1 S2C Enterprise Edition VPN

1.1 Enterprise Edition VPN Gateway Management

1.1.1 Creating a VPN Gateway

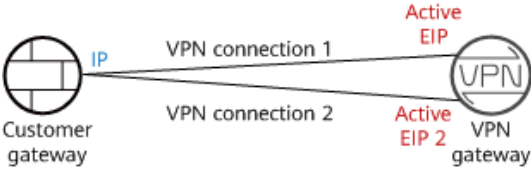

Scenario

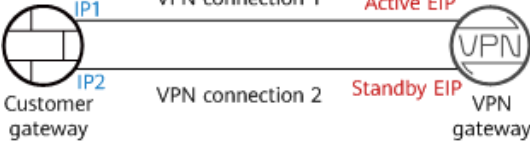

To connect your on-premises data center or private network to your ECSs in a VPC, you need to create a VPN gateway before creating a VPN connection.

Context

The recommended networking varies according to the number of customer gateway IP addresses, as described in [Table 1-1](#).

Table 1-1 Networking

Number of Customer Gateway IP Addresses	Recommended Networking	Description
1	 <p>The diagram illustrates a network setup where a 'Customer gateway' (represented by a globe icon) is connected to a 'VPN gateway' (represented by a circle with 'VPN' inside) through two separate 'VPN connection' lines. The VPN gateway is also associated with two 'Active EIP' (Elastic IP) addresses, labeled 'Active EIP' and 'Active EIP 2'.</p>	<p>It is recommended that the VPN gateway uses the active-active mode. In this case, one VPN connection group is used.</p>

Number of Customer Gateway IP Addresses	Recommended Networking	Description
2	 <p>The diagram illustrates a network configuration where a Customer gateway (left) has two IP addresses, IP1 and IP2. It is connected to a VPN gateway (right) which has two Elastic IP addresses, Active EIP and Standby EIP. Two VPN connections are established: 'VPN connection 1' connects IP1 to the Active EIP, and 'VPN connection 2' connects IP2 to the Standby EIP.</p>	<p>It is recommended that the VPN gateway uses the active/standby mode. In this case, two VPN connection groups are used.</p>

- If your on-premises data center has only one customer gateway configured with only one IP address, it is recommended that the VPN gateway uses the active-active mode. In this mode, you need to create a VPN connection between each of the active EIP and active EIP 2 of the VPN gateway and the IP address of the customer gateway. In this scenario, only one VPN connection group is used.
- If your on-premises data center has two customer gateways or one customer gateway configured with two IP addresses, it is recommended that the VPN gateway uses the active/standby mode. In this mode, you need to create a VPN connection with each of the customer gateway IP addresses using the active and standby EIPs of the VPN gateway. In this scenario, two VPN connection groups are used.

Notes and Constraints

- A VPN gateway of a non-GM specification cannot be changed to a VPN gateway of the GM specification.
- When an enterprise router is associated, pay attention to the upper limit of entries in the routing table of the enterprise router.
- When creating a VPN gateway, you can create two EIPs with the same shared bandwidth.
- Access via non-fixed IP addresses is available only for some regions. This function is supported only when **Billing Mode** is set to **Yearly/Monthly** and **Network Type** is set to **Public network**.
- The HomeZones feature is available only for some regions, which is subject to the actual pages on the management console.
- VPN gateways of the Professional 3 specification do not support IPv6, access via non-fixed IP addresses, or edge AZs.

Prerequisites

- A VPC has been created. For details about how to create a VPC, see [Creating a VPC and Subnet](#).

- Security group rules have been configured for the VPC, and ECSs can communicate with other devices on the cloud. For details about how to configure security group rules, see [Security Group Rules](#).
- An enterprise router has been created if you want to use it to connect to a VPN gateway. For details, see the enterprise router documentation.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **S2C VPN Gateways** tab.
- Step 6** Click **Buy S2C VPN Gateway**.
- Step 7** Set parameters as prompted and click **Next**.

[Table 1-2](#) lists the VPN gateway parameters.

Table 1-2 Description of VPN gateway parameters

Parameter	Description	Example Value
Billing Mode	<ul style="list-style-type: none">• Yearly/Monthly: You are billed by month or year when creating a VPN gateway. By default, 10 VPN connection groups are included free of charge with the purchase of a VPN gateway.• Pay-per-use: VPN gateways and VPN connection groups are billed by usage duration, and the billing cycle is 1 hour.	Yearly/Monthly Pay-per-use
Region	For low network latency and fast resource access, select the region nearest to your target users. Resources cannot be shared across regions.	AP-Singapore

Parameter	Description	Example Value
AZ	An AZ is a geographic location with independent power supply and network facilities in a region. AZs in the same VPC are interconnected through private networks and are physically isolated. You are advised to select an AZ type based on the AZs where resources in the VPC are located. The following types of AZs are supported: <ul style="list-style-type: none"> • General • HomeZones 	<i>Set this parameter based on the site requirements.</i>
Name	Name of a VPN gateway. The value can contain only letters, digits, underscores (_), hyphens (-), and periods (.).	vpngw-001
Network Type	<ul style="list-style-type: none"> • Public network: A VPN gateway establishes VPN connections through the Internet. • Private network: A VPN gateway establishes VPN connections through a private network. 	Public network
Protocol Type	The value can be IPv4 or IPv6 .	IPv4
Associate With	<ul style="list-style-type: none"> • VPC Through a VPC, the VPN gateway sends messages to the customer gateway or servers in the local subnet. • Enterprise Router Through an enterprise router, the VPN gateway sends messages to the customer gateway or servers in the subnets of all VPCs connected to the enterprise router. <p>NOTE In this scenario, pay attention to the upper limit of entries in the routing table of the enterprise router. If the number of routes advertised by the customer gateway and VPN gateway exceeds this upper limit, the enterprise router cannot learn the excess routes. As a result, traffic will fail to be forwarded between the VPN gateway and the customer gateway.</p>	VPC
VPC	This parameter is available only when Associate With is set to VPC . Select a VPC.	vpc-001(192.168.0.0/16)
Enterprise Router	This parameter is available only when Associate With is set to Enterprise Router . Select an enterprise router.	er-001

Parameter	Description	Example Value
Interconnection Subnet	<p>This parameter is available only when Associate With is set to VPC.</p> <p>This subnet is used for communication between the VPN gateway and VPC. Ensure that the selected interconnection subnet has four or more assignable IP addresses.</p>	192.168.66.0/24
Local Subnet	<p>This parameter is available only when Associate With is set to VPC.</p> <p>Specify the VPC subnets with which your on-premises data center needs to communicate through the customer gateway.</p> <ul style="list-style-type: none">• Select subnet Select subnets of the local VPC.• Enter CIDR block Enter subnets of the local VPC or subnets of the VPC that establishes a peering connection with the local VPC.	192.168.1.0/24,192.168.2.0/24
BGP ASN	BGP ASN of the VPN gateway, which must be different from that of the customer gateway.	64512

Parameter	Description	Example Value
HA Mode	<ul style="list-style-type: none"> ● Active-active <ul style="list-style-type: none"> – When Associate With is set to VPC, the outgoing traffic from the VPN gateway to the customer subnet is preferentially forwarded through the first VPN connection (VPN connection 1) set up between the customer subnet and an EIP. If VPN connection 1 fails, the outgoing traffic is automatically switched to the other VPN connection (VPN connection 2) set up with the customer subnet. After VPN connection 1 recovers, the outgoing traffic is still transmitted through VPN connection 2 and will not be switched back to VPN connection 1. – When Associate With is set to Enterprise Router, the outgoing traffic from the VPN gateway to the customer subnet is load balanced among all VPN connections set up with the customer subnet. ● Active/Standby <p>The outgoing traffic from the VPN gateway to the customer subnet is preferentially transmitted through the VPN connection (VPN connection 1) set up between the customer subnet and the active EIP. If VPN connection 1 fails, the outgoing traffic is automatically switched to the other VPN connection (VPN connection 2) set up between the customer subnet and the standby EIP. After VPN connection 1 recovers, the outgoing traffic is automatically switched back to VPN connection 1.</p> 	Active-active
Specification	<p>Four options are available: Professional 1, Professional 2, Professional 3, and GM.</p> <p>Professional 1 and Professional 2 support access via non-fixed IP addresses only when Billing Mode is Yearly/Monthly and Network Type is set to Public network.</p> <p>For details about differences between these specifications, see Specifications.</p>	Professional 1

Parameter	Description	Example Value
VPN Connection Groups	<p>This parameter is available only when Billing Mode is set to Yearly/Monthly.</p> <p>By default, 10 VPN connection groups are included free of charge with the purchase of a VPN gateway.</p> <ul style="list-style-type: none">• If an on-premises data center has only one egress gateway, all servers or user hosts in the data center connect to the Internet through this gateway. In this case, you need to configure a VPN connection group consisting of two VPN connections. That is, configure a VPN connection for each of the two EIPs of the VPN gateway to communicate with the egress gateway in the on-premises data center.• If an on-premises data center has two egress gateways, the servers or user hosts in the data center connect to the Internet through the two egress gateways. In this case, you need to configure two VPN connection groups, each of which consisting of two VPN connections. That is, configure a VPN connection for each of the two EIPs of each VPN gateway to communicate with both egress gateways in the on-premises data center.	10
EIP Type	<p>Select the type of the EIP to be bound to the VPN gateway.</p> <p>For more information about EIP types, see What Is Elastic IP?</p>	<i>Set this parameter based on the site requirements.</i>
Bandwidth Name	<p>This parameter is available only when Network Type is set to Public network.</p> <p>Specify the name of the EIP bandwidth.</p> <ul style="list-style-type: none">• Bandwidth (Mbit/s): 5• When Shared Bandwidth is toggled on, you can select the name of the shared bandwidth.• A maximum of 20 EIPs can be added to shared bandwidth. For details about how to apply for more quota, see Increasing the Quota.	Vpngw-bandwidth2

Parameter	Description	Example Value
Active EIP	<p>This parameter is available only when Network Type is set to Public network.</p> <p>EIP used by the VPN gateway to communicate with a customer gateway.</p> <ul style="list-style-type: none"> • Create now: Buy a new EIP. The billing mode of the new EIP is the same as that of the VPN gateway. <p>NOTE When shared bandwidth is used, you can only use EIPs created now.</p> <ul style="list-style-type: none"> • Use existing: Use an existing EIP. This EIP can share bandwidth with the EIPs of other network services. 	Create Now
Billed By	<p>This parameter is available only when Billing Mode is set to Pay-per-use and Network Type is set to Public network.</p> <p>Pay-per-use billing supports two billing modes:</p> <ul style="list-style-type: none"> • Bandwidth: You need to specify a bandwidth limit and pay for the amount of time you use the bandwidth. • Traffic: You need to specify a bandwidth limit and pay for the outbound traffic sent from your VPC. 	Traffic
Bandwidth (Mbit/s)	<p>This parameter is available only when Network Type is set to Public network.</p> <p>Bandwidth of the EIP, in Mbit/s.</p> <ul style="list-style-type: none"> • All VPN connections created using the EIP share the bandwidth of the EIP. The total bandwidth consumed by all the VPN connections cannot exceed the bandwidth of the EIP. <p>If network traffic exceeds the bandwidth of the EIP, network congestion may occur and VPN connections may be interrupted. As such, ensure that you configure enough bandwidth.</p> <ul style="list-style-type: none"> • You can configure alarm rules on Cloud Eye to monitor the bandwidth. • You can customize the bandwidth within the allowed range. • Some regions support only 300 Mbit/s bandwidth by default. If higher bandwidth is required, apply for 300 Mbit/s bandwidth and then submit a service ticket for capacity expansion. 	10 Mbit/s

Parameter	Description	Example Value
Active EIP 2	<p>This parameter is available only when the Network Type is set to Public network and HA Mode is set to Active-active.</p> <p>A VPN gateway needs to be bound to a group of EIPs (active EIP and active EIP 2). You can plan the bandwidth and billing mode for each EIP. The EIPs can share bandwidth with the EIPs of other network services.</p> <p>NOTE When shared bandwidth is used, you can only create an EIP now, and the EIP cannot be changed after being created.</p>	Create Now
Standby EIP	<p>This parameter is available only when the Network Type is set to Public network and HA Mode is set to Active/Standby.</p> <p>A VPN gateway needs to be bound to a group of EIPs (active EIP and standby EIP). You can plan the bandwidth and billing mode for each EIP. The EIPs can share bandwidth with the EIPs of other network services.</p> <p>NOTE When Billing Mode of the VPN gateway is Pay-per-use and the backup EIP is billed by traffic, you are advised to configure alarm rules on Cloud Eye to monitor the backup EIP. This prevents traffic fee overrun caused by VPN connection switching due to a fault of the active VPN connection.</p> <p>For details about how to configure alarm rules on Cloud Eye, see Creating an Alarm Rule.</p>	Create Now
Enterprise Project	<p>Enterprise project to which the VPN belongs.</p> <p>An enterprise project facilitates project-level management and grouping of cloud resources and users. The default project is default.</p> <p>For details about how to create and manage enterprise projects, see Enterprise Management User Guide.</p>	default

Parameter	Description	Example Value
Advanced Settings	<p>Parameters under Advanced Settings are available only when Network Type is set to Private network and Associate With is set to VPC.</p> <ul style="list-style-type: none"> • Select: This option applies to the scenario where VPCs of the same tenant are connected. Select the access VPC, access subnet, and gateway IP address of the current tenant. • Enter: This option applies to the scenario where a VPC of the current tenant is connected to that of another tenant. Enter the access project, access domain, access VPC, access subnet, and gateway IP address of the other tenant. 	Select
Access Project	<p>This parameter is available only when you select Enter for Advanced Settings. Enter an access project ID. For details about how to obtain the project ID, see How Do I Obtain an Enterprise Project ID.</p>	<i>Set this parameter based on the site requirements.</i>
Access Domain	<p>This parameter is available only when you select Enter for Advanced Settings. Enter an access domain ID. For details about how to obtain the domain ID, see Viewing or Modifying IAM User Information.</p>	<i>Set this parameter based on the site requirements.</i>
Access VPC	<ul style="list-style-type: none"> • This parameter is available only when Associate With is set to Enterprise Router. • This parameter is available only when Associate With is set to VPC and Network Type is set to Private network. <p>If a VPN gateway needs to connect to different VPCs in the southbound and northbound directions, set the VPC in the northbound direction as the access VPC. The VPC in the southbound direction is the VPC associated with the VPN gateway.</p>	Same as the associated VPC

Parameter	Description	Example Value
Access Subnet	<ul style="list-style-type: none">This parameter is available only when Associate With is set to Enterprise Router.This parameter is available only when Associate With is set to VPC and Network Type is set to Private network. <p>By default, a VPN gateway uses the interconnection subnet to connect to the associated VPC. Set this parameter when another subnet needs to be used.</p>	Same as the interconnection subnet
Gateway IP Address	<p>This parameter is available only when Associate With is set to VPC and Network Type is set to Private network.</p> <ul style="list-style-type: none">Self-assigned IP address (default) An IP address on the access subnet will be automatically assigned to the VPN gateway. You can view the automatically assigned IP address on the VPN Gateways page.Manually-specified IP address Manually configure IP addresses on the access subnet for the VPN gateway. When you select Select for Advanced Settings, you can click View In-Use IP Address on the right to check the IP addresses in use. The refresh and fuzzy search functions are supported in the View In-Use IP Address dialog box. When HA Mode is set to Active/Standby for the VPN gateway, enter the active and standby IP addresses in sequence. When HA Mode is set to Active-active for the VPN gateway, enter the active IP address and active IP address 2 in sequence.	Self-assigned IP address
Advanced Settings > Tags	<p>Tag of a VPN resource. The value consists of a key and a value. A maximum of 20 tags can be added.</p> <p>You can select predefined tags or customize tags.</p> <p>To view predefined tags, click View predefined tags.</p>	-

Parameter	Description	Example Value
Required Duration	<p>This parameter is available only when Billing Mode is set to Yearly/Monthly.</p> <p>If your account balance is sufficient and you select Auto-renew, the system automatically renews your service when the required duration elapses.</p> <ul style="list-style-type: none">• Monthly subscription: Your service is automatically renewed on a per-month basis.• Yearly subscription: Your service is automatically renewed on a per-year basis.	6

Step 8 Confirm the order and click **Pay Now**.

Step 9 (Optional) For a VPN gateway of the GM specification, upload the VPN gateway certificate after the VPN gateway is created. Otherwise, the VPN gateway cannot set up a VPN connection.

For details, see [Uploading Certificates for a VPN Gateway](#).

----End

1.1.2 Viewing a VPN Gateway

Scenario

After creating a VPN gateway, you can view its details.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. On the **S2C VPN Gateways** tab page, view the VPN gateway list.
7. Click the name of a VPN gateway to view its details.
 - For VPN gateways of the public network type, you can view their basic information, EIPs, and tags. If the specification of a VPN gateway is **Professional 1: non-fixed IP address** or **Professional 2: non-fixed IP address**, you can also view its policy template configuration.
 - For VPN gateways of the private network type, you can view their basic information and advanced settings.

- For VPN gateways of the GM specification, you can view their basic information and certificate information.

 **NOTE**

In the VPN gateway list, you can click  in the **Gateway IP Address** column of a VPN gateway to view the bandwidth and traffic of the VPN gateway.

1.1.3 Modifying a VPN Gateway

Scenario

You can modify basic information about a VPN gateway, including the name and local subnet.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and click **Modify Basic Information** in the **Operation** column.

To modify only the name of a VPN gateway, you can also click  on the right of the VPN gateway name.

7. Modify the name and local subnet of the VPN gateway as prompted.
8. Click **OK**.

Table 1-3 describes the parameters for modifying the VPN gateway.

Table 1-3 Parameters for modifying the VPN gateway

Parameter	Description	Modifiable or Not
Name	Name of a VPN gateway. The value can contain only letters, digits, underscores (_), hyphens (-), and periods (.).	Y

Parameter	Description	Modifiable or Not
EIP	To change an EIP, unbind it and bind a new one. If a VPN connection has been created for an EIP, the EIP cannot be unbound. NOTE <ul style="list-style-type: none"> Only the bandwidth size can be changed. The EIP name and type can be changed only on the EIP console. 	Y
Local Subnet	VPC subnets with which your on-premises data center needs to communicate through the customer gateway.	Y
Billing Mode	The value can be Yearly/ Monthly or Pay-per-use .	Y
VPN Connection Groups	The number of VPN connection groups needs to be specified only when Billing Mode is set to Yearly/ Monthly .	Y
Region	For low network latency and fast resource access, select the region nearest to your target users. Resources cannot be shared across regions.	N
Specification	Three options are available: Professional 1 , Professional 2 , and GM .	The supported specifications are subject to those displayed on the management console.
Associate With	The options include VPC and Enterprise Router .	N
Enterprise Router	The associated enterprise router needs to be specified only when Associate With is set to Enterprise Router .	N
VPC	VPC that the on-premises data center needs to access.	N

Parameter	Description	Modifiable or Not
Interconnection Subnet	This subnet is used for communication between the VPN gateway and VPC. Ensure that the selected interconnection subnet has four or more assignable IP addresses.	N
BGP ASN	BGP AS number.	N
AZ	An AZ is a geographic location with independent power supply and network facilities in a region. AZs in the same VPC are interconnected through private networks and are physically isolated. <ul style="list-style-type: none"> • If two or more AZs are available, select two AZs. The VPN gateway deployed in two AZs has higher availability. You are advised to select the AZs where resources in the VPC are located. • If only one AZ is available, select this AZ. 	N

1.1.4 Modifying the Specification of a Yearly/Monthly VPN Gateway

Scenario

If the specification of a yearly/monthly VPN gateway of the public network type is **Professional 1** or **Professional 2**, you can change the specification of the VPN gateway to enable it to support access via non-fixed IP addresses.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and choose **More > Modify Specifications** in the **Operation** column.
7. Modify the gateway specification as prompted.

1.1.5 Modifying the Policy Template of a VPN Gateway

Scenario

If the specification of a VPN gateway is **Professional 1: non-fixed IP address** or **Professional 2: non-fixed IP address**, you can modify the policy template for the VPN gateway.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and click **View/Modify Policy Template** in the **Operation** column. On the **Policy Template** tab page, click **Modify Policy Template** to modify the policy template.

NOTE

After the policy template is modified, the customer gateway with a non-fixed IP address must update the corresponding configuration (requiring manual modification) and connect to the VPN gateway again. Otherwise, the connection will be interrupted.

Table 1-4 Description of policy template parameters

Parameter		Description	Support for Modification
IKE Policy	Version	Version of the IKE protocol. The supported version is v2 .	×

Parameter		Description	Support for Modification
	Authentication Algorithm	Hash algorithm used for authentication. The following options are available: <ul style="list-style-type: none">• SHA2-256• SHA2-384• SHA2-512 The default algorithm is SHA2-256 .	√
	Encryption Algorithm	Encryption algorithm. The following options are available: <ul style="list-style-type: none">• AES-128-GCM-16• AES-256-GCM-16• AES-128(Insecure. Not recommended.)• AES-192(Insecure. Not recommended.)• AES-256(Insecure. Not recommended.) The default value is AES-128 .	√
	DH Algorithm	The following algorithms are supported: <ul style="list-style-type: none">• Group 14(Insecure. Not recommended.)• Group 15• Group 16• Group 19• Group 20• Group 21 The default value is Group 15 .	√
	Lifetime (s)	Lifetime of a security association (SA). An SA will be renegotiated when its lifetime expires. <ul style="list-style-type: none">• Unit: second• Value range: 60 to 604800 The default value is 86400 .	√

Parameter		Description	Support for Modification
	Local ID	Authentication identifier of the VPN gateway used in IPsec negotiation. The VPN gateway ID configured on the customer gateway must be the same as the local ID configured here. Otherwise, IPsec negotiation fails. By default, EIPs of the VPN gateways are used.	×
IPsec Policy	Authentication Algorithm	Hash algorithm used for authentication. The following options are available: <ul style="list-style-type: none">• SHA2-256• SHA2-384• SHA2-512 The default algorithm is SHA2-256 .	√
	Encryption Algorithm	Encryption algorithm. The following options are available: <ul style="list-style-type: none">• AES-128-GCM-16• AES-256-GCM-16• AES-128(Insecure. Not recommended.)• AES-192(Insecure. Not recommended.)• AES-256(Insecure. Not recommended.) The default value is AES-128 .	√

Parameter		Description	Support for Modification
	PFS	<p>Algorithm used by the Perfect forward secrecy (PFS) function.</p> <p>PFS supports the following algorithms:</p> <ul style="list-style-type: none"> • DH group 14(Insecure. Not recommended.) • DH group 15 • DH group 16 • DH group 19 • DH group 20 • DH group 21 • Disable <p>The default value is DH group 15.</p>	√
	Transfer Protocol	<p>Security protocol used in IPsec to transmit and encapsulate user data.</p> <p>Currently, ESP is supported.</p>	×
	Lifetime (s)	<p>Lifetime of an SA.</p> <p>An SA will be renegotiated when its lifetime expires.</p> <ul style="list-style-type: none"> • Unit: second • Value range: 30 to 604800 <p>The default value is 3600.</p>	√

7. Click **OK**.

1.1.6 Binding an EIP to a VPN Gateway

Scenario

You can bind EIPs to a VPN gateway that has been created.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and click **Bind EIP** in the **Operation** column.
 - If the VPN gateway uses the active-active mode, the VPN gateway can have an active EIP and active EIP 2 bound.
 - If the VPN gateway uses the active/standby mode, the VPN gateway can have an active EIP and a standby EIP bound.
7. Select the desired EIP and click **OK**.

