1 Cloud Connection Operation Guide

1.1 Cloud Connections

1.1.1 Managing Cloud Connect Service Disclaimer

Scenarios

To provide cross-region network communications, Cloud Connect will obtain and transmit your credential and account ID from the Chinese mainland to the country or region where the network instances you want to connect to are running for identity verification and authentication.

The credential and account ID is required only for providing services for you. If you need to use Cloud Connect for network communications, please read and [agree to the Cloud Connect Service Disclaimer](#).

If you do not need Cloud Connect for network communications, you can [reject the disclaimer](#).

Agreeing to the Disclaimer

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. On the **Cloud Connections** page, click **Accept Disclaimer**.
4. Select **I have read and agree to the Cloud Connect Service Disclaimer**.
5. Click **OK**.

Rejecting the Disclaimer

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. On the **Cloud Connections** page, click **Reject Disclaimer**.
4. In the displayed dialog box, click **OK**.

1.1.2 Creating a Cloud Connection

Scenarios

You need a cloud connection to connect the VPCs that you want to access.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. On the **Cloud Connections** page, click **Create Cloud Connection**.
4. Configure the parameters.

Table 1-1 Parameters for creating a cloud connection

Parameter	Description	Example Value
Name	Specifies the cloud connection name.	CC-test
Enterprise Project	Specifies the enterprise project that cloud connection belongs to. An enterprise project facilitates project-level management and grouping of cloud resources and users. The name of the default project is default . For details about creating and managing enterprise projects, see the Enterprise Management User Guide .	default
Scenario	Specifies whether the cloud connection is used to connect VPCs or enterprise routers. If you select VPC here, only VPCs or virtual gateways can use this cloud connection.	VPC
Tag	Identifies the cloud connection. A tag consists of a key and a value. You can add 20 tags to a cloud connection. NOTE If you have configured tag policies for Cloud Connect, add tags to cloud connections based on the tag policies. If you add a tag that does not comply with the tag policies, cloud connections may fail to be created. Contact your administrator to learn more about tag policies.	<ul style="list-style-type: none">• Key: cc_key1• Value: cc-01

Parameter	Description	Example Value
Description	(Optional) Provides supplementary information about the cloud connection. The description can contain no more than 255 characters and cannot contain angle brackets (<>).	-

5. Click **OK**.

1.1.3 Viewing a Cloud Connection

Scenarios

You can view details about a cloud connection you created.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name to view the details.

1.1.4 Modifying a Cloud Connection

Modifying Cloud Connection Details

Scenarios

You can modify the name and description of a cloud connection.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection, click **Modify** in the **Operation** column, and change the name and description.
4. Click **OK**.

Modifying the Bandwidth

Scenarios

You can modify the bandwidth of the bandwidth package that you have bound to a cloud connection.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Bound Bandwidth Packages**.

4. Locate the bandwidth package and click **Modify Bandwidth** in the **Operation** column.
5. Modify the bandwidth and click **OK**.
6. Confirm the new bandwidth and click **Pay Now**.

1.1.5 Deleting a Cloud Connection

Scenarios

You can delete a cloud connection you no longer need.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click **Delete** in the **Operation** column.
A cloud connection used by network instances cannot be deleted. To delete the cloud connection, remove the network instances from it first.
4. Click **Yes**.

1.1.6 Unbinding a Bandwidth Package

Scenarios

You can unbind a bandwidth package that you do not require from the cloud connection.

Prerequisites

You have deleted the inter-region bandwidths that you have assigned based on this bandwidth package.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Bound Bandwidth Packages**.
4. Locate the bandwidth package and click **Unbind** in the **Operation** column.
5. Click **Yes**.

1.1.7 Managing Cloud Connection Tags

Scenarios

After a cloud connection is created, you can view its tags or add, edit or delete a tag.

A tag is the identifier of a cloud connection and consists of a key and a value. You can add 20 tags to a cloud connection.

If you have configured tag policies for Cloud Connect, add tags to cloud connections based on the tag policies. If you add a tag that does not comply with the tag policies, cloud connections may fail to be created. Contact your administrator to learn more about tag policies.

 **NOTE**

If a predefined tag has been created on TMS, you can directly select the corresponding tag key and value.

For details about predefined tags, see [Predefined Tags](#).

Adding a Tag

Add a tag to an existing cloud connection.

1. Log in to the management console.
2. On the console homepage, click  in the upper left corner and select the desired region and project.
3. Click  to display **Service List** and choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Cloud Connections**.
5. Locate the connection and click its name to switch to the details page.
6. Click the **Tags** tab.
7. Click **Add Tag**.
8. In the displayed dialog box, enter a key and a value.

[Table 1-2](#) describes the tag key and value requirements.

Table 1-2 Tag key and value requirements

Parameter	Requirements
Key	<ul style="list-style-type: none"> • Cannot be left blank. • Must be unique for each resource. • Can contain a maximum of 36 characters. • Can contain only letters, digits, hyphens, and underscores.
Value	<ul style="list-style-type: none"> • Can be left blank. • Can contain a maximum of 43 characters. • Can contain only letters, digits, period, hyphens, and underscores.

9. Click **OK**.

Editing a Tag

Modify the value of a tag added to a cloud connection.

1. Log in to the management console.
2. On the console homepage, click  in the upper left corner and select the desired region and project.
3. Click  to display **Service List** and choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Cloud Connections**.
5. Locate the connection and click its name to switch to the details page.
6. Click the **Tags** tab.
7. In the tag list, locate the tag you want to modify and click **Edit** in the **Operation** column.
8. Enter a new value.
9. Click **OK**.

Deleting a Tag

Delete a tag from a cloud connection.

 CAUTION

Deleted tags cannot be recovered.

1. Log in to the management console.
2. On the console homepage, click  in the upper left corner and select the desired region and project.
3. Click  to display **Service List** and choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Cloud Connections**.
5. Locate the connection and click its name to switch to the details page.
6. Click the **Tags** tab.
7. In the tag list, locate the tag you want to delete and click **Delete** in the **Operation** column.
8. Click **Yes**.

1.2 Network Instances

1.2.1 Loading a Network Instance

Scenarios

Load the VPCs and virtual gateways to the cloud connection based on your network plan.

Constraints

To provide cross-region network communications, Cloud Connect will obtain and transmit your credential and account ID from the Chinese mainland to the country or region where the network instances you want to connect to are running for identity verification and authentication.

The credential and account ID is required only for providing services for you. If you need to use Cloud Connect for network communications, please read and [agree to the Cloud Connect Service Disclaimer](#).

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, click the name of the cloud connection.
4. Click **Network Instances**.
5. Click **Load Network Instance**.
6. In the **Load Network Instance** dialog box, specify the account.
 - If the network instance to be loaded is from your own account that is used to create the cloud connection, select **Current account**.
Configure the parameters based on [Table 1-3](#) and then click **OK**.
 - If the network instance is from the other user, select **Peer account**.
Configure the parameters based on [Table 1-4](#) and then click **OK**.

Table 1-3 Parameters for loading network instances in the current account

Parameter	Description
Account	Specifies whether network instances will be loaded across accounts. Select Current account .
Region	Specifies the region where the VPC you want to connect is located.
Instance Type	Specifies the type of the network instance. Two options are available, VPC and Virtual gateway .

Parameter	Description
VPC	Specifies the VPC you want to load to the cloud connection. This parameter is mandatory if you have set Instance Type to VPC .
VPC CIDR Block	Specifies the subnets of the VPC you want to load and the custom CIDR blocks. If you have set Instance Type to VPC , configure the following two parameters: <ul style="list-style-type: none"> • Subnet: Select one or all subnets of the VPC. • Other CIDR Block
Virtual Gateway	Specifies the virtual gateway you want to load to the cloud connection. This parameter is mandatory if you have set Instance Type to Virtual gateway .
Virtual Gateway CIDR Block	Specifies the VPC and the network segment route of the remote user site in the virtual gateway you want to load to the cloud connection. If you have set Instance Type to Virtual gateway , you need to configure the following two parameters: <ul style="list-style-type: none"> • Local Subnet • Remote Subnet
Remarks	Provides supplementary information about the network instance.

Table 1-4 Parameters for loading network instances across accounts

Parameter	Description
Account	Specifies whether network instances will be loaded across accounts. Select Peer account .
Peer Account ID	Specifies the ID of this other user's account.
Region	Specifies the region where the VPC you want to connect is located.
Peer Project ID	Specifies the project ID of the VPC in the other user's account.

Parameter	Description
Instance Type	Specifies the type of the network instance you want to load to the cloud connection.
Peer VPC	Specifies the VPC you want to load.
VPC CIDR Block	Specifies the subnets of the VPC you want to load and the custom CIDR blocks.
Remarks	Provides supplementary information about the network instance.

 **NOTE**

- A network instance can be loaded to only one cloud connection.
 - If a VPC is loaded, the associated virtual gateway cannot be loaded.
7. Configure other parameters and click **OK**.
 8. Click **Load Another Instance** if you want to continue loading network instances. Then click the **Network Instances** tab to view the network instances you loaded.

1.2.2 Viewing a Network Instance

Scenarios

You can view details about a network instance that has been loaded to a cloud connection.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Network Instances**.
4. Click the name of the loaded network instance. In the lower right area of the page, view its details.

1.2.3 Modifying a Network Instance

Modifying a VPC

Scenarios

You can modify the subnets and custom CIDR blocks of a loaded VPC.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Network Instances**.
4. Locate the VPC and click its name.
5. In the lower right area of the page, click **Modify VPC CIDR Block**.
6. Modify the subnets and custom CIDR blocks.
7. Click **OK**.

Modifying a Virtual Gateway

Scenarios

You can modify local and remote subnets of a loaded virtual gateway.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Network Instances**.
4. Locate the virtual gateway and click its name.
5. In the lower right area of the page, click **Modify Virtual Gateway CIDR Block**.
6. Modify the local and remote subnets.
7. Click **OK**.

1.2.4 Removing a Network Instance

Removing a VPC

Scenarios

You can remove a VPC that does not need to communicate with other VPCs.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Network Instances**.
4. Locate the VPC and click its name.
5. In the lower right area of the page, click **Remove**.
6. Click **Yes**.

Removing a Virtual Gateway

Scenarios

If an on-premises data center does not need to communicate with a VPC in another region, you can remove the virtual gateway associated with the VPC.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Network Instances**.
4. Locate the virtual gateway and click its name.
5. In the lower right area of the page, click **Remove**.
6. Click **Yes**.

1.3 Bandwidth Packages

1.3.1 Buying a Bandwidth Package

Scenarios

To enable network communications between regions in the same geographic region or across geographic regions, you need to purchase a bandwidth package and bind it to a cloud connection.

Bandwidth packages are used when network instances to be loaded to a cloud connection are VPCs.

NOTE

To allow you to test network connectivity between regions, Cloud Connect provides 10 kbit/s by default. To test network connectivity, you can ping an ECS in one VPC from an ECS in the other VPC.

No bandwidth packages are required if two VPCs are in the same region because they can communicate with each other by default after they are loaded to the same cloud connection.

Constraints

To provide cross-region network communications, Cloud Connect will obtain and transmit your credential and account ID from the Chinese mainland to the country or region where the network instances you want to connect to are running for identity verification and authentication.

The credential and account ID is required only for providing services for you. If you need to use Cloud Connect for network communications, please read and [agree to the Cloud Connect Service Disclaimer](#).

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.

4. Click **Buy Bandwidth Package**.
5. Configure the parameters based on [Table 1-5](#) and click **Buy Now**.

Table 1-5 Parameters

Parameter	Description
Billing Mode	Specifies how you want the bandwidth package to be billed.
Name	Specifies the bandwidth package name. The name can contain 1 to 64 characters, including digits, letters, underscores (_), hyphens (-), and periods (.).
Billed By	Specifies by what you want the bandwidth package to be billed. Only Bandwidth is available.
Applicability	Specifies whether the bandwidth package is used for communications within a geographic region, between geographic regions, or between specified regions. The following options are available: <ul style="list-style-type: none"> • Single geographic region: Use the bandwidth package between regions in the same geographic region. • Across geographic regions: Use the bandwidth package between regions in different geographic regions.
Geographic Region	Specifies the geographic region.
Bandwidth	Specifies the bandwidth you require for network communications across regions, in Mbit/s. The sum of all inter-region bandwidths you assign cannot exceed the total bandwidth of the bandwidth package. Assign the bandwidth based on your network plan.
Required Duration	Specifies how long you require the bandwidth package for. Auto renewal is supported.
Cloud Connection	Specifies the cloud connection you want to bind the bandwidth package to. Two options are available, Bind now and Bind later .

