1 Before You Start

- [1.1 Overview](#)
- [1.2 Calling Method](#)
- [1.3 Endpoints](#)
- [1.4 Constraints](#)
- [1.5 Concepts](#)

1.1 Overview

CodeArts TestPlan is a one-stop cloud testing platform provided for software developers. It covers test management and API tests, and integrates the DevOps agile testing concepts, helping you improve management efficiency and deliver high-quality products. You can use APIs described in this document to perform operations, such as creating and deleting test cases. For details about all supported operations, see [2 API Overview](#).

Before calling a CodeArts TestPlan API, ensure that you have fully understood the concepts related to CodeArts TestPlan. For details, see [Service Overview](#).

1.2 Calling Method

CodeArts TestPlan supports Representational State Transfer (REST) APIs, allowing you to call APIs using HTTPS. For details about API calling, see [3 Calling APIs](#).

1.3 Endpoints

An endpoint is the request address for calling an API. Endpoints vary with services and regions. For the endpoints of all services, see [Regions and Endpoints](#).

The following table lists the CodeArts TestPlan endpoints. Select a desired one based on the service requirements.

Region Name	Region	Endpoint
LA-Mexico City2	la-north-2	cloudtest-ext.la-north-2.myhuaweicloud.com
LA-Sao Paulo1	sa-brazil-1	cloudtest-ext.sa-brazil-1.myhuaweicloud.com
AP-Singapore	ap-southeast-3	cloudtest-ext.ap-southeast-3.myhuaweicloud.com

1.4 Constraints

For details, see API description.

1.5 Concepts

- Account

An account is created upon successful registration the cloud platform. The account has full access permissions for all of its cloud services and resources. It can be used to reset user passwords and grant user permissions. The account is a payment entity and should not be used directly to perform routine management. For security purposes, create users and grant them permissions for routine management.

- User

An Identity and Access Management (IAM) user is created by an account to use cloud services. Each IAM user has its own identity credentials (password and access keys).

You can view the account ID and user ID on the [My Credentials](#) page of the console. The account name, username, and password will be required for API authentication.

- Region

Regions are divided from the dimensions of geographical location and network latency. Public services, such as Elastic Cloud Server (ECS), Elastic Volume Service (EVS), Object Storage Service (OBS), Virtual Private Cloud (VPC), Elastic IP (EIP), and Image Management Service (IMS), are shared within the same region.

Regions are classified into universal regions and dedicated regions.

- A universal region provides universal cloud services for common tenants.
- A dedicated region provides specific services for specific tenants.

- Availability zone (AZ)

An AZ contains one or more physical data centers. Each AZ has independent cooling, fire extinguishing, moisture-proof, and electricity facilities. Within an AZ, computing, network, storage, and other resources are logically divided into multiple clusters. AZs within a region are interconnected using high-speed optical fibers to support cross-AZ high-availability systems.

- Project

A project is created by a user in CodeArts Req based on a template. It also contains preset work items, code, and resources. IAM users in a project are added to the project as team members. They are assigned with corresponding roles and granted with operation permissions.

- Enterprise project

An enterprise project groups and manages enterprise resources in a logically isolated manner. It can contain resources in multiple regions, and allow resources to be added or removed.

For details about how to obtain enterprise project IDs and features, see [Applicable Scenarios](#) in the user guide of the Enterprise Management service.

2 API Overview

Table 2-1 CodeArts TestPlan APIs

Category	API
API Test Suite Management	Generates an API test suite by importing files from a repository
Environment Parameter Management	Obtaining the Environment Parameter List of CodeArts TestPlan
Test Plan Management	Adding Test Cases in Batches to a Plan, Creating a Plan in a Project, Querying the Test Plan List in a Project, Querying the Requirement Tree of a Test Plan, Querying the Operation History of a Test Plan, and Querying the Test Plan List in a Project (V2)

3 Calling APIs

3.1 Making an API Request

3.2 Authentication

3.3 Response

3.1 Making an API Request

This section describes the structure of a REST API request, and demonstrates how to call an API, for example, the API used to [obtain an IAM user token](#). The obtained token can then be used to authenticate other API calls.

Request URI

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

A request URI consists of four parts: *{URI-scheme}:// {Endpoint} / {resource-path}? {query-string}*

The following table describes the parameters.

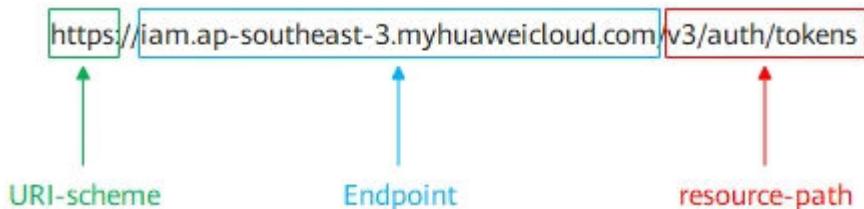

Parameter	Description
URI-scheme	Protocol used to transmit requests. All APIs use HTTPS .
Endpoint	Domain name or IP address of the server bearing the REST service. The endpoint varies between services in different regions. It can be obtained from Regions and Endpoints . For example, the endpoint of IAM in the AP-Singapore region is iam.ap-southeast-3.myhuaweicloud.com .
resource-path	The resource path, that is, the API access path, is obtained from the URI of a specific API. For example, the resource-path of the API used to obtain a user token is /v3/auth/tokens .

Parameter	Description
query-string	(Optional) Query a parameter. The query parameter is prefixed with a question mark (?), in the format of Parameter name=Parameter value . For example, limit=10 indicates that a maximum of 10 data records will be queried.

For example, to obtain the IAM token in region **AP-Singapore**, obtain the endpoint of this region (iam.ap-southeast-3.myhuaweicloud.com) and find the resource path (**/v3/auth/tokens**) in the URI for [obtaining a user token](#). Then, construct the URI as follows:

`https://iam.ap-southeast-3.myhuaweicloud.com/v3/auth/tokens`

Figure 3-1 Example URI

NOTE

To simplify the URI display in this document, each API is provided only with a resource path and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

Request Methods

HTTP defines the following request methods that can be used to send a request to the server. The details are as follows:

Request Method	Description
GET	Requests the server to return specified resources.
PUT	Requests the server to update specified resources.
POST	Requests the server to add resources or perform special operations.
DELETE	Requests the server to delete specified resources, for example, an object.
HEAD	Same as GET except that the server must return only the response header.