1.1.7 Unbinding an EIP from a VPN Gateway

Scenario

After a VPN gateway is created, you can unbind an EIP from it.

Notes and Constraints

An EIP that is in use by a VPN connection cannot be unbound from a VPN gateway.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and click **Unbind EIP** or choose **More > Unbind EIP** in the **Operation** column.
 - If the VPN gateway uses the active-active mode, the active EIP and active EIP 2 can be unbound from the VPN gateway.
 - If the VPN gateway uses the active/standby mode, the active EIP and standby EIP can be unbound from the VPN gateway.
7. In the displayed dialog box, click **Yes**.

NOTE

- An EIP will continue to be billed after being unbound from a VPN gateway. If you no longer need an EIP, you are advised to release it.
- The impact of shared bandwidth freezing on EIPs is subject to the EIP documentation. For details, see [Why My EIPs Are Frozen? How Do I Unfreeze My EIPs?](#)

1.1.8 Unsubscribing from a Yearly/Monthly VPN Gateway

Scenario

If a yearly/monthly VPN gateway is no longer required, you can unsubscribe from it.

Notes and Constraints

- You can unsubscribe from a VPN gateway only when it is in normal state.
- If a pay-per-use EIP is bound to a VPN gateway, the EIP is automatically unbound from the VPN gateway when you unsubscribe from the VPN gateway. After the EIP is unbound, it is retained. If the EIP is no longer used, you can release it after unsubscribing from the VPN gateway.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and choose **More > Unsubscribe** in the **Operation** column.
7. Unsubscribe from the VPN gateway as prompted.

1.1.9 Renewing a Yearly/Monthly VPN Gateway

Scenario

You can renew a yearly/monthly VPN gateway that is about to expire.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the target VPN gateway, and choose **More > Renew** or click **Renew** in the **Operation** column.
7. Complete the renewal as prompted.

1.1.10 Deleting a Pay-per-Use VPN Gateway

Scenario

You can delete a pay-per-use VPN gateway that is no longer required.

Notes and Constraints

- The delete operation is not supported for a VPN gateway that is being created, updated, or deleted.
- If a VPN gateway is bound to an EIP billed in yearly/monthly mode, the EIP will be unbound from the VPN gateway when the VPN gateway is deleted. After the EIP is unbound, it is retained. If the EIP is no longer used, you can release it after deleting the gateway.
- If a VPN gateway is bound to an EIP billed in pay-per-use mode, the EIP will be released when the VPN gateway is deleted.

To retain such a pay-per-use EIP, unbind it before deleting the VPN gateway. For details about how to unbind an EIP, see [1.1.7 Unbinding an EIP from a VPN Gateway](#).

- If a VPN gateway is bound to an EIP that shares bandwidth with other EIPs, the EIP will be released and the shared bandwidth will be reserved when the VPN gateway is deleted.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate the row that contains the VPN gateway to be deleted, and choose **More > Delete** in the **Operation** column.
7. In the displayed dialog box, click **Yes**.

NOTE

The impact of shared bandwidth freezing on EIPs is subject to the EIP documentation. For details, see [Why My EIPs Are Frozen? How Do I Unfreeze My EIPs?](#).

1.1.11 Uploading Certificates for a VPN Gateway

Scenario

When creating a VPN gateway of the GM specification, you need to upload certificates for it to establish VPN connections with a customer gateway. In addition, configure the alarm function on the Cloud Eye console for such a VPN gateway. For details, see [Creating an Alarm Rule to Monitor an Event](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate a VPN gateway of the GM specification, and choose **More > View/Upload Certificate** in the **Operation** column.
7. Click **Upload Certificate** and set parameters as prompted.

Table 1-5 describes the parameters for uploading certificates for a VPN gateway.

Table 1-5 Parameters for uploading certificates for a VPN gateway

Parameter	Description	Example Value
Certificate Name	User-defined name.	certificate-001
Signature Certificate	Certificate used for signature authentication to ensure data validity and non-repudiation. Use a text editor (such as Notepad++) to open the signature certificate file in PEM format, and copy the certificate content to this text box. Enter both a signature certificate and its issuing CA certificate.	-----BEGIN CERTIFICATE----- <i>Signature certificate</i> -----END CERTIFICATE----- -----BEGIN CERTIFICATE----- <i>CA certificate</i> -----END CERTIFICATE-----
Signature Private Key	Private key used to decrypt the data that is encrypted by a signature certificate. Use a text editor (such as Notepad++) to open the signature private key file in KEY format, and copy the private key to this text box.	-----BEGIN EC PRIVATE KEY----- <i>Signature private key</i> -----END EC PRIVATE KEY-----

Parameter	Description	Example Value
Encryption Certificate	<p>Certificate used to encrypt data transmitted over VPN connections to ensure data confidentiality and integrity. The CA that issues the encryption certificate must be the same as the CA that issues the signature certificate.</p> <p>Use a text editor (such as Notepad++) to open the encryption certificate file in PEM format, and copy the certificate content to this text box.</p>	<pre>-----BEGIN CERTIFICATE----- <i>Encryption certificate</i> -----END CERTIFICATE-----</pre>
Encryption Private Key	<p>Private key used to decrypt the data that is encrypted by an encryption certificate.</p> <p>Use a text editor (such as Notepad++) to open the encryption private key file in KEY format, and copy the private key to this text box.</p>	<pre>-----BEGIN EC PRIVATE KEY----- <i>Encryption private key</i> -----END EC PRIVATE KEY-----</pre>

1.1.12 Replacing Certificates of a VPN Gateway

Scenario

When certificates of a VPN gateway of the GM specification expire or become invalid, you need to replace the certificates.

After certificates of a VPN gateway are replaced, the customer gateway must use the corresponding new CA certificate to renegotiate with the VPN gateway. Otherwise, VPN connections will be disconnected.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Locate a VPN gateway of the GM specification, and choose **More > View/Upload Certificate** in the **Operation** column.

- Click **Replace** and set parameters as prompted.

Table 1-6 describes the parameters for replacing certificates of a VPN gateway.

Table 1-6 Parameters for replacing certificates of a VPN gateway

Parameter	Description	Example Value
Certificate Name	This parameter cannot be modified.	The value must be the same as the original certificate name.
New Signature Certificate	Certificate used for signature authentication to ensure data validity and non-repudiation. Use a text editor (such as Notepad++) to open the signature certificate file in PEM format, and copy the certificate content to this text box. Enter both a signature certificate and its issuing CA certificate.	-----BEGIN CERTIFICATE----- <i>Signature certificate</i> -----END CERTIFICATE----- -----BEGIN CERTIFICATE----- <i>CA certificate</i> -----END CERTIFICATE-----
New Signature Private Key	Private key used to decrypt the data that is encrypted by a signature certificate. Open the signature private key file in KEY format as a text file, and copy the private key to this text box.	-----BEGIN EC PRIVATE KEY----- <i>Signature private key</i> -----END EC PRIVATE KEY-----
New Encryption Certificate	Certificate used to encrypt data transmitted over VPN connections to ensure data confidentiality and integrity. The CA that issues the encryption certificate must be the same as the CA that issues the signature certificate. Use a text editor (such as Notepad++) to open the encryption certificate file in PEM format, and copy the certificate content to this text box.	-----BEGIN CERTIFICATE----- <i>Encryption certificate</i> -----END CERTIFICATE-----

Parameter	Description	Example Value
New Encryption Private Key	Private key used to decrypt the data that is encrypted by an encryption certificate. Use a text editor (such as Notepad++) to open the encryption private key file in KEY format, and copy the private key to this text box.	-----BEGIN EC PRIVATE KEY----- <i>Encryption private key</i> -----END EC PRIVATE KEY-----

8. Select "I have read and understand the preceding risk, and would like to replace the certificates anyway." and click **OK**.

1.2 Customer Gateway Management of Enterprise Edition VPN

1.2.1 Creating a Customer Gateway

Scenario

To connect your on-premises data center or private network to your ECSs in a VPC, you need to create a customer gateway before creating a VPN connection.

Notes and Constraints

- The identifier of a customer gateway that uses SM series cryptographic algorithms can only be a gateway IP address, which must be a static IP address.
- A customer gateway identified by a full qualified domain name (FQDN) supports VPN connections only in policy template mode.
- Address groups cannot be used to configure the source and destination subnets in a policy on customer gateway devices.
- Only IKEv2 is supported in the policy template mode.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – Customer Gateways**.
5. On the **Customer Gateways** page, click **Create Customer Gateway**.

6. Set parameters as prompted and click **Create Now**.
Table 1-7 lists the customer gateway parameters.

Table 1-7 Description of customer gateway parameters

Parameter	Description	Example Value
Name	Name of a customer gateway. The value can contain only letters, digits, underscores (_), hyphens (-), and periods (.).	cgw-001
Identifier	<ul style="list-style-type: none"> ● IP Address: Specify the IP address of the customer gateway. ● FQDN: Enter an FQDN. The value is a string of 1 to 128 case-sensitive characters, including letters, digits, and special characters (excluding & < > [] \). Spaces are not supported. If the customer gateway does not have a fixed IP address, select FQDN. <p>Ensure that UDP port 4500 is permitted in a firewall rule on the customer gateway in your on-premises data center or private network.</p>	<ul style="list-style-type: none"> ● IP Address, 1.2.3.4 ● FQDN, cgw-fqdn
BGP ASN	<p>This parameter is available only when Identifier is set to IP Address.</p> <p>Enter the ASN of your on-premises data center or private network.</p> <p>The BGP ASN of the customer gateway must be different from that of the VPN gateway.</p>	65000
CA certificate (optional)	<p>For a customer gateway that uses SM series cryptographic algorithms, you need to upload a CA certificate for it to establish VPN connections with a VPN gateway.</p> <ul style="list-style-type: none"> ● To upload a new certificate, manually enter a value starting with -----BEGIN CERTIFICATE----- and ending with -----END CERTIFICATE-----. ● To use an uploaded certificate, select the certificate. Pay attention to the time when the certificate will expire. 	<pre>-----BEGIN CERTIFICATE- ----- CA certificate -----END CERTIFICATE- -----</pre>

Parameter	Description	Example Value
Advanced Settings > Tags	Tag of a VPN resource. The value consists of a key and a value. A maximum of 20 tags can be added. You can select predefined tags or customize tags. To view predefined tags, click View predefined tags .	-

7. (Optional) If there are two customer gateways, repeat the preceding operations to configure the other customer gateway with a different identifier.

Related Operations

You need to configure an IPsec VPN tunnel on the router or firewall in your on-premises data center.

1.2.2 Viewing a Customer Gateway

Scenario

After creating a customer gateway, you can view its details.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – Customer Gateways**.
5. On the **Customer Gateways** page, view the customer gateway list.
6. Click the name of a customer gateway to view its details.
 - In the **Basic Information** area, you can view the **Name, Identifier, ID, BGP ASN, and VPN Connection** of the customer gateway.
 - In the **CA Certificate** area, you can view the certificate information including **CA Certificate SN, Signature Algorithm, Expiration Date, Issuer, and Issued To**, and add or replace the CA certificate. (If the customer gateway uses SM series cryptographic algorithms, you need to add a CA certificate.)

1.2.3 Modifying a Customer Gateway

Scenario

After creating a customer gateway, you can modify its name. For a customer gateway that uses SM series cryptographic algorithms, you can also add or replace its CA certificate.

For details about how to add or replace a CA certificate, see [1.2.5 Uploading a Certificate for a Customer Gateway](#) and [1.2.6 Replacing the Certificate of a Customer Gateway](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – Customer Gateways**.
5. On the **Customer Gateways** page, click  next to the name of a customer gateway.
6. Enter a new name for the customer gateway and click **OK**.

[Table 1-8](#) describes the parameters related to customer gateway modification.

Table 1-8 Parameters related to customer gateway modification

Parameter	Description	Modifiable or Not
Name	Name of a VPN connection. The value can contain only letters, digits, underscores (_), hyphens (-), and periods (.).	Y
BGP ASN	BGP AS number.	N
Gateway IP Address	IP address used by the customer gateway to communicate with the VPN gateway. The value must be a static address.	N

1.2.4 Deleting a Customer Gateway

Scenario

You can delete a customer gateway that you have created.

Notes and Constraints

Before deleting a customer gateway associated with a VPN connection, remove the customer gateway from the VPN connection.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – Customer Gateways**.
5. On the **Customer Gateways** page, locate the customer gateway to delete, and click **Delete** in the **Operation** column.
6. Click **Yes**.

1.2.5 Uploading a Certificate for a Customer Gateway

Scenario

For a customer gateway that uses SM series cryptographic algorithms, you need to upload a CA certificate for it to establish VPN connections with a VPN gateway.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – Customer Gateways**.
5. On the **Customer Gateways** page, click the name of the target customer gateway.
6. In the **CA Certificate** area, click **Add**.
7. Set parameters and click **OK**.

Table 1-9 describes the parameters for uploading a CA certificate for a customer gateway.

Table 1-9 Parameters for uploading a CA certificate for a customer gateway

Parameter	Description	Example Value
Upload a certificate	CA certificate of the customer gateway.	-----BEGIN CERTIFICATE----- <i>CA certificate</i> -----END CERTIFICATE-----
Use an uploaded certificate	Select an uploaded certificate. Pay attention to the time when the certificate will expire.	-

1.2.6 Replacing the Certificate of a Customer Gateway

Scenario

When the CA certificate of a customer gateway that uses SM series cryptographic algorithms expires or becomes invalid, you need to replace the CA certificate.

After the CA certificate is replaced, the customer gateway needs to use the SM certificate issued based on the new CA certificate to renegotiate with the VPN gateway. Otherwise, VPN connections will be disconnected.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - Customer Gateways**.
5. On the **Customer Gateways** page, click the name of the target customer gateway.
6. In the **CA Certificate** area, click **Replace**.
7. Set parameters as prompted.

[Table 1-10](#) describes the parameters for replacing the CA certificate of a customer gateway.

Table 1-10 Parameters for replacing the CA certificate of a customer gateway

Parameter	Description	Example Value
Upload a certificate	CA certificate of the customer gateway.	-----BEGIN CERTIFICATE----- <i>CA certificate</i> -----END CERTIFICATE-----
Use an uploaded certificate	Select an uploaded certificate. Pay attention to the time when the certificate will expire.	-

8. Select "I have read and understand the preceding risk, and would like to replace the CA certificate anyway." and click **OK**.

1.3 Enterprise Edition VPN Connection Management

1.3.1 Creating a VPN Connection

Scenario

To connect your on-premises data center or private network to your ECSs in a VPC, you need to create VPN connections after creating a VPN gateway and a customer gateway.

Notes and Constraints

- When creating a VPN connection in static routing mode, ensure that the customer gateway supports ICMP and is correctly configured with the customer interface IP address of the VPN connection before enabling NQA. Otherwise, traffic will fail to be forwarded.
- When creating a VPN connection in policy-based mode and adding multiple policy rules, ensure that the source and destination CIDR blocks in the rules do not overlap. Otherwise, data flows may be incorrectly matched or IPsec tunnels may flap.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Connections**.

5. On the **VPN Connections** page, click **Buy VPN Connection**.

 **NOTE**

For higher reliability, you are advised to create a VPN connection between each of the two EIPs of a VPN gateway and a customer gateway.

6. Set parameters as prompted and click **Buy Now**.

Table 1-11 lists the VPN connection parameters.

Table 1-11 Description of VPN connection parameters

Parameter	Description	Example Value
Name	Name of a VPN connection. The value can contain only letters, digits, underscores (_), hyphens (-), and periods (.).	vpn-001
VPN Gateway	Name of the VPN gateway for which the VPN connection is created. You can also click Create VPN Gateway to create a VPN gateway. For details about related parameters, see Table 1-2 . If you use a VPN gateway of the GM specification and no certificate has been bound to the VPN gateway, click Upload Certificate to upload certificates. Otherwise, VPN connections cannot be set up.	vpngw-001
Gateway IP Address	IP address of the VPN gateway. The same address of a VPN gateway cannot be repeatedly selected when you create VPN connections between the VPN gateway and the same customer gateway.	Available gateway IP address

Parameter	Description	Example Value
Customer Gateway	<p>Name of a customer gateway.</p> <p>You can also click Create Customer Gateway to create a customer gateway. For details about related parameters, see Table 1-7.</p> <p>If you use a customer gateway that supports SM series cryptographic algorithms and no CA certificate has been bound to the customer gateway, upload a CA certificate by referring to 1.2.5 Uploading a Certificate for a Customer Gateway. Otherwise, VPN connections cannot be set up.</p> <p>NOTE</p> <p>If a customer gateway connects to multiple VPN gateways, the BGP ASNs and VPN types of the VPN gateways must be the same.</p>	cgw-001

Parameter	Description	Example Value
VPN Type	<p>IPsec connection mode, which can be route-based or policy-based.</p> <ul style="list-style-type: none">• Static routing Determines the data that enters the IPsec VPN tunnel based on the route configuration (local subnet and customer subnet). Application scenario: Communication between customer gateways• BGP routing Determines the traffic that can enter the IPsec VPN tunnel based on BGP routes. Application scenario: Communication between customer gateways, many or frequently changing interconnection subnets, or backup between VPN and Direct Connect• Policy-based Determines the data that enters the IPsec VPN tunnel based on the policy (between the customer network and VPC). Policy rules can be defined based on the source and destination CIDR blocks. Application scenario: Isolation between customer gateways• Policy template The VPN gateway passively responds to the IPsec connection requests from the customer gateway. After authenticating the customer gateway, the VPN gateway accepts the policy rules defined on the customer gateway based on source and destination CIDR blocks.<ul style="list-style-type: none">- Address groups cannot be used to configure the source and destination subnets in a policy on customer gateway devices.- Only IKEv2 is supported in the policy template mode.	Static routing

Parameter	Description	Example Value
	Application scenario: The customer gateway uses a non-fixed IP address.	
Customer Subnet	<p>Customer-side subnet that needs to access the VPC on the cloud through VPN connections.</p> <p>If there are multiple customer subnets, separate them with commas (,).</p> <p>NOTE</p> <ul style="list-style-type: none">• The customer subnet can overlap with the local subnet but cannot be the same as the local subnet.• A customer subnet cannot be included in the existing subnets of the VPC associated with the VPN gateway. It also cannot be the destination address in the route table of the VPC associated with the VPN gateway.• Customer subnets cannot be the reserved CIDR blocks of VPCs, for example, 100.64.0.0/10 or 214.0.0.0/8.• If the interconnection subnet is associated with an ACL rule, ensure that the ACL rule permits the TCP port for traffic between all local and customer subnets.• Address groups cannot be used to configure the source and destination subnets in a policy on customer gateway devices.	172.16.1.0/24,172.16.2.0/24
Branch Interconnection	<p>This parameter is available only when VPN Type is set to BGP routing.</p> <ul style="list-style-type: none">• Enabled• Disabled <p>This function is disabled by default.</p> <p>NOTE</p> <p>When this function is disabled, only local subnet routes are advertised.</p>	Disabled

Parameter	Description	Example Value
Interface IP Address Assignment	<p>This parameter is available only when VPN Type is set to Static routing or BGP routing.</p> <p>NOTE</p> <ul style="list-style-type: none">• Set interface IP addresses to the tunnel interface IP addresses used by the VPN gateway and customer gateway to communicate with each other.• If the tunnel interface address of the customer gateway is fixed, select Manually specify, and set the tunnel interface address of the VPN gateway based on the tunnel interface address of the customer gateway.• Manually specify<ul style="list-style-type: none">– Set Local Tunnel Interface Address to the tunnel interface address of the VPN gateway, which can reside only on the 169.254.x.x/30 CIDR block (except 169.254.195.x/30). Then, the system automatically sets Customer Tunnel Interface Address to a random value based on the setting of Local Tunnel Interface Address. For example, when you set Local Tunnel Interface Address to 169.254.1.6/30, the system automatically sets Customer Tunnel Interface Address to 169.254.1.5/30.– When you set VPN Type to BGP routing and configure tunnel interface addresses in Manually specify mode, ensure that the local and remote tunnel interface addresses configured on the customer gateway device (the other end of the VPN connection) are the same as the values of Customer Tunnel Interface Address and Local Tunnel Interface Address, respectively.• Automatically assign	Automatically assign

Parameter	Description	Example Value
	<ul style="list-style-type: none">- By default, an IP address on the 169.254.x.x/30 CIDR block is assigned to the tunnel interface of the VPN gateway.- To view the automatically assigned local and customer interface IP addresses, click Modify VPN Connection on the VPN Connections page.- When you set VPN Type to BGP routing and select Automatically assign, check the automatically assigned local and customer tunnel interface addresses after the VPN connection is created. Ensure that the local and remote tunnel interface addresses configured on the customer gateway device (the other end of the VPN connection) are the reverse of the settings on the cloud side.	
Local Tunnel Interface Address	This parameter is available only when Interface IP Address Assignment is set to Manually specify . Tunnel interface IP address configured on the VPN gateway.	N/A
Customer Tunnel Interface Address	This parameter is available only when Interface IP Address Assignment is set to Manually specify . Tunnel interface IP address configured on the customer gateway device.	N/A

Parameter	Description	Example Value
Link Detection	<p>This parameter is available only when VPN Type is set to Static routing.</p> <p>NOTE When enabling this function, ensure that the customer gateway supports ICMP and is correctly configured with the customer interface IP address of the VPN connection. Otherwise, traffic will fail to be forwarded.</p> <p>After this function is enabled, the VPN gateway automatically performs Network Quality Analysis (NQA) on the customer interface IP address of the customer gateway. For details about NQA, see Huawei Cloud VPN NQA.</p>	Selected
PSK	<p>The PSKs configured for the VPN gateway and customer gateway must be the same.</p> <p>The PSK:</p> <ul style="list-style-type: none">• Contains 8 to 128 characters.• Can contain only three or more types of the following characters:<ul style="list-style-type: none">- Digits- Uppercase letters- Lowercase letters- Special characters: ~ ! @ # \$ % ^ () - _ + = { } , . / : ; <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	Test@123
Confirm PSK	<p>Enter the PSK again.</p> <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	Test@123

