Change History

Description	Released On
This is the thirty-second official release. This release incorporates the following change: Added the section Credit Management.	2024-07-29
This issue is the thirty-first official release. This release incorporates the following change: Added the API for batch querying customer budgets to Manage Customer Budgets.	2024-05-10
This issue is the thirtieth official release. This release incorporates the following change: Included Open APIs in Support on the top navigation bar in Partner Center.	2023-11-15
This issue is the twenty-ninth official release. This release incorporates the following change: Changed Solution Partner to Cloud Solution Provider and Solution Partner Program to Cloud Solution Provider Program.	2022-08-05
This issue is the twenty-eighth official release. This release incorporates the following change: Added Managing Resource Packages.	2021-06-16
This issue is the twenty-seventh official release. This release incorporates the following change: Added the API for querying available discounts of an order in Managing Yearly/Monthly Orders.	2021-04-28

Description	Released On
This issue is the twenty-sixth official release. This release incorporates the following change:	2021-04-09
Updated the function of customizing the display of brand, promotion, and menu in (Optional) Customizing HUAWEI CLOUD Management Console.	
This issue is the twenty-fifth official release. This release incorporates the following change:	2020-12-30
Modified Querying Product Information . Specifically, added the APIs for querying the measurement units and the measurement unit number system.	
This issue is the twenty-fourth official release. This release incorporates the following change: Modified Partner Bills. Specifically, updated the API for querying partner's monthly bills.	2020-12-16
This issue is the twenty-third official release. This release incorporates the following changes: Modified Querying Product Information. Specifically, added the API for querying usage types.	2020-11-18
Modified Managing Yearly/Monthly Orders. Specifically, added the API for enabling or canceling the change from yearly/monthly to pay-per-use upon resource expiration.	
This issue is the twenty-second official release. This release incorporates the following changes: Added the following APIs in Querying Product Information: • API for querying cloud service types	2020-11-04
 API for querying cloud service types API for querying resources by cloud service type 	
This issue is the twenty-first official release. This release incorporates the following change: Modified Querying the Price of a Product. Specifically, updated the API for querying the resource provision details of an order.	2020-10-21
This issue is the twentieth official release. This release incorporates the following changes: Modified Managing Customers. Specifically, updated the APIs for freezing and unfreezing customer accounts. Modified Manage Customer Budgets. Specifically, updated	2020-09-02
the APIs for querying and setting customer budgets.	

Description	Released On
This issue is the nineteenth official release. This release incorporates the following changes:	2020-06-30
Modified Managing Yearly/Monthly Orders. Specifically, updated the APIs for querying the amount of unsubscription orders, querying the yearly/monthly resources, and setting or canceling automatic renewal for yearly/monthly resources.	
Modified Managing Pay-Per-Use Resources. Specifically, updated the APIs for querying customers' pay-per-use resources.	
This issue is the eighteenth official release.	2020-06-17
This release incorporates the following change:	
Modified Managing Yearly/Monthly Orders. Specifically, updated the APIs for querying orders and order details, paying yearly/monthly product orders, canceling orders to be paid, as well as renewing or unsubscribing from yearly/monthly resources.	
This issue is the seventeenth official release.	2020-06-03
This release incorporates the following change:	
Modified Registering a Customer . Specifically, updated the APIs for verifying customer registration information and sending a verification code.	
This issue is the sixteenth official release.	2020-05-20
This release incorporates the following changes:	
Modified Performing Real-Name Authentication . Specifically, updated the APIs for requesting individual real-name authentication, requesting enterprise real-name authentication, changing real-name authentication, and querying the real-name authentication review result.	
Modified Managing Customers . Specifically, updated the API for querying the customer list.	
This issue is the fifteenth official release.	2020-04-22
This release incorporates the following change:	
Modified Registering a Customer . Specifically, updated the API for creating a customer account in the API list.	

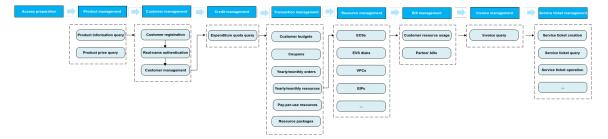

Description	Released On
This issue is the fourteenth official release. This release incorporates the following changes: Modified Querying the Price of a Product. Specifically, added the API for querying the price of a pay-per-use product and the API for querying the price of a yearly/monthly product.	2020-03-25
Brought the API for querying product prices based on the product specifications offline.	
This issue is the thirteenth official release. This release incorporates the following change: Added Invoice Management.	2020-01-15
This issue is the twelfth official release. This release incorporates the following change: Added Access Configuration (Optional). After partner access configuration is complete, partners can customize the HUAWEI CLOUD console on the API Management page. Partners can customize the brand in the page header and partial areas of the management console.	2019-11-06
This issue is the eleventh official release. This release incorporates the following changes: Modified Managing Customers. Specifically, added the functions for partners to freeze and unfreeze accounts of reseller customers on the partner sales platform.	2019-10-23
This issue is the tenth official release. This release incorporates the following changes: Added Managing Service Tickets.	2019-09-25
This issue is the ninth official release. This release incorporates the following changes: Added the API for changing real-name authentication in Performing Real-Name Authentication. If customers want to change individual real-name authentication to enterprise real-name authentication, they can perform the authentication again on the partner sales platform.	2019-09-17
This issue is the eighth official release. This release incorporates the following change: Added descriptions of the real-name authentication API in Performing Real-Name Authentication. Customers can complete real-name authentication on the partner sales platform using their business licenses or personal certificates. HUAWEI CLOUD reviews the customer authentication information and the uploaded attachments, and returns the result to the partner sales platform.	2019-09-04

Description	Released On
This issue is the seventh official release.	2019-08-21
This release incorporates the following changes:	
Modified Partner Bills. Specifically, the bills of the last month are generated before 12:00 (Beijing time) on the fifth day of this month. Modified Contents Pills Specifically, LILLAWEL CLOUD.	
 Modified Customer Bills. Specifically, HUAWEI CLOUD sends the bill to the partner before 12:00 (Beijing time) on the fifth day of each month. 	
This issue is the sixth official release.	2019-07-16
This release incorporates the following changes:	
Modified and moved Obtaining the SP Metadata File from section "Access Configuration" to section "Preparations". Partners can download the SP Metadata file under Prepare on the Benefits and Support > API Management > Prepare page.	
This issue is the fifth official release.	2019-07-10
This release incorporates the following change:	
Added Follow-Up Procedure in Basic Configuration.	
This issue is the fourth official release.	2019-05-22
This release incorporates the following change:	
Added Managing Customer Resource Usage.	
This issue is the third official release.	2019-05-10
This release incorporates the following changes:	
 Moved Obtaining the SP Metadata File and Generating the IDP Metadata File from section "Preparations" to section "Access Configuration". 	
 Adjusted sections in Customer Management, Transaction Management, Cloud Service Resource Management, and Bill Management based on service scenarios in Development Scenario Introduction (Reseller Model). 	
Added Managing Customer Resource Usage.	
This issue is the second official release.	2019-04-13
This release incorporates the following change:	
Combined section "Introduction" and "Access Process" into Development Scenario Introduction (Reseller Model).	
This issue is the first official release.	2019-03-22

2 Development Scenario Introduction (Reseller Model)

Huawei Cloud provides E2E operational capabilities for distributor and solution provider partners to manage credits, products, customers, transactions, cloud resources, bills, service tickets, and invoices. Solution partners can build their own sales platforms based on the operation capabilities.

The following figure illustrates the specific scenarios.

Product Management

Partners can query the cloud service or resource types, query resources by cloud service type, or query usage types, measurement units, and measurement unit number system on the partner sales platform.

Customer Management

- A HUAWEI CLOUD account is created for a customer when the customer creates an account on the partner sales platform, and the customer account on the sales platform is bound to the HUAWEI CLOUD account. In addition, the HUAWEI CLOUD account is bound to the partner account. After registration, the customer can purchase cloud services and manage cloud service resources on HUAWEI CLOUD.
- 2. Customers can complete real-name authentication on the partner sales platform using business licenses and personal certificates. The HUAWEI CLOUD reviews the customer authentication information and attachments and returns the result to the partner sales platform. If a customer changes from individual authentication to enterprise authentication, the customer can

complete real-name authentication on the partner sales platform. Customers can perform real-name authentication on the partner sales platform using their business licenses or personal certificates. HUAWEI CLOUD reviews the customer authentication information and attachments and sends the result to the partner sales platform. If a customer changes from individual authentication to enterprise authentication, the customer can perform real-name authentication on the partner sales platform.

3. The partner sales platform can also manage the partner customers.

Coupon Management

On the partner sales platform, partners can view the coupon list.

Credit Management

Expenditure quotas can be checked in partner sales platforms.

Transaction Management

- 1. A partner can view its customer's budget and set or adjust the budget for its customer on the partner sales platform. The budget is used to control customer's monthly consumption.
- 2. A partner can view the coupons distributed by themselves.
- 3. Two solutions are available for the partner sales platform to support their customers purchase cloud services:
 - Solution 1: Using the web UI, the customers can switch from the partner sales platform to the cloud service management console on HUAWEI CLOUD through SSO and purchase the cloud services.
 - Solution 2: Using the native cloud service API of HUAWEI CLOUD, the customers can purchase cloud services on the partner sales platform. For details, see HUAWEI CLOUD APIs.
 - Solution 1 is recommended for partners with limited development capabilities or time.
- 4. A partner can view customers' yearly/monthly orders and pay-per-use resources on the sales platform.
- 5. Partners can view the resource package list and the resource package usage.

Cloud Service Resource Management

Two solutions are available for the partner sales platform to support their customers manage cloud service resources:

- Solution 1: Using the web UI, the customers can switch from the partner sales
 platform to the cloud service management console on HUAWEI CLOUD
 through SSO and manage the cloud services.
- Solution 2: Using the native cloud service API of HUAWEI CLOUD, the customers can manage cloud services on the partner sales platform. For details, see **HUAWEI CLOUD APIs**.

Solution 1 is recommended for partners with limited development capabilities or time.

