1 Calling APIs

1.1 Making an API Request

This section describes the structure of a REST API request, and uses the IAM API for obtaining a user token as an example to demonstrate how to call an API. The obtained token can then be used to authenticate the calling of other APIs.

Request URI

A request URI is in the following format:

{URI-scheme} :// {Endpoint} / {resource-path} ? {query-string}

Although a request URI is included in the request header, most programming languages or frameworks require the request URI to be transmitted separately.

- **URI-scheme:**
Protocol used to transmit requests. All APIs use HTTPS.
- **Endpoint:**
Domain name or IP address of the server bearing the REST service. The endpoint varies between services in different regions. It can be obtained from [Regions and Endpoints](#).
- **resource-path:**
Access path of an API for performing a specified operation. Obtain the path from the URI of an API. For example, the **resource-path** of the API used to obtain a user token is **/v3/auth/tokens**.
- **query-string:**
Query parameter, which is optional. Ensure that a question mark (?) is included before each query parameter that is in the format of "Parameter name=Parameter value". For example, **?limit=10** indicates that a maximum of 10 data records will be displayed.

NOTE

To simplify the URI display in this document, each API is provided only with a **resource-path** and a request method. The **URI-scheme** of all APIs is **HTTPS**, and the endpoints of all APIs in the same region are identical.

Request Methods

The HTTP protocol defines the following request methods that can be used to send a request to the server:

- **GET**: requests the server to return specified resources.
- **PUT**: requests the server to update specified resources.
- **POST**: requests the server to add resources or perform special operations.
- **DELETE**: requests the server to delete specified resources, for example, an object.
- **HEAD**: same as GET except that the server must return only the response header.
- **PATCH**: requests the server to update partial content of a specified resource. If the resource does not exist, a new resource will be created.

For example, in the case of the API used to obtain a user token, the request method is POST. The request is as follows:

```
POST https://{{endpoint}}/v3/auth/tokens
```

Request Header

You can also add additional header fields to a request, such as the fields required by a specified URI or HTTP method. For example, to request for the authentication information, add **Content-Type**, which specifies the request body type.

Common request header fields are as follows:

- **Content-Type**: specifies the request body type or format. This field is mandatory and its default value is **application/json**. Other values of this field will be provided for specific APIs if any.
- **X-Auth-Token**: specifies a user token only for token-based API authentication. The user token is a response to the API used to obtain a user token. This API is the only one that does not require authentication.

NOTE

In addition to supporting token-based authentication, APIs also support authentication using access key ID/secret access key (AK/SK). During AK/SK-based authentication, an SDK is used to sign the request, and the **Authorization** (signature information) and **X-Sdk-Date** (time when the request is sent) header fields are automatically added to the request.

For more information, see [AK/SK-based Authentication](#).

The API used to obtain a user token does not require authentication. Therefore, only the **Content-Type** field needs to be added to requests for calling the API. An example of such requests is as follows:

```
POST https://{{endpoint}}/v3/auth/tokens
Content-Type: application/json
```

Request Body

The body of a request is often sent in a structured format as specified in the **Content-Type** header field. The request body transfers content except the request header.

The request body varies between APIs. Some APIs do not require the request body, such as the APIs requested using the GET and DELETE methods.

In the case of the API used to obtain a user token, the request parameters and parameter description can be obtained from the API request. The following provides an example request with a body included. Set **username** to the name of a user, **domainname** to the name of the account that the user belongs to, ********* to the user's login password, and **xxxxxxxxxxxxxx** to the project name, such as **eu-west-0**. You can learn more information about projects from [Regions and Endpoints](#). Check the value of the **Region** column.

NOTE

The **scope** parameter specifies where a token takes effect. You can set **scope** to an account or a project under an account. In the following example, the token takes effect only for the resources in a specified project. For more information about this API, see "Obtaining a User Token".

```
POST https://{{endpoint}}/v3/auth/tokens
Content-Type: application/json
{
  "auth": {
    "identity": {
      "methods": [
        "password"
      ],
      "password": {
        "user": {
          "name": "username",
          "password": "*****",
          "domain": {
            "name": "domainname"
          }
        }
      }
    },
    "scope": {
      "project": {
        "name": "xxxxxxxxxxxxxx"
      }
    }
  }
}
```

If all data required for the API request is available, you can send the request to call the API through [curl](#), [Postman](#), or coding. In the response to the API used to obtain a user token, **x-subject-token** is the desired user token. This token can then be used to authenticate the calling of other APIs.

1.2 Authentication

Requests for calling an API can be authenticated using either of the following methods:

- Token-based authentication: Requests are authenticated using a token.
- AK/SK-based authentication: Requests are authenticated by encrypting the request body using an AK/SK pair. This method is recommended because it provides higher security than token-based authentication.

Token-based Authentication

NOTE

The validity period of a token is 24 hours. When using a token for authentication, cache it to prevent frequently calling the IAM API used to obtain a user token.

A token specifies temporary permissions in a computer system. During API authentication using a token, the token is added to requests to get permissions for calling the API.

The token can be obtained by calling the required API. For more information, see Obtaining a User Token. A project-level token is required for calling this API, that is, **auth.scope** must be set to **project** in the request body. Example:

```
{  
    "auth": {  
        "identity": {  
            "methods": [  
                "password"  
            ],  
            "password": {  
                "user": {  
                    "name": "username",  
                    "password": "*****",  
                    "domain": {  
                        "name": "domainname"  
                    }  
                }  
            }  
        },  
        "scope": {  
            "project": {  
                "name": "xxxxxxx"  
            }  
        }  
    }  
}
```

After a token is obtained, the **X-Auth-Token** header field must be added to requests to specify the token when calling other APIs. For example, if the token is **ABCDEFJ....**, **X-Auth-Token: ABCDEFJ....** can be added to a request as follows:

```
POST https://{{endpoint}}/v3/auth/projects  
Content-Type: application/json  
X-Auth-Token: ABCDEFJ....
```

AK/SK-based Authentication

NOTE

AK/SK-based authentication supports API requests with a body not larger than 12 MB. For API requests with a larger body, token-based authentication is recommended.

In AK/SK-based authentication, AK/SK is used to sign requests and the signature is then added to the requests for authentication.

- AK: access key ID, which is a unique identifier used in conjunction with a secret access key to sign requests cryptographically.
- SK: secret access key used in conjunction with an AK to sign requests cryptographically. It identifies a request sender and prevents the request from being modified.

In AK/SK-based authentication, you can use an AK/SK to sign requests based on the signature algorithm or use the signing SDK to sign requests. For details about how to sign requests and use the signing SDK, see [API Signature Guide](#).

NOTICE

The signing SDK is only used for signing requests and is different from the SDKs provided by services.

1.3 Response

Status Codes

After sending a request, you will receive a response containing the status code, response header, and response body.

A status code is a group of numbers ranging from 1xx to 5xx. It indicates the status of a response. For more information, see [Status Code](#).

For example, if status code **201** is returned for calling the API used to obtain a user token, the request is successful.

Response Header

A response header corresponds to a request header, for example, **Content-Type**.

Figure 1-1 shows the response header for the API of obtaining a user token, in which **x-subject-token** is the desired user token. Then, you can use the token to authenticate the calling of other APIs.