Parameter	Description	Example Value
Policy	<p>This parameter is available only when VPN Type is set to Policy-based.</p> <p>Defines the data flow that enters the encrypted VPN connection between the local and customer subnets. You need to configure the source and destination CIDR blocks in each policy rule. By default, a maximum of five policy rules can be configured.</p> <ul style="list-style-type: none"> ● Source CIDR Block The source CIDR block must contain some CIDR blocks of the local subnets. 0.0.0.0/0 indicates any IP address. ● Destination CIDR Block The destination CIDR block must contain all the CIDR blocks of the customer subnets. A policy rule supports a maximum of five destination CIDR blocks, which are separated by commas (,). 	<ul style="list-style-type: none"> ● Source CIDR block 1: 192.168.1.0/24 ● Destination CIDR block 1: 172.16.1.0/24,172.16.2.0/24 ● Source CIDR block 2: 192.168.2.0/24 ● Destination CIDR block 2: 172.16.1.0/24,172.16.2.0/24
Policy Settings	<ul style="list-style-type: none"> ● Default: Use default IKE and IPsec policies. ● Custom: Use custom IKE and IPsec policies. For details about the policies, see Table 1-12 and Table 1-13. <p>NOTE When Local ID and Customer ID are set to IP Address, you can specify specific IP addresses as the local and customer IDs, which must be different.</p>	Custom
Policy Template	<p>This parameter is available only when VPN Type is set to Policy template.</p> <p>The policy template cannot be modified here. For details about the modification, see 1.1.5 Modifying the Policy Template of a VPN Gateway.</p>	-

Parameter	Description	Example Value
Tag	<ul style="list-style-type: none">• Tag of a VPN resource. The value consists of a key and a value. A maximum of 20 tags can be added.• You can select predefined tags or customize tags.• To view predefined tags, click View predefined tags.	-

Table 1-12 IKE policy

Parameter	Description	Example Value
Version	<p>Version of the IKE protocol. The value can be one of the following:</p> <ul style="list-style-type: none">• v1 (v1 has low security. If the device supports v2, v2 is recommended.) The IKE version can only be v1 for VPN connections set up using SM series cryptographic algorithms.• v2 <p>The default value is v1 for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is v2 for VPN connections that are not set up using SM series cryptographic algorithms.</p>	v2
Negotiation Mode	<p>This parameter is available only when Version is v1.</p> <ul style="list-style-type: none">• Main Only Main is available if a VPN gateway of the GM specification is selected.• Aggressive	Main

Parameter	Description	Example Value
Authentication Algorithm	<p>Hash algorithm used for authentication. The following options are available:</p> <ul style="list-style-type: none">• SHA1(Insecure. Not recommended.)• MD5(Insecure. Not recommended.)• SHA2-256• SHA2-384• SHA2-512• SM3 <p>This authentication algorithm is available only for VPN connections set up using an SM series cryptographic algorithm. In this case, the IKE version can only be v1.</p> <p>The default value is SM3 for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is SHA2-256 for VPN connections that are not set up using SM series cryptographic algorithms.</p>	SHA2-256

Parameter	Description	Example Value
Encryption Algorithm	<p>Encryption algorithm. The following options are available:</p> <ul style="list-style-type: none">• 3DES(Insecure. Not recommended.)• AES-128(Insecure. Not recommended.)• AES-192(Insecure. Not recommended.)• AES-256(Insecure. Not recommended.)• AES-128-GCM-16• AES-256-GCM-16 <p>When this encryption algorithm is used, the IKE version can only be v2.</p> <ul style="list-style-type: none">• SM4 <p>This encryption algorithm is available only for VPN connections set up using an SM series cryptographic algorithm. In this case, the IKE version can only be v1.</p> <p>The default value is SM4 for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is AES-128 for VPN connections that are not set up using SM series cryptographic algorithms.</p>	AES-128

Parameter	Description	Example Value
DH Algorithm	<p>The following algorithms are supported:</p> <ul style="list-style-type: none">• Group 1(Insecure. Not recommended.)• Group 2(Insecure. Not recommended.)• Group 5(Insecure. Not recommended.)• Group 14(Insecure. Not recommended.)• Group 15• Group 16• Group 19• Group 20• Group 21 <p>The default value is Group 15.</p> <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	Group 15
Lifetime (s)	<p>Lifetime of a security association (SA). An SA will be renegotiated when its lifetime expires.</p> <ul style="list-style-type: none">• Unit: second• The value ranges from 60 to 604800.• The default value is 86400.	86400

Parameter	Description	Example Value
Local ID	<p>Authentication identifier of the VPN gateway used in IPsec negotiation. The peer ID configured on the customer gateway must be the same as the local ID configured here. Otherwise, IPsec negotiation fails.</p> <ul style="list-style-type: none">• IP Address (default value)<ul style="list-style-type: none">– The system automatically sets this parameter to the IP address of the VPN gateway.– You can configure a specific IP address as the local ID, which must be different from the customer ID.• FQDN Set the FQDN to a string of 1 to 128 case-sensitive characters that can contain letters, digits, and special characters (excluding &, <, >, [,], \, ?, and spaces). <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	IP Address
Customer ID	<p>Authentication identifier of the customer gateway used in IPsec negotiation. The local ID configured on the customer gateway must be the same as the customer ID configured here. Otherwise, IPsec negotiation fails.</p> <ul style="list-style-type: none">• IP Address (default value)<ul style="list-style-type: none">– The system automatically sets this parameter to the IP address of the customer gateway.– You can configure a specific IP address as the customer ID, which must be different from the local ID.• FQDN Set the FQDN to a string of 1 to 128 case-sensitive characters that can contain letters, digits, and special characters (excluding &, <, >, [,], \, ?, and spaces). <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	IP Address

Table 1-13 IPsec policy

Parameter	Description	Example Value
Authentication Algorithm	<p>Hash algorithm used for authentication. The following options are available:</p> <ul style="list-style-type: none">• SHA1(Insecure. Not recommended.)• MD5(Insecure. Not recommended.)• SHA2-256• SHA2-384• SHA2-512• SM3 <p>Select this authentication algorithm only for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is SM3 for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is SHA2-256 for VPN connections that are not set up using SM series cryptographic algorithms.</p>	SHA2-256

Parameter	Description	Example Value
Encryption Algorithm	<p>Encryption algorithm. The following options are available:</p> <ul style="list-style-type: none">• 3DES(Insecure. Not recommended.)• AES-128(Insecure. Not recommended.)• AES-192(Insecure. Not recommended.)• AES-256(Insecure. Not recommended.)• AES-128-GCM-16• AES-256-GCM-16• SM4 <p>Select this encryption algorithm only for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is SM4 for VPN connections set up using SM series cryptographic algorithms.</p> <p>The default value is AES-128 for VPN connections that are not set up using SM series cryptographic algorithms.</p>	AES-128

Parameter	Description	Example Value
PFS	<p>Algorithm used by the Perfect forward secrecy (PFS) function.</p> <p>PFS supports the following algorithms:</p> <ul style="list-style-type: none">• Disable(Insecure. Not recommended.)• DH group 1(Insecure. Not recommended.)• DH group 2(Insecure. Not recommended.)• DH group 5(Insecure. Not recommended.)• DH group 14(Insecure. Not recommended.)• DH group 15• DH group 16• DH group 19• DH group 20• DH group 21 <p>The default value is DH group 15.</p> <p>NOTE</p> <ul style="list-style-type: none">• This parameter is not available for VPN connections set up using SM series cryptographic algorithms.• When a VPN gateway and customer gateway use an SM series cryptographic algorithm to set up VPN connections, ensure that the PFS function is disabled on the customer gateway. Otherwise, VPN connections cannot be set up.	DH group 15
Transfer Protocol	<p>Security protocol used in IPsec to transmit and encapsulate user data. The following protocols are supported:</p> <ul style="list-style-type: none">• ESP <p>The default value is ESP.</p>	ESP

Parameter	Description	Example Value
Lifetime (s)	Lifetime of an SA. An SA will be renegotiated when its lifetime expires. <ul style="list-style-type: none">• Unit: second• The value ranges from 30 to 604800.• The default value is 3600.	3600

 **NOTE**

An IKE policy specifies the encryption and authentication algorithms to use in the negotiation phase of an IPsec tunnel. An IPsec policy specifies the protocol, encryption algorithm, and authentication algorithm to use in the data transmission phase of an IPsec tunnel. The policy settings for VPN connections must be the same at the VPC and on-premises data center sides. If they are different, VPN negotiation will fail, causing the failure to establish VPN connections.

The following algorithms are not recommended because they are not secure enough:

- Authentication algorithms: SHA1 and MD5
- Encryption algorithms: 3DES, AES-128, AES-192, and AES-256

Because some customer devices do not support secure encryption algorithms, the default encryption algorithm of VPN connections is still AES-128. You are advised to use a more secure encryption algorithm if customer devices support secure encryption algorithms.

- DH algorithms: Group 1, Group 2, Group 5, and Group 14

7. Confirm the VPN connection configuration and click **Submit**.
8. Repeat the preceding operations to create the other VPN connection.

For details about IP address configuration, see [Context](#).

For details about scenario-specific configuration examples, see [Administrator Guide](#).

1.3.2 Configuring Health Check

Scenario

After VPN connections are created, you can configure health check to enable the VPN gateway to send probe packets to the customer gateway to collect statistics about the round-trip time and packet loss rate of physical links. The statistics help you learn about the VPN connection quality. The Cloud Eye service monitors the round-trip time and packet loss rate of VPN links. For details, see [Metrics](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.

3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Connections**.
5. On the **VPN Connections** page, click the name of the target VPN connection. On the **Summary** tab page, click **Add** in the **Health Check** area.
6. In the **Add Health Check** dialog box, click **OK**.

1.3.3 Viewing a VPN Connection

Scenario

After creating a VPN connection, you can view its details.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Connections**.
5. On the **VPN Connection** page, view the VPN connection list.
6. Click the name of a VPN connection to view its basic information, policy configuration, and tags.
 - When **VPN Type** is **Static routing**, the basic information includes the VPN connection information and health check information.
 - When **VPN Type** is **BGP routing**, the basic information includes the VPN connection information and health check information.
 - When **VPN Type** is **Policy-based**, the basic information includes the VPN connection information, policy rule information, and health check information.

NOTE

- In the VPN connection list, locate the target VPN connection, and choose **More > Modify Policy Settings** on the right to view IKE and IPsec policies of the VPN connection.
- In the VPN connection list, you can locate the target VPN connection and click **View Metric** to view monitoring information about the VPN connection.

Check the value of **VPN Connection Status**. If the value is **0**, the VPN connection is not connected. If the value is **1**, the VPN connection is connected. If the value is **2**, the VPN connection status is unknown.

- In the VPN connection list, you can locate the target VPN connection and choose **More > View Logs** to view log information about the VPN connection.

If a VPN connection is in **Not connected** state, you can determine the cause of the disconnection based on the VPN connection log details. If the log does not show any exception but the VPN connection is still not connected, [submit a service ticket](#) for Huawei technical support.

1.3.4 Modifying a VPN Connection

Scenario

A VPN connection is an encrypted communications channel established between a VPN gateway in a VPC and a customer gateway in your on-premises data center. You can modify a VPN connection when required.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Connections**.
5. On the **VPN Connections** page, locate the VPN connection to modify, and click **Modify VPN Connection** or **Modify Policy Settings**.
6. Modify VPN connection parameters as prompted.
 - For VPN connections in policy template mode, you can modify the policy settings on the **VPN Gateways** page, instead of on the **VPN Connection** page. For details, see [1.1.5 Modifying the Policy Template of a VPN Gateway](#).
 - For a VPN connection in BGP routing mode, you can enable or disable branch Interconnection on the **Modify VPN Connection** page.
7. Click **OK**.

 **CAUTION**

If you change the PSK or modify the IKE or IPsec policy of a VPN connection, ensure that the new configurations are consistent with those on the customer gateway. Otherwise, the VPN connection will be interrupted.

Only some of the parameters take effect immediately after being modified, as described in [Table 1-14](#).

Table 1-14 Time when new parameter settings take effect

Item	Parameter	When New Settings Take Effect	How to Modify
-	PSK	<ul style="list-style-type: none"> When IKEv1 is used, the new setting takes effect in the next negotiation period. When IKEv2 is used, the new setting takes effect after the VPN connection is re-established. <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	<ul style="list-style-type: none"> When IKEv1 is used: Locate the VPN connection to modify, choose More > Reset PSK on the right, and change the PSK as prompted. When IKEv2 is used: <ol style="list-style-type: none"> Delete the current VPN connection. Create a new VPN connection.
IKEv1 policy	Encryption Algorithm	<p>The new settings take effect in the next negotiation period.</p> <p>NOTE</p> <ul style="list-style-type: none"> The following parameters cannot be modified for VPN connections set up using SM series cryptographic algorithms: Encryption Algorithm, Authentication Algorithm, and Negotiation Mode. The following parameters are not available for VPN connections set up using SM series cryptographic algorithms: DH Algorithm, Local ID, and Customer ID. 	Locate the VPN connection to modify, and click Modify VPN Configuration .
	Authentication Algorithm		
	DH Algorithm		
	Negotiation Mode		
	Local ID		
	Customer ID		
	Lifetime (s)		
	Version	<p>The new settings take effect immediately.</p> <p>NOTE This parameter is not available for VPN connections set up using SM series cryptographic algorithms.</p>	

Item	Parameter	When New Settings Take Effect	How to Modify	
IKEv2 policy	Encryption Algorithm	The new settings take effect in the next negotiation period.	Locate the VPN connection to modify, and click Modify VPN Configuration .	
	Authentication Algorithm			
	DH Algorithm			
	Lifetime (s)			
	Version	The new settings take effect immediately.		
	Local ID	The new settings take effect after the VPN connection is re-established.		<ol style="list-style-type: none"> Delete the current VPN connection. Create a new VPN connection.
	Customer ID			
IPsec policy	Encryption Algorithm	The new settings take effect in the next negotiation period. NOTE <ul style="list-style-type: none"> Encryption Algorithm and Authentication Algorithm cannot be modified for VPN connections set up using SM series cryptographic algorithms. The PFS parameter is not available for VPN connections set up using SM series cryptographic algorithms. 	Locate the VPN connection to modify, and click Modify VPN Configuration .	
	Authentication Algorithm			
	PFS			
	Lifetime (s)			
	Transfer Protocol	This parameter cannot be modified on the management console.		

Table 1-15 describes the parameters related to VPN connection modification.

Table 1-15 Parameters related to VPN connection modification

Parameter	Description	Modifiable or Not
Name	Name of a VPN connection. The value can contain only letters, digits, underscores (_), hyphens (-), and periods (.).	Y
Customer Gateway	Gateway used for communicating with a VPC through VPN.	Y
Customer Subnet	Subnet in the on-premises data center that needs to access the VPC on Huawei Cloud.	Y
Policy Settings	There are IKE and IPsec policies.	Y
Policy	The settings include the source and destination CIDR blocks.	Y
PSK	The PSKs configured for the VPN gateway and customer gateway must be the same.	Y
Billing Mode	<ul style="list-style-type: none">● Yearly/Monthly: You are billed by month or year. By default, 10 VPN connection groups are included free of charge with the purchase of a VPN gateway.● Pay-per-use: VPN gateways and VPN connection groups are billed by usage duration, and the billing cycle is 1 hour.	The billing mode can only be changed from pay-per-use to yearly/monthly.
Local Tunnel Interface Address	Tunnel interface IP address configured on the VPN gateway.	Y
Customer Tunnel Interface Address	Tunnel interface IP address configured on the customer gateway device.	Y
Branch Interconnection	This parameter is available only when VPN Type is set to BGP routing .	Y

Parameter	Description	Modifiable or Not
VPN Gateway	VPN gateway that has been created.	N
Gateway IP Address	IP address used by the customer gateway to communicate with the VPN gateway. The value must be a static address. Ensure that UDP port 4500 is permitted in a firewall rule on the customer gateway in your on-premises data center or private network.	N
Interface IP Address Assignment	Mode in which IP addresses of the local and customer interfaces are assigned. The options include Manually specify and Automatically assign .	N
Link Detection	This function is used for route reliability detection in multi-link scenarios. NOTE When enabling this function, ensure that the customer gateway supports ICMP and is correctly configured with the customer interface IP address of the VPN connection. Otherwise, VPN traffic will fail to be forwarded.	N

1.3.5 Deleting a VPN Connection

Scenario

If a VPN connection is no longer required, you can delete it to release network resources.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Connections**.

5. On the **VPN Connections** page, locate the row that contains the target VPN connection, and choose **More > Delete**.
6. In the displayed dialog box, click **Yes**.

1.4 Enterprise Edition VPN Fee Management

1.4.1 Changing the Billing Mode of a VPN Gateway from Pay-Per-Use to Yearly/Monthly

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Locate the target pay-per-use VPN gateway, and choose **More > Change Billing Mode** in the **Operation** column.
 - You can change the billing mode of the VPN gateway and bound EIPs to yearly/monthly simultaneously. Alternatively, you can only change the billing mode of the VPN gateway to yearly/monthly, and retain the billing mode of the bound EIPs as pay-per-use.

Only when the EIPs bound to a VPN gateway are billed by bandwidth in pay-per-use mode, you can change the billing modes of the VPN gateway and EIPs to yearly/monthly simultaneously.
 - Billing formula change

Assume that X VPN connection groups are in use before the billing mode is changed to yearly/monthly. Then, after the billing mode is changed, the billing formula changes to: Fee of the VPN gateway + Fee of $(X - 10)$ VPN connection groups.
6. In the **Change Billing Mode** dialog box, click **OK**.
7. On the **Change Subscription** page that is displayed, confirm the information about the VPN gateway and configure the usage duration.
8. Click **Pay**.
9. On the payment page, confirm the order information, select a coupon or discount, and select the payment method.
10. Click **Pay**.

NOTE

Changing the billing mode of a VPN gateway from pay-per-use to yearly/monthly will not affect your services.

1.4.2 Increasing or Decreasing the Bandwidth of an EIP Billed on a Yearly/Monthly Basis

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the name of a VPN gateway.
6. Click the **Elastic IPs** tab, and click **Change** next to **Bandwidth (Mbit/s)**.
7. On the **Modify Bandwidth** page, select your required bandwidth and click **Next**.
8. Click **Pay Now**.
 - If the bandwidth is increased, the new bandwidth takes effect immediately after you pay the extra fees.
 - If the bandwidth is decreased, the new bandwidth takes effect only within the renewal period.

1.4.3 Increasing or Decreasing the VPN Connection Group Quota of a Yearly/Monthly VPN Gateway

Notes and Constraints

- You can change the VPN connection group quota for Enterprise Edition VPN gateways whose specifications are not Basic.
- The new VPN connection group quota cannot be less than the number of connection groups in use.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Locate the row that contains the target VPN gateway, and choose **More > Change VPN Connection Group Quota**.
6. On the **Change VPN Connection Group Quota** page, set a new number of VPN connection groups and click **Next**.
7. If you increase the quota, click **Pay Now** to pay the extra fee. If you decrease the quota, click **OK**.

The new quota of VPN connection groups takes effect immediately, and you are charged the extra fee or refunded accordingly.

2 S2C Classic VPN

2.1 Classic VPN Gateway Management

2.1.1 Buying a VPN Gateway

Scenarios

To connect your on-premises data center or private network to your ECSs in a VPC, buy a VPN gateway first. If you choose to buy a pay-per-use VPN gateway, a VPN connection will be created together with the VPN gateway.

Prerequisites

- A VPC has been created. For details about how to create a VPC, see [Creating a VPC and Subnet](#).
- Security group rules have been configured for the VPC, and ECSs can communicate with other devices on the cloud. For details about how to configure security group rules, see [Security Group Rules](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Gateways**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the **VPN Gateways** page, click **Buy VPN Gateway**.
6. Configure parameters based on [Table 2-1](#), and click **Buy Now**.

Table 2-1 Description of VPN gateway parameters

Parameter	Description	Example Value
Billing Mode	Billing mode of a VPN gateway, which can be pay-per-use Pay-per-use: When you buy a pay-per-use VPN gateway, you must buy a VPN connection together with the VPN gateway.	Pay-per-use
Region	Regions are geographic areas that are physically isolated from each other. The networks inside different regions are not connected to each other, so resources cannot be shared across regions. For low network latency and fast resource access, select the region nearest to your target users.	AP-Singapore
Name	Name of a VPN gateway.	vpngw-001
VPC	Name of the VPC to which the VPN gateway connects.	vpc-001
Type	VPN type. IPsec is selected by default.	IPsec
Billed By	A pay-per-use VPN gateway can be billed by bandwidth or by traffic. The billing modes available for a region are subject to those displayed on the page. <ul style="list-style-type: none">• Bandwidth: You need to specify a bandwidth limit and pay for the amount of time you use the bandwidth.• Traffic: You need to specify a bandwidth limit and pay for the traffic you generate.	Traffic

Parameter	Description	Example Value
Bandwidth (Mbit/s)	<p>The bandwidth of the VPN gateway. The bandwidth is shared by all VPN connections created for the VPN gateway. The total bandwidth size used by all VPN connections created for a VPN gateway cannot exceed the VPN gateway bandwidth size.</p> <p>During the use of VPN, if the network traffic exceeds the VPN gateway bandwidth, network congestion may occur and VPN connections may be interrupted. As such, ensure that you configure enough bandwidth.</p> <p>You can configure alarm rules on Cloud Eye to monitor the bandwidth.</p>	10

 **NOTE**

When you buy a pay-per-use VPN gateway, you also need to configure a VPN connection that will be created together with the gateway (excepting the **CN South-Shenzhen** region). For details, see [Table 2-2](#).