For example, if the request method is **POST** in the URI for [obtaining a user token](#), the request is as follows:

```
POST https://iam.ap-southeast-3.myhuaweicloud.com/v3/auth/tokens
```

Request Header

You can add additional fields, for example, the fields required by a specified URI or HTTP method, to a request header. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields:

Name	Description	Mandatory	Remarks
Content-Type	Request body type or format	Yes	The default value is application/json . Other values of this field will be provided for specific APIs if any.
X-Auth-Token	User token	Optional	The user token is a response to the API used to obtain a user token . This API is the only one that does not require authentication.
X-Project-ID	Subproject ID	Optional	Used in multi-project scenarios.
X-Domain-ID	Account ID	-	-

NOTE

In addition to supporting token-based authentication, public cloud APIs also support authentication using AK/SK. During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

For more information, see [AK/SK Authentication](#).

The API used to obtain a user token does not require authentication. Therefore, only the **Content-Type** field needs to be added to request headers for calling the API. An example of such requests is as follows:

```
POST https://iam.ap-southeast-3.myhuaweicloud.com/v3/auth/tokens
Content-Type: application/json
```

Request Body

A request body is generally sent in structured format. It corresponds to **Content-Type** in the request header and transfers content except the request header.

The request body varies according to APIs. Certain APIs do not require the request body, such as GET and DELETE.

In the case of the API used to [obtain a user token](#), the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Replace *username*, *domainname* (account name), ******* (login password), and *xxxxxxx* (project ID) with the actual values. To learn how to obtain a project name, see [6.3 Obtaining a Project ID](#).

NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see [Obtaining a User Token Through Password Authentication](#).

```
POST https://iam.ap-southeast-3.myhuaweicloud.com/v3/auth/tokens
Content-Type: application/json
```

```
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "id": "xxxxxxx"
      }
    }
  }
}
```

If all data required for the API request is available, you can send the request to call the API through [curl](#), [Postman](#), or coding. In the response to the API used to [obtain a user token](#), **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

3.2 Authentication

Requests for calling an API can be authenticated using either of the following methods:

- **Token authentication:** Requests are authenticated using Tokens.

- **AK/SK authentication:** Requests are encrypted using an AK/SK.

Token-based Authentication

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the Identity and Access Management (IAM) API for obtaining a user token.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API.

When calling the API to **obtain a user token**, set **auth.scope** in the request body to **project**.

```
{  
    "auth": {  
        "identity": {  
            "methods": [  
                "password"  
            ],  
            "password": {  
                "user": {  
                    "name": "username",  
                    "password": "*****",  
                    "domain": {  
                        "name": "domainname"  
                    }  
                }  
            }  
        },  
        "scope": {  
            "project": {  
                "id": "xxxxxxx"  
            }  
        }  
    }  
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, **X-Auth-Token: ABCDEFJ....** can be added to a request as follows:

```
GET https://iam.ap-southeast-3.myhuaweicloud.com/v3/auth/tokens  
Content-Type: application/json  
X-Auth-Token: ABCDEFJ....
```

AK/SK-based Authentication

AK/SK authentication supports API requests with a body no larger than 12 MB. For API requests with a larger body, use token authentication.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID. It is a unique ID associated with an SK. AK is used together with SK to sign requests.

- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK-based authentication, you can use an AK/SK to sign requests based on the signature algorithm or use the signing SDK to sign requests. For details about how to sign requests and use the signing SDK, see [AK/SK Signing and Authentication Guide](#).

NOTICE

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

3.3 Response

Status Code

After sending a request, you will receive a response, including a status code, response header, and response body.

A status code is a group of digits, ranging from 1xx to 5xx. It indicates the status of a request. For more information, see [6.1 Status Codes](#).

If status code **201** is returned for calling the API used to [obtain a user token](#), the request is successful.

Response Header

Similar to a request, a response also has a header, for example, **Content-type**.

The following figure shows the response header fields for the API used to [obtain a user token](#). The **x-subject-token** header field is the target user token. This token can then be used to authenticate the calling of other APIs.

Figure 3-2 Header fields of the response to the request for obtaining a user token

```
connection → keep-alive
content-type → application/json
date → Tue, 12 Feb 2019 06:52:13 GMT
server → Web Server
strict-transport-security → max-age=31536000; includeSubdomains;
transfer-encoding → chunked
via → proxy A
x-content-type-options → nosniff
x-download-options → noopener
x-frame-options → SAMEORIGIN
x-iam-trace-id → 218d45ab-d674-4995-af3a-2d0255ba41b5
x-subject-token
→ MIIYQYJKoZIhvNAQcCollYjCCGEoCAQExDTALBglhgkBGZQMEAqEwgharBgkqhkiG9w0BBwGgħacBIIWmHsidG9rZW4iOnsiZXhwaXJlc19hdCl6ljlwMTktMDidMTNUMCfj3Kjs6YgKnpVNrbW2eZseb78S0kajACgklqO1wi4JlGzrp18LGXK5bxldfq4lqHCYb8P4NaY0NYejcAgzJVeFIYtLWT1GSO0zxkZmlQHQj82H8qHdgjZ09fuEbL5dMhdavj+33wElxHRE9187o+k9-j+CMZSEB7bUGd5Uj6eRASX1jipPEGA270g1Fr0ooL6jqqlFkNPQuFSOU8+uSttVwRtNfsC+qTp22Rkd5MCqFGQ8LcuUxC3a+9CMBnOintWW7oeRUvhVpxk8pxiX1wTEboXRzT6MUbpvGw-oPNFYxJECKn0H3HRozv0N--n5d6Nbvg=-
x-xss-protection → 1; mode=block;
```

Response Body

The body of a response is often returned in structured format as specified in the **Content-Type** header field. The response body transfers content except the response header.

For the API used to [obtain a user token](#), the response body is as follows: The following example is part of the response body for the API used to obtain a user token:

```
{
  "token": {
    "expires_at": "2019-02-13T06:52:13.855000Z",
    "methods": [
      "password"
    ],
    "catalog": [
      {
        "endpoints": [
          {
            "region_id": "xx-xxxxxx-1",
            ....
```

If an error occurs during API calling, an error code and the corresponding error message will be displayed. The following shows an error response body:

```
{
  "error_msg": "The format of message is error",
  "error_code": "AS.0001"
}
```

In the response body, **error_code** is an error code, and **error_msg** provides information about the error.

4 API

- [4.1 API Test Suite Management](#)
- [4.2 Environment Parameter Management](#)
- [4.3 Test Plan Management](#)

4.1 API Test Suite Management

4.1.1 Generating an API Test Suite by Importing Files from the Repository

Function

Generates an API test suite by importing files from the repository.

URI

POST /v1/projects/{project_id}/repository/testsuites

Table 4-1 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID Minimum: 32 Maximum: 32

Request Parameters

Table 4-2 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Call IAM to obtain the user token (value of X-Subject-Token in the response header). Minimum: 1 Maximum: 100000

Table 4-3 Request body parameters

Parameter	Mandatory	Type	Description
testsuite_name	Yes	String	Name of the test suite to be generated Minimum: 3 Maximum: 128
repository_id	Yes	String	Repository ID Minimum: 32 Maximum: 32
repository_branch	Yes	String	Repository branch Minimum: 3 Maximum: 100
file_path	Yes	String	Relative path of the YAML or JSON file in the repository. Only YAML and JSON files of Swagger 2.0 are supported. Minimum: 6 Maximum: 128

Response Parameters

Status code: 201

Table 4-4 Response body parameters

Parameter	Type	Description
testsuite_id	String	ID of the generated test suite Minimum: 32 Maximum: 32
testcase_ids	Array of strings	List of generated test case IDs Array Length: 0 - 500

Status code: 400**Table 4-5** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called Minimum: 16 Maximum: 16
error_detail	Array of CommonResponseDetail objects	Details about the interface invoking failure. This structure is unavailable for non-parameter verification failures. Array Length: 0 - 500
error_msg	String	Error message displayed after an API fails to be called Minimum: 3 Maximum: 100

Table 4-6 CommonResponseDetail

Parameter	Type	Description
step_name	String	Records the name of the incorrect step. Minimum: 3 Maximum: 100
testcase_name	String	Case name Minimum: 3 Maximum: 128
fail_content	String	Records the actual error content. Minimum: 3 Maximum: 128

Parameter	Type	Description
fail_keys	String	Records the AW that contains the error. Minimum: 3 Maximum: 128
fail_source	String	Records the name of the header that triggers an error. Minimum: 3 Maximum: 100
fail_type	String	Records the error type. Minimum: 3 Maximum: 100
stage	String	Records the stage that contains the error. Minimum: 2 Maximum: 50

Status code: 401**Table 4-7** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 403**Table 4-8** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404

Table 4-9 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500**Table 4-10** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Example Requests

```
{  
    "testsuite_name": "jalor_test_suite",  
    "repository_id": "aa03aeee96fa48f0acc223f0ab503a1f",  
    "repository_branch": "master",  
    "file_path": "apitest.yaml"  
}
```

Example Responses

Status code: 201

Created

```
{  
    "testsuite_id": "",  
    "testsuite_ids": [ "" ]  
}
```

Status Codes

Status Code	Description
201	Created
400	Bad Request
401	Unauthorized
403	Forbidden

Status Code	Description
404	Not Found
500	Internal Server Error

Error Codes

See [Error Codes](#).

4.2 Environment Parameter Management

4.2.1 Obtaining the Environment Parameter Group List

Function

Obtaining the Environment Parameter Group List

URI

GET /v1/projects/{project_id}/environments

Table 4-11 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID Minimum: 32 Maximum: 32

Table 4-12 Query Parameters

Parameter	Mandatory	Type	Description
offset	Yes	Long	Offset, which is the position where the query starts. The value must be greater than or equal to 0. Minimum: 0 Maximum: 999 Default: 0

Parameter	Mandatory	Type	Description
limit	Yes	Long	<p>Number of items displayed on each page. A maximum of 200 items are supported.</p> <p>Minimum: 1</p> <p>Maximum: 200</p> <p>Default: 200</p>

Request Parameters

Table 4-13 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	<p>User token.</p> <p>Call IAM to obtain the user token (value of X-Subject-Token in the response header).</p> <p>Minimum: 1</p> <p>Maximum: 100000</p>

Response Parameters

Status code: 200

Table 4-14 Response body parameters

Parameter	Type	Description
environments	Array of Environment objects	Environment list
offset	Long	<p>Offset, which is the position where the query starts. The value must be greater than or equal to 0.</p> <p>Minimum: 0</p> <p>Maximum: 999</p>
limit	Long	<p>Number of items displayed on each page. A maximum of 200 items are supported.</p> <p>Minimum: 1</p> <p>Maximum: 200</p>

Parameter	Type	Description
total_count	Long	Total number of environments Minimum: 0 Maximum: 100

Table 4-15 Environment

Parameter	Type	Description
environment_id	String	Environment ID Minimum: 32 Maximum: 32
environment_name	String	Environment name Minimum: 3 Maximum: 80
environment_description	String	Environment description Minimum: 0 Maximum: 500
is_default	Boolean	Whether the environment is default

Status code: 400**Table 4-16** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called Minimum: 12 Maximum: 16
error_msg	String	Error message displayed after an API fails to be called Minimum: 3 Maximum: 100

Status code: 401

Table 4-17 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 403**Table 4-18** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404**Table 4-19** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500**Table 4-20** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Example Requests

None

Example Responses

Status code: 200

OK

```
{  
  "environments" : [ {  
    "environment_id" : "ff4893796ee1a8aa009ff3a470de55d8",  
    "environment_name" : "Default environment",  
    "environment_description" : "Default environment",  
    "is_default" : true  
  } ],

Error Codes

See [Error Codes](#).

4.3 Test Plan Management

4.3.1 Adding Test Cases in Batches to a Plan

Function

Adds test cases in batches to a plan.

URI

POST /v1/projects/{project_id}/plans/{plan_id}/testcases/batch-add

Table 4-21 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Uniquely identifies a project. The value contains 32 characters. For details about how to obtain the value, see Obtaining a Project ID .
plan_id	Yes	String	Unique ID of a plan. The value contains 11 to 34 characters.

Request Parameters

Table 4-22 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Call IAM to obtain the user token (value of X-Subject-Token in the response header).

