2.2 CLI Command Reference (V1).....

11

1 How to Use KooCLI

Huawei Cloud Koo Command Line Interface (KooCLI), previously named "HCloud CLI", is designed to manage Huawei Cloud service APIs released on [API Explorer](#). With KooCLI, you can call the open APIs of CFW to manage and use your CFW resources. For details about KooCLI, see [What Is KooCLI?](#)

Installing KooCLI

Before using KooCLI, install it. KooCLI is compatible with Windows, Linux, and macOS. Install the required version.

- [Installing KooCLI in Windows](#)
- [Installing KooCLI in Linux](#)
- [Installing KooCLI in macOS](#)
- [Configuring and Using KooCLI in Docker](#)

Initializing KooCLI Configuration

Your identity information is obtained for authentication when you use KooCLI to call APIs. By configuring KooCLI initialization, you can store your permanent AK/SK information in the configuration file. In this way, you do not need to frequently enter the fixed information when calling APIs.

Skip this step if you intend to pass authentication parameters directly in commands instead of using the configuration file. For details, see [Using KooCLI in Non-configuration Mode](#).

The following uses Windows as an example to describe how to initialize KooCLI configuration. The operations on Linux and macOS are similar. Before the initialization, obtain the AK/SK information. For details, see [Access Keys](#).

1. Open the CLI.
2. Run the following commands to initialize the configuration:
hcloud configure init
3. Enter the parameter values as prompted.
Access Key ID [required]: //Mandatory. Enter the AK.
Secret Access Key [required]: //Mandatory. Enter the SK. The system anonymizes the entered content.
Secret Access Key (again): //Mandatory. Enter the SK again. The system anonymizes the entered content.
Region: //Optional. Enter a region.

After the configuration is complete, the system displays a message indicating that the initial configuration is successful.

Generating and Executing CLI Commands

KooCLI supports two methods for generating commands:

- Use API Explorer to quickly generate and obtain the CLI command for calling an API. **You are advised to use API Explorer to obtain CLI commands.**
- Use CLI commands to query the operation commands and related parameters of APIs, and then manually combine the CLI commands to call the APIs. For details, see [Step 4: View and Run Cloud Service Operation Commands](#).

The following uses the **Querying the Recipient Status** API of SecMaster as an example to describe how to generate a CLI command in API Explorer and then run the CLI command to call the API.

- In **API Explorer**, select **SecMaster** from the cloud service drop-down list and **v1** for **Version**. In the API list, choose **Security Reports > ListRecipientsStatus**.
- On the parameter configuration page in the middle, set the parameters required for calling the API.
- In the right pane, click the **CLI Example** tab to view the generated CLI commands.

The following is an example of the CLI command for the API:

```
hcloud SecMaster ListRecipientsStatus/v1 --cli-region="cn-east-3" --
workspace_id="6944735d-2314-49f5-a4a2-855xxx3e7fc" --
project_id="e3e9e6834f4440039782xxx4f5b16d1" --email_address="10xxx1323@qq.com"
```

- Copy the generated CLI commands and paste them into the CLI for execution.

The following is an example of the CLI command output for the API:

```
[ { "address" : "10xxx1323@qq.com", "confirm_status" : "FINISH" } ]
```

2 CLI Command Reference

2.1 CLI Command Reference (V2)

Alert Rule Template Management

API Name	Command	Description	Operation
Querying the Alert Rule Template List	hcloud SecMaster ListAlertRuleTemplates/v2	This API is used to query the list of alert rule templates.	Go debug
Viewing an Alert Rule Template	hcloud SecMaster ShowAlertRuleTemplate/v2	This API is used to view an alert rule template.	Go debug
Querying the Alert Rule Template Overview	hcloud SecMaster ListAlertRuleTemplateMetrics/v2	This API is used to query the alert rule template overview.	Go debug

Security Analysis

API Name	Command	Description	Operation
Creating an Ad Hoc Query	hcloud SecMaster CreateAdhocQuery/v2	This API is used to create an ad hoc query.	Go debug
Obtaining Ad Hoc Query Results	hcloud SecMaster ShowAdhocResult/v2	This API is used to obtain an ad hoc query result.	Go debug
Disabling the Query Operation	hcloud SecMaster DeleteAdhocQuery/v2	This API is used to disable the query operation.	Go debug

API Name	Command	Description	Operation
Creating Ad Hoc SQL Parameter Rendering	hcloud SecMaster CreateSqlRender/v2	This API is used create ad hoc SQL parameter rendering.	Go debug
Querying Table Logs	hcloud SecMaster ListTableLogs/v2	This API is used to query table logs.	Go debug
Querying a Table Histogram	hcloud SecMaster ListTableHistograms/v2	This API is used to query a table histogram.	Go debug
Creating a Security Analysis Query	hcloud SecMaster CreateTableAnalysis/v2	This API is used to create a security analysis query.	Go debug

Data Consumption Management

API Name	Command	Description	Operation
Querying Real-Time Consumption Configurations	hcloud SecMaster ShowDataConsumption/v2	This API is used to query the real-time data consumption configurations.	Go debug
Enabling Real-time Consumption	hcloud SecMaster EnableDataConsumption/v2	This API is used to enable real-time consumption.	Go debug
Disabling Real-Time Consumption	hcloud SecMaster DisableDataConsumption/v2	Disabling Real-Time Consumption	Go debug

SQL Verification

API Name	Command	Description	Operation
Creating an SQL Verification	hcloud SecMaster CreateSqlValidation/v2	This API is used to create an SQL verification.	Go debug

Alert Rule Management

API Name	Command	Description	Operation
Querying the Alert Rule List	hcloud SecMaster ListAlertRules/v2	This API is used to query the list of alert rules.	Go debug
Creating an Alert Rule	hcloud SecMaster CreateAlertRule/v2	This API is used to create an alert rule.	Go debug
Querying an Alert Rule	hcloud SecMaster ShowAlertRule/v2	This API is used to query an alert rule.	Go debug
Updating an Alert Rule	hcloud SecMaster UpdateAlertRule/v2	This API is used to update an alert rule.	Go debug
Deleting an Alert Rule	hcloud SecMaster DeleteAlertRule/v2	This API is used to delete an alert rule.	Go debug
Enabling an Alert Rule	hcloud SecMaster EnableAlertRule/v2	This API is used to enable an alert rule.	Go debug
Disabling an Alert Rule	hcloud SecMaster DisableAlertRule/v2	This API is used to disable an alert rule.	Go debug
Querying Alert Rule Overview	hcloud SecMaster ListAlertRuleMetrics/v2	This API is used to query alert rule overview.	Go debug

Directory Management

API Name	Command	Description	Operation
Querying the Directory Group	hcloud SecMaster ListDirectories/v2	This API is used to query the directory group.	Go debug

Pipeline Management

API Name	Command	Description	Operation
Updating the Pipeline Structure	hcloud SecMaster UpdatePipeSchema/v2	This API is used to update the pipeline structure.	Go debug

API Name	Command	Description	Operation
Querying Pipeline Details	hcloud SecMaster ShowPipe/v2	This API is used to query pipeline details.	Go debug
Updating a Pipeline	hcloud SecMaster UpdatePipe/v2	This API is used to update a pipeline.	Go debug
Deleting a Pipeline	hcloud SecMaster DeletePipe/v2	This API is used to delete a pipeline.	Go debug
Querying the Pipeline List	hcloud SecMaster ListPipes/v2	This API is used to query the pipeline list.	Go debug
Creating a Pipeline	hcloud SecMaster CreatePipe/v2	This API is used to create a pipeline.	Go debug