6. Confirm the information and click **Pay Now**.
7. Click **Confirm**.

Go back to the bandwidth package list and locate the bandwidth package. If its status changes to **Normal**, you can bind the bandwidth package to a cloud connection.

1.3.2 Modifying a Bandwidth Package

Scenarios

You can modify the bandwidth of a bandwidth package you have purchased. You can increase or decrease the bandwidth.

- If you increase the bandwidth, you need to pay for the increased bandwidth. The new bandwidth will take effect after you make the payment.
- If you decrease the bandwidth, the system will refund the overpayment to your account. The new bandwidth takes effect immediately.

The following procedure use bandwidth increase as an example.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
4. Locate the bandwidth package and click **Modify Bandwidth** in the **Operation** column.
5. Select **Increase bandwidth** and click **Continue**.
6. Specify the new bandwidth and click **OK**.
7. Confirm the information and click **Submit**.
8. Select a payment method and click **Pay**.

1.3.3 Binding a Bandwidth Package to a Cloud Connection

Scenarios

Bind a purchased bandwidth package to a cloud connection.

NOTE

- One cloud connection can only have one bandwidth package regardless of if the cloud connection is used for communications within a geographic region or between geographic regions. For example, if network instances are in the Chinese mainland and Asia Pacific, your cloud connection can only have one bandwidth package.
- A bandwidth package can only be bound to one cloud connection.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.

4. Locate the bandwidth package and click **Bind** in the **Operation** column.
5. Select the cloud connection you want to bind.
6. Click **OK**.

1.3.4 Unbinding a Bandwidth Package from a Cloud Connection

Scenarios

If you do not need a bandwidth package any longer, you can unbind it from the cloud connection.

Prerequisites

You have deleted the inter-region bandwidths that you have assigned based on this bandwidth package.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
4. Locate the bandwidth package and click **Unbind** in the **Operation** column.
5. Click **Yes**.

1.3.5 Unsubscribing from a Yearly/Monthly Bandwidth Package

Scenarios

You can unsubscribe from a yearly/monthly bandwidth package if you do not need it any longer. After you unsubscribe from the package, you will stop being charged for it.

Prerequisites

You have unbound the bandwidth package from the cloud connection by referring to [Unbinding a Bandwidth Package from a Cloud Connection](#).

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
4. Locate the bandwidth package and click **Unsubscribe** in the **Operation** column.

5. Select the bandwidth package, reason for unsubscription, and **I understand a handling fee will be charged for this unsubscription.**
6. Click **Confirm**.

1.3.6 Managing Bandwidth Package Tags

Scenarios

After a bandwidth package is purchased, you can view its tags or add, edit or delete a tag.

A tag is an identifier of a bandwidth package and consists of a key and a value. You can add 20 tags to a bandwidth package.

NOTE

If a predefined tag has been created on TMS, you can directly select the corresponding tag key and value.

For details about predefined tags, see [Predefined Tags](#).

Adding a Tag

Add a tag to an existing bandwidth package.

1. Log in to the management console.
2. On the console homepage, click  in the upper left corner and select the desired region and project.
3. Click  to display **Service List** and choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
5. Locate the bandwidth package and click its name to switch to the details page.
6. Click the **Tags** tab.
7. Click **Add Tag**.
8. In the displayed dialog box, enter a key and a value.

[Table 1-6](#) describes the tag key and value requirements.

Table 1-6 Tag key and value requirements

Parameter	Requirements
Key	<ul style="list-style-type: none">• Cannot be left blank.• Must be unique for each resource.• Can contain a maximum of 36 characters.• Can contain only letters, digits, hyphens, and underscores.

Parameter	Requirements
Value	<ul style="list-style-type: none">• Can be left blank.• Can contain a maximum of 43 characters.• Can contain only letters, digits, period, hyphens, and underscores.

9. Click **OK**.

Editing a Tag

Modify the value of a tag added to a bandwidth package.

1. Log in to the management console.
2. On the console homepage, click  in the upper left corner and select the desired region and project.
3. Click  to display **Service List** and choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
5. Locate the bandwidth package and click its name to switch to the details page.
6. Click the **Tags** tab.
7. In the tag list, locate the tag you want to modify and click **Edit** in the **Operation** column.
8. Enter a new value.
9. Click **OK**.

Deleting a Tag

Delete a tag from a bandwidth package.

 CAUTION

Deleted tags cannot be recovered.

1. Log in to the management console.
2. On the console homepage, click  in the upper left corner and select the desired region and project.
3. Click  to display **Service List** and choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
5. Locate the bandwidth package and click its name to switch to the details page.

6. Click the **Tags** tab.
7. In the tag list, locate the tag you want to delete and click **Delete** in the **Operation** column.
8. Click **Yes**.

1.4 Inter-Region Bandwidths

1.4.1 Assigning an Inter-Region Bandwidth

Scenarios

If network instances are in the same region, they can communicate with each other by default after they are loaded to one cloud connection. If network instances are in different regions, you need to assign inter-region bandwidths to ensure normal network communications between the instances. By default, Cloud Connect provides 10 kbit/s of bandwidth for testing network connectivity across regions.

Constraints

To provide cross-region network communications, Cloud Connect will obtain and transmit your credential and account ID from the Chinese mainland to the country or region where the network instances you want to connect to are running for identity verification and authentication.

The credential and account ID is required only for providing services for you. If you need to use Cloud Connect for network communications, please read and [agree to the Cloud Connect Service Disclaimer](#).

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, click the name of the cloud connection.
4. Click **Inter-Region Bandwidths**.
5. Click **Assign Inter-Region Bandwidth**.
6. Select the regions and the bandwidth package and enter the bandwidth.
7. Click **OK**.

Now the network instances in the two regions can communicate with each other.

1.4.2 Viewing Inter-Region Bandwidths

Scenarios

You can view details about inter-region bandwidths you have configured.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. Locate the cloud connection and click its name.
4. Click **Inter-Region Bandwidths** and view the inter-region bandwidths that you have assigned for the cloud connection.

1.4.3 Modifying an Inter-Region Bandwidth

Scenarios

You can modify an inter-region bandwidth if it no longer meets your requirements.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Inter-Region Bandwidths**.
4. Locate the inter-region bandwidth and click **Modify** in the **Operation** column.
5. Modify the bandwidth and click **OK**.

1.4.4 Deleting an Inter-Region Bandwidth

Scenarios

If you do not require network communications between two regions, you can delete the inter-region bandwidth assigned between them.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Inter-Region Bandwidths**.
4. Locate the inter-region bandwidth and click **Delete** in the **Operation** column.
5. Click **Yes**.

1.4.5 Viewing Monitoring Data of an Inter-Region Bandwidth

Scenarios

You can view the real-time monitoring data of an inter-region bandwidth to evaluate the network quality.

Procedure

1. Log in to the management console.

2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Inter-Region Bandwidths**.
4. Locate the inter-region bandwidth and click the icon in the **Monitoring** column to view the metrics of the corresponding period, for example, metrics of the last hour, 3 hours, or 12 hours.

1.5 Routes

1.5.1 Adding a Custom CIDR Block

Scenarios

If you use Cloud Connect together with another cloud service, such as NAT Gateway, Direct Connect, or VPN, you need to add a custom CIDR block to the cloud connection, so that the VPCs you load to the cloud connection can communicate with the service.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name.
4. Click **Network Instances**.
5. Locate the network instance and click its name.
6. In the lower right area, click **Modify VPC CIDR Block**.
7. Click **Advanced Settings**.
8. Enter the CIDR block in the **Other CIDR Block** text box and click **Add**.
9. Click **OK**.

1.5.2 Viewing Route Information

Scenarios

You can view the routes of a cloud connection.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the cloud connection list, locate the cloud connection and click its name. On the displayed page, click **Route Information**.
4. From the drop-down list, select the region.
5. View the routes in the list.

1.6 Cross-Account Authorization

1.6.1 Allowing Other Users to Load Your VPCs

Scenarios

You can grant other users the permissions to load your VPCs to their cloud connections.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane, choose **Cloud Connect > Cross-Account Authorization**.
4. Click **Network Instances Authorized by Me**.
5. Click **Authorize Network Instance**.
Select a region and a VPC, and enter the peer account ID and peer cloud connection ID.
6. Click **OK**.

1.6.2 Viewing Authorization

You can view the VPCs that you have allowed other users to load to their cloud connections and the VPCs that you are allowed to load to your cloud connection.

Viewing the VPCs that Can Be Loaded to Other Users' Cloud Connections

Scenarios

You can view the VPCs that you have allowed other users to load to their cloud connections

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane, choose **Cloud Connect > Cross-Account Authorization**.
4. Click **Network Instances Authorized by Me**.
5. In the search box in the upper right corner of the list, search the VPCs by name or ID.
6. In the displayed VPC list, view the VPCs.

Viewing the VPCs that Other Users Allow You to Load

Scenarios

You can view the VPCs that other users have allowed you to load to your cloud connection.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane, choose **Cloud Connect > Cross-Account Authorization**.
4. Click **Network Instances Authorized to Me**.
5. In the search box in the upper right corner of the list, search the VPCs by peer account ID, VPC ID, or cloud connection ID.
6. In the displayed VPC list, view the VPCs.

1.6.3 Canceling Authorization

Scenarios

You can cancel the authorization that allows other users to load your VPCs to their cloud connections.

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane, choose **Cloud Connect > Cross-Account Authorization**.
4. Click **Network Instances Authorized by Me**.
5. In the search box in the upper right corner of the list, search the VPCs by name or ID.
6. Click **Cancel Authorization** in the **Operation** column.
7. Click **Yes**.

NOTE

After the authorization is canceled, other users can still use your VPCs that have been loaded to their cloud connections until these VPCs are removed from the cloud connection.

1.6.4 Loading a VPC in Another Account

Scenarios

You can load the VPCs in other accounts to your cloud connection so that your VPCs can communicate with these VPCs.

Prerequisites

You must have the permissions of **Tenant Guest**, **VPC Administrator**, and **Cross Connect Administrator** for the region where the other user's VPCs reside.

For details, see [Permission Management](#).

Procedure

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane, choose **Cloud Connect > Cross-Account Authorization**.
4. Click **Network Instances Authorized to Me**.
5. In the search box in the upper right corner of the list, search the VPCs by peer account ID, VPC ID, or cloud connection ID.
6. Select the VPC and click **Load to Cloud Connection** in the **Operation** column.
7. Configure the parameters.

Table 1-7 Parameters for loading a VPC to a cloud connection

Parameter	Description
Cloud Connection ID	Specifies the ID of the cloud connection to which the VPC you want to load.
Region	Specifies the region where the VPC you want to connect is located.
Instance Type	Specifies the type of the network instance you can load. Only VPCs can be loaded.
Peer VPC	Specifies the ID of the VPC to be loaded.
VPC CIDR Block	Specifies the subnets of the VPC you want to load and the custom CIDR blocks.

8. Click **OK**.
In the cloud connection list, locate the cloud connection and click its name. Under **Network Instances**, view the loaded VPC.

1.7 Cross-Border Permits

1.7.1 Applying for a Cross-Border Permit

Scenarios

In accordance with the laws and administrative regulations of the Ministry of Industry and Information Technology (MIIT) of the People's Republic of China, only three major operators in the Chinese mainland are allowed for cross-border network communications, and a cross-border permit is required if you carry out business activities outside the Chinese mainland.

You need to apply for a cross-border permit only when a VPC to be connected is outside the Chinese mainland and other VPCs are inside the Chinese mainland.

Procedure

1. Log in to the management console.
2. Click  to display **Service List** and choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
4. On the displayed page, click **apply now**.

If the registered address of your business entity is in the Chinese mainland, click [here](#) to go to the **Cross-Border Service Application System** page.

If the registered address of your business entity is outside the Chinese mainland, click [here](#) to go to the **Cross-Border Service Application System** page.