Table 4-23 Request body parameters

Parameter	Mandatory	Type	Description
service_id	Yes	Integer	Service ID returned by the API for registering a test service
testcase_id_list	Yes	Array of strings	Number of cases contained in the plan. The array length is less than 50. Only one test type can be contained.

Response Parameters

Status code: 400

Table 4-24 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 401**Table 4-25** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404**Table 4-26** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500**Table 4-27** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called
error_detail	ErrorDetailInfo object	Details about failed batch operations. This structure is unavailable when all operations fail.

Table 4-28 ErrorDetailInfo

Parameter	Type	Description
failed	Array of ErrorCaseInfo Bean objects	Details about the resources that fail to be operated in batches

Table 4-29 ErrorCaseInfoBean

Parameter	Type	Description
error_code	String	Error code
error_msg	String	Error message
testcase_id	String	Failed resource information

Example Requests

Add test cases in batches to a plan.

```
post https://[endpoint]/v1/projects/efdb403066474ab08836b9eeaaa23bca/plans/  
9b26f58ec29943f681804a6628779a23/testcases/batch-add

4.3.2 Creating a Plan in a Project

Function

Create a plan in a project.

URI

POST /v1/projects/{project_id}/plans

Table 4-30 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Uniquely identifies a project.

Request Parameters

Table 4-31 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Call IAM to obtain the user token (value of X-Subject-Token in the response header).

Table 4-32 Request body parameters

Parameter	Mandatory	Type	Description
assigned_id	No	String	Processor ID. If this parameter is left blank, the current user is used by default.
name	Yes	String	Plan name
plan_cycle	Yes	PlanCycle object	Plan period
service_id_list	Yes	Array of integers	Case types contained in the plan. The array length is less than 10.

Table 4-33 PlanCycle

Parameter	Mandatory	Type	Description
end_date	No	String	End time of a plan, which must be UTC time. Example, 2020-03-31
start_date	No	String	Start time of a plan, which must be UTC time. Example, 3/4/2020

Response Parameters

Status code: 201

Table 4-34 Response body parameters

Parameter	Type	Description
plan_id	String	Plan ID returned after the API is called successfully
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 400

Table 4-35 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 401**Table 4-36** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404**Table 4-37** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500**Table 4-38** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Example Requests

Creating a Plan in a Project

```
post https://[endpoint]/v1/projects/efdb403066474ab08836b9eeaaa23bca/plans

{
    "assigned_id" : "efdb403066474ab08836b9eeaaa23bca",
    "name" : "This is a test plan name",
    "plan_cycle" : {
        "end_date" : "2020-03-31",
        "start_date" : "2020-03-04"
    },
    "service_id_list" : [ 13, 24 ]
}
```

Example Responses

Status code: 201

Created

```
{

4.3.3 Querying the Test Plan List in a Project

Function

Queries the test plan list in a project.

URI

GET /v1/projects/{project_id}/plans

Table 4-39 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which uniquely identifies a project. The value is a string of 32 characters.

Table 4-40 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Used for fuzzy query (for test plan names)
current_stage	No	String	Test plan stage (create, design, execute, or report)
offset	Yes	Integer	Page number. The value ranges from 1 to 20000.
limit	Yes	Integer	Number of items displayed on each page. The value ranges from 1 to 200.

Request Parameters

Table 4-41 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Call IAM to obtain the user token (value of X-Subject-Token in the response header).

Response Parameters

Status code: 201

Table 4-42 Response body parameters

Parameter	Type	Description
[items]	Array of TestPlanDetail objects	Response for querying the test plan list in a project

Table 4-43 TestPlanDetail

Parameter	Type	Description
creator	creator object	Test plan creator information
current_stage	String	Stage of the current test plan
design_stage	design_stage object	Information about the test plan design stage
end_date	String	Test plan deadline
execute_stage	execute_stage object	Information about the test plan execution stage
expire_day	Integer	Obtains the expiration time. A positive value indicates that the plan has expired.
finish_date	String	Actual completion time of the test plan (Actual completion of the test plan means that all test cases under the test plan are completed.)
iteration	NameAndId object	Test plan iteration No. and iteration name
name	String	Test plan name
owner	owner object	Test plan processor information
plan_id	String	Test plan ID
project_id	String	Project ID
report_stage	report_stage object	Statistics in the report stage
start_date	String	Test plan start time

Table 4-44 creator

Parameter	Type	Description
id	String	ID of the test plan creator
nick_name	String	Alias of the test plan creator. This parameter is not returned if the user does not set an alias.
user_name	String	Name of the test plan creator

Table 4-45 design_stage

Parameter	Type	Description
case_count	Integer	Number of cases
issue_count	Integer	Number of requirements
issue_covered_count	String	Number of requirements associated with test cases

Table 4-46 execute_stage

Parameter	Type	Description
case_pass_rate	String	Test case pass rate, which is calculated based on test case results
completed_defect_count	Integer	Number of completed defects
defect_count	Integer	Number of defects
executed_case_count	Integer	Number of executed test cases, counted by test case status

Table 4-47 NameAndId

Parameter	Type	Description
id	String	Object ID
name	String	object name

Table 4-48 owner

Parameter	Type	Description
id	String	Test plan processor ID
name	String	Name of the test plan processor. nickName is returned first. If nickName does not exist, userName is returned.
nick_name	String	Alias of the test plan processor. This parameter is not returned if the user does not set an alias.
user_name	String	Username of the test plan processor

Table 4-49 report_stage

Parameter	Type	Description
case_complet_e_rate	String	Case completion rate, which is calculated by status

Status code: 400**Table 4-50** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 401**Table 4-51** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404**Table 4-52** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500

Table 4-53 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Example Requests

```
get https://[endpoint]/v1/projects/efdb403066474ab08836b9eeaaa23bca/plans?  
offset=1&limit=10&current_stage
```

Example Responses

4.3.4 Querying the Requirement Tree of a Test Plan

Function

Queries the requirement list in a test plan.

URI

GET /v1/projects/{project_id}/plans/{plan_id}/issues

Table 4-54 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID. Minimum: 32 Maximum: 32
plan_id	Yes	String	Test plan ID, which uniquely identifies a test plan. The value is a string of 11 to 34 characters.