Bill Management

- 1. A partner can query customers' consumption records on the sales platform.
- 2. A partner can view its monthly bills on the partner sales platform, and settle the bills with HUAWEI CLOUD.
- 3. A partner can query its monthly expenditures on its sales platform. The expenditures include the detailed consumption records of each customer and the corresponding official website price and partner discount. The partner can perform rating for its customer based on the details and generate the customer bill.

Service Ticket Management

- A customer or partner creates a HUAWEI CLOUD service ticket on the partner sales platform. The partner sales platform forwards the service ticket to the HUAWEI CLOUD after-sales service team. When a customer or partner submits a service ticket, the customer or partner needs to enter the required information based on a template.
- 2. A customer or partner can query all the HUAWEI CLOUD service tickets or details of a HUAWEI CLOUD service ticket submitted by itself on the partner sales platform.
- 3. A customer or partner can perform operations on a service ticket submitted by itself, such as urging, deleting, closing, and canceling the service ticket. In addition, they can add messages on the service ticket details page, for example, adding confidential information, providing information required for the customer service handling the service ticket, or asking about the service ticket handling progress.

Invoice Management

On the partner sales platform, partners can view the invoice list.

3 Access Configuration (Optional)

3.1 Overview

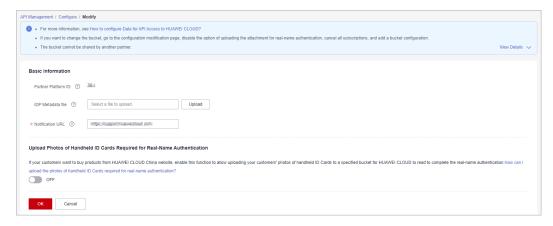

After joining the Cloud Solution Provider Program, you can log in to the Partner Center using the account for joining the program. Configure the basic information, file subscription, contact information, and real-name authentication information on the **Support Center** > **API Management**.

After you complete the basic configuration, you can continue to configure the redirection address for the partner platform. This step is optional. Access through Web UI requires further configuration.

3.2 Basic Configuration

Procedure

- **Step 1** Sign in to Huawei Cloud as a partner. On the top navigation bar, select **Support** > **Open APIs**.
- **Step 2** Click the **Configure** icon in the flowchart to switch to the **Configure** page.

Step 3 Set the parameters based on **Table 3-1**. After the configuration is complete, click **OK**.

Table 3-1 Parameter descriptions

Parameter	Description
Basic Information	
IDP metadata file (enterprise identity provider metadata	Indicates the IDP Metadata file in .xml format generated by the partner sales platform according to the SAML protocol standards.
file)	The file must be in the .xml format, and its size cannot exceed 2 MB.
	For details about how to generate the IDP metadata file, see Generating the IDP Metadata File .
Notification URL	Indicates the callback address provided by the partner sales platform for receiving the association result. Using an address in HTTPS is recommended. For details, see Association Result Notification API.
Upload Photos of Handheld ID Cards Required for Real-Name	

Authentication

If a partner's customers buy products from HUAWEI CLOUD Chinese mainland website and want to perform real-name authentication, customers need to upload pictures of the certificates for HUAWEI CLOUD to read to complete the real-name authentication. For details about how to upload the attachment for real-name authentication, see How Do I Upload the Attachment for Real-Name Authentication?

File Subscription

- After you subscribe to the partner bill (customer consumption details), you can rate your customers, and your sales platform will generate the customer bills based on this bill and then you can perform reconciliation with HUAWEI CLOUD.
- You can subscribe to customer resource usage details and view resource usage details of all your customers or a specified customer on the partner sales platform. Customers can view their own resource usage details on the partner sales platform.

Step 4 Specify bucket information if you have enabled the real-name authentication or file subscription.

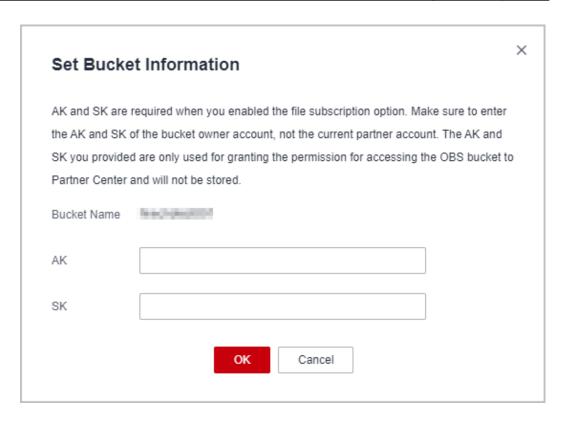

Table 3-2 Bucket parameters

Parameter	Description
AK	Indicates the Access Key ID (AK) which is used when the partner sales platform accesses the OBS client or SDK. For details about how to obtain the AK, see Obtaining an AK/SK.
SK	Indicates the Secret Access Key (SK) which is used when the partner sales platform accesses the OBS client or SDK. For details about how to obtain the SK, see Obtaining an AK/SK.
Bucket Name	Indicates the name of the bucket created by the partner. Only OBS buckets purchased on Huawei Cloud in the Hong Kong region can be used.

----End

Association Result Notification API

If the partner sales platform connects to HUAWEI CLOUD by switching to the HUAWEI CLOUD portal, the partner needs to provide a callback API for HUAWEI CLOUD sending the association result to the partner. An HTTPS URL is recommended.

The partner needs to comply with the following requirements when defining and developing this API.

1. URL

POST https://www.example.com/bind

2. Request Parameters

The request parameters are in Form Data format.

Table 3-3 Parameter information

Paramet er	Description	Example
bindRequ est	Indicates the message body of the association result (JSON format). The message is coded using BASE64. For details about the parameters in the JSON message body, see Table 3-4.	EYJKB21HAW5OYW1LIJO IEW9UZ3POASISIMRVB WFPBKLKIJOIEW9UZ3PO AWLKIIWIEFVZZXJJZ- CI6INLVBMD6AGL4IIWIY MLUZEFJDGLVBII6MX0% 3D
SigAlg	Indicates the signature algorithm. SHA256 is used for signature by default. HTTP://WWW.W3.ORG/2001/04/ XMLDSIG-MORE#RSA-SHA256	HTTP%3A%2F %2FWWW.W3.ORG %2F2001%2F04%2FXML DSIG-MORE%23RSA- SHA256
Signature	Indicates the signature. The signature is used to verify the initiator of a request. When HUAWEI CLOUD initiates a request, it uses the private key and the bindRequest value in the request to obtain the signature. When receiving the request, the receiver verifies the signature using the public key provided by HUAWEI CLOUD (the value in the <ds:x509certificate></ds:x509certificate> tag in the SP Metadata file). If the signature verification succeeds, the request is sent by HUAWEI CLOUD, and the follow-up operations can be performed. Otherwise, the request is invalid.	SWCFTCP4NKMU %2BOBH1FCSXFY0DL31 BGNH4EXUGTQY %2BSPLXC%2B94NXSS %2FRHPWYE9TXVNVSPT R6XRWBZLVHTBDRGLGC 0OPTTCFYD4D3%2F6PM ESNG5C4BPT

Parameter Parameter Description Type Indicates the user ID of the partner's xUserId String customer on the partner sales platform. xAccountId Indicates the ID of the customer account String created on the partner sales platform. An account ID must be unique and is better to be consistent with the domainName. Indicates the HUAWEI CLOUD account of domainName String the partner's customer. This account will be used when the API is invoked. domainId String Indicates the HUAWEI CLOUD account ID of the partner's customer. This ID will be used when the API is invoked. userName String Indicates the HUAWEI CLOUD username of

the partner's customer.

the partner's customer.

The value is in UTC format.

Indicates the HUAWEI CLOUD user ID of

Indicates the time when a request expires.

Example: 2017-07-31T07:40:14.004Z

0: indicates that the association is

• 1: indicates that the association failed.

Indicates the association result.

Table 3-4 Parameters in the bindRequest JSON message

□ NOTE

userId

exporetime

bindAction

Table 3-4 lists the account name, username, account ID, and user ID because HUAWEI CLOUD IAM has account and username concepts. For details about the two concepts, see "Account" and "IAM User" in **Identity Management**.

successful.

Follow-Up Procedure

If you find any parameters are incorrectly configured, you can modify the configuration.

Step 1 On the top navigation bar, select **Support** > **Open APIs**.

String

String

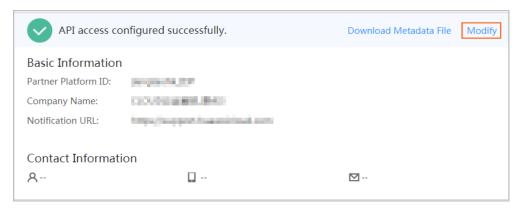

String

Step 2 Click the access configuration icon or **View or Modify API Configuration** under the icon.

The access configuration page is displayed.

Step 3 Click Modify and modify the configuration as required.

If the **IDP Metadata** file is incorrectly configured, click **Download Metadata File** to download the file to the local, modify and save it, click **Modify**, and then upload the file again.

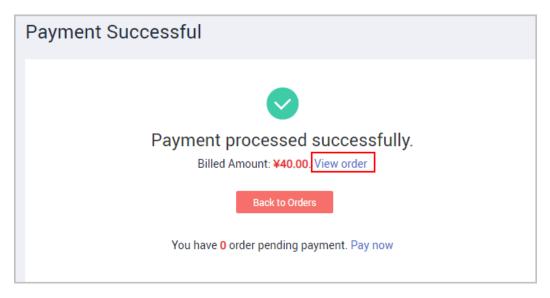

----End

3.3 (Optional) Configuring the Redirection URL for the Partner Platform

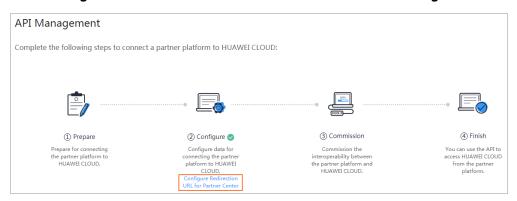

After you configure the access parameters, you can configure the redirection URL for Partner Center on the **API Management** page. Then, customers can return to the partner sales platform after they pay the bills.

