuration. The value must contain 1 to 64 characters consisting of only digits, letters, underscores (_), and hyphens (-). |
| config_desc       | No        | String  | Description of a training job configuration. The value must contain 0 to 256 characters. By default, this parameter is left blank.                    |
| worker_server_num | Yes       | Integer | Number of workers in a training job. Obtain the maximum value from <a href="#">Querying Job Resource Specifications</a> .                             |

| Parameter          | Mandatory | Type          | Description                                                                                                                                                                                                                                                                                           |
|--------------------|-----------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| app_url            | Yes       | String        | Code directory of a training job, for example, <b>/usr/app/</b> . This parameter must be used together with <b>boot_file_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                             |
| boot_file_url      | Yes       | String        | Boot file of a training job, which needs to be stored in the code directory, for example, <b>/usr/app/boot.py</b> . This parameter must be used together with <b>app_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> . |
| model_id           | Yes       | Long          | Model ID of a training job. Obtain <b>model_id</b> by calling the API described in <a href="#">Querying a Built-in Algorithm</a> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                             |
| parameter          | No        | Array<Object> | Running parameters of a training job. It is a collection of label-value pairs. For details, see the sample request. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-653</a> .                                       |
| spec_id            | Yes       | Long          | ID of the resource specifications selected for a training job. Obtain the ID by calling the API described in <a href="#">Querying Job Resource Specifications</a> .                                                                                                                                   |
| data_url           | No        | String        | OBS URL of the dataset required by a training job, for example, <b>/usr/data/</b> . This parameter cannot be used together with <b>data_source</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . However, one of the parameters must exist.                                                    |
| dataset_id         | No        | String        | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                                                                          |
| dataset_version_id | No        | String        | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                                                                          |

| Parameter      | Mandatory | Type       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| data_source    | No        | JSON Array | Dataset of a training job. This parameter cannot be used together with <b>data_url</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . For details, see <a href="#">Table 25-652</a> .                                                                                                                                                                                                                                                                                                             |
| engine_id      | Yes       | Long       | ID of the engine selected for a training job. The default value is <b>1</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> . Obtain the ID by calling the API described in <a href="#">Querying Job Engine Specifications</a> .                                                                                                                                                                                                 |
| train_url      | No        | String     | OBS URL of the output file of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                                                                                                                                                                                                                                                                                                                               |
| log_url        | No        | String     | OBS URL of the logs of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                                                                                                                                                                                                                                                                                                                                      |
| user_image_url | No        | String     | SWR URL of a custom image used by a training job. Example value: <b>100.125.5.235:20202/jobmng/custom-cpu-base:1.0</b>                                                                                                                                                                                                                                                                                                                                                                                  |
| user_command   | No        | String     | Boot command used to start the container of a custom image of a training job. The format is <b>bash /home/work/run_train.sh python /home/work/user-job-dir/app/train.py {python_file_parameter}</b> . The boot script <b>run_train.sh</b> must be invoked to initialize variables, such as the AK/SK. The <b>run_train.sh</b> script is followed by <b>python</b> to ensure that the Python files can be executed in the initialized variable environment. <b>run_train.sh</b> is used to start Python. |

Table 25-652 data\_source parameters

| Parameter  | Mandatory | Type   | Description                                                                                                                                            |
|------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id | No        | String | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> . |

| Parameter       | Mandatory | Type   | Description                                                                                                                                            |
|-----------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_version | No        | String | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> . |
| type            | No        | String | Dataset type. The value can be <b>obs</b> or <b>dataset</b> . <b>obs</b> and <b>dataset</b> cannot be used at the same time.                           |
| data_url        | No        | String | OBS bucket path. This parameter cannot be used together with <b>dataset_id</b> or <b>dataset_version</b> .                                             |

Table 25-653 parameter parameters

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| label     | No        | String | Parameter name.  |
| value     | No        | String | Parameter value. |

## Response Body

[Table 25-654](#) describes the response parameters.