Cloud Service Access

API Name	Command	Description	Operation
Obtaining Cloud Service Log Collection Configuration	hcloud SecMaster ListCollectConfig/v2	This API is used to obtain cloud service log collection configuration.	Go debug
Saving Cloud Service Log Collection Configuration	hcloud SecMaster CreateCollectConfig/v2	This API is used to save cloud service collection configurations.	Go debug

Analysis Script Management

API Name	Command	Description	Operation
Querying the List of Analysis Scripts	hcloud SecMaster ListAnalysisScripts/v2	This API is used to query the list of analysis scripts.	Go debug
Creating an Analysis Script	hcloud SecMaster CreateAnalysisScript/v2	This API is used to create an analysis script.	Go debug
Viewing an Analysis Script	hcloud SecMaster ShowAnalysisScript/v2	This API is used to view an analysis script.	Go debug
Updating an Analysis Script	hcloud SecMaster UpdateAnalysisScript/v2	This API is used to update an analysis script.	Go debug

API Name	Command	Description	Operation
Deleting an Analysis Script	hcloud SecMaster DeleteAnalysisScript/v2	This API is used to delete an analysis script.	Go debug

Retrieval Script Management

API Name	Command	Description	Operation
Querying the Retrieval Script List	hcloud SecMaster ListRetrieveScripts/v2	This API is used to query the list of retrieval scripts.	Go debug
Creating a Retrieval Script	hcloud SecMaster CreateRetrieveScript/v2	This API is used to create a retrieval script.	Go debug
Querying a Retrieval Script	hcloud SecMaster ShowRetrieveScript/v2	This API is used to query a retrieval script.	Go debug
Updating a Retrieval Script	hcloud SecMaster UpdateRetrieveScript/v2	This API is used to update retrieval script.	Go debug
Deleting a Retrieval Script	hcloud SecMaster DeleteRetrieveScript/v2	This API is used to delete a retrieval script.	Go debug

Code Snippet Management

API Name	Command	Description	Operation
Querying Code Snippets	hcloud SecMaster ListCodeSegments/v2	This API is used to query code snippets.	Go debug
Creating Code Snippets	hcloud SecMaster CreateCodeSegment/v2	This API is used to create code snippets.	Go debug
View Code Snippets	hcloud SecMaster ShowCodeSegment/v2	This API is used to view code snippets.	Go debug
Updating a Code Snippet	hcloud SecMaster UpdateCodeSegment/v2	This API is used to update a code snippet.	Go debug

API Name	Command	Description	Operation
Deleting a Code Snippet	hcloud SecMaster DeleteCodeSegment/v2	This API is used to delete a code snippet.	Go debug

Subscription Management

API Name	Command	Description	Operation
Querying Resource Subscription Information	hcloud SecMaster ShowSubscriptionResources/v2	This API is used to query resource subscription information.	Go debug

Table Management

API Name	Command	Description	Operation
Querying the Table List	hcloud SecMaster ListTables/v2	This API is used to query the table list.	Go debug
Creating a Table	hcloud SecMaster CreateTable/v2	This API is used to create a table.	Go debug
Querying Table Details	hcloud SecMaster ShowTable/v2	This API is used to query table details.	Go debug
Modifying Table Details	hcloud SecMaster UpdateTable/v2	This API is used to modify table details.	Go debug
Deleting a Table	hcloud SecMaster DeleteTable/v2	This API is used to delete a table.	Go debug
Modifying the Table Structure	hcloud SecMaster UpdateTableSchema/v2	This API is used to modify the table structure.	Go debug

Upgrading a Version

API Name	Command	Description	Operation
Querying the Current Available Version	hcloud SecMaster ShowVersion/v2	This API is used to query the current available version.	Go debug

Data Processing Job Management

API Name	Command	Description	Operation
Querying the Data Processing Job List	hcloud SecMaster ListDataTransformations/v2	This API is used to query the list of data processing jobs.	Go debug
Creating a Data Processing job.	hcloud SecMaster CreateDataTransformation/v2	This API is used to create a data processing job.	Go debug
Viewing a Data Processing Job	hcloud SecMaster ShowDataTransformation/v2	This API is used to view a data processing job.	Go debug
Updating a Data Processing Job	hcloud SecMaster UpdateDataTransformation/v2	This API is used to update a data processing job.	Go debug
Deleting a Data Processing Job	hcloud SecMaster DeleteDataTransformation/v2	This API is used to delete a data processing job.	Go debug
Enabling a Data Processing Job	hcloud SecMaster EnableDataTransformation/v2	This API is used to enable a data processing job.	Go debug
Disabling a Data Processing Job	hcloud SecMaster DisableDataTransformation/v2	This API is used to disable a data processing job.	Go debug
Querying Data Processing Overview	hcloud SecMaster ListDataTransformationMetrics/v2	This API is used to query data processing overview.	Go debug

Data Statistics

API Name	Command	Description	Operation
Obtaining Monitoring Statistics	hcloud SecMaster ShowMonitorStats/v2	This API is used to obtain monitoring statistics.	Go debug

Baseline Inspection

API Name	Command	Description	Operation
Querying the List of Baseline Inspection Results	hcloud SecMaster SearchBaseline/v2	This API is used to query the list of baseline inspection results.	Go debug
Querying the Check Item List	hcloud SecMaster SearchCheckitems /v2	This API is used to query the check item list.	Go debug
Adding a Custom Check Item	hcloud SecMaster CreateCustomized Checkitem/v2	This API is used to add a custom check item.	Go debug
Deleting a Custom Check Item	hcloud SecMaster DeleteCustomized Checkitems/v2	This API is used to delete a custom check item.	Go debug
Querying Check Item Details	hcloud SecMaster ShowCheckitemDetail/v2	This API is used to query check item details.	Go debug
Updating a Check Item	hcloud SecMaster UpdateCheckitem /v2	This API is used to update a check item.	Go debug
Querying the Compliance Pack List	hcloud SecMaster SearchCompliance Packages/v2	This API is used to query the compliance pack list.	Go debug
Adding a Custom Compliance Pack	hcloud SecMaster CreateCustomized CompliancePackage/v2	This API is used to add a custom compliance pack.	Go debug
Deleting a Custom Compliance Pack	hcloud SecMaster DeleteCustomized CompliancePackages/v2	This API is used to delete a custom compliance pack.	Go debug
Querying Compliance Pack Details	hcloud SecMaster ShowCompliancePackageDetail/v2	This API is used to query compliance pack details.	Go debug
Updating a Compliance Pack	hcloud SecMaster UpdateCompliancePackage/v2	This API is used to update a compliance pack.	Go debug

Layouts

API Name	Command	Description	Operation
Querying the Layout Field List	hcloud SecMaster ListLayoutFieldAll/v2	This API is used to query the layout field list.	Go debug
Creating a Layout Field	hcloud SecMaster CreateLayoutField/v2	This API is used to create a layout field.	Go debug
Batch Deleting Layout Fields	hcloud SecMaster DeleteLayoutField/v2	This API is used to delete layout fields.	Go debug
Querying Layout Field Details	hcloud SecMaster ShowLayoutFieldInfo/v2	This API is used to query the layout field details.	Go debug
Updating a Layout Field	hcloud SecMaster UpdateLayoutField/v2	This API is used to update a layout field.	Go debug

2.2 CLI Command Reference (V1)

Tenant Collection

API Name	Command	Description	Operation
Querying the Collection Channel List	hcloud SecMaster ListCollectorChannels/v1	This API is used to query the list of collection channels.	Go debug
Creating a Collection Channel	hcloud SecMaster CreateCollectorChannel/v1	This API is used to create a collection channel.	Go debug
Querying the Collection Channel Group List	hcloud SecMaster ListCollectorChannelGroup/v1	This API is used to query the list of collection channel groups.	Go debug
Creating a Collection Channel Group	hcloud SecMaster CreateCollectorChannelGroup/v1	This API is used to create a collection channel group.	Go debug
Updating a Collection Channel Group	hcloud SecMaster UpdateCollectorChannelGroup/v1	This API is used to update a collection channel group.	Go debug

