## Billing Overview

In this document, you will learn about how RDS DB instances are billed, how you can renew subscriptions and manage costs, and what happens if your account goes into arrears.

#### Billing Modes

There are yearly/monthly and pay-per-use billing modes. Each one has different advantages and disadvantages.

- Yearly/Monthly: You pay upfront for the amount of time you expect to use the RDS DB instance for. You will need to make sure you have a topup account with a sufficient balance or have a valid payment method configured first.
- Pay-per-use: You can start using the RDS DB instance first and then pay as you go.

For details about the two billing modes, see Overview.

You can also change the billing mode later if it no longer meets your needs. For details, see **Overview**.

#### Billed Items

You will be billed for instance classes, storage space, backup space, EIP bandwidths, Monitoring by Seconds (for RDS for MySQL only), database proxies (for RDS for MySQL only), images (for RDS for SQL Server only), and cross-region backup. The billed items vary depending on the DB engine. For details about the billing factors and formulas for each billed item, see **Billed Items**.

For more information about the billing samples and the billing for each item, see **Billing Examples**.

#### Renewing Subscriptions

If you want to continue using an RDS DB instance after it expires, you need to renew the DB instance subscription within the specified period. Otherwise, resources, such as compute and storage, will be automatically released, and data may be lost. You can renew your subscription manually or automatically. For more details, see **Overview**.

#### Viewing Bills

You can choose **Billing & Costs** > **Bills** to check the RDS transactions and bills. For details, see **Bills**.

#### Arrears

If there is not a sufficient account balance to pay for your bill and there is no other payment method configured, your account will go into arrears. If you want to continue using your cloud services, you will need to top up your account in a timely manner. For details, see **Arrears**.

#### • Stopping Billing

If you no longer need to use your cloud service, you can unsubscribe from or delete it to stop the billing. You can also stop pay-per-use DB instances to save money. For details, see **Billing Termination**.

#### Managing Costs

RDS costs include resource costs and O&M costs. You can allocate, analyze, and optimize RDS costs to save more money. For details, see **Cost Management**.

## **2** Billing Modes

#### 2.1 Overview

There are yearly/monthly and pay-per-use billing modes. Each one has different advantages and disadvantages.

- Yearly/Monthly is a prepaid billing mode. You pay in advance for a subscription term, and in exchange, you get a discounted rate. The longer the subscription term, the bigger the discount. Yearly/Monthly billing is a good option for long-term, stable services.
- Pay-per-use is a postpaid billing mode. You pay as you go and just pay for what you use. The DB instance usage is calculated by the second but billed every hour. There are no wasted resources.

Table 2-1 lists the differences between the two billing modes.

**Table 2-1** Differences between billing modes

Billing Mode	Yearly/Monthly	Pay-per-use	
Payment	Prepaid	Postpaid	
Billing Method	Billed by the subscription term you purchase	Calculated by the second but billed every hour	

Billed Items	Instance classes (vCPUs and memory), storage space, backup space, cross-region backup, EIPs, Monitoring by Seconds (for RDS for MySQL only), database proxies (for RDS for MySQL only), images (for RDS for SQL Server only), and deployment in Dedicated Computing Cluster (DCC).	Instance classes (vCPUs and memory), storage space, backup space, cross-region backup, EIPs, Monitoring by Seconds (for RDS for MySQL only), database proxies (for RDS for MySQL only), images (for RDS for SQL Server only), and deployment in Dedicated Computing Cluster (DCC).
Changing the Billing Mode	Yearly/Monthly can be changed to pay-per-use. The change takes effect only after the yearly/monthly subscription expires. For details, see Yearly/Monthly to Pay-per-Use.	Pay-per-use can be changed to yearly/monthly.  For details, see Pay-per-Use to Yearly/Monthly.
Changing the instance class	Supported	Supported
Application Scenarios	Recommended for resources expected to be in use long-term. A cost-effective option for scenarios where the resource usage duration is predictable.	Recommended when the resource demands are likely to fluctuate and you want more flexibility.

## 2.2 Yearly/Monthly Billing

If you expect to use resources for a longer period, you can save money by selecting yearly/monthly billing. This section describes the billing rules for yearly/monthly DB instances.

#### **Application Scenarios**

If you want to ensure resource stability over a certain period of time, yearly/monthly billing is a good choice for the following types of workloads:

- Long-term workloads with stable resource requirements, such as official websites, online malls, and blogs.
- Long-term projects, such as scientific research projects and large-scale events.
- Workloads with predictable traffic bursts, for example, e-commerce promotions or festivals.

• Workloads with high data security requirements

#### **Billed Items**

The following table lists the billed items of a yearly/monthly DB instance.

#### **◯** NOTE

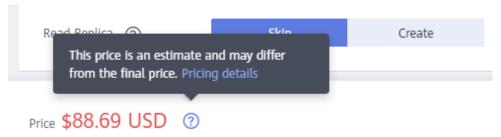

The billed items marked with asterisks (\*) are mandatory.

Table 2-2 Billed items

Billed Item	Description
* Instance class	vCPUs and memory
* Storage space	If the actual storage usage exceeds your purchased storage, you will be billed for additional storage on a pay-per-use basis.
* Backup space	RDS provides free backup space of the same size as your purchased database storage.
	After the free backup space is used up, charges are applied based on the backup space pricing details. Pricing is listed on a per-hour basis, but bills are calculated based on the actual usage duration.
* Images (for RDS for SQL Server only)	RDS for SQL Server images from KooGallery
(Optional) Cross-region backup	RDS allows you to store backups in a region different from the one where your DB instance is located. Enabling cross-region backup will incur extra fees, and you will be billed for the storage space. Pricing is listed on a per-hour basis, but bills are calculated based on the actual usage duration.
(Optional) EIP bandwidth	If an EIP is purchased along with a yearly/monthly DB instance and the EIP is billed by bandwidth.
(Optional) Monitoring by Seconds (for RDS for MySQL only)	Once it is enabled, pricing is listed on a per-hour basis, but bills are calculated based on the actual usage duration. RDS provides monitoring every 60 seconds for free.
(Optional) Database proxies (for RDS for MySQL only)	RDS allows read and write requests to be automatically routed through a read/write splitting address. Enabling database proxy incurs extra fees.
(Optional) Deployment in DCC	RDS can be deployed in DCC, which incurs extra fees.

If you want to purchase an RDS for MySQL 8.0 general-purpose primary/standby DB instance with 2 vCPUs, 4 GB of memory, a cloud SSD, and 40 GB of storage for a duration of one month, the price will be displayed as follows (excluding the backup space fee):

Figure 2-1 Example price

#### The price includes:

- The instance class (vCPUs and memory)
- The storage space

#### □ NOTE

The backup space pricing is not included. For details about the backup fees, see the **Product Pricing Details** page of the **price calculator**.

#### **Billed Usage Period**

A yearly/monthly DB instance is billed for the purchased duration. The billing starts from when you activated or renewed the subscription, and ends at 23:59:59 of the expiry date.

For example, if you purchased a one-month RDS DB instance on March 08, 2023, 15:50:04, the billed usage period is from March 08, 2023, 15:50:04 to April 08, 2023, 23:59:59.

#### **Billing Examples**

Suppose you purchased a one-month RDS for MySQL 8.0 primary/standby DB instance (instance class: general-purpose, 2 vCPUs | 4 GB; storage: cloud SSD, 40 GB; backup space: 50 GB (40 GB for free); bandwidth: 6 Mbit/s; one-second monitoring) on March 08, 2023, 15:50:04, and renewed the subscription for one more month before the initial subscription expired. That would include two usage periods:

- Billed usage period 1: March 08, 2023, 15:50:04 to April 08, 2023, 23:59:59.
- Billed usage period 2: April 08, 2023, 23:59:59 to May 08, 2023, 23:59:59.
  - From April 08, 2023, 23:59:59 to May 01, 2023, 23:59:59, 20 GB of free backup space was used.

- From May 01, 2023, 23:59:59 to May 08, 2023, 23:59:59, another 10 GB of backup space was used, which was billed for 168 hours.
- Monitoring by Seconds was enabled at 23:59:59 on May 04, 2023. Fees were generated from 23:59:59 on May 04, 2023 to 23:59:59 on May 08, 2023 (96 hours).