5. On the application page, configure the parameters and upload the required materials.

Table 1-8 Online cross-border permit application

Parameter	Description
Applicant Name	The applicant name, which must be the same as the company name in the <i>Letter of Commitment to Information Security</i> .
Huawei Cloud UID	The account ID to log in to the management console. You can take the following steps to obtain your account ID. <ol style="list-style-type: none">1. Log in to the management console.2. Click the username in the upper right corner and select My Credentials from the drop-down list.3. On the API Credentials page, view the Account ID.
Type of Product	Select Cloud Connect .
Bandwidth (M)	The bandwidth must be the same as the bandwidth in the <i>Letter of Commitment to Information Security</i> . The information is for reference only and does not affect the actual service bandwidth.
Start Date	For reference only
Termination Date	For reference only
Customer Type	Select a type based on the actual situation.
Country of the Customer	Country where the applicant is located.
Contact Name	-
Contact Number	-

Parameter	Description
Type of ID	-
ID Number	-
Scope of Business	Briefly describe the main business.
Number of Employees	For reference only
Per Capita Bandwidth	For reference only
Branch Location Country	Country where the applicant branch is located. Set this parameter based on the actual situation.

Table 1-9 Required materials

Material	Signature	Seal	Description
A scanned copy of your company's business license	N/A	Required	For the position of the seal, see the template provided by Huawei Cloud.
A scanned copy of the <i>Huawei Cloud Cross-Border Circuit Service Agreement</i>	Required	Required	<ul style="list-style-type: none"> Sign the material on the signature block. Stamp the seal over the signature.
A scanned copy of the <i>China Unicom Letter of Commitment to Information Security of the Cross-Border Circuit Service</i>	Required	Required	<ul style="list-style-type: none"> Sign the material on the signature block. Stamp the seal over the signature. Specify the bandwidth you estimated and your company name.

6. Click **Submit**.

1.7.2 Querying the Application Progress

Scenarios

You can query the progress of your cross-border permit application.

Procedure

1. Log in to the management console.
2. Click  to display **Service List** and choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Bandwidth Packages**.
4. On the displayed page, click **you can view the approval progress** in the upper part of the page.
Alternatively, on the application page, click **Application Progress Enquiry** in the upper right corner.
5. On the **Self-inquiry System** page, enter the **Huawei Cloud ID** and **Contact Number** as prompted, and click **Query**.

1.8 Monitoring

1.8.1 Overview

Monitoring is key to ensuring the performance, reliability, and availability of a cloud service. Monitoring provides you with data on your Cloud Connect resource usage. You can use Cloud Eye to track the status of your Cloud Connect resources. Cloud Eye automatically monitors resources in real time and enables you to manage alarms and notifications, so that you can keep track of performance of Cloud Connect.

For more information, see the following:

- [Monitoring Metrics](#)
- [Setting an Alarm Rule](#)
- [Viewing Metrics](#)

1.8.2 Supported Metrics

Description

The table describes monitored metrics reported by Cloud Connect to Cloud Eye as well as their namespaces and dimensions. You can use the management console to query the metrics of the monitored objects and alarms generated for Cloud Connect.

Namespace

SYS.CC

Metrics

Table 1-10 Cloud Connect metrics

ID	Metric	Description	Value Range	Monitored Object	Monitoring Interval
network_incoming_bits_rate	Network Incoming Bandwidth	Bit rate for inbound data to a region from another region of a cloud connection Unit: bit/s	≥ 0 bits/s	Inter-region bandwidth	5 minutes
network_outgoing_bits_rate	Network Outgoing Bandwidth	Bit rate for outbound data from a region to another region of a cloud connection Unit: bit/s	≥ 0 bits/s	Inter-region bandwidth	5 minutes
network_incoming_bytes	Network Incoming Traffic	Number of bytes for inbound data to a region from another region of a cloud connection Unit: byte	≥ 0 bytes	Inter-region bandwidth	5 minutes
network_outgoing_bytes	Network Outgoing Traffic	Number of bytes for outbound data from a region to another region of a cloud connection Unit: byte	≥ 0 bytes	Inter-region bandwidth	5 minutes

ID	Metric	Description	Value Range	Monitored Object	Monitoring Interval
network_incoming_packets_rate	Network Incoming Packet Rate	Packet rate for inbound data to a region from another region of a cloud connection Unit: Packet/s	≥ 0 packets/s	Inter-region bandwidth	5 minutes
network_outgoing_packets_rate	Network Outgoing Packet Rate	Packet rate for outbound data from a region to another region of a cloud connection Unit: Packet/s	≥ 0 packets/s	Inter-region bandwidth	5 minutes
network_incoming_packets	Network Incoming Packets	Number of packets for inbound data to a region from another region of a cloud connection Unit: Packet	≥ 0 packets	Inter-region bandwidth	5 minutes
network_outgoing_packets	Network Outgoing Packets	Number of packets for outbound data from a region to another region of a cloud connection Unit: Packet	≥ 0 packets	Inter-region bandwidth	5 minutes
network_bandwidth_usage	Network Bandwidth Usage	Utilization of an inter-region bandwidth assigned to a cloud connection Unit: percent	0-100%	Inter-region bandwidth	5 minutes

 NOTE

In some regions, the monitoring period can be set to 1 minute. View the actual monitoring period on the console.

Dimensions

Key	Value
cloud_connect_id	Cloud connection ID
bwp_id	Bandwidth package ID
region_bandwidth_id	Inter-region bandwidth ID

1.8.3 Setting Alarm Rules

Scenarios

You can configure alarm rules to customize the monitored objects and notification policies and to learn Cloud Connect resource status at any time.

Procedure

1. Log in to the management console.
2. In the service list, choose **Management & Governance > Cloud Eye**.
3. In the navigation pane on the left, choose **Alarm Management > Alarm Rules**.
4. On the **Alarm Rule** page, click **Create Alarm Rule** to create an alarm rule. You can also modify an existing alarm rule.
5. After configuring the parameters, click **Create**.

After the alarm rule is set, the system automatically notifies you when an alarm is triggered.

 NOTE

For more information about Cloud Connect alarm rules, see [Cloud Eye User Guide](#).

1.8.4 Viewing Metrics

1. Log in to the management console.
2. Click  in the upper left corner to select a region and a project.
3. In the service list, choose **Management & Governance > Cloud Eye**.
4. In the navigation pane on the left, choose **Cloud Service Monitoring > Cloud Connect**.
5. Click **View Metric** in the **Operation** column to view the cloud connection status.

You can view data of the last one, three, 12, or 24 hours, or last 7 days.

1.9 Auditing

1.9.1 Key Operations Recorded by CTS

Scenarios

With Cloud Trace Service (CTS), you can record operations associated with Cloud Connect for later query, audit, and backtracking.

Prerequisites

You have enabled CTS.

Key Operations Recorded by CTS

Table 1-11 Cloud connection operations recorded by CTS

Operation	Resource	Trace
Creating a cloud connection	cloudConnection	createCloudConnection
Updating a cloud connection	cloudConnection	updateCloudConnection
Deleting a cloud connection	cloudConnection	deleteCloudConnection
Loading a network instance	networkInstance	createNetworkInstance
Updating a network instance	networkInstance	updateNetworkInstance
Removing a network instance	networkInstance	deleteNetworkInstance
Assigning an inter-region bandwidth	interRegionBandwidth	createInterRegionBandwidth
Updating an inter-region bandwidth	interRegionBandwidth	updateInterRegionBandwidth
Deleting an inter-region bandwidth	interRegionBandwidth	deleteInterRegionBandwidth
Buying a bandwidth package	bandwidthPackage	createBandwidthPackage
Updating a bandwidth package	bandwidthPackage	updateBandwidthPackage

Operation	Resource	Trace
Deleting a bandwidth package	bandwidthPackage	deleteBandwidthPackage
Binding a bandwidth package to a cloud connection	bandwidthPackage	associateBandwidthPackage
Unbinding a bandwidth package	bandwidthPackage	disassociateBandwidthPackage
Allowing other users to load your VPCs	authorisation	createAuthorisation
Updating authorization	authorisation	updateAuthorisation
Canceling authorization	authorisation	deleteAuthorisation

1.9.2 Viewing Traces

Scenarios

After CTS is enabled, CTS starts recording operations on cloud resources. The CTS management console stores the last seven days of operation records.

This section describes how to query or export the last seven days of operation records on the management console.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. In the upper left corner of the page, click  to go to the service list. Under **Management & Governance**, click **Cloud Trace Service**.
4. In the navigation pane on the left, choose **Trace List**.
5. Specify filters as needed. The following filters are available:
 - **Trace Type**: Set it to **Management** or **Data**.
 - **Trace Source**, **Resource Type**, and **Search By**
Select filters from the drop-down list.
If you select **Trace name** for **Search By**, select a trace name.
If you select **Resource ID** for **Search By**, select or enter a resource ID.
If you select **Resource name** for **Search By**, select or enter a resource name.
 - **Operator**: Select a specific operator (a user other than an account).
 - **Trace Status**: Select **All trace statuses**, **Normal**, **Warning**, or **Incident**.
 - Search time range: In the upper right corner, choose **Last 1 hour**, **Last 1 day**, or **Last 1 week**, or specify a custom time range.

6. Click arrow on the left of the required trace to expand its details.
7. Locate the required trace and click **View Trace** in the **Operation** column.
A dialog box is displayed, showing the trace content.

2 Central Network Operation Guide

2.1 Overview

What Is a Central Network?

Relying on the cloud backbone network, Central Network allows you to easily build a reliable, intelligent enterprise-grade network and manage global network resources on premises and on the cloud. By building a central network, you can enable communications between enterprise routers, as well as between enterprise routers and your on-premises data center, in the same region or different regions.

Application Scenarios

- Cross-region communication on the cloud: Enterprise routers in different regions are added to a central network as attachments so that resources in these regions can communicate with each other over one network.

Figure 2-1 Cross-region communication between enterprise routers

- Communication between on-premises data centers and the cloud across regions: Enterprise routers and global DC gateways are added to a central network as attachments, so that on-premises data centers can access the cloud over the cloud backbone network.

Figure 2-2 Connectivity between enterprise routers and an on-premises data center

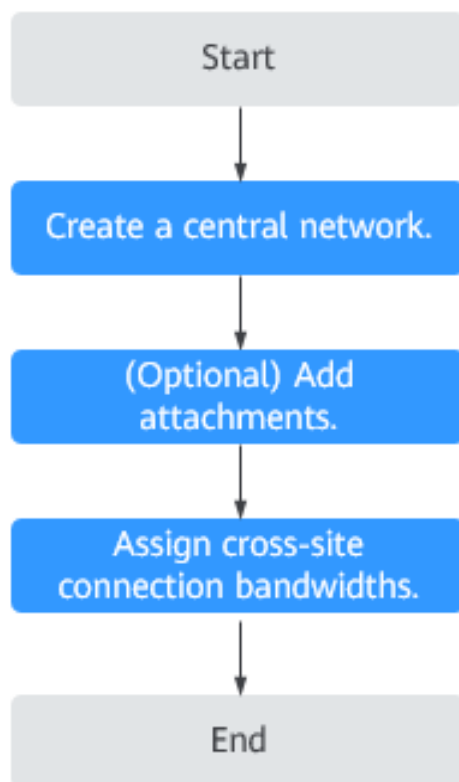

- Global network: By flexibly changing the central network policies, you can build a global network more conveniently.

Process for Using a Central Network to Manage Network Resources

Figure 2-3 shows the process of configuring a central network to manage global network resources.

Figure 2-3 Configuration process

2.2 Managing Central Networks

Scenarios

After an enterprise router is created, you can create a central network and add the enterprise router to a policy of the central network. In this way, resources can

communicate with each other across regions, and network resources in each region can be managed centrally.

If both global DC gateways and enterprise routers are added to a central network, the on-premises data centers can access the cloud.

Constraints

- Before building a central network, you need to create enterprise routers and enable **Default Route Table Association** and **Default Route Table Propagation** for them.

Figure 2-4 Enabling **Default Route Table Association** and **Default Route Table Propagation** for enterprise routers

* Name

* ASN

Autonomous System Number used on Huawei Cloud for a Border Gateway Protocol (BGP) session. You can specify an ASN in the range of 64512-65534 or 4200000000-4204907294.
If your enterprise routers in different regions use Cloud Connect to communicate, specify a unique ASN for each enterprise router.