View the order details after the payment is complete.

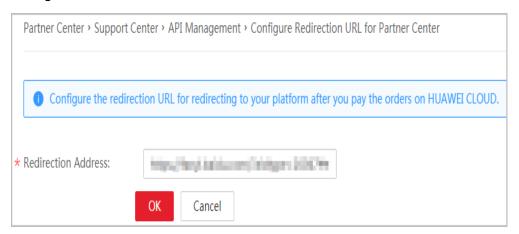

After customers pay the order, they can click **View order** on the displayed page to switch to the order details page. If the partner has configured the redirection URL, customers can click **View order** to return to the partner sales platform to view the order details.

- **Step 1** On the top navigation bar, select **Support** > **Open APIs**.
- Step 2 Click Configure Redirection URL for Partner Center under Configure.

Step 3 Configure the redirection URL and then click **OK**.

If **Redirection Address** is incorrect, you can switch to the **Configure Redirection URL for Partner Center** page and click **Modify** in the upper right corner of page and modify the configuration.

----End

4 (Optional) Customizing HUAWEI CLOUD Management Console

4.1 Overview

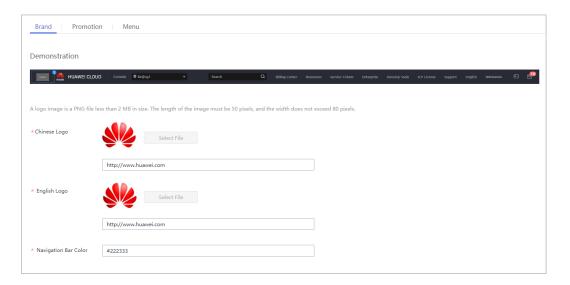

After you configure the access setting, you can customize the HUAWEI CLOUD console on the **Support Center** > **API Management** page. Specifically, you can define the brand display, promotion menu, and HUAWEI CLOUD menu of the console. After the customization is complete, when a customer of the partner switches from the partner platform to the HUAWEI CLOUD console, the customized HUAWEI CLOUD console will be displayed.

After the partner submits the customization information, the HUAWEI CLOUD operations administrator will complete the review within three working days. After the application is approved, the customization is complete.

- **Step 1** Sign in to Huawei Cloud as a partner. On the top navigation bar, select **Support** > **Open APIs**.
- **Step 2** Click **Customize HUAWEI CLOUD Console** under the access configuration icon in the flowchart. The **Customize Console** page is displayed.

Step 3 On the **Customize Console** page, you can click the **Brand**, **Promotion**, **Menu**, and **User Information** tabs as required and customize the configuration to meet your specific requirements. The unconfigured items will be the same as those on HUAWEI CLOUD.

Step 4 After you confirm the configuration, click **Submit** in the upper right corner. The HUAWEI CLOUD operations administrator will complete the review within three working days.

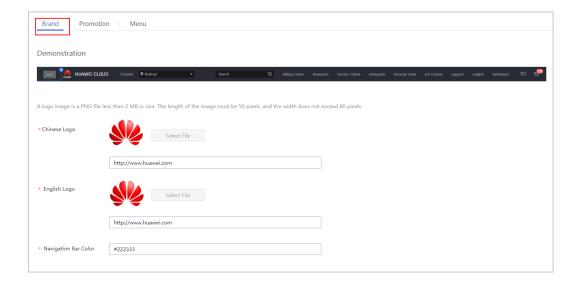

----End

The following describes the customization on each tab.

4.2 Customizing Logo Display

You can upload your enterprise logo and set the HUAWEI CLOUD console to display both the Huawei and your logos.

Step 1 On the **Customize Console** page, click the **Brand** tab.

- **Step 2** Click **Select File** and upload your Chinese and English logos. If they are the same, you can upload the same picture. Then, click **Submit**.
- Step 3 Configure the redirection URL for each logo.

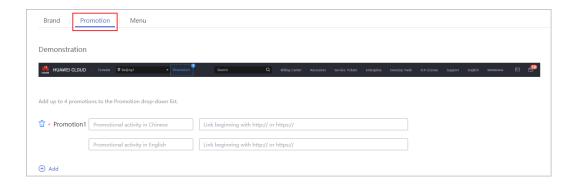

Step 4 Enter the RGB color code in the **Navigation Bar Color** text box.

----End

4.3 Customizing the Promotion Page

You can configure the promotion page on the HUAWEI CLOUD console to display your promotions and advertisements.

Step 1 On the **Customize Console** page, click the **Promotion** tab.

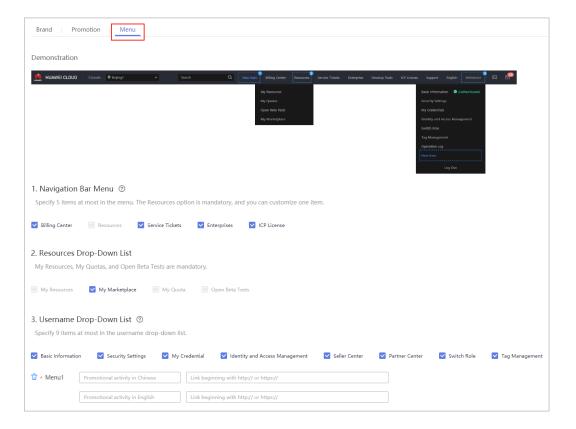

Step 2 Click **Add**. In the **Promotion** pane, enter the name and link of the promotion.

----End

4.4 Customizing Huawei Cloud Menu

You can customize menus displayed on the HUAWEI CLOUD console, including the information menu, resource drop-down list, username drop-down list, and customized menu.

Step 1 On the **Customize Console** page, click the **Menu** tab.

Step 2 Configure menus for each menu pane.

- Select the menus to be displayed on the console.
- Click **Add** to add a menu and configure the menu name and link.

----End

5 Product Management

5.1 Querying Product Information

Service Object

Partners

Scenario Description

On the sales platform, partners can:

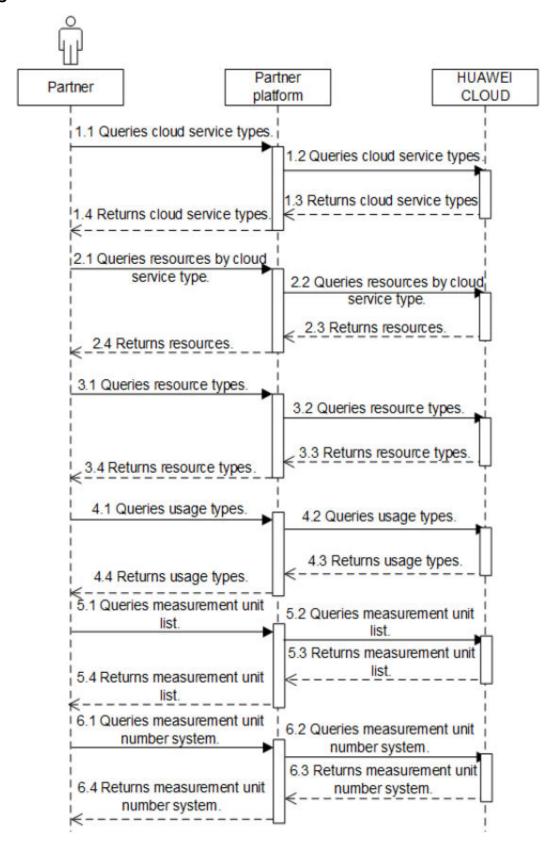

- Query the cloud service or resource type.
- Query resources by cloud service type.
- Query the usage type, measurement unit, and measurement unit number system.

Related APIs

API	API Definition

API Invoking Process

5.2 Querying the Price of a Product

Service Object

Partner's customers

Scenario Description

Customers can view introductions to cloud services, such as ECS, EVS, VPC, and EIP, and purchase the cloud services. Two solutions are available for the partner sales platform to support their customers purchase cloud services:

Solution 1: Using the web UI, the customers can switch from the partner sales platform to the cloud service management console on HUAWEI CLOUD through SSO and purchase the cloud services.

Solution 2: Using the native cloud service API of HUAWEI CLOUD, the customers can purchase cloud services on the partner sales platform.

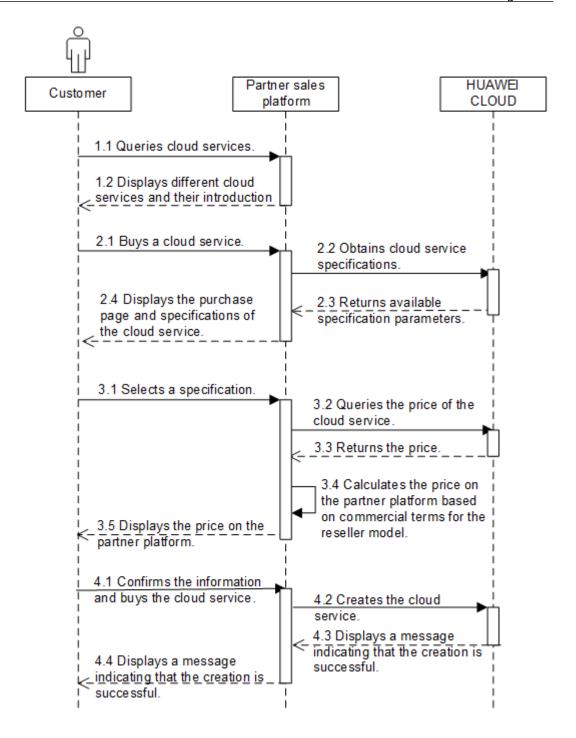

Solution 1 is recommended for partners with limited development capabilities or time.