API Name	Command	Description	Operation
Deleting a Collection Channel Group	hcloud SecMaster DeleteCollectorChannelGroup/v1	This API is used to delete a collection channel group.	Go debug
Querying the Collection Channel Instance List	hcloud SecMaster ListCollectorInstances/v1	This API is used to query the list of collection channel instances.	Go debug
Displaying Collection Channels	hcloud SecMaster ShowCollectorChannel/v1	This API is used to display collection channels.	Go debug
Modifying a Collection Channel	hcloud SecMaster UpdateCollectorChannel/v1	This API is used to modify a collection channel.	Go debug
Deleting a Collection Channel	hcloud SecMaster DeleteCollectorChannel/v1	This API is used to delete a collection channel.	Go debug
Executing a Collection Channel Operation	hcloud SecMaster CreateCollectorChannelOperation/v1	This API is used to execute a collection channel operation.	Go debug
Querying the Collection Connection List	hcloud SecMaster ListCollectorConnections/v1	This API is used to query the list of collection connections.	Go debug
Creating a Collection Connection	hcloud SecMaster CreateCollectorConnection/v1	This API is used to create a collection connection.	Go debug
Querying Collection Connection Details	hcloud SecMaster ShowCollectorConnection/v1	This API is used to query collection connection details.	Go debug
Updating a Collection Connection	hcloud SecMaster UpdateCollectorConnection/v1	This API is used to update a collection connection.	Go debug
Deleting a Collection Connection	hcloud SecMaster DeleteCollectorConnection/v1	This API is used to delete a collection connection.	Go debug
Installing a Collection Channel File	hcloud SecMaster CreateCollectorFiles/v1	This API is used to installing a collection channel file.	Go debug
Querying Collection Parsers	hcloud SecMaster ListCollectorParsers/v1	This API is used to query collection parsers.	Go debug

API Name	Command	Description	Operation
Creating a Collection Parser	hcloud SecMaster CreateCollectorParser/v1	This API is used to create a collection parser.	Go debug
Exporting a Collection Parser	hcloud SecMaster ExportCollectorParser/v1	This API is used to export a collection parser.	Go debug
Importing a Collection Parser	hcloud SecMaster ImportCollectorParser/v1	This API is used to import a collection parser.	Go debug
Querying the Collection Parser Template List	hcloud SecMaster ListCollectorParserTemplate/v1	This API is used to query the list of collection parser templates.	Go debug
Querying Collection Parser Details	hcloud SecMaster ShowCollectorParser/v1	This API is used to query collection parser details.	Go debug
Deleting a Collection Parser	hcloud SecMaster DeleteCollectorParser/v1	This API is used to delete a collection parser.	Go debug
Querying the Parser List	hcloud SecMaster ListCollectorModuleTemplate/v1	This API is used to list parsers.	Go debug
Querying the Parser Rule List	hcloud SecMaster ListCollectorModuleRestrictions/v1	This API is used to query the list of parser rules.	Go debug
Querying the Collection Node List	hcloud SecMaster ListCollectorNode/v1	This API is used to query the collection node list.	Go debug

Node Management

API Name	Command	Description	Operation
Querying Component Information by Node ID	hcloud SecMaster ListNodes/v1	Node to be queried.	Go debug
Deleting a Node by Node ID	hcloud SecMaster DeleteNode/v1	This API is used to delete a node.	Go debug

API Name	Command	Description	Operation
Querying the Installation Script List	hcloud SecMaster ListInstallation/v1	This API is used to query the installation script list.	Go debug
Querying the VPCEP Description	hcloud SecMaster ListVpcEndpoint-Service/v1	This API is used to list VPCEP services.	Go debug
Updating VPCEP Description	hcloud SecMaster UpdateVpcEndpointService/v1	This API is used to update VPCEP.	Go debug
Updating Node Information	hcloud SecMaster UpdateNode/v1	This API is used to update node information.	Go debug

Component Management

API Name	Command	Description	Operation
Querying the Component List	hcloud SecMaster ListIsapComponents/v1	This API is used to query the component list.	Go debug
Displaying the Component Details	hcloud SecMaster ShowIsapComponent/v1	This API is used to display component details.	Go debug
Querying Component Configurations	hcloud SecMaster ListComponentConfiguration/v1	This API is used to query component configurations.	Go debug
Saving Component Configuration	hcloud SecMaster UpdateComponentConfiguration/v1	This API is used to save component configuration.	Go debug
Creating a Configuration Application	hcloud SecMaster CreateConfigurationApplication/v1	This API is used to create a configuration application.	Go debug
Obtaining the Configuration Data of a Historical Component Version	hcloud SecMaster ListHistoryComponentConfiguration/v1	This API is used to obtain the configuration data of historical component versions.	Go debug
Querying the Running Node List	hcloud SecMaster ListRunningNodes/v1	This API is used to query the list of running nodes.	Go debug

API Name	Command	Description	Operation
Querying the Component Template List	hcloud SecMaster ListComponentTemplate/v1	This API is used to query the list of component templates.	Go debug

Alert Rule Management

API Name	Command	Description	Operation
Listing Alert Rules	hcloud SecMaster ListAlertRules/v1	This API is used to list alert rules.	Go debug
Creating an Alert Rule	hcloud SecMaster CreateAlertRule/v1	This API is used to create an alert rule.	Go debug
Deleting an Alert Rule	hcloud SecMaster DeleteAlertRule/v1	This API is used to delete an alert rule.	Go debug
Disabling an Alert Rule	hcloud SecMaster DisableAlertRule/v1	This API is used to disable an alert rule.	Go debug
Enabling an Alert Rule	hcloud SecMaster EnableAlertRule/v1	This API is used to enable an alert rule.	Go debug
Querying Alert Rules	hcloud SecMaster ListAlertRuleMetrics/v1	This API is used to query alert rules.	Go debug
Simulating an Alert Rule	hcloud SecMaster CreateAlertRuleSimulation/v1	This API is used to simulate an alert rule.	Go debug
Querying the Alert Rule Template List	hcloud SecMaster ListAlertRuleTemplates/v1	This API is used to query the alert rule template list.	Go debug
Querying Alert Template Overview	hcloud SecMaster ListAlertRuleTemplateMetrics/v1	This API is used to querying alert template overview.	Go debug
Viewing Alert Rule Templates	hcloud SecMaster ShowAlertRuleTemplate/v1	This API is used to view alert rule templates.	Go debug
Querying an Alert Rule	hcloud SecMaster ShowAlertRule/v1	This API is used to query an alert rule.	Go debug

API Name	Command	Description	Operation
Updating an Alert Rule	hcloud SecMaster UpdateAlertRule/v1	This API is used to update an alert rule.	Go debug

Data Space Management

API Name	Command	Description	Operation
Obtaining the Data Space List	hcloud SecMaster ListDataspace/v1	This API is used to obtain the data space list.	Go debug
Creating a Data Space	hcloud SecMaster CreateDataspace/v1	This API is used to create a data space.	Go debug
Obtaining Data Space Details	hcloud SecMaster ShowDataspace/v1	This API is used to obtain data space details.	Go debug
Modifying a Data Space	hcloud SecMaster UpdateDataspace/v1	This API is used to modify a data space.	Go debug
Deleting a Data Space	hcloud SecMaster DeleteDataspace/v1	This API is used to delete a data space.	Go debug

Pipeline Management

API Name	Command	Description	Operation
Creating a Data Pipeline	hcloud SecMaster CreatePipe/v1	This API is used to create a data pipeline.	Go debug