Table 25-654 Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |

## Sample Request

The following shows how to create a training job configuration whose name is **testConfig** and description is **This is config**.

```
POST https://endpoint/v1/{project_id}/training-job-configs
{
```

```
{
 "config_name": "testConfig",
 "config_desc": "This is config",
 "worker_server_num": 1,
 "app_url": "/usr/app/",
 "boot_file_url": "/usr/app/boot.py",
 "parameter": [
 {
 "label": "learning_rate",
 "value": "0.01"
 },
 {
 "label": "batch_size",
 "value": "32"
 }
],
 "spec_id": 1,
 "dataset_id": "38277e62-9e59-48f4-8d89-c8cf41622c24",
 "dataset_version_id": "2ff0d6ba-c480-45ae-be41-09a8369bfc90",
 "engine_id": 1,
 "train_url": "/usr/train/",
 "log_url": "/usr/log/",
 "model_id": 1
}
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Status Code](#).

### 25.3.2.2 Querying a List of Training Job Configurations

#### Function

This API is used to obtain the created training job configurations that meet the search criteria.

#### URI

GET /v1/{project\_id}/training-job-configs

[Table 25-655](#) describes the required parameters.

**Table 25-655** Parameters

| Parameter  | Mandator y | Type   | Description                                                                                                     |
|------------|------------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes        | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

## Request Body

[Table 25-656](#) describes the request parameters.

**Table 25-656** Parameters

| Parameter      | Mandator y | Type    | Description                                                                                                                                                                                                                                |
|----------------|------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| per_page       | No         | Integer | Number of job parameters displayed on each page. The value range is [1, 1000]. Default value: <b>10</b>                                                                                                                                    |
| page           | No         | Integer | Index of the page to be queried. Default value: <b>1</b>                                                                                                                                                                                   |
| sortBy         | No         | String  | Sorting mode of the query. The value can be <b>config_name</b> , <b>config_desc</b> , or <b>create_time</b> . The default value is <b>config_name</b> . <b>create_time</b> is not supported for <b>sample</b> sorting.                     |
| order          | No         | String  | Sorting order. Options: <ul style="list-style-type: none"><li>• <b>asc</b>: ascending order</li><li>• <b>desc</b>: descending order. The default value is <b>desc</b>.</li></ul>                                                           |
| search_content | No         | String  | Search content, for example, a parameter name. By default, this parameter is left blank.                                                                                                                                                   |
| config_type    | No         | String  | Configuration type to be queried. Options: <ul style="list-style-type: none"><li>• <b>custom</b>: Query the custom configurations.</li><li>• <b>sample</b>: Query the sample configurations. The default value is <b>custom</b>.</li></ul> |

## Response Body

[Table 25-657](#) describes the response parameters.

**Table 25-657** Parameters

| Parameter          | Type                                            | Description                                                                                                                                |
|--------------------|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success         | Boolean                                         | Whether the request is successful                                                                                                          |
| error_message      | String                                          | Error message of a failed API call. This parameter is not included when the API call succeeds.                                             |
| error_code         | String                                          | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |
| config_total_count | Integer                                         | Total number of the queried training job configurations                                                                                    |
| configs            | Array of <a href="#">ConfigResponse</a> objects | <b>configs</b> parameters                                                                                                                  |

**Table 25-658** configs parameters

| Parameter      | Type    | Description                                                                                                                                                                                           |
|----------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| config_name    | String  | Name of a training job configuration                                                                                                                                                                  |
| config_desc    | String  | Description of a training job configuration                                                                                                                                                           |
| create_time    | Long    | Time when a training job is created                                                                                                                                                                   |
| engine_type    | Integer | Engine type of a training job                                                                                                                                                                         |
| engine_name    | String  | Name of the engine selected for a training job                                                                                                                                                        |
| engine_id      | Long    | ID of the engine selected for a training job                                                                                                                                                          |
| engine_version | String  | Version of the engine selected for a training job                                                                                                                                                     |
| user_image_url | String  | SWR URL of a custom image used by a training job. Example value: <b>100.125.5.235:20202/jobmng/custom-cpu-base:1.0</b>                                                                                |
| user_command   | String  | Boot command used to start the container of a custom image of a training job. The format is <b>bash /home/work/run_train.sh python /home/work/user-job-dir/app/train.py {python_file_parameter}</b> . |

## Sample Request

[Table 25-660](#) describes the request parameters.

**Table 25-660** Parameters

| Parameter         | Mandatory | Type    | Description                                                                                                                                                                                                                                                                                                 |
|-------------------|-----------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| config_desc       | No        | String  | Description of a training job configuration. The value must contain 0 to 256 characters. By default, this parameter is left blank.                                                                                                                                                                          |
| worker_server_num | Yes       | Integer | Number of workers in a training job. Obtain the maximum value from <a href="#">Querying Job Resource Specifications</a> .                                                                                                                                                                                   |
| app_url           | Yes       | String  | Code directory of a training job, for example, <code>/usr/app/</code> . This parameter must be used together with <b>boot_file_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                             |
| boot_file_url     | Yes       | String  | Boot file of a training job, which needs to be stored in the code directory, for example, <code>/usr/app/boot.py</code> . This parameter must be used together with <b>app_url</b> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> . |
| model_id          | Yes       | Long    | Model ID of a training job. Obtain <b>model_id</b> by calling the API described in <a href="#">Querying a Built-in Algorithm</a> . After setting <b>model_id</b> , you do not need to set <b>app_url</b> or <b>boot_file_url</b> , and <b>engine_id</b> .                                                   |

| Parameter          | Mandatory | Type          | Description                                                                                                                                                                                                                                        |
|--------------------|-----------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| parameter          | No        | Array<Object> | Running parameters of a training job. It is a collection of label-value pairs. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-662</a> .                         |
| spec_id            | Yes       | Long          | ID of the resource specifications selected for a training job. Obtain the ID by calling the API described in <a href="#">Querying Job Resource Specifications</a> .                                                                                |
| data_url           | No        | String        | OBS URL of the dataset required by a training job, for example, <b>/usr/data/</b> . This parameter cannot be used together with <b>data_source</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . However, one of the parameters must exist. |
| dataset_id         | No        | String        | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                       |
| dataset_version_id | No        | String        | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> or <b>data_source</b> .                                                                       |
| data_source        | No        | JSON Array    | Dataset of a training job. This parameter cannot be used together with <b>data_url</b> or <b>dataset_id</b> and <b>dataset_version_id</b> . For details, see <a href="#">Table 25-661</a> .                                                        |
| engine_id          | Yes       | Long          | ID of the engine selected for a training job. The default value is <b>1</b> . Obtain the ID by calling the API described in <a href="#">Querying Job Engine Specifications</a> .                                                                   |
| train_url          | No        | String        | OBS URL of the output file of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                                                                          |

| Parameter      | Mandatory | Type   | Description                                                                                                                                                                                             |
|----------------|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| log_url        | No        | String | OBS URL of the logs of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>                                                                                      |
| user_image_url | No        | String | SWR URL of a custom image used by a training job. Example value: <b>100.125.5.235:20202/jobmng/custom-cpu-base:1.0</b>                                                                                  |
| user_command   | No        | String | Boot command used to start the container of a custom image of a training job. The format is <b>bash / home/work/run_train.sh python / home/work/user-job-dir/app/train.py {python_file_parameter}</b> . |

**Table 25-661 data\_source parameters**

| Parameter       | Mandatory | Type   | Description                                                                                                                                            |
|-----------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id      | No        | String | Dataset ID of a training job. This parameter must be used together with <b>dataset_version_id</b> , but cannot be used together with <b>data_url</b> . |
| dataset_version | No        | String | Dataset version ID of a training job. This parameter must be used together with <b>dataset_id</b> , but cannot be used together with <b>data_url</b> . |
| type            | No        | String | Dataset type. The value can be <b>obs</b> or <b>dataset</b> . <b>obs</b> and <b>dataset</b> cannot be used at the same time.                           |
| data_url        | No        | String | OBS bucket path. This parameter cannot be used together with <b>dataset_id</b> or <b>dataset_version</b> .                                             |

**Table 25-662 parameter parameters**

| Parameter | Mandatory | Type   | Description      |
|-----------|-----------|--------|------------------|
| label     | No        | String | Parameter name.  |
| value     | No        | String | Parameter value. |

## Response Body

**Table 25-663** describes the response parameters.

**Table 25-663** Parameters

| Parameter     | Type    | Description                                                                                                                                |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                          |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |

## Sample Request

The following shows how to modify the job parameter configuration named **config**.

PUT [https://endpoint/v1/{project\\_id}/training-job-configs/config](https://endpoint/v1/{project_id}/training-job-configs/config)