Figure 1-1 Header of the response to the request for obtaining a user token

```
connection → keep-alive
content-type → application/json
date → Tue, 12 Feb 2019 06:52:13 GMT
server → Web Server
strict-transport-security → max-age=31536000; includeSubdomains;
transfer-encoding → chunked
via → proxy A
x-content-type-options → nosniff
x-download-options → noopener
x-frame-options → SAMEORIGIN
x-iam-trace-id → 218d45ab-d674-4995-af3a-2d0255ba41b5
x-subject-token
→ MIIYXQYJKoZIhvNAQcColIYTjCCGEoCAQEExDTAL8glghkgBZQMEAegwgharBgkqhkiG9w0BBwGgg hacBIIWmHsIdG9rZW4iOnsiZXhwaXJlc19hdCI6ijlwMTktMDitMTNUMCfj3kJ56gqKnPvNRbW2eZ5eb78SzOkgjAcgkIq01wi4JlGzrpdi8LGXK5bxldfq4lqHCYb8P4NaY0NYejcAgzjVeFIytLWT1GSO0zxKZmlQHQj82H8qHdgIZ09fuEbL5dMhdavj+33wElxHRC9187o+k9-
j+CMZSEB7bUGd5Uj6eRASX1jiPPEGA270g1FruooL6jqglfkNPQuFSOU8+uSstVwRtNfsC+qTp22Rkd5MCqFGQ8LcuUxC3a+9CMBnOintWW7oeRUvhVpxk8pxiX1wTEboXRzT6MUbpvGw-oPNFYxjCKnoH3HRozv0vN--n5d6Nbvg==

x-xss-protection → 1; mode=block;
```

(Optional) Response Body

A response body is generally returned in a structured format, corresponding to the **Content-Type** in the response header, and is used to transfer content other than the response header.

The following shows part of the response body for the API to obtain a user token. For the sake of space, only part of the content is displayed here.

```
{  
  "token": {  
    "expires_at": "2019-02-13T06:52:13.855000Z",  
    "methods": [  
      "password"  
    ],  
    "catalog": [  
      {  
        "endpoints": [  
          {  
            "region_id": "xxxxxxxx",  
.....
```

If an error occurs during API calling, the system returns an error code and a message to you. The following shows the format of an error response body:

```
{  
  "error": {  
    "message": "The request you have made requires authentication.",  
    "title": "Unauthorized"  
  }  
}
```

In the preceding information, **error_code** is an error code, and **error_msg** describes the error.

2 API

2.1 Management APIs

2.1.1 Enabling or Disabling a Risk Rule

Function

This API is used to enable or disable a risk rule.

URI

POST /v1/{project_id}/{instance_id}/audit/rule/risk/switch

Table 2-1 Path Parameters

Parameter	Mandatory	Type	Description
instance_id	Yes	String	Instance ID
project_id	Yes	String	Project ID

Request Parameters

Table 2-2 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token.The token can be obtained by calling the IAM API used to obtain a user token. The value of X-Subject-Token in the response header is the user token.

Table 2-3 Request body parameters

Parameter	Mandatory	Type	Description
ids	Yes	String	Risk IDs. Values are separated by commas (,).Risk id can be obtained from this interface:/v1/{project_id}/{instance_id}/dbss/audit/rule/risk
status	Yes	String	Its value can be OFF or ON. Enumeration values: • OFF • ON

Response Parameters

Status code: 200

Table 2-4 Response body parameters

Parameter	Type	Description
status	String	response status

Status code: 400

Table 2-5 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-6 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-7 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-8 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{instance_id}/audit/rule/risk/switch
{
  "ids" : "c7ILB3kBcwCqSg3B2OpF",
  "status" : "OFF"
}
```

Example Responses

Status code: 200

Request succeeded.

```
{
  "status" : "SUCCESS"
}
```

Status code: 400

Invalid request parameter.

```
{
  "error" : {
    "error_code" : "DBSS.XXX",
    "error_msg" : "XXX"
  }
}
```

Status code: 403

Authentication failed.

```
{  
  "error" : {  
    "error_code" : "DBSS.XXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameter.
403	Authentication failed.

Error Codes

See [Error Codes](#).

2.1.2 Enabling or Disabling an Agent

Function

This API is used to enable or disable the agent. An enabled agent collects user access information.

URI

POST /v1/{project_id}/{instance_id}/audit/agent/switch

Table 2-9 Path Parameters

Parameter	Mandatory	Type	Description
instance_id	Yes	String	Instance ID
project_id	Yes	String	Project ID

Request Parameters

Table 2-10 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token. The token can be obtained by calling the IAM API used to obtain a user token. The value of X-Subject-Token in the response header is the user token.

Table 2-11 Request body parameters

Parameter	Mandatory	Type	Description
agent_id	Yes	String	Audit agent ID
status	Yes	Integer	Agent status. 1: enabled; 0: disabled

Response Parameters

Status code: 200

Table 2-12 Response body parameters

Parameter	Type	Description
result	String	Response status.

Status code: 400

Table 2-13 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-14 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-15 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-16 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{instance_id}/audit/agent/switch
{
  "agent_id" : "ASWDSDSDSWEWDSDSD",
  "status" : 1
}
```

Example Responses

Status code: 200

Request succeeded.

```
{
  "result" : "SUCCESS"
}
```

Status code: 400

Invalid request parameter.

```
{
  "error" : {
    "error_code" : "DBSS.XXX",
    "error_msg" : "XXX"
  }
}
```

Status code: 403

Authentication failed.

```
{  
  "error" : {  
    "error_code" : "DBSS.XXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Request succeeded.
400	Invalid request parameter.
403	Authentication failed.

Error Codes

See [Error Codes](#).

2.1.3 Querying Quota Information About an Account

Function

This API is used to query quota information about an account.

URI

GET /v1/{project_id}/dbss/audit/quota

Table 2-17 Path Parameters

Parameter	Mandatory	Type	Description
project_id	No	String	Project ID

Request Parameters

Table 2-18 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-19 Response body parameters

Parameter	Type	Description
audit_quota	Long	Remaining instance quota.
cpu	Long	Remaining CPU quota.
project_id	String	Project ID.
ram	Long	Remaining memory quota.

Status code: 400

Table 2-20 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-21 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-22 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-23 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-24 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-25 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/dbss/audit/quota

Example Responses

Status code: 200

Success

```
{  
  "projectId" : "0250cb8a80c24c0b9f20f557cb159aad",  
  "cpu" : 796,  
  "ram" : 1622016,  
  "audit_quota" : 1  
}
```

Status code: 400

Client error.

```
{  
  "error" : {  
    "error_code" : "DBSS.XXXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Success
400	Client error.
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.1.4 Querying ECS Specifications

Function

This API is used to query ECS specifications.

URI

GET /v1/{project_id}/dbss/audit/specification

Table 2-26 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID

Request Parameters

Table 2-27 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-28 Response body parameters

Parameter	Type	Description
specification	Array of EcsSpecificationBean objects	ECS specifications set

Table 2-29 EcsSpecificationBean

Parameter	Type	Description
azs	Array of strings	Az information list
id	String	ECS specification ID
level	String	Level. [low,medium,high]
name	String	Name. ECS Type name.
proxy	Integer	Proxy Database audit editions Basic:3 Database audit editions Professional:6 Database audit editions Advanced:30
ram	Integer	Memory
vcpus	Integer	CPU
azType	String	Retrun : [null]. There's meaningless at the moment

Status code: 400

Table 2-30 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-31 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-32 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-33 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-34 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-35 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/dbss/audit/specification

Example Responses

Status code: 200

Success

```
{  
    "specification" : [ {  
        "level" : "low",  
        "id" : "s2.xlarge.4",  
        "name" : "s2.xlarge.4",  
        "vcpus" : 4,  
        "ram" : 16384,  
        "proxy" : 3,  
        "azs" : [ "region-01-7a" ]  
    }, {  
        "level" : "medium",  
        "id" : "s2.2xlarge.4",  
        "name" : "s2.2xlarge.4",  
        "vcpus" : 8,  
        "ram" : 32768,  
        "proxy" : 6,  
        "azs" : [ "region-01-7a" ]  
    }, {  
        "level" : "high",  
        "id" : "s3.4xlarge.4",  
        "name" : "s3.4xlarge.4",  
        "vcpus" : 16,  
    } ]  
}
```

```
        "ram" : 65536,  
        "proxy" : 30,  
        "azs" : [ "region-01-7a", "region-01-7b" ]  
    } ]  
}
```

Status code: 400

Client error.

```
{  
  "error": {  
    "error_code": "DBSS.XXXX",  
    "error_msg": "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Success
400	Client error.
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.1.5 Querying AZ Information

Function

This API is used to query AZ information.