Cloud Service Access

API Name	Command	Description	Operation
Obtaining Cloud Service Log Collection Configuration	hcloud SecMaster ListCollectConfig/v1	This API is used to obtain cloud service log collection configuration.	Go debug

API Name	Command	Description	Operation
Saving Cloud Service Log Collection Configuration	hcloud SecMaster CreateCollectConfig/v1	This API is used to save cloud service collection configurations.	Go debug
Querying the Region List	hcloud SecMaster ListRegions/v1	This API is used to query the region list.	Go debug

Cloud Log Resources

API Name	Command	Description	Operation
Obtaining the Industry Monitoring Information	hcloud SecMaster ShowPlatformManaged/v1	This API is used to obtain the industry monitoring information.	Go debug
Listing Cloud Log Resources	hcloud SecMaster ListCloudLogResources/v1	This API is used to list cloud log resources.	Go debug
Creating Cloud Log Resources	hcloud SecMaster CreateResourceConfig/v1	This API is used to create cloud log resources.	Go debug
Query the Industry Monitoring Status	hcloud SecMaster ShowCloudLogTenantWhitelist/v1	This API is used to query whether industry monitoring is enabled.	Go debug
Querying the List of Platform Industry Monitoring Accounts	hcloud SecMaster ListCloudLogPlatform/v1	List Cloud Log Resources	Go debug
Querying the List of Industry Monitoring Accounts	hcloud SecMaster ListCloudLogManages/v1	This API is used to list cloud log resources.	Go debug
Deleting LTS Log Subscription	hcloud SecMaster DeleteLtsCloudLog/v1	This API is used to list cloud log resources.	Go debug
Querying the List of Pipeline Aliases	hcloud SecMaster ListCloudLogAlias/v1	This API is used to list cloud log resources.	Go debug

Monitoring

API Name	Command	Description	Operation
Obtaining Metric Statistics	hcloud SecMaster ShowMonitorMetricStats/v1	This API is used to obtain metric statistics.	Go debug

Data Pipelines

API Name	Command	Description	Operation
Obtaining the Data Pipeline List	hcloud SecMaster ListPipes/v1	This API is used to obtain the data pipeline list.	Go debug
Obtaining Data Pipeline Details	hcloud SecMaster ShowPipe/v1	This API is used to obtain data pipeline details.	Go debug
Modifying a Data Pipeline	hcloud SecMaster UpdatePipe/v1	This API is used to modify a data pipeline.	Go debug
Deleting a Data Pipeline	hcloud SecMaster DeletePipe/v1	This API is used to deleting a data pipeline.	Go debug
Querying Real-Time Consumption Configurations	hcloud SecMaster ShowPipeConsumption/v1	Querying Real-Time Consumption Configurations	Go debug
Enabling Real-time Consumption	hcloud SecMaster CreatePipeConsumption/v1	Enabling Real-time Consumption	Go debug
Disabling Real-Time Consumption	hcloud SecMaster DeletePipeConsumption/v1	This API is used to disable real-time consumption.	Go debug
Obtaining Index Information	hcloud SecMaster ShowPipeIndex/v1	This API is used to obtain index information.	Go debug
Modifying Indexes	hcloud SecMaster UpdatePipeIndex/v1	This API is used to modify indexes.	Go debug

Query and Analysis

API Name	Command	Description	Operation
Obtaining the Data Distribution Histogram	hcloud SecMaster ListSearchHistograms/v1	This QPI is used to obtain the data distribution histogram.	Go debug
Obtaining Search Data	hcloud SecMaster ListSearchLogs/v1	This API is used to obtain search data.	Go debug

Query Conditions

API Name	Command	Description	Operation
Querying the Search Criteria List	hcloud SecMaster ListSearchConditions/v1	This API is used to query the search criteria list.	Go debug
Creating Search Criteria	hcloud SecMaster CreateSearchCondition/v1	This API is used to create search criteria.	Go debug
This API is used to query search criteria details.	hcloud SecMaster ShowSearchCondition/v1	Querying Search Criteria Details	Go debug
Modifying Search Criteria	hcloud SecMaster UpdateSearchCondition/v1	This API is used to modify search criteria.	Go debug
Deleting Search Criteria	hcloud SecMaster DeleteSearchCondition/v1	This API is used to delete search criteria.	Go debug

Data Delivery

API Name	Command	Description	Operation
Querying Delivery Information	hcloud SecMaster ListShippers/v1	This API is used to query delivery information.	Go debug
Creating a Data Delivery	hcloud SecMaster CreateShipper/v1	This API is used to create a data delivery.	Go debug
Deleting Delivery Information	hcloud SecMaster DeleteShipper/v1	This API is used to delete delivery information.	Go debug

API Name	Command	Description	Operation
Obtaining the Delivery Authorization List	hcloud SecMaster ListShipperAuthorizations/v1	This API is used to obtain the delivery authorization list.	Go debug
Handling Authorization Requests	hcloud SecMaster HandleShipperAuthorization/v1	This API is used to handle authorization requests.	Go debug
Obtaining Agency Permissions	hcloud SecMaster ShowShipperDelegateAuth/v1	This API is used to obtain agency permissions.	Go debug
Creating Agency Permissions	hcloud SecMaster CreateShipperDelegateAuth/v1	This API is used to create agency permissions.	Go debug
Querying Parameters	hcloud SecMaster ShowShipperParam/v1	This API is used to query parameters.	Go debug
Querying Delivery Rule Details	hcloud SecMaster ShowShipper/v1	This API is used to query delivery rule details.	Go debug
Performing Authorization Again	hcloud SecMaster RetryShipperAuthorization/v1	This API is used to perform authorization again.	Go debug
Suspending a Delivery	hcloud SecMaster PauseShipper/v1	This API is used to suspend a delivery.	Go debug
Starting a Delivery	hcloud SecMaster ResumeShipper/v1	This API is used to start a delivery.	Go debug
Restarting a Delivery	hcloud SecMaster RetryShipper/v1	This API is used to restart a delivery.	Go debug

Analysis and Query

API Name	Command	Description	Operation
Executing Analysis	hcloud SecMaster CreateSearchAnalysis/v1	This API is used to execute analysis.	Go debug

Workflow Management

API Name	Command	Description	Operation
Querying the Workflow List	hcloud SecMaster ListWorkflows/v1	This API is used to query the workflow list.	Go debug
Creating a Workflow	hcloud SecMaster CreateAopWorkflow/v1	This API is used to create a workflow.	Go debug
Querying Workflow Details	hcloud SecMaster ShowAopWorkflow/v1	This API is used to query workflow details.	Go debug
Updating a Workflow	hcloud SecMaster UpdateAopWorkflow/v1	This API is used to update a workflow.	Go debug
Deleting a Workflow	hcloud SecMaster DeleteAopWorkflow/v1	This API is used to delete a workflow.	Go debug

Workflow Version Management

API Name	Command	Description	Operation
Querying the Workflow Version List	hcloud SecMaster ListAopWorkflowVersions/v1	This API is used to query the workflow version list.	Go debug
Creating a Workflow Version	hcloud SecMaster CreateAopWorkflowVersion/v1	This API is used to create a workflow version.	Go debug
Querying Workflow Version Details	hcloud SecMaster ShowAopWorkflowVersion/v1	This API is used to query workflow version details.	Go debug
Updating the Workflow Version Information	hcloud SecMaster UpdateAopWorkflowVersion/v1	This API is used to update the workflow version information.	Go debug
Deleting a Workflow Version	hcloud SecMaster DeleteAopWorkflowVersion/v1	This API is used to delete a workflow version.	Go debug
Reviewing the Workflow Version for Release	hcloud SecMaster CreateAopWorkflowVersionApproval/v1	This API is used to review a workflow version.	Go debug