```
{
 "config_desc": "This is config",
 "worker_server_num": 1,
 "app_url": "/usr/app/",
 "boot_file_url": "/usr/app/boot.py",
 "parameter": [
 {
 "label": "learning_rate",
 "value": 0.01
 },
 {
 "label": "batch_size",
 "value": 32
 }
],
 "spec_id": 1,
 "dataset_id": "38277e62-9e59-48f4-8d89-c8cf41622c24",
 "dataset_version_id": "2ff0d6ba-c480-45ae-be41-09a8369bfc90",
 "engine_id": 1,
 "train_url": "/usr/train/",
 "log_url": "/usr/log/",
 "model_id": 1
}
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
}
```

```
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.2.4 Deleting a Training Job Configuration

## Function

This API is used to delete a training job configuration.

## URI

DELETE /v1/{project\_id}/training-job-configs/{config\_name}

[Table 25-664](#) describes the required parameters.

**Table 25-664** Parameters

| Parameter   | Mandatory | Type   | Description                                                                                                     |
|-------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id  | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| config_name | Yes       | String | Name of a training job configuration                                                                            |

## Request Body

None

## Response Body

[Table 25-665](#) describes the response parameters.

**Table 25-665** Parameters

| Parameter     | Type    | Description                                                                                                                                |
|---------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                          |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                          |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds. |

### Sample Request

The following shows how to delete the job configuration named **test-trainconfig**.

```
DELETE https://endpoint/v1/{project_id}/training-job-configs/test-trainconfig
```

### Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

### Status Code

For details about the status code, see [Table 24-1](#).

## 25.3.2.5 Querying the Details About a Training Job Configuration

### Function

This API is used to obtain the details about a specified training job configuration.

### URI

```
GET /v1/{project_id}/training-job-configs/{config_name}
```

[Table 25-666](#) describes the required parameters.

**Table 25-666** URI parameters

| Parameter       | Mandator<br>y | Type   | Description                                                                                                     |
|-----------------|---------------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id      | Yes           | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| config_nam<br>e | Yes           | String | Name of a training job configuration                                                                            |

**Table 25-667** Query parameters

| Parameter   | Mandatory | Type   | Description                                                                                                                                                                                                                                |
|-------------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| config_type | No        | String | Configuration type to be queried. Options: <ul style="list-style-type: none"><li>• <b>custom</b>: Query the custom configurations.</li><li>• <b>sample</b>: Query the sample configurations. The default value is <b>custom</b>.</li></ul> |

## Request Body

None

## Response Body

[Table 25-668](#) describes the response parameters.

**Table 25-668** Parameters

| Parameter         | Type       | Description                                                                                                                                                                                                                |
|-------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| is_success        | Boolean    | Whether the request is successful                                                                                                                                                                                          |
| error_message     | String     | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                                                                                                          |
| error_code        | String     | Error code of a failed API call. For details, see <a href="#">Error Codes</a> . This parameter is not included when the API call succeeds.                                                                                 |
| config_name       | String     | Name of a training job configuration                                                                                                                                                                                       |
| config_desc       | String     | Description of a training job configuration                                                                                                                                                                                |
| worker_server_num | Integer    | Number of workers in a training job                                                                                                                                                                                        |
| app_url           | String     | Code directory of a training job                                                                                                                                                                                           |
| boot_file_url     | String     | Boot file of a training job                                                                                                                                                                                                |
| model_id          | Long       | Model ID of a training job                                                                                                                                                                                                 |
| parameter         | JSON Array | Running parameters of a training job. It is a collection of label-value pairs. This parameter is a container environment variable when a training job uses a custom image. For details, see <a href="#">Table 25-673</a> . |