You will be billed for both usage periods. RDS resources are billed individually as follows:

Table 2-3 Formulas for billing yearly/monthly RDS resources

Resource	Formula	Unit Price
Instance class (including vCPUs and memory)	Unit price of the instance class x Required duration	See the price of each DB engine in RDS Pricing Details.
Storage space	Unit price of the storage space x Required duration x Storage capacity (GB)	See the storage price in RDS Pricing Details.
Backup space	Unit price of the backup space x Billed duration x (Backup capacity - Storage capacity) (GB)  NOTE  The billed duration refers to the length of time the billed backup space was used for.	See the backup space price in RDS Pricing Details.
EIP bandwidth	Billed by fixed bandwidth	See <b>EIP Pricing Details</b> .
Monitoring by Seconds (for RDS for MySQL only)	Unit price of Monitoring by Seconds x Billed duration	See Configuring Monitoring by Seconds.

Figure 2-2 shows how the total price is calculated.

#### **NOTICE**

The prices in the figure are just examples. The actual prices are those displayed on RDS Pricing Details.

Instance class: general-purpose, 2 vCPUs | 4 GB, primary/standby \$27.39 USD Storage space: 40 GB 2 months 40 GB was free and 10 GB was billed Billed usage period 1: 20 GB (free) 2023/04/08 23:59:59-2023/05/01 23:59:59 20 GB (free) \$0.33 USD Backup space: 50 GB Billed usage period 2 2023/05/01 23:59:59-2023/05/08 23:59:59 \$0.0002 USD/GB/hour early/Monthly DB instance Billed duration: 168 hours \$4.86 USD/Mbit/s per month Total price: \$259.87 USD \$48.6 USD 0-5 Mbit/s 5 Mbit/s 2 months EIP bandwidth: 6 Mbit/s \$16.2 USD/Mbit/s per month \$32.4 USD > 5 Mbit/s 1 Mbit/s 2 months 1-second monitoring \$0.012 USD/hour \$1.15 USD Monitorina by Seconds 2023/05/04 23:59:59-2023/05/08 23:59:59 Billed duration: 96 hours

**Figure 2-2** Total price for a yearly/monthly DB instance (taking RDS for MySQL in CN-Hong Kong as an example)

#### **Price Change After Instance Class Change**

If the instance class of a yearly/monthly DB instance no longer meets your needs, you can change the instance class on the console. The system will recalculate the price and either bill or refund you the difference.

- If you upgrade your DB instance class, you need to pay the difference in price.
- If you downgrade your DB instance class, Huawei Cloud will refund you the difference.

You are not advised to downgrade your DB instance to a lower instance class because the instance performance may be affected. Suppose you purchased a one-month RDS for MySQL primary/standby DB instance (instance class: general-purpose, 2 vCPUs | 4 GB; storage: cloud SSD, 40 GB) in CN-Hong Kong on April 08, 2023 and upgraded the instance class to 4 vCPUs | 8 GB on April 18, 2023. The price of the original instance class was \$88.69 USD/month, and that for the new instance class was \$239.69 USD/month. The price difference will be calculated as follows:

Price difference for the instance class upgrade = Price for the new instance class × Remaining period - Price for the original instance class × Remaining period

The remaining period is the remaining days of each calendar month divided by the maximum number of days in each calendar month.

In this example, Remaining period = 12 (Remaining days in April)/30 (Maximum number of days in April) + 8 (Remaining days in May)/31 (Maximum number of

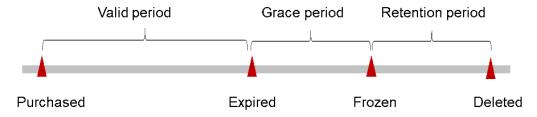

days in May) = 0.6581. Cost of upgrade = \$239.69 USD x 0.6581 - \$88.69 USD x 0.6581 = \$99.37 USD

For more details, see Pricing of a Changed Specification.

#### Impact of Expiration

**Figure 2-3** shows the statuses a yearly/monthly DB instance can go through throughout its lifecycle. After a DB instance is purchased, it enters the valid period and runs normally during this period. If the DB instance is not renewed after it expires, before being deleted, it first enters a grace period and then a retention period.

Figure 2-3 Lifecycle of a yearly/monthly DB instance

#### **Expiration Reminder**

The system will send you a reminder (by email, SMS, or in-app message) 7 days before a yearly/monthly DB instance expires to remind you to renew the subscription.

#### **Impact of Expiration**

If your yearly/monthly DB instance is not renewed after it expires, it changes to the **Expired** state and enters a grace period. During the grace period, you can access the DB instance but cannot:

- Change instance class
- Change the billing mode to pay-per-use
- Unsubscribe from the DB instance

If the yearly/monthly DB instance is not renewed after the grace period ends, its status turns to **Frozen** and it enters a retention period. You cannot access or use the DB instance while it is in the retention period, but the data stored in it can be retained.

If the yearly/monthly DB instance is not renewed by the time the retention period ends, the corresponding resources will be released and the data stored in the resources will be deleted.

#### ■ NOTE

- During the retention period, you cannot access or use your DB instance but the data stored in it can be retained. The retention period for the Huawei Cloud International website is 15 days.
- During the grace period, you can access and use only some resources of your DB instance. The grace period for the Huawei Cloud International website is 15 days.
- For details about renewal, see Overview.

## 2.3 Pay-per-Use Billing

Pay-per-use billing means you pay nothing up front and are not tied into any contract or commitment. This section describes the billing rules for pay-per-use DB instances.

#### **Application Scenarios**

Pay-per-use billing is good for short-term or unpredictable workloads.

#### **Billed Items**

You are billed for the following items on a pay-per-use basis.

□ NOTE

The billed items marked with asterisks (\*) are mandatory.

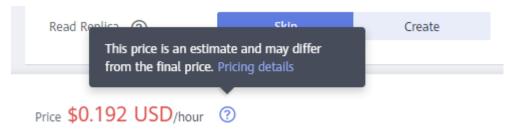

Table 2-4 Items billed on a pay-per-use basis

Billed Item	Description
* Instance class	vCPUs and memory
* Storage space	Storage space
* Backup space	RDS provides free backup storage of the same size as your purchased database storage.
	After the free backup space is used up, charges are applied based on the backup space pricing details. Pricing is listed on a per-hour basis, but bills are calculated based on the actual usage duration.
* Images (for RDS for SQL Server only)	RDS for SQL Server images from KooGallery
(Optional) Cross-region backup	RDS allows you to store backups in a region different from the one where your DB instance is located. Enabling cross-region backup will incur extra fees, and you will be billed for the storage space. Pricing is listed on a per-hour basis, but bills are calculated based on the actual usage duration.
(Optional) EIP bandwidth	If an EIP is purchased along with a yearly/monthly DB instance and the EIP is billed by bandwidth.

Billed Item	Description
(Optional) Monitoring by Seconds (for RDS for MySQL only)	Once it is enabled, pricing is listed on a per-hour basis, but bills are calculated based on the actual usage duration. RDS provides monitoring every 60 seconds for free.
(Optional) Database proxies (for RDS for MySQL only)	RDS allows read and write requests to be automatically routed through a read/write splitting address. Enabling database proxy incurs extra fees.
(Optional) Deployment in DCC	RDS can be deployed in DCC, which incurs extra fees.

If you want to purchase an RDS for MySQL 8.0 general-purpose primary/standby DB instance with 2 vCPUs, 4 GB of memory, a cloud SSD, and 40 GB of storage, you will see the following prices (excluding the backup space fee):

Figure 2-4 Example prices

#### The price includes:

- The instance class (vCPUs and memory)
- The storage space

#### **◯** NOTE

The backup space pricing is not included. For details about the backup fees, see the **Product Pricing Details** page of the **price calculator**.

#### **Billed Usage Period**

Pay-per-use DB instance usage is calculated by the second and billed every hour. The billing starts when the DB instance is created and ends when the instance is deleted.

#### ■ NOTE

It takes a certain time to create a DB instance. The billing starts from the **Completed** time on the **Instant Tasks** page in the task center.