Table 2-2 Description of VPN connection parameters

Parameter	Description	Example Value
Name	Name of a VPN connection.	vpn-001
VPN Gateway	Name of the VPN gateway for which the VPN connection is created.	vpcgw-001
Local Subnet	<p>VPC subnets that will access your on-premises network through a VPN. You can set the local subnet using either of the following methods:</p> <ul style="list-style-type: none"> • Select subnet: Select the subnets that need to access your on-premises data center or private network. • Specify CIDR block: Enter the CIDR blocks that need to access your on-premises data center or private network. <p>NOTE CIDR blocks of local subnets cannot overlap.</p>	192.168.1.0/24, 192.168.2.0/24

Parameter	Description	Example Value
Remote Gateway	The public IP address of the gateway in your data center or on the private network. This IP address is used for communicating with your VPC.	N/A
Remote Subnet	The subnets of your on-premises network that will access a VPC through a VPN. The remote and local subnets cannot overlap with each other. The remote subnet cannot overlap with CIDR blocks involved in existing VPC peering, Direct Connect, or Cloud Connect connections created for the local VPC. NOTE CIDR blocks of remote subnets cannot overlap.	192.168.3.0/24, 192.168.4.0/24
PSK	PSKs configured at both ends of a VPN connection must be the same. The PSK: <ul style="list-style-type: none">• Contains 6 to 128 characters.• Can contain only:<ul style="list-style-type: none">- Digits- Letters- Special characters: ~ ` ! @ # \$ % ^ () - _ + = [] { } \ , . / : ;	Test@123
Confirm PSK	Enter the PSK again.	Test@123
Advanced Settings	<ul style="list-style-type: none">• Default: Use default IKE and IPsec policies.• Custom: Use custom IKE and IPsec policies. For details, see Table 2-3 and Table 2-4.	Custom

Table 2-3 IKE policy

Parameter	Description	Example Value
Authentication Algorithm	<p>Hash algorithm used for authentication. The following algorithms are supported:</p> <ul style="list-style-type: none">• MD5 (This algorithm is insecure. Exercise caution when using this algorithm.)• SHA1 (This algorithm is insecure. Exercise caution when using this algorithm.)• SHA2-256• SHA2-384• SHA2-512 <p>The default algorithm is SHA2-256.</p>	SHA2-256
Encryption Algorithm	<p>Encryption algorithm. The following algorithms are supported:</p> <ul style="list-style-type: none">• AES-128• AES-192• AES-256• 3DES (This algorithm is insecure. Exercise caution when using this algorithm.) <p>The default algorithm is AES-128.</p>	AES-128
DH Algorithm	<p>Diffie-Hellman key exchange algorithm. The following algorithms are supported:</p> <ul style="list-style-type: none">• Group 1 (This algorithm is insecure. Exercise caution when using this algorithm.)• Group 2 (This algorithm is insecure. Exercise caution when using this algorithm.)• Group 5 (This algorithm is insecure. Exercise caution when using this algorithm.)• Group 14• Group 15• Group 16• Group 19• Group 20• Group 21 <p>The default value is Group 14.</p> <p>DH algorithms configured at both ends of a VPN connection must be the same. Otherwise, the negotiation will fail.</p>	Group 14

Parameter	Description	Example Value
Version	Version of the IKE protocol. The value can be one of the following: <ul style="list-style-type: none">v1 (not recommended due to security risks)v2 The default value is v2 .	v2
Lifetime (s)	Lifetime of an SA, in seconds An SA will be renegotiated when its lifetime expires. The default value is 86400 .	86400

Table 2-4 IPsec policy

Parameter	Description	Example Value
Authentication Algorithm	Hash algorithm used for authentication. The following algorithms are supported: <ul style="list-style-type: none">SHA1 (This algorithm is insecure. Exercise caution when using this algorithm.)MD5 (This algorithm is insecure. Exercise caution when using this algorithm.)SHA2-256SHA2-384SHA2-512 The default algorithm is SHA2-256 .	SHA2-256
Encryption Algorithm	Encryption algorithm. The following algorithms are supported: <ul style="list-style-type: none">AES-128AES-192AES-2563DES (This algorithm is insecure. Exercise caution when using this algorithm.) The default algorithm is AES-128 .	AES-128

Parameter	Description	Example Value
PFS	<p>Algorithm used by the Perfect forward secrecy (PFS) function.</p> <p>PFS supports the following algorithms:</p> <ul style="list-style-type: none">• DH group 1 (This algorithm is insecure. Exercise caution when using this algorithm.)• DH group 2 (This algorithm is insecure. Exercise caution when using this algorithm.)• DH group 5 (This algorithm is insecure. Exercise caution when using this algorithm.)• DH group 14• DH group 15• DH group 16• DH group 19• DH group 20• DH group 21 <p>The default algorithm is DH group 14.</p>	DH group 14
Transfer Protocol	<p>Security protocol used in IPsec to transmit and encapsulate user data. The following protocols are supported:</p> <ul style="list-style-type: none">• ESP• AH• AH-ESP <p>The default protocol is ESP.</p>	ESP
Lifetime (s)	<p>Lifetime of an SA, in seconds</p> <p>An SA will be renegotiated when its lifetime expires.</p> <p>The default value is 3600.</p>	3600

⚠ CAUTION

The following algorithms are not recommended because they are not secure enough:

Authentication algorithms: SHA1 and MD5

Encryption algorithm: 3DES

DH algorithms: Group 1, Group 2, and Group 5

7. Confirm the VPN gateway information and click **Buy Now**.
After a VPN gateway is created, the system automatically assigns a public IP address, that is, the IP address displayed in the **Gateway IP Address** column in the VPN gateway list. The gateway IP address is also the remote gateway IP address configured on the on-premises VPN network.

2.1.2 Viewing a VPN Gateway

Scenarios

After creating a VPN gateway, you can view its details.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. View VPN gateway information.

2.1.3 Modifying a VPN Gateway

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the Classic page, click the **VPN Gateways** tab.
 - Locate the row that contains the target VPN gateway, and choose **More > Modify Bandwidth** in the **Operation** column.
 - Locate the row that contains the target VPN gateway, and choose **More > Modify Basic Information** in the **Operation** column.
 - Locate the row that contains the target VPN gateway, and choose **More > Modify Specifications** in the **Operation** column.
6. Modify the VPN gateway bandwidth, name, or description as required.
7. Click **OK**.

Modifying Basic Information About a VPN Gateway

Scenario

You can modify the name and description of a VPN gateway.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Gateways**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. Locate the row that contains the VPN gateway that you want to modify, and choose **More > Modify Basic Information** in the **Operation** column.
6. Modify the VPN gateway name or description as required.

 **NOTE**

The name of a VPN gateway can contain only letters, digits, underscores (_), hyphens (-), and periods (.).

7. Click **OK**.

Modifying VPN Gateway Bandwidth

Scenario

When the bandwidth of a VPN gateway cannot meet your service requirements, you can modify the VPN gateway bandwidth.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Gateways**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the **VPN Gateways** page, locate the row that contains the target VPN gateway and choose **More > Modify Bandwidth** in the **Operation** column.
6. Modify the bandwidth as required.
7. Click **Submit**.

2.1.4 Deleting a Pay-per-Use VPN Gateway

Scenarios

If a VPN gateway is no longer required, you can delete it to release network resources as long as it has no VPN connections configured.

If it has any connections configured, delete the connections first.

 NOTE

If you create a pay-per-use VPN gateway, a VPN connection will be created together with the gateway. If you delete all VPN connections created for a pay-per-use VPN gateway, the VPN gateway will be automatically deleted. For details, see [2.2.4 Deleting a VPN Connection](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Gateways**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
4. Locate the row that contains the target VPN gateway, and choose **More > Delete** in the **Operation** column.
If Enterprise Edition VPN is available for the selected region, locate the row that contains the target VPN gateway, and choose **More > Delete**.
5. In the displayed dialog box, click **Yes**.

2.2 Classic VPN Connection Management

2.2.1 Buying a VPN Connection

Scenarios

To connect your on-premises data center or private network to your ECSs in a VPC, you need to create a VPN connection after a VPN gateway is obtained.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Connections**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the **VPN Connections** page, click **Buy VPN Connection**.
6. Configure the parameters as prompted and click **Pay Now**. [Table 2-5](#) describes the VPN connection parameters.

Table 2-5 Description of VPN connection parameters

Parameter	Description	Example Value
Region	Regions are geographic areas that are physically isolated from each other. The networks inside different regions are not connected to each other, so resources cannot be shared across regions. For low network latency and fast resource access, select the region nearest to your target users.	CN North-Beijing4
Name	Name of a VPN connection.	vpn-001
VPN Gateway	Name of the VPN gateway for which the VPN connection is created.	vpcgw-001
Local Subnet	VPC subnets that will access your on-premises network through a VPN. You can set the local subnet using either of the following methods: <ul style="list-style-type: none">• Select subnet: Select the subnets that need to access your on-premises data center or private network.• Specify CIDR block: Enter the CIDR blocks that need to access your on-premises data center or private network. NOTE CIDR blocks of local subnets cannot overlap.	192.168.1.0/24, 192.168.2.0/24
Remote Gateway	The public IP address of the gateway in your data center or on the private network. This IP address is used for communicating with your VPC.	N/A
Remote Subnet	The subnets of your on-premises network that will access a VPC through a VPN. The remote and local subnets cannot overlap with each other. The remote subnet cannot overlap with CIDR blocks involved in existing VPC peering, Direct Connect, or Cloud Connect connections created for the local VPC. NOTE CIDR blocks of remote subnets cannot overlap.	192.168.3.0/24, 192.168.4.0/24

Parameter	Description	Example Value
PSK	Private key shared by two ends of a VPN connection for negotiation. PSKs configured at both ends of the VPN connection must be the same. The PSK: <ul style="list-style-type: none">• Contains 6 to 128 characters.• Can contain only:<ul style="list-style-type: none">- Digits- Letters- Special characters: ~ ` ! @ # \$ % ^ () - _ + = [] { } \ , . / : ;	Test@123
Confirm PSK	Enter the PSK again.	Test@123
Advanced Settings	<ul style="list-style-type: none">• Default: Use default IKE and IPsec policies.• Existing: Use existing IKE and IPsec policies.• Custom: including IKE Policy and IPsec Policy, which specifies the encryption and authentication algorithms of a VPN tunnel. For details, see Table 2-6 and Table 2-7.	Custom

Table 2-6 IKE policy

Parameter	Description	Example Value
Authentication Algorithm	Hash algorithm used for authentication. The following algorithms are supported: <ul style="list-style-type: none">• MD5 (This algorithm is insecure. Exercise caution when using this algorithm.)• SHA1 (This algorithm is insecure. Exercise caution when using this algorithm.)• SHA2-256• SHA2-384• SHA2-512 The default algorithm is SHA2-256 .	SHA2-256

Parameter	Description	Example Value
Encryption Algorithm	Encryption algorithm. The following algorithms are supported: <ul style="list-style-type: none">• AES-128• AES-192• AES-256• 3DES (This algorithm is insecure. Exercise caution when using this algorithm.) The default algorithm is AES-128 .	AES-128
DH Algorithm	Diffie-Hellman key exchange algorithm. The following algorithms are supported: <ul style="list-style-type: none">• Group 1 (This algorithm is insecure. Exercise caution when using this algorithm.)• Group 2 (This algorithm is insecure. Exercise caution when using this algorithm.)• Group 5 (This algorithm is insecure. Exercise caution when using this algorithm.)• Group 14• Group 15• Group 16• Group 19• Group 20• Group 21 The default algorithm is Group 14 .	Group 14
Version	Version of the IKE protocol. The value can be one of the following: <ul style="list-style-type: none">• v1 (not recommended due to security risks)• v2 The default value is v2 .	v2
Lifetime (s)	Lifetime of an SA, in seconds An SA will be renegotiated when its lifetime expires. The default value is 86400 .	86400

Table 2-7 IPsec policy

Parameter	Description	Example Value
Authentication Algorithm	Hash algorithm used for authentication. The following algorithms are supported: <ul style="list-style-type: none">• SHA1 (This algorithm is insecure. Exercise caution when using this algorithm.)• MD5 (This algorithm is insecure. Exercise caution when using this algorithm.)• SHA2-256• SHA2-384• SHA2-512 The default algorithm is SHA2-256 .	SHA2-256
Encryption Algorithm	Encryption algorithm. The following algorithms are supported: <ul style="list-style-type: none">• AES-128• AES-192• AES-256• 3DES (This algorithm is insecure. Exercise caution when using this algorithm.) The default algorithm is AES-128 .	AES-128

Parameter	Description	Example Value
PFS	<p>Algorithm used by the Perfect forward secrecy (PFS) function.</p> <p>PFS supports the following algorithms:</p> <ul style="list-style-type: none">• DH group 1 (This algorithm is insecure. Exercise caution when using this algorithm.)• DH group 2 (This algorithm is insecure. Exercise caution when using this algorithm.)• DH group 5 (This algorithm is insecure. Exercise caution when using this algorithm.)• DH group 14• DH group 15• DH group 16• DH group 19• DH group 20• DH group 21 <p>The default algorithm is DH group 14.</p>	DH group 14
Transfer Protocol	<p>Security protocol used in IPsec to transmit and encapsulate user data. The following protocols are supported:</p> <ul style="list-style-type: none">• AH• ESP• AH-ESP <p>The default protocol is ESP.</p>	ESP
Lifetime (s)	<p>Lifetime of an SA, in seconds</p> <p>An SA will be renegotiated when its lifetime expires.</p> <p>The default value is 3600.</p>	3600

 **NOTE**

An IKE policy specifies the encryption and authentication algorithms to be used in the negotiation phase of an IPsec tunnel. An IPsec policy specifies the protocol, encryption algorithm, and authentication algorithm to be used in the data transmission phase of an IPsec tunnel. The IKE and IPsec policies must be the same at both ends of a VPN connection. If they are different, the VPN connection cannot be set up.

The following algorithms are not recommended because they are not secure enough:

- Authentication algorithms: SHA1 and MD5
 - Encryption algorithm: 3DES
 - DH algorithms: Group 1, Group 2, and Group 5
7. Click **Submit**.
 8. You need to configure an IPsec VPN tunnel on the router or firewall in your on-premises data center.

2.2.2 Viewing a VPN Connection

Scenarios

After creating a VPN connection, you can view its details.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** in the upper left corner, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Connections**.

If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**. Then, click the **VPN Connections** tab.

5. View the VPN connection information. You can also locate the row that contains the target VPN connection, and click **View Policy** in the **Operation** column to view IKE and IPsec policy details of the VPN connection.

2.2.3 Modifying a VPN Connection

Scenarios

A VPN connection is an encrypted communications channel established between the VPN gateway in your VPC and that in an on-premises data center. The VPN connection can be modified after creation.

 **CAUTION**

If you modify the advanced settings, network communications may be interrupted. Exercise caution when performing this operation.

Changing the PSK only will not delete the current VPN connection. The new PSK takes effect during IKE renegotiation after the IKE lifetime expires.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Connections**.

If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**. Then, click the **VPN Connections** tab.

5. Locate the row that contains the target VPN connection, and click **Modify** in the **Operation** column.
6. In the displayed **Modify VPN Connection** dialog box, modify parameters as required.

NOTE

The name of a VPN gateway can contain only letters, digits, underscores (_), hyphens (-), and periods (.).

7. Click **OK**.

2.2.4 Deleting a VPN Connection

Scenarios

If a VPN connection is no longer required, you can delete it to release network resources.

When you delete the last VPN connection of a pay-per-use VPN gateway, the associated VPN gateway will also be deleted.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Connections**.

If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**. Then, click the **VPN Connections** tab.

5. Locate the row that contains the target VPN connection, and choose **More > Delete** in the **Operation** column.
6. In the displayed dialog box, click **Yes**.

2.3 Classic VPN Management (LA-Mexico City1/LA-Sao Paulo1)

2.3.1 Buying a VPN (LA-Mexico City1/LA-Sao Paulo1)

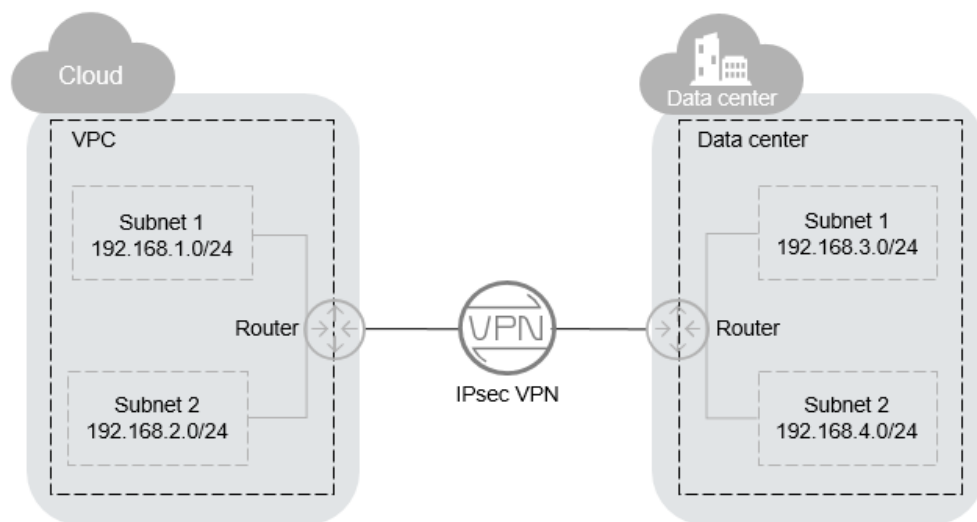

Overview

By default, ECSs in a VPC cannot communicate with devices in your on-premises data center or private network. To enable communication between them, you can use a VPN by creating it in your VPC and updating security group rules.

IPsec VPN Topology

In [Figure 2-1](#), the VPC has subnets 192.168.1.0/24 and 192.168.2.0/24. Your on-premises data center has subnets 192.168.3.0/24 and 192.168.4.0/24. You can use VPN to enable subnets in the VPC to communicate with those in your data center.

Figure 2-1 IPsec VPN

Site-to-site VPN is supported to enable communication between VPC subnets and on-premises data center subnets. Before establishing an IPsec VPN, ensure that the on-premises data center where the VPN is to be established meets the following conditions:

- On-premises devices that support the standard IPsec protocol are available.
- The on-premises devices have fixed public IP addresses, which can be statically configured or translated by NAT.
- The on-premises subnets do not conflict with VPC subnets, and devices in the on-premises subnets can communicate with the on-premises devices.

If the preceding conditions are met, ensure that the IKE policies and IPsec policies at both ends are consistent and the subnets at both ends are matched pairs when configuring IPsec VPN.

After the configuration is complete, VPN negotiation needs to be triggered by private network data flows.

Scenarios

You need a VPN that sets up a secure, isolated communications tunnel between your on-premises data center and cloud services.

Prerequisites

- A VPC has been created. For details about how to create a VPC, see [Creating a VPC and Subnet](#).
- Security group rules have been configured for the VPC, and ECSs can communicate with other devices on the cloud. For details about how to configure security group rules, see [Security Group Rules](#).

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the **Virtual Private Network** page, click **Buy VPN**.
If Enterprise Edition VPN is available for the selected region, click **Buy VPN** on the **Classic** page.
6. Configure required parameters and click **Next**.

[Table 2-8](#), [Table 2-9](#), and [Table 2-10](#) describe the parameters.

Table 2-8 Basic parameters

Parameter	Description	Example Value
Region	Regions are geographic areas that are physically isolated from each other. The networks inside different regions are not connected to each other, so resources cannot be shared across regions. For low network latency and fast resource access, select the region nearest to your target users.	LA-Mexico City1
Billing Mode	VPNs are billed on a pay-per-use basis.	Pay-per-use
Name	The VPN name	VPN-001
VPC	The VPC name	VPC-001

Parameter	Description	Example Value
Local Subnet	VPC subnets that will access your on-premises network through a VPN.	192.168.1.0/24, 192.168.2.0/24
Remote Gateway	The public IP address of the gateway in your data center or on the private network. This IP address is used for communicating with your VPC.	N/A
Remote Subnet	The subnets of your on-premises network that will access a VPC through a VPN. The remote and local subnets cannot overlap with each other. The remote subnets cannot overlap with CIDR blocks involved in existing VPC peering connections created for the VPC.	192.168.3.0/24, 192.168.4.0/24
PSK	Private key shared by two ends of a VPN connection for negotiation. PSKs configured at both ends of the VPN connection must be the same. The PSK can contain 6 to 128 characters.	Test@123
Confirm PSK	Enter the PSK again.	Test@123
Advanced Settings	<ul style="list-style-type: none">• Default: Use default IKE and IPsec policies.• Custom: Use custom IKE and IPsec policies. For details, see Table 2-9 and Table 2-10.	Custom

Table 2-9 IKE policy

Parameter	Description	Example Value
Authentication Algorithm	Hash algorithm used for authentication. The following algorithms are supported: <ul style="list-style-type: none">• MD5(Insecure. Not recommended.)• SHA1(Insecure. Not recommended.)• SHA2-256• SHA2-384• SHA2-512 The default value is SHA2-256 .	SHA2-256
Encryption Algorithm	Encryption algorithm. The following algorithms are supported: <ul style="list-style-type: none">• AES-128• AES-192• AES-256• 3DES(Insecure. Not recommended.) The default value is AES-128 .	AES-128
DH Algorithm	Diffie-Hellman key exchange algorithm. The following algorithms are supported: <ul style="list-style-type: none">• DH group 1(Insecure. Not recommended.)• DH group 2(Insecure. Not recommended.)• DH group 5(Insecure. Not recommended.)• DH group 14• Group 15• Group 16• Group 19• Group 20• Group 21 The default value is Group 14 .	Group 14

Parameter	Description	Example Value
Version	Version of the IKE protocol. The value can be one of the following: <ul style="list-style-type: none">v1 (For security reasons, IKEv1 is not recommended. If your devices support IKEv2, select IKEv2.)v2 The default value is v2 .	v2
Lifetime (s)	Lifetime of an SA, in seconds An SA will be renegotiated when its lifetime expires. The default value is 86400 .	86400
Negotiation Mode	This parameter is available only when Version is set to v1 . You can set Negotiation Mode to Main or Aggressive . The default value is Main .	Main

Table 2-10 IPsec policy

Parameter	Description	Example Value
Authentication Algorithm	Hash algorithm used for authentication. The following algorithms are supported: <ul style="list-style-type: none">SHA1(Insecure. Not recommended.)MD5(Insecure. Not recommended.)SHA2-256SHA2-384SHA2-512 The default value is SHA2-256 .	SHA2-256

Parameter	Description	Example Value
Encryption Algorithm	Encryption algorithm. The following algorithms are supported: <ul style="list-style-type: none">• AES-128• AES-192• AES-256• 3DES(Insecure. Not recommended.) The default value is AES-128 .	AES-128
PFS	Algorithm used by the Perfect forward secrecy (PFS) function. PFS supports the following algorithms: <ul style="list-style-type: none">• Disable• DH group 1(Insecure. Not recommended.)• DH group 2(Insecure. Not recommended.)• DH group 5(Insecure. Not recommended.)• DH group 14• DH group 15• DH group 16• DH group 19• DH group 20• DH group 21 The default value is DH group 14 .	DH group 14
Transfer Protocol	Security protocol used in IPsec to transmit and encapsulate user data. The following protocols are supported: <ul style="list-style-type: none">• AH• AH-ESP• ESP The default value is ESP .	ESP
Lifetime (s)	Lifetime of an SA, in seconds An SA will be renegotiated when its lifetime expires. The default value is 3600 .	3600

 **NOTE**

An IKE policy specifies the encryption and authentication algorithms to be used in the negotiation phase of an IPsec tunnel. An IPsec policy specifies the protocol, encryption algorithm, and authentication algorithm to be used in the data transmission phase of an IPsec tunnel. The IKE and IPsec policies must be the same at both ends of a VPN connection. Otherwise, the VPN connection cannot be set up.