| Parameter            | Type       | Description                                                                                                               |
|----------------------|------------|---------------------------------------------------------------------------------------------------------------------------|
| spec_id              | Long       | ID of the resource specifications selected for a training job                                                             |
| data_url             | String     | Dataset of a training job                                                                                                 |
| dataset_id           | String     | Dataset ID of a training job                                                                                              |
| dataset_version_id   | String     | Dataset version ID of a training job                                                                                      |
| data_source          | JSON Array | Dataset of a training job For details, see <a href="#">Table 25-669</a> .                                                 |
| engine_type          | Integer    | Engine type of a training job                                                                                             |
| engine_name          | String     | Name of the engine selected for a training job                                                                            |
| engine_id            | Long       | ID of the engine selected for a training job                                                                              |
| engine_version       | String     | Version of the engine selected for a training job                                                                         |
| train_url            | String     | OBS URL of the output file of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b> |
| log_url              | String     | OBS URL of the logs of a training job. By default, this parameter is left blank. Example value: <b>/usr/train/</b>        |
| user_image_url       | String     | SWR URL of a custom image used by a training job                                                                          |
| user_command         | String     | Boot command used to start the container of a custom image of a training job                                              |
| spec_code            | String     | Resource specifications selected for a training job                                                                       |
| gpu_type             | String     | GPU type of the resource specifications                                                                                   |
| create_time          | Long       | Time when a training job parameter configuration is created                                                               |
| cpu                  | String     | CPU memory of the resource specifications                                                                                 |
| gpu_num              | Integer    | Number of GPUs of the resource specifications                                                                             |
| core                 | String     | Number of cores of the resource specifications                                                                            |
| dataset_name         | String     | Dataset of a training job                                                                                                 |
| dataset_version_name | String     | Dataset of a training job                                                                                                 |
| pool_id              | String     | ID of a resource pool                                                                                                     |

| Parameter      | Type       | Description                                                                                        |
|----------------|------------|----------------------------------------------------------------------------------------------------|
| pool_name      | String     | Name of a resource pool                                                                            |
| volumes        | JSON Array | Storage volume that can be used by a training job. For details, see <a href="#">Table 25-670</a> . |
| nas_mount_path | String     | Local mount path of SFS Turbo (NAS). Example value: <b>/home/work/nas</b>                          |
| nas_share_addr | String     | Shared path of SFS Turbo (NAS). Example value: <b>192.168.8.150:/</b>                              |
| nas_type       | String     | Only NFS is supported. Example value: <b>nfs</b>                                                   |

**Table 25-669 data\_source** parameters

| Parameter       | Type   | Description                                                                                                                                                                  |
|-----------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| dataset_id      | String | Dataset ID of a training job                                                                                                                                                 |
| dataset_version | String | Dataset version ID of a training job                                                                                                                                         |
| type            | String | Dataset type. Options: <ul style="list-style-type: none"><li>• <b>obs</b>: Data from OBS is used.</li><li>• <b>dataset</b>: Data from a specified dataset is used.</li></ul> |
| data_url        | String | OBS bucket path                                                                                                                                                              |

**Table 25-670 volumes** parameters

| Parameter | Type   | Description                                                                                                                                                                                                                  |
|-----------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| nfs       | Object | Storage volume of the shared file system type. Only the training jobs running in a resource pool with the shared file system network connected support such storage volumes. For details, see <a href="#">Table 25-671</a> . |
| host_path | Object | Storage volume of the host file system type. Only training jobs running in a dedicated resource pool support such storage volumes. For details, see <a href="#">Table 25-672</a> .                                           |

**Table 25-671 nfs** parameters

| Parameter | Type   | Description                    |
|-----------|--------|--------------------------------|
| id        | String | ID of an SFS Turbo file system |

| Parameter | Type    | Description                                                                                                                                                                                                                              |
|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| src_path  | String  | Address of an SFS Turbo file system                                                                                                                                                                                                      |
| dest_path | String  | Local path to a training job                                                                                                                                                                                                             |
| read_only | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

Table 25-672 **host\_path** parameters

| Parameter | Type    | Description                                                                                                                                                                                                                              |
|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| src_path  | String  | Local path to a host                                                                                                                                                                                                                     |
| dest_path | String  | Local path to a training job                                                                                                                                                                                                             |
| read_only | Boolean | Whether <b>dest_path</b> is read-only. The default value is <b>false</b> . <ul style="list-style-type: none"><li>• <b>true</b>: read-only permission</li><li>• <b>false</b>: read/write permission. This is the default value.</li></ul> |

Table 25-673 **parameter** parameters

| Parameter | Type   | Description     |
|-----------|--------|-----------------|
| label     | String | Parameter name  |
| value     | String | Parameter value |

## Sample Request

The following shows how to obtain the details about the job configuration named **config123**.

```
GET https://endpoint/v1/{project_id}/training-job-configs/config123
```