Table 4-55 Query Parameters

Parameter	Mandatory	Type	Description
offset	Yes	Long	Offset, which is the position where the query starts. The value must be greater than or equal to 0. Minimum: 0 Maximum: 999 Default: 0
limit	Yes	Long	Number of items displayed on each page. A maximum of 200 items are supported. Minimum: 1 Maximum: 200 Default: 200

Request Parameters

Table 4-56 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Can be obtained by calling the IAM API for obtaining the user token (the value of X-Subject-Token in the response header). Minimum: 1 Maximum: 100000

Response Parameters

Status code: 201

Table 4-57 Response body parameters

Parameter	Type	Description
[items]	Array of TestPlanIssue Detail objects	Requirement list associated with a test plan in a project

Table 4-58 TestPlanIssueDetail

Parameter	Type	Description
end_date	String	Deadline
iteration	NameAndId object	Test plan iteration No. and iteration name
module	NameAndId object	Test plan iteration No. and iteration name
name	String	Work item name
owner	NameAndId object	Test plan iteration No. and iteration name
parent_issue	String	Parent work item
plan_id	String	Test plan ID
project_id	String	Project ID, which uniquely identifies a project. The value is a string of 32 characters.
region_id	String	Region
severity	NameAndId object	Test plan iteration No. and iteration name
start_date	String	Start date
status	NameAndId object	Test plan iteration No. and iteration name
tracker	NameAndId object	Test plan iteration No. and iteration name
workitem_id	String	Work item ID

Table 4-59 NameAndId

Parameter	Type	Description
id	String	Object ID
name	String	object name

Status code: 400

Table 4-60 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 401**Table 4-61** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404**Table 4-62** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500**Table 4-63** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Example Requests

Query the requirement tree of a test plan.

```
get https://[endpoint]/v1/projects/efdb403066474ab08836b9eeaaa23bca/plans/

4.3.5 Querying the Operation History of a Test Plan

Function

Queries the operation history of a test plan.

URI

GET /v1/projects/{project_id}/plans/{plan_id}/journals

Table 4-64 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which uniquely identifies a project. The value is a string of 32 characters.
plan_id	Yes	String	Test plan ID, which uniquely identifies a test plan. The value is a string of 11 to 34 characters.

Table 4-65 Query Parameters

Parameter	Mandatory	Type	Description
offset	Yes	Long	Offset, which is the position where the query starts. The value must be greater than or equal to 0. Minimum: 0 Maximum: 999 Default: 0
limit	Yes	Long	Number of items displayed on each page. A maximum of 200 items are supported. Minimum: 1 Maximum: 200 Default: 200

Request Parameters

Table 4-66 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Call IAM to obtain the user token (value of X-Subject-Token in the response header).

Response Parameters

Status code: 201

Table 4-67 Response body parameters

Parameter	Type	Description
[items]	Array of TestPlanJournalList objects	Response for querying the operation history of a test plan in a project

Table 4-68 TestPlanJournalList

Parameter	Type	Description
detail	Array of TestPlanJournalDetail objects	Historical record details
operate_time	String	Change time
operator	NameAndId object	Test plan iteration No. and iteration name
plan_id	String	Test plan ID
project_id	String	Project ID, which uniquely identifies a project. The value is a string of 32 characters.

Table 4-69 TestPlanJournalDetail

Parameter	Type	Description
added	Array of NameAndId objects	Records of adding test plan resources (work items or test cases)
deleted	Array of NameAndId objects	Records of removing test plan resources (work items or test cases)
journalized_type	String	Specific type in change records. Example: test case or issue
type	String	Whether the basic information or a resource is changed (adding or removing issues/cases)
updated	Array of AttributeChange objects	Change of the basic information about the test plan. It includes the plan name, test type, plan processor, version number, associated iteration, start date, end date/deadline, and description.

Table 4-70 NameAndId

Parameter	Type	Description
id	String	Object ID
name	String	object name

Table 4-71 AttributeChange

Parameter	Type	Description
attribute_type	String	Changed test plan attributes
new_value	String	Changed value
old_value	String	Original value

Status code: 400**Table 4-72** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called

Parameter	Type	Description
error_msg	String	Error message displayed after an API fails to be called

Status code: 401**Table 4-73** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404**Table 4-74** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

4.3.6 Querying the Test Plan List in a Project (V2)

Function

Queries the test plan list in a project (V2).

URI

GET /v2/projects/{project_id}/plans

Table 4-76 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID, which uniquely identifies a project. The value is a string of 32 characters.

Table 4-77 Query Parameters

Parameter	Mandatory	Type	Description
offset	Yes	Integer	Offset, which is the position where the query starts. The value must be greater than or equal to 0.
limit	Yes	Integer	Number of items displayed on each page. A maximum of 200 items are supported.
name	No	String	Used for fuzzy query (for test plan names)
current_stage	No	String	Test plan stage (create, design, execute, or report)

Request Parameters

Table 4-78 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token. Call IAM to obtain the user token (value of X-Subject-Token in the response header).

Response Parameters

Status code: 201

Table 4-79 Response body parameters

Parameter	Type	Description
[items]	Array of TestPlanData il objects	Response for querying the test plan list in a project

Table 4-80 TestPlanDetail

Parameter	Type	Description
creator	creator object	Test plan creator information
current_stage	String	Stage of the current test plan
design_stage	design_stage object	Information about the test plan design stage
end_date	String	Test plan deadline
execute_stage	execute_stag e object	Information about the test plan execution stage
expire_day	Integer	Obtains the expiration time. A positive value indicates that the plan has expired.
finish_date	String	Actual completion time of the test plan (Actual completion of the test plan means that all test cases under the test plan are completed.)
iteration	NameAndId object	Test plan iteration No. and iteration name
name	String	Test plan name
owner	owner object	Test plan processor information
plan_id	String	Test plan ID
project_id	String	Project ID
report_stage	report_stage object	Statistics in the report stage
start_date	String	Test plan start time

Table 4-81 creator

Parameter	Type	Description
id	String	ID of the test plan creator

Parameter	Type	Description
nick_name	String	Alias of the test plan creator. This parameter is not returned if the user does not set an alias.
user_name	String	Name of the test plan creator

Table 4-82 design_stage

Parameter	Type	Description
case_count	Integer	Number of cases
issue_count	Integer	Number of requirements
issue_covered_count	String	Number of requirements associated with test cases

Table 4-83 execute_stage

Parameter	Type	Description
case_pass_rate	String	Test case pass rate, which is calculated based on test case results
completed_defect_count	Integer	Number of completed defects

executed_case_count	Integer	Number of executed test cases, counted by test case status

Table 4-84 NameAndId

Parameter	Type	Description
id	String	Object ID
name	String	object name

Table 4-85 owner

Parameter	Type	Description
id	String	Test plan processor ID

Parameter	Type	Description
name	String	Name of the test plan processor. nickName is returned first. If nickName does not exist, userName is returned.
nick_name	String	Alias of the test plan processor. This parameter is not returned if the user does not set an alias.
user_name	String	Username of the test plan processor

Table 4-86 report_stage

Parameter	Type	Description
case_complet_e_rate	String	Case completion rate, which is calculated by status

Status code: 400**Table 4-87 Response body parameters**

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 401**Table 4-88 Response body parameters**

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 404

Table 4-89 Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Status code: 500**Table 4-90** Response body parameters

Parameter	Type	Description
error_code	String	Error code displayed after an API fails to be called
error_msg	String	Error message displayed after an API fails to be called

Example Requests