For example, if you purchased a pay-per-use DB instance at 8:45:30 and deleted it at 8:55:30, you are billed for the 600 seconds from 8:45:30 to 8:55:30.

#### **Billing Examples**

Suppose you purchased an RDS for MySQL 8.0 primary/standby DB instance (instance class: general-purpose, 2 vCPUs | 4 GB; storage: cloud SSD, 40 GB; backup space: 50 GB (40 GB for free); bandwidth: 6 Mbit/s; one-second monitoring) on April 18, 2023, 9:59:30, and deleted it on April 18, 2023, 10:45:46. Two usage periods will be billed:

- Usage of 30 seconds from 9:59:30 to 10:00:00 (between 9:00:00 and 10:00:00)
- Usage of 2,746 seconds from 10:00:00 to 10:45:46 (between 10:00:00 and 11:00:00)
  - From April 18, 2023, 10:00:00 to April 18, 2023, 10:45:00, 20 GB of free backup space was used.
  - From April 18, 2023, 10:45:00 to April 18, 2023, 10:45:46, another 10 GB of backup space was used, which was billed for 46 seconds.
  - Monitoring by Seconds was enabled at 10:10:00 on April 18, 2023. Fees were generated from 10:10:00 on April 18, 2023 to 10:45:46 on April 18, 2023 (2,146 seconds).

The price displayed in the pricing details is per hour, so you need to divide it by 3,600 to obtain the price for each second and then multiple the per-second price by the total number of seconds. RDS resources are billed individually as follows:

**Table 2-5** Formulas for billing pay-per-use RDS resources

Resource	Formula	Unit Price
Instance class (including vCPUs and memory)	Unit price of the instance class x Required duration	See the price of each DB engine in RDS Pricing Details.
Storage space	Unit price of the storage space x Required duration x Storage capacity (GB)	See the storage price in RDS Pricing Details.

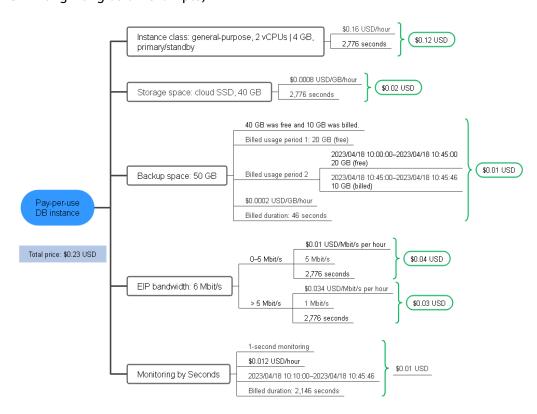

Resource	Formula	Unit Price
Backup space	Unit price of the backup space x Billed duration x (Backup capacity – Storage capacity) (GB)	See the backup space price in RDS Pricing Details.
	NOTE  The billed duration refers to the length of time the billed backup space was used for.	
EIP bandwidth	Billed by fixed bandwidth	See EIP Pricing Details.
Monitoring by Seconds (for RDS for MySQL only)	Unit price of Monitoring by Seconds x Billed duration	See Configuring Monitoring by Seconds.

Figure 2-5 shows how the total price is calculated.

#### NOTICE

The prices in the figure are just examples. The actual prices are those displayed on RDS Pricing Details.

For pay-per-use billing, decimal numerals on the price calculator are rounded off and are accurate to two decimal places. If the fee is less than \$0.01 USD (after rounding off), \$0.01 USD will be displayed.

**Figure 2-5** Total price for a pay-per-use DB instance (taking RDS for MySQL in CN-Hong Kong as an example)

#### **Price Change After Instance Class Change**

If you change the instance class of a pay-per-use DB instance, the original order will become invalid and a new order will be placed. You will be billed based on the new instance class.

If you change the instance class within a given hour, multiple records will be generated. Different records record the billing for different instance classes.

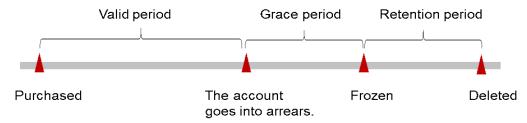

For example, if you purchased a pay-per-use DB instance (2 vCPUs | 4 GB) at 9:00:00 and changed the instance class to 4 vCPUs | 8 GB at 9:30:00, the following items will be billed:

- DB instance (2 vCPUs | 4 GB) usage from 9:00:00 to 9:30:00
- DB instance (4 vCPUs | 8 GB) usage from 9:30:00 to 10:00:00

#### Impact of Arrears

**Figure 2-6** shows the statuses a pay-per-use DB instance can have throughout its lifecycle. After a DB instance is purchased, it enters the valid period and runs normally during this period. If your account goes into arrears, the DB instance enters a grace period and then a retention period.

Figure 2-6 Lifecycle of a pay-per-use DB instance

#### **Arrears Reminder**

The system will bill you for pay-per-use resources after each billing cycle ends. If your account goes into arrears, we will notify you by email, SMS, or in-app message.

#### **Impacts of Arrears**

If your account is insufficient to pay your amount due, your account goes into arrears, and the pay-per-use DB instance enters the grace period. You are still responsible for expenditures generated during the grace period. You can view the charges on the **Billing Center** > **Overview** page and pay any past due balance as needed.

If you do not bring your account balance current before the grace period expires, the DB instance turns to **Frozen** and enters a retention period. You cannot access or use the DB instance while it is in the retention period, but the data stored in it can be retained.

If you do not bring your account balance current before the retention period ends, the corresponding resources will be released and the data stored in the resources will be deleted.

#### □ NOTE

- During the retention period, you cannot access or use your DB instance but the data stored in it can be retained. The retention period for the Huawei Cloud International website is 15 days.
- During the grace period, you can access and use only some resources of your DB instance. The grace period for the Huawei Cloud International website is 15 days.
- For details about top-up, see Topping Up an Account.

## 3 Billed Items

#### Description

You will be billed for the instance class, storage space, and backup space. For details, see **Table 3-1**.

**◯** NOTE

The billed items marked with asterisks (\*) are mandatory.

**Table 3-1** DB instance billed items

Billed Item	Description	Billing Mode	Formula
* Instance class	Billed by vCPUs, memory, and instance type. Computing and storage capabilities vary by the number of vCPUs and memory size.	Yearly/ Monthly and pay- per-use	Unit price x Required duration  For details about the unit price, see the price of each DB engine in RDS Pricing Details.
* Storage space	Billed based on unified standards.	Yearly/ Monthly and pay- per-use	Unit price x Storage capacity x Required duration  For details about the unit price, see the storage price in RDS Pricing Details.

Billed Item	Description	Billing Mode	Formula
* Backup space	Billed based on unified standards.	Pay-per- use	Unit price x Billed backup capacity x Billed duration  For details about the unit price, see the backup space price in RDS Pricing Details.  NOTE  The billed duration refers to the length of time the billed backup space was used for.
* Images (for RDS for SQL Server only)	Billed based on unified standards.	Yearly/ Monthly and pay- per-use	Unit price x Required duration
(Option al) Cross- region backup	Billed by storage space based on unified standards.	Pay-per- use	Unit price x Storage capacity x Required duration Unit price of storage space: \$0.0002 USD/GB/hour
(Option al) EIP bandwid th	An EIP is required if the DB instance needs to access the Internet.  Billed by bandwidth, traffic, and the EIP reservation price.  EIP for a yearly/monthly DB instance: billed by bandwidth.  EIP for a pay-per-use DB instance: billed by bandwidth, traffic, or shared bandwidth. You are also charged for IP reservation if you do not bind the EIP to any instance.	Yearly/ Monthly and pay- per-use You can purchase a bandwidt h add-on package or a shared traffic package.	Billed by fixed bandwidth  For details about the unit price, see EIP Pricing Details.

Billed Item	Description	Billing Mode	Formula
(Option al)	Billed based on unified standards.	Pay-per- use	Unit price x Billed duration
Monitori ng by Seconds (for RDS for MySQL only)			For details about the unit price of Monitoring by Seconds, see Configuring Monitoring by Seconds.
			NOTE  Billed duration: indicates the usage duration of Monitoring by Seconds (1s or 5s).
(Option al) Databas e proxies (for RDS for MySQL only)	Billed by the proxy instance class (vCPUs and memory) and nodes	Yearly/ Monthly and pay- per-use	Unit price x Required duration x Number of proxy nodes For details about the unit price, see Database Proxy Billing.
(Option al) Deploy ment in DCC	Billed by storage space based on unified standards.	Yearly/ Monthly and pay- per-use	Unit price x Storage capacity x Required duration  For details about the unit price of storage space, see "MySQL Deployed in a DCC" in RDS Pricing Details.