The following algorithms are not recommended because they are not secure enough:

- Authentication algorithms: SHA1 and MD5
- Encryption algorithm: 3DES
- DH algorithms: Group 1, Group 2, and Group 5

7. Submit your application.

After the IPsec VPN is created, a public IP address is assigned to the VPN. The IP address is the local gateway address of the created VPN. When configuring the remote tunnel in your data center, you must set the remote gateway address to this IP address.

8. You need to configure an IPsec VPN tunnel on the router or firewall in your on-premises data center.

2.3.2 Viewing Purchased VPNs

Scenarios

You can view details about an existing VPN.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the **Virtual Private Network** page, view the target VPN.
If Enterprise Edition VPN is available for the selected region, view the target VPN on the **Classic** page.

[Table 2-11](#) describes the VPN status.

Table 2-11 VPN status

Status	Description
Normal	The VPN is successfully created, and the on-premises data center can access the VPC properly.
Not connected	The VPN is successfully created but has not been used for communication with the on-premises data center.
Creating	The VPN is being created.

Status	Description
Updating	VPN information is being updated.
Deleting	The VPN is being deleted.
Abnormal	The VPN is abnormal.
Frozen	The VPN is frozen.

2.3.3 Modifying a Purchased VPN

Scenarios

If VPN network information conflicts with VPC network information or needs to be adjusted based on the latest network environment, you can modify the VPN.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.
5. On the **Virtual Private Network** page, locate the target VPN and click **Modify**.
If Enterprise Edition VPN is available for the selected region, locate the target VPN and click **Modify** on the **Classic** page.
6. In the displayed dialog box, modify parameters as required.
7. Click **OK**.

2.3.4 Deleting a VPN

Scenarios

You can delete a VPN if it is no longer required.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**.

5. On the **Virtual Private Network** page, locate the target VPN and click **Delete**.

If Enterprise Edition VPN is available for the selected region, locate the target VPN and click **Delete** on the **Classic** page.

6. In the displayed dialog box, click **Yes**.

2.4 Classic VPN Fee Management

2.4.1 Changing a Pay-Per-Use VPN Gateway from Being Billed by Bandwidth to Being Billed by Traffic or the Other Way Around

Prerequisites

A VPN gateway is billed in the pay-per-use mode.

The billing modes available for a region are subject to those displayed on the page.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click **Service List** and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Classic - VPN Gateways**.
If Enterprise Edition VPN is available for the selected region, choose **Virtual Private Network > Classic**. The **VPN Gateways** tab page is displayed.
5. Locate the row that contains the target VPN gateway.
6. Choose **More > Modify Bandwidth** in the **Operation** column.
7. On the **Modify Bandwidth** page, set **Billed By** to **Bandwidth** in the **Modify Specifications** area.
8. Click **Submit**.

3 P2C VPN

3.1 P2C VPN Gateway Management

3.1.1 Creating a VPN Gateway

Scenario

P2C VPN allows users to securely access applications and services deployed in a VPC from local terminals. To use P2C VPN, you need to create a VPN gateway first.

Limitations and Constraints

You can create a maximum of 50 VPN gateways.

Prerequisites

- A VPC has been created. For details about how to create a VPC, see [Creating a VPC and Subnet](#).
- Security group rules have been configured for the VPC, and ECSs can communicate with other devices on the cloud. For details about how to configure security group rules, see [Security Group Rules](#).

Procedure

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab, and then click **Buy P2C VPN Gateway**.

Step 6 Set parameters as prompted and click **Buy Now**.

Table 3-1 describes the VPN gateway parameters.

Table 3-1 Description of VPN gateway parameters

Parameter	Description	Example Value
Region	For low network latency and fast resource access, select the region nearest to your target users. Resources cannot be shared across regions.	<i>Set this parameter based on the actual condition.</i>
Name	Enter the name of a VPN gateway.	p2c-vpngw-001
VPC	Select a VPC.	vpc-001(192.168.0.0/16)
Interconnection Subnet	Specify the subnet used by the VPN gateway to access the VPC. Ensure that the selected interconnection subnet has three or more assignable IP addresses.	192.168.66.0/24
Specification	Only Professional 1 is supported. <ul style="list-style-type: none">Maximum bandwidth: 300 Mbit/sMaximum number of VPN connections: 500	Professional 1
AZ	An availability zone (AZ) is a geographic location with independent power supply and network facilities in a region. AZs in the same VPC are interconnected through private networks and are physically isolated. <ul style="list-style-type: none">If two or more AZs are available, select two AZs. The VPN gateway deployed in two AZs has higher availability. You are advised to select the AZs where resources in the VPC are located.If only one AZ is available, select this AZ.	AZ1, AZ2
Connections	Ten VPN connections are included free of charge with the purchase of a VPN gateway. You can select or customize the number of required VPN connections. NOTE If you set the number of VPN connections to 10, all the 10 connections are free of charge.	10

Parameter	Description	Example Value
EIP	<p>Set the EIP used by the VPN gateway to communicate with clients.</p> <ul style="list-style-type: none"> • Create now: Buy a new EIP. The billing mode of a new EIP is yearly/monthly. • Use existing: Use an existing EIP. Only EIPs with dedicated bandwidth are supported. <p>NOTE If an existing EIP is used, its billing mode can be pay-per-use or yearly/monthly.</p>	Create now
EIP Type	<p>This parameter is available only when a new EIP is created.</p> <p>Dynamic BGP: Dynamic BGP provides automatic failover and chooses the optimal path when a network connection fails. For more information about EIP types, see What Is an EIP?</p>	Dynamic BGP
Billed By	<p>This parameter is available only when a new EIP is created.</p> <p>Pay-per-use billing includes two modes: billed by bandwidth and billed by traffic.</p> <ul style="list-style-type: none"> • Bandwidth: You need to specify a bandwidth limit and pay for the amount of time you use the bandwidth. • Traffic: You need to specify a bandwidth limit and pay for the outbound traffic sent from your VPC. 	Bandwidth

Parameter	Description	Example Value
Bandwidth (Mbit/s)	<p>This parameter is available only when a new EIP is created.</p> <p>Specify the bandwidth of the EIP.</p> <ul style="list-style-type: none">All VPN connections created using the EIP share the bandwidth of the EIP. The total bandwidth consumed by all the VPN connections cannot exceed the bandwidth of the EIP.If network traffic exceeds the bandwidth of the EIP, network congestion may occur and VPN connections may be interrupted. As such, ensure that you configure enough bandwidth.You can configure alarm rules on Cloud Eye to monitor the bandwidth.You can customize the bandwidth within the allowed range.Some regions support only 300 Mbit/s bandwidth by default. If higher bandwidth is required, select 300 Mbit/s bandwidth and then submit a service ticket for capacity expansion.	20 Mbit/s
Bandwidth Name	<p>This parameter is available only when a new EIP is created.</p> <p>Specify the name of the EIP bandwidth.</p>	p2c-vpngw-bandwidth1
Advanced Settings > Tags	<ul style="list-style-type: none">A tag identifies a VPN resource. It consists of a key and a value. A maximum of 20 tags can be added.You can select predefined tags or customize tags.To view predefined tags, click View predefined tags.	-
Usage Duration	<p>If your account balance is sufficient and you select Auto-renew, the system automatically renews your service when the required duration elapses.</p> <ul style="list-style-type: none">Monthly subscription: Your service is automatically renewed on a per-month basis.Yearly subscription: Your service is automatically renewed on a per-year basis.	6

----End

3.1.2 Modifying a VPN Gateway

Scenario

After creating a VPN gateway, you can modify its basic information, including its name and bandwidth.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
 - To modify the name of a VPN gateway, click  on the right of the VPN gateway name, modify the name, and click **OK**.
 - To modify the bandwidth of the bound EIP, click the VPN gateway name, click **Modify** on the right of **Bandwidth (Mbit/s)** in the **EIP** area on the **Basic Information** tab page, modify the bandwidth, and confirm the price.

----End

3.1.3 Viewing a VPN gateway

Scenario

After creating a VPN gateway, you can view its details.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
- Step 6** Click the name of a VPN gateway to view its details.
 - When the client authentication mode is certificate authentication, you can view the following details:

- **Basic Information** tab page: You can view basic information about the VPN gateway and EIP.
- **Server** tab page: You can view the basic information, authentication information, and advanced settings of the server.
- **Connections** tab page: You can view information about the VPN connections established with the server, including the ID, virtual address, actual address, establishment time, number of incoming bytes, number of outgoing bytes, number of incoming data packets, and number of outgoing data packets.
- **Tags** tab page: You can view and manage the keys and values of tags created for the VPN gateway.
- When the client authentication mode is password authentication (local), you can view the following details:
 - **Basic Information** tab page: You can view basic information about the VPN gateway and EIP.
 - **Server** tab page: You can view the basic information, authentication information, and advanced settings of the server.
 - **User Management** tab page: You can view the created users and user groups.
 - **Access Policies** tab page: You can view the gateway policy information, including the name/ID, user group, destination CIDR block, description, and update time.
 - **Connections** tab page: You can view information about the VPN connections established with the server, including the ID, virtual address, actual address, username, establishment time, number of incoming bytes, number of outgoing bytes, number of incoming data packets, and number of outgoing data packets.
 - **Tags** tab page: You can view and manage the keys and values of tags created for the VPN gateway.

----End

3.1.4 Unsubscribing from a VPN Gateway

Scenario

You can unsubscribe from a VPN gateway if it is no longer required.

Limitations and Constraints

- The unsubscription operation is not supported for a VPN gateway that is being created, updated, or unsubscribed.
- If a VPN gateway is bound to a pay-per-use EIP, the EIP will be unbound from the VPN gateway when you unsubscribe from the VPN gateway. After the EIP is unbound, it is retained. If the EIP is no longer required, you can release it after unsubscribing from the gateway.
- Unsubscribing from a VPN gateway will interrupt its VPN connections immediately.

Procedure

- Step 1** Log in to the management console.
 - Step 2** Click  in the upper left corner and select the desired region and project.
 - Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
 - Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and choose **More > Unsubscribe** in the **Operation** column.
 - Step 6** In the displayed dialog box, click **Yes**.
- End

3.1.5 Binding an EIP to a VPN Gateway

Scenario

You can bind an EIP to a VPN gateway that has been created.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
- Step 5** Locate the row that contains the target VPN gateway, and choose **More > Bind EIP** in the **Operation** column.
- Step 6** Select the desired EIP and click **Yes**.

NOTE

After you bind an EIP, download the client configuration again.

----End

3.1.6 Unbinding an EIP from a VPN Gateway

Scenario

After a VPN gateway is created, you can unbind an EIP from it.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
- Step 6** Locate the row that contains the target VPN gateway, and choose **More > Unbind EIP** in the **Operation** column.
- Step 7** Click **Yes**.

NOTE

An EIP will continue to be billed after being unbound from a VPN gateway. If you no longer need an EIP, you are advised to release it.

----End

3.1.7 Searching for VPN Gateways by Tag

Scenario

When using the VPN service, you can classify VPN resources based on specific rules to facilitate resource management and fee calculation.

With the Tag Management Service (TMS), you can add tags to your VPN resources to classify them. Additionally, you can quickly search for VPN resources by tag on the management console.

Prerequisites

You have added tags to VPN resources. For details, see [Adding Tags to Cloud Resources](#).

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.

Step 6 Click in the text box for selecting a property or entering a keyword, choose a tag key under **Resource Tag**, and select a key value.

- You can only select existing keys and values from the drop-down list.
- You can select a maximum of 20 tags to search for VPN resources. If you select multiple tags, the relationship between them is OR.
- You can use tags together with other types of filter criteria. The relationship between them is OR.

----End

3.2 P2C VPN Server Management

3.2.1 Configuring a Server

Scenario

A server provides configuration management and connection authentication capabilities. After a P2C VPN gateway is created, you need to complete the server configuration for it.

Prerequisites

The VPN gateway where a server is to be deployed has been created.

Limitations and Constraints

- You can configure a server only when the VPN gateway is in **Normal** state.
- A VPN gateway can have only one server associated.

Procedure

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. Then, click **Configure Server** in the **Operation** column of the target VPN gateway, or click the name of the target VPN gateway and click the **Server** tab.

Step 6 Set parameters as prompted and click **OK**.

[Table 3-2](#) describes the server parameters.

Table 3-2 Server parameters

Area	Parameter	Description	Example Value
Basic Information	Local CIDR Block	<p>Destination CIDR block that clients need to access through the P2C VPN gateway. The CIDR block can be within or connected to a Huawei Cloud VPC.</p> <p>A maximum of 20 local CIDR blocks can be specified. The local CIDR block cannot be set to 0.0.0.0. The local CIDR block cannot overlap or conflict with the following special CIDR blocks: 0.0.0.0/8, 224.0.0.0/4, 240.0.0.0/4, and 127.0.0.0/8.</p> <ul style="list-style-type: none">• Select subnet Select subnets of the local VPC.• Enter CIDR block Enter subnets of the local VPC or subnets of the VPC that establishes a peering connection with the local VPC. <p>NOTE After the local CIDR block is modified, clients need to be reconnected.</p>	192.168.0.0/24
	Client CIDR Block	<p>CIDR block for assigning IP addresses to virtual NICs of clients. It cannot overlap with the local CIDR block or the CIDR blocks in the route table of the VPC where the VPN gateway is located.</p> <p>The client CIDR block must be in the format of dotted decimal notation/mask. The mask ranges from 16 to 26. When assigning an IP address to a client, the system assigns a smaller CIDR block with the mask of 30 to ensure proper network communication. As such, ensure that the number of available IP addresses in the specified client CIDR block is at least four times the number of VPN connections.</p> <p>The recommended client CIDR blocks vary according to the number of VPN connections. For details, see Table 3-3.</p> <p>NOTE After the client CIDR block is modified, clients need to be reconnected.</p>	172.16.0.0/16
	Tunnel Type	<p>Secure Sockets Layer (SSL) is a transport layer protocol used to establish a secure channel between a client and a server.</p> <p>The value is fixed at OpenVPN (SSL).</p>	OpenVPN (SSL)

Area	Parameter	Description	Example Value
Authentication Information	Server Certificate	<p>SSL certificate of the server. Clients use this certificate to verify the server's identity.</p> <ul style="list-style-type: none">To use an uploaded certificate, select it from the drop-down list box.To upload a new certificate, choose Upload from the drop-down list box to go to the Cloud Certificate Manager (CCM) service page. Upload a server certificate as prompted. For details, see Uploading an External Certificate.It is recommended to use a certificate with a strong cryptographic algorithm, such as RSA-3072 or RSA-4096. <p>NOTE If you delete the referenced server certificate in CCM after configuring the server, the availability of the server certificate is not affected.</p>	<i>Set this parameter based on the actual condition.</i>

Area	Parameter	Description	Example Value
	Client Authentication Mode	<p>Mode in which the server verifies the client identity. The options include Certificate authentication and Password authentication (local).</p> <ul style="list-style-type: none">• Select Certificate authentication.<ul style="list-style-type: none">– Click Upload Client CA Certificate, open the CA certificate file in PEM format as a text file, and copy the certificate content to the Content text box in the Upload Client CA Certificate dialog box. A maximum of 10 client CA certificates can be added.It is recommended to use a certificate with a strong cryptographic algorithm, such as RSA-3072 or RSA-4096. Certificates using the RSA-2048 encryption algorithm have risks. Exercise caution when using such certificates.– After a CA certificate is verified, you can view its basic information, including the name, serial number, signature algorithm, issuer, subject, and expiration time. <ul style="list-style-type: none">• Select Password authentication (local).<ul style="list-style-type: none">– Click the User Management and User Groups tabs in sequence, and click Create User Group.– Click the User Management tab. On the Users tab page, click Create User.– Click the Access Policies tab, and click Create Policy.	<i>Set this parameter based on the actual condition.</i>
Advanced Settings	Protocol	Protocol used by P2C VPN connections. <ul style="list-style-type: none">• TCP (default)	TCP
	Port	Port used by P2C VPN connections. <ul style="list-style-type: none">• 443 (default)• 1194	443

Area	Parameter	Description	Example Value
	Encryption Algorithm	Encryption algorithm used by P2C VPN connections. <ul style="list-style-type: none"> AES-128-GCM (default) AES-256-GCM 	AES-128-GCM
	Authentication Algorithm	Authentication algorithm used by P2C VPN connections. <ul style="list-style-type: none"> When the encryption algorithm is AES-128-GCM, the authentication algorithm is SHA256. When the encryption algorithm is AES-256-GCM, the authentication algorithm is SHA384. 	SHA256
	Compression	Whether to compress the transmitted data. By default, this function is disabled and cannot be modified.	Disabled
	Domain Name Access	Whether to enable domain name access. <ul style="list-style-type: none"> Valid DNS server address: <ul style="list-style-type: none"> Not 0.0.0.0 Non-loopback address. The loopback address range is 127.0.0.0 to 127.255.255.255. Non-multicast address. The broadcast address range is 224.0.0.0 to 239.255.255.255. Address not starting or ending with 0 Non-duplicate DNS server address 	Enabled

Table 3-3 Recommended client CIDR blocks

Number of VPN Connections	Recommended Client CIDR Block
10	CIDR blocks with the mask less than or equal to 26 Example: 10.0.0.0/26 and 10.0.0.0/25
20	CIDR blocks with the mask less than or equal to 25 Example: 10.0.0.0/25 and 10.0.0.0/24

Number of VPN Connections	Recommended Client CIDR Block
50	CIDR blocks with the mask less than or equal to 24 Example: 10.0.0.0/24 and 10.0.0.0/23
100	CIDR blocks with the mask less than or equal to 23 Example: 10.0.0.0/23 and 10.0.0.0/22
200	CIDR blocks with the mask less than or equal to 22 Example: 10.0.0.0/22 and 10.0.0.0/21
500	CIDR blocks with the mask less than or equal to 21 Example: 10.0.0.0/21 and 10.0.0.0/20

----End

3.2.2 Checking Server Information

Scenario

After a server is configured, you can view its configuration.

Prerequisites

A server has been configured.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
 - **Basic Information** area: You can view the server ID, local CIDR block, client CIDR block, tunnel type, and server status.
 - **Authentication Information** area: You can view the server certificate information and client authentication mode.
 - **Advanced Settings** area: You can view the protocol, port, encryption algorithm, authentication algorithm, compression function status, and domain name access information.

----End

3.2.3 Modifying a Server

Scenario

You can modify the server configuration.

NOTE

- If you specify a client IP address and then modify the local CIDR block or client CIDR block of the server, the client needs to reconnect to the server and the specified IP address will be cleared.
- If you modify advanced settings such as the protocol and port, you need to download the new client configuration file and import it to the clients for the modification to take effect.

Precautions

- After the port or encryption algorithm is changed, clients are disconnected. You need to download the new client configuration file to reconnect them.
- Exercise caution when adding, deleting, or modifying the local CIDR block of a VPN gateway, client CIDR block of a VPN connection, client authentication type, and access policy, since these operations may interrupt the network.

Modifying a Server

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the VPN gateway list, locate the target VPN gateway, and click **View Server** in the **Operation** column.

- Click  next to **Basic Information** to change the local or client CIDR block.
- Click **Replace** in the **Operation** column of the server certificate to replace it.
- Click  on the right of **Client Authentication Mode** to change the client authentication mode.
- Click  next to **Advanced Settings** to modify the port, encryption algorithm, or domain name access configuration.

CAUTION

After a DNS server address is changed, the new address takes effect when a client reconnects to the cloud.

Step 6 Click **OK**.

----End

Changing the Authentication Mode

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the VPN gateway list, locate the target VPN gateway, and click **View Server** in the **Operation** column.

Step 6 Change the client authentication mode in either of the following ways:

- When **Client Authentication Mode** is set to **Password authentication (local)**, click  on the right of **Password authentication (local)**. In the **Modify Client Authentication Mode** dialog box, change the value of **Client Authentication Mode** to **Certificate authentication** and click **OK**.
Before changing the authentication mode to **Certificate authentication**, ensure that users, user groups, and policies have been deleted.
- When **Client Authentication Mode** is set to **Certificate authentication**, click  on the right of **Certificate authentication**. In the **Modify Client Authentication Mode** dialog box, change the value of **Client Authentication Mode** to **Password authentication (local)** and click **OK**.
Before changing the authentication mode to **Password authentication (local)**, ensure that CA certificates have been deleted.

 **CAUTION**

After the authentication mode is changed, the original connections are interrupted.

----End

3.2.4 Uploading a Server Certificate

Procedure

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **Configure Server** in the **Operation** column.
- Step 6** On the **Server** tab page, click **Upload** in the **Server Certificate** drop-down list box. The **Cloud Certificate Manager** page is displayed.
- Step 7** On the **SSL Certificate Manager** page, click the **Hosted Certificates** tab, click **Upload Certificate**, and enter related information as prompted.

Table 3-4 describes the parameters for uploading a certificate.

Table 3-4 Parameters for uploading an international standard certificate

Parameter	Description
Certificate standard	Select International .
Certificate Name	User-defined name of a certificate.
Enterprise Project	Select the enterprise project to which the SSL certificate is to be added.
Certificate File	<p>Use a text editor (such as Notepad++) to open the certificate file in CER or CRT format to be uploaded, and copy the certificate content to this text box.</p> <p>You need to upload a combined certificate file that contains both the server certificate content and CA certificate content. The CA certificate content must be pasted below the server certificate content.</p> <p>NOTE If you do not have a certificate, you can generate a self-issued certificate and upload it. For details, see Using Easy-RSA to Issue Certificates (Server and Client Sharing a CA Certificate).</p> <p>For the format of the certificate file content to be uploaded, see Figure 3-1.</p>
Private Key	<p>Use a text editor (such as Notepad++) to open the certificate file in KEY format to be uploaded, and copy the private key content to this text box.</p> <p>You only need to upload the private key of the server certificate.</p> <p>For the format of the private key content to be uploaded, see Figure 3-1.</p>

Figure 3-1 Format of the certificate content to be uploaded

```
* Certificate File Upload
-----BEGIN CERTIFICATE-----
+01fG82xmnj0ZkE6bQ==
-----END CERTIFICATE-----
-----BEGIN CERTIFICATE-----
9z3BpmtjJ5fgf7ufUg/Npv6Tpu5l
-----END CERTIFICATE-----

* Private Key Upload
-----BEGIN PRIVATE KEY-----
MIIEvQIBADANBgkqhkiG9w0BAQEFAASCBCwggSjAgEAAoIBAQDWkrvw9dofJLcEA
-----END PRIVATE KEY-----
```

NOTE

The common name (CN) of a server certificate must be in the domain name format.