URI

GET /v2/{project_id}/dbss/audit/availability-zone

Table 2-36 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID

Request Parameters

Table 2-37 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-38 Response body parameters

Parameter	Type	Description
azs	Array of AzInfo objects	List of available zone information

Table 2-39 AzInfo

Parameter	Type	Description
zone_name	String	available zone name
zone_number	Integer	available zone number
az_type	String	available zone type
alias	String	available zone alias
alias_us	String	available zone alias in English

Status code: 400

Table 2-40 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-41 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.

Parameter	Type	Description
error_msg	String	Error information.

Status code: 403

Table 2-42 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-43 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-44 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-45 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v2/{project_id}/dbss/audit/availability-zone

Example Responses

Status code: 200

Success

```
{  
  "azs": [ {  
    "zone_name": "region-01-7a",  
    "zone_number": 2,  
    "az_type": "normal",

2.1.6 Query Operation Logs

Function

This API is used to query user operation logs.

URI

POST /v1/{project_id}/{instance_id}/dbss/audit/operate-log

Table 2-46 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Request Parameters

Table 2-47 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-48 Request body parameters

Parameter	Mandatory	Type	Description
time	No	TimeRangeBean object	Time range
user_name	No	String	Filter users to obtain operation logs
operate_name	No	String	Filter object names to obtain operation logs The value can be : DOWNLOAD
result	No	String	Filter execution results to obtain operation logs [success, fail]
page	No	String	Page number
size	No	String	Number of records on each page

Table 2-49 TimeRangeBean

Parameter	Mandatory	Type	Description
end_time	No	String	Start time. This parameter must be used together with end_time. The format must be yyyy-MM-dd HH:mm:ss.(UTC)
start_time	No	String	End time. This parameter must be used together with start_time. The format must be yyyy-MM-dd HH:mm:ss. (UTC)
time_range	No	String	Query time segment. The value can be : HALF_HOUR HOUR THREE_HOUR TWELVE_HOUR DAY (24 hours), WEEK (7 days), or MONTH (30 days). Enumerated value: HALF_HOUR HOUR THREE_HOUR TWELVE_HOUR DAY WEEK MONTH

Response Parameters

Status code: 200

Table 2-50 Response body parameters

Parameter	Type	Description
total_num	Integer	Total
operate_log	Array of OperateLogInfo objects	Operation log list

Table 2-51 OperateLogInfo

Parameter	Type	Description
id	String	Operation log ID
user	String	Operation log user
time	String	Time when a record is generated. The format is timestamp.

Parameter	Type	Description
function	String	Function type of the record.[Create new protected database, Create new user's email config, Update user's email config, Update user's alarm config, Delete system alarm record, Rules -> Sensitive Data Protect and so on.]
action	String	Operation type of the record. create: create update: update operate: operation (switch) delete: delete
name	String	Operation object of the record.
description	String	Description of the record.
result	String	Execution result of the user in the record. success indicates success. fail indicates failure.

Status code: 400

Table 2-52 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-53 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-54 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-55 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-56 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-57 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{instance_id}/dbss/audit/operate-log
{
  "time": {
    "time_range": "HOUR"
  },
  "page": 1,
  "size": 10
}
```

Example Responses

Status code: 200

Success

```
{
  "total_num": 3,
  "operate_log": [
    {

Status Codes

Status Code	Description
200	Success
400	Invalid parameter.
403	Authentication failed.
500	Internal server error.

Error Codes

See [Error Codes](#).

2.1.7 Modifying a Security Group

Function

This API is used to modify a security group.

URI

POST /v1/{project_id}/dbss/audit/security-group

Table 2-58 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID

Request Parameters

Table 2-59 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-60 Request body parameters

Parameter	Mandatory	Type	Description
resource_id	Yes	String	Resource ID (DBSS instances ID, the instance ID is not in the basic information.) This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances
securitygroup_ids	Yes	Array of strings	Security group ID list (Only one update is allowed at present)

Response Parameters

Status code: 200

Table 2-61 Response body parameters

Parameter	Type	Description
result	String	Response status.

Status code: 400

Table 2-62 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-63 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-64 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-65 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-66 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-67 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/dbss/audit/security-group
{
  "resource_id" : "062212d8-8e30-4783-9671-43f3f1f3bb1e",
  "securitygroup_ids" : [ "f0fbec06-bcf6-4c7e-99fa-f0ddfb1d9bd" ]
}
```

Example Responses

Status code: 200

Success

""

Status code: 400

Failure

```
{
  "error" : {
    "error_code" : "DBSS.XXXX",
    "error_msg" : "XXX"
  }
}
```

Status Codes

Status Code	Description
200	Success
400	Failure
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.2 Instance Purchase and Query APIs

2.2.1 Querying the Audit Instance List

Function

This API is used to query the audit instance list.

URI

GET /v1/{project_id}/dbss/audit/instances

Table 2-68 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID

Table 2-69 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	String	Offset.
limit	No	String	Number of query records

Request Parameters

Table 2-70 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-71 Response body parameters

Parameter	Type	Description
servers	Array of AuditInstanceListBean objects	Instance information list
total	Integer	Total

Table 2-72 AuditInstanceListBean

Parameter	Type	Description
charge_model	String	Payment mode. Its value can be Period (yearly/monthly) or (Demand) pay-per-use.
comment	String	Remarks.
config_num	Integer	Total number of configured databases.
connect_ip	String	Connection address.
connect_ipv6	String	IPv6 address.
cpu	Integer	Number of CPUs
created	String	Creation time
database_limit	Integer	Total number of supported databases
effect	Integer	1: The resource is frozen and can be released. 2: The resource is frozen and cannot be released. 3: The resource is frozen and cannot be renewed. If the preceding information is not involved, null is returned.
expired	String	Expired time of instances.
id	String	ID (This is an auto-increment parameter and is meaningless at present.)
keep_days	String	Days until expiration.
name	String	Instance alias
new_version	String	If a value is returned, the upgrade is required. If no value is returned, the value is null.
port_id	String	ID of the port that the EIP is bound to
ram	Integer	Memory
region	String	Region where the instance is located
remain_days	String	Days past the expiration date.
resource_id	String	Resource ID (DBSS instances ID, the instance ID is not in the basic information.) This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances
resource_spec_code	String	Instance specifications

Parameter	Type	Description
scene	String	Scenario: Dictionary Value[POLICE,ILLEGAL,VERIFY,PARTNER,ARREA RS,null]
security_group_id	String	Security group
specification	String	Instance specifications
status	String	Instance status. Its value can be: SHUTOFF (disabled), ACTIVE (operations allowed), DELETING (no operations allowed), BUILD (no operations allowed), DELETED (not displayed), ERROR (only deletion allowed), HAWAIT (waiting for the standby to be created; no operations allowed), FROZEN (only renewal, binding, and unbinding allowed) UPGRADEING (no operations allowed)
subnet_id	String	Subnet ID
task	String	Task status. Its value can be: powering-on (the instance is being started and can be bound or unbound), powering-off (the instance is being stopped and can be bound or unbound) rebooting (the instance is being restarted and can be bound or unbound), delete_wait (the instance is waiting to be deleted and no operations are allowed on the cluster or instance), NO_TASK (the instance is not displayed)
version	String	Current version of the instance
vpc_id	String	VPC
zone	String	AZ
upgrade_log	String	Database instance upgradde log.

Status code: 400

Table 2-73 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-74 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-75 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-76 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-77 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-78 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/dbss/audit/instances

Example Responses

Status code: 200

Success

2.2.2 Query instance creation task information

Function

This API is used to query instance creation task information.