Default Route Table Association Enable ⓘ

Default Route Table Propagation Enable ⓘ

Auto Accept Shared Attachments Enable ⓘ

- To enable communication between on-premises data centers and the cloud, you need to create global DC gateways and add them to the central network as attachments.

NOTE

You can check the regions where global DC gateways are available on the Direct Connect console.

Creating a Central Network

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Click **Create Central Network**.
5. Enter the name and description and then configure policies for the central network. [Table 2-1](#) lists the parameters required for creating a central network.

Table 2-1 Parameters for creating a central network

Parameter	Setting
Name	Enter a name for the central network.
Description	Describe the central network for easy identification.
Policy	

Parameter	Setting
Region	Add a policy to record your configuration. You need to select a region for the policy.
Enterprise Router	Add only one enterprise router for a region. All added enterprise routers can communicate with each other by default. 10 kbit/s of bandwidth is provided for testing connectivity between enterprise routers.

6. Click **OK**.

Follow-up Operations

- Add attachments.
For details, see [Managing Attachments](#).
- Assign cross-site connection bandwidths.
For details, see [Managing Cross-Site Connection Bandwidths](#).

2.3 Managing Policies

Scenarios

Policies record the enterprises routers that have been added to a central network to allow you to better manage your network. You can apply policies of any version.

Constraints

- A central network can only have one policy. If you apply another policy for this central network, the policy that was previously applied will be automatically cancelled.
- In each policy, only one enterprise router can be added for a region. All added enterprise routers can communicate with each other by default.
- A policy that is being applied or cancelled cannot be deleted.

Creating a Policy

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Policies** tab and click **Add Policy**.
6. Select the target region and the enterprise router in this region.
You can click **Add Enterprise Router** to add an enterprise router in another region.

7. Click **OK**.

Applying a Policy

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. On the **Policies** tab, locate the policy you want to apply and click **Apply** on the right.
6. In the **Policy Changes** area on the right, check the change of the enterprise router in the policy.
7. Click **OK**.

Deleting a Policy

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. On the **Policies** tab, locate the policy you want to delete and click **Delete** on the right.
6. In the displayed dialog box, click **OK**.

2.4 Managing Attachments

Scenarios

You can add network instances such as global DC gateways to a central network as attachments to enterprise routers in given regions, so that network instances in different regions can communicate with each other.

This topic describes how to manage attachments on a central network.

Constraints

- Only existing global DC gateways can be added to a central network as attachments. If there are no global DC gateways, create one by following the instructions in [Creating a Global DC Gateway](#).

NOTE

You can check the regions where global DC gateways are available on the Direct Connect console.

- By default, you can add up to three attachments to a central network. To increase the quota, [submit a service ticket](#).
- Up to five attachments can be added on the console at a time on the console. To add more attachments, click **OK** and then click **Add Attachment**.

Adding Attachments

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Attachments** tab and click **Add Attachment**.
6. Add network instances such as global DC gateways to the central network. [Table 2-2](#) describes the parameters.

Table 2-2 Parameters for adding a network instance to a central network as an attachment

Parameter	Setting
Name	Enter a name for the attachment.
Region where the enterprise router on the central network is located	
Region	Select the region of the enterprise router that the network instance is attached to.
Enterprise Router	Select an enterprise router in the selected region. The network instance will be attached to the selected enterprise router. If there are no enterprise routers for you to choose from, click Create Enterprise Router to create one first.
Network instance that will be added to a central network	
Attachment Type	Specify the type of the network instance that will be added to the central as attachment. Currently, only global DC gateways are supported. A global DC gateway can work with enterprise routers in the same region or different regions to build a central network so that your on-premises data center can access the VPCs over the Huawei backbone network. This can reduce network latency, simplify network topology, and improve O&M efficiency.
Region	Select the region where the global DC gateway is located. This region may be different from that of the enterprise router.
Global DC Gateway	Select the global DC gateway that will be attached to the selected enterprise router, so that they can communicate with each other and the on-premises data center can communicate with the cloud network. If there are no global DC gateways for you to choose from, click Create Global DC Gateway to create one first.

7. Click **OK**.

Deleting an Attachment

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Attachments** tab, locate the attachment you want to delete, and click **Delete** in the **Operation** column.
6. Click **OK**.

2.5 Managing Cross-Site Connection Bandwidths

Scenarios

Enterprise routers and global DC gateways in different regions added to the same policy can communicate with each other after you purchase a global connection bandwidth and assign cross-site connection bandwidths for these network resources.

Constraints

- [Changing a Cross-Site Connection Bandwidth](#) and [Deleting a Cross-Site Connection Bandwidth](#) cannot be performed when a cross-site connection is being created, updated, deleted, frozen, unfrozen, or recovered.
- The total of cross-site connection bandwidths cannot exceed the global connection bandwidth.
- After [Deleting a Cross-Site Connection Bandwidth](#), you will still be billed if the global connection bandwidth is not deleted.

Assigning a Cross-Site Connection Bandwidth

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Cross-Site Connection Bandwidths** tab, locate the cross-site connection, and click **Assign now** in the **Global Connection Bandwidth** column.
6. On the **Assign Cross-Site Connection Bandwidth** page, select the global connection bandwidth.

You can also click **Buy Now** to purchase one if there are no available global connection bandwidths.

7. Enter the bandwidth.
8. Click **OK**.

Viewing Monitoring Metrics of Cross-Site Connection Bandwidths

You can view the status of each cross-site connection bandwidth assigned for communications between network resources.

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Cross-Site Connection Bandwidths** tab and click the icon in the **Monitoring** column to view the monitoring data.

NOTE

- For more information about Enterprise Router monitoring, see [Supported Metrics](#).
- If a global DC gateway is attached to an enterprise router, only metrics of the enterprise router can be viewed.

Changing a Cross-Site Connection Bandwidth

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Cross-Site Connection Bandwidths** tab, locate the cross-site connection, and click **Change Bandwidth** in the **Operation** column.
6. On the **Change Bandwidth** page, change the global connection bandwidth or modify the cross-site connection bandwidth.
7. Click **OK**.

Deleting a Cross-Site Connection Bandwidth

1. Log in to the management console.
2. In the service list, choose **Networking > Cloud Connect**.
3. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
4. Locate the central network and click its name.
5. Switch to the **Cross-Site Connection Bandwidths** tab, locate the cross-site connection, and click **Delete Bandwidth** in the **Operation** column.
6. In the displayed dialog box, click **OK**.

2.6 Auditing

2.6.1 Key Operations Recorded by CTS

Scenarios

With Cloud Trace Service (CTS), you can record operations associated with cloud connections and central networks for later query, audit, and backtracking.

Prerequisites

You have enabled CTS.

Key Operations Recorded by CTS

Table 2-3 Central network operations that can be recorded by CTS

Operation	Resource	Trace
Creating a central network	centralNetwork	createCentralNetwork
Updating a central network	centralNetwork	updateCentralNetwork
Deleting a central network	centralNetwork	deleteCentralNetwork
Adding a central network policy	centralNetworkPolicy	createCentralNetworkPolicy
Applying a central network policy	centralNetworkPolicy	applyCentralNetworkPolicy
Deleting a central network policy	centralNetworkPolicy	deleteCentralNetworkPolicy
Adding a global DC gateway to a central network as an attachment	centralNetworkAttachment	createCentralNetworkGdgwAttachment
Updating a global DC gateway on a central network	centralNetworkAttachment	updateCentralNetworkGdgwAttachment
Removing an attachment from a central network	centralNetworkAttachment	deleteCentralNetworkAttachment
Updating a central network connection	centralNetworkConnection	updateCentralNetworkConnection
Adding a tag to a central network	createCentralNetworkTags	centralNetworkTags
Deleting a tag from a central network	deleteCentralNetworkTags	centralNetworkTags

2.6.2 Viewing Traces

Scenarios

After CTS is enabled, it starts recording operations on cloud resources. The CTS console stores the operation records of the last seven days.

This topic describes how to query or export operation records of the last seven days on the CTS console.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. In the upper left corner of the page, click  to go to the service list. Under **Management & Governance**, click **Cloud Trace Service**.
4. In the navigation pane on the left, choose **Trace List**.
5. Specify filters as needed. The following filters are available:
 - **Trace Type**: Set it to **Management** or **Data**.
 - **Trace Source, Resource Type, and Search By**
Select filters from the drop-down list.
If you select **Trace name** for **Search By**, select a trace name.
If you select **Resource ID** for **Search By**, select or enter a resource ID.
If you select **Resource name** for **Search By**, select or enter a resource name.
 - **Operator**: Select a specific operator (a user other than an account).
 - **Trace Status**: Select **All trace statuses**, **Normal**, **Warning**, or **Incident**.
 - **Search time range**: In the upper right corner, choose **Last 1 hour**, **Last 1 day**, or **Last 1 week**, or specify a custom time range.
6. Click arrow on the left of the required trace to expand its details.
7. Locate the required trace and click **View Trace** in the **Operation** column.
A dialog box is displayed, showing the trace content.

3 Global Connection Bandwidth Operation Guide

3.1 Overview

A global connection bandwidth is used by instances to allow communications over the cloud backbone network.

NOTE

- In Cloud Connect, global connection bandwidths are mainly used by central networks.
- By default, global connection bandwidths cannot be used by cloud connections. Only some existing users can bind global connection bandwidths to cloud connections.

There are different types of global connection bandwidths that are designed for different application scenarios, including multi-city, geographic-region, and cross-geographic-region bandwidths. Geographic-region and cross-geographic-region bandwidths are often bound to cloud connections for communications on the cloud.

Table 3-1 Global connection bandwidth types

Bandwidth Type	Instance Type	Description	Scenario
Multi-city	Global EIPs	Select this type of bandwidth if you need communications between cloud regions in the same region, for example, CN East-Shanghai1 and CN East-Shanghai2 in East China.	A global EIP and its associated resource, such as an ECS or load balancer, have to be in the same region. Multi-city Bandwidth Application Scenario (Global EIP)

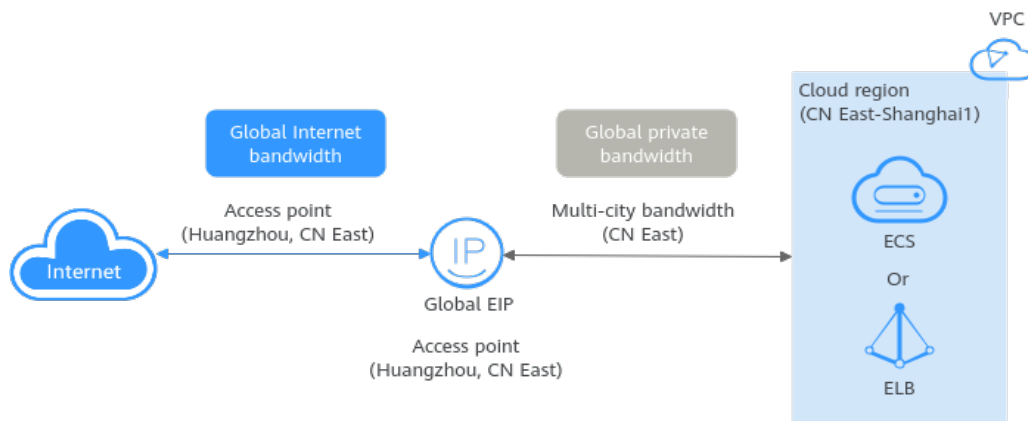

Bandwidth Type	Instance Type	Description	Scenario
Geographic - region	Global EIPs Cloud connections	Select this type of bandwidth if you need communications within a geographic region. Geographic regions include the Chinese mainland, Asia Pacific, and Southern Africa. For example, CN East-Shanghai1 and CN South-Guangzhou are regions in the Chinese mainland. For details about the relationship between geographic regions and Huawei Cloud regions, see Geographic Regions and Huawei Cloud Regions .	<ul style="list-style-type: none"> • A global EIP and its associated resource, such as an ECS or load balancer, have to be in the same geographic region. Geographic-region Bandwidth Application Scenario (Global EIP) • Enterprise routers on a central network are from the same geographic region. Geographic-region/Cross-geographic-region Bandwidth Application Scenario (Central Network)
Cross-geographic - region	Global EIPs Cloud connections	Select this type of bandwidth if you need communications across geographic regions. Geographic regions include the Chinese mainland, Asia Pacific, and Southern Africa. For example, CN East-Shanghai1 and CN-Hong Kong are from different geographic regions. For details about the relationship between geographic regions and cloud regions, see Geographic Regions and Huawei Cloud Regions .	<ul style="list-style-type: none"> • A global EIP and its associated resource, such as an ECS or load balancer, are from different geographic regions. Cross-geographic-region Bandwidth Application Scenario (Global EIP) • Enterprise routers on a central network are from different geographic regions. Geographic-region/Cross-geographic-region Bandwidth Application Scenario (Central Network)

Multi-city Bandwidth Application Scenario (Global EIP)

In this example, a global EIP is bound to an ECS.