#### **Billing Examples**

Suppose you purchased a one-month RDS for MySQL primary/standby DB instance (instance class: general-purpose 2 vCPUs | 4 GB; storage: cloud SSD 40 GB; backup space: 50 GB (40 GB for free); bandwidth: 6 Mbit/s; one-second monitoring) on March 08, 2023, 15:50:04, and renewed the subscription for one more month before the initial subscription expired. That would include two usage periods:

- Billed usage period 1: March 08, 2023, 15:50:04 to April 08, 2023, 23:59:59
- Billed usage period 2: April 08, 2023, 23:59:59 to May 08, 2023, 23:59:59
  - From April 08, 2023, 23:59:59 to May 01, 2023, 23:59:59, 20 GB of free backup space was used.

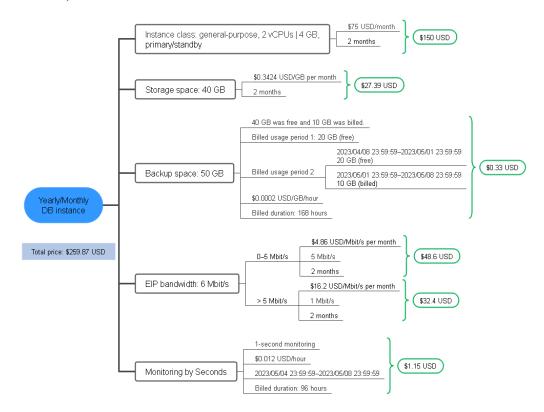

- From May 01, 2023, 23:59:59 to May 08, 2023, 23:59:59, another 10 GB of backup space was used, which was billed for 168 hours.
- Monitoring by Seconds was enabled at 23:59:59 on May 04, 2023. Fees were generated from 23:59:59 on May 04, 2023 to 23:59:59 on May 08, 2023 (96 hours).

Figure 3-1 shows how the total price is calculated.

#### **NOTICE**

The prices in the figure are only for reference. For details, see RDS Pricing Details.

**Figure 3-1** Total price for a yearly/monthly DB instance (taking RDS for MySQL as an example)

For more billing examples of a pay-per-use DB instance, see **Billing Examples**.

## 4 Billing Examples

#### **Billing Scenario**

A user purchased a pay-per-use RDS for MySQL 8.0 DB instance in CN-Hong Kong at 15:30:00 on March 18, 2023. The DB instance configuration is as follows:

- Instance class: general-purpose, 2 vCPUs | 4 GB, primary/standby
- Storage space: cloud SSD, 40 GB
- EIP bandwidth: 6 Mbit/s

After a period of time, the user found that the current instance class no longer met service requirements and scaled up the storage to 80 GB at 8:00:00 on March 19, 2023, then updated the instance class to 8 vCPUs | 16 GB and enabled Monitoring by Seconds at 9:00:00 on March 20, 2023. Since the user wanted to use the DB instance long term, the user then changed the instance to yearly/monthly billing with a one-month duration at 10:30:00 on the same day. So how much will the user be billed for this DB instance in March and April?

#### **Billing Analysis**

The total price of this DB instance involves both pay-per-use and yearly/monthly usage:

- Pay-per-use usage: March 18, 2023, 15:30:00 to March 20, 2023, 10:30:00
  - From March 18, 2023, 15:30:00 to March 19, 2023, 8:00:00
    - Instance class: general-purpose, 2 vCPUs | 4 GB, primary/standby
    - Storage space: cloud SSD, 40 GB (with 40 GB backup space for free)
    - Used backup space: 30 GB (free)
    - EIP bandwidth: 6 Mbit/s
  - From March 19, 2023, 8:00:00 to March 20, 2023, 9:00:00
    - Instance class: general-purpose, 2 vCPUs | 4 GB, primary/standby
    - Storage space: cloud SSD, 80 GB (with 80 GB backup space for free)

- Used backup space: another 40 GB (free)
- EIP bandwidth: 6 Mbit/s
- From March 20, 2023, 9:00:00 to March 20, 2023, 10:30:00
  - Instance class: general-purpose, 8 vCPUs | 16 GB, primary/standby
  - Storage space: cloud SSD, 80 GB (with 80 GB backup space for free)
  - Used backup space: another 15 GB (5 GB was billed on a pay-per-use basis from March 20, 2023, 10:00:00 to March 20, 2023, 10:30:00)
  - EIP bandwidth: 6 Mbit/s
  - Monitoring by Seconds: one-second monitoring
- Yearly/monthly usage: March 20, 2023, 10:30:00 to April 20, 2023, 23:59:59
  - Instance class: general-purpose, 8 vCPUs | 16 GB, primary/standby
  - Storage space: cloud SSD, 80 GB (with 80 GB backup space for free)
  - Used backup space: No new backup space is used. (5 GB was billed on a pay-per-use basis from March 20, 2023, 10:30:00 to April 20, 2023, 23:59:59)
  - EIP bandwidth: 6 Mbit/s
  - Monitoring by Seconds: one-second monitoring
  - Billed duration: one month

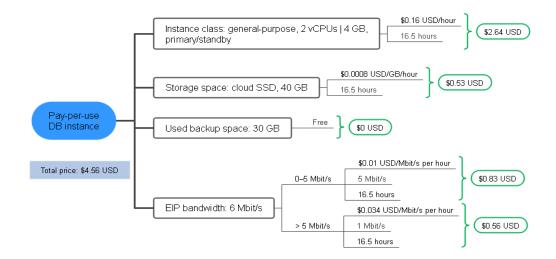

#### **NOTICE**

The prices in the figure are just examples. The actual prices are those displayed on RDS Pricing Details.

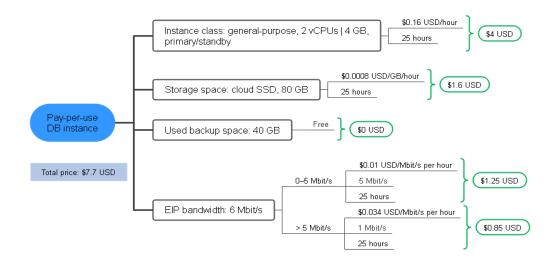

For pay-per-use billing, decimal numerals on the price calculator are rounded off and are accurate to two decimal places. If the fee is less than \$0.01 USD (after rounding off), \$0.01 USD will be displayed.

#### Pay-per-use

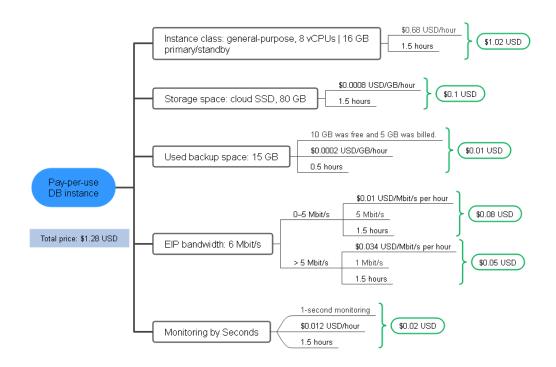

From March 18, 2023, 15:30:00 to March 19, 2023, 8:00:00, a DB instance with 2 vCPUs, 4 GB of memory, and 40 GB of storage was used for 16.5 hours, so the price would be calculated as follows:

From March 19, 2023, 8:00:00 to March 20, 2023, 9:00:00, a DB instance with 2 vCPUs, 4 GB of memory, and 80 GB of storage was used for 25 hours, so the price would be calculated as follows:

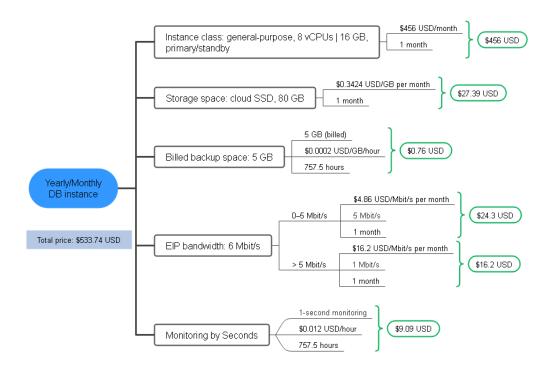

From March 20, 2023, 9:00:00 to March 20, 2023, 10:30:00, a DB instance with 8 vCPUs, 16 GB of memory, and 80 GB of storage was used for 1.5 hours, so the price would be calculated as follows:

#### Yearly/Monthly

From March 20, 2023, 10:30:00 to April 20, 2023, 23:59:59, a DB instance purchased using yearly/monthly billing was used for one month, so the price would be calculated as follows:

From March to April, the total price of this DB instance is \$547.28 USD (4.56 + 7.7 + 1.28 + 533.74).