URI

GET /v1/{project_id}/dbss/audit/jobs/{resource_id}

Table 2-79 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
resource_id	Yes	String	Resource ID (DBSS instances ID, the instance ID is not in the basic information.) This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances

Request Parameters

Table 2-80 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-81 Response body parameters

Parameter	Type	Description
jobs	Array of JobBean objects	job list

Table 2-82 JobBean

Parameter	Type	Description
job_id	String	Task ID, which is used for asynchronous query.
status	String	Status.[SUCCESS,RUNNING,FAIL,INIT,READY]
job_type	String	Job type.This field is not used
server_id	String	VM ID
server_name	String	VM name
begin_time	Long	Task Start time.Displayed with a 13-digit timestamp
end_time	Long	Task End time. Displayed with a 13-digit timestamp
charge_mode	String	Billing mode.[Period,Demand]
error_code	String	Error code(If the creation is successful, the returned value is null.)
fail_reason	String	Failure cause(If the creation is successful, the returned value is null.)

Status code: 400

Table 2-83 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-84 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-85 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-86 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-87 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-88 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/dbss/audit/jobs/{resource_id}

Example Responses

Status code: 200

Success

```
{  
  "jobs" : [ {

Status Code	Description
200	Success
400	Failure
403	Authentication failed.
500	Internal server error.

Error Codes

See [Error Codes](#).

2.2.3 Creating an Audit Instance in Yearly/Monthly Billing Mode

Function

This API is used to Creating an audit instance in yearly/monthly billing mode.

URI

POST /v2/{project_id}/dbss/audit/charge/period/order

Table 2-89 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID

Request Parameters

Table 2-90 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-91 Request body parameters

Parameter	Mandatory	Type	Description
flavor_ref	Yes	String	Specifies the ID of the specifications used by the ECS.
name	Yes	String	ECS name. Value range: Enter a maximum of 64 characters. Only letters, digits, underscores (_), and hyphens (-) are allowed. If the number of ECSs to be created is greater than 1, the length cannot exceed 59 characters.
vpc_id	Yes	String	VPC ID
availability_zone	Yes	String	Availability zone to which the ECS belongs. (Primary and secondary AZs are separated by commas. Example: az1.dc1,az2.dc2)
enterprise_project_id	Yes	String	Enterprise project ID.
nics	Yes	Array of nics objects	NIC of the ECS.
security_groups	Yes	Array of security_groups objects	Information about the security group to which the ECS belongs.
comment	No	String	Remarks
region	Yes	String	ID of the region where the ECS is located.
cloud_service_type	Yes	String	Service type. Default value: hws.service.type.dbss

Parameter	Mandatory	Type	Description
charging_mod e	Yes	Integer	Billing mode: 0: yearly/ monthly 1: pay-per-use
period_type	Yes	Integer	Subscription period type: 0: day 1: week 2: month t3: year 4: hour 5: absolute time
period_num	Yes	Integer	Subscription period
subscription_n um	Yes	Integer	Subscription quantity. Only one set of DBSS can be subscribed to.
product_infos	Yes	Array of product_infos objects	Product list
tags	No	Array of KeyValueBea n objects	Resource tag
promotion_inf o	No	String	Discount information
is_auto_renew	No	Integer	Auto-renewal: The value 1 indicates auto-renewal is enabled, and the value 0 indicates auto-renewal is disabled.

Table 2-92 nics

Parameter	Mandatory	Type	Description
subnet_id	Yes	String	Subnet ID of the NIC.
ip_address	No	String	Specifies the IP address. If the value of this parameter is left blank or is set to an empty string, the IP address is automatically assigned.

Table 2-93 security_groups

Parameter	Mandatory	Type	Description
id	Yes	String	Specifies the ID of the security group corresponding to the ECS. This ID takes effect for the NIC configured on the ECS.

Table 2-94 product_infos

Parameter	Mandatory	Type	Description
product_id	Yes	String	Product ID
cloud_service_type	Yes	String	Service type. Default value: hws.service.type.dbss
resource_type	Yes	String	Resource type. Default value: hws.resource.type.dbss
resource_spec_code	Yes	String	Resource specifications.dbss.bypassaudit.low, dbss.bypassaudit.medium, dbss.bypassaudit.high
product_spec_desc	Yes	String	Product specification description.

Table 2-95 KeyValueBean

Parameter	Mandatory	Type	Description
key	Yes	String	Key
value	Yes	String	Value

Response Parameters

Status code: 200

Table 2-96 Response body parameters

Parameter	Type	Description
description	String	Description
code	String	Return code
order_id	String	Order ID

Status code: 400

Table 2-97 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-98 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-99 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-100 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-101 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-102 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v2/{project_id}/dbss/audit/charge/period/order

2.3 Database APIs

2.3.1 Querying Databases

Function

This API is used to query databases.

URI

GET /v1/{project_id}/{instance_id}/dbss/audit/databases

Table 2-103 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Table 2-104 Query Parameters

Parameter	Mandatory	Type	Description
status	No	String	Database status [ON,OFF]
offset	No	String	Offset
limit	No	String	Number of query records

Request Parameters

Table 2-105 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-106 Response body parameters

Parameter	Type	Description
databases	Array of DataBaseBean objects	Database information list
total	Integer	Total

Table 2-107 DataBaseBean

Parameter	Type	Description
database	DataBase object	Database information

Table 2-108 DataBase

Parameter	Type	Description
id	String	Database ID. This parameter can be obtained through the interface provided by the RDS service: GET /v3/{project_id}/instances
name	String	Database name. This parameter can be obtained through the interface provided by the RDS service: GET /v3/{project_id}/instances
type	String	Type of the added database. Enumerated values: MYSQL ORACLE POSTGRESQL SQLSERVER DAMENG TAURUS DWS KINGBASE GAUSSDBOPENGAUSS GREENPLUM HIGHGO SHENTONG GBASE8A GBASE8S GBASEXDM MONGODB DDS
version	String	Database version

Parameter	Type	Description
charset	String	Database character set
ip	String	IP address
port	String	Database port
os	String	Database OS
status	String	<p>Database status. This parameter can be obtained through the interface provided by the RDS service: GET /v3/{project_id}/instances</p> <p>GET https://{{Endpoint}}/v3/{{project_id}}/instances</p> <p>id={{id}}&name={{name}}&type={{type}}&datastore_type={{datastore_type}}&vpc_id={{vpc_id}}&subnet_id={{subnet_id}}&offset={{offset}}&limit={{limit}}</p> <p>If the value is BUILD, the instance is being created.</p> <p>If the value is ACTIVE, the instance is normal.</p> <p>If the value is FAILED, the instance is abnormal.</p> <p>If the value is MODIFYING, the instance is being scaled up.</p> <p>If the value is REBOOTING, the instance is being rebooted.</p> <p>If the value is RESTORING, the instance is being restored.</p> <p>If the value is MODIFYING INSTANCE TYPE, the instance is changing from primary to standby.</p> <p>If the value is SWITCHOVER, the primary/standby switchover is being performed.</p> <p>If the value is MIGRATING, the instance is being migrated.</p> <p>If the value is BACKING UP, the instance is being backed up.</p> <p>If the value is MODIFYING DATABASE PORT, the database port is being changed.</p> <p>If the value is SHUTDOWN, the DB instance is stopped.</p>
instance_name	String	Database instance name
audit_status	String	Database running status. Enumerated values: ACTIVE SHUTOFF ERROR

Parameter	Type	Description
agent_url	Array of strings	Unique ID of the agent
db_classification	String	Database type. Its value can be: RDS,ECS (customer-built)
rds_id	String	Rds database ID
rds_obj_info	String	Full Log Audit Bucket Information.
dws_obj_info	String	Full Log Audit Bucket Information.

Status code: 400

Table 2-109 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-110 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-111 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-112 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-113 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-114 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/{instance_id}/dbss/audit/databases

Example Responses

Status code: 200

Success

```
{

2.3.2 Adding an Agent-Free RDS Database

Function

This API is used to add an agent-free RDS database.