Step 8 Click **Submit**. The certificate is uploaded.

Step 9 In the certificate list, verify that the certificate status is **Hosted**.

----End

3.2.5 Modifying a Server Certificate

Precautions

After the server certificate is replaced, clients are disconnected. You need to download the new client configuration file to reconnect them.

Procedure

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.

Step 6 On the **Server** tab page, click **Replace** in the **Operation** column of the server certificate. The **Replace Server Certificate** dialog box is displayed.

Step 7 Select a server certificate, and click **OK**.

----End

3.2.6 Uploading a Client CA Certificate

Scenario

You need to upload a client CA certificate only when **Client Authentication Mode** is set to **Certificate authentication**.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **Configure Server** or **View Server** in the **Operation** column.
- Step 6** On the **Server** tab page, choose **Certificate authentication** from the **Client Authentication Mode** drop-down list box, and click **Upload Client CA Certificate**.
- Step 7** Set parameters as prompted.

Table 3-5 Parameters for uploading a CA certificate

Parameter	Description	Example Value
Name	This parameter can be modified.	ca-cert-server
Content	<p>Use a text editor (such as Notepad++) to open the signature certificate file in PEM format, and copy the certificate content to this text box.</p> <p>NOTE</p> <ul style="list-style-type: none"> • It is recommended to use a certificate with a strong cryptographic algorithm, such as RSA-3072 or RSA-4096. • Certificates using the RSA-2048 encryption algorithm have risks. Exercise caution when using such certificates. 	<pre>-----BEGIN CERTIFICATE----- MIIDoTCCAomgAwIBAgIUZAxA/ 2WIDFidbH9QfedbwYHrmQQw DQYJKoZIhvcNAQEL BQAwwYDELMAkGA1UEBhMCQ0 4xCzAJBgNVBAGMAkJKMQswC- QYDVQQHDAJCSjEPMA0G -----END CERTIFICATE-----</pre>

- Step 8** Click **OK**.

 NOTE

A maximum of 10 client CA certificates can be added.

----End

3.2.7 Deleting a Client CA Certificate

Scenario

You can delete a CA certificate that has been uploaded when **Client Authentication Mode** is set to **Certificate authentication**.

Precautions

After a CA certificate is deleted, clients cannot connect to the server. Exercise caution when deleting a CA certificate.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** On the **Server** tab page, click **Delete** in the **Operation** column of a client CA certificate.
- Step 7** In the **Delete CA Certificate** dialog box, click **OK**.

----End

3.2.8 Creating a User and User Group

Scenario

You can create users and user groups only when **Client Authentication Mode** is set to **Password authentication (local)**.

Limitations and Constraints

- Each user can establish a maximum of five connections.
- A maximum of 500 users can be created on a VPN gateway.

Creating a User

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **Configure Server** or **View Server** in the **Operation** column.
- Step 6** On the **Server** tab page, set **Client Authentication Mode** to **Password authentication (local)** and click **OK**.
- Step 7** Choose **User Management > Users**, and click **Create User**.

[Table 3-6](#) describes the parameters.

Table 3-6 Parameters for creating a user

Parameter	Description
Name	The value can contain a maximum of 64 characters, including letters, digits, periods (.), underscores (_), and hyphens (-). NOTE Do not use the following usernames that are reserved in the system: <ul style="list-style-type: none">• L3SW_ (prefix)• link• Cascade• SecureNAT• localbridge• administrator (case-insensitive)
Description	Enter description information as needed.
Password	<ul style="list-style-type: none">• The value contains 8 to 32 characters.• The value must contain at least two types of the following characters: uppercase letters, lowercase letters, digits, and special characters including `~!@#\$%^&*()-_+=\ []{};:","<.>/?` and spaces.• The password cannot be the username or the reverse of the username. NOTE For account security purposes, you are advised to change the password periodically.
Confirm Password	Reenter the password.

Parameter	Description
User Group	Select the user group to which the user belongs. NOTE <ul style="list-style-type: none">A user that is not added to any user group cannot access resources on the cloud.If no access policy is configured for the selected user group, the user will be unable to access resources on the cloud.
Specify Client IP Address	Determine whether to specify a client IP address. <ul style="list-style-type: none">Enabled The existing connection of the specified IP address will be interrupted.Disabled CAUTION <ul style="list-style-type: none">The specified IP address cannot be the same as the gateway IP address of the client address pool.The specified IP address must be the first host address in a CIDR block with a 30-bit mask.The specified IP address cannot be the same as the IP address that has been specified for another user.The specified IP address must be in the client address pool.

Step 8 Click **OK**.

The **Users** tab page is displayed, showing the user information, including the name/ID, user group, creation time, and static IP address.

----End

 **NOTE**

The maximum number of users that can be added is the maximum number of connections supported by the corresponding VPN gateway.

Creating a User Group

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **Configure Server** or **View Server** in the **Operation** column.

Step 6 On the **Server** tab page, set **Client Authentication Mode** to **Password authentication (local)** and click **OK**.

Step 7 Choose **User Management > User Groups**. Click **Create User Group**, enter the name and description, and click **OK**.

----End

 **NOTE**

- The name of a user group must be unique.
- A maximum of 50 user groups are supported.
- Currently, the quota of user groups cannot be modified.
- After creating a user group, you need to configure an access policy for accessing resources on the cloud.

Adding a User to a User Group

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **Configure Server** or **View Server** in the **Operation** column.

Step 6 On the **Server** tab page, set **Client Authentication Mode** to **Password authentication (local)** and click **OK**.

Step 7 Add a user to a user group using either of the following methods:

- Add a user on the **Users** tab page.
 - a. Choose **User Management > Users**, and click **Create User**.
 - b. Set parameters as prompted.
Select the user group to which the user is to be added.

 **NOTE**

If you do not select a user group when creating a user, you can click **Modify** in the **Operation** column of the user to select a user group.

- c. Click **OK**.
- Add a user on the **User Groups** tab page.
 - a. Choose **User Management > User Groups**. Click **Create User Group**, enter the name and description, and click **OK**.
 - b. Locate the row that contains the created user group, and click **Add User** in the **Operation** column.
 - c. In the **Add User** dialog box, select one or more users, click , and click **OK**.

----End

3.2.9 Modifying a User or User Group

Scenario

You can modify a user or user group that has been created when **Client Authentication Mode** is set to **Password authentication (local)**.

Precautions

After the user group to which a user belongs is modified, the original connection is interrupted. Exercise caution when modifying a user group.

Modifying a User

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Choose **User Management > Users**. Locate the row that contains the target user, and click **Modify** in the **Operation** column. In the **Modify User** dialog box, you can modify the description or user group, and determine whether to specify a client IP address.

When a client IP address is specified, all connections of the current user and the connection of the new IP address will be disconnected.

NOTE

For account security purposes, you are advised to change the password periodically.

----End

Modifying a User Group

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.

- Step 6** Choose **User Management > User Groups**. Click **Modify** in the **Operation** column of the target user group, and modify the name and description.

 **CAUTION**

The default user group cannot be modified or deleted.

----End

3.2.10 Deleting a User or User Group

Scenario

You can delete a user or user group that has been created when **Client Authentication Mode** is set to **Password authentication (local)**.

Precautions

After a user is deleted, the user is disconnected and cannot be connected again. Exercise caution when deleting a user.

Deleting a User

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Choose **User Management > Users**. Click **Delete** in the **Operation** column of the target user.
- Step 7** In the **Delete User** dialog box, click **OK**.

----End

Removing a User from a User Group

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Choose **User Management > User Groups**. Click the name of a user group to go to the user list page.
- Step 7** Click **Remove** in the **Operation** column of the user to be removed from the user group.
- Step 8** In the **Remove User** dialog box, click **OK**.

 **CAUTION**

After being removed, a user cannot access resources on the cloud.

----End

Deleting a User Group

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Choose **User Management > User Groups**. Click **Delete** in the **Operation** column of the target user group.
- Step 7** In the **Delete User Group** dialog box, click **OK**.

 **CAUTION**

- After the user group is deleted, users in the user group cannot access resources on the cloud.
 - The default user group cannot be modified or deleted.
-

----End

3.2.11 Creating an Access Policy

Scenario

You can create an access policy when the client authentication mode is **Password authentication (local)**.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **Configure Server** in the **Operation** column.
- Step 6** On the **Server** tab page, set **Client Authentication Mode** to **Password authentication (local)** and click **OK**.
- Step 7** Click the **Access Policies** tab, click **Create Policy**, set the policy name, destination CIDR block, description, and user group, and click **OK**.

NOTE

- A maximum of 10 destination CIDR blocks can be configured in a single policy.
- A maximum of 100 access policies are supported.

----End

3.2.12 Modifying an Access Policy

Scenario

You can modify an access policy when the client authentication mode is **Password authentication (local)**.

Precautions

Modifying an access policy may interrupt the network. Exercise caution when performing this operation.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.

- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Click the **Access Policies** tab, click **Modify** in the **Operation** column of the target policy, and modify the name, destination CIDR block, description, and user group as required.
- End

3.2.13 Deleting an Access Policy

Scenario

You can delete an access policy when the client authentication mode is **Password authentication (local)**.

Precautions

After an access policy is deleted, users in the user group associated with this policy cannot access related resources on the cloud. Exercise caution when deleting an access policy.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Click the **Access Policies** tab, and click **Delete** in the **Operation** column of the target policy.
- Step 7** In the **Delete Policy** dialog box, click **OK**.
- End

3.2.14 Resetting the Password of a User

Scenario

You can reset the password of a user that has been created when **Client Authentication Mode** is set to **Password authentication (local)**.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Choose **User Management > Users**. Click **Reset Password** in the **Operation** column of the target user.
- Step 7** In the **Reset Password** dialog box, enter a new password, reenter it, and click **OK**.

NOTE

For account security purposes, you are advised to change the password periodically.

----End

3.2.15 Importing Users in Batches

Scenario

You can import users in batches when the client authentication mode is **Password authentication (local)**.

Limitations and Constraints

- This operation is supported only on Windows operating systems.
- A maximum of 500 users can be created on a VPN gateway.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.

Step 6 Choose **User Management > Users**, and click **Import User**.

Step 7 In the **Import User** dialog box, click **Download Template**, and configure the downloaded .xlsx template file.

Enter names, passwords, user group names, and static IP addresses in the template file.

 **NOTE**

If a static IP address is specified for a user in the template, the user's client uses this static IP address, and no IP address will be automatically assigned to this user.

Step 8 Click **Select File** and upload the template file.

If the template content is incorrect, the system displays the message "Invalid file content". In this case, you need to modify the template file and import it again.

 **NOTE**

- The size of the file to be uploaded cannot exceed 50 KB.
- Only .xlsx files (Excel 2007 or later) can be uploaded.
- The table header in the file to be uploaded must be the same as that in the downloaded template file.

The system may be unable to identify the imported template content. Therefore, you are advised not to modify the original content in the template file.

- A maximum of 500 user records are supported in the file to be uploaded.

Step 9 Click **OK**. Users are imported in batches.

----End

3.2.16 Deleting Users in Batches

Scenario

You can delete users in batches when the client authentication mode is **Password authentication (local)**.

Precautions

After a user is deleted, the user is disconnected and cannot be connected again. Exercise caution when deleting a user.

Procedure

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Choose **User Management > Users**, select the user to be deleted, and click **Delete User**.
- Step 7** In the **Delete User** dialog box, click **OK**.
- End

3.2.17 Viewing a VPN connection

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Click the **Connections** tab, and view details about the current connection, including the ID, virtual address, actual address, time when the connection is established, and operation.

NOTE

The **Username** column is available on the **Connections** tab page only when the client authentication mode is set to **Password authentication (local)**.

----End

3.2.18 Tearing Down a VPN Connection

Limitations and Constraints

Only when a VPN gateway is in normal states, you can tear down its connections.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.

- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Click the **Connections** tab, locate the target VPN connection, and click **Tear Down** in the **Operation** column.

 **CAUTION**

Exercise caution when tearing down a connection because doing so will disconnect the corresponding VPN client. To prevent the client from going online again, reset the password.

- Step 7** In the dialog box that is displayed, click **OK**. The disconnection request is delivered, and the VPN connection will be torn down.

----End

3.2.19 Viewing VPN Connection Logs

Scenario

After the VPN logging function is enabled, you can view the logs of a specified VPN connection.

Prerequisites

The Log Tank Service (TLS) has been enabled. For details, see [Using TLS](#).

Procedure

- Creating a log group
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the page, and choose **Management & Governance > Log Tank Service**.
 - d. Create a log group. For details, see [Managing Log Groups](#).
- Creating a log stream
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.

- c. Click  in the upper left corner of the page, and choose **Management & Governance > Log Tank Service**.
 - d. Create a log stream. For details, see [Managing Log Streams](#).
 - Configuring the connection log function
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - d. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
 - e. Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
 - f. Click the **Connections** tab. The VPN connection details page is displayed.
 - g. In the **Connection Log** area, click **Configure Connection Log**.
 - h. In the dialog box that is displayed, toggle on **Collect Logs**.
 - i. Select the target log group and log stream, and click **OK**.
- On the **Connections** tab page, you can view the configured connection log.
- Viewing connection logs
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - d. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
 - e. Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
 - f. Click the **Connections** tab. The VPN connection details page is displayed.
 - g. In the **Connection Log** area, click **View Log Details**. The LTS page is displayed.
 - h. In the log group list, click  on the left of the target log group to view log stream details.
 - i. Click a log stream name to view log details, including the time and log content.

The log format is as follows:

```
$p2c_vgw_id $connection_id $client_public_ip $client_private_ip $client_user_name $event_type $event_timestamp
```

Table 3-7 Description of the log format

Parameter	Description
p2c_vgw_id	Gateway ID
connection_id	Connection ID
client_public_ip	Actual address
client_private_ip	Virtual address
client_user_name	Username
event_type	Online/Offline event type
event_timestamp	Timestamp

You can search for logs by keyword on the log stream details page on the LTS console.

3.2.20 Updating the VPN Connection Log Configuration

Prerequisites

The VPN connection log function has been configured. For details, see [Configuring the Connection Log Function](#).

Precautions

After the connection log configuration is updated, the previously reported connection logs cannot be viewed in the new log group or log stream. Exercise caution when performing this operation.

Procedure

- Step 1** Log in to the management console.
- Step 2** Click  in the upper left corner and select the desired region and project.
- Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
- Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
- Step 5** Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.
- Step 6** Click the **Connections** tab. The VPN connection details page is displayed.
- Step 7** In the **Connection Log** area, click **Configure Connection Log**.
- Step 8** In the dialog box that is displayed, select a new log group and a new log stream.

Step 9 Click **OK**.

The **Connections** tab page is displayed, showing the new connection log configuration.

----End

3.2.21 Deleting the VPN Connection Log Configuration

Precautions

After the connection log configuration is deleted, connection logs cannot be reported. Exercise caution when performing this operation.

Procedure

Step 1 Log in to the management console.

Step 2 Click  in the upper left corner and select the desired region and project.

Step 3 Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.

Step 4 In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.

Step 5 Click the **P2C VPN Gateways** tab. In the P2C VPN gateway list, locate the target P2C VPN gateway, and click **View Server** in the **Operation** column.

Step 6 Click **Connections**. The VPN connection details page is displayed.

Step 7 In the **Connection Log** area, click **Configure Connection Log**.

Step 8 In the dialog box that is displayed, toggle off **Collect Logs**.

Step 9 Click **OK**.

----End

3.3 P2C VPN Client Management

3.3.1 Downloading the Client Configuration

Scenario

After a server is configured, you need to download the client configuration, which will be used by a client to establish a VPN connection with the server.

Limitations and Constraints

After a server is configured, you need to download the client configuration, which will be used by a client to establish a VPN connection with the server.

Procedure

- Step 1** Log in to the management console.
 - Step 2** Click  in the upper left corner and select the desired region and project.
 - Step 3** Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - Step 4** In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
 - Step 5** Click the **P2C VPN Gateways** tab. In the VPN gateway list, locate the target VPN gateway, and click **Download Client Configuration** in the **Operation** column.
- End

3.3.2 Configuring a Client

Limitations and Constraints

- When a VPN client connects to multiple servers, ensure that the client CIDR blocks configured for the servers do not overlap with each. Otherwise, the client may be assigned the same IP address for connecting to different servers, causing connection failures.
- A client can establish only one VPN connection with a VPN gateway.
- After DNS is configured on the OpenVPN client, the new DNS configuration inherits or overwrites the original DNS configuration. As a result, domain names in the original DNS configuration fail to be resolved, causing access failures.

High-Risk Operation Warning

Before configuring a client, exercise caution when adding, deleting, or modifying the local subnet of a VPN gateway and the customer subnet or policy configuration of a VPN connection, because these operations may cause network interruption.

Windows Client (OpenVPN GUI)

The following uses OpenVPN GUI v2.6.6 (I001) as an example to describe how to install the client. The installation pages may vary according to the software version.

You are advised to use OpenVPN GUI 2.6 or later on Windows operating systems.

- Step 1** Download the OpenVPN GUI installation package and install it as prompted.

The installation package varies according to the Windows operating system as follows:

- For a 32-bit Windows operating system, download the [Windows 32-bit MSI installer](#).
- For a 64-bit Windows operating system, download the [Windows 64-bit MSI installer](#).

- For a 64-bit Windows ARM-based operating system, download the [Windows ARM64 MIS installer](#).

Step 2 Click **OpenVPN GUI** in the Start menu to start the client.

The message "OpenVPN GUI is already running. Right click on the tray icon to start." is displayed in the lower right corner.

Step 3 Right-click the  icon on the Windows taskbar, choose **Import > Import file**, and import the configuration file with the client certificate and private key added.

When the file is imported, the message "File imported successfully." is displayed in the lower right corner.

Step 4 In the **Open** dialog box, select the configuration file with the client certificate and private key added, and click **Open**.

Step 5 Right-click the  icon on the Windows taskbar, and choose **Connect**.

----End

Windows Client (OpenVPN Connect)

The following uses OpenVPN Connect 3.5.0 (3818) as an example to describe how to install the client. The installation pages may vary according to the software version.

You are advised to use OpenVPN Connect 3.4.4 or later on Windows operating systems.

Step 1 [Download OpenVPN Connect](#) from the OpenVPN official website, and install it as prompted.

Step 2 Start the OpenVPN Connect client. Then, add configuration information and establish a VPN connection using either of the following methods.

- **Method 1: Use the configuration file (with the client certificate and private key added) to establish a VPN connection.**

Start the OpenVPN client, import the configuration file (with the client certificate and private key added), and establish a VPN connection.

- **Method 2: Use the original configuration file (without the client certificate and private key) and a USB key to establish a VPN connection.**

a. Initialize a USB key.

The following uses Longmai's mToken GM3000 administrator tool (v2.2.19.619) as an example to describe how to create a USB key. When the USB key is successfully initialized, remove and insert the USB key.

b. Import the client certificate to the USB key.

c. Use the USB key to establish a VPN connection.

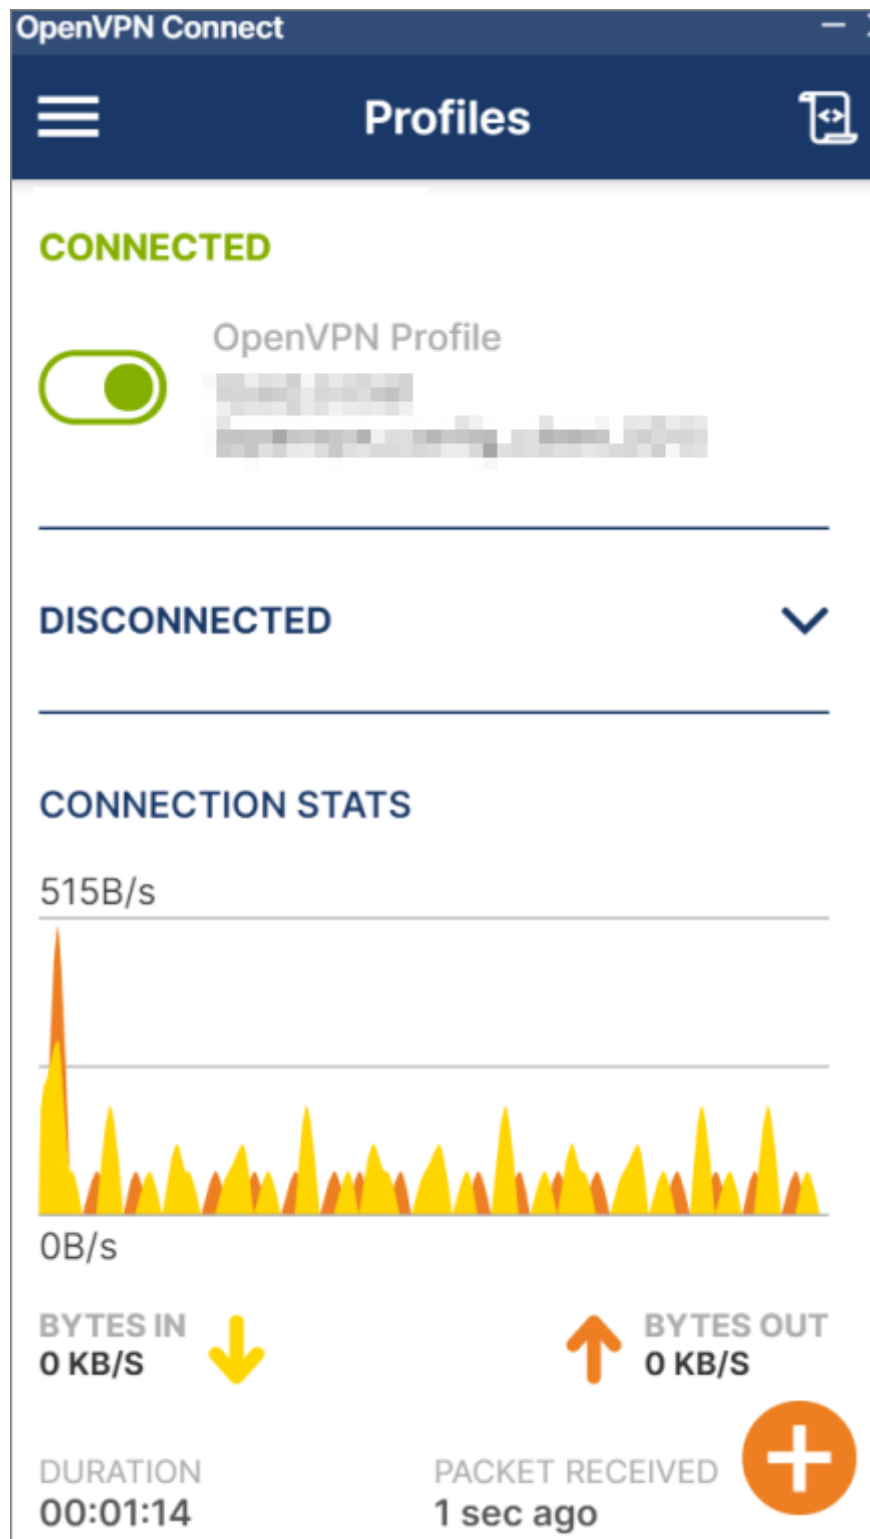

In OpenVPN Connect, import the configuration file without the client CA certificate and private key from the USB key, and click **CONNECT**.