## 5 Billing Mode Changes

### 5.1 Overview

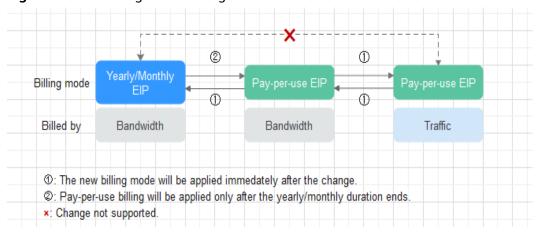

You can change the billing mode if it no longer meets your needs. **Table 5-1** lists the changeable DB instance billed items.

Table 5-1 Changeable DB instance billed items

Billed Item	Change Description	Reference
Instance class	Changing the billing mode of a DB instance includes the changes to the	-
Storage space	instance class (vCPUs and memory), storage space, image (for RDS for SQL Server only), and dedicated	
Image (for RDS for SQL Server only)	resources (optional).  • Change from pay-per-use to yearly/monthly to enjoy lower	
(Optional) Deployment in DCC	prices. Change from yearly/monthly to pay-per-use to use the DB instance more flexibly.	
	NOTE Such a change takes effect only after the yearly/monthly subscription ends.	

Billed Item	Change Description	Reference
EIP	<ul> <li>A yearly/monthly EIP can be changed to a pay-per-use EIP billed by bandwidth after the yearly/monthly subscription ends.</li> <li>A pay-per-use EIP billed by bandwidth can be changed to a yearly/monthly EIP.</li> <li>Pay-per-use EIPs billed by bandwidth can be changed to pay-per-use EIPs billed by traffic, and pay-per-use EIPs billed by traffic can be changed to pay-per-use EIPs billed by bandwidth.</li> <li>For details, see Figure 5-1.</li> </ul>	<ul> <li>Pay-per-Use to Yearly/Monthly</li> <li>Yearly/Monthly to Pay-per-Use</li> </ul>
Database proxy (for RDS for MySQL only)	<ul> <li>Only pay-per-use proxies can be selected for pay-per-use DB instances.</li> <li>Either pay-per-use proxies or yearly/monthly proxies can be selected for yearly/monthly DB instances. If you select a pay-per-use proxy, it can be changed to yearly/monthly after creation. If you want to select a yearly/monthly proxy, contact customer service.</li> </ul>	Changing a Proxy from Pay-per-Use to Yearly/ Monthly

Figure 5-1 EIP billing mode change

## 5.2 Pay-per-Use to Yearly/Monthly

If you have a pay-per-use DB instance that you expect to use for a long time, you can change it to yearly/monthly billing to reduce costs. Doing so will create an

order. After you pay for the order, yearly/monthly billing will be applied immediately.

Suppose a user bought a pay-per-use DB instance at 15:29:16 on April 18, 2023 and changed it to yearly/monthly billing at 16:30:30 on the same day. After the user paid for the order, yearly/monthly billing was applied immediately. On the **Billing Center > Billing** page, three line items were generated, one for each of the hours the DB instance was used on a pay-per-use basis, and one for the yearly/monthly subscription:

- Pay-per-use expenditures for 15:29:16 to 16:00:00 on April 18, 2023
- Pay-per-use expenditures for 16:00:00 to 16:30:30 on April 18, 2023
- A single, yearly/monthly expenditure generated on April 18, 2023, 16:30:30

#### **Constraints**

Resources such as the EIP that is used by a DB instance may not support the change with this instance. For details about their billing mode change rules and handling methods, see **Table 5-2**.

**Table 5-2** EIP billing mode change rules

Resour ce	Billing Mode	Billed By	Bandwi dth Type	Change to Yearly/ Monthly Billing with the DB instance	Handling Measure
EIP	Pay- per-use	Bandwi dth	Dedicat ed	Not supported	Change the EIP to yearly/monthly billing on the EIP console. For details, see Changing EIP Billing Mode.
EIP	Pay- per-use	Traffic	Dedicat ed	Not supported	An EIP that is billed by traffic on a pay-per-use basis cannot be directly changed to be billed on a yearly/monthly basis. To change this:  1. Change the EIP to be billed by bandwidth on a pay-per-use basis.  2. Change the EIP to be billed on a yearly/monthly basis.  For details, see Changing EIP Billing Mode.

#### **Constraints**

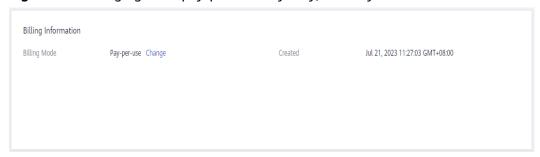

Pay-per-use DB instances in any of the following statuses cannot be changed to yearly/monthly: frozen, creation failed, changing instance class, and scaling up.

#### Changing the Billing Mode from Pay-per-Use to Yearly/Monthly

- **Step 1** Log in to the management console.
- **Step 2** Click in the upper left corner and select a region and a project.
- Step 3 Click in the upper left corner of the page and choose Databases > Relational Database Service.
- **Step 4** On the **Instances** page, locate the target DB instance and choose **More** > **Change to Yearly/Monthly** in the **Operation** column.

Alternatively, click the DB instance name to go to the **Basic Information** page. In the **Billing Information** area, click **Change** on the right of **Billing Mode**.

Figure 5-2 Changing from pay-per-use to yearly/monthly

- **Step 5** Select the renewal duration, in months. The minimum duration is one month.
  - If you do not need to modify your settings, click **Pay** to go to the payment page.
  - If you are not sure about the settings, the system will reserve your order. You can choose Billing & Costs > Unpaid Orders in the upper right corner and pay or cancel the order. The instance status is Changing to Yearly/Monthly. Payment incomplete. Pay Now.
- **Step 6** Select a payment method and click **Confirm**.
- **Step 7** View the result on the **Instances** page.

In the upper right corner of the instance list, click to refresh the list. The instance status will become **Available** and the billing mode will become yearly/monthly after the change is complete.

----End

### 5.3 Yearly/Monthly to Pay-per-Use

After creating a yearly/monthly DB instance, you can change it to pay-per-use for more flexibility, and you can recoup part of what you paid for the subscription.

Suppose a user bought a yearly/monthly DB instance at 15:29:16 on April 18, 2023 and changed it to pay-per-use billing at 16:30:00 on May 18, 2023. On the **Billing Center** > **Billing** page, bills are generated as follows:

- Yearly/Monthly expenditures for 15:29:16 on April 18 to 23:59:59 on May 18, 2023
- Pay-per-use expenditures for 23:59:59 on May 18, 2023 to the end time of pay-per-use usage. A bill was generated every hour.

#### **NOTICE**

The pay-per-use billing mode will be applied only after the yearly/monthly billed duration ends and auto-renew will be not in effect.

#### **Constraints**

Resources such as the EIP that is used by a DB instance may not support the change with this instance. For details about their billing mode change rules and handling methods, see **Table 5-3**.

Table 5-3 EIP billing mode change rules

Resour ce	Billing Mode	Billed By	Bandwi dth Type	Change to Pay-per-Use Billing with the DB Instance	Handling Measure
EIP	Yearly/ Monthl y	Bandwi dth	Dedicat ed	Not supported	Change the EIP to yearly/monthly billing on the EIP console. For details, see Changing EIP Billing Mode.