URI

POST /v1/{project_id}/{instance_id}/dbss/audit/databases/rds

Table 2-115 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Request Parameters

Table 2-116 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-117 Request body parameters

Parameter	Mandatory	Type	Description
databases	Yes	Array of databases objects	List of added databases
total_count	No	Integer	Total

Table 2-118 databases

Parameter	Mandatory	Type	Description
id	Yes	String	Database ID. This parameter can be obtained through the interface provided by the RDS service: GET /v3/{project_id}/instances
db_name	Yes	String	Database name. This parameter can be obtained through the interface provided by the RDS service: GET /v3/{project_id}/instances

Parameter	Mandatory	Type	Description
status	Yes	String	<p>Database status. This parameter can be obtained through the interface provided by the RDS service: GET /v3/{project_id}/instances</p> <p>GET https://[{Endpoint}]/v3/{project_id}/instances?id={id}&name={name}&type={type}&datastore_type={datastore_type}&vpc_id={vpc_id}&subnet_id={subnet_id}&offset={offset}&limit={limit}</p> <p>If the value is BUILD, the instance is being created.</p> <p>If the value is ACTIVE, the instance is normal.</p> <p>If the value is FAILED, the instance is abnormal.</p> <p>If the value is MODIFYING, the instance is being scaled up.</p> <p>If the value is REBOOTING, the instance is being rebooted.</p> <p>If the value is RESTORING, the instance is being restored.</p> <p>If the value is MODIFYING INSTANCE TYPE, the instance is changing from primary to standby.</p> <p>If the value is SWITCHOVER, the primary/standby switchover is being performed.</p> <p>If the value is MIGRATING, the instance is being migrated.</p> <p>If the value is BACKING UP, the instance is being backed up.</p> <p>If the value is MODIFYING DATABASE PORT, the database port is being changed.</p> <p>If the value is SHUTDOWN, the DB instance is stopped.</p>
port	Yes	String	Database port
ip	Yes	String	IP address

Parameter	Mandatory	Type	Description
instance_name	Yes	String	DB instance name
version	Yes	String	Database version.MySQL 8.0
type	Yes	String	Database type.Support RDS

Response Parameters

Status code: 200

Table 2-119 Response body parameters

Parameter	Type	Description
illegal_db_id	Array of strings	ID of the database instance that fails to be added.
legal_db_id	Array of strings	ID of the database instance that is successfully added.

Status code: 400

Table 2-120 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-121 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-122 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-123 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-124 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-125 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{instance_id}/dbss/audit/databases/rds
{
  "databases": [ {
    "id": "123751d3ee2f47aea64822e98318c6a8in01",

2.4 Tag APIs

2.4.1 Querying Project Tags

Function

This API is used to query project tags.

URI

GET /v1/{project_id}/{resource_type}/tags

Table 2-126 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
resource_type	Yes	String	Resource type.Default usage: auditInstance

Request Parameters

Table 2-127 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-128 Response body parameters

Parameter	Type	Description
tags	Array of tags objects	Tag list

Table 2-129 tags

Parameter	Type	Description
key	String	Key. The value can contain up to 128 characters. The key must comply with the 3.1 KEY character set specifications.
values	Array of strings	Value list. Enter a maximum of 255 characters. The value must comply with specifications described in 3.2 Character Set Specifications for VALUE.

Status code: 400

Table 2-130 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-131 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.

Parameter	Type	Description
error_msg	String	Error information.

Status code: 403

Table 2-132 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-133 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-134 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-135 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/{resource_type}/tags

Example Responses

Status code: 200

Success

```
{  
  "tags" : [ {  
    "key" : "key1",  
    "values" : [ "value1", "value2" ]  
  }, {  
    "key" : "key2",  
    "values" : [ "value1", "value2" ]  
  } ]  
}
```