The ECS is in the CN East-Shanghai1 region, and the access point of the global EIP is in Hangzhou, a city in East China.

Figure 3-1 Multi-city bandwidth application scenario (global EIP)

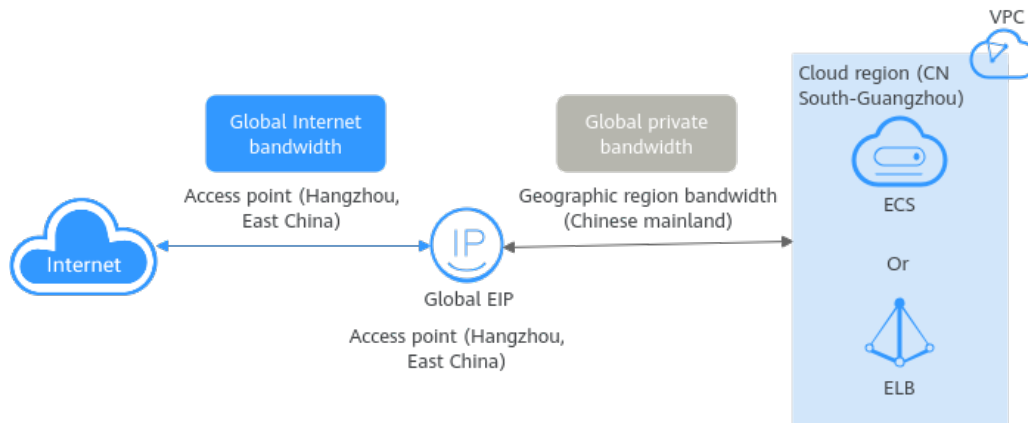

Geographic-region Bandwidth Application Scenario (Global EIP)

In this example, a global EIP is bound to an ECS.

The ECS is in the CN South-Guangzhou region, and the access point of the global EIP is in Hangzhou. Both Guangzhou and Hangzhou are cities on the Chinese mainland.

Figure 3-2 Geographic-region bandwidth application scenario (global EIP)

Cross-geographic-region Bandwidth Application Scenario (Global EIP)

In this example, a global EIP is bound to an ECS.

The ECS is in the CN-Hong Kong region, and the access point of the global EIP is in Hangzhou. CN-Hong Kong is a cloud region in Asia Pacific, but Hangzhou is a city on the Chinese mainland.

- Geographic region 1: Asia Pacific, the geographic region where the ECS is located
- Geographic region 2: Chinese mainland, the geographic region where the global EIP is accessed

NOTE

Ensure that the geographic regions 1 and 2 are configured as above.

Figure 3-3 Cross-geographic-region bandwidth application scenario (global EIP)

Geographic-region/Cross-geographic-region Bandwidth Application Scenario (Central Network)

In this example, enterprise routers are connected over a cloud connection.

- Enterprise router 1 in CN East-Shanghai1 and enterprise router 2 in CN South-Guangzhou are from the same geographic region. A geographic-region bandwidth can be used for communications between the two enterprise routers.
- Enterprise router 1 in CN East-Shanghai1 and enterprise router 3 in CN-Hong Kong are in different geographic regions. A cross-geographic-region bandwidth can be used for communications between the two enterprise routers.
 - Geographic region 1: Chinese mainland, geographic region where enterprise router 1 is located
 - Geographic region 2: Asia Pacific, geographic region where enterprise router 3 is located

NOTE

- Ensure that both the geographic regions of enterprise router 1 and enterprise router 3 have been configured.
- Enterprise router 2 in CN South-Guangzhou and enterprise router 3 in CN-Hong Kong are in different geographic regions. A cross-geographic-region bandwidth can be used for communications between the two enterprise routers.
 - Geographic region 1: Chinese mainland, geographic region where enterprise router 2 is located
 - Geographic region 2: Asia Pacific, geographic region where enterprise router 3 is located

3.2 Buying a Global Connection Bandwidth

Scenarios

This section describes how to buy a global connection bandwidth for communication on a private network.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Cloud Connections**.
5. In the cloud connection list, click the name of the cloud connection.
6. On the basic information page, click the **Global Connection Bandwidths** tab.
7. Click **Buy Global Connection Bandwidth**.
8. Configure the parameters based on [Table 3-2](#).

Table 3-2 Parameters required for buying a global connection bandwidth

Parameter	Description
Billing Mode	Mandatory Pay-per-use: a postpaid subscription. You are charged based on the usage duration of the global connection bandwidth. Your global connection bandwidth is billed by second, and you are charged for a minimum of 60 seconds each time. If the usage is less than an hour, you are charged based on the actual duration, accurate to seconds.
Bandwidth Type	Mandatory There are different types of global connection bandwidths that are designed for different application scenarios, including multi-city, geographic-region, and cross-geographic-region bandwidths. The type of a bandwidth cannot be changed after your purchase. Learn about the application scenarios of different types of bandwidths. You can decide whether to use a geographic-region bandwidth or cross-geographic-region bandwidth based on service scenarios.

Parameter	Description
Billed By	Mandatory The price of a global connection bandwidth varies by its size. <ul style="list-style-type: none">• After a bandwidth is purchased, the billing starts immediately regardless of whether the bandwidth is used.• If a bandwidth is no longer required, delete it in a timely manner to avoid unnecessary fees.
Bandwidth	Mandatory Select the size of the bandwidth in Mbit/s.
Bandwidth Name	Mandatory Enter the name of the bandwidth. The name: <ul style="list-style-type: none">• Must contain 1 to 64 characters.• Can contain letters, digits, underscores (_), hyphens (-), and periods (.).

9. Click **Next**.
10. Confirm the configurations and click **Submit**.
The global connection bandwidth list page is displayed.
11. In the global connection bandwidth list, view the status of the bandwidth.
If the bandwidth status is **Normal**, the purchase is successful.

3.3 Binding a Global Connection Bandwidth

Scenarios

You can bind a global connection bandwidth to a global EIP or a cloud connection.

Constraints

- Instances that a global connection bandwidth is to be bound to must be from the same region as the bandwidth.
- A global connection bandwidth can only be bound to instances of the same type. If you want to add other type of instances to a global connection bandwidth with instances bound, you need to remove the bound instances first.
 - Global EIPs: You can add or remove global EIPs in batches.
 - Cloud connections: You can bind one global connection bandwidth to or unbind it from one cloud connection at a time.
- If use a global connection bandwidth on a central network, you need to configure cross-site connections by performing the following operations:
 - [Creating a Central Network](#)

- [Managing Policies](#)
- [Managing Attachments](#)
- Global connection bandwidths of different types can be used with different instances. For details, see the following table.

Table 3-3 Instances that can use a global connection bandwidth

Bandwidth Type	Global EIP	Central Network
Multi-city	√	×
Cross-geographic-region	√	√
Geographic-region	√	√

Using a Global Connection Bandwidth on a Central Network

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
5. In the central network list, click the name of the target central network.
6. Switch to the **Cross-Site Connection Bandwidths** tab.
7. Locate the cross-site connection, and click **Assign now** in the **Global Connection Bandwidth** column.
8. On the **Assign Cross-Site Connection Bandwidth** page, select the global connection bandwidth.
9. Specify the bandwidth and click **OK**.

Binding Global EIPs to a Global Connection Bandwidth

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Intra-Cloud > Global Connection Bandwidths**.
5. Locate the global connection bandwidth and click **Add** in the **Operation** column.
6. In the **Add** dialog box, set **Instance Type** to **Global EIP**.
For a multi-city global connection bandwidth, select the two regions where the bandwidth will be used.
7. Search for global EIPs using keywords.
8. Select one or more global EIPs and click **OK**.

3.4 Unbinding a Global Connection Bandwidth

Scenarios

You can unbind a global connection bandwidth from a global EIP or a cloud connection.

Constraints

- Before a global connection bandwidth is unbound from a resource, ensure that the resource is not used for running workloads or establishing connectivity. If the resource is used, workloads will be unavailable or the network will be interrupted.
- A global connection bandwidth can only be bound to instances of the same type. If you want to add other type of instances to a global connection bandwidth with instances bound, you need to remove the bound instances first by referring to [Binding a Global Connection Bandwidth](#).
- If inter-region bandwidths have been assigned from a global connection bandwidth, the global private bandwidth cannot be unbound from the cloud connection. You need to delete the inter-region bandwidths first.

Deleting a Cross-Site Connection Bandwidth

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Central Networks**.
5. Switch to the **Cross-Site Connection Bandwidths** tab, locate the cross-site connection, and click **Delete Bandwidth** in the **Operation** column.
6. In the displayed dialog box, click **OK**.

Unbinding a Global EIP from a Global Connection Bandwidth

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Intra-Cloud > Global Connection Bandwidths**.
5. Locate the global connection bandwidth.
 - If the bandwidth is only bound to one instance, click **Remove** in the **Operation** column and then click **OK** in the displayed dialog box.
 - If the bandwidth is bound to more than one instance:
 - i. On the details page of the bandwidth, click **Associated Instances**.
 - ii. Select the instances.

- iii. Click **Remove** above the instance list.
- iv. In the displayed dialog box, click **OK**.

3.5 Modifying a Global Connection Bandwidth

Scenarios

You can increase or decrease a global connection bandwidth. The new bandwidth takes effect immediately.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Cloud Connections**.
5. In the cloud connection list, click the name of the cloud connection.
6. On the basic information page, click the **Global Connection Bandwidths** tab.
7. Locate the target bandwidth and choose **More > Modify Bandwidth** in the **Operation** column.
8. Modify the bandwidth name and size as prompted, and click **Next**.
9. Confirm the information and click **Submit**.

3.6 Deleting a Global Connection Bandwidth

Scenarios

If your pay-per-use global connection bandwidth is no longer required, delete the bandwidth in a timely manner to avoid unnecessary fees.

Constraints

A global connection bandwidth with an instance bound cannot be deleted. To delete such a bandwidth, unbind its instance first. For details, see [Unbinding a Global Connection Bandwidth](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. On the console homepage, choose **Networking > Cloud Connect**.
4. In the navigation pane on the left, choose **Cloud Connect > Cloud Connections**.
5. In the cloud connection list, click the name of the cloud connection.

6. On the basic information page, click the **Global Connection Bandwidths** tab.
7. Locate the bandwidth you want to delete and click its name to view its settings.
8. In the upper left corner of the page, click .
9. In the global connection bandwidth list, search for the bandwidth.
10. Choose **More > Delete** in the **Operation** column.
11. Click **OK**.

3.7 Auditing

3.7.1 Key Operations Recorded by CTS

Scenarios

With Cloud Trace Service (CTS), you can record operations associated with global connection bandwidths for later query, audit, and backtracking.

Prerequisites

You have enabled CTS.

Key Operations Recorded by CTS

Table 3-4 Global connection bandwidth operations recorded by CTS

Operation	Resource	Trace
Creating a global connection bandwidth	globalConnectionBandwidth	createGcBandwidth
Updating a global connection bandwidth	globalConnectionBandwidth	updateGcBandwidth
Deleting a global connection bandwidth	globalConnectionBandwidth	deleteGcBandwidth
Binding a global connection bandwidth to an instance	globalConnectionBandwidth	bindGcBandwidth
Unbinding a global connection bandwidth from an instance	globalConnectionBandwidth	unbindGcBandwidth

3.7.2 Viewing Traces

Scenarios

After CTS is enabled, CTS starts recording operations on cloud resources. The CTS management console stores the last seven days of operation records.