Querying the price of a yearly/monthly product	https://support.huaweicloud.com/intl/en-us/api-bpconsole/bcloud_01002.html
Switching from the partner sales platform to the HUAWEI CLOUD portal	None
Native cloud service APIs	https://developer.huaweicloud.com/intl/en-us/ openapilist

API Invoking Process

Through native APIs of HUAWEI CLOUD services

Development Suggestions

- 1. For the solution through web UI integration, it is recommended to display the HUAWEI CLOUD service console in a new tab or page for a customer when the customer clicks the purchase button on the partner sales platform page. The links can be specified based on the HUAWEI CLOUD cloud service console links.
- 2. Partners can configure the redirection URL on the **Support Center > API Management** page to allow customers to return to the partner platform after

completing the order payment. For details, see **(Optional) Configuring the Redirection URL for the Partner Platform**.

6 Customer Management

6.1 Registering a Customer

Service Object

Partner's customers

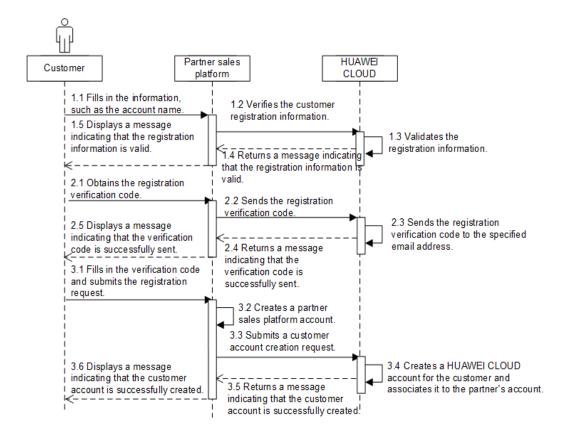

Scenario Description

A HUAWEI CLOUD account is created for a customer when the customer creates an account on the partner sales platform, and the customer account on the sales platform is bound to the HUAWEI CLOUD account. In addition, the HUAWEI CLOUD account is bound to the partner account, so the customer is associated to the partner.

Related APIs

Creating a customer	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/mc_00016.html

API Invoking Process

Development Suggestions

- The account name and email address must be verified valid for Huawei Cloud by invoking the API for verifying the customer registration information. If the email address is not specified, the customer will not receive any notifications such as verification code and resource expiration notifications, and does not need to enter the verification code when creating a Huawei Cloud account for the customer.
- The Huawei Cloud account name can be the same as the account name on the partner sales platform. If the account name is not specified, Huawei Cloud will automatically generate an account name.
- The xAccountId field is used to associate the partner sales platform account
 with the HUAWEI CLOUD account, and is globally unique. When a customer
 switches to the HUAWEI CLOUD portal from the partner sales platform, this
 field is used to identify the customer. The value must be the same as that
 entered when the customer account is created.
- The value of password is the password of the HUAWEI CLOUD account. It is optional. If the value is not specified, HUAWEI CLOUD will automatically generate one.
- When the API for creating a customer is invoked, HUAWEI CLOUD will synchronously create a HUAWEI CLOUD customer account and send the customer ID and account name to the partner platform. Then, HUAWEI CLOUD associates the customer with the partner asynchronously. To query the result of associating the partner and customer, see Querying Customers.
- If a customer has created an account on the partner sales platform and does not have a HUAWEI CLOUD account, the customer needs to switch to the

- HUAWEI CLOUD portal through the web UI, create a HUAWEI CLOUD account, and associate it with the customer's partner sales platform.
- If a customer has created an account on the partner sales platform and does not have a HUAWEI CLOUD account, the customer needs to switch to the HUAWEI CLOUD portal through the web UI, create a HUAWEI CLOUD account, and associate it with the customer's partner sales platform.

6.2 Performing Real-Name Authentication

Service Object

Partner's customers

Scenario Description

Customers can complete real-name authentication on the partner sales platform using their business licenses or personal certificates. HUAWEI CLOUD reviews the customer authentication information and the uploaded attachments, and returns the result to the partner sales platform.

If a customer wants to change individual authentication to enterprise authentication, the customer can perform the real-name authentication again on the partner sales platform.

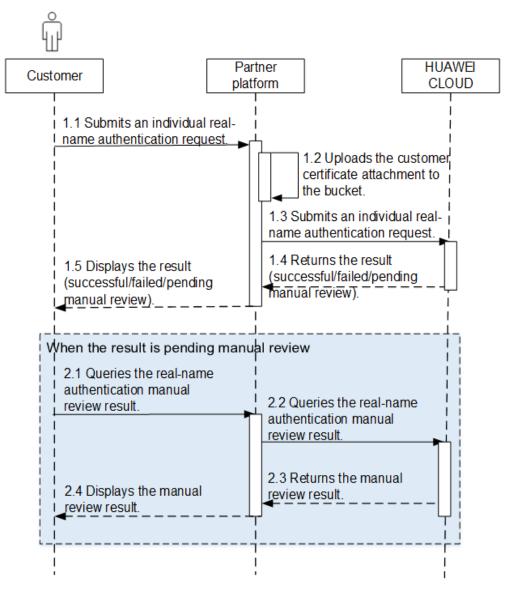

If a customer wants to purchase resources in the China region, the customer needs to complete real-name authentication first.

Requesting a Real-Name Authentication Change	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mc_00019.html
Querying the Real-Name Authentication Review Result	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/mc_00020.html

API Invoking Process

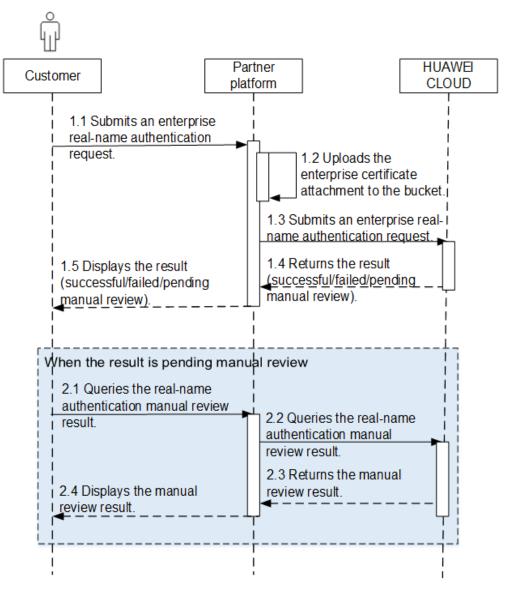

1. Individual certificate real-name authentication

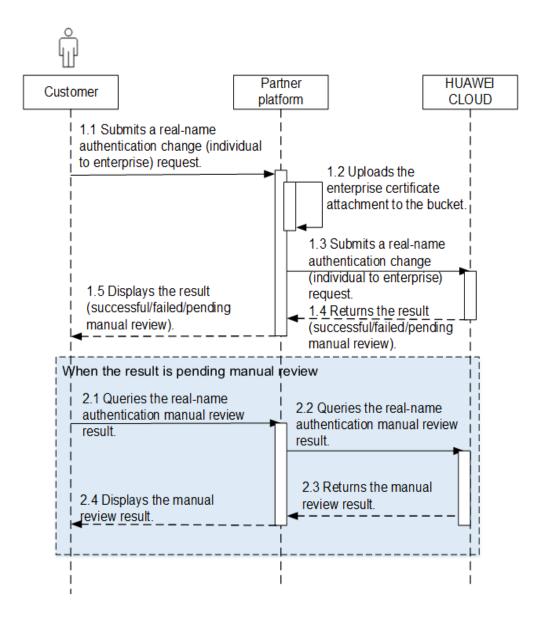

2. Individual bank card real-name authentication

3. Enterprise real-name authentication

4. Real-name authentication change

Development Precautions

- Ensure to enable Upload Photos of Handheld ID Cards Required for Real-Name Authentication on the Support Center > API Management > Configure page before you invoke the HUAWEI CLOUD real-name authentication API.
- Images for real-name authentication must be uploaded to the download directory of the bucket.

6.3 Managing Customers

Service Object

Partner

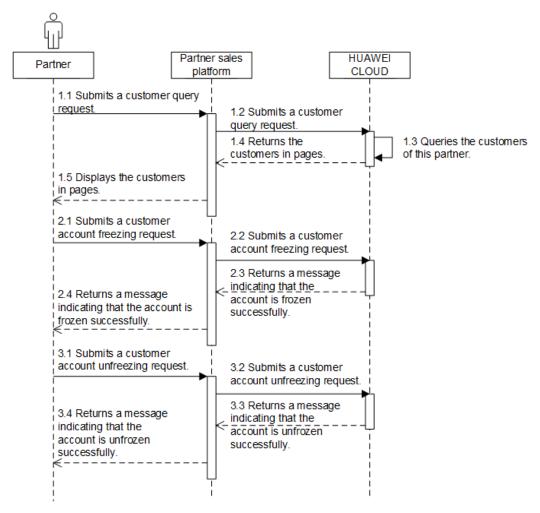

Scenario Description

Partners can view their associated customers and display the basic information such as the customer company names and customer real-name authentication status on the partner sales platform.

Partners can freeze accounts of customers associated with the partners in reseller model on the partner sales platform. When the accounts are frozen, the customers cannot purchase, renew the subscription to, change, or properly use the resources.

Partners can unfreeze accounts of customers associated with the partners in reseller model on the partner sales platform. After the accounts are unfrozen, fees generated when the customers purchase, renew the subscription to, and change resources are paid by the partners.

API	API Definition
Querying customers	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mc_00021.html
Freezing a customer account	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/mc_00027.html
Unfreezing a customer account	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mc_00028.html

7 Credit Management

Service Object

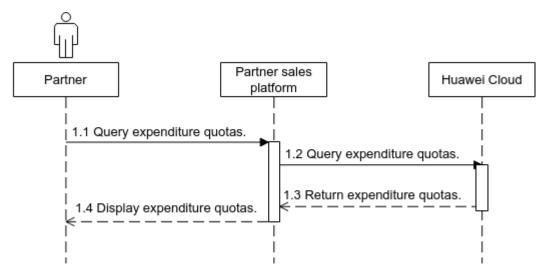

Partners

Scenario Description

A consumption quota is a credit limit Huawei Cloud allocates to you. It specifies the maximum amount that you can owe to Huawei Cloud. If the quota is exceeded, your account will be restricted and all customers associated with you in the Reseller model will be restricted from purchases. It is not used for payment and does not indicate the exact amount that partners need to pay.