Status code: 400

Failure

```
{  
  "error" : {  
    "error_code" : "DBSS.XXXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Success
400	Failure
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.4.2 Querying Resource Instances by Tag

Function

This API is used to query resource instances by tag.

URI

POST /v1/{project_id}/{resource_type}/resource-instances/filter

Table 2-136 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
resource_type	Yes	String	Resource type. Default usage: auditInstance

Table 2-137 Query Parameters

Parameter	Mandatory	Type	Description
limit	No	String	Number of records to be queried. This parameter is not available when action is set to count . If action is set to filter , the default value is 1000 . The maximum value is 1000 , and the minimum value is 1 . The value cannot be a negative number.
offset	No	String	The index position. This parameter is not available when action is set to count . If offset is set to N , the resource query starts from the N+1 piece of data. If action is set to filter , the value of offset is 0 by default, indicating that the query starts from the first piece of data. The offset value must be a number and cannot be a negative number.

Request Parameters

Table 2-138 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-139 Request body parameters

Parameter	Mandatory	Type	Description
matches	No	Array of matches objects	Specifies the search field. The tag key is the field to be matched, for example, <code>resource_name</code> . The tag value indicates the value to be matched. The key is a fixed dictionary value and cannot be a duplicate key or unsupported key. Check whether fuzzy match is required based on the key value. For example, if key is set to <code>resource_name</code> , fuzzy search (case-insensitive) is performed by default. If value is empty, exact match is performed. Most services do not have resources without names. In this case, an empty list is returned. If key is <code>resource_id</code> , exact match is used. Only <code>resource_name</code> for key is supported. Other key values will be available later.
not_tags	No	Array of TagKeyValue sBean objects	Tags are excluded, a maximum of 50 tag keys are included, and each tag value can have a maximum of 10 values. Each tag value can be an empty array, but the tag structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns instances containing no tag in this list. Keys are in the AND relationship and values in each key-value structure is in the OR relationship. If no filtering condition is specified, full data is returned.

Parameter	Mandatory	Type	Description
tags	No	Array of TagKeyValue sBean objects	The resources to be queried contain tags listed in tags . Each instance to be queried contains a maximum of 50 keys. Each tag key has a maximum of 10 tag values. The tag value corresponding to each tag key can be an empty array but the structure cannot be missing. Each tag key and each value of the same tag key must be unique. The response returns instances containing all tags in this list. Keys in this list are in the AND relationship and values in each key-value structure are in the OR relationship. If no tag filtering criteria is specified, full data is returned.
tags_any	No	Array of TagKeyValue sBean objects	Any tags are included. A maximum of 50 tag keys are included, and each tag key can have a maximum of 10 values. Each tag value can be an empty array, but the tag structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns instances containing any tag in this list. Keys in this list are in the OR relationship and values in each key-value structure are also in the OR relationship. If no filtering condition is specified, full data is returned.

Parameter	Mandatory	Type	Description
not_tags_any	No	Array of TagKeyValue sBean objects	Tags are excluded, a maximum of 50 tag keys are included, and each tag key can have a maximum of 10 values. Each tag value can be an empty array, but the tag structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns resources containing no tag in this list. Keys in this list are in the OR relationship and values in each key-value structure are also in the OR relationship. If no filtering condition is specified, full data is returned.
without_any_tag	No	Boolean	If this parameter is set to true, all resources without tags are queried. In this case, the tags, tags_any, not_tags, and not_tags_any fields are ignored.

Table 2-140 matches

Parameter	Mandatory	Type	Description
key	No	String	Key
value	No	String	Value

Table 2-141 TagKeyValueBean

Parameter	Mandatory	Type	Description
key	Yes	String	Specifies the tag key. It can contain up to 128 Unicode characters. It cannot be left blank. The system does not verify the character set of key when searching for resources. key cannot be empty, an empty string, or spaces. Before using key , delete single-byte character (SBC) spaces before and after the value.

Parameter	Mandatory	Type	Description
values	Yes	Array of strings	Specifies the tag values. Each value contains a maximum of 255 Unicode characters. Before verifying and using values , delete SBC spaces before and after the value. The tag value can be an empty array but cannot be left blank. If values is left blank, it indicates any_value (querying any value). All values of a tag key are in the OR relationship.

Response Parameters

Status code: 200

Table 2-142 Response body parameters

Parameter	Type	Description
resources	Array of resources objects	Resource instance list
total_count	Integer	Total number of records.

Table 2-143 resources

Parameter	Type	Description
resource_detail	Object	Resource details. Resource details are used for extension. This parameter is left blank by default.
resource_id	String	Resource ID (DBSS instances ID, the instance ID is not in the basic information.) This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances
resource_name	String	Specifies the resource name. If the resource does not have a name, the ID is returned.
tags	Array of tags objects	The tag list. This parameter is an empty array by default if there is no tag.

Table 2-144 tags

Parameter	Type	Description
key	String	Key
value	String	Value

Table 2-145 sys_tags

2.4.3 Querying the Number of Resource Instances by Tag

Function

This API is used to query the number of resource instances by tag.

URI

POST /v1/{project_id}/{resource_type}/resource-instances/count

Table 2-152 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID

Parameter	Mandatory	Type	Description
resource_type	Yes	String	Resource type.Default usage: auditInstance

Request Parameters

Table 2-153 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-154 Request body parameters

Parameter	Mandatory	Type	Description
matches	No	Array of matches objects	Specifies the search field. The tag key is the field to be matched, for example, resource_name . The tag value indicates the value to be matched. The key is a fixed dictionary value and cannot be a duplicate key or unsupported key. Check whether fuzzy match is required based on the key value. For example, if key is set to resource_name , fuzzy search (case-insensitive) is performed by default. If value is empty, exact match is performed. Most services do not have resources without names. In this case, an empty list is returned. If key is resource_id , exact match is used. Only resource_name for key is supported. Other key values will be available later.

Parameter	Mandatory	Type	Description
not_tags	No	Array of TagKeyValue sBean objects	Tags are excluded, a maximum of 50 tag keys are included, and each tag value can have a maximum of 10 values. Each tag value can be an empty array, but the tag structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns instances containing no tag in this list. Keys are in the AND relationship and values in each key-value structure is in the OR relationship. If no filtering condition is specified, full data is returned.
tags	No	Array of TagKeyValue sBean objects	The resources to be queried contain tags listed in tags . Each instance to be queried contains a maximum of 50 keys. Each tag key has a maximum of 10 tag values. The tag value corresponding to each tag key can be an empty array but the structure cannot be missing. Each tag key and each value of the same tag key must be unique. The response returns instances containing all tags in this list. Keys in this list are in the AND relationship and values in each key-value structure are in the OR relationship. If no tag filtering criteria is specified, full data is returned.

Parameter	Mandatory	Type	Description
tags_any	No	Array of TagKeyValue sBean objects	Any tags are included. A maximum of 50 tag keys are included, and each tag key can have a maximum of 10 values. Each tag value can be an empty array, but the tag structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns instances containing any tag in this list. Keys in this list are in the OR relationship and values in each key-value structure are also in the OR relationship. If no filtering condition is specified, full data is returned.
not_tags_any	No	Array of TagKeyValue sBean objects	Tags are excluded, a maximum of 50 tag keys are included, and each tag key can have a maximum of 10 values. Each tag value can be an empty array, but the tag structure cannot be missing. Keys must be unique and values of a key must be unique. The response returns resources containing no tag in this list. Keys in this list are in the OR relationship and values in each key-value structure are also in the OR relationship. If no filtering condition is specified, full data is returned.
without_any_t ag	No	Boolean	If this parameter is set to true, all resources without tags are queried. In this case, the tags, tags_any, not_tags, and not_tags_any fields are ignored.

Table 2-155 matches

Parameter	Mandatory	Type	Description
key	No	String	Key

Parameter	Mandatory	Type	Description
value	No	String	Value

Table 2-156 TagKeyValuesBean

Parameter	Mandatory	Type	Description
key	Yes	String	Specifies the tag key. It can contain up to 128 Unicode characters. It cannot be left blank. The system does not verify the character set of key when searching for resources. key cannot be empty, an empty string, or spaces. Before using key , delete single-byte character (SBC) spaces before and after the value.
values	Yes	Array of strings	Specifies the tag values. Each value contains a maximum of 255 Unicode characters. Before verifying and using values , delete SBC spaces before and after the value. The tag value can be an empty array but cannot be left blank. If values is left blank, it indicates any_value (querying any value). All values of a tag key are in the OR relationship.

Response Parameters

Status code: 200

Table 2-157 Response body parameters

Parameter	Type	Description
resources	Array of resources objects	Resource instance list
total_count	Integer	Total number of records.

Table 2-158 resources

Parameter	Type	Description
resource_detail	Object	Resource details. Resource details are used for extension. This parameter is left blank by default.
resource_id	String	Resource ID (DBSS instances ID, the instance ID is not in the basic information.) This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances
resource_name	String	Specifies the resource name. If the resource does not have a name, the ID is returned.
tags	Array of tags objects	The tag list. This parameter is an empty array by default if there is no tag.

Table 2-159 tags

Parameter	Type	Description
key	String	Key
value	String	Value

Table 2-160 sys_tags

Parameter	Type	Description
key	String	Key

Parameter	Type	Description
error	Object	Error message.

Table 2-162 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-163 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-164 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-165 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-166 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{resource_type}/resource-instances/count
```

```
{
  "matches": [ {
    "key": "resource_name",
    "value": "resource1"
  }
]
```

```
    },
    "not_tags" : [ {
        "key" : "key1",
        "values" : [ "*value1", "value2" ]
    }],
    "tags" : [ {
        "key" : "key1",
        "values" : [ "*value1", "value2" ]
    }],
    "tags_any" : [ {
        "key" : "key1",
        "values" : [ "value1", "value2" ]
    }],
    "not_tags_any" : [ {
        "key" : "key1",
        "values" : [ "value1", "value2" ]
    }]
}
```

Example Responses

Status code: 200

Success

```
{
    "total_count" : 1000
}
```

Status code: 400

Failure

```
{
    "error" : {
        "error_code" : "DBSS.XXXX",
        "error_msg" : "XXX"
    }
}
```

Status Codes

Status Code	Description
200	Success
400	Failure
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.4.4 Adding Resource Tags in Batches

Function

This API is used to add resource tags in batches.

URI

POST /v1/{project_id}/{resource_type}/{resource_id}/tags/create

Table 2-167 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
resource_type	Yes	String	Resource type.Default usage: auditInstance
resource_id	Yes	String	Resource ID (DBSS instances ID, the instance ID is not in the basic information.) This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances

Request Parameters

Table 2-168 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-169 Request body parameters

Parameter	Mandatory	Type	Description
tags	No	Array of KeyValueBean objects	Tag list This parameter is mandatory for tenants. For users with the op_service permission, choose either this field or sys_tags.
sys_tags	No	Array of KeyValueBean objects	System tag listThis field is available only to the op_service permission. Choose either this field or tags. Currently, TMS invokes only one resource_tag structure. The key is fixed as _sys_enterprise_project_id. The value is UUID or 0. 0 indicates the enterprise project by default.

Table 2-170 KeyValueBean

Parameter	Mandatory	Type	Description
key	Yes	String	Key
value	Yes	String	Value

Response Parameters

Status code: 400

Table 2-171 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-172 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-173 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-174 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-175 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-176 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{resource_type}/{resource_id}/tags/create
{
  "tags": [ {
    "key": "key1"
  }, {
    "key": "key2",
    "value": "value3"
  }],
  "sys_tags": [ {
    "key": "_sys_enterprise_project_id",
    "value": "5aa119a8-d25b-45a7-8d1b-88e127885635"
  }]
}
```

Example Responses

Status code: 204

Success

Status code: 400

Failure

```
{  
  "error" : {  
    "error_code" : "DBSS.XXXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
204	Success
400	Failure
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.4.5 Batch Deleting Resource Tags

Function

This API is used to batch delete resource tags.