This section describes how to query or export the last seven days of operation records on the management console.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. In the upper left corner of the page, click  to go to the service list. Under **Management & Governance**, click **Cloud Trace Service**.
4. In the navigation pane on the left, choose **Trace List**.
5. Specify filters as needed. The following filters are available:
 - **Trace Type**: Set it to **Management** or **Data**.
 - **Trace Source, Resource Type, and Search By**
Select filters from the drop-down list.
If you select **Trace name** for **Search By**, select a trace name.
If you select **Resource ID** for **Search By**, select or enter a resource ID.
If you select **Resource name** for **Search By**, select or enter a resource name.
 - **Operator**: Select a specific operator (a user other than an account).
 - **Trace Status**: Select **All trace statuses**, **Normal**, **Warning**, or **Incident**.
 - Search time range: In the upper right corner, choose **Last 1 hour**, **Last 1 day**, or **Last 1 week**, or specify a custom time range.
6. Click arrow on the left of the required trace to expand its details.
7. Locate the required trace and click **View Trace** in the **Operation** column.
A dialog box is displayed, showing the trace content.

4 Permissions Management

4.1 Creating a User and Granting Permissions

Use [IAM](#) to implement fine-grained permissions control for your Cloud Connect resources. With IAM, you can:

- Create IAM users for employees based on your enterprise's organizational structure. Each IAM user will have their own security credentials for accessing Cloud Connect resources.
- Grant only the permissions required for users to perform a specific task.
- Delegate a Huawei Cloud account to manage your Cloud Connect resources or a cloud service to access your Cloud Connect resources.

Skip this part if you do not require individual IAM users for refined permissions management.

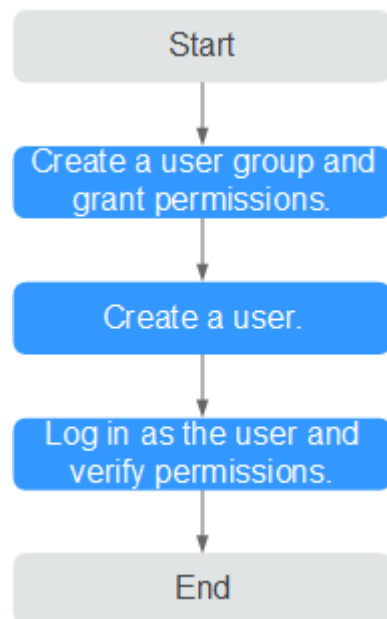

[Figure 4-1](#) shows the process of granting permissions.

Prerequisites

Before you assign permissions to a user group, you need to know the Cloud Connect permissions that you can assign to the user group and select permissions based on service requirements. For details about the system permissions of Cloud Connect, see [Permissions](#). For the system policies of other services, see [System Permissions](#).

Process Flow

Figure 4-1 Process of granting Cloud Connect permissions

1. **Create a user group and assign permissions.**
Create a user group on the IAM console and assign the **Cross Connect Administrator** policy to the group.
2. **Create an IAM user and add it to the user group.**
Create a user on the IAM console and add the user to the group created in **1**.
3. **Log in** and verify permissions.
Log in to the Cloud Connect console using the user's credentials and verify that the user has all permissions for Cloud Connect.
 - In the service list, choose **Networking > Cloud Connect**. Click **Create Cloud Connection** in the upper right corner. If the cloud connection can be created, the **Cross Connect Administrator** policy has taken effect.
 - Choose any other service in the **Service List**. A message will appear indicating that you have sufficient permissions to access the service.

4.2 Custom Policy

Custom policies can be created to supplement the system-defined policies of Cloud Connect.

You can create custom policies in either of the following ways:

- Visual editor: Select cloud services, actions, resources, and request conditions. This does not require knowledge of policy syntax.
- JSON: Edit JSON policies from scratch or based on an existing policy.

For details, see [Creating a Custom Policy](#). The following are examples custom policies created for Cloud Connect.

Example Custom Policies

- Example 1: Allowing users to delete cloud connections

```
{
  "Version": "1.1",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "cc:cloudConnections:delete"
      ]
    }
  ]
}
```

- Example 2: Denying bandwidth package deletion

A policy with only "Deny" permissions must be used in conjunction with other policies to take effect. If the policies assigned to a user contain both Allow and Deny actions, the Deny actions take precedence over the Allow actions.

The following method can be used if you need to assign permissions of the **CC FullAccess** policy to a user but also forbid the user from deleting topics. Create a custom policy for denying topic deletion, and assign both policies to the group the user belongs to. Then the user can perform all operations on Cloud Connect except deleting topics. The following is an example of a deny policy:

```
{
  "Version": "1.1",
  "Statement": [
    {
      "Effect": "Deny",
      "Action": [
        "cc:bandwidthPackages:delete"
      ]
    }
  ]
}
```

- Example 3: Defining permissions for multiple services in a policy

A custom policy can contain the actions of multiple services that are of the global or project-level type. The following is an example policy containing actions of multiple services:

```
{
  "Version": "1.1",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "cc:bandwidthPackages:create",
        "cc:cloudConnections:create",
        "cc:bandwidthPackages:delete",
        "cc:cloudConnections:delete"
      ]
    },
    {
      "Effect": "Allow",
      "Action": [
        "eps:enterpriseProjects:enable",
        "eps:enterpriseProjects:update",
        "eps:enterpriseProjects:create",
        "eps:enterpriseProjects:delete"
      ]
    }
  ]
}
```

4.3 Configuration Examples for Cloud Connect Permission Policy

You can configure permission policies for different IAM users based on service requirements.

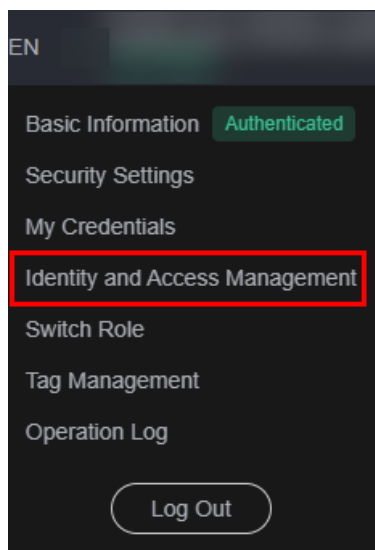

Example 1: Allowing an IAM User Who Is Not in Any Enterprise Projects to Have All Cloud Connect Permissions

An IAM user who is not in any enterprise projects wants to have all Cloud Connect permissions, for example, performing operations on cloud connections, network instances, bandwidth packages, inter-region bandwidths, and routes, and operations such as cross-border permit application and cross-account authorization.

To grant the permissions to this IAM user, perform the following operations:

1. Log in to the management console.
2. On the homepage, hover over the username in the upper right corner and choose **Identity and Access Management** from the drop-down list.

Figure 4-2 Identity and Access Management

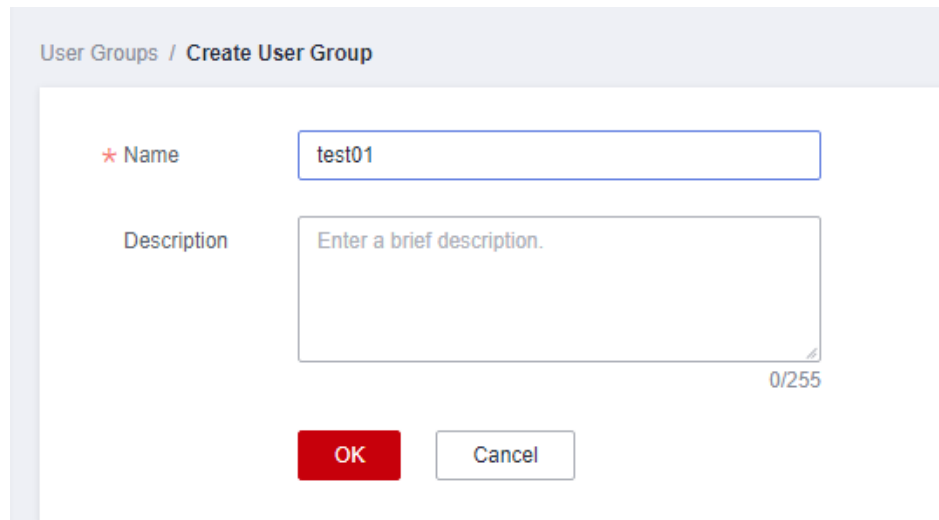

3. In the navigation pane on the left, choose **User Groups**.
4. In the upper right corner, click **Create User Group**.

Figure 4-3 Creating a user group

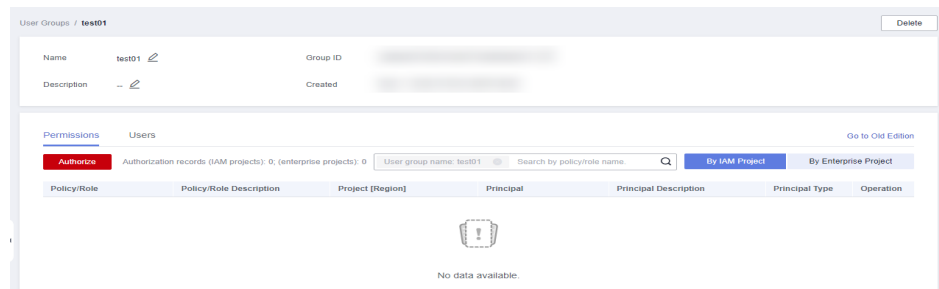

5. Configure the parameters and click **OK**.

Figure 4-4 Configuring user group parameters

6. Locate the created user group and click its name.
7. Click **By IAM Project** on the right and then click **Authorize**.

Figure 4-5 Authorizing a user group

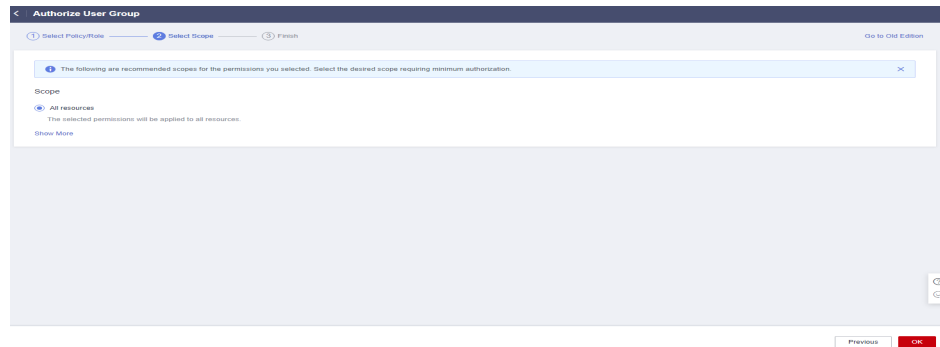

8. Enter **Cross Connect Administrator** in the text box and click the search icon.
9. In the search result, select **Cross Connect Administrator** and click **Next**.