 **NOTE**

- When the connection is being established, do not remove the USB key.
- After the connection is established, it will not be interrupted if you remove the USB key, and you can tear down this connection manually. However, the connection will fail to be re-established after you remove the USB key.

If information similar to the following is displayed, the connection is successfully established.

Figure 3-2 Connection established

----End

Linux Client

The following describes how to install the OpenVPN client on the Ubuntu 22.04 (Jammy) operating system (openvpn_2.5.8-0ubuntu0.22.04.1_amd64). The installation commands vary according to the Linux operating system. You are advised to use OpenVPN 2.5 or later on Linux operating systems. (OpenVPN 2.5 does not support DCO, so you need to comment out **disable-dco** in the configuration file.)

Step 1 Open the CLI.

Step 2 Run the following command to install the OpenVPN client:

```
yum install -y openvpn
```

Step 3 Copy the content of the client configuration file (with the client certificate and private key added) to the **/etc/openvpn/conf/** directory.

Step 4 Go to the **/etc/openvpn/conf/** directory, and run the following command to establish a VPN connection:

```
openvpn --config /etc/openvpn/conf/config.ovpn --daemon
```

NOTE

On Linux, you are advised not to modify the DNS configuration of the OS after starting OpenVPN. Otherwise, the new DNS configuration of the OS will be overwritten by the DNS configuration of the OpenVPN client when OpenVPN is started next time.

----End

macOS Client (OpenVPN Connect)

The following uses OpenVPN Connect (3.4.4.4629) as an example to describe how to install the client. The installation pages may vary according to the software version.

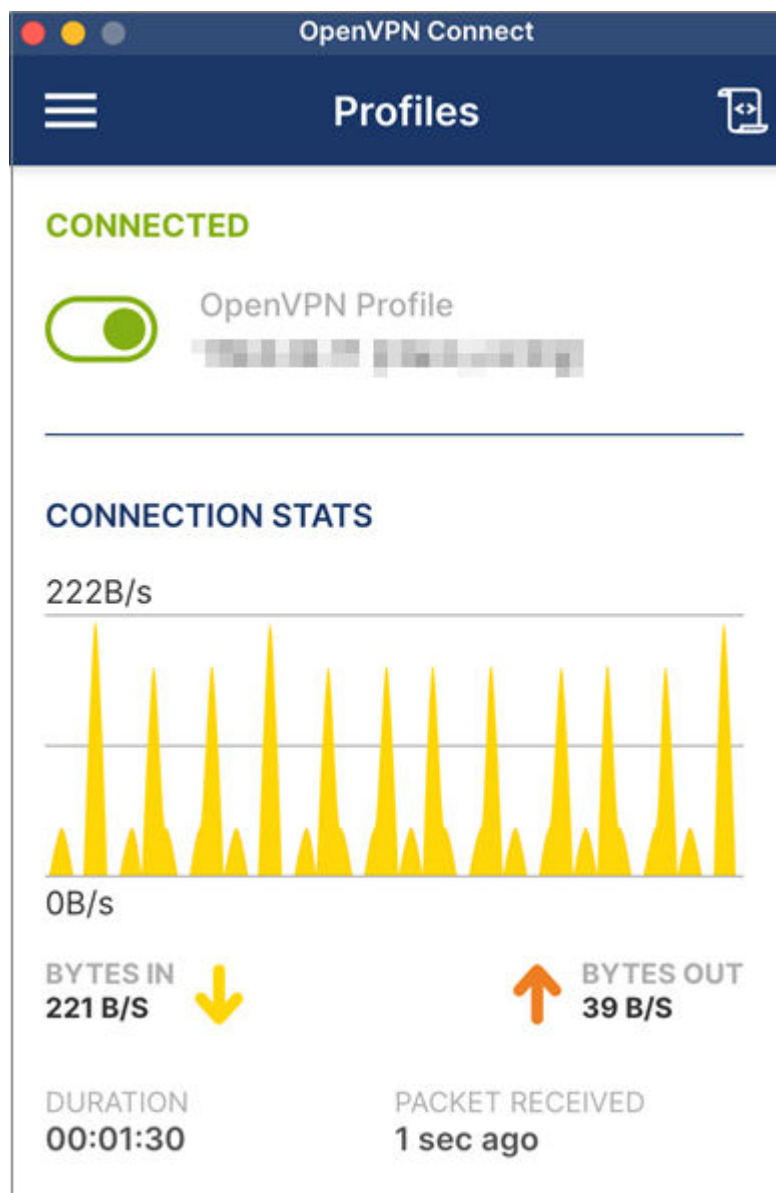

Step 1 Visit the OpenVPN official website, and [download the OpenVPN Connect installer](#) based on the hardware of your device.

Step 2 Install OpenVPN Connect as prompted.

Step 3 Start the OpenVPN Connect client, import the configuration file (with the client certificate and private key added), enter the configuration information, and establish a VPN connection.

If information similar to the following is displayed, the connection is successfully established.

Figure 3-3 Connection established

----End

macOS Client (Tunnelblick)

The following uses Tunnelblick (3.8.8d) as an example to describe how to install the client. The installation pages may vary according to the software version.

Step 1 Download Tunnelblick from the official website.

Download the software of a required release. An official release is recommended. You are advised to download the software in DMG format.

Step 2 Install Tunnelblick as prompted.

Step 3 Start the Tunnelblick client, upload the configuration file (with the client certificate and private key added) to the Tunnelblick client, and establish a VPN connection.

You need to comment out **disable-dco** in the configuration file.

----End

Android Client

The following uses OpenVPN (3.3.4) as an example to describe how to install the client. The installation pages may vary according to the software version.

You are advised to use OpenVPN 3.3.2 or later on Android operating systems.

Step 1 Download the [OpenVPN client \(Android\)](#) and install it.

Step 2 Start the OpenVPN client, import the configuration file (with the client certificate and private key added), and establish a VPN connection.

A connection request is displayed on the app screen. Tap **OK**.

If information similar to the following is displayed, the connection is successfully established.

Figure 3-4 Connection established

----End

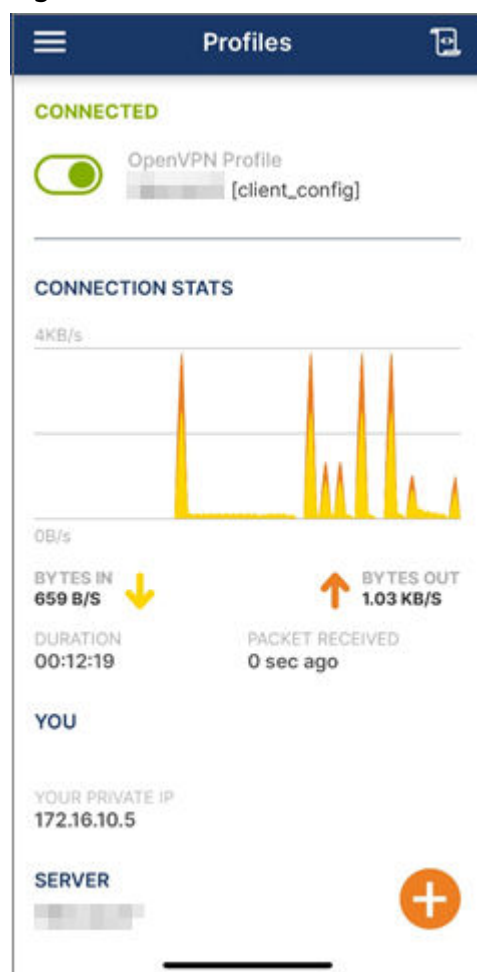

iOS Client

The following uses OpenVPN Connect (3.4.0) as an example to describe how to install the client. The installation pages may vary according to the software version.

- Step 1** Search for "OpenVPN Connect" in the App Store, download the software, and install it.
- Step 2** Download the client configuration file **client_config.ovpn**, and add the client certificate and private key to this file. Start OpenVPN Connect, and import the client configuration file as prompted.

If information similar to the following is displayed, the connection is successfully established.

Figure 3-5 Connection established

----End

3.4 P2C VPN Fee Management

3.4.1 Increasing or Decreasing the VPN Connection Quota of a Yearly/Monthly VPN Gateway

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
5. Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
6. Locate the row that contains the target VPN gateway, and choose **More > Change VPN Connection Quota**.

7. In the **Change VPN Connection Quota** dialog box, select **Increase** or **Decrease**, and click **Yes**.
8. Select a desired number of connections, and click **Next**.
9. Confirm the information, and click **Pay Now**.

 **NOTE**

- In yearly/monthly billing mode, a maximum of 500 connections are supported.
- If you increase the number of VPN connections for a gateway, the new quota takes effect immediately, and you will be charged the extra fee.
- If you decrease the VPN connection quota, you need to set a renewal period and pay for the renewal. The new quota will be available in the new renewal period. If the number of connections in use exceeds the new connection quota in the new renewal period, new connections cannot be created. As such, set a proper connection quota.

4 Monitoring

4.1 Monitoring VPN

Monitoring is the key to ensuring VPN performance, reliability, and availability. You can determine VPN resource usage based on monitoring data. The cloud platform provides Cloud Eye to help you obtain the running statuses of your VPNs. You can use Cloud Eye to automatically monitor VPNs in real time and manage alarms and notifications, so that you can know VPN performance metrics in a timely manner.

4.2 Metrics (S2C Enterprise Edition VPN)

Description

This section describes monitored metrics reported by VPN to Cloud Eye as well as their namespaces and dimensions. You can use the Cloud Eye management console to query the metrics of the monitored objects and alarms generated for VPN.

Namespace

SYS.VPN

Metrics

Table 4-1 Metrics supported for Enterprise Edition VPN gateways

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
gateway_send_pkt_rate	Outbound Packet Rate	Average number of data packets leaving the cloud per second.	≥ 0 pps	Gateway	1 minute
gateway_recv_pkt_rate	Inbound Packet Rate	Average number of data packets entering the cloud per second.	≥ 0 pps	Gateway	1 minute
gateway_send_rate	Outbound Bandwidth	Average volume of traffic leaving the cloud per second.	0-1 Gbit/s	Gateway	1 minute
gateway_recv_rate	Inbound Bandwidth	Average volume of traffic entering the cloud per second.	0-1 Gbit/s	Gateway	1 minute
gateway_send_rate_usage	Outbound Bandwidth Usage	Bandwidth utilization for traffic leaving the cloud.	0-100%	Gateway	1 minute
gateway_recv_rate_usage	Inbound Bandwidth Usage	Bandwidth utilization for traffic entering the cloud.	0-100%	Gateway	1 minute
gateway_connection_num	Number of Connections	Number of VPN connections.	≥ 0	Gateway	1 minute

Table 4-2 Enterprise Edition VPN connection metrics

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
tunnel_average_latency	Average Tunnel RTT	Average round-trip time on the tunnel between the VPN gateway and customer gateway.	0–5000 ms	VPN connection	1 minute
tunnel_max_latency	Maximum Tunnel RTT	Maximum round-trip time on the tunnel between the VPN gateway and customer gateway.	0–5000 ms	VPN connection	1 minute
tunnel_packet_loss_rate	Tunnel Packet Loss Rate	Packet loss rate on the tunnel between the VPN gateway and customer gateway.	0–100 %	VPN connection	1 minute
link_average_latency	Average Link RTT	Average round-trip time on the physical link between the VPN gateway and customer gateway.	0–5000 ms	VPN connection	1 minute
link_max_latency	Maximum Link RTT	Maximum round-trip time on the physical link between the VPN gateway and customer gateway.	0–5000 ms	VPN connection	1 minute
link_packet_loss_rate	Link Packet Loss Rate	Packet loss rate on the physical link between the VPN gateway and customer gateway.	0–100 %	VPN connection	1 minute
connection_status	VPN Connection Status	Status of a VPN connection: 0 : not connected 1 : connected 2 : unknown	0, 1, or 2	VPN connection	1 minute
recv_pkt_rate	Packet Receive Rate	Average number of data packets received per second.	≥ 0 pps	VPN connection	1 minute
send_pkt_rate	Packet Send Rate	Average number of data packets sent per second.	≥ 0 pps	VPN connection	1 minute

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
recv_rate	Traffic Receive Rate	Average volume of traffic received per second.	0~1G bit/s	VPN connection	1 minute
send_rate	Traffic Send Rate	Average volume of traffic sent per second.	0~1G bit/s	VPN connection	1 minute

Dimensions

key	Value
evpn_connection_id	Enterprise Edition S2C VPN connection
evpn_sa_id	SAs of an Enterprise Edition S2C VPN connection
evpn_gateway_id	Enterprise Edition S2C VPN gateway

4.3 Metrics (S2C Classic VPN)

Description

This section describes monitored metrics reported by VPN to Cloud Eye as well as their namespaces and dimensions. You can use the Cloud Eye management console to query the metrics of the monitored objects and alarms generated for VPN.

Namespace

SYS.VPC

Metrics

Table 4-3 Metrics supported for Classic VPN bandwidth

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
upstream_bandwidth	Outbound Bandwidth	Network rate of outbound traffic (previously called "Upstream Bandwidth"). Unit: bit/s	≥ 0 bit/s	Bandwidth or EIP	1 minute
downstream_bandwidth	Inbound Bandwidth	Network rate of inbound traffic (previously called "Downstream Bandwidth"). Unit: bit/s	≥ 0 bit/s	Bandwidth or EIP	1 minute
upstream_bandwidth_usage	Outbound Bandwidth Usage	Usage of outbound bandwidth, in percentage. Outbound bandwidth usage = Outbound bandwidth/Purchased bandwidth	0-100%	Bandwidth or EIP	1 minute
downstream_bandwidth_usage	Inbound Bandwidth Usage	Usage of inbound bandwidth, in percentage. Inbound bandwidth usage = Inbound bandwidth/Purchased bandwidth NOTE <ul style="list-style-type: none"> Up to 10 Mbit/s inbound bandwidth is provided by Huawei Cloud for some sites that purchase an inbound bandwidth of less than 10 Mbit/s. As such, the inbound bandwidth usage may be greater than 100%. If you change the bandwidth of an EIP in use, there is a delay of 5–10 minutes for the metrics to update for the new bandwidth. 	0-100%	Bandwidth or EIP	1 minute

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
up_stream	Outbound Traffic	Outbound network traffic (previously called "Upstream Traffic") Unit: byte	≥ 0 bytes	Bandwidth or EIP	1 minute
down_stream	Inbound Traffic	Inbound network traffic (previously called "Downstream Traffic") Unit: byte	≥ 0 bytes	Bandwidth or EIP	1 minute

Table 4-4 Metrics supported for Classic VPN connections

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
connection_status	VPN Connection Status	Status of a VPN connection: 0 : not connected 1 : connected	0 or 1	VPN connection	5 minutes

Dimensions

key	Value
vpn_connection_id	S2C Classic VPN connection

4.4 Metrics (P2C VPN)

Description

This section describes monitored metrics reported by VPN to Cloud Eye as well as their namespaces and dimensions. You can use the Cloud Eye management console to query the metrics of the monitored objects and alarms generated for VPN.

Namespace

SYS.VPN

Metrics

Table 4-5 Metrics supported for Enterprise Edition VPN gateways

Metric ID	Metric Name	Description	Value Range	Monitored Object	Monitoring Interval (Raw Data)
gateway_send_pkt_rate	Outbound Packet Rate	Average number of data packets leaving the cloud per second.	≥ 0 pps	Gateway	1 minute
gateway_recv_pkt_rate	Inbound Packet Rate	Average number of data packets entering the cloud per second.	≥ 0 pps	Gateway	1 minute
gateway_send_rate	Outbound Bandwidth	Average volume of traffic leaving the cloud per second.	0-1G bit/s	Gateway	1 minute
gateway_recv_rate	Inbound Bandwidth	Average volume of traffic entering the cloud per second.	0-1G bit/s	Gateway	1 minute
gateway_send_rate_usage	Outbound Bandwidth Usage	Bandwidth utilization for traffic leaving the cloud.	0-100%	Gateway	1 minute
gateway_recv_rate_usage	Inbound Bandwidth Usage	Bandwidth utilization for traffic entering the cloud.	0-100%	Gateway	1 minute
gateway_connection_num	Number of Connections	Number of VPN connections.	≥ 0	Gateway	1 minute

Dimensions

key	Value
p2c_vpn_gateway_id	Enterprise Edition P2C VPN gateway

4.5 Viewing Metrics

Scenarios

View the VPN connection status and usages of bandwidth and EIP. You can view data of the last 1, 3, 12, or 24 hours, or last 7 days.

Viewing VPN Gateway Metrics

- Viewing metrics on the VPN console
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the management console, and choose **Networking > Virtual Private Network**.
 - d. View metrics. The operations vary according to the VPN type.
 - S2C Enterprise Edition VPN: Choose **Virtual Private Network > Enterprise – VPN Gateways > S2C VPN Gateways**, and click  in the **Gateway IP Address** column of a VPN gateway. You can view metrics of two EIPs separately.

The metrics are EIP metrics, including **Outbound Bandwidth, Inbound Bandwidth, Inbound Bandwidth Usage, Outbound Bandwidth Usage, Outbound Traffic, and Inbound Traffic**.
 - S2C Classic VPN: Choose **Virtual Private Network > Classic > VPN Gateways**, and click **View Metric** in the **Operation** column of a VPN gateway. The Cloud Eye page is then displayed.

The metrics are EIP metrics, including **Outbound Bandwidth, Inbound Bandwidth, Inbound Bandwidth Usage, Outbound Bandwidth Usage, Outbound Traffic, and Inbound Traffic**.
 - P2C VPN: Choose **Virtual Private Network > Enterprise – VPN Gateways > P2C VPN Gateways**, and click  in the **Gateway IP Address** column of a VPN gateway.

The metrics are EIP metrics, including **Outbound Bandwidth, Inbound Bandwidth, Inbound Bandwidth Usage, Outbound Bandwidth Usage, Outbound Traffic, and Inbound Traffic**.
- Viewing metrics on the Cloud Eye console
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click **Service List** and choose **Management & Governance > Cloud Eye**.
 - d. Choose **Cloud Service Monitoring > Virtual Private Network**.
 - e. View metrics. The operations vary according to the VPN type.

- S2C Enterprise Edition VPN: Choose **S2C VPN Gateway** from the right drop-down list box, and click the **Resources** tab. The instance list is displayed. Click **View Metric** in the **Operation** column of a VPN gateway.

The VPN gateway metrics include **Outbound Packet Rate, Inbound Bandwidth, Outbound Bandwidth, Inbound Bandwidth Usage, Number of Connections, Outbound Bandwidth Usage, and Inbound Packet Rate.**

- P2C VPN: Choose **P2C VPN Gateway** from the right drop-down list box, and click the **Resources** tab. The instance list is displayed. Click **View Metric** in the **Operation** column of a VPN gateway.

The VPN gateway metrics include **Number of Connections, Inbound Packet Rate, Inbound Bandwidth, Inbound Bandwidth Usage, Outbound Bandwidth, Outbound Packet Rate, and Outbound Bandwidth Usage.**

Viewing VPN Connection Metrics

- Viewing metrics on the VPN console
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the management console, and choose **Networking > Virtual Private Network**.
 - d. View metrics. The operations vary according to the VPN type.
 - S2C Enterprise Edition VPN: Choose **Virtual Private Network > Enterprise – VPN Connections**, and click  **View Metric** under the name of a VPN connection.

The metrics include the following:

 - VPN Connection Status
 - Average Link RTT, Maximum Link RTT, Link Packet Loss Rate
These metrics are displayed only after the health check function is enabled. To enable this function, click the name of a VPN connection and add health check items on the **Summary** tab page.
 - Average Tunnel RTT, Maximum Tunnel RTT, Tunnel Packet Loss Rate
These metrics are displayed only when **VPN Type** is set to **Static routing** and the NQA function is enabled.
 - S2C Classic VPN: Choose **Virtual Private Network > Classic > VPN Connections**, and choose **More > View Metric** in the **Operation** column of a VPN connection. The Cloud Eye page is then displayed.

The metric is **VPN Connection Status**.
- Viewing metrics on the Cloud Eye console

- a. Log in to the management console.
- b. Click  in the upper left corner and select the desired region and project.
- c. Click **Service List** and choose **Management & Governance > Cloud Eye**.
- d. Choose **Cloud Service Monitoring > Virtual Private Network**.
- e. View metrics. The operations vary according to the VPN type.
 - S2C Enterprise Edition VPN
 - 1) Choose **S2C VPN Connection** from the right drop-down list box, and click the **Resources** tab.
 - 2) Click **View Metric** in the **Operation** column of a VPN connection to view its metrics.

The metrics include the following:

 - VPN Connection Status, Packet Receive Rate, Packet Send Rate, Traffic Receive Rate, Traffic Send Rate
 - Average Link RTT, Maximum Link RTT, Link Packet Loss Rate

These metrics are displayed only after the health check function is enabled. To enable this function, click the name of a VPN connection and add health check items on the **Summary** tab page.

 - Average Tunnel RTT, Maximum Tunnel RTT, Tunnel Packet Loss Rate

These metrics are displayed only when **VPN Type** is set to **Static routing** and the NQA function is enabled.
 - S2C Classic VPN: Choose **VPN Connections** from the right drop-down list box, click the **Resources** tab, and click **View Metric** in the **Operation** column of a VPN connection.

The metric is **VPN Connection Status**.

4.6 Creating Alarm Rules

Scenarios

You can configure alarm rules on the Cloud Eye console to keep track of your VPN status at any time.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the management console, and choose **Management & Governance > Cloud Eye**.
4. Choose **Cloud Service Monitoring > Virtual Private Network**, and configure alarm rules for different types of alarms as required.