Partners can query their consumption quotas on their own sales platforms. If the consumption quota of a partner is insufficient, the partner can pay bills to restore the consumption quota or contact their ecosystem manager to increase the quota.

API	Related Link
Querying consumption quotas	https://support.huaweicloud.com/intl/zh-cn/api-bpconsole/cq_001.html

8 Transaction Management

8.1 Manage Customer Budgets

Service Object

Partner

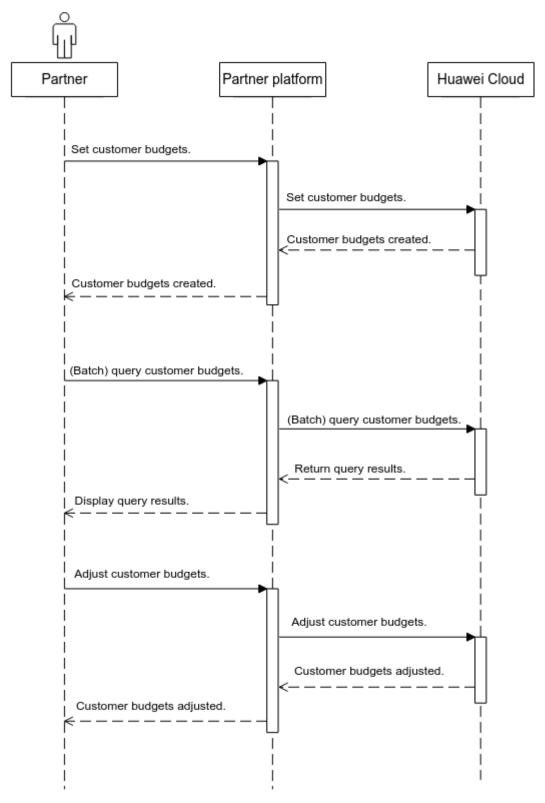

Scenario Description

A customer's budget is used to control the total expenditures of a customer. A customer can purchase and renew cloud services on the partner sales platform only when the customer's account has sufficient budget.

If a customer is associated to a partner for the first time, the partner needs to configure a budget for the customer.

A partner can query and adjust the budgets of its customers on the partner sales platform. If the customer's budget cannot meet the customer's requirements, the partner needs to adjust the budget.

API	API Definition
Querying customer budgets	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mt_01004.html
Batch querying customer budgets	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mt_01006.html
Setting customers' budgets	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mt_01005.html

Development Suggestions

- Customers' budgets are used to control the customers' total expenditures of each month. Partners need to configure proper budgets for the customers based on actual requirements.
- If the partner sales platform detects that a customer's budget is less than or equal to 0, the customer is forbidden to purchase or renew resources.
- The API for **configuring customer's budgets** is invoked when a partner sets the budget for a customer for the first time or adjusts the budget.

8.2 Coupon Management

Service Object

Partner and its customers

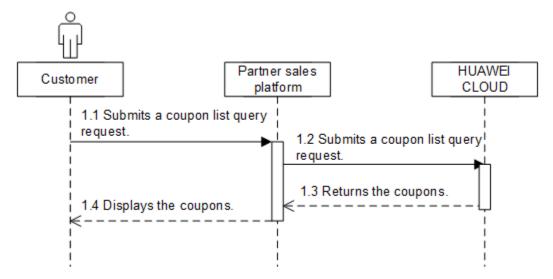

Scenario Description

A partner can view its issued coupons.

Related APIs

API	API Definition
Querying coupons	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mp_02001.html

API Invoking Process

8.3 Managing Yearly/Monthly Orders

Service Object

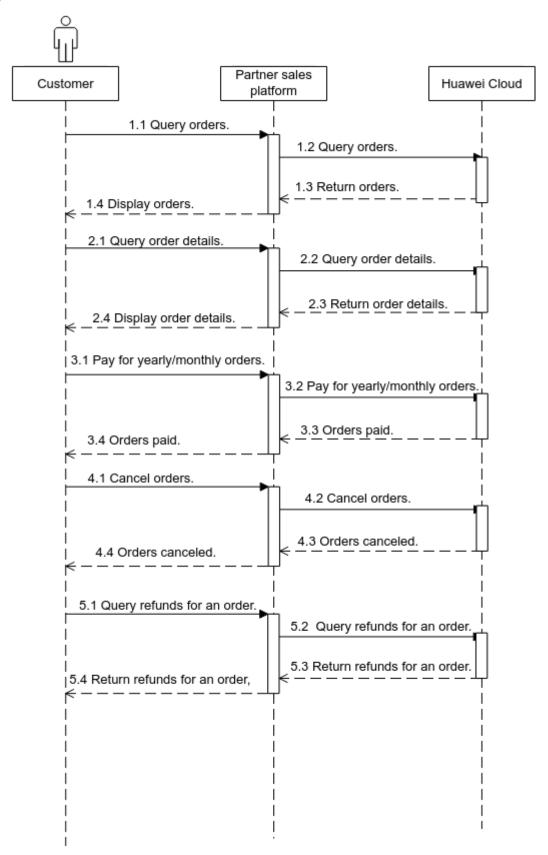

Customers of a partner

Scenario Description

After purchasing yearly/monthly resources, a customer can perform the following operations on the partner sales platform:

- Query the orders in different statuses such as pending approval, processing, canceled, completed, and pending payment.
- Pay or cancel orders in the pending payment state, and unsubscribe from yearly/monthly products in the subscribed state.
- Query the available discounts of an order.
- Query the resources and original orders where the refund of an unsubscription or degrade order is from.

API	API Definition
Querying orders	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00013.html
Querying order details	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00014.html
Paying yearly/monthly product orders	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00030.html
Canceling orders in the pending payment status	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00017.html
Querying refunds for orders	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00020.html

Development Suggestions

The prerequisite for this scenario is that the customer has purchased yearly/monthly cloud service resources.

8.4 Managing Yearly/Monthly Resources

Service Object

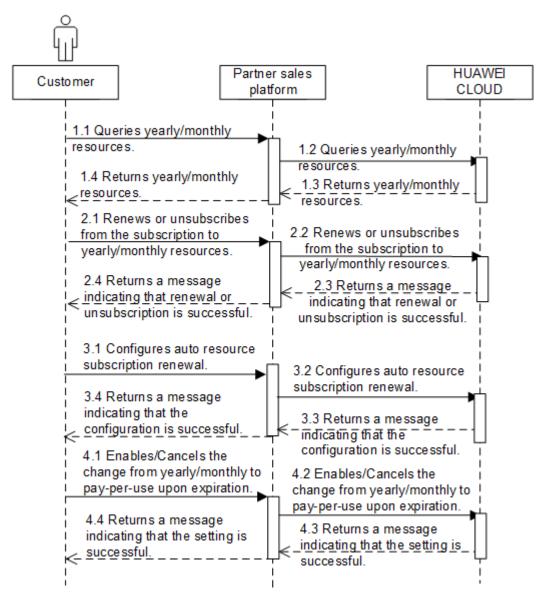

Customers of a partner

Scenario Description

After purchasing yearly/monthly resources, a customer can perform the following operations on the partner sales platform:

- Query the expiration date of orders in the completed status, and renew the subscription to orders or resources about to expire.
- Configure automatic renewal for purchased yearly/monthly resources.
- Query the resources and original orders where the refund of an unsubscription or degrade order is from.

API	API Definition
Querying customer's yearly/monthly resources	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00021.html
Renewing subscription to yearly/monthly resources	https://support.huaweicloud.com/intl/en-us/api-bpconsole/api_order_00018.html
Unsubscribing from yearly/ monthly resources	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00019.html
Enabling automatic subscription renewal for yearly/monthly resources	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00022.html
Disabling automatic subscription renewal for yearly/monthly resources	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00023.html
Enabling/Canceling the change from yearly/ monthly to pay-per-use upon expiration	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/api_order_00024.html

Development Suggestions

- The prerequisite for this scenario is that a customer has purchased yearly/ monthly cloud service resources.
- The resource IDs need to be obtained using the APIs for querying yearly/ monthly resources because the management operations, such as subscribing to or unsubscribing from yearly/monthly resources, and enabling or disabling automatic subscription renewal, are performed based on resources.
- If a primary resource has attached resources and subscription to the primary resource is renewed or canceled, the system will also renew or cancel the subscription to the attached resources. An example of primary and attached resources are as follows: ECS is the primary resource, and its attached resources are EVS, VPC, EIP, and bandwidth.

 The fee of automatic subscription renewal for a product will be deducted at 03:00 seven days before the product is due. If the fee fails to deduct for the first time due to insufficient account balance, the system will attempt to deduct the fee at 03:00 every day before the reserved product resource expires until the fee is deducted successfully.

8.5 Managing Pay-Per-Use Resources

Service Object

Partner's customers

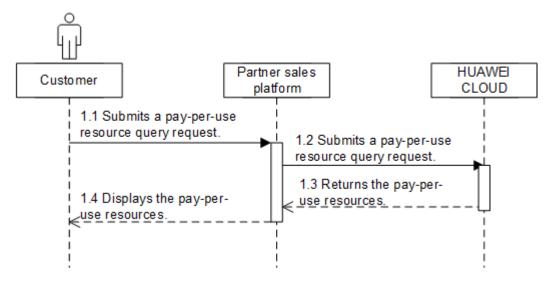

Scenario Description

After a customer purchases pay-per-use resources, it can query the provisioned ones on the partner sales platform.

Related APIs

API	API Definition
Querying customer's pay- per-use resources	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mqr_01002.html

API Invoking Process

Development Suggestions

The pay-per-use resource query has a latency, and therefore the data obtained from the API is for reference only.