API Name	Command	Description	Operation
Verifying a Workflow Version	hcloud SecMaster ValidateAopWorkflowVersion/v1	This API is used to verify a workflow version.	Go debug

Workflow Packaging Management

API Name	Command	Description	Operation
Exporting a Workflow	hcloud SecMaster ExportAopworkflow/v1	This API is used to export workflows.	Go debug
Importing Workflow Information	hcloud SecMaster ImportAopworkflow/v1	This API is used to import workflows.	Go debug

Workflow Instance Management

API Name	Command	Description	Operation
Creating a Workflow Instance	hcloud SecMaster CreateWorkflowInstance/v1	This API is used to create a workflow instance.	Go debug
Querying the Workflow Instance List	hcloud SecMaster ListAopWorkflowInstance/v1	This API is used to query workflow instance list.	Go debug
Querying the Details of a Workflow Instance	hcloud SecMaster ShowAopWorkflowInstance/v1	This API is used to query the details of a workflow instance.	Go debug
Updating a Workflow Instance	hcloud SecMaster UpdateWorkflowInstance/v1	This API is used to update a workflow instance.	Go debug

Metering and Billing

API Name	Command	Description	Operation
Querying Subscribed Resources of a User	hcloud SecMaster ListSubscription-Order/v1	This API is used to query details about a subscribed resource. Note that the purchase , usage , and smn parameters are mutually exclusive. Only one request parameter can be matched at a time. The priority is as follows: smn > usage > purchase .	Go debug
Enabling or Configuring SecMaster Subscription	hcloud SecMaster CreateSubscriptionOrder/v1	This API is used to enable or configure the subscription to SecMaster.	Go debug
Updating a Resource	hcloud SecMaster UpdateSubscriptionOrder/v1	This API is used to update a subscribed resource.	Go debug
Unsubscribing from a Resource	hcloud SecMaster DeleteSubscriptionOrder/v1	This API is used to cancel subscriptions to SecMaster resources. This API is supported only in pay-per-use scenarios.	Go debug
Querying the SecMaster Offerings Available at the Current Site	hcloud SecMaster ListSubscription-Product/v1	This API is used to query the SecMaster offerings available at the current site.	Go debug
Querying the List of Purchased Resources	hcloud SecMaster ListSubscription-GlobalOrder/v1	This API is used to query the list of purchased resources.	Go debug

Metric Management

API Name	Command	Description	Operation
Batch Querying Metrics	hcloud SecMaster BatchSearchMetricHits/v1	This API is used to batch query metrics.	Go debug

Comment

API Name	Command	Description	Operation
Querying the Comment List	hcloud SecMaster ListNotes/v1	This API is used to query the comment list.	Go debug
Creating a Comment	hcloud SecMaster CreateNote/v1	This API is used to create comments.	Go debug
Deleting a Comment	hcloud SecMaster DeleteNotes/v1	This API is used to delete a comment.	Go debug

Dictionary Management

API Name	Command	Description	Operation
Querying Dictionary Information	hcloud SecMaster ListConfiguration-Dictionaries/v1	This API is used to query dictionary information.	Go debug
Creating a Dictionary	hcloud SecMaster CreateConfigurationDictionaries/v1	This API is used to create dictionary data.	Go debug
Updating a Dictionary	hcloud SecMaster UpdateConfigurationDictionaries/v1	This API is used to update dictionary data.	Go debug
Deleting a Dictionary	hcloud SecMaster DeleteConfigurationDictionaries/v1	This API is used to delete dictionary data.	Go debug

Plug-in Management

API Name	Command	Description	Operation
Querying the Plug-in Definition List	hcloud SecMaster ListComponents/v1	This API is used to query the plug-in definition list.	Go debug
Querying Plug-in Details	hcloud SecMaster ShowComponent/v1	This API is used to query plug-in details.	Go debug

API Name	Command	Description	Operation
Querying the Plug-in Action List	hcloud SecMaster ListComponentActions/v1	This API is used to query the plug-in function, connector, and manager list	Go debug
Querying Plug-in Action Details	hcloud SecMaster ShowComponentAction/v1	This API is used to query plug-in action details.	Go debug

Operation Connection Management

API Name	Command	Description	Operation
Querying the Operation Connection List	hcloud SecMaster ListConnections/v1	This API is used to query the operation connection list.	Go debug
Creating an Operation Connection	hcloud SecMaster CreateConnection/v1	This API is used to create an operation connection.	Go debug
Querying Operation Connection Details	hcloud SecMaster ShowConnection/v1	This API is used to query operation connection details.	Go debug
Updating an Operation Connection	hcloud SecMaster UpdateConnection/v1	This API is used to update an operation connection.	Go debug
Deleting an Operation Connection	hcloud SecMaster DeleteConnection/v1	This API is used to delete an operation connection.	Go debug

Attachment Management

API Name	Command	Description	Operation
Uploading an Attachment	hcloud SecMaster UploadAttachment/v1	This API is used to upload an attachment to OBS.	Go debug
Downloading an Attachment	hcloud SecMaster DownloadAttachment/v1	This API is used to download an attachment from OBS.	Go debug
Obtaining Attachment Details	hcloud SecMaster ShowAttachment/v1	This API is used to obtain attachment details.	Go debug

Plugin Configuration Template Management

API Name	Command	Description	Operation
Querying Plugin Configuration Templates	hcloud SecMaster ListComponentTemplates/v1	This API is used to query the plugin configuration template list during workflow configuration.	Go debug
Creating a Plugin Configuration Template	hcloud SecMaster CreateComponentTemplate/v1	This API is used to create a plugin configuration template during workflow configuration.	Go debug
Querying Plugin Configuration Template Details	hcloud SecMaster ShowComponentTemplate/v1	This API is used to query the plugin configuration template details during workflow configuration.	Go debug
Updating a Plugin Configuration Template	hcloud SecMaster UpdateComponentTemplate/v1	This API is used to update a plugin configuration template during workflow configuration.	Go debug
Deleting a Plugin Configuration Template	hcloud SecMaster DeleteComponentTemplate/v1	This API is used to delete a plugin configuration template during workflow configuration.	Go debug

Data Class Management

API Name	Command	Description	Operation
Querying the Data Class List	hcloud SecMaster ListDataclass/v1	This API is used to query the data class list.	Go debug
Querying the Field List	hcloud SecMaster ListDataclassFields/v1	This API is used to query the field list.	Go debug

API Name	Command	Description	Operation
Querying Data Class Details	hcloud SecMaster ShowDataClassInfo/v1	This API is used to query data class details.	Go debug

Data Class Types

API Name	Command	Description	Operation
Adding a Data Class Type	hcloud SecMaster CreateDataclassType/v1	This API is used to add a data type.	Go debug
Deleting a Data Class Type	hcloud SecMaster DeleteDataclassType/v1	This API is used to delete a data class type.	Go debug
Enabling/Disabling a Data Class Type	hcloud SecMaster EnableDataclassType/v1	This API is used to disable or enable a data class type.	Go debug

Alert Management

API Name	Command	Description	Operation
Querying the Alert List	hcloud SecMaster ListAlerts/v1	This API is used to query the alert list.	Go debug
Creating an Alert	hcloud SecMaster CreateAlert/v1	This API is used to create an alert.	Go debug
Deleting an Alert	hcloud SecMaster DeleteAlert/v1	This API is used to delete an alert.	Go debug
Converting an Alert into an Incident	hcloud SecMaster CreateBatchOrderAlerts/v1	This API is used to convert alerts into incidents.	Go debug
Obtain Alert Details	hcloud SecMaster ShowAlert/v1	This API is used to obtain alert details.	Go debug
Updating an Alert	hcloud SecMaster ChangeAlert/v1	This API is used to update alerts based on attribute changes. The update works on only changed columns.	Go debug