## Sample Response

- Successful response

```
{
 "spec_code": "modelarts.vm.gpu.v100",
 "user_image_url": "100.125.5.235:20202/jobmng/custom-cpu-base:1.0",
 "user_command": "bash -x /home/work/run_train.sh python /home/work/user-job-dir/app/mnist/

## Status Code

For details about the status code, see [Table 24-1](#).

## 25.3.3 Visualization Jobs

### 25.3.3.1 Creating a Visualization Job

#### Function

This API is used to create a visualization job.

Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Visualization Job List](#) and [Querying the Details About a Visualization Job](#).

#### URI

POST /v1/{project\_id}/visualization-jobs

[Table 25-674](#) describes the required parameters.

**Table 25-674** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

#### Request Body

[Table 25-675](#) describes the request parameters.

**Table 25-675** Parameters

| Parameter | Mandatory | Type   | Description                                                                                                                                  |
|-----------|-----------|--------|----------------------------------------------------------------------------------------------------------------------------------------------|
| job_name  | Yes       | String | Name of a visualization job. The value must contain 1 to 20 characters consisting of only digits, letters, underscores (_), and hyphens (-). |
| job_desc  | No        | String | Description of a visualization job. The value must contain 0 to 256 characters. By default, this parameter is left blank.                    |
| train_url | Yes       | String | OBS path                                                                                                                                     |

| Parameter | Mandatory | Type   | Description                                                                                                                                |
|-----------|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|
| job_type  | No        | String | Type of a visualization job. You can create visualization jobs of TensorBoard and MindInsight types. The default type is TensorBoard.      |
| flavor    | No        | Object | Specifications when a visualization job is created. You do not need to set this parameter. For details, see <a href="#">Table 25-676</a> . |
| schedule  | No        | Object | Auto stop setting. For details, see <a href="#">Table 25-677</a> .                                                                         |

**Table 25-676** flavor parameters

| Parameter | Mandatory | Type   | Description                                                                                                      |
|-----------|-----------|--------|------------------------------------------------------------------------------------------------------------------|
| code      | Yes       | String | Resource specification code of a visualization job. You can obtain the code through the <b>flavor</b> parameter. |

**Table 25-677** schedule parameters

| Parameter | Mandatory | Type   | Description                                             |
|-----------|-----------|--------|---------------------------------------------------------|
| type      | Yes       | String | Set this parameter to <b>stop</b> .                     |
| time_unit | Yes       | String | Unit of auto stop duration. The value is <b>HOURS</b> . |
| duration  | Yes       | Int    | Auto stop duration. The value ranges from 0 to 24.      |

## Response Body

[Table 25-678](#) describes the response parameters.

**Table 25-678** Parameters

| Parameter  | Type    | Description                       |
|------------|---------|-----------------------------------|
| is_success | Boolean | Whether the request is successful |

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| job_id        | Long    | ID of a visualization job                                                                                                                     |
| job_name      | String  | Name of a visualization job                                                                                                                   |
| status        | Integer | Status of a visualization job. For details about the job statuses, see <a href="#">Job Statuses</a> .                                         |
| create_time   | Long    | Time when a visualization job is created, in timestamp format                                                                                 |
| service_url   | String  | Endpoint of a visualization job                                                                                                               |

## Sample Request

The following shows how to create a visualization job whose name is **visualization-job**, description is **this is a visualization job**, and OBS path is **/obs/name/**.

```
POST https://endpoint/v1/{project_id}/visualization-jobs
{
 "job_name": "visualization-job",
 "job_desc": "this is a visualization job",
 "train_url": "/obs/name/",
 "job_type": "mindinsight",
 "schedule": [
 {
 "type": "stop",
 "time_unit": "HOURS",
 "duration": 1
 }
]
}
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "job_id": "10",
 "job_name": "visualization-job",
 "status": "1",
 "create_time": "1524189990635"
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "error message",
}
```

```
{
 "error_code": "ModelArts.0103"
}
```

### Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.3.2 Querying a Visualization Job List

#### Function

This API is used to obtain the visualization jobs that meet the search criteria.

#### URI

GET /v1/{project\_id}/visualization-jobs

[Table 25-679](#) describes the required parameters.

**Table 25-679** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-680** Query parameters

| Parameter | Mandatory | Type    | Description                                                                                                                                                                                                                                         |
|-----------|-----------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| status    | No        | String  | Job status. By default, all job statuses are returned. For example, to obtain failed jobs, set the value of <b>status</b> to <b>3</b> , <b>5</b> , <b>6</b> , or <b>13</b> . For details about the job statuses, see <a href="#">Job Statuses</a> . |
| per_page  | No        | Integer | Number of jobs displayed on each page. The value range is [1, 1000]. Default value: <b>10</b>                                                                                                                                                       |
| page      | No        | Integer | Index of the page to be queried. Default value: <b>1</b>                                                                                                                                                                                            |
| sortBy    | No        | String  | Sorting mode of the query. The value can be <b>job_id</b> , <b>job_name</b> , <b>job_desc</b> , <b>create_time</b> , or <b>status</b> . Default value: <b>job_id</b>                                                                                |

| Parameter      | Mandatory | Type   | Description                                                                                                                                                             |
|----------------|-----------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| order          | No        | String | Sorting order. Options: <ul style="list-style-type: none"><li>• <b>asc</b>: ascending order. It is the default value.</li><li>• <b>desc</b>: descending order</li></ul> |
| search_content | No        | String | Search content, for example, a visualization job name. The value must contain 0 to 64 characters. By default, this parameter is left blank.                             |
| workspace_id   | No        | String | Workspace where a job resides. Default value: <b>0</b>                                                                                                                  |

## Request Body

None

## Response Body

[Table 25-681](#) describes the response parameters.

**Table 25-681** Parameters

| Parameter       | Type              | Description                                                                                                                                   |
|-----------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success      | Boolean           | Whether the request is successful                                                                                                             |
| error_code      | String            | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| error_message   | String            | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| job_total_count | Integer           | Total number of the queried visualization jobs                                                                                                |
| job_count_limit | Integer           | Number of visualization jobs that can be created                                                                                              |
| jobs            | <b>jobs</b> array | Visualization job attributes. For details, see <a href="#">Table 25-682</a> .                                                                 |
| quotas          | Integer           | Maximum number of training jobs                                                                                                               |

**Table 25-682 jobs parameters**

| Parameter   | Type    | Description                                                                                           |
|-------------|---------|-------------------------------------------------------------------------------------------------------|
| job_name    | String  | Name of a visualization job                                                                           |
| status      | Integer | Status of a visualization job. For details about the job statuses, see <a href="#">Job Statuses</a> . |
| create_time | Long    | Time when a visualization job is created                                                              |
| duration    | Long    | Visualization job running duration, in milliseconds                                                   |
| job_desc    | String  | Description of a visualization job                                                                    |
| service_url | String  | Endpoint of a visualization job                                                                       |
| train_url   | String  | Path for storing visualization job logs                                                               |
| job_id      | Long    | ID of a visualization job                                                                             |
| resource_id | String  | Charged resource ID of a visualization job                                                            |

## Sample Request

The following shows how to obtain the top 10 visualization jobs that are being deployed on the first page in ascending order.