8.6 Managing Resource Packages

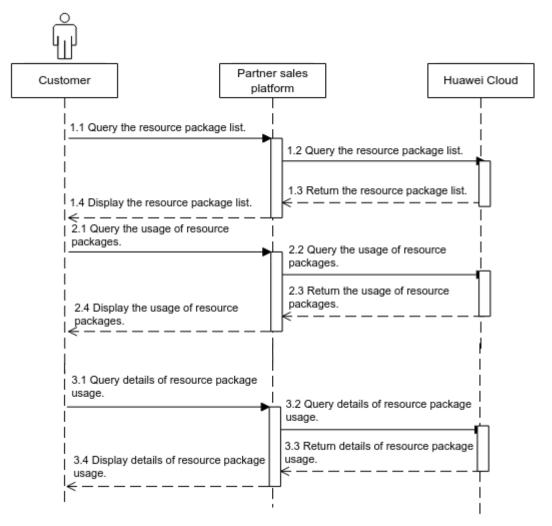

Service Object

Customers of a partner

Scenario Description

After a customer purchases a resource package, the customer can query the resource package list and resource usage on the partner sales platform.

API	API Definition
Querying Resource	https://support.huaweicloud.com/intl/en-us/
Packages	api-bpconsole/api_order_00027.html
Querying the Resource	https://support.huaweicloud.com/intl/en-us/
Usage	api-bpconsole/api_order_00028.html
Querying Details of	https://support.huaweicloud.com/intl/en-us/
Resource Usage	api-bpconsole/api_order_00029.html

Development Suggestions

The prerequisite for this scenario is that the customer has purchased a resource package.

9 Cloud Service Resource Management

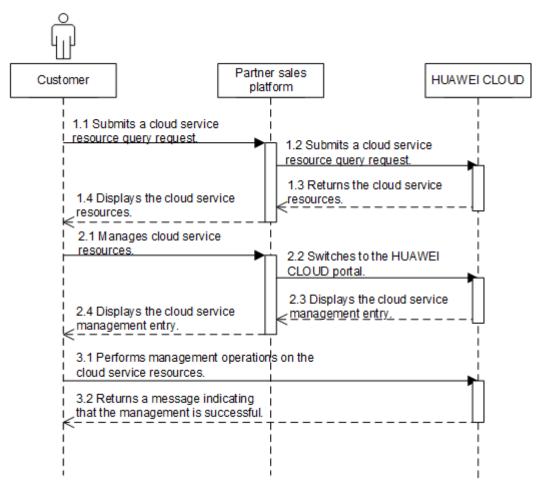

Service Object

Partner's customers

Scenario Description

After a customer purchases cloud service resources, it can switch from the partner sales platform to the HUAWEI CLOUD portal to manage the purchased cloud service resources. Specifically, the customer can start, stop, or restart an ECS, attach an EVS disk to an ECS, expand the capacity of an EVS disk, create snapshots and backups for an EVS disk, create a VPC and configure subnets, as well as bind, unbind, or release an EIP.

API	API Definition
Switching from the partner sales platform to the HUAWEI CLOUD portal	None

Development Suggestions

Cloud service management is complex. Therefore, it is recommended to display the HUAWEI CLOUD portal in another tab or page for the cloud service management when customers switch from the partner sales platform.

10 Bill Management

10.1 Managing Customer Resource Usage

Service Object

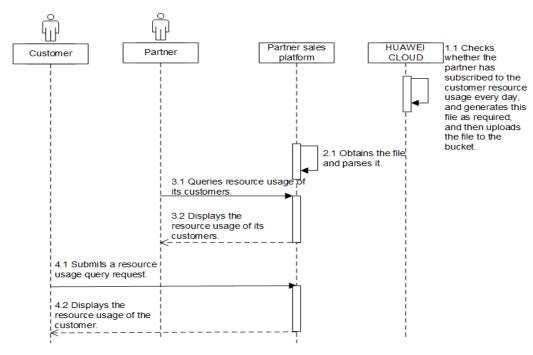

Partners

Scenario Description

Partners subscribe to the customer resource usage on the **Support Center > API Management > Configure** page in Partner Center.

- Partners can view resource usage of its all customers or a specified customer on the partner sales platform.
- Customers can query their own resource usage.

API	API Definition
Querying customer resource usage	https://support.huaweicloud.com/intl/en-us/api-bpconsole/api_order_00009.html

Development Suggestions

- The system generates the customer resource usage file containing the data generated till the previous day from 12:00 to 20:00 (not later than 24:00) every day. Therefore, it is recommended to set the partner sales platform to obtain the customer resource usage file at 24:00 every day.
- The customer resource usage data has a latency. Therefore, the data cannot be used when the data accuracy requirement is high, such as for monitoring or budget control.

10.2 Partner Bill Management

10.2.1 Partner Bills

Service Object

Partner

Scenario Description

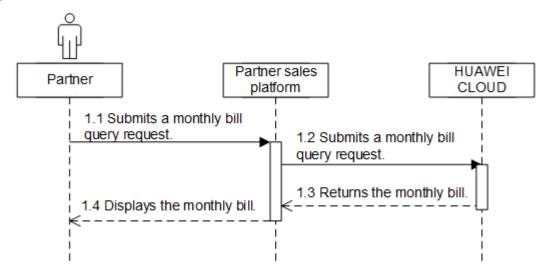

After a partner's customer purchases a cloud service product, the partner needs to settle the generated fee with HUAWEI CLOUD. The partner obtains the bills of the previous or earlier months from the partner sales platform, views the bill information including the bill amount and payment deadline, and then completes settlement with HUAWEI CLOUD.

After the settlement is complete, HUAWEI CLOUD will restore the budget of the customer.

Related APIs

API	API Definition
Querying monthly bills	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mb_00003.html

API Invoking Process

Development Suggestions

- The partner bills of the last month are generated before 12:00 (Beijing time) on the fifth day of this month. Therefore, the partner can query the bills of the last month or earlier only.
- The refund contains the amount returned to the customer due to order cancellation or specifications changes.

10.2.2 Customer Bills

Service Object

Partner's customers

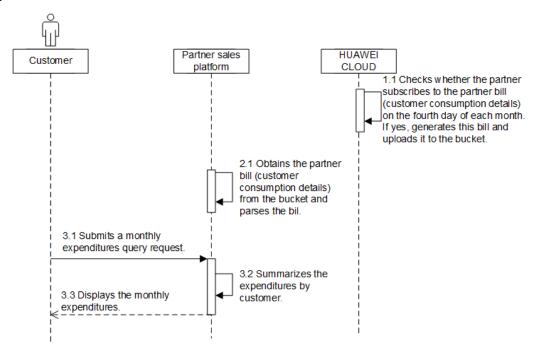

Scenario Description

After a partner subscribes to the partner bill (customer consumption details) on the **Support Center** > **API Management** > **Configure** page in Partner Center on HUAWEI CLOUD, the partner can rate its customers for the generated consumptions, and the partner sales platform will generate the customer bills based on this bill. The partner can perform reconciliation with HUAWEI CLOUD based on these customer bills.

Related APIs

API	API Definition
Querying monthly expenditures	https://support.huaweicloud.com/intl/en-us/api-bpconsole/mb_00002.html

API Invoking Process

Development Suggestions

- If a partner has subscribed to the partner bill (customer consumption details) in the HUAWEI CLOUD Partner Center, HUAWEI CLOUD will send the bill to the partner before 12:00 (Beijing time) on the fifth day of each month.
- The partner sales platform reads the bill and parses it. Then, the partner rates the consumptions of the customer based on this file, and the partner sales platform generates the customer expenditure bill.

1 1 Invoice Management

11.1 Managing Invoices

Service Object

Partner

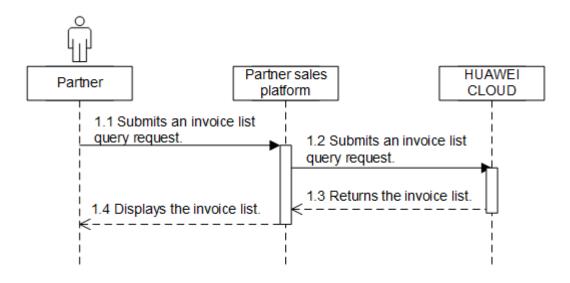

Scenario Description

On the partner sales platform, the invoice list can be viewed.

Related APIs

API	API Definition	
Querying the invoice list	https://support.huaweicloud.com/intl/en-us/ api-bpconsole/miv_01005.html	

API Invoking Process

12 Managing Service Tickets

Service Object

Partner and its customers

Scenario Description

- A customer or partner creates a HUAWEI CLOUD service ticket on the partner sales platform. The partner sales platform forwards the service ticket to the HUAWEI CLOUD after-sales service team. When a customer or partner submits a service ticket, the customer or partner needs to enter the required information based on a template.
- 2. A customer or partner can query all the HUAWEI CLOUD service tickets or details of a HUAWEI CLOUD service ticket submitted by itself on the partner sales platform.
- 3. A customer or partner can perform operations on a service ticket submitted by itself, such as urging, deleting, closing, and canceling the service ticket. In addition, they can add messages on the service ticket details page, for example, adding confidential information, providing information required for the customer service handling the service ticket, or asking about the service ticket handling progress.

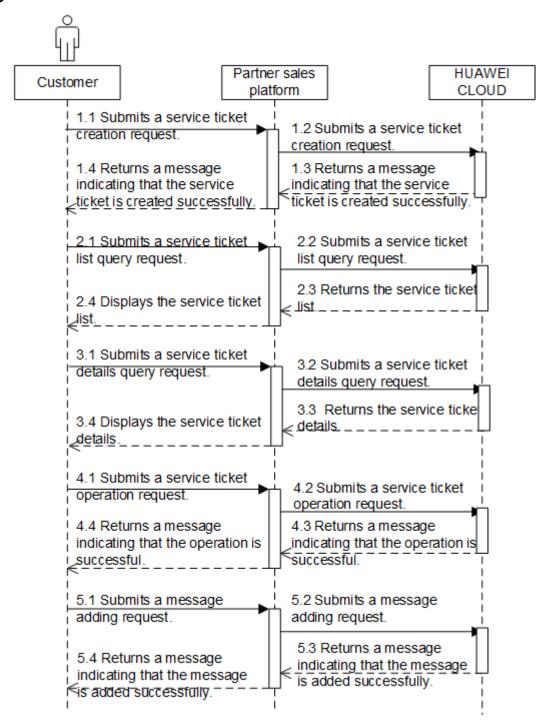

Related APIs

For details, see **Service Ticket Open APIs**.