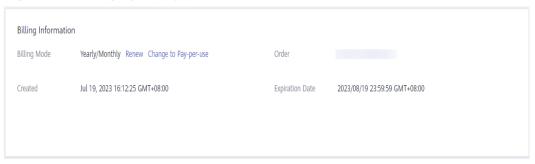

Resour ce	Billing Mode	Billed By	Bandwi dth Type	Change to Pay-per-Use Billing with the DB Instance	Handling Measure
EIP	Yearly/ Monthl y	Traffic	Dedicat ed	Not supported	An EIP billed on a yearly/monthly basis cannot be directly changed to be billed by traffic on a pay-per-use basis. To change this:  1. Change the EIP to be billed by bandwidth on a pay-per-use basis.  2. Change the EIP to be billed by traffic on a pay-per-use basis.  For details, see Changing EIP Billing Mode.

#### Changing the Billing Mode from Yearly/Monthly to Pay-per-Use

- Step 1 Log in to the management console.
- **Step 2** Click on the upper left corner and select a region and a project.
- Step 3 Click in the upper left corner of the page and choose Databases > Relational Database Service.
- **Step 4** On the **Instances** page, locate the target DB instance and choose **More** > **Change to Pay-per-use** in the **Operation** column.

Alternatively, click the DB instance name to go to the **Basic Information** page. In the **Billing Information** area, click **Change to Pay-per-use** on the right of **Billing Mode**.

Figure 5-3 Changing to pay-per-use

- **Step 5** In the displayed dialog box, click **Yes**.
- **Step 6** Confirm the instance billing information and click **Change to Pay-per-Use**.

----End

# 6 Renewing Subscriptions

#### 6.1 Overview

#### When to Renew Subscriptions

If a yearly/monthly DB instance is about to expire but you want to continue using it, you need to renew the DB instance subscription within a specified period, or resources, such as vCPUs and memory, will be automatically released, and data will be lost and cannot be restored.

Only yearly/monthly DB instance subscriptions can be renewed. If you use a payper-use instance, just ensure that your account has a valid payment method configured or a top-up account with a sufficient balance.

If you renew a DB instance before it expires, resources will be retained and you can continue using the instance. For details about DB instance statuses after they have expired and the associated impacts, see **Impact of Expiration**.

#### **How to Renew Subscriptions**

You can renew a yearly/monthly DB instance manually or automatically.

**Table 6-1** Renewing a yearly/monthly DB instance

Method	Description
Manually Renewing a DB Instance	You can renew a yearly/monthly DB instance on the console any time before it is automatically deleted due to arrears.
Auto- renewing a DB Instance	You can enable auto-renewal to automatically renew the DB instance before it expires. This prevents resources from being deleted in case you forget to renew a subscription.

You can select a method to renew a yearly/monthly DB instance based on the phase the instance is currently in.

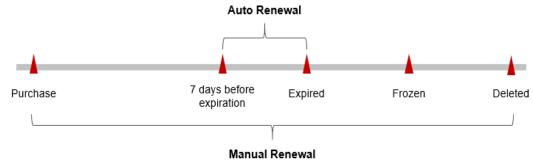

Figure 6-1 Selecting a renewal method based on the DB instance's current phase

- A DB instance is in the **Available** state after it is provisioned.
- When a DB instance subscription expires, the status will change from **Available** to **Expired**.
- If an expired DB instance is not renewed, it enters a grace period. If it is not renewed by the time the grace period expires, the DB instance will be frozen and enter a retention period.
- If you do not renew the subscription before the retention period expires, your resources will be automatically deleted.

#### ∩ NOTE

- During the retention period, you cannot access or use your DB instance but the data stored in it can be retained. The retention period for the Huawei Cloud International website is 15 days.
- During the grace period, you can access and use only some resources of your DB instance. The grace period for the Huawei Cloud International website is 15 days.

You can enable auto-renewal any time before a DB instance expires. By default, the system will make the first attempt to charge your account for the renewal at 03:00 seven days before the expiry date. If this attempt fails, it will make another attempt at 03:00 every day until the subscription is renewed or expires. You can change the auto-payment date for renewal as required.

### 6.2 Manually Renewing a DB Instance

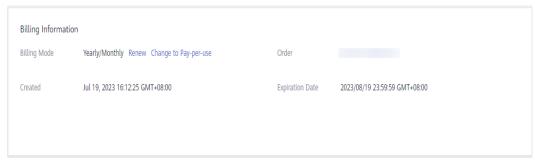

You can renew a yearly/monthly DB instance on the console any time before it is automatically deleted due to arrears.

#### Renewing a DB Instance on the Console

- Step 1 Log in to the management console.
- **Step 2** Click on the upper left corner and select a region and a project.
- Step 3 Click in the upper left corner of the page and choose Databases > Relational Database Service.
- **Step 4** On the **Instances** page, locate the DB instance you want to renew and choose **More** > **Renew** in the **Operation** column.

Alternatively, click the DB instance name to go to the **Basic Information** page. In the **Billing Information** area, click **Renew** on the right of **Billing Mode**.

Figure 6-2 Renewing a DB instance

**Step 5** On the displayed page, renew the DB instance.

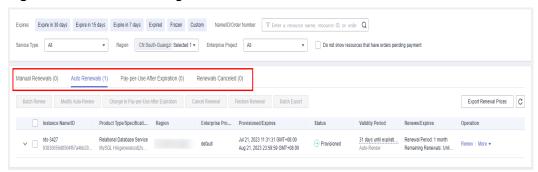

----End

#### Renewing a Subscription in the Billing Center

- **Step 1** Log in to the management console.
- **Step 2** Hover over **Billing & Costs** in the upper part of the console and choose **Renewal** from the drop-down list.
- **Step 3** Set the search criteria.

On the Manual Renewals, Auto Renewals, Pay-per-Use After Expiration, and Renewals Canceled pages, you can view the DB instances to be renewed.

Figure 6-3 Renewal management

You can move all DB instances that need to be manually renewed to the **Manual Renewals** tab page. For details, see **Restoring to Manual Renewal**.

- **Step 4** Manually renew DB instances.
  - Individual renewal: Click Renew in the Operation column for the desired DB instance.

Figure 6-4 Individual renewal

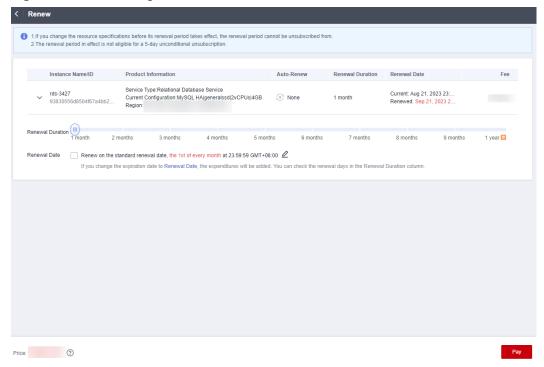

• Batch renewal: Check the boxes for the desired DB instances, and click **Batch Renew** in the upper left corner.

**Figure 6-5** Batch renewal

Step 5 Select a renewal duration and optionally select Renew on the standard renewal date. For details, see Setting the Same Renewal Day for Yearly/Monthly DB Instances. Confirm the price and click Pay.

Figure 6-6 Confirming renewal

**Step 6** Select a payment method and make your payment. Once the order is paid, the renewal is complete.

----End

# Setting the Same Renewal Day for Yearly/Monthly DB Instances

If the DB instances have different expiry dates, you can set the same renewal day, for example, the first day of each month, to make it easier to manage renewals.

In **Figure 6-7**, a user sets the same renewal day for two resources that will expire at different dates.

1. Set the same renewal day. 2. Select resources Operations expiration. Assume that you configure the system to renew resources A and B on the first day of each month. Resource A Additionally renew for Renew for one more month Renew on Expires on April 17 Renewal rules Resource B Renew for one more month Additionally renew for 24 days Expires on

Figure 6-7 Setting the same renewal day for resources with different expiry dates

For details, see **Setting a Renewal Date**.