Figure 4-6 Selecting a system-defined role

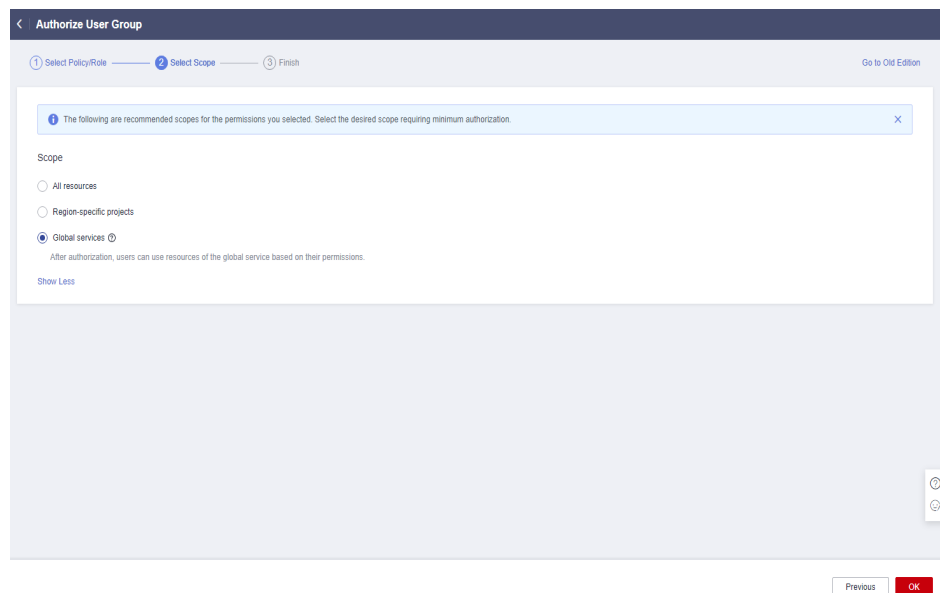

10. Click **Show More**.

Figure 4-7 Scope

11. Select **Global services** and click **OK**.

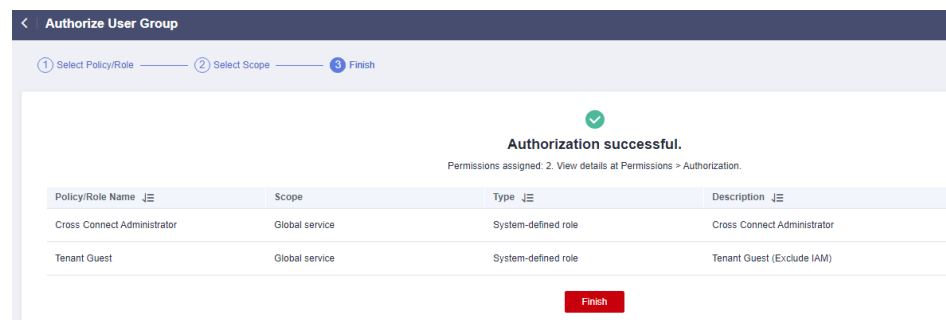

Figure 4-8 Global services

NOTE

If "Authorization successful" is displayed, the authorization is complete. The authorization will take effect 15 to 30 minutes later.

Figure 4-9 Authorization successful

12. Go back to the user group list, locate the created user group, and click **Manage User** in the **Operation** column.

Figure 4-10 Manage User

13. Select the IAM user you want to add to the user group and click **OK**.

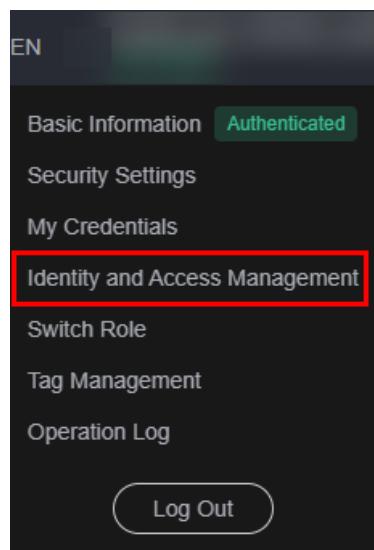

Example 2: Authorizing an IAM User to Use Cloud Connect in All Enterprise Projects

An IAM user needs to perform operations on Cloud Connect resources, including network instances, bandwidth packages, inter-region bandwidths, and routes, in all enterprise projects. You can perform the operations below to grant the corresponding permissions to this IAM user.

To grant the permissions on cross-account authorization and cross-border permit application, perform the operations in [Example 1: Allowing an IAM User Who Is Not in Any Enterprise Projects to Have All Cloud Connect Permissions](#).

1. Log in to the management console.
2. On the homepage, hover over the username in the upper right corner and choose **Identity and Access Management** from the drop-down list.

Figure 4-11 Identity and Access Management

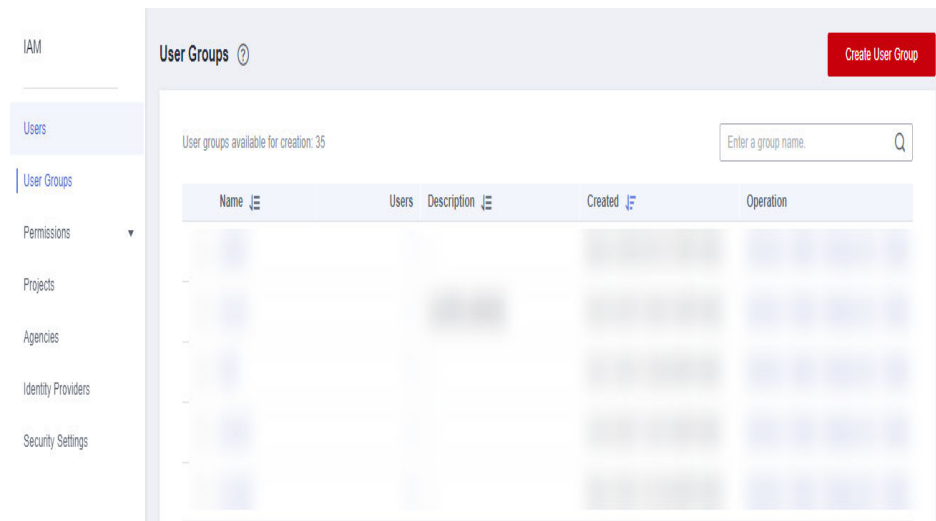

3. In the navigation pane on the left, choose **User Groups**.
4. In the upper right corner, click **Create User Group**.

Figure 4-12 Creating a user group

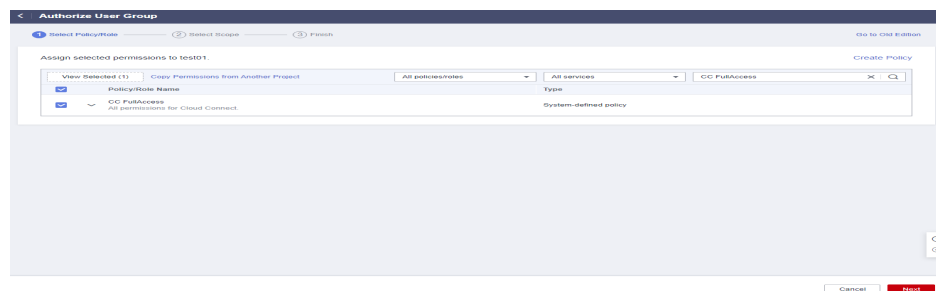

5. Configure the parameters and click **OK**.

Figure 4-13 Configuring user group parameters

6. Locate the created user group and click its name.
7. Click **By IAM Project** on the right and then click **Authorize**.

Figure 4-14 Authorizing a user group

8. Enter **CC FullAccess** in the text box and click the search icon.
9. In the search result, select **CC FullAccess** and click **Next**.

Figure 4-15 Selecting a system-defined policy

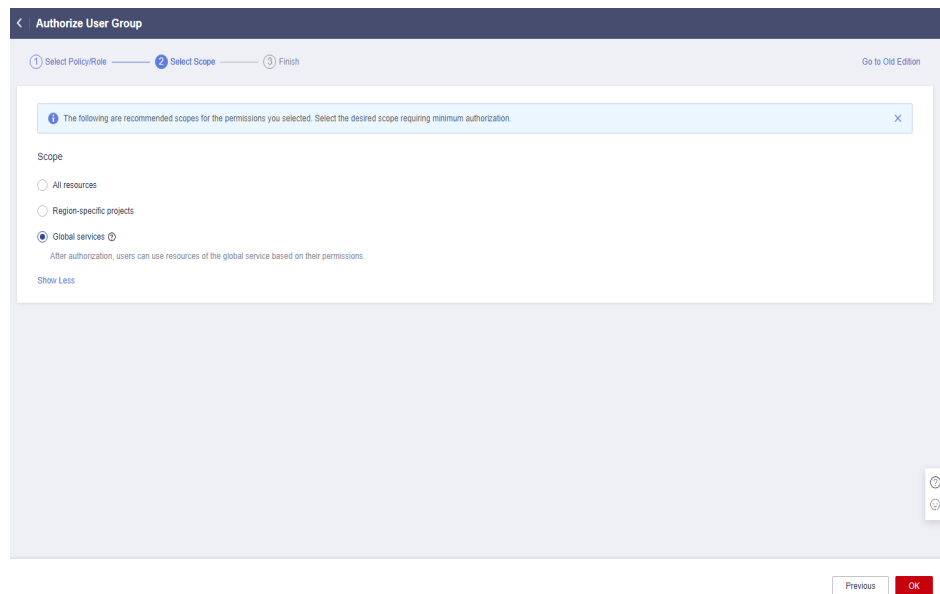

10. Click **Show More**.

Figure 4-16 Scope

11. Select **Global services** and click **OK**.

Figure 4-17 Global services

- Go back to the user group list, locate the created user group, and click **Manage User** in the **Operation** column.

Figure 4-18 Manage User

- Select the IAM user you want to add to the user group and click **OK**.

NOTE

If the IAM user does not have VPC-related permissions, you can grant the **CC Network Depend QueryAccess** permissions for the user group that the IAM user belongs to and select **All resources** for **Scope**.

You can view the authorization in the **Permissions** tab.

Figure 4-19 Permissions

Policy/Role	Policy/Role Description	Project (Region)	Principal	Principal Description	Principal Type	Operation
CC FullAccess	All permissions for Cloud Connect	Global service (Global)	test01	--	User Group	Delete
CC Network Depend Query...	Read-only permissions for Cloud C...	All resources (Existing and future ...	test01	--	User Group	Delete

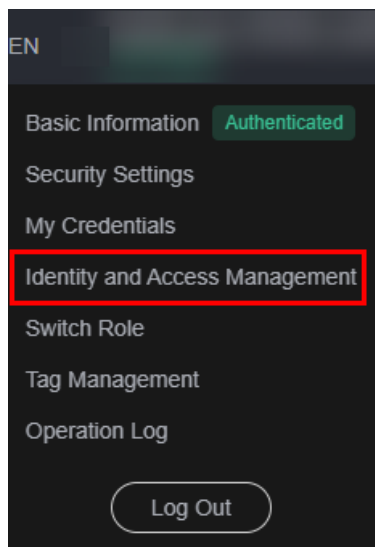

Example 3: Authorizing an IAM User to Use Cloud Connect in a Specific Enterprise Project

An IAM user needs to perform operations on Cloud Connect resources, including network instances, bandwidth packages, inter-region bandwidths, and routes, in specific enterprise projects. You can perform the operations below to grant the corresponding permissions to this IAM user.

To grant the permissions on cross-account authorization and cross-border permit application, perform the operations in [Example 1: Allowing an IAM User Who Is Not in Any Enterprise Projects to Have All Cloud Connect Permissions](#).

1. Log in to the management console.
2. On the homepage, hover over the username in the upper right corner and choose **Identity and Access Management** from the drop-down list.

Figure 4-20 Identity and Access Management

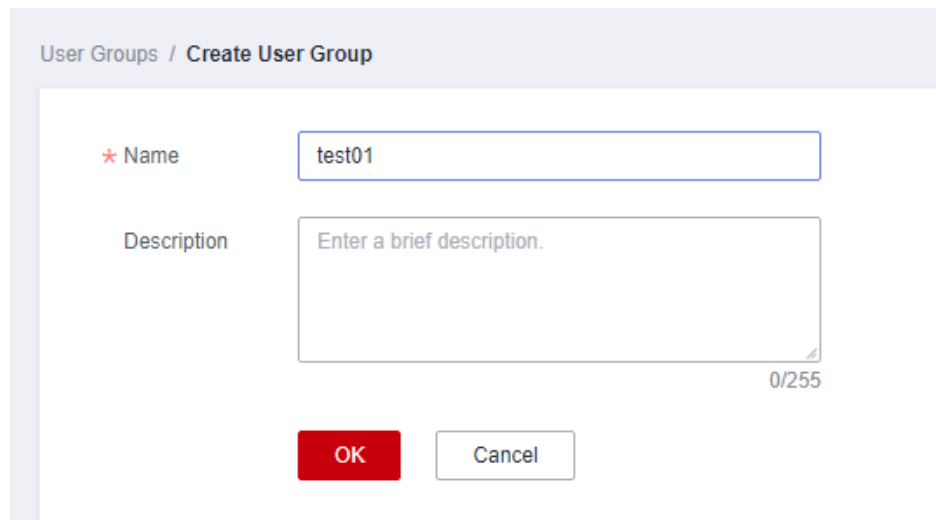

3. In the navigation pane on the left, choose **User Groups**.
4. In the upper right corner, click **Create User Group**.