```
GET https://endpoint/v1/{project_id}/visualization-jobs ?
status=7&per_page=10&page=1&sortBy=status&order=asc& search_content=job_name
```

## Sample Response

- Successful response

```
{
 "quotas": 100,
 "is_success": true,
 "job_total_count": 1,
 "job_count_limit": 999,
 "jobs": [
 {
 "job_id": 1,
 "job_name": "visualization-job",
 "status": 1,
 "create_time": 15099239923,
 "resource_id": "4787c885-e18d-4ef1-aa12-c4ed0c364b27",
 "duration": 1502323,
 "job_desc": "This is a visualization job",
 "service_url": "https://console.huaweicloud.com/modelarts/tensoarbod/xxxx/111",
 "train_url": "/obs/name/"
 }
]
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "error message",
 "error_code": "ModelArts.0103"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.3.3 Querying the Details About a Visualization Job

## Function

This API is used to obtain the details about a specified visualization job based on the job name.

## URI

GET /v1/{project\_id}/visualization-jobs/{job\_id}

[Table 25-683](#) describes the required parameters.

**Table 25-683** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | String | ID of a visualization job                                                                                       |

## Request Body

None

## Response Body

[Table 25-684](#) describes the response parameters.

**Table 25-684** Parameters

| Parameter     | Type   | Description                                                                                                                                   |
|---------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| error_message | String | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| job_name      | String | Name of a visualization job                                                                                                                   |
| service_url   | String | Endpoint of a visualization job                                                                                                               |

| Parameter   | Type   | Description                                                                                           |
|-------------|--------|-------------------------------------------------------------------------------------------------------|
| resource_id | String | Charged resource ID of a visualization job                                                            |
| job_id      | Long   | ID of a visualization job                                                                             |
| job_desc    | String | Description of a visualization job                                                                    |
| duration    | Long   | Visualization job running duration, in milliseconds                                                   |
| create_time | Long   | Time when a visualization job is created, in timestamp format                                         |
| train_url   | String | OBS path of the visualization job output file                                                         |
| status      | Int    | Status of a visualization job. For details about the job statuses, see <a href="#">Job Statuses</a> . |

## Sample Request

The following shows how to obtain the visualization job whose ID is 10.

```
GET https://endpoint/v1/{project_id}/visualization-jobs/10
```

## Sample Response

- Successful response

```
{
 "duration": 33000,
 "service_url": "https://console.huaweicloud.com/modelarts2/tensorboard/04f679b17380d32a2f32c00335c4b5ba/197/",

}
```
- Failed response

```
{
 "error_message": "The length of search content should be in [0,100]",
 "error_code": "ModelArts.0104"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.3.4 Modifying the Description of a Visualization Job

#### Function

This API is used to modify the description of a visualization job.

## URI

PUT /v1/{project\_id}/visualization-jobs/{job\_id}

[Table 25-685](#) describes the required parameters.

**Table 25-685** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | String | ID of a visualization job                                                                                       |

## Request Body

[Table 25-686](#) describes the request parameters.

**Table 25-686** Parameters

| Parameter | Mandatory | Type   | Description                                                                     |
|-----------|-----------|--------|---------------------------------------------------------------------------------|
| job_desc  | Yes       | String | Description of a visualization job. The value must contain 0 to 256 characters. |

## Response Body

[Table 25-687](#) describes the response parameters.

**Table 25-687** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |

## Sample Request

The following shows how to modify the description of the visualization job whose ID is **10** to **This is a ModelArts job**.

```
PUT https://endpoint/v1/{project_id}/visualization-jobs/10
{
 "job_desc": "This is a ModelArts job"
}
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Illegal name: %%123",
 "error_code": "ModelArts.0104"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.3.5 Deleting a Visualization Job

#### Function

This API is used to delete a visualization job. Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Visualization Job List](#) and [Querying the Details About a Visualization Job](#).

#### URI

DELETE /v1/{project\_id}/visualization-jobs/{job\_id}

[Table 25-688](#) describes the required parameters.

**Table 25-688** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | String | ID of a visualization job                                                                                       |

## Request Body

None

## Response Body

[Table 25-689](#) describes the response parameters.