# 6.3 Auto-renewing a DB Instance

Auto-renewal can prevent DB instances from being automatically deleted if you forget to manually renew them. The auto-renewal rules are as follows:

- The first auto-renewal date is based on when the DB instance expires and the billing cycle.
- The auto-renewal period of a DB instance depends on the subscription term.
  - Monthly subscriptions renew each month.
  - Yearly subscriptions renew each year.
- You can enable auto-renewal any time before a DB instance expires. By default, the system will make the first attempt to charge your account for the renewal at 03:00 seven days before the expiry date. If this attempt fails, it will make another attempt at 03:00 every day until the subscription is renewed or expires.
- After auto-renewal is enabled, you can still renew the DB instance manually if you want to. After a manual renewal is complete, auto-renewal is still valid, and the renewal fee will be deducted from your account seven days before the new expiry date
- By default, the renewal fee is deducted from your account seven days before the new expiry date. You can change this auto-renewal payment date as required.

For more information about auto-renewal rules, see Auto-Renewal Rules.

# **Prerequisites**

The yearly/monthly DB instance is not expired.

# **Enabling Auto-Renewal During Purchase**

You can enable auto-renewal on the DB instance purchase page, as shown in **Figure 6-8**. For details, see **Buy a DB Instance**.

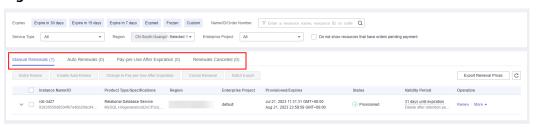

Figure 6-8 Enabling auto-renewal

## **Enabling Auto-Renewal on the Renewals Page**

- **Step 1** Log in to the management console.
- **Step 2** Hover over **Billing & Costs** in the upper part of the console and choose **Renewal** from the drop-down list.
- **Step 3** Set the search criteria.
  - You can view the DB instances auto-renewal has been enabled for on the Auto Renewals page.
  - You can enable auto-renewal for DB instances on the Manual Renewals,
     Pay-per-Use After Expiration, and Renewals Canceled pages.

Figure 6-9 Renewals

- **Step 4** Enable auto-renewal for yearly/monthly DB instances.
  - Enabling auto-renewal for a single instance: Select the instance for which you
    want to enable auto-renewal and click Enable Auto-Renew in the Operation
    column.

Figure 6-10 Enabling auto-renewal for a single instance

 Enabling auto-renewal for multiple instances at a time: Select the instances for which you want to enable auto-renewal and click Enable Auto-Renew above the list.

Figure 6-11 Enabling auto-renewal for multiple instances

**Step 5** Select a renewal period, specify the auto-renewal times, and click **Pay**.

Figure 6-12 Enabling auto-renew

----End

**7** Bills

You can view the resource usage and bills for different billing cycles on the **Billing** page in the Billing Center.

#### **Bill Generation**

Transaction records for yearly/monthly subscriptions are generated immediately after being paid for.

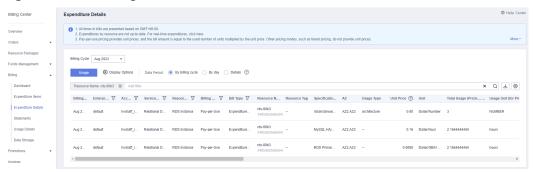

A pay-per-use DB instance is billed by the hour, day, or month, depending on the instance's usage type. The DB instance usage is billed by the hour. For details, see Bill Run for Pay-per-Use Resources

You are not charged immediately after a record is generated. For example, if a pay-per-use DB instance (which is billed on an hourly basis) is deleted at 08:30, you will still have expenditures for the 08:00 to 09:00 hour. However, but you will not likely be billed for the 08:00 to 09:00 hour until about 10:00. On the **Billing** page of the Billing Center, select the **Expenditure Details** tab. **Expenditure Time** in the bill indicates the time when the pay-per-use DB instance is used.

# Viewing Bills of a Specific Resource

- Step 1 Log in to the management console.
- **Step 2** Click in the upper left corner and select a region and a project.
- Step 3 Click in the upper left corner of the page and choose Databases > Relational Database Service.
- **Step 4** On the **Instances** page, copy the instance name.
- **Step 5** On the top menu bar, choose **Billing & Costs** > **Bills**.
- **Step 6** On the **Expenditure Details** tab, select **Resource Name** as the filter criteria, enter the obtained instance name, and click the Q icon.

Figure 7-1 Searching for a bill

By default, the bill details are displayed by usage and billing cycle. You can choose other display options as required. For details, see **Bills**.

----End

## Checking the Consistency of the Actual Usage and Billed Usage

Assume that you purchased a pay-per-use DB instance at 10:37:19 on August 08, 2023 and deleted it later that day, at 12:47:11.

#### • Transaction Records

Pay-per-use DB instance usage is calculated by the second but billed on an hourly basis. You can check the transaction records against the actual usage. The billed resources are billed separately. For details, see **Table 7-1** (taking storage as an example).

Table 7-1 DB instance transaction records

Service Type	RDS
Specifi cations	Primary/standby storage   cloud SSD   40 GB
Billing Mode	Pay-per-use
Expend iture Time	For the period of time from 10:37:19 to 12:47:11, 3 transaction records would be generated for the resource usage in the following periods:  • 2023/08/08 10:37:19 - 2023/08/08 11:00:00  • 2023/08/08 11:00:00 - 2023/08/08 12:00:00  • 2023/08/08 12:00:00 - 2023/08/08 12:47:11
List Price	List price on the official website = Usage x Unit price x Capacity The DB instance was used for 1,361 seconds in the first period, and the storage unit price can be obtained on the RDS Pricing Details page. The list price for the first period = $(1,361 \div 3,600) \times 0.0008 \times 40 = 0.01209777 \text{ USD. Similarly, you can calculate the storage list price for the other periods.}$

Discou nted Amoun t	Discounts offered for cloud services, for example, commercial discounts, partner authorized discounts, and promotional discounts. It is the discounted amount based on the list price.
Trunca ted Amoun t	Huawei Cloud billing is calculated to the 8th decimal place. However, the amount due is truncated to the 2nd decimal place. The third and later decimal places are referred to as the truncated amounts.
	Take the first period as an example. The truncated amount is \$0.00209777 USD.
Amoun t Due	Amount due = List price – Discount amount – Truncated amount Take the first period as an example. If the discount amount is 0, the amount due is \$0.01 USD (0.01209777 - 0 - 0.00209777).

#### DB instance bill details

Bill details can display in multiple ways. By default, the bill details of a resource are displayed by usage and by billing cycle. **Table 7-2** illustrates the DB instance bill details, which can be used to check against the actual usage (taking storage as an example).

Table 7-2 DB instance bill details

Service Type	RDS
Resour ce Type	DB instance
Billing Mode	Pay-per-use
Resour ce Name/I D	Instance name/ID
Specifi cations	Primary/standby storage   cloud SSD   40 GB
Usage Type	Duration for a pay-per-use DB instance
Unit Price	When pay-per-use billing is used, the unit price is only provided if the amount is equal to the usage multiplied by the unit price. No unit price is provided in other pricing modes, for example, tiered pricing.
	You can search for the unit price for pay-per-use DB instances on the RDS Pricing Details page.

Unit	Displayed on the RDS Pricing Details page.  Example: USD/GB/hour
Usage	Depends on the unit of the unit price, which is USD/GB/hour. Storage usage is billed by the hour. Example: 2.1644444444 hours
Usage Unit	Hour
List Price	List price on the official website = Usage x Unit price x Capacity The DB instance was used for 2.1644444444 hours in total, and the storage unit price can be obtained on the RDS Pricing Details page. The list price = 2.1644444444 x 0.0008 x 40 = \$0.06926222 USD.
Discou nted Amoun t	Discounts offered for cloud services, for example, commercial discounts, partner authorized discounts, and promotional discounts. It is the discounted amount based on the list price.
Amoun t Due	Amount that should be paid for used cloud services after discounts are applied.

8 Arrears

If your configured payment method is unable to pay for your bill, your account will be in arrears. You will need to update you payment method or to top up your account in a timely manner if you want to continue using your cloud services.

#### **Arrears Reason**

If your DB instance is not billed at a yearly/monthly basis, your account falls into arrears any time your configured payment method is unable to pay for the used resources on the pay-per-use basis.