API Name	Command	Description	Operation
Batch Updating Alerts	hcloud SecMaster ChangeAlerts/v1	This API is used to batch update alerts based on attribute changes. The update works on only changed columns.	Go debug
Batch Deleting Alerts	hcloud SecMaster DeleteAlerts/v1	This API is used to batch delete alerts.	Go debug
Importing Alerts	hcloud SecMaster ImportAlerts/v1	This API is used to batch import alerts. You need to fill in the downloaded template based on the data object types and descriptions specified for security incidents. Mandatory fields cannot be left empty. The backend will verify all fields during import.	Go debug
Downloading an Alert Import Template	hcloud SecMaster DownloadAlertTemplate/v1	This API is used to download the alert import template. The template is organized based on the standard data class field attributes. The default alert example will be downloaded.	Go debug
Exporting Alerts	hcloud SecMaster ExportAlerts/v1	This API is used to export alerts. If the field is of the object type, the content of the entire subobject is exported.	Go debug

Incident Management

API Name	Command	Description	Operation
Querying the Incident List	hcloud SecMaster ListIncidents/v1	This API is used to query the incident list.	Go debug
Creating an Incident	hcloud SecMaster CreateIncident/v1	This API is used to create an incident.	Go debug

API Name	Command	Description	Operation
Deleting an Incident	hcloud SecMaster DeleteIncident/v1	This API is used to delete an incident.	Go debug
Querying Details About an Incident	hcloud SecMaster ShowIncident/v1	This API is used to obtain the details about an incident.	Go debug
Updating an Incident	hcloud SecMaster ChangeIncident/v1	This API is used to update an incident based on its attribute changes. The update works on only changed columns.	Go debug
Batch Updating Incidents	hcloud SecMaster ChangeIncidents/v1	This API is used to update an incident based on its attribute changes. The update works on only changed columns.	Go debug
Batch Deleting Incidents	hcloud SecMaster DeleteIncidents/v1	This API is used to batch delete incidents.	Go debug
Importing Incidents	hcloud SecMaster ImportIncidents/v1	This API is used to import incidents. You need to fill in the downloaded template based on the data object types and descriptions specified for security incidents. Mandatory fields cannot be left empty. The backend will verify all fields during import.	Go debug
Downloading an Incident Import Template	hcloud SecMaster DownloadIncidentTemplate/v1	This API is used to download the incident import template. The template is organized based on the standard data class field attributes. The default incident example will be downloaded.	Go debug

API Name	Command	Description	Operation
Exporting Incidents	hcloud SecMaster ExportIncidents/v1	This API is used to export the incident list. If the field is of the object type, the content of the entire subobject will be exported.	Go debug

Threat Indicator Management

API Name	Command	Description	Operation
Querying the Indicator List	hcloud SecMaster ListIndicators/v1	This API is used to query the indicator list.	Go debug
Creating a Threat Indicator	hcloud SecMaster CreateIndicator/v1	This API is used to create a threat indicator.	Go debug
Deleting a Threat Indicator	hcloud SecMaster DeleteIndicator/v1	Deleting a Threat Indicator	Go debug
Querying Details About a Threat Indicator	hcloud SecMaster ShowIndicatorDetail/v1	This API is used to query the details about a threat indicator.	Go debug
Updating a Threat Indicator	hcloud SecMaster UpdateIndicator/v1	This API is used to update a threat indicator.	Go debug
Downloading an Indicator Template	hcloud SecMaster DownloadIndicatorTemplate/v1	This API is used to download the indicator import template. The template is organized based on the standard data class field attributes. The default indicator example will be downloaded.	Go debug
Exporting Indicators	hcloud SecMaster ExportIndicators/v1	This API is used to export indicators. If the field is of the object type, the content of the entire subobject will be exported.	Go debug

API Name	Command	Description	Operation
Importing Indicators	hcloud SecMaster ImportIndicators/v1	This API is used to import indicators in batches. You need to fill in the downloaded template based on the data object types and descriptions specified for indicators. Mandatory fields cannot be left empty. The backend will verify all fields during import.	Go debug

Incident Relationship Management

API Name	Command	Description	Operation
Querying the Associated Data Object List	hcloud SecMaster ListDataobjectRelations/v1	This API is used to query the associated data object list.	Go debug
Associating a Data Object	hcloud SecMaster CreateDataobjectRelation/v1	This API is used to associate a data object.	Go debug
Canceling Association with a Data Object	hcloud SecMaster DeleteDataobjectRelation/v1	This API is used to cancel association with a data object.	Go debug
Batch Associating Data Objects	hcloud SecMaster BatchCreateDataobjectRelations/v1	This API is used to batch associate data objects.	Go debug

General Security Application

API Name	Command	Description	Operation
Querying the Data Object List	hcloud SecMaster ListDataobjects/v1	This API is used to query the data object list.	Go debug
Creating a Data Object	hcloud SecMaster CreateDataobject/v1	This API is used to create data objects.	Go debug

API Name	Command	Description	Operation
Batch Deleting Data Objects	hcloud SecMaster DeleteDataobjects /v1	This API is used to batch delete data objects.	Go debug
Querying a Data Object	hcloud SecMaster ShowDataobject/v1	This API is used to query a data object.	Go debug
Editing a Data Object	hcloud SecMaster UpdateDataobject /v1	This API is used to update a data object.	Go debug
Exporting a Data Object	hcloud SecMaster ExportDataobjects /v1	This API is used to export data objects.	Go debug
Importing a Data Object	hcloud SecMaster ImportDataobjects/v1	This API is used to import data objects.	Go debug

Data Object Management

API Name	Command	Description	Operation
Batch Creating Data Objects	hcloud SecMaster BatchCreateData-panelObjects/v1	This API is used to create data objects managed by data classes in batches on the data plane.	Go debug
Querying a Data Plane Object	hcloud SecMaster ShowDatapanelObject/v1	This API is used to query details about managed data objects on the data plane.	Go debug
Querying the Data Object List	hcloud SecMaster ListDatapanelObjects/v1	This API is used to query data objects managed by data classes on the data plane.	Go debug

Layouts

API Name	Command	Description	Operation
Querying the Layout List	hcloud SecMaster ListLayout/v1	This API is used to query the layout list.	Go debug

API Name	Command	Description	Operation
Creating a Layout	hcloud SecMaster CreateLayout/v1	This API is used to create a layout.	Go debug
Deleting a Layout	hcloud SecMaster DeleteLayouts/v1	This API is used to delete a layout.	Go debug
Querying Layout Details	hcloud SecMaster ShowLayout/v1	This API is used to query layout details.	Go debug
Modifying a Layout	hcloud SecMaster UpdateLayout/v1	This API is used to modify a layout.	Go debug
Managing Layouts	hcloud SecMaster ExecuteLayout/v1	This API is used to manage a layout.	Go debug
Querying the Layout Page List	hcloud SecMaster ListLayoutWizards/v1	This API is used to query all layouts.	Go debug
Creating a Layout Page	hcloud SecMaster CreateLayoutWizard/v1	This API is used to create a layout.	Go debug
Querying Layout Page Details	hcloud SecMaster ShowLayoutWizardByField/v1	This API is used to query layout page details.	Go debug
Batch Updating Layout Pages	hcloud SecMaster UpdateLayoutWizards/v1	This API is used to update a layout.	Go debug
Querying the Layout Page	hcloud SecMaster ShowLayoutWizard/v1	This API is used to query the layout page.	Go debug
Deleting a Layout Page	hcloud SecMaster DeleteLayoutWizard/v1	This API is used to delete a layout.	Go debug
Querying the Module List	hcloud SecMaster ListModules/v1	This API is used to query all modules.	Go debug
Creating a Module	hcloud SecMaster CreateModule/v1	This API is used to create a module.	Go debug
Querying Module Details	hcloud SecMaster ShowModule/v1	This API is used to query module details.	Go debug
Updating a Layout Module	hcloud SecMaster UpdateModule/v1	This API is used to update a layout module.	Go debug
Deleting a Module	hcloud SecMaster DeleteModule/v1	This API is used to delete a module.	Go debug