**Table 25-689** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |

## Sample Request

The following shows how to delete the visualization job whose ID is 10.

```
DELETE https://endpoint/v1/{project_id}/visualization-jobs/10
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "This job can't be delete. job status: 9",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.3.6 Stopping a Visualization Job

#### Function

This API is used to stop a visualization job. Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Visualization Job List](#) and [Querying the Details About a Visualization Job](#).

## URI

POST /v1/{project\_id}/visualization-jobs/{job\_id}/stop

[Table 25-690](#) describes the required parameters.

**Table 25-690** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | String | ID of a visualization job                                                                                       |

## Request Body

None

## Response Body

[Table 25-691](#) describes the response parameters.

**Table 25-691** Parameters

| Parameter     | Type    | Description                                                                                                                                   |
|---------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                                                             |
| error_code    | String  | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |

## Sample Request

The following shows how to stop the visualization job whose ID is 10.

```
POST https://endpoint/v1/{project_id}/visualization-jobs/10/stop
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "This job can't be stop. job status: 10",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.3.7 Restarting a Visualization Job

## Function

This API is used to restart a visualization job. Calling this API is an asynchronous operation. The job status can be obtained by calling the APIs described in [Querying a Visualization Job List](#) and [Querying the Details About a Visualization Job](#).

## URI

POST /v1/{project\_id}/visualization-jobs/{job\_id}/restart

[Table 25-692](#) describes the required parameters.

**Table 25-692** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |
| job_id     | Yes       | String | ID of a visualization job                                                                                       |

## Request Body

None

## Response Body

[Table 25-693](#) describes the response parameters.

**Table 25-693** Parameters

| Parameter  | Type    | Description                       |
|------------|---------|-----------------------------------|
| is_success | Boolean | Whether the request is successful |

| Parameter     | Type   | Description                                                                                                                                   |
|---------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| error_code    | String | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| error_message | String | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |

## Sample Request

The following shows how to restart the visualization job whose ID is 10.

```
POST https://endpoint/v1/{project_id}/visualization-jobs/10/restart
```

## Sample Response

- Successful response

```
{
 "is_success": true
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "This job can't be resubmit. job status: 8",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

## 25.3.4 Resource and Engine Specifications

### 25.3.4.1 Querying Job Resource Specifications

#### Function

This API is used to obtain the resource specifications of a specified job.

You must specify the resource specifications when creating a training job or an inference job.

#### URI

```
GET /v1/{project_id}/job/resource-specs
```

[Table 25-694](#) describes the required parameters.

**Table 25-694** Parameters

| Parameter  | Mandatory | Type   | Description                                                                                                     |
|------------|-----------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes       | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-695** Parameters

| Parameter    | Mandatory | Type    | Description                                                                                                                                                                                                                                                                  |
|--------------|-----------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| job_type     | No        | String  | Job type. The value can be <b>train</b> or <b>inference</b> . This parameter is not required for querying the specifications of ExeML resources.                                                                                                                             |
| engine_id    | No        | Long    | Engine ID of a job. Default value: <b>0</b> This parameter is not required for querying the specifications of ExeML resources.                                                                                                                                               |
| project_type | No        | Integer | Project type. Default value: <b>0</b> <ul style="list-style-type: none"><li><b>0</b>: non-ExeML project</li><li><b>1</b>: ExeML job for image classification</li><li><b>2</b>: ExeML job for object detection</li><li><b>3</b>: ExeML job for predictive analytics</li></ul> |

## Request Body

None

## Response Body

[Table 25-696](#) describes the response parameters.

**Table 25-696** Parameters

| Parameter     | Type    | Description                                                                                       |
|---------------|---------|---------------------------------------------------------------------------------------------------|
| is_success    | Boolean | Whether the request is successful                                                                 |
| error_message | String  | Error message of a failed API call.<br>This parameter is not included when the API call succeeds. |

| Parameter        | Type               | Description                                                                                                                                   |
|------------------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| error_code       | String             | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| spec_total_count | Integer            | Total number of job resource specifications                                                                                                   |
| specs            | <b>specs</b> array | List of resource specifications attributes. For details, see <a href="#">Table 25-697</a> .                                                   |

**Table 25-697** specs parameters

| Parameter      | Type    | Description                                                                                                        |
|----------------|---------|--------------------------------------------------------------------------------------------------------------------|
| spec_id        | Long    | ID of the resource specifications                                                                                  |
| core           | String  | Number of cores of the resource specifications                                                                     |
| cpu            | String  | CPU memory of the resource specifications                                                                          |
| gpu_num        | Integer | Number of GPUs of the resource specifications                                                                      |
| gpu_type       | String  | GPU type of the resource specifications                                                                            |
| spec_code      | String  | Type of the resource specifications                                                                                |
| max_num        | Integer | Maximum number of nodes that can be selected                                                                       |
| unit_num       | Integer | Number of pricing units                                                                                            |
| storage        | String  | SSD size of a resource flavor                                                                                      |
| interface_type | Integer | Interface type                                                                                                     |
| no_resource    | Boolean | Whether the resources of the selected specifications are sufficient. True indicates that no resource is available. |

## Sample Request

The following shows how to obtain the resource specifications of a training job.