## **Arrears Impact**

Yearly/Monthly

This is a pre-paid billing mode, so you can continue using yearly/monthly DB instances even if your account is in arrears. However, you cannot perform operations such as purchasing new DB instances, scaling up storage space, upgrading instance classes, or renewing DB instances, because they will generate new expenditures.

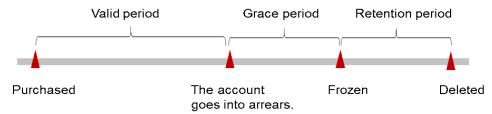

Pay-per-Use

If your configured payment method is unable to pay a bill for pay-per-use resources, the resources enter a grace period. After you top up your account, Huawei Cloud will bill you for expenditures generated by the resources during the grace period. You can view the expenditures on the **Overview** page of the Billing Center.

If your account is still in arrears after the grace period ends, the resources enter the retention period and their status turns to **Frozen**. You cannot perform any operations on these resources.

After the retention period ends, the compute resources (vCPUs and memory) and EIPs will be released and cannot be restored.

Figure 8-1 Lifecycle of a pay-per-use DB instance

#### **◯** NOTE

- During the retention period, you cannot access or use your DB instance but the data stored in it can be retained. The retention period for the Huawei Cloud International website is 15 days.
- During the grace period, you can access and use only some resources of your DB instance. The grace period for the Huawei Cloud International website is 15 days.

## **Avoiding and Handling Arrears**

Make sure you have a valid payment method configured as soon as possible after your account is in arrears. For details, see **Topping Up an Account**.

If a DB instance is no longer used, you can delete it to avoid generating further expenditures.

To help make sure your account never falls into arrears, you can configure the **Balance Alert** on the **Overview** page of the Billing Center. Then, any time an expenditure quota drops to below the threshold you specify, Huawei Cloud automatically notifies you by SMS or email.

# 9 Billing Termination

## **Yearly/Monthly Resources**

When you purchase a yearly/monthly resource, such as a yearly/monthly DB instance, you make a one-time up-front payment. By default, the billing automatically stops when the purchased subscription expires.

- If you no longer need a resource, but the subscription has not yet expired, you can unsubscribe from it. Depending on what coupons were used for the purchase and on if 5-day unconditional unsubscription rules apply, Huawei Cloud may issue you a refund. For details about unsubscription rules, see Unsubscriptions.
- If you have enabled auto-renewal but no longer wish to automatically renew the subscription, disable it before the auto-renewal date (7 days before the expiration date by default) to avoid unexpected expenditures.

### **Pay-per-Use Resources**

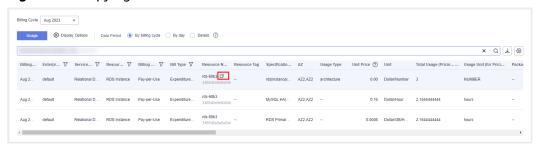

If pay-per-use resources, such as pay-per-use DB instances, are no longer required, delete them in a timely manner.

# Searching for Resources from Bills and Stopping Billing

To ensure that all related resources are deleted, you can search the billing records by resource name, and then delete the resources you identify in this way.

- Step 1 Log in to the management console.
- **Step 2** On the top menu bar, choose **Billing & Costs** > **Bills**.
- **Step 3** On the **Expenditure Details** page of the Billing Center, click the icon shown in the following figure to copy the resource name.

Figure 9-1 Copying the resource name

- Step 4 Click in the upper left corner of the page and choose Databases > Relational Database Service.
- **Step 5** Enter the copied resource name in the search box to search for the resource.
- **Step 6** Choose **More** > **Stop** in the **Operation** column to stop the DB instance. You can temporarily stop pay-per-use DB instances to save money.

After a DB instance is stopped, the ECS where the DB instance is located is no longer billed. Other resources, including EIPs, storage resources, database proxies, and backups, are still billed. For more information, see **Stopping an Instance**.

**Step 7** To delete the DB instance, choose **More** > **Delete** in the **Operation** column. Ensure that the DB instance has been removed from the list.

#### □ NOTE

You are billed one hour after the resource usage is calculated, so a bill may still be generated after the pay-per-use resource is deleted. For example, if you delete a DB instance (which is billed on an hourly basis) at 08:30, the expenditures for that hour from 08:00 to 09:00 are usually not billed until about 10:00.

#### ----End

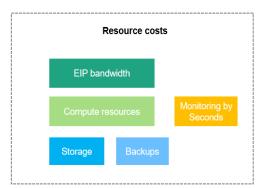

# 10 Cost Management

The following describes how to manage RDS costs in terms of cost composition, allocation, analysis, and optimization. Optimizing costs can help you maximize return on investment.

# **10.1 Cost Composition**

RDS costs consist of two parts:

- Resource costs: cost of compute and storage resources. For details, see Billing Modes.
- O&M costs: labor costs incurred during the use of DB instances.

# 10.2 Cost Allocation

A good cost accountability system is a prerequisite for cost management. It ensures that departments, business teams, and owners are accountable for their respective cloud costs. An enterprise can allocate cloud costs to different teams or projects so as to have a clear picture of their respective costs.

Huawei Cloud **Cost Center** provides various tools for you to group costs in different ways. You can experiment with these tools and find a way that works best for you.

By linked account

The enterprise master account can manage costs by grouping the costs of its member accounts by linked account. For details, see **Viewing Costs by Linked Account**.

#### • By enterprise project

Before allocating costs, enable Enterprise Project Management Service (EPS) and plan your enterprise projects based on your organizational structure or service needs. When purchasing cloud resources, select an enterprise project so that the costs of the resources will be allocated to the selected enterprise project. For details, see **Viewing Costs by Enterprise Project**.

Figure 10-1 Selecting an enterprise project

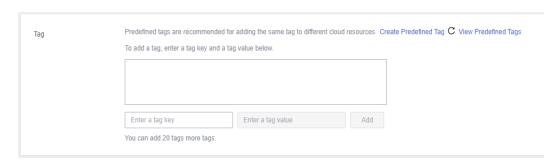

#### By cost tag

You use tags to sort your Huawei Cloud resources in a variety of different ways, for example, by purpose, owner, or environment. The following is the process of managing costs by predefined tags (recommended).

Figure 10-2 Adding tags

For details, see **Viewing Costs by Cost Tag**.

#### By cost category

You can use cost categories provided by **Cost Center** to split shared costs. Shared costs are the costs of resources (compute, network, storage, or resource packages) shared across multiple departments or the costs that

cannot be directly split by cost tag or enterprise project. These costs are not directly attributable to a singular owner, and they cannot be categorized into a singular cost type. In this case, you can define cost splitting rules to fairly allocate these costs among teams or business units. For details, see **Viewing Cost By Cost Category**.

# 10.3 Cost Analysis

To precisely control and optimize your costs, you need a clear understanding of what parts of your enterprise incurred different costs. **Cost Center** visualizes your original costs and amortized costs using various dimensions and display filters for cost analysis so that you can analyze the trends and drivers of your service usage and costs from a variety of perspectives or within different defined scopes.

You can also use cost anomaly detection provided by **Cost Center** to detect unexpected expenses in a timely manner. In this way, costs can be monitored, analyzed, and traced.

For details, see Performing Cost Analysis to Explore Costs and Usage and Enabling Cost Anomaly Detection to Identify Anomalies.

# **10.4 Cost Optimization**

You can identify resources with high costs based on the analysis results in the cost center, determine the causes of high costs, and take optimization measures accordingly.

## Resource rightsizing

- View DB instance monitoring metrics on the Cloud Eye console, such as the CPU, memory, and disk usage. If the current configuration is more than you need, you can downgrade the instance class.
- Identify idle resources and delete idle DB instances in a timely manner.
- Purchase general-purpose DB instances for workloads requiring low performance stability to reduce costs.

# Billing mode selection

Different types of services have different requirements on resource usage periods, so the most economical billing mode for one resource may not be the best option for another resource.

- For mature services that tend to be stable for the long term, select yearly/monthly billing.
- For short-term, unpredictable services that experience traffic bursts and cannot afford to be interrupted, select pay-per-use billing.
- Monitor the lifecycle of DB instances and renew yearly/monthly instances that are about to expire in a timely manner.