Security Reports

API Name	Command	Description	Operation
Managing Security Reports	hcloud SecMaster ExecuteReportAction/v1	This API is used to manage a security report.	Go debug
Obtaining Security Report Details	hcloud SecMaster ShowReportInfo/v1	This API is used to obtain report details.	Go debug
Updating a Security Report	hcloud SecMaster UpdateReport/v1	This API is used to update a security report.	Go debug
Deleting a Security Report	hcloud SecMaster DeleteReport/v1	This API is used to delete a security report.	Go debug
Querying the Security Report List	hcloud SecMaster ListReports/v1	This API is used to obtain the report list.	Go debug
Creating a Security Report	hcloud SecMaster CreateReport/v1	This API is used to create a security report.	Go debug
Updating the Recipient Email Address Status	hcloud SecMaster UpdateRecipientEmailStatus/v1	This API is used to update the email address status of a recipient.	Go debug
Querying the Recipient Status	hcloud SecMaster ListRecipientsStatus/v1	This API is used to query the status of a recipient.	Go debug

Directory Customization

API Name	Command	Description	Operation
Querying the Directory List	hcloud SecMaster ListAllSecondCatalogue/v1	This API is used to query the directory list.	Go debug
Creating a Custom Directory	hcloud SecMaster CreateCatalogue/v1	This API is used to create a custom directory.	Go debug
Batch Deleting Directories	hcloud SecMaster DeleteCatalogue/v1	This API is used to batch delete directories.	Go debug

API Name	Command	Description	Operation
Modifying a Custom Directory	hcloud SecMaster UpdateCatalogue/v1	This API is used to modify a custom directory.	Go debug
Querying the List of Directories by Condition	hcloud SecMaster ListCatalogue/v1	This API is used to query the list of directories based on specified conditions.	Go debug
Batch Modifying Directories	hcloud SecMaster BatchUpdateCatalogue/v1	This API is used to batch modify custom directories.	Go debug

Metric Definitions

API Name	Command	Description	Operation
Querying the Metric List	hcloud SecMaster ListMetrics/v1	This API is used to query the metric list.	Go debug
Creating a Metric	hcloud SecMaster CreateMetric/v1	This API is used to create a metric.	Go debug
Obtaining Metric Metadata	hcloud SecMaster ShowMetricMetadata/v1	This API is used to obtain metric metadata.	Go debug
Updating a Metric Definition	hcloud SecMaster UpdateMetrics/v1	This API is used to update a metric definition.	Go debug
Deleting a Metric	hcloud SecMaster DeleteMetrics/v1	This API is used to delete a metric.	Go debug

Classifications & Mappings

API Name	Command	Description	Operation
Querying Classifications & Mappings	hcloud SecMaster ShowMappingInfoList/v1	This API is used to query the list of classifications & mappings.	Go debug
Querying Classification & Mapping Functions	hcloud SecMaster ShowMappingFunction/v1	This API is used to query functions used for classifications and mappings.	Go debug

API Name	Command	Description	Operation
Copying a Mapping	hcloud SecMaster CopyMapping/v1	This API is used to copy a mapping.	Go debug
Deleting Mapping Information	hcloud SecMaster DeleteMappingInfo/v1	This API is used to delete mapping information.	Go debug
Modifying the Status of a Mapping	hcloud SecMaster UpdateMappingInfoStatus/v1	This API is used to modifying the status of a categorical mapping.	Go debug
Adding a Classification	hcloud SecMaster CreateClassifier/v1	This API is used to add a classification.	Go debug
Querying Classification Details	hcloud SecMaster ShowClassifierInfo/v1	This API is used to query classification details.	Go debug
Modifying a Classification	hcloud SecMaster UpdateClassifier/v1	This API is used to modify a classification.	Go debug
Deleting a Classification	hcloud SecMaster DeleteClassifier/v1	This API is used to delete a classification.	Go debug
Adding a Mapping	hcloud SecMaster CreateMapper/v1	This API is used to add a mapping.	Go debug
Querying the Mapping List	hcloud SecMaster ShowMapperList/v1	This API is used to query the mapping list.	Go debug
Querying Mapping Details	hcloud SecMaster ShowMapperDetail/v1	This API is used to query mapping details.	Go debug
Modifying a Mapping	hcloud SecMaster UpdateMapper/v1	Modifying a Mapping	Go debug
Deleting a Mapping	hcloud SecMaster DeleteSingleMapper/v1	This API is used to delete a mapping.	Go debug
Creating a Preprocessing Rule	hcloud SecMaster CreatePreProcessingRules/v1	This API is used to create a preprocessing rule.	Go debug
Querying Preprocessing Rules	hcloud SecMaster ShowPreProcessingRulesList/v1	This API is used to query preprocessing rules.	Go debug

Playbook Management

API Name	Command	Description	Operation
Monitoring Playbook Running	hcloud SecMaster ShowPlaybookMonitors/v1	Playbook Running Monitoring (Offline Soon)	Go debug
Querying Playbook Statistics Data	hcloud SecMaster ShowPlaybookStatistics/v1	Playbook Statistics (Offline Soon)	Go debug
Querying the Playbook List	hcloud SecMaster ListPlaybooks/v1	This API is used to query the playbook list.	Go debug
Creating a Playbook	hcloud SecMaster CreatePlaybook/v1	This API is used to create a playbook.	Go debug
Querying Playbook Details	hcloud SecMaster ShowPlaybook/v1	This API is used to query details about a playbook.	Go debug
Modifying a Playbook	hcloud SecMaster UpdatePlaybook/v1	This API is used to modify a playbook.	Go debug
Deleting a Playbook	hcloud SecMaster DeletePlaybook/v1	This API is used to delete a playbook.	Go debug

Playbook Version Management

API Name	Command	Description	Operation
Cloning a Playbook and Its Version	hcloud SecMaster CopyPlaybookVersion/v1	Cloning a Playbook and Version (Offline Soon)	Go debug
Querying the Playbook Version List	hcloud SecMaster ListPlaybookVersions/v1	This API is used to query the version list of a playbook.	Go debug
Creating a Playbook Version	hcloud SecMaster CreatePlaybookVersion/v1	This API is used to create a playbook version.	Go debug
Querying Playbook Version Details	hcloud SecMaster ShowPlaybookVersion/v1	This API is used to query playbook version details.	Go debug

API Name	Command	Description	Operation
Updating a Playbook Version	hcloud SecMaster UpdatePlaybookVersion/v1	This API is used to update a playbook version.	Go debug
Deleting a Playbook Version	hcloud SecMaster DeletePlaybookVersion/v1	This API is used to delete a playbook version.	Go debug

Playbook Rule Management (Offline Soon)

API Name	Command	Description	Operation
Creating a Playbook Rule	hcloud SecMaster CreatePlaybookRule/v1	This API is used to create a playbook rule.	Go debug
Querying Playbook Rule Details	hcloud SecMaster ShowPlaybookRule/v1	This API is used to query details about a playbook rule.	Go debug
Updating a Playbook Rule	hcloud SecMaster UpdatePlaybookRule/v1	This API is used to update a playbook rule.	Go debug
Deleting a Playbook Rule	hcloud SecMaster DeletePlaybookRule/v1	This API is used to delete a playbook rule.	Go debug