```
GET https://endpoint/v1/{project_id}/job/resource-specs?job_type=train
```

## Sample Response

- Successful response

```
{
 "specs": [
 {
```

```
 "spec_id": 2,
 "core": "2",
 "cpu": "8",
 "gpu_num": 0,
 "gpu_type": "",
 "spec_code": "modelarts.vm.cpu.2u",
 "unit_num": 1,
 "max_num": 2,
 "storage": "",
 "interface_type": 1,
 "no_resource": false
 }
],
"is_success": true,
"spec_total_count": 1
}
```

- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

### Status Code

For details about the status code, see [Table 24-1](#).

### 25.3.4.2 Querying Job Engine Specifications

#### Function

This API is used to obtain the engine type and version of a specified job.

You must specify the engine specifications when creating a training job or an inference job.

#### URI

GET /v1/{project\_id}/job/ai-engines

[Table 25-698](#) describes the required parameters.

**Table 25-698** Parameters

| Parameter  | Mandator<br>y | Type   | Description                                                                                                     |
|------------|---------------|--------|-----------------------------------------------------------------------------------------------------------------|
| project_id | Yes           | String | Project ID. For details about how to obtain a project ID, see <a href="#">Obtaining a Project ID and Name</a> . |

**Table 25-699** Parameters

| Parameter | Mandatory | Type   | Description                                                   |
|-----------|-----------|--------|---------------------------------------------------------------|
| job_type  | No        | String | Job type. The value can be <b>train</b> or <b>inference</b> . |

## Request Body

None

## Response Body

[Table 25-700](#) describes the response parameters.

**Table 25-700** Parameters

| Parameter     | Type                 | Description                                                                                                                                   |
|---------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| is_success    | Boolean              | Whether the request is successful                                                                                                             |
| error_message | String               | Error message of a failed API call.<br>This parameter is not included when the API call succeeds.                                             |
| error_code    | String               | Error code of a failed API call. For details, see <a href="#">Error Codes</a> .<br>This parameter is not included when the API call succeeds. |
| engines       | <b>engines</b> array | List of engine specifications attributes. For details, see <a href="#">Table 25-701</a> .                                                     |

**Table 25-701 engines** parameters

| Parameter      | Type    | Description                                                                                                                                                                                                                                                                             |
|----------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| engine_type    | Integer | Engine type of a training job <ul style="list-style-type: none"><li>1: TensorFlow</li><li>2: MXNet</li><li>4: Caffe</li><li>5: Spark_MLLib</li><li>6: Scikit Learn</li><li>9: XGBoost-Sklearn</li><li>10: PyTorch</li><li>13: Ascend-Powered-Engine</li><li>17: MindSpore-GPU</li></ul> |
| engine_id      | Long    | ID of the engine selected for a training job                                                                                                                                                                                                                                            |
| engine_name    | String  | Name of the engine selected for a training job                                                                                                                                                                                                                                          |
| engine_version | String  | Version of the engine selected for a training job                                                                                                                                                                                                                                       |

## Sample Request

The following shows how to obtain the engine specifications of a training job.

```
GET https://endpoint/v1/{project_id}/job/ai-engines?job_type=train
```

## Sample Response

- Successful response

```
{
 "is_success": true,
 "engines": [
 {
 "engine_type": 1,
 "engine_name": "TensorFlow",
 "engine_id": 1,
 "engine_version": "TF-1.4.0-python2.7"
 }
]
}
```
- Failed response

```
{
 "is_success": false,
 "error_message": "Error string",
 "error_code": "ModelArts.0105"
}
```

## Status Code

For details about the status code, see [Table 24-1](#).

## 25.3.5 Job Statuses

[Table 25-702](#) describes the job statuses.

**Table 25-702** Job statuses

| Status Value | Description                                                     |
|--------------|-----------------------------------------------------------------|
| 0            | JOBSTAT_UNKNOWN: Unknown status.                                |
| 1            | JOBSTAT_INIT: The job is being initialized.                     |
| 2            | JOBSTAT_IMAGE_CREATING: The job image is being created.         |
| 3            | JOBSTAT_IMAGE_FAILED: Failed to create the job image.           |
| 4            | JOBSTAT_SUBMIT_TRYING: The job is being submitted.              |
| 5            | JOBSTAT_SUBMIT_FAILED: Failed to submit the job.                |
| 6            | JOBSTAT_DELETE_FAILED: Failed to delete the job.                |
| 7            | JOBSTAT_WAITING: The job is queuing.                            |
| 8            | JOBSTAT_RUNNING: The job is running.                            |
| 9            | JOBSTAT_KILLING: The job is being canceled.                     |
| 10           | JOBSTAT_COMPLETED: The job has been completed.                  |
| 11           | JOBSTAT_FAILED: Failed to run the job.                          |
| 12           | JOBSTAT_KILLED: Job canceled successfully.                      |
| 13           | JOBSTAT_CANCELED: Job canceled.                                 |
| 14           | JOBSTAT_LOST: Job lost.                                         |
| 15           | JOBSTAT_SCALING: The job is being scaled.                       |
| 16           | JOBSTAT_SUBMIT_MODEL_FAILED: Failed to submit the model.        |
| 17           | JOBSTAT_DEPLOY_SERVICE_FAILED: Failed to deploy the service.    |
| 18           | JOBSTAT_CHECK_INIT: The job review is being initialized.        |
| 19           | JOBSTAT_CHECK_RUNNING: The job is being reviewed.               |
| 20           | JOBSTAT_CHECK_RUNNING_COMPLETED: The approval job is completed. |
| 21           | JOBSTAT_CHECK_FAILED: Failed to review the job.                 |