Adding messages	https://support.huaweicloud.com/intl/en-us/ api-ticket/ticket_api_10007.html

For details, see **Service Ticket Open APIs**.

13 Appendix

13.1 Creating a Bucket

If a partner wants to query the file of the monthly bill details of a partner, the partner needs to create a bucket to store the monthly bill details files uploaded by HUAWEI CLOUD.

If a partner's customers buy products from HUAWEI CLOUD Chinese mainland website and want to perform real-name authentication, customers need to upload pictures of the certificates to a specified bucket for HUAWEI CLOUD to read to complete the real-name authentication.

You can create buckets on the Object Storage Service (OBS) management console. A bucket is a container for storing your data (objects) in OBS. Before you store data in OBS, you need to create a bucket. For details about how to create a bucket, see **Creating a Bucket**.

□ NOTE

- A partner account cannot be used to purchase resources. Therefore, partners need to use a common HUAWEI CLOUD account to log in to the system and create a bucket.
- To change a bucket, partners need to go to the configuration modification page, cancel subscription to all files, and disable attachment uploading for real-name authentication. Then, the partners can add a bucket on the configuration modification page.
- Different partners cannot share the same bucket.
- Only OBS buckets purchased on HUAWEI CLOUD in the Hong Kong region can be used.
- After the default encryption is enabled for a bucket, all objects uploaded to the bucket are encrypted. The **obs/default** key is used for encryption by default, and the files stored in the bucket cannot be downloaded.

Default Encryption	Enable
--------------------	--------

13.2 Obtaining the SP Metadata File

The **SP Metadata** file is the metadata file of the trustworthy SAML service provider. It contains the HUAWEI CLOUD SAML public key information and response path information.

If a partner switches to HUAWEI CLOUD from the partner sales platform **through the web UI**, the partner sales platform can check whether HUAWEI CLOUD SAML messages are reliable using this public key.

Procedure

- **Step 1** Sign in to Huawei Cloud as a partner. On the top navigation bar, select **Support** > **Open APIs**.
- Step 2 Click Obtain SP Metadata File under Prepare.

Step 3 Upload the SP Metadata file to the IDP server of the partner's self-built platform. The file is used to verify the SAML message when a customer logs in to the partner's self-built platform and switches to HUAWEI CLOUD.

----End

13.3 Generating the IDP Metadata File

Before connecting to HUAWEI CLOUD, the partner sales platform needs to prepare the **IDP Metadata** file (metadata file of the enterprise identity provider). The file contains the SAML public key and response path information. If a partner switches to HUAWEI CLOUD from the partner sales platform **through the web UI**, HUAWEI CLOUD can check whether SAML messages from the partner sales platform are reliable using this public key.

Do not include sensitive IDP information, such as IDP user names, passwords, or other confidential information.

Example of the IDP Metadata File (Saved Using UTF-8)

An example of the **IDP Metadata** generated based on the SAML2.0 protocol is as follows:

```

```

Parameter Description

Change the content in bold tags in the preceding example based on the site requirements. For details about the parameters, see **Table 13-1**.

Table 13-1 Parameter description

</md:EntityDescriptor>

Parameter	Description
entityID	Indicates the unique partner ID.
	You are advised to use a domain name and ensure that the value is globally unique. The value must contain https://.
	Example: https://www.test.com

Parameter	Description
<ds:x509certificate></ds:x509certificate>	Indicates a certificate containing the public key, which is used for signature verification. To ensure security, you are advised to use a public key greater than or equal to 2048 bits. HUAWEI CLOUD uses the signature certificate in the IDP Metadata file to verify the credibility and integrity of messages transmitted during the authentication. For details, see Generating a Certificate.
Location in <md:singlelo goutService</md:singlelo 	The partner IDP server provides the session deregistration function. After a partner's customer deregisters a session in HUAWEI CLOUD IAM, a message is returned to the address in server redirection mode. Example: https://www.test.com/saml/logout
Location in <md:singlesig nOnService</md:singlesig 	Indicates the address for the IDP server of the partner sales platform processing SAML requests during SSO. The server redirection mode is used. This address is defined by partners for receiving and processing SAML requests and generating SAML responses.
	Example: https://www.test.com/saml/login

13.4 Sample Code for Parsing the SAMLRequest

 Sample code of the "URL decoding > decoding with Base64 > decompressing (zip.inflate)" process

```
package org.apache;
import java.io.*;
import org.opensaml.xml.util.Base64;
import java.util.zip.InflaterInputStream;
import java.util.zip.Inflater;
class SamlRequestDecoder {
  public static void main(String[] args) throws UnsupportedEncodingException {
    String samlRequest = "hZJBb9swDIX%2Fiqa77dho0kyIU2QNigboNq9xd9hlkGWm1ipLsSjF7b
%2Bv7KRbhwHZlSK%2FR73HxdVzq8qBLEqic5rGE0pAC1NL%2FZjTh
%2FImmtOr5QJ5q7I9W3nX6HvoPKAjYVAjÖ77k1FvNDEeJTPMWkDnBtqvPdyyLJ2xvjTPCKEpWiGBdkLo2
Gn0Ldgv2IAU83N
%2FltHFujyxJeFCJG897kEIZX8fCtGPRy2SQSwbwPyRK1mErqbkbfzLAAqvpXajG07SHauT4MJaEhWovXDLi
EwHaefuSgMAPyjxKfdvHXAwYSm6MFTB%2BO6c7rhAo2axz%2BtM12ZOqZ7rreDdT1aHqU9F1T5Wqs
%2FYSm19TefkcWrHgiPIAf4YRPWw0Oq5dTrNJOo%2FSNMpm5eQjS1M2nccXF7MflBQnyz5JfYzinL
%2FVsQnZbVkWUfF1W1Ly%2FS3S0EBPAbJR3b5P7jyYv5lMl2fDWSTv%2Bb%2FP5UsAbtaFUVK8kJVSpr
%2B2wF1ww1kPo7ktd%2BdXGCqyjnZjK3OWa5QhL0q2xYD%2F5rmSOwn2P%2BdDk%2BVpyb
%2BvePkK"
    byte[] decodedBytes = Base64.decode(java.net.URLDecoder.decode(samlRequest, "utf-8"));
       ByteArrayInputStream bytesIn = new ByteArrayInputStream(decodedBytes);
       InflaterInputStream in = new InflaterInputStream(bytesIn, new Inflater(true));
       byte[] buffer = new byte[decodedBytes.length];
       ByteArrayOutputStream out = new ByteArrayOutputStream();
       for (int bytesRead = 0; bytesRead != -1; bytesRead = in.read(buffer)) {
         out.write(buffer, 0, bytesRead);
       System.out.println(new String(out.toByteArray(), "UTF-8"));
    catch (Exception e) {
```

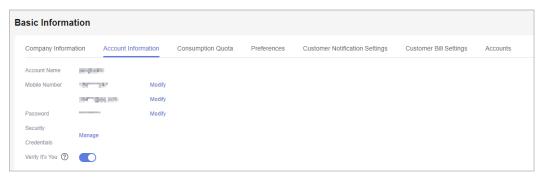

} }

• The parsed **samlRequest.xml** content is similar to the following:

13.5 How Do I Check the Partner ID?

You can obtain the partner ID on the My Credentials page.

- **Step 1** Sign in to **Huawei Cloud** as a partner.
- **Step 2** In the drop-down list of your account name, click **Partner Center** to go to the Partner Center.
- **Step 3** Under the account name, select **Partner Information** > **Basic Information**.
- **Step 4** Click **Account Information**.

Step 5 Click Manage.

On My Credentials page, check the Account ID, which is your partner ID.

----End

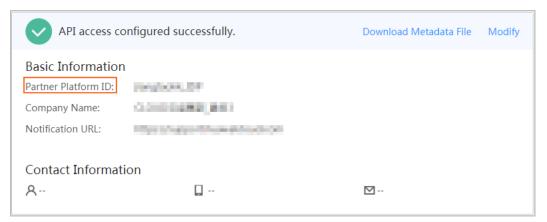

13.6 How Do I Obtain the xaccountType Value?

The xaccountType value is the system ID of your partner sales platform. You can obtain the ID of your partner sales platform on the **Configure** page.

NOTICE

To obtain the value of **xaccountType**, you need to configure the access parameters on the **Support** > **Open APIs** page of Partner Center first. For details, see **Basic Configuration**.

After you configure the access parameters, you can obtain the **xaccountType** value (**Partner Platform ID** value) on the **Configure** page.

13.7 Generating a Certificate

A partner can purchase certificates issued by commercial CA or use OpenSSL to generate free certificates. There are many OpenSSL commands for generating certificates. This section describes the recommended OpenSSL commands.

Step 1 Generate the RSA public-private key pair of CA.

Command: openssl genrsa [-out filename] [-aes256] [numbits]

Example: openssl genrsa -out CAkey.pem -aes256 2048

When the command is executed, a message is displayed on the OpenSSL UI to prompt you to manually enter the password of the generated private key file. The password automatically derives an encryption key and encrypts the private key file.

Parameter	Description	
[-out filename]	Indicates the name and path of the file that stores the public-private key pair.	
[-aes256]	Indicates that the encryption algorithm is AES256-CBC.	
	You can also use other encryption algorithms, such as -des , -des3 , -aes128 , and -idea . The recommended symmetric encryption algorithms are AES (128 or higher bits). Therefore, AES256 is recommended. If no encryption algorithm is specified in the command for generating the public-private key pair, the generated key-pair file is not protected by the password.	
[numbers]	Indicates the length of the generated public-private key pair. The recommended asymmetric encryption algorithm is RSA (2048 bits or higher). Therefore, the recommended length of the public-private key pair has 2048 bits.	

```
ecs-5052:/etc/ssl # openssl genrsa -out CAkey.pem -aes256 2048

Generating RSA private key, 2048 bit long modulus

****

e is 65537 (0x10001)

Enter pass phrase for CAkey.pem:

Verifying - Enter pass phrase for CAkey.pem:

ecs-5052:/etc/ssl #
```

Step 2 Use the CA private key to perform self signature and generate a root certificate.