Figure 4-21 Creating a user group

5. Configure the parameters and click **OK**.

Figure 4-22 Configuring user group parameters

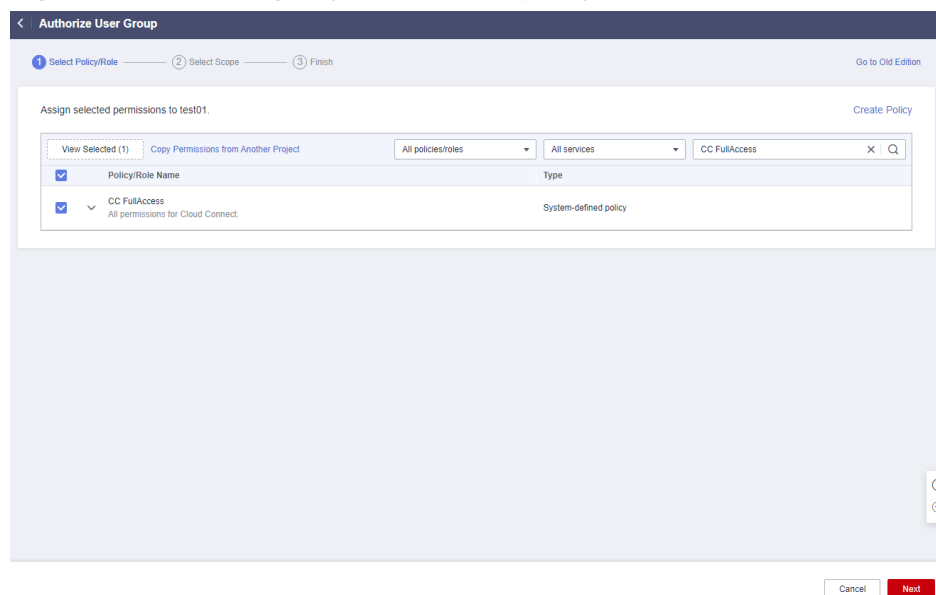

6. Locate the created user group and click its name.
7. Click **By IAM Project** on the right and then click **Authorize**.

Figure 4-23 Authorizing a user group

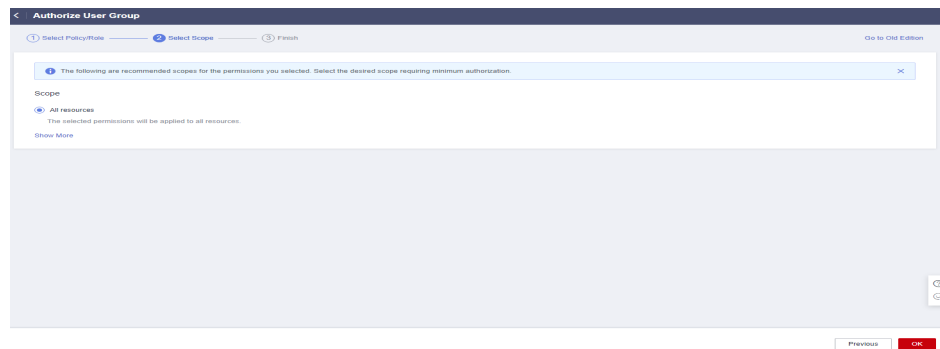

8. Enter **CC FullAccess** in the text box and click the search icon.
9. In the search result, select **CC FullAccess** and click **Next**.

Figure 4-24 Selecting a system-defined policy

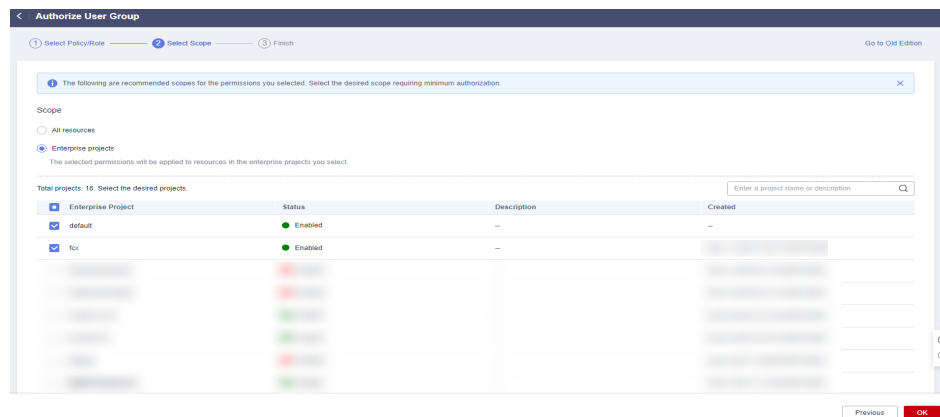

- Click **Show More**.

Figure 4-25 Scope

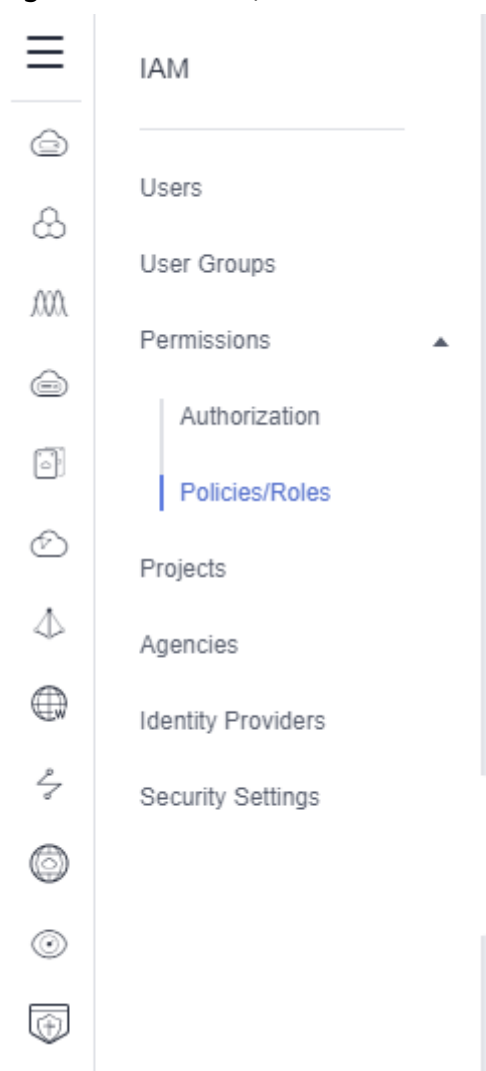

- Select **Enterprise projects**.
- Select an enterprise project and click **OK**.

Figure 4-26 Enterprise projects

- In the navigation pane on the left, choose **Permissions > Policies/Roles**.

Figure 4-27 Policies/Roles

14. Click **Create Custom Policy**.

Figure 4-28 Creating a custom policy

15. Configure the parameters based on [Configuration Examples for Cloud Connect Permission Policy](#).

Table 4-1 Custom policy parameters

Parameter	Description
Policy Name	Specifies the name of the custom policy.
Policy View	<ul style="list-style-type: none">• (Recommended) Visual editor• JSON
Policy Content	<ul style="list-style-type: none">• Select Allow.• Cloud service: Cloud Connect• Actions:<ul style="list-style-type: none">– ReadOnly: Select cc:networkInstances:get, cc:interRegionBandwidths:get, and cc:cloudConnectionRoutes:get.– ReadWrite: Select the following: cc:networkInstances:create cc:interRegionBandwidths:update cc:networkInstances:delete cc:interRegionBandwidths:create cc:interRegionBandwidths:delete cc:networkInstances:update– ListOnly: Select cc:cloudConnectionRoutes:list, cc:networkInstances:list, and cc:interRegionBandwidths:list.

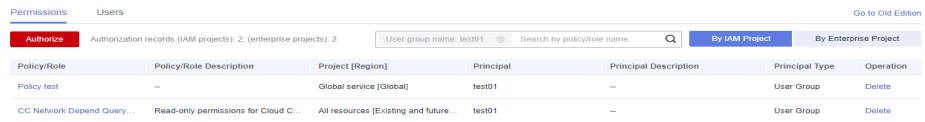

16. Configure other parameters and click **OK**.
17. Repeat steps **3** to **7**.
18. Search for the created custom policy by name.
19. Select the custom policy and click **Next**.
20. Click **Show More**.
21. Select **All resources** and click **OK**.

 **NOTE**

If the IAM user does not have VPC-related permissions, you can grant the **CC Network Depend QueryAccess** permissions for the user group that the IAM user belongs to and select **All resources** for **Scope**.

You can view the authorization in the **Permissions** tab.

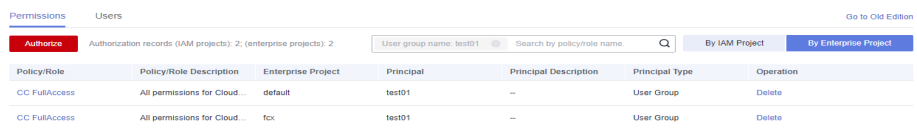

Figure 4-29 Authorization records in the IAM project view

The screenshot shows the 'Permissions' tab in the IAM project view. It displays a table of authorization records for the user group 'test01'. The table has columns for Policy/Role, Policy/Role Description, Project (Region), Principal, Principal Description, Principal Type, and Operation. Two records are visible: 'Policy test' and 'CC Network Depend Query...'. Both records show 'test01' as the principal and 'User Group' as the principal type.

Policy/Role	Policy/Role Description	Project (Region)	Principal	Principal Description	Principal Type	Operation
Policy test	--	Global service [Global]	test01	--	User Group	Delete
CC Network Depend Query...	Read-only permissions for Cloud C...	All resources [Existing and future...	test01	--	User Group	Delete

Figure 4-30 Authorization records in the enterprise project view

The screenshot shows the 'Permissions' tab in the enterprise project view. It displays a table of authorization records for the user group 'test01'. The table has columns for Policy/Role, Policy/Role Description, Enterprise Project, Principal, Principal Description, Principal Type, and Operation. Two records are visible: 'CC FullAccess' and 'CC FullAccess'. Both records show 'test01' as the principal and 'User Group' as the principal type.

Policy/Role	Policy/Role Description	Enterprise Project	Principal	Principal Description	Principal Type	Operation
CC FullAccess	All permissions for Cloud ...	default	test01	--	User Group	Delete
CC FullAccess	All permissions for Cloud ...	fcc	test01	--	User Group	Delete

5 Quotas

What Is Quota?

Quotas can limit the number or amount of resources available to users, such as the maximum number of ECSs or EVS disks that can be created.

If the existing resource quota cannot meet your service requirements, you can apply for a higher quota.

How Do I View My Quotas?

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. In the upper right corner of the page, choose **Resources > My Quotas**.
The **Service Quota** page is displayed.

Figure 5-1 My Quotas

4. View the used and total quota of each type of resources on the displayed page.
If a quota cannot meet service requirements, apply for a higher quota.

How Do I Apply for a Higher Quota?

1. Log in to the management console.

- In the upper right corner of the page, choose **Resources > My Quotas**. The **Service Quota** page is displayed.

Figure 5-2 My Quotas

- Click **Increase Quota** in the upper right corner of the page.

Figure 5-3 Increasing quota

The image shows a screenshot of the 'Service Quota' page. At the top right, there is a red button labeled 'Increase Quota'. Below it is a table with the following columns: Service, Resource Type, Used Quota, and Total Quota. The table lists various services and their corresponding resource types and quotas.

Service	Resource Type	Used Quota	Total Quota
Auto Scaling	AS group	0	
	AS configuration	0	
Image Management Service	Image	0	
Cloud Container Engine	Cluster	0	
FunctionGraph	Function	0	
	Code storage(MB)	0	
Elastic Volume Service	Disk	3	
	Disk capacity(OB)	120	
	Snapshots	4	
Storage Disaster Recovery Service	Protection group	0	
	Replication pair	0	
Cloud Server Backup Service	Backup Capacity(OB)	0	
	Backup	0	
Scalable File Service	File system	0	
	File system capacity(OB)	0	
	Domain name	0	
CDN	File URL refreshing	0	
	Directory URL refreshing	0	
	URL prefetching	0	

- On the **Create Service Ticket** page, configure parameters as required. In the **Problem Description** area, fill in the content and reason for adjustment.
- After all necessary parameters are configured, select **I have read and agree to the Ticket Service Protocol and Privacy Statement** and click **Submit**.