Playbook Instance Management

API Name	Command	Description	Operation
Querying the Playbook Instance List	hcloud SecMaster ListPlaybookInstances/v1	This API is used to query the playbook instance list.	Go debug
Querying Details About a Playbook Instance	hcloud SecMaster ShowPlaybookInstance/v1	This API is used to query details about a playbook instance.	Go debug
Operating a Playbook Instance	hcloud SecMaster ChangePlaybookInstance/v1	Operating a Playbook Instance	Go debug
Querying the Playbook Topology	hcloud SecMaster ShowPlaybookTopology/v1	Querying the Playbook Topology	Go debug

API Name	Command	Description	Operation
Querying Review Logs of a Playbook Instance	hcloud SecMaster ListPlaybookAuditLogs/v1	Querying Review Logs of a Playbook Instance	Go debug

Playbook Review Management

API Name	Command	Description	Operation
Reviewing a Playbook	hcloud SecMaster CreatePlaybookApprove/v1	This API is used to review a playbook.	Go debug
Querying the Playbook Review Result	hcloud SecMaster ListPlaybookApproves/v1	This API is used to query the playbook review result.	Go debug

Playbook Action Management (Offline Soon)

API Name	Command	Description	Operation
Querying the Playbook Workflow	hcloud SecMaster ListPlaybookActions/v1	Querying the Playbook Workflow List	Go debug
Creating a Playbook Workflow	hcloud SecMaster CreatePlaybookAction/v1	This API is used to create a playbook workflow.	Go debug
Updating a Playbook Workflow	hcloud SecMaster UpdatePlaybookAction/v1	This API is used to update a playbook workflow.	Go debug
Deleting a Playbook Workflow	hcloud SecMaster DeletePlaybookAction/v1	This API is used to delete a playbook workflow.	Go debug

Playbook Packaging Management

API Name	Command	Description	Operation
Exporting Playbooks	hcloud SecMaster ExportPlaybook/v1	This API is used to export playbooks.	Go debug

API Name	Command	Description	Operation
Importing Playbooks	hcloud SecMaster ImportPlaybook/v1	This API is used to import playbooks.	Go debug

Emergency Policies

API Name	Command	Description	Operation
Creating a Retry Emergency Policy	hcloud SecMaster CreateRetryPolicy/v1	This API is used to create a retry emergency policy.	Go debug
Querying Policy View Objects	hcloud SecMaster ShowPolicy/v1	This API is used to query policy view objects.	Go debug
Batch Deleting Emergency Policies	hcloud SecMaster DeletePolicies/v1	This API is used to batch delete emergency policies.	Go debug
Querying the Policy View List	hcloud SecMaster SearchPolicy/v1	This API is used to query the policy view list.	Go debug
Querying the Task View List	hcloud SecMaster SearchPolicyRecord/v1	This API is used to query the task view list.	Go debug
Querying Historical Records by Policy ID	hcloud SecMaster SearchPolicyRecordByPolicyId/v1	This API is used to query the historical records of a policy by policy ID.	Go debug

Resource Manager

API Name	Command	Description	Operation
Querying the Resource List	hcloud SecMaster ListResources/v1	This API is used to query the resource list.	Go debug
Deleting a Resource	hcloud SecMaster DeleteResource/v1	This API is used to delete a resource.	Go debug
Obtaining Resource Details	hcloud SecMaster ShowResource/v1	This API is used to obtain resource details.	Go debug

API Name	Command	Description	Operation
Updating Resource Information	hcloud SecMaster ChangeResource/v1	This API is used to update a resource based on its attribute changes. The update works on only changed columns.	Go debug
Importing Resources	hcloud SecMaster ImportResource/v1	This API is used to import resources. You need to fill in the downloaded template based on the data object types and descriptions specified for resources. Mandatory fields cannot be left empty. The backend will verify all fields during import.	Go debug
Exporting the Resource List	hcloud SecMaster ExportResources/v1	This API is used to export the resource list.	Go debug
Downloading the Resource Import Template	hcloud SecMaster DownloadResourceTemplate/v1	This API is used to download the resource import template.	Go debug

Task Center

API Name	Command	Description	Operation
Querying the To-Do List	hcloud SecMaster ListTasks/v1	This API is used to query the to-do list.	Go debug
Querying Details About a To-Do Task	hcloud SecMaster ShowTask/v1	This API is used to query details about a to-do task.	Go debug
Updating To-Do Task Information	hcloud SecMaster UpdateTask/v1	This API is used to update to-do task information.	Go debug

Vulnerability Management

API Name	Command	Description	Operation
Obtaining Vulnerability Details	hcloud SecMaster ShowVulnerability/v1	This API is used to obtain vulnerability details.	Go debug
Querying the Vulnerability List	hcloud SecMaster ListVulnerabilities/v1	This API is used to query the list of detected vulnerabilities.	Go debug
Exporting Vulnerabilities	hcloud SecMaster ExportVulnerabilities/v1	This API is used to export vulnerability details.	Go debug
Import Vulnerabilities	hcloud SecMaster ImportVulnerabilities/v1	This API is used to import vulnerabilities in batches. You need to fill in the downloaded template based on the data object types and descriptions specified for vulnerabilities. Mandatory fields cannot be left empty. The backend will verify all fields during import.	Go debug
Downloading a Vulnerability Import Template	hcloud SecMaster DownloadVulnerabilityTemplate/v1	This API is used to download the vulnerability import template. The template is organized based on the standard data class field attributes.	Go debug

Resource Tag Management

API Name	Command	Description	Operation
Deleting a Resource Tag	hcloud SecMaster DeleteTags/v1	This API is used to batch delete tags from a specified instance.	Go debug

API Name	Command	Description	Operation
Batch Deleting Resource Tags	hcloud SecMaster BatchUntagResources/v1	This API is used to batch delete tags from a specified instance.	Go debug
Updating a Tag Value	hcloud SecMaster UpdateTagValue/v1	This API is used to update a tag value.	Go debug
Querying Resource Tags	hcloud SecMaster ListResourceTag/v1	This API is used to query tags of a specific resource.	Go debug
Querying Tags in a Project	hcloud SecMaster ListProjectTag/v1	This API is used to query tags of all resources in a specified project.	Go debug
Batch Adding tags to a Resource	hcloud SecMaster BatchTagResources/v1	This API is used to batch add tags for a specified instance.	Go debug

Resource Instance Management

API Name	Command	Description	Operation
Querying the Resource Instance List	hcloud SecMaster ListResourceInstance/v1	This API is used to query the resource instance list by tag.	Go debug
Querying the Number of Resource Instances	hcloud SecMaster CountResourceInstance/v1	This API is used to query the number of resource instances by tag.	Go debug

Workspace Management

API Name	Command	Description	Operation
Querying the Workspace List	hcloud SecMaster ListWorkspaces/v1	This API is used to query the workspace list. You can filter workspaces by workspace name, workspace description, and creation time.	Go debug

API Name	Command	Description	Operation
Creating a Workspace	hcloud SecMaster CreateWorkspace/v1	Before using the baseline inspection, alert management, security analysis, and security orchestration in SecMaster, you need to create at least one workspace first. You can use workspaces to group your resources by application scenario. This will make security operations more efficient.	Go debug
Querying Details About a Workspace	hcloud SecMaster ShowWorkspace/v1	This API is used to query details about a workspace, such as the workspace name and description.	Go debug
Updating a Workspace	hcloud SecMaster UpdateWorkspace/v1	This API is used to update the name, description, and other information of a workspace.	Go debug
Deleting a Workspace	hcloud SecMaster DeleteWorkspace/v1	This API is used to delete a workspace.	Go debug

Agency Management

API Name	Command	Description	Operation
Viewing Agency Information	hcloud SecMaster ListServiceAgency/v1	check service linked agency	Go debug
Creating an Agency and Granting Permissions to It	hcloud SecMaster CreateServiceAgency/v1	This API is used to create an agency based on the role and scope in the body and assign the policy to the agency.	Go debug
