# 1 What Is the Difference Between Adding a Resource Tag and Creating a Key?

When you add a resource tag, if you set only the tag key, the value of the tag is empty value by default, and the tag will be associated with a resource after it is added. You can add tags in batches.

If you create a key, a column with the key as the header will be added to the resource tag list, and the value is set to Not Tagged by default. To attach tags with the key created to resources, add values for the key in the rows that contain the resources. If you do not add any values for the key, the key will not be associated with any resources.

The following picture shows a tag of a VPC with the key set to Owner and the value left empty. It also shows a created key, Usage.

**Figure 1-1** Example

Resource Type	Resource Name	Region	Total Tags	Usage	Owner
<input type="checkbox"/> vpc	vpc-default		1	Not tagged	(Empty value)

# 2 How Do I Start the ActiveX Plug-in When Using Internet Explorer 9 to Import Files?

---

## Description

If you use Internet Explorer 9 to import files, you need to start the ActiveX plug-in.

## Procedure

1. Click  in the upper right corner of the browser.
2. Select **Internet Options**.
3. Click the **Security** tab in the displayed dialog box.
4. Click **Internet**.
5. (Optional) Click **Default level**.  
If the security level is set to **Custom level**, reset it to **Default level**.
6. Move the security level slider to set the security level to **Medium**.
7. Click **Apply**.
8. Click **Custom Level**.
9. Set **Initialize and script ActiveX controls not marked as safe for scripting** to **Prompt**.
10. Click **OK**.

# 3 What Can I Do If I Failed to Import Tags?

---

You may have edited the tag template with Excel.

Tag import only support CSV files using UTF-8 encoding.

If you edit a CSV file with Excel for tag import, the tags will be garbled. To edit a CSV file, open it with notepad.

# 4 How Can I Rectify an Invalid Tag?

---

If an invalid tag appears,  is displayed in the resource tag list, then you need to manually restore the invalid tag.

An invalid tag can be restored in either of the following situations:

- If the tag key is invalid, delete the tag and add a new tag that meets the requirements.
- If only the tag value is invalid, modify the tag value.

## Procedure

1. Log in to the management console.
2. Under **Management & Governance**, select **Tag Management Service**.
3. Set the resource search criteria and click **Search**.
4. Click **Restore** in the resource tag list.
5. In the **Edit Tag** area, restore the invalid tag.
  - Invalid tag key
    - i. Locate the row containing the invalid tag key and click **Delete**.
    - ii. In the **Add Tag** area, enter a tag key and a tag value.
  - Invalid tag value  
In the **Edit Tag** area, specify new values for tags.
6. Click **OK**.

The invalid tag has been restored.