```
get https://{endpoint}/v2/projects/efdb403066474ab08836b9eeaaa23bca/plans?  
offset=1&limit=10&name&current_stage
```

Example Responses

Status code: 201

OK

5 Application Examples

5.1 User Plan Operations

Scenario

This scenario is applicable to those who have created projects in CodeArts TestPlan and have created cases in their own projects. They can create different plans to manage their own cases.

The following procedure describes how to create a test plan and add cases to the plan.

Prerequisites

You have created a project and created your own cases.

Involved APIs

User plan operations include creating a plan under a project and adding test cases to a plan in batches. To add test cases to a plan, you must have created test cases in advance. The following APIs are involved:

- Creating a Plan in a Project: You can create your own test plan under the third-party test type in the project.
- Adding Test Cases in Batches to a Plan: After the plan is created, associate test cases with the plan.

Procedure

Step 1 Determine the user token that can be used to authenticate the calling of other APIs.

1. View the user token. For details, see [Obtaining a User Token](#).
2. Obtain the value of **X-Subject-Token** in the response header.

Step 2 Create a test plan.

- API information

URL format: POST /v1/projects/{*project_id*}/plans

For details about API request parameters, see [Creating a Plan in a Project](#).

- Example request

POST https://*{endpoint}*/v1/projects/{*project_id*}/plans

- Obtain the value of *{endpoint}* from [1.3 Endpoints](#).

- *{project_id}* uniquely identifies a project.

Body:

```
{  
    "name" : "Name of a test plan",  
    "assigned_id" : "efdb403066474ab08836b9eeaaa23bca",  
    "service_id_list" : [ 0 ],  
    "plan_cycle" : {  
        "start_date" : "2020-03-04",  
        "end_date" : "2020-03-31"  
    }  
}
```

- Example response

```
{  
    "plan_id" : "efdb403066474ab08836b9eeaaa23bca",  
    "error_code" : "CLOUDTEST.000XXXXXX",  
    "error_msg" : "Failure cause: xxx"  
}
```

Step 3 Add a case to the test plan.

- API information

URL format: POST /v1/projects/{*project_id*}/plans/{*plan_id*}/testcases/batch-add

For details about API request parameters, see [Adding Test Cases in Batches to a Plan](#).

- Example request

POST https://*{endpoint}*/v1/projects/{*project_id*}/plans/{*plan_id*}/testcases/batch-add

- Obtain the value of *{endpoint}* from [1.3 Endpoints](#).

- *{project_id}* uniquely identifies a project.

Body:

```
{  
    "service_id" : 13,  
    " testcase_id_list" : [ "efdb403066474ab08836b9eeaaa23bca",  
    "251fca07b22f493692eb06b1754f07a8" ]  
}
```

- Example response

```
{  
    "error_code" : "CLOUDTEST.000XXXXXX",  
    "error_msg" : "Failure cause: xxx",  
    "error_detail" : {  
        "failed" : [ {  
            "error_code" : "CLOUDTEST.000XXXXXX",  
            "error_msg" : "Failure cause: xxx",  
            "testcase_id" : "efdb403066474ab08836b9eeaaa23bca"  
        }, {  
            "error_code" : "CLOUDTEST.000XXXXXX",  
            "error_msg" : "Failure cause: xxx",  
            "testcase_id" : "251fca07b22f493692eb06b1754f07a8"  
        } ]  
    }  
}
```

```
    }]  
}
```

6 Appendix

- [6.1 Status Codes](#)
- [6.2 Error Codes](#)
- [6.3 Obtaining a Project ID](#)
- [6.4 Obtaining an Account ID](#)

6.1 Status Codes

Table 6-1 Normal status codes

Status Code	Description
200	OK
201	Created

Table 6-2 Abnormal status codes

Status Code	Description
204	No Content
400	Bad Request
401	Unauthorized
404	Not Found
500	Internal Server Error

6.2 Error Codes

If an error occurs in API calling and no result is returned, you can locate the cause based on the error code of each API.

If an error occurs during API calling, HTTP status code 4xx or 5xx is returned. The returned message body contains the specific error code and error information.

If you fail to locate the cause of the error, contact customer service and provide the error code so that we can help you solve the problem as soon as possible.

Error Response Body Format

If an error occurs during API calling, an error code and the corresponding error message will be displayed. The following shows an error response body:

```
{  
  "error_code": "CLOUDTEST.00013024",  
  "error_msg": "Not authorized to add cases."  
}
```

In the response body, **error_code** is an error code, and **error_msg** provides information about the error.

Error Code Description

If an error code starting with **APIGW** is returned after you call an API, rectify the fault by referring to the instructions provided in [Error Codes](#).

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.0010005	Inter-service communication issues.	Inter-service communication issues.	Contact customer service for troubleshooting.
400	CLOUDTEST.0012002	Invalid project ID.	The project ID is invalid.	Check whether the project ID contains 32 characters.
400	CLOUDTEST.0013024	Not authorized to add test cases of this type.	The current user has not yet been authorized to add test cases of this type.	Contact the administrator to grant permissions.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00013025	Not authorized to query test cases of this type.	The current user has not yet been authorized to query test cases of this type.	Contact the administrator to grant permissions.
400	CLOUDTEST.00013026	Not authorized to update test cases of this type.	The current user has not yet been authorized to update test cases of this type.	Contact the administrator to grant permissions.
400	CLOUDTEST.00014000	Empty requirement ID.	The requirement ID in the input parameters is empty.	Contact customer service for troubleshooting.
400	CLOUDTEST.00014001	Requirement not found in the project.	The requirement cannot be found in the input project.	Contact customer service for troubleshooting.
400	CLOUDTEST.00014003	Too many test cases under the requirement.	The number of test cases under the requirement exceeds the maximum.	Add no more than 200 test cases in the requirement.
400	CLOUDTEST.00015002	Directory not found.	The directory in the input parameters cannot be found.	Contact customer service for troubleshooting.
400	CLOUDTEST.00017000	Invalid test case ID.	The test case ID is invalid.	Check whether the test case ID contains 32 characters.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00017001	Target test case not found.	The target test case in the input parameters cannot be found.	Contact customer service for troubleshooting.
400	CLOUDTEST.00017003	Invalid test plan ID.	The test plan ID is invalid.	Check whether the test plan ID contains 32 characters.
400	CLOUDTEST.00017004	Test step too long.	In the input parameters, the test step is too long.	Check whether the length of the test step exceeds 500 characters.
400	CLOUDTEST.00017005	Expected result too long.	In the input parameters, the expected result is too long.	Check whether the length of the expected step exceeds 500 characters.
400	CLOUDTEST.00017006	Sprint not found.	The sprint in the input parameters cannot be found.	Contact customer service for troubleshooting.
400	CLOUDTEST.00017009	Invalid test case execution ID.	The test case execution ID is invalid.	Check whether the test case execution ID is within 32 characters.
400	CLOUDTEST.00017011	Invalid case name.	In the input parameters, the case name contains invalid characters.	Check the case name and delete invalid characters.
400	CLOUDTEST.00017012	Invalid service types.	The service types are invalid.	Check whether the length of the service type list in the request exceeds 10.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00017013	Test case prerequisite too long.	In the input parameters, the test case prerequisite is too long.	Check whether the test case prerequisite exceeds 500 characters.
400	CLOUDTEST.00017014	Case description too long.	In the input parameters, the case description is too long.	Check whether the case description exceeds 500 characters.
400	CLOUDTEST.00017015	Case ID already in use.	The case ID in the input parameters has been used by another case.	Change the case ID.
400	CLOUDTEST.00017016	Max. 50,000 cases in a project.	Max. 50,000 cases in a project. Submit a service ticket to increase the quota.	Check whether the number of cases exceeds the upper limit. Delete some cases.
400	CLOUDTEST.00017017	Empty case ID.	The case ID in the input parameters is empty.	Enter a case ID.
400	CLOUDTEST.00017019	Invalid duration.	The duration is invalid.	Check whether the value is an integer.
400	CLOUDTEST.00017020	Some cases failed in batch execution.	Some cases failed to execute during the batch execution.	Check whether the design of the failed cases complies with the requirements. If no problem is found, contact customer service.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00017021	Some cases failed in batch update.	Some cases failed to update during the batch update.	Check whether the design of the failed cases complies with the requirements. If no problem is found, contact customer service.
400	CLOUDTEST.00017032	Invalid processor ID.	The processor ID is invalid.	Check whether the processor ID contains 32 characters.
400	CLOUDTEST.00017036	Delete case failed. Abnormal inter-service communication.	Failed to delete the case. Inter-service communication may be abnormal.	Contact customer service for troubleshooting.
400	CLOUDTEST.00017038	Service type invalid or not found.	The service type is invalid or not found.	Check whether the service type is correct.
400	CLOUDTEST.00017051	Invalid test case version.	The version of test case in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.00017054	Invalid case level.	The case level in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.00017055	Too many cases for batch execution.	Too many cases to be executed in batches.	Execute no more than 50 cases in a batch.
400	CLOUDTEST.00017056	Too many cases for batch update.	Too many cases to be updated in batches.	Update no more than 50 cases in a batch.
400	CLOUDTEST.00017057	Case not found in the project or plan.	The case cannot be found in the project or plan.	Contact customer service for troubleshooting.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00017058	Invalid test case result.	The test case result is invalid.	Check whether the value is 0 , 1 , 5 , or 6 .
400	CLOUDTEST.00018001	Tag too long.	In the input parameters, the tag is too long.	Use no more than 25 characters for the tag.
400	CLOUDTEST.00018002	Too many tags associated with the test case.	Too many tags associated with the test case.	Associate the test case with no more than 30 tags.
400	CLOUDTEST.00018004	Too many tags added to the project.	Too many tags added to the project.	Add no more than 10,000 tags to the project.
400	CLOUDTEST.00018005	Invalid tag name value.	The value of the tag name in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.00030001	Invalid case IDs for batch operation.	The case IDs for batch operation are invalid.	Check whether the number of test cases for batch operation exceeds 50 and whether the ID of a single test case contains 32 characters.
400	CLOUDTEST.00030002	Invalid service name.	The service name is invalid.	Check whether the length of the service name exceeds 16 characters.
400	CLOUDTEST.00030004	Invalid region value.	The region value in the input parameters is invalid.	Contact customer service for troubleshooting.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.0 0030007	Invalid introduction value.	The introduction value in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0030037	Invalid registration parameters for parsing.	Invalid registration parameters for parsing.	Check whether the input parameters are valid.
400	CLOUDTEST.0 0030038	Invalid input parameters.	The input parameters are invalid.	Check whether the input parameters are valid.
400	CLOUDTEST.0 0030040	Invalid value of deletion frequency.	The value of deletion frequency in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0030041	Invalid value of deletion rule.	The value of the deletion rule in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0030043	Invalid domain name.	The domain name is invalid.	Starts the domain name with https or http, and use no more than 128 characters.
400	CLOUDTEST.0 0030044	Invalid value of interconnection mode.	The value of interconnection mode in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0030045	Invalid value of service type.	The value of service type in the input parameters is invalid.	Contact customer service for troubleshooting.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.0 0030047	Invalid value of tenant.	The value of tenant in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0040008	Empty end time.	The end time in the input parameters is empty.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0040011	Invalid value of test case level.	The value of test case level in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0040012	Invalid module value.	The value of module in the input parameters is invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.0 0040014	Invalid test case name length.	The length of the test case name is invalid.	Use 3 to 128 characters.
400	CLOUDTEST.0 0060005	Invalid start time.	The start time is invalid.	Check whether the input parameter is a timestamp.
400	CLOUDTEST.0 0060006	Invalid end time.	The end time is invalid.	Check whether the input parameter is a timestamp.
400	CLOUDTEST.0 0060010	Invalid format of planned start time.	The format of the planned start time is invalid.	Check whether the time format is <i>XXXX-XX-XX</i> .
400	CLOUDTEST.0 0060011	Invalid format of planned end time.	The format of the planned end time is invalid.	Check whether the time format is <i>XXXX-XX-XX</i> .

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00070002	Case information not found in test plan.	The case information in the input test plan parameters cannot be found.	Contact customer service for troubleshooting.
400	CLOUDTEST.00070003	Invalid test plan values.	The test plan values in the input parameters are invalid.	Contact customer service for troubleshooting.
400	CLOUDTEST.00070010	Invalid test plan name length.	The length of the test plan name is invalid.	Use no more than 128 characters and do not use invalid symbols.
400	CLOUDTEST.00088006	Empty value of execution result.	The value of execution result in the input parameters is empty.	Contact customer service for troubleshooting.
401	CLOUDTEST.00013013	Not authorized to delete this type of test case.	The current user has not yet been authorized to delete this type of test case.	Check whether the current user has the operation permissions on this type of test case.
401	CLOUDTEST.00030003	Insufficient permissions.	The current user does not have sufficient permissions.	Use the administrator account.
401	CLOUDTEST.00050001	Token expired.	The token expired.	Check whether the latest token is used for calling the API.
500	CLOUDTEST.00013001	Not authorized to operate the test type.	The current user has not yet been authorized to operate the test type.	Select other test cases that you are authorized to add to the plan.

Status Code	Error Code	Error Message	Description	Solution
500	CLOUDTEST.00013002	Not authorized to operate certain test types in the plan.	The current user has not yet been authorized to operate certain test types.	Check whether the user has permissions for all service types in the request.
500	CLOUDTEST.00017022	Execute case failed.	Failed to execute the case.	Check whether the case execution information in the request body is compliant.
500	CLOUDTEST.00017023	Update case status failed.	Failed to update the case status.	Check whether the update information of case results in the request body is compliant.
500	CLOUDTEST.00017024	All cases that the execution request involves have already been executed.	All cases that the execution request involves have already been executed.	Check whether the request body involves the test cases that have already been executed.
500	CLOUDTEST.00017025	All cases that the update request involves already have the required results.	All cases that the update request involves already have the required results.	Check whether the request body involves the test cases that already have the required results.
500	CLOUDTEST.00017026	Some cases that the request involves have already been executed.	Some cases that the request involves have already been executed.	Check whether the request body involves the test cases that have already been executed.
500	CLOUDTEST.00017027	Some cases that the request involves already have the required results.	Some cases that the request involves already have the required results.	Check whether the request body involves the test cases that already have the required results.

Status Code	Error Code	Error Message	Description	Solution
500	CLOUDTEST.00017028	A case that the update request involves has already been executed.	A case that the update request involves has already been executed.	Check whether the test case has already been executed.
500	CLOUDTEST.00017029	A case that the request involves already has the required results.	A case that the request involves already has the required results.	Check whether the test case already has the required results.
500	CLOUDTEST.00030022	Not authorized.	The user has not yet been authorized to perform this operation.	Use the primary account to perform this operation.
500	CLOUDTEST.00030028	Service name already registered.	The service name has already been registered.	Use another name.
500	CLOUDTEST.00030046	Service already deleted.	The service has already been deleted.	The service has already been deleted.
500	CLOUDTEST.00040003	Start time later than end time.	The start time is later than the end time.	Set a start time earlier than the end time.
500	CLOUDTEST.00050000	System busy due to an internal exception.	The system is busy due to an internal exception.	Try again later.
500	CLOUDTEST.00070008	Invalid processor.	The processor is invalid.	Change the processor to another role.
500	CLOUDTEST.00070009	Test plan name already in use.	The test plan name is already in use.	Use another name.
400	CLOUDTEST.0010005	Inter-service communication issues.	Inter-service communication issues.	Contact customer service for troubleshooting.

Status Code	Error Code	Error Message	Description	Solution
400	CLOUDTEST.00012002	Invalid project UUID. Use only letters and digits (32 characters).	The project UUID is invalid. Use only letters and digits (32 characters).	Check whether the project ID contains 32 characters.
400	CLOUDTEST.00012005	Invalid version URI. Use only letters and digits. (11 to 34 characters)	The version URI is invalid. Use only letters and digits. (11 to 34 characters)	Check whether the input parameters are valid.

6.3 Obtaining a Project ID

Obtaining a Project ID by Calling an API

You can obtain the project ID by calling the API used to [query project information](#).

The API for obtaining a project ID is **GET https://{Endpoint}/v3/projects/**. {Endpoint} indicates the endpoint of IAM, which can be obtained from [1.3 Endpoints](#). For details about API authentication, see [3.2 Authentication](#).

In the following example, **id** indicates a project ID.