URI

DELETE /v1/{project_id}/{resource_type}/{resource_id}/tags/delete

Table 2-177 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
resource_type	Yes	String	Resource type. Default usage: auditInstance

Parameter	Mandatory	Type	Description
resource_id	Yes	String	<p>Resource ID (DBSS instances ID, the instance ID is not in the basic information.)</p> <p>This parameter can be obtained through the interface : GET /v1/{project_id}/dbss/audit/instances</p>

Request Parameters

Table 2-178 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Table 2-179 Request body parameters

Parameter	Mandatory	Type	Description
tags	No	Array of KeyValueBean objects	Tag list This parameter is mandatory for tenants. For users with the op_service permission, choose either this field or sys_tags.
sys_tags	No	Array of KeyValueBean objects	System tag listThis field is available only to the op_service permission. Choose either this field or tags. Currently, TMS invokes only one resource_tag structure. The key is fixed as _sys_enterprise_project_id. The value is UUID or 0. 0 indicates the enterprise project by default.

Table 2-180 KeyValueBean

Parameter	Mandatory	Type	Description
key	Yes	String	Key

Parameter	Mandatory	Type	Description
value	Yes	String	Value

Response Parameters

Status code: 400

Table 2-181 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-182 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-183 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-184 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-185 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-186 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{resource_type}/{resource_id}/tags/delete
```

```
{
  "tags": [ {
    "key": "key1"
  }, {
    "key": "key2",
    "value": "value3"
  } ]
}
```

Example Responses

Status code: 204

Success

Status code: 400

Failure

```
{
  "error": {
    "error_code": "DBSS.XXXX",
    "error_msg": "XXX"
  }
}
```

Status Codes

Status Code	Description
204	Success
400	Failure
403	Authentication failed.
500	Server error.

Error Codes

See [Error Codes](#).

2.5 Instance Rule APIs

2.5.1 Querying the Audit Scope Policy List

Function

This API is used to query the audit scope policy list.

URI

GET /v1/{project_id}/{instance_id}/dbss/audit/rule/scopes

Table 2-187 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Table 2-188 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	String	Offset
limit	No	String	Number of query records

Request Parameters

Table 2-189 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-190 Response body parameters

Parameter	Type	Description
scopes	Array of RuleScopeInfo o objects	Audit scope rule list
total	Integer	Total

Table 2-191 RuleScopeInfo

Parameter	Type	Description
id	String	Audit scope rule ID
name	String	Audit scope name
action	String	Actions in the audit scope [REVOKE,DROP_TABLE,SELECT_FOR_UPDATE,S ELECT,ROLLBACK,CREATE_TABLESPACE,DELETE, GRANT,DROP_USER,DROP_TABLESPACE,UPDAT E,INSERT,CREATE_USER,CREATE_TABLE,LOGIN]
status	String	Audit scope rule status [Enabled,Disabled]
exception_ips	String	Exception IP address of the audit scope
source_ips	String	Source IP address of the audit scope rule
source_ports	String	Port of the audit scope rule
db_ids	String	Database ID
db_names	String	Database name
db_users	String	Database account
all_audit	Boolean	Full audit or not true : Full audit false : not Full audit

Status code: 400

Table 2-192 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-193 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-194 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-195 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-196 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-197 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/{instance_id}/dbss/audit/rule/scopes

Example Responses

Status code: 200

Success

```
{  
  "scopes" : [ {  
    "id" : "zX4W2ngBo47GiyUSBuNs",  
    "name" : "Full audit rule",  
    "action" : "",  
    "status" : "ON",  
    "exception_ips" : "",  
    "source_ips" : "",  
    "source_ports" : "",  
    "db_ids" : "",  
    "db_names" : "",  
    "db_users" : "",  
    "all_audit" : true  
  } ],  
  "total" : 1  
}
```

Status code: 400

Invalid parameter.

```
{  
  "error" : {  
    "error_code" : "DBSS.XXXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status code: 500

Internal server error.

```
{  
  "error" : {  
    "error_code" : "DBSS.XXXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Success
400	Invalid parameter.
403	Authentication failed.
500	Internal server error.

Error Codes

See [Error Codes](#).

2.5.2 Querying a SQL Injection Rule Policy

Function

This API is used to query a SQL injection rule policy.

URI

POST /v1/{project_id}/{instance_id}/dbss/audit/rule/sql-injections

Table 2-198 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Request Parameters

Table 2-199 Request header parameters

Parameter	Mandatory	Type	Description
Content-type	Yes	String	The fixed value of this parameter is application/json; charset=UTF-8 , which cannot be changed.
X-Auth-Token	Yes	String	User token

Table 2-200 Request body parameters

Parameter	Mandatory	Type	Description
risk_levels	No	String	Risk level: (Use commas (,) to separate multiple queries.) HIGH MEDIUM LOW

Response Parameters

Status code: 200

Table 2-201 Response body parameters

Parameter	Type	Description
rules	Array of rules objects	SQL rule list
total	Integer	Total number of items in the current scope

Table 2-202 rules

Parameter	Type	Description
id	String	SQL Rule ID
name	String	SQL rule name
status	String	Rule status: ON OFF
risk_level	String	Risk level: HIGH MEDIUM LOW
type	String	System default rules or user-defined rules. [SYSTEM,CUSTOMIZE]
rank	Integer	The priority of this rule, with values ranging from 1 to 8. The smaller the value, the higher the priority
feature	String	SQL command feature For example : Delete *
regex	String	Regular expression
keywords	String	Keyword defined in the system rule. This field is available only for preset rules.

Status code: 400

Table 2-203 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-204 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-205 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-206 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-207 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-208 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

```
/v1/{project_id}/{instance_id}/dbss/audit/rule/sql-injections
{
  "risk_levels" : "HIGH"
}
```

Example Responses

Status code: 200

Success

```
{
  "rules" : [ {
```

```
"id" : "zX4W2ngBo47GiyUSBuNs",
"name" : "MySQL error based SQL injection",
"status" : "ON",
"type" : "SYSTEM",
"risk_level" : "HIGH",
"rank" : 1,
"feature" : "Regular expression",
"regex" : "(.*?)(select)\\s+[0-9]+\\s+from\\s+\\((\\s*select\\s+count(.*)?(concat)\\s*(.*)?(from)\\s*(information_schema.tables).(.*?)(group)\\s+(by)(.*?))"
} ],
"total" : 1
}
```

Status code: 400

Invalid parameter.

```
{
  "error" : {
    "error_code" : "DBSS.XXXX",
    "error_msg" : "XXX"
  }
}
```

Status code: 500

Internal server error.

```
{
  "error" : {
    "error_code" : "DBSS.XXXX",
    "error_msg" : "XXX"
  }
}
```

Status Codes

Status Code	Description
200	Success
400	Invalid parameter.
403	Authentication failed.
500	Internal server error.

Error Codes

See [Error Codes](#).

2.5.3 Querying a Risk Rule Policy

Function

This API is used to query a risk rule policy.

URI

GET /v1/{project_id}/{instance_id}/dbss/audit/rule/risk

Table 2-209 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Table 2-210 Query Parameters

Parameter	Mandatory	Type	Description
name	No	String	Risk name
risk_levels	No	String	Risk level [LOW,MEDIUM,HIGH,NO_RISK]]

Request Parameters

Table 2-211 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-212 Response body parameters

Parameter	Type	Description
rules	Array of rules objects	List of risk rules
total	Integer	Total

Table 2-213 rules

Parameter	Type	Description
id	String	Risk rule ID
name	String	Risk rule name
type	String	Risk type [OPERATION, LOGIN]
feature	String	Risk characteristics CLIENT[Any]OPERATE[LOGIN][REVOKE,DROP TABLE,SELECT FOR UPDATE,SELECT,ROLLBACK,CREATE TABLESPACE,DELETE,GRANT,DROP USER,DROP TABLESPACE,UPDATE,INSERT,CREATE USER,CREATE TABLE]OBJECT[Any]
status	String	Risk rule status[On,OFF]
rank	Integer	Risk rule priority [1~8]
risk_level	String	Risk level [No Risk,Low,Moderate,High]

Status code: 400

Table 2-214 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-215 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-216 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-217 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-218 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-219 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/{instance_id}/dbss/audit/rule/risk

Example Responses

Status code: 200

Success

```
{
  "rules": [
    {
      "id": "xX4W2ngBo47GiyUSBeOy",

    "error_code" : "DBSS.XXXX",  
    "error_msg" : "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Success
400	Invalid parameter.
403	Authentication failed.
500	Internal server error.