- Alarms related to VPN gateways in S2C Enterprise Edition VPN: Choose **Virtual Private Network - S2C VPN Gateway** from the right drop-down list box, click the **Resources** tab, and choose **More > Create Alarm Rule** in the **Operation** column of a VPN gateway.
 - Alarms related to VPN connections in S2C Enterprise Edition VPN: Choose **Virtual Private Network - S2C VPN Connection** from the right drop-down list box, click the **Resources** tab, and choose **More > Create Alarm Rule** in the **Operation** column of a VPN connection.
 - Alarms related to P2C VPN gateways: Choose **P2C VPN Gateway** from the right drop-down list box, click the **Resources** tab, and choose **More > Create Alarm Rule** in the **Operation** column of a VPN gateway.
 - Alarms related to Classic VPN connections: Choose **VPN Connections** from the right drop-down list box, click the **Resources** tab, and choose **More > Create Alarm Rule** in the **Operation** column of a VPN connection.
5. Configure an alarm rule on the **Create Alarm Rule** page.
- By default, the alarm template **Virtual Private Network Alarm Template** is available. You can use this default template without creating a new one.
 - You can also click **Configure manually** to create a custom alarm template. After the template is created, you can select it from the **Template** drop-down list box.
6. Click **Create**.

After the alarm rule is created, if you have enabled **Alarm Notification** and configured required parameters, you will receive notifications once an alarm is triggered.

 **NOTE**

For more information about VPN alarm rules, see the [Cloud Eye User Guide](#).

5 Audit

5.1 Key Operations That Can Be Recorded by CTS

 NOTE

CTS is not available for S2C Classic VPN in LA-Mexico City1 and LA-Sao Paulo1 regions.

Table 5-1 Operations related to S2C Enterprise Edition VPN that can be recorded by CTS

Operation	Resource Type	Trace Name
Creating a customer gateway	customer-gateway	createCgw
Updating a customer gateway	customer-gateway	updateCgw
Deleting a customer gateway	customer-gateway	deleteCgw
Creating a VPN gateway	vpn-gateway	createVgw
Updating a VPN gateway	vpn-gateway	updateVgw
Deleting a VPN gateway	vpn-gateway	deleteVgw
Creating a yearly/monthly VPN gateway	vpn-gateway	createPrePaidVgw
Updating the VPN gateway status	vpn-gateway	updateResourceState

Operation	Resource Type	Trace Name
Updating the specification of a yearly/monthly VPN gateway	vpn-gateway	updateVgwSpecification
Updating the specification of a pay-per-use VPN gateway	vpn-gateway	updatePostpaidVgwSpecification
Creating a VPN connection	vpn-connection	createVpnConnection
Updating a VPN connection	vpn-connection	updateVpnConnection
Deleting a VPN connection	vpn-connection	deleteVpnConnection
Uploading a gateway certificate	vgw-certificate	createVgwCertificate
Replacing a gateway certificate	vgw-certificate	updateVgwCertificate
Creating a resource tag	instance	batchCreateResourceTags
Deleting a resource tag	instance	batchDeleteResourceTags
Querying the customer gateway list	customer-gateway	listCgws
Querying a customer gateway	customer-gateway	showCgw
Querying resource tags	instance	showResourceTags
Querying project tags	instance	listProjectTags
Querying resource instances by tag	instance	listResourcesByTags
Querying the number of resource instances by tag	instance	countResourcesByTags

Operation	Resource Type	Trace Name
Querying certificates of a VPN gateway	vpn-gateway	showVpnGatewayCertificate
Querying a VPN gateway	vpn-gateway	showVgw
Querying the AZs of VPN gateways	vpn-gateway	listExtendedAvailabilityZones
Querying the VPN connection list	vpn-connection	listVpnConnections
Querying a VPN connection	vpn-connection	showVpnConnection
Querying the VPN gateway list	vpn-connection	listVgws
Querying a VPN connection monitor	vpn-connection	showConnectionMonitor
Querying the VPN connection monitor list	vpn-connection	listConnectionMonitors
Querying quotas of a specified tenant	quota	showQuotasInfo
Querying VPN connection logs	vpn-connection	queryVpnConnectionLog

Table 5-2 Operations related to S2C Classic VPN that can be recorded by CTS

Operation	Resource Type	Trace Name
Creating a VPN connection	VpnConnection	createVpnConnection
Updating a VPN connection	VpnConnection	updateVpnConnection
Deleting a VPN connection	VpnConnection	deleteVpnConnection
Creating a VPN gateway	VpnGw	createVpnGw
Updating a VPN gateway	VpnGw	updateVpnGw

Operation	Resource Type	Trace Name
Deleting a VPN gateway	VpnGw	deleteVpnGw
Querying a VPN connection	VpnConnection	showVpnConnection
Querying the VPN connection list	VpnConnection	listVpnConnection
Querying an IPsec policy		
Querying an IKE policy		
Querying a VPN gateway	VpnGw	showVpnGw
Querying the VPN gateway list	VpnGw	listVpnGw
Querying quotas	quota	showQuota
Querying the list of SM series algorithms	VpnConnection	listSupportedAlgorithm

Table 5-3 Operations related to P2C VPN that can be recorded by CTS

Operation	Resource Type	Trace Name
Subscribing to resources	p2c-vpn-gateway	subscribeP2cVgw
Updating the specification of a yearly/monthly VPN gateway	p2c-vpn-gateway	updateP2cVgwSpecification
Changing the resource status (frozen or unfrozen)	p2c-vpn-gateway	updateP2cVgwStatus
Unsubscribing from resources	p2c-vpn-gateway	unsubscribeP2cVgw
Updating a P2C VPN gateway	p2c-vpn-gateway	updateP2cVgw
Creating an SSL server	vpn-server	createVpnServer

Operation	Resource Type	Trace Name
Modifying an SSL server	vpn-server	updateVpnServer
Creating a VPN user	vpn-user	createVpnUser
Modifying a VPN user	vpn-user	updateVpnUser
Changing the password of a VPN user	vpn-user	updateVpnUserPassword
Resetting the password of a VPN user	vpn-user	resetVpnUserPassword
Deleting a VPN user	vpn-user	deleteVpnUser
Creating a VPN user group	vpn-user-group	createVpnUserGroup
Modifying a VPN user group	vpn-user-group	updateVpnUserGroup
Adding a user to a VPN user group	vpn-user-group	addVpnUsersToGroup
Removing a user from a VPN user group	vpn-user-group	removeVpnUsersToGroup
Creating a VPN access policy	vpn-access-policy	createVpnAccessPolicy
Modifying a VPN access policy	vpn-access-policy	updateVpnAccessPolicy
Deleting a VPN access policy	vpn-access-policy	deleteVpnAccessPolicy
Downloading the client configuration file	vpn-server	exportClientConfig
Importing a client CA certificate	vpn-server	importClientCa
Modifying a client CA certificate	vpn-server	updateClientCa
Deleting a client CA certificate	vpn-server	deleteClientCa

Operation	Resource Type	Trace Name
Creating resource tags in batches	p2c-vpn-gateway	batchCreateResourceTags
Deleting resource tags in batches	p2c-vpn-gateway	batchDeleteResourceTags
Querying the P2C VPN gateway list	p2c-vpn-gateway	listP2cVgws
Querying a P2C VPN gateway with a specified ID	p2c-vpn-gateway	showP2cVgw
Querying the AZs of a P2C VPN gateway	p2c-vpn-gateway	listP2cVgwAvailabilityZones
Querying the connections of a P2C VPN gateway	p2c-vpn-gateway	listP2cVgwConnections
Querying tags of a specific instance	p2c-vpn-gateway	listTagsForResource
Querying the tags of all resources owned by a tenant in a specified project	p2c-vpn-gateway	listTags
Querying the VPN access policy list	vpn-access-policy	listVpnAccessPolicies
Querying a VPN access policy	vpn-access-policy	showVpnAccessPolicy
Querying server information on a gateway	vpn-server	listVpnServersByVgw
Querying a client CA certificate	vpn-server	showClientCa
Querying information about all servers of a tenant	vpn-server	listVpnServersByProject
Querying the VPN user list	vpn-user	listVpnUsers
Querying a VPN user	vpn-user	showVpnUser

Operation	Resource Type	Trace Name
Querying the VPN user group list	vpn-user	listVpnUserGroups
Querying a VPN user group	vpn-user	showVpnUserGroup
Querying VPN users in a group	vpn-user	listVpnUsersInGroup
Creating VPN users in batches	vpn-user	batchCreateVpnUsers
Deleting VPN users in batches	vpn-user	batchDeleteVpnUsers
Creating or updating the connection log configuration	p2c-vpn-gateway	updateVpnConnectionsLogConfig
Deleting the connection log configuration	p2c-vpn-gateway	deleteVpnConnectionsLogConfig
Querying the connection log configuration	p2c-vpn-gateway	showVpnConnectionsLogConfig
Tearing down connections of a P2C VPN gateway	p2c-vpn-gateway	disconnectP2cVgwConnection

5.2 Querying CTS Traces

After you enable CTS and the management tracker is created, CTS starts recording operations performed on VPN resources. You can view the operation records in the last seven days on the CTS console. For details about how to view audit logs, see [Querying Real-Time Traces](#).

6 Permissions Management

6.1 Creating a User and Granting VPN Permissions

Use the [Identity and Access Management \(IAM\)](#) service to implement fine-grained permissions control over your VPN resources. With IAM, you can:

- Create IAM users for employees based on your enterprise's organizational structure. Each IAM user will have their own security credentials for accessing VPN resources.
- Grant users only the permissions required to perform a given task based on their job responsibilities.
- Grant the permission to perform professional and efficient O&M on your VPN resources to other Huawei Cloud accounts or cloud services.

If your Huawei Cloud account meets your permissions requirements, you can skip this section.

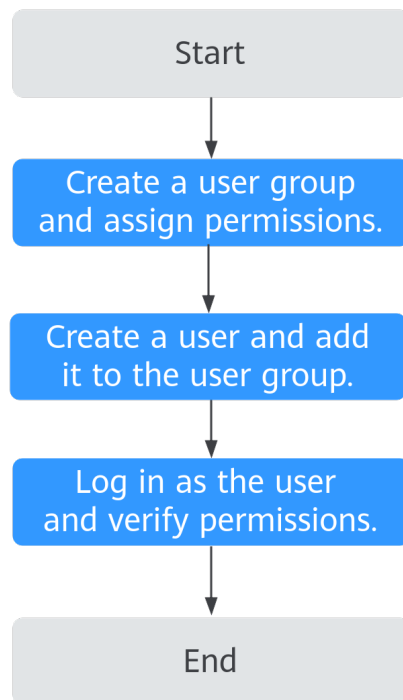

This section describes the procedure for granting permissions (see [Figure 6-1](#)).

Prerequisites

You have learned about the permissions supported by VPN (see [Permissions Management](#)), and determined the permissions to be granted to a user group. Before granting permissions of other services, learn about all [system-defined permissions](#) supported by IAM.

Process Flow

Figure 6-1 Process of granting VPN permissions

1. **Create a user group and assign permissions** to it.
Create a user group on the IAM console and attach the **VPN FullAccess** policy to the group.
2. **Create a user and add it to the user group.**
Create a user on the IAM console and add the user to the group created in 1.
3. **Log in** and verify permissions.
Log in to the management console as the created user. Switch to the authorized region and verify the permissions.
 - Click **Service List** and choose **Networking > Virtual Private Network**. On the **Enterprise - VPN Gateways** page, click the **S2C VPN Gateways** tab, and click **Buy S2C VPN Gateway** to create a VPN gateway. If the VPN gateway is successfully created, the **VPN FullAccess** policy has already taken effect.
 - Click **Service List** and choose **Networking > Virtual Private Network > Classic**. Click **Buy VPN Gateway** to create a VPN gateway. If the VPN gateway is successfully created, the **VPN FullAccess** policy has already taken effect.
 - Click **Service List** and choose **Networking > Virtual Private Network**. On the **Enterprise - VPN Gateways** page, click the **P2C VPN Gateways** tab, and click **Buy P2C VPN Gateway** in the upper right corner to create a VPN gateway. If the VPN gateway is successfully created, the **VPN FullAccess** policy has already taken effect.
 - Select any service except the VPN service in **Service List**. If a message appears indicating that you have insufficient permissions to access the service, the **VPN FullAccess** policy has already taken effect.

6.2 VPN Custom Policies

Custom policies can be created to supplement the system-defined policies of VPN.

You can create custom policies in either of the following ways:

- Visual editor: Select cloud services, actions, resources, and request conditions. This does not require knowledge of policy syntax.
- JSON: Edit JSON policies from scratch or based on an existing policy.

For details, see [Creating a Custom Policy](#). The following section contains examples of common VPN custom policies.

Example VPN custom policy

- Example 1: Grant permission to delete VPN gateways.

```
{
  "Version": "1.1",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "vpn:vpnGateways:delete"
      ]
    }
  ]
}
```

- Example 2: Deny VPN connection deletion.

A policy with only "Deny" permissions must be used together with other policies. If the permissions granted to an IAM user contain both "Allow" and "Deny", the "Deny" permissions take precedence over the "Allow" permissions.

The following method can be used if you need to assign permissions of the **VPN FullAccess** policy to a user but also forbid the user from deleting VPN connections. Create a custom policy for denying VPN connection deletion, and assign both policies to the group the user belongs to. Then the user can perform all operations on VPN except deleting VPN connections. The following is an example of a deny policy:

```
{
  "Version": "1.1",
  "Statement": [
    {
      "Effect": "Deny",
      "Action": [
        "vpn:vpnGateways:delete"
      ]
    }
  ]
}
```

- Example 3: defining multiple actions in a policy

A custom policy can contain the actions of one or multiple services that are of the same type (global or project-level). The following is an example policy containing multiple actions.

```
{
  "Version": "1.1",
  "Statement": [
    {
      "Effect": "Allow",
```

```
    "Action": [
      "vpn:vpnGateways:create",
      "vpn:vpnConnections:create",
      "vpn:customerGateways:create"
    ]
  },
  {
    "Effect": "Deny",
    "Action": [
      "vpn:vpnGateways:delete",
      "vpn:vpnConnections:delete",
      "vpn:customerGateways:create"
    ]
  },
  {
    "Effect": "Allow",
    "Action": [
      "vpc:vpcs:list",
      "vpc:subnets:get"
    ]
  }
]
```

7 Tag Management

7.1 Scenario

VPN tags are used to identify VPN resources, facilitating VPN resource identification and management. You can add tags for a VPN resource when you create the VPN resource. Alternatively, you add tags for an existing VPN resource on the resource details page. A maximum of 20 tags can be added for each VPN resource.

 **NOTE**

Only S2C Enterprise Edition VPN and P2C VPN support VPN tag management.

A tag consists of a key and a value. [Table 7-1](#) describes the requirements on the keys and values of VPN tags.

Table 7-1 Requirements on the keys and values of VPN tags

Parameter	Requirement	Example Value
Key	<ul style="list-style-type: none">• Cannot be left blank.• Must be unique for the same VPN.• Can contain a maximum of 128 characters.• Can contain only the following types of characters:<ul style="list-style-type: none">- Digits- Spaces- Letters- Special characters, including _ . : - = + @• Cannot start or end with a space or start with <code>_sys_</code>.	vpn_key1

Parameter	Requirement	Example Value
Value	<ul style="list-style-type: none">• Can contain a maximum of 255 characters.• Can contain only the following types of characters:<ul style="list-style-type: none">- Digits- Spaces- Letters- Special characters, including . : - = + @ / _	vpn-01

7.2 S2C Enterprise Edition VPN

7.2.1 Searching for Resources by Tag

Context

You can search for VPN gateways, customer gateways, and VPN connections based on the tag keys and values that have been added for these VPN resources.

Procedure

Searching for VPN gateways in S2C Enterprise Edition VPN by tag

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **S2C VPN Gateways** tab.
6. Click in the text box for selecting a property or entering a keyword, choose a tag key under **Resource Tag**, and select a tag value.

The system displays the VPN gateways that match the selected tag key and value.

- You can only select existing keys and values from the drop-down list.
- You can select multiple tags to search for VPN resources. If you select multiple tags, the relationship between them is AND.
- You can use tags together with other types of filter criteria. The relationship between them is AND.

Searching for customer gateways in S2C Enterprise Edition VPN by tag

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – Customer Gateways**.
5. Click in the text box for selecting a property or entering a keyword, choose a tag key under **Resource Tag**, and select a tag value.

The system displays the customer gateways that match the selected tag key and value.

- You can only select existing keys and values from the drop-down list.
- You can select multiple tags to search for VPN resources. If you select multiple tags, the relationship between them is AND.
- You can use tags together with other types of filter criteria. The relationship between them is AND.

Searching for VPN connections in S2C Enterprise Edition VPN by tag

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Connections**.
5. Click in the text box for selecting a property or entering a keyword, choose a tag key under **Resource Tag**, and select a tag value.

The system displays the VPN connections that match the selected tag key and value.

- You can only select existing keys and values from the drop-down list.
- You can select multiple tags to search for VPN resources. If you select multiple tags, the relationship between them is AND.
- You can use tags together with other types of filter criteria. The relationship between them is AND.

7.2.2 Managing Tags

Context

You can add, delete, modify, and view tags of VPN resources.

Procedure

- **Managing tags of VPN gateways in S2C Enterprise Edition VPN**
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.

- c. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - d. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Gateways**.
 - e. Click the **S2C VPN Gateways** tab.
 - f. Click the name of the target VPN gateway. The VPN gateway details page is displayed.
 - g. Click the **Tags** tab, and add, delete, modify, or view tags of the VPN gateway.
 - Add a tag.
Click **Add Tag**. In the **Add Tag** dialog box, enter the key and value of a tag to be added, and click **OK**.
 - Modify a tag.
Click **Edit** in the **Operation** column of the tag to be modified. In the **Edit Tag** dialog box, change the tag value and click **OK**.
 - Delete a tag.
Click **Delete** in the **Operation** column of the tag to be deleted. In the **Delete Tag** dialog box, click **OK**.
 - View tags.
On the **Tags** page, view tag details, including the number of new tags that can be created and the key and value of each existing tag.
- **Managing tags of customer gateways in S2C Enterprise Edition VPN**
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - d. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - Customer Gateways**.
 - e. Click the name of the target customer gateway. The customer gateway details page is displayed.
 - f. In the **Tags** area, add, delete, modify, or view tags of the customer gateway.
 - Add a tag.
Click **Add**. In the **Add Tag** dialog box, enter the key and value of a tag to be added, and click **OK**.
 - Modify a tag.
Click **Edit** in the **Operation** column of the tag to be modified. In the **Edit Tag** dialog box, change the tag value and click **OK**.
 - Delete a tag.

Click **Delete** in the **Operation** column of the tag to be deleted. In the **Delete Tag** dialog box, click **OK**.

- View tags.

In the **Tags** area, view tag details, including the number of new tags that can be created and the key and value of each existing tag.

- **Managing tags of VPN connections in S2C Enterprise Edition VPN**
 - a. Log in to the management console.
 - b. Click  in the upper left corner and select the desired region and project.
 - c. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
 - d. In the navigation pane on the left, choose **Virtual Private Network > Enterprise - VPN Connections**.
 - e. Click the name of the target VPN connection. The VPN connection details page is displayed.
 - f. Click the **Tags** tab, and add, delete, modify, or view tags of the VPN connection.
 - Add a tag.

Click **Add Tag**. In the **Add Tag** dialog box, enter the key and value of a tag to be added, and click **OK**.
 - Modify a tag.

Click **Edit** in the **Operation** column of the tag to be modified. In the **Edit Tag** dialog box, change the tag value and click **OK**.
 - Delete a tag.

Click **Delete** in the **Operation** column of the tag to be deleted. In the **Delete Tag** dialog box, click **OK**.
 - View tags.

On the **Tags** page, view tag details, including the number of new tags that can be created and the key and value of each existing tag.

7.3 P2C VPN

7.3.1 Searching for Resources by Tag

Context

You can search for VPN gateways based on the tag keys and values that have been added for them.

Procedure

1. Log in to the management console.

2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
6. Click in the text box for selecting a property or entering a keyword, choose a tag key under **Resource Tag**, and select a tag value to search for the target VPN gateway.
 - You can only select existing keys and values from the drop-down list.
 - You can select multiple tags to search for VPN resources. If you select multiple tags, the relationship between them is OR.
 - You can use tags together with other types of filter criteria. The relationship between them is OR.

7.3.2 Managing Tags

Context

You can add, delete, modify, and view tags of VPN resources.

Procedure

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Click  in the upper left corner of the page, and choose **Networking > Virtual Private Network**.
4. In the navigation pane on the left, choose **Virtual Private Network > Enterprise – VPN Gateways**.
5. Click the **P2C VPN Gateways** tab. The P2C VPN gateway list is displayed.
6. Click the name of the target VPN gateway. The VPN gateway details page is displayed.
7. Click the **Tags** tab, and add, delete, modify, or view tags of the VPN gateway.
 - Add a tag.
Click **Add Tag**. In the **Add Tag** dialog box, enter the key and value of a tag to be added, and click **OK**.
 - Modify a tag.
Click **Edit** in the **Operation** column of the tag to be modified. In the **Edit Tag** dialog box, change the tag value and click **OK**.
 - Delete a tag.
Click **Delete** in the **Operation** column of the tag to be deleted. In the **Delete Tag** dialog box, click **OK**.
 - View tags.

On the **Tags** tab page, view tag details, including the number of new tags that can be created and the key and value of each existing tag.

8 Quotas

What Is a Quota?

Quotas put limits on the quantities and capacities of resources available to users, such as the maximum number of ECSs or EVS disks that can be created.

If the existing resource quota cannot meet your service requirements, you can apply for a higher quota.

Resource Types

- S2C Classic VPN resources include Classic VPN gateways and Classic VPN connections.
- S2C Enterprise Edition VPN resources include VPN gateways, VPN connection groups, and customer gateways.
- P2C VPN resources include only VPN gateways.

The total quota of each resource type varies according to regions.

How Do I View My Quotas?

1. Log in to the management console.
2. Click  in the upper left corner and select the desired region and project.
3. Choose **Resources** > **My Quotas** in the upper right corner of the page.
4. View the used and total quota of each type of resources on the displayed page.

If a quota cannot meet service requirements, apply for a higher quota.

How Do I Apply for a Higher Quota?

1. Log in to the management console.
2. Choose **Resources** > **My Quotas** in the upper right corner of the page.
3. Click **Increase Quota** in the upper right corner of the page.
4. On the **Create Service Ticket** page, configure parameters as required.
In the **Problem Description** area, enter the required quota and the reason for the quota adjustment.

5. Select the agreement and click **Submit**.