Command: openssl req [-x509] [-new] [-key filename] [-out filename] [-md2|-md5|-sha1|-mdc2|-sha256] [-days n] [-config path of openssl.cnf]

Example: openssl req -x509 -new -key CAkey.pem -sha256 -out CA.pem -days 3650 -config openssl.cnf

In the example, **Cakey.pem** is the private key file generated in **Step 1**. When the command is executed, a message is displayed on the OpenSSL UI to prompt you to manually enter the password of the private key file generated in **Step 1** and information of the certificate applicant.

Table 13-3 Parameter description

Parameter	Description	
[-x509]	Generates the root CA certificate. The extension item of the certificate is specified in the config file.	
[-new]	Generates a new Certificate Secure Request (CSR) file. If this parameter is used together with -x509, a self-signed root certificate file is generated. In this case, you need to enter the necessary information for creating a CSR file. The required information is defined in the config file.	
[-key filename]	Indicates the source of the certificate private key file. The format of the file is PKCS#8 .	
[-out filename]	Generates the certificate request file. If -x509 is specified, a self-signed root certificate file is generated. By default, a standard CSR file is generated.	
[-md2 -md5 - sha1 -mdc2 - sha256]	Indicates the hash algorithm of the certificate. It is recommended to use SHA256 in the signature scenario. In addition, because the RSA public-private key pair is generated in Step 1 , the signature algorithm specified here is SHA256RSA.	
[-days n]	Indicates the validity period of the certificate with the signature. If this parameter is not specified, the validity period of the generated certificate is 30 days (default). Generally, it is recommended to set the validity period of the generated certificate to 10 years. That is, the value of n is 3650 .	
[-config path of openssl.cnf]	Indicates the name and path of the openssl.cnf configuration file.	

```
ecs-5052:/etc/ssl # openssl req -x509 -new -key CAkey.pem -sha256 -out CA.pem -days 3650 -config openssl.cnf
Enter pass phrase for CAkey.pem:
You are about to be asked to enter information that will be incorporated
into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.

Country Name (2 letter code) [AU]:
State or Province Name (full name) [Some-State]:
Locality Name (eg, city) [1:
Organization Name (eg, company) [Internet Widgits Pty Ltd]:
Organizational Unit Name (eg, section) [1:
Common Name (e.g. server FODN or YOUR name) [1:
```

Step 3 Generates the public-private key pair of the device certificate.

The command for generating the public-private key pair of the device certificate. The command is the same as that for generating the public-private key-pair of the CA certificate.

Example: openssl genrsa -out Devicekey.pem -aes256 2048

Devicekey.pem is the file that stores the public-private key of the device certificate. When the command is executed, a message is displayed on the OpenSSL UI to prompt you to manually enter the password of the generated private key file. The password automatically derives an encryption key and encrypts the private key file.

```
ecs-5052:/etc/ssl # openssl genrsa -out Devicekey.pem -aes256 2048
Generating RSA private key, 2048 bit long modulus

.....***

e is 65537 (0x10001)
Enter pass phrase for Devicekey.pem:
Verifying - Enter pass phrase for Devicekey.pem:
```

Step 4 Generates a CSR file of the device certificate.

Command: openssl req [-new] [-key filename] [-out filename] [-config path of openssl.cnf]

Example: openssl req -new -key Devicekey.pem -out DeviceCert.csr -config openssl.cnf

In the example, **Devicekey.pem** is the private key file generated in **Step 3**. When the command is executed, a message is displayed on the OpenSSL UI to prompt you to manually enter the password of the private key file generated in **Step 3** and information of the certificate applicant.

Table 13-3 describes the parameters.

```
ers-5052:/etc/ssl t openssl req -new -key Devicekey.pem -out DeviceCert.csr -config openssl.cnf
Enter pass phrase for Devicekey.pem:
You are about to be asked to enter information that will be incorporated
into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.

Country Name (2 letter code) [AU]:
State or Province Name (full name) [Some-State]:
Locality Name (eq. city) [1:
Organization Name (eq. company) [Internet Widgits Pty Ltd]:
Organization Name (eg. server FODN or YOUR name) [1:
Enail Address [1:
Please enter the following 'extra' attributes
to be sent with your certificate request
A challenge password [1:
Am optional company name [1:
```

Step 5 Use the CA private key to issue the device certificate.

Command: openssl x509 [-req] [-in filename] [-out filename] [-CA filename] [-CAkey filename] [-md2|-md5|-sha1|-mdc2|-sha256] [-days arg] [-CAcreateserial] [-extfile filename] [-extensions v3_req]

Example: openssl x509 -req -in DeviceCert.csr -out DeviceCert.pem -CA CA.pem -CAkey CAkey.pem -sha256 -days 3650 -CAcreateserial -extensions v3_req -extfile openssl.cnf

When the command is executed, a message is displayed on the OpenSSL UI to prompt you to manually enter the password of the CA root private key file generated in **Step 1**.

Table 13-4 Parameter description

Parameter	Description		
[-req]	Indicates that the input file (the file following the -in parameter) is the CSR file (in x509 commands).		
[-in filename]	Indicates the name of the input file. The file is the CSR file of the device certificate generated in Step 4 .		
[-out filename]	Indicates the name of the generated file. The file is the device certificate file.		
[-CA filename]	Indicates the name of the CA certificate file for signature, that is, the CSR file generated in Step 2 .		
[-CAkey filename]	Indicates the CA private key file, that is, the RSA public- private key pair of CA generated in Step 1 .		
[-md2 -md5 - sha1 -mdc2 - sha256]	Indicates the hash algorithm of the certificate. It is recommended to use SHA256 in the signature scenario. In addition, because the RSA public-private key pair is generated in Step 1 , the signature algorithm specified here is SHA256RSA.		
[-days n]	Indicates the validity period of the certificate with the signature. If this parameter is not specified, the validity period of the generated certificate is 30 days (default). Generally, it is recommended to set the validity period of the generated certificate to 10 years. That is, the value of n is 3650 .		
[-CAcreateserial]	If there is no CA serial number file (default file name CA.srl), one CA serial number file will be generated. If there is a default CA serial number file, the default file is used. The serial number increases by one every time when a certificate is issued.		
[-extfile filename]	Indicates the name of the file containing the certificate extension item. In the example, the file name is openssl.cnf . If this parameter is not specified, the generated certificate does not contain any extension item, that is, the generated certificate is of the x.509 v1 version.		
[-extensions section]	Indicates the extended items in the issued certificate file. If this parameter is not specified, the default value is v3_ca, indicating that a CA root certificate is generated. In this example, the device certificate is to be issued. Therefore, the section value is set to v3_req, indicating that the basic constraint of the generated certificate is Subject Type=End Entity (the certificate is a terminal entity certificate).		

ecs-5952:/ztc/ssl || openssl x509 -req -in DeviceCert.csr -out DeviceCert.pen -CA CA.pen -CAkey CAkey.pen -sha256 -days 3650 -CAc reateserial -extensions v3_req -extfile openssl.cnf Signature ok sub_lect=/C= /ST= /L= /O= /OH= /CN= /cnailAddress= Getting CA Private Key Enter pass phrase for CAkey.pen: Step 6 The body of the DeviceCert.pem file (excluding the header and tail of the file) generated in Step 5 is the values of <ds:X509Certificate> </ds:X509Certificate> in Example of the IDP Metadata File (Saved Using UTF-8).

----End

13.8 HUAWEI CLOUD Environment and Address

Environment	Description	Address
Login address provided by IAM	Indicates the address provided by IAM for the partner to switch to the page from the partner sales platform for registering or associating a HUAWEI CLOUD account. It is not the API path (endpoint) provided by IAM.	https:// auth.huaweicloud.com /

Environment	Description	Address
Address of obtaining the SP Metadata file	The partner needs to upload the SP Metadata file to the IDP server on the partner sales platform, use the public key in the SP Metadata file to verify the message received from HUAWEI CLOUD, and establish the trust relationship with IAM.	https:// auth.huaweicloud.co m/authui/saml/ metadata.xml? unsigned=true The unsigned parameter indicates whether to sign the packet and is optional. Signature verification prevents the file content from being tampered with.
		 If the metadata content contains the unsigned parameter and its value is true, the obtained content does not have the signature information.
		• If the metadata content does not contain the unsigned parameter or its value is not true, the obtained content contains the signature information, and so the signature verification can be performed. NOTE When logging in to the address, the content of the metadata file is displayed. Press ctrl+s to save the content.
CBC request address	Indicates the path (endpoint) provided by CBC to access the partner operation capability. The partner adds the address and	https://bss- intl.myhuaweicloud.co m
	the URI of a specific API to access the API.	

Environment	Description	Address
Partner Center	Indicates the operation management UI provided by HUAWEI CLOUD for the partner.	https://account- intl.huaweicloud.com /obmgr/#/obmgr/ index
My Account	Common customers (not partners) can view with basic account information, perform user authentication, configure preferences, and view their privileges and recommended operation management pages.	https://account- intl.huaweicloud.com /usercenter/#/ accountindex/ accountInfo
Billing Center	HUAWEI CLOUD provides the operation management UI for common customers not partners to recharge, renew, view orders, view financial information, view vouchers and discounts, apply for contracts, issue invoices, and perform unsubscription and changes.	https://account- intl.huaweicloud.com /usercenter
Console	Common customers (not partners) can log in to the HUAWEI CLOUD management console to view, purchase, and use HUAWEI CLOUD services.	https://console- intl.huaweicloud.com /console/

13.9 Network Connectivity Test Method

You can run the command (curl -kv https://apigw-external-lb-waf.ap-southeast-3.myhuaweicloud.com) to test connectivity through a proxy or a public IP. If the returned result includes a line starting with connected to, the new IP is accessible.