Error Codes

See [Error Codes](#).

2.5.4 Querying a Specified Risk Rule Policy

Function

This API is used to query a specified risk rule policy.

URI

GET /v1/{project_id}/{instance_id}/dbss/audit/rule/risk/{risk_id}

Table 2-220 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID
risk_id	Yes	String	Risk Rule ID

Request Parameters

Table 2-221 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-222 Response body parameters

Parameter	Type	Description
rule_id	String	Risk rule ID
rule_name	String	Risk name
status	String	Risk rule status. Enumerated values: OFF ON
action	String	Operation set. Values are separated by commas (,). Allowed operations include: LOGIN CREATE_TABLE CREATE_TABLESPACE DROP_TABLE DROP_TABLESPACE DELETE INSERT INSERT_SELECT SELECT SELECT_FOR_UPDATE UPDATE CREATE_USER DROP_USER GRANT OPERATE ALL
schemas	Array of schemas objects	Schema list
rank	Integer	Risk rule priority
ignore_case	Boolean	Case insensitive or not
risk_level	String	Risk level Enumerated values: LOW MEDIUM HIGH NO_RISK
db_ids	String	Database ID. Values are separated by commas (,). A single ID can contain up to 256 characters.
execution_symbol	String	Relationship between the execution duration and the execution duration threshold Enumerated value: GREATER EQUAL LESS GREATER_EQUAL LESS_EQUAL NO_MATCH
execution_time	Integer	Execution duration threshold

Parameter	Type	Description
affect_symbol	String	Relationship between the number of affected rows and the row quantity threshold: Enumerated value: GREATER EQUAL LESS GREATER_EQUAL LESS_EQUAL NO_MATCH
affect_rows	Integer	Threshold of affected rows
client_ips	String	Client IP address segment:The value is in the IP-IP format or IP/XX format. IP address segments are separated by commas (,).

Table 2-223 schemas

Parameter	Type	Description
schema	String	Schema name
table	String	Table
column	String	Column name

Status code: 400

Table 2-224 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-225 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-226 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-227 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-228 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-229 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/{instance_id}/dbss/audit/rule/risk/{risk_id}

Example Responses

Status code: 200

Success

```
{  
    "status": "OFF",  
    "action": "LOGIN,SELECT,INSERT",  
    "schemas": [ {  
        "schema": "dbss_audit",  
        "table": null,

2.5.5 Querying a Privacy Data Masking Rule

Function

This API is used to query a privacy data masking rule.

URI

GET /v1/{project_id}/{instance_id}/dbss/audit/sensitive/masks

Table 2-230 Path Parameters

Parameter	Mandatory	Type	Description
project_id	Yes	String	Project ID
instance_id	Yes	String	Instance ID

Table 2-231 Query Parameters

Parameter	Mandatory	Type	Description
offset	No	String	Offset
limit	No	String	Number of query records

Request Parameters

Table 2-232 Request header parameters

Parameter	Mandatory	Type	Description
X-Auth-Token	Yes	String	User token

Response Parameters

Status code: 200

Table 2-233 Response body parameters

Parameter	Type	Description
rules	Array of rules objects	Rule list
total	Integer	Total

Table 2-234 rules

Parameter	Type	Description
id	String	Rule ID
name	String	Rule name [default:GPS Information]
type	String	Rule type[default,User-defined]
regex	String	Rule regular expression
mask_value	String	Substitution value
status	String	Rule status[ON,OFF]
operate_time	String	Operation time

Status code: 400

Table 2-235 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-236 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 403

Table 2-237 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-238 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Status code: 500

Table 2-239 Response body parameters

Parameter	Type	Description
error	Object	Error message.

Table 2-240 ErrorDetail

Parameter	Type	Description
error_code	String	Error code.
error_msg	String	Error information.

Example Requests

/v1/{project_id}/{instance_id}/dbss/audit/sensitive/masks

Example Responses

Status code: 200

Success

```
{  
  "rules": [ {  
    "id": "n34W2ngBo47GiyUSKOVL",  
    "name": "GPS Information",  
    "type": "BUILD_IN",  
    "regex": "-",  
    "mask_value": "###",  
    "status": "ON",  
    "operate_time": "2030-01-01 00:00:06"  
  } ]  
}
```

Status code: 400

Invalid parameter.

```
{  
  "error": {  
    "error_code": "DBSS.XXXX",  
    "error_msg": "XXX"  
  }  
}
```

Status code: 500

Internal server error.

```
{  
  "error": {  
    "error_code": "DBSS.XXXX",  
    "error_msg": "XXX"  
  }  
}
```

Status Codes

Status Code	Description
200	Success
400	Invalid parameter.
403	Authentication failed.
500	Internal server error.

Error Codes

See [Error Codes](#).

3 Appendix

3.1 Status Codes

- Normal

Returned Value	Description
200	The request is successfully processed.

- Abnormal

Status Code	Error	Description
400	Bad Request	The server fails to process the request.
401	Unauthorized	A username and a password are required.
403	Forbidden	Access to the requested page is denied.
404	Not Found	The server fails to find the requested page.
405	Method Not Allowed	Method specified in the request is not allowed.
406	Not Acceptable	The response generated by the server could not be received by the client.
407	Proxy Authentication Required	Proxy authentication is required before the request is processed.
408	Request Timeout	The request timed out.
409	Conflict	The request is not processed due to a conflict.

Status Code	Error	Description
500	Internal Server Error	The request is not processed due to a server error.
501	Not Implemented	The request is not processed because the server does not support the requested function.
502	Bad Gateway	Failed to complete the request because the server has received an invalid response.
503	Service Unavailable	Failed to complete the request because the system is unavailable.
504	Gateway Timeout	A gateway timeout error occurs.

3.2 Error Codes

Status Code	Error Codes	Error Message	Description	Solution
400	DBSS.10000001	Enter a valid request message	Enter a valid request message	check parameter
400	DBSS.10020101	Enter a valid request message	Enter a valid request message	check parameter
400	DBSS.10020102	Enter a valid request message	Enter a valid request message	check parameter
400	DBSS.10020118	Failed to add database, exceeding the limit	Failed to add database, exceeding the limit	Delete unnecessary databases or purchase new instances
400	DBSS.10020140	Illegal order ID	Illegal order ID	check order ID
400	DBSS.100210016	Insufficient quota	Insufficient quota	Contact administrator
400	DBSS.10020010	The request parameter is incorrect	Request message param error	Modifying Request Parameters

Status Code	Error Codes	Error Message	Description	Solution
400	DBSS.100200 09	The request message format is invalid	Request message format error	Modifying Request Parameters
401	DBSS.100201 00	Failed to authenticate the token in the request	Failed to authenticate the token in the request	check token
404	DBSS.100210 04	ECS can not found the request page	ECS can not found the request page	Check the ECS path configuration
404	DBSS.100200 07	No such server found	No such server found	Check the Connection to the Server
404	DBSS.100210 010	ECS internal server error	ECS internal server error	Check the ECS Server
500	DBSS.110000 00	Internal system exception. Contact technical support engineers	Internal system exception. Contact technical support engineers	Contact technical support engineers

3.3 Obtaining a Project ID

1. Obtain the token.

For details, see [Token-based Authentication](#).

2. Obtain the project ID.

The API for obtaining the project ID is **GET https://iam.eu-west-0.myhuaweicloud.com/v3/projects**.

Add **X-Auth-Token** to the request header, and set the value of **X-Auth-Token** to the token obtained in the preceding step.

The following is an example response. **id** indicates the project ID.

```
{
  "links": {},
  "projects": [
    {
      "is_domain": ,
      "description": "",
      "links": {}
    },
    "enabled": true,
    "id": "", //Project ID
    "parent_id": "",
    "domain_id": ""
  ]
}
```

```
        "name": ""  
    },  
    ...  
]  
}
```