```
{  
  "projects": [  
    {  
      "domain_id": "65382450e8f64ac0870cd180d14e684b",  
      "is_domain": false,  
      "parent_id": "65382450e8f64ac0870cd180d14e684b",  
      "name": "xxxxxx",  
      "description": "",  
      "links": {  
        "next": null,  
        "previous": null,  
        "self": "https://www.example.com/v3/projects/a4a5d4098fb4474fa22cd05f897d6b99"  
      },  
      "id": "a4a5d4098fb4474fa22cd05f897d6b99",  
      "enabled": true  
    }  
  ],  
  "links": {  
    "next": null,  
    "previous": null,  
    "self": "https://www.example.com/v3/projects"  
  }  
}
```

Obtaining a Project ID from the Console

A project ID is required for some URLs when an API is called. To obtain a project ID, perform the following operations:

Step 1 Log in to the management console.

Step 2 Hover the mouse pointer over the username in the upper right corner and choose **My Credentials** from the drop-down list.

Choose **My Credentials > API Credentials** to view the project ID in the project list.

----End

6.4 Obtaining an Account ID

An account ID is required for some URLs when an API is called. To obtain an account ID, perform the following operations:

Step 1 Log in to the management console.

Step 2 Hover the mouse pointer over the username in the upper right corner and choose **My Credentials** from the drop-down list.

Choose **My Credentials > API Credentials** to view the account ID.

----End
